Jacobi, Abraham (1830–1919) American pediatrician who invented laryngoscope, wrote numerous treatises on children's diseases, established the first free clinic for children, and, with Emil Noeggerath, founded the *American Journal of Obstetrics* (1862).

Jac'o-bine. $C_{18}H_{25}NO_6$, an alkaloid obtained from *Senecio jacobaea* and certain other species of *Senecio*.

Jacobson's reflex. See under *reflex*.

Jacobson, Ludwig Levin [*Danish anatomist*, 1783–1843]. Described the vomeronasal organ, called *organ of Jacobson*, and the tympanic nerve and plexus, called *Jacobson's nerve*, *Jacobson's plexus*.

Jac'o-dine. $C_{18}H_{25}NO_6$; an alkaloid obtained from *Senecio jacobaea* and certain other species of *Senecio*.

Jac'o-nine. $C_{18}H_{25}NO_6$; an alkaloid obtained from *Senecio jacobaea*.

Jacquemier, Jean Marie [*French obstetrician*, 1806–79]. Described a bluish discoloration of the vaginal mucosa, appearing from about the sixth to the twelfth week of pregnancy; called *Jacquemier's sign*, *Chadwick's sign*, *Kluge's sign*.

Jacquet's erythema. See *erythema* gluteale.

Jac"ti-ta'tion [L. *jactatio*, to bring forward in public, from *jactare*, to toss about]. A tossing about, great restlessness; a condition at times present in grave diseases.

Jac'u-lif'er-ous [L. *jaculum*, dart; *ferre*, to bear]. Prickly; bearing spines.

Jadassohn, Josef [*German dermatologist*, 1863–1936]. Described maculopapular erythroderma (1892); called *Jadassohn's disease*. Described and named granulosis rubra nasi (1901). See *nevus*.

Jaeger, Eduard [*Austrian ophthalmologist*, 1818–84]. Introduced a method of testing acuteness of vision by means of lines of type of different sizes printed on cards. Called *Jaeger's test types*.

Jaeger test. See Nagel's *test*.

Jaesche, Georg Emanuel [*German surgeon*, 1815–76]. Known for his contributions to the development of plastic surgery. Devised operations for entropion and trichiasis. Devised an operation for distichia in which he transplanted the glands of Zeis away from the edge of the lid by excising a crescent-shaped piece of skin; called *Arlt-Jaesche technic*.

Jaffé, Max [*German biochemist*, 1841–1911]. Discovered urobilin in urine (1868). Isolated indican from urine (1877). In *Jaffé's test* a red color develops when picric acid is added to creatinine in alkaline solution.

Jakob, Alfons Maria (1884–1931) German psychiatrist who described a form of pseudosclerosis, called *Jakob's disease*.

Jaksch, Rudolf von [*Austrian physician in Czechoslovakia*, 1855–1947]. Described infantile pseudoleukemic anemia (1889); called *von Jaksch's anemia* or *disease*. See also von Jaksch-Pollak's *test*.

Jal'ap [Sp. *jalapa*, from a town in Mexico] (*jalapa*). The tuberous root of *Exogonium purga*, a plant of the Convolvulaceae. Its active principle is a resin which contains a glycoside, convolvulin. Jalap is an active hydragogue cathartic, and is used to remove dropsical effusions by way of the intestine. Dose, 0.65–2.0 Gm. (10–30 gr.)

compound colocynth and j. pills (*pilulae colocynthidis et jalapae*). The vegetable cathartic pills contain compound colocynth extract, hyoscyamus extract, jalap resin, leptandra extract, and podophyllum resin. The compound cathartic pills (*pilulae hydrargyri chloridi mitis compositae*) contain compound colocynth extract, mild mercurous chloride, jalap resin, and gamboge.

compound j. powder (*pulvis jalapae compositus*). Powdered jalap 35, potassium bitartrate 65. The salt increases the degree of subdivision of the jalap and enhances its hydragogue action. Dose, 2–4 Gm. (30–60 gr.)

j. resin (*resina jalapae*). An alcoholic jalap extract precipitated with water. Dose, 0.13–0.32 Gm. (2–5 gr.)

Jal'a-pin [*jalapa*]. A name sometimes applied to the resin from jalap.

Jal"a-pi-no'lic ac'id. $C_{15}H_{30}(OH)COOH$. An acid occurring as a constituent of glycosides of Ipomoea.

Ja-mai'ca dog'wood. See *piscidia*.

Jam'bul. *Eugenia jambolana*, the bark and seeds of which have been variously used in medicine.

James powder See antimony powder

J mes'town weed. Old term for Jimson weed. See *stramonium*.

Janet, Pierre Marie Félix [*French psychiatrist*, 1859–1947]. Described psychasthenia (1903) also called *J net disease*.

J neway Edward Gamaliel [*American physician*, 1841 1911]. Described small hemorrhagi lesions occurring usually on the palms and soles in bacterial endocarditis; called *Janeway' nodes*.

Janeway Theodore Caldwell [*American physician*, 1872–1917]. Invented sphygmomanometer called *Janeway' sphygmomanometer*

Jan'i-ceps [L. *Janus*, an Italian deity represented with two opposite faces; *caput*, head]. Conjoined twins in which there is single head exhibiting two equal, opposite faces. Also called *cephalothoracopagus disymmetros*.

J. asymmetros. A janiceps with the two faces unequally developed; iniops.

Jansen, Albert [*German otolaryngologist*, 1859–1933]. Described an operation for disease of the frontal sinus in which he curetted the frontal sinus after removing the lower wall and the inferior portion of the anterior wall called *Jansen peration*.

Jansen, Barend Coenraad Petrus [*Dutch physiological chemist*, 1884–]. With Donath, isolated vit min B_1 (1926) Devised test for thiamine hydrochloride by means of potassium ferricyanide. Vitamin B_1 in aqueous solution is oxidized to thiochrome, which is extracted with isobutanol and its fluorescence determined.

Janský Jan [*Czechoslovakian physician*, d. 1921]. Classified human blood in four groups (1907); see *blood groups*. Late infantil amaurotic familial idiocy is called *Bielschowsky-Janský disease*.

Janssen, Zacharias [*Dutch spectacle maker* fl. 1600]. Credited with the construction of the first compound microscope (ca. 1590)

Ja'nus. See *janiceps*.

J asymmetros. See *iniops*

J nus green B (C.C.) A basic aniline dye, diethyl safranin. Used especially in the vital staining of mitochondria; has been used in the vital staining of fungi and protozoa. Also called *diazin green S*.

J p' -con'i tine (jap ah kon -teen, tin) The most poisonous of aconite alkaloids; obtained from *Aconitum japonicum*. On saponification, it hydrolyzes to benzoic acid and japaconine

Ja-pan' tal'low Japan wax.

Ja pan' wax. A f t from the mesocarp of the fruit of *Rhus succedanea* of J pan and China; pale-yellow solid used as an ingredient of ointments. Syn., *J pan tallow sumach wax vegetable wax*.

Ja ra-ra ca (zhah rah-rah'kuh, jah rah-rack uh) A poisonous snake, member of the genus *Bothrops*, found in Brazil.

Jarcho, Julius [*American gynecologist and obstetrician*, 1882–]. Invented manometer for testing the patency of the uterine tubes called *Jarcho pressometer* It is used also for the introduction of opaque mediums for hysterosalpingography and pyelography

Jar'gon [OF] Confused, unintelligible talk, gibberish, babble. Also see *agrammatism*, *phasia*.

Jar gon-ize [*jargon*]. T utter unintelligible sounds t speak in, or turn something into, jargon.

Jarisch-Herxheimer reaction. See under *reaction*

Jarjavay Jean François [*French physician*, 1815–60] Described depressor urethrae muscle, slip of the sphincter urethrae membranaceae which joins the sphincter vaginae; called *Jarjavay muscle*.

Jarvis, William Chapman [*American laryngologist* 1855–95] Inventor of snare used for removing polypoid growths in the nose and throat; called *Jarvis' snare*.

Jat're-pha [G *iatros*, physician *trophē*, nourishment]. A genus of plants of the Euphorbiaceae. Also called *Jatropa*.

J. curcas. The source of purging nuts.

J. gossypifolia. The tua-tua plant, indigenous to South America, West Indies, and Africa has been used as purgative and as cure for leprosy

Jaun dice (j wn'dis, jahn dis) [OF *jaunisse* from L. *galbus*, yellow]. Yellowness of the skin, mucous membranes, and secretions; due to bile pigments in the blood. Also see *icterus*.

acholuric j. That without demonstrable bil pigment in the urine. See hereditary *spherocytosis*.

rsenical j. That due to arsenical hepatitis.

black j. An extreme degree of j undice.

catarrhal j See infectious *hepatitis*.

chronic familial j. See hereditary *spherocytosis*

clinical j Icterus with yellowing of the skin and sclerae; the icterus index is bove 15.

congenital j. That ppearing t, or shortly after birth; due to defective development of the biliary passages.

constitutional j. Physiologic hyperbilirubinemia.

dissociated j Selective etention of either bile pigment or bile salts; most frequently acholuria.

epidemic j. See infectious *hepatitis*.

f milial acholuric j. See hereditary *spherocytosis*.

familial j. ( ) Hemolytic jaundice. (b) Physiologi hyperbilirubinemia.

familial nonhemolytic j. See physiologic *hyperbilirubinemia*.

gravi neonatorum j A severe degree of icterus neonatorum.

green j That in which the discoloration of the skin is green or olive-colored.

hemolytic j. A chronic, microcytic anemia, characterized by increased erythrocyte fragility reticulocytosis, spherocytosis, acholuric jaundice, and splenomegaly There is familial form now classified as hereditary spherocytosis in which splenectomy can be of great value in the acquired form, splenectomy is of questionable value.

hepatocanalicular j A rare form of chronic hepatic jaundice which may follow infectious hepatitis or the therapeutic use of arsenicals, sulfonamides, or thiouracil. Biliary cirrhosis is this type of jaundice. Bile pigments and bile salts are present in the urine; undamaged parenchymal cells and periportal infiltration, with no evidence of retention of bile are indicated by biopsy

hepatocellular j That due to impairment of function of the liver cells.

hepatogenous j. That due to hepatic disease. It may be obstructive or hepatocellular

hereditary no hemolytic j. See physiologic *hyperbilirubinemia*.

homologous serum j. Homologous serum hepatitis.

hyperhemolytic j. That due to inability of the liver t excrete the quantity of pigment presented t it as the result of excessive hemolysis.

infectious j See infectious *hepatitis*

inoculation j See homologous serum *hepatitis*.

intralobular j. Hepatocellular jaundice

j. of the new born. See *icterus* neonatorum.

late rsphenamine j. See homologous serum *hepatitis*.

latent j. Increase in bile pigment i the blood, insufficient to show jaundice clinically but determinable by the icterus index (from 6 to 15)

malignant j. Icterus gravis.

mechanical j. See obstructive *j*.
Minkowski-Chauffard hemolytic j. See hereditary *spherocytosis*.
nuclear j. See *kernicterus*.
obstructive j. That due to interference with the outflow of bile by mechanical obstruction of th biliary passages, as by gallstones or tumor.
parenchymatous j. Hepatocellular jaundice.
posthepatic j. Obstructive *j*; occasional usage.
postvaccinal j. See homologous serum *hepatitis*.
prehepatic j. Jaundice in which there is no apparent liver lesion, as hemolytic *j* and physiologic hyperbilirubinemia.
regurgitation j. That due to secretion of bil pigment into the hepatic lymph channels and thence into the blood. It may be hepatocellular or bstructive. Also called *resorptive j*.
retention j. That due to the inability of the liver to excrete th bile pigment presented to it.
spirochetal j. A disease in man caused by the spirochete, *Leptospira icterohaemorrhagiae*; characterized by f ver nausea, headache, muscular pain, and j undice. Also called *Weil disease*, *spirochetosis icterohaemorrhagica*.
syringe j. See homologous serum *hepatitis*.
toxic j. That associated with toxic hepatitis.
transfusion j. See homologous serum *hepatitis*.
Jauregg. See Julius *Wagner* von Jauregg.
Javal, Louis Emile [*French ophthalmologist*, 1839–1907]. Inventor f the astigmometer (1867) W th Schiötz, invented an ophthalmometer (1881).
ja van'i-cin. $C_{15}H_{14}O_6$; red antibiotic substance derived from cultures of *Fusarium javanicum*, active against many bacteria but only slightly antifungal. **Oxyjavanicin** is produced simultaneously.
J nine. An alkaloid from the bark of various species of Cinchona.
jaw [perhaps from E. *chew* *chaw*, with influence from F *joue*, cheek]. Either of two bones, the pper j w or maxilla, and the lower jaw or mandible, which form the skeleton of the mouth.
lumpy j. See *actinomycosis*.
phossy j. Phosphorus necrosis of the j w.
snapping j. A condition characterized by an audible and palpable snap on opening and closing the mouth, usually caused by displacement of the meniscus in the mandibular joint.
wolf jaw. Bilateral cl ft of the lip, j w and palate.
Jaworski, Valery [*Polish physician*, 1849–1925]. Described spiral bodies of mucus, *Jaworski cor puscles*, found in the gastric secretion in cases of pronounced hyperchlorhydria.
jaw-wink'i g. See Marcus Gunn *phenomenon*.
Jeanselme Antoine Edouard [*French dermatologist* 1858–1935]. Known especially for his studies of syphilis. Described juxta-articular nodules, also called *Jeanselme nodules*.
J co-le'ic ac'id (jee"ko lee'ick, jeck). An acid occurring in the glycerides of cod liver oil.
Jecolin. A proprietary hematinic used in primary and secondary anemias.
Jed'dah ul'cer (jed'ah, jed'uh). See *oriental sore*.
je j"u nec'to my (jedj oo-neck'to-mee) [L *jejun s*, empty; G *ektomē*, excision]. Excision of part or all of the j junum.
je j"u ni'tis (jedj oo nigh tis) [*jejunum*; G *-itis*, inflammation]. Inflammation of the jejunum.
je j"u no- (jedj oo-no- j jew no-) **jejun-** [*jej* *l* *medicine*, combining form denoting *the jejun m*.
j j"u no-ce cos't my [*jejunum*, L. *caecus*, blind G *stoma*, mouth]. Formation of an anastomosis between the jejunum and the cecum by surgery.
je j"u no-co lo s to-my [*jejunum*; G *kolon*, colon *stoma*]. The formation of an anastomosis between the jejunum and the colon by surgery.
j j"u no gas'tric. See *gastrojejunal*.
j j"u no-il"e-i'tis [*jejunum*; G *eilein*, to roll; *-itis*, inflammation]. Inflammation of the jejunum and the ileum.
je j"u no il"e-os'to-my [*jejunum*, *eilein*, G *stoma*, mouth]. The formation f an anastomosis between the jejunum and the ileum by surgery.
je j"u no il'e-um [*jejunum*; *eilein*]. That part of the small intestine extending from the duodenum to the cecum.
je j"u no je j"u nos'to-my (jedj oo-noo to-mee) [*jejunum*; *jejunum*; G *stoma*, mouth]. Surgical formation of an anastomosis between two parts of the jejunum.
je j"u nor'rha phy (jedj oo-nor uh-fee) [*jejunum*; G *rhaphē*, suture]. Suture of the jejunum.
je j"u nos'to-my (jedj oo-nos to-mee) [*jejunum*; G. *stoma*, mouth]. The making of an artificial opening (jejunal fistula) through the bdominal wall into the jejunum.
je j"u not'o-my (jedj oo-not o-mee) [*jejunum*; G *tomē*, cutting]. Incision into the jejunum.
je-ju num [*jejunus*]. The second division of the small intestine extending between the duodenum and the ileum, and measuring bout 8 feet (2.2 meters) in length. See Plate 13. —**jejunal** *adj*
Jellinek Tillais' sign. See under *sign*.
jel'ly [L. *gelare*, to congeal]. A semisolid colloidal system f liquid suspended in solid, as water in gelatin.
contraceptive j. Any one of number of viscous substances introduced into the vagina to prevent conception; designed to act both as an occlusive and as vehicle for contraceptive chemicals.
electrode j. A jelly for improving the contact between skin and electrode in electrocardiography and electroencephalography.
glycerin j. A mixture of glycerin, gelatin, and other substances, e.g. zinc oxide.
K-Y j. Trade-mark for lubricating jelly containing boric acid, glycerin, chondrus, and tragacanth.
Lieberkühn j. The alkali metaprotein having the consistency of jelly formed by the action of dilute sodium hydroxide sol tion on albumin.
mineral j. Petrolatum. Also called *petroleum j*.
petroleum j. Petrolatum.
vaginal j. Any one of group of substances introduced into the vagina for the treatment of disease, or more commonly for contraceptive purposes.
Wharton' j. The mucoid connective tissue that constitutes the matrix of the umbilical cord.
jel'ly beet. See *Unna paste boot*.
jel'ly of Whar'ton. See Wharton's *jelly*.
Jenner Edward [*English physician*, 1749–1823]. Introduced inoculation with matter containing the virus of vaccinia, to produce immunity to smallpox. See smallpox *vaccine*, also called *Jenner vaccine*.
Jenner William [*English physician*, 1815–98]. Differentiated typhus from typhoid *fever* (1849).
Jenner' stain. See under *stain*.
Jensen, Carl Oluf [*Danish veterinary surgeon and pathologist*, 1864–1934]. Established the fact that cancer can be transmitted by inoculation. See Jensen *sarcoma*.
Jensen, Edmund Zeuthen [*Danish ophthalmologist*, 1861 1950]. Described retinochoroiditis juxtapapillaris (1908), called *Jensen disease* It is characterized by the juxtapapillary location of the exudat with retinal involvement and sector defect in the visual field.
Jensen method. See Hagedorn and Jensen *method*.

Jephcott method. See under *method.*

je·quir'i·ty [Pg. *jequiriti*]. The seed of *Abrus precatorius.* An infusion containing abrin has been prepared from it and used in treating trachoma.

jerk [possibly imitative in origin]. A sudden, spasmodic movement; term often applied to certain reflexes, as the j aw-jerk reflex, patellar reflex.

jer'vine (jur'veen, -vin). The predominant alkaloidal constituent, an alkanolamine, of veratrum viride and veratrum album, practically inert physiologically.

jes"a·con'i·tine. $C_{33}H_{45}NO_{12}$; an alkaloid from the root of certain species of *Aconitum.*

Jesu Haly ('Ali ibn Isa) [*Arabian ophthalmologist*, eleventh century]. His book on diseases of the eye was considered the standard throughout Europe and the East, and is said still to be in use among Arabian physicians.

Jes'u·its' bal'sam (bawl'sum). Compound benzoin tincture.

Jes·u·its' bark. Old term for Peruvian bark; the bark of several species of *Cinchona.* See *cinchona.*

Jes'u·its' drops. Compound benzoin tincture.

jet dust coun'ter. An instrument for determining the number of dust particles in the air. A measured sample of air is humidified and propelled at high velocity through narrow aperture against perpendicular plate to which the dust particles adhere. They are then counted under microscope. Other instruments used for the same purpose are the konimeter, impinger, and precipitator. Also see *dust count.*

jet in jec'tion. See *hypospray.*

Jewett, Hugh Judge [*American urologist*, 1903–]. Known for his operation of ureterointestinal anastomosis, in which junction is made in two stages between ureter and sigmoid colon.

Jezler-Takata test. See Takata-Ara *test.*

jig'ger. See *Tunga penetrans.*

Jim'son weed. See *stramonium.*

jiu jit'su. See *jujitsu.*

Jobert de Lamballe, Antoine Joseph [*French surgeon*, 1799–1867]. Known for his contributions to plastic surgery and to surgery of the intestinal tract. Described potential hollow in the upper part of the popliteal space, called *Jobert's fossa.*

Jobling, James Wesley [*American physician*, 1876–]. Described an experimentally transmissible carcinoma of the rat, called *Flexner-Jobling tumor.* He also developed an antimeningitis serum.

jock'ey strap. The popular name given to scrotal supporter suspensory.

Joffroy, Alix [*French physician*, 1844–1908]. With Charcot, demonstrated atrophy of the anterior horns of the spinal cord in poliomyelitis, and described the lesions of the spinal cord in muscular atrophy (1869). See also Joffroy's *reflex, sign.*

John of Arderne [*English physician*, 1306–90]. Made important contributions to the development of surgery. Described an operative method for the treatment of anal fistula.

Johne, Heinrich Albert [*German veterinarian*, 1839–1910]. Described chronic type of enteritis of cattle, in which emaciation and recurrent diarrhea persist for months, called *Johne's disease.* On post-mortem examination, typical thickening and corrugation of the intestinal mucosa are found. The etiologic agent, *Mycobacterium paratuberculosis,* is called *Johne's bacillus.* See johnin reaction.

joh'nin (yo'nin). A vaccine prepared from cultures of *Mycobacterium paratuberculosis.* Also called *paratuberculin.*

Johnson, Clayton Richardson [*American radiologist*, 1896–]. Known for his methods and improvements in radiographic pelvimetry. Invented stereoroentgenometer. The *Johnson method* is a procedure for interpreting roentgenogram, based on cross-thread localization.

joint. Articulation. For joints listed by name, see Table of Joints in the Appendix. See Plate 2.

ball-and-socket j. See *enarthrosis.*

biaxial j. One in which movement is around two transverse axes at right angles to each other. The two varieties are the condyloid and the saddle joint.

Charcot's j. A neuropathic arthropathy in which articular cartilage and subjacent bone degenerate while hypertrophic changes occur at the joint edges and present an irregular deformity with instability of the joint. Most common in tabes dorsalis.

false j. A pseudarthrosis.

flail j. A condition of excessive mobility often following resection of joint.

gliding j. One which allows only gliding movements; formed by the apposition of plane surfaces, or one slightly convex, the other slightly concave.

hinge j. A joint with only one axis of rotation. Syn., *ginglymus.*

incudostapedial j. The diarthrodial articulation between the lenticular process of the incus and the head of the stapes.

pastern j. The articulation between the proximal and second phalanges (great and small pastern bones) of any leg of horse.

pivot j. One in which movement is limited to rotation; the movement is uniaxial, and in the longitudinal axis of the bones. Also called *trochoid joint.*

rotation j. A lateral ginglymus.

saddle j. One in which the opposing surfaces are reciprocally concavo-convex.

joint body. See *joint mouse.*

joint fu'sion. See *arthrodesis.*

joint-ill. A pyosepticemia of newborn animals resulting from an infection of the navel, characteristically accompanied by suppurative arthritis.

joint mouse. A small loose body within joint, frequently calcified, derived from synovial membrane, organized fibrin fragments of articular cartilage, or arthritic osteophytes. Also called *joint body.*

Jolly, Friedrich (1844–1904). German neurologist who described reaction, said to occur in certain amyotrophies, in which the contractility of muscle which has been exhausted by faradism can still be excited by the influence of the will; inversely, when voluntary movements are impossible, the muscle can contract on faradization; called *Jolly's reaction.*

Jolly, Justin Marie Jules [*French histologist*, 1870–]. Described nuclear bodies, probably detritus from the nuclei, found in erythrocytes. Called *Jolly bodies, Howell-Jolly bodies.*

Jones, Robert [*English orthopedic surgeon*, 1858–1933]. Pioneer in tendon transplanting and bone grafting. Devised many orthopedic appliances, among them modification of the Thomas splint, designed for fractures of the humerus, called *Jones splint.* See also Jones position.

Jones, Thomas Wharton [*Scottish ophthalmologist*, 1808–91]. Remembered for his operation for the relief of ectropion, in which he made V incision, closing it in the shape of Y.

Jones test. See Boerner, Jones, and Lukens *test.*

Jonnesco. See *Ionescu.*

Jorissenne, Gustave [*Belgian physician*, b. 1846]. Described sign of early pregnancy: the pulse rate is not increased when the patient changes from the horizontal to the erect position. Called *Jorissenne's sign.*

Joseph, Jacques [*German surgeon*, 1865–1934]. Made important contributions to the development of plastic surgery. Introduced an operation for complete reconstruction of the ear by implanting an ivory ear covered by a skin flap.

Joslin, Elliott Proctor [*American physician*, 1869–]. Known for his investigations into the cause and treatment of diabetes mellitus.

joule (jowl, jōōl) [after James Prescott *Joule*, English physicist, 1818–89]. A unit of energy equivalent to the energy supplied by a power of 1 watt operating for 1 second. Symbol, J

judg'ment [L. *judex* judge]. The capacity to judge the ability to draw correct conclusions from the material acquired by experience.

ju de. See *jugum*.

ju gal [L. *jugum*, yoke]. 1. Connecting or uniting, as by a yoke. 2 Pertaining to the zygoma, as the jugal point.

j. point. The craniometric point which is situated at the angle that the posterior border of the frontosphenoidal process of the zygoma makes with the superior border of its temporal process.

ju'glans (jew glanz) [L., walnut] The dried inner bark from the roots of *Juglans cinera*. The fluidextract is used as a cathartic and antiperiodic. Also called *butternut bark*.

ju'glone. $C_{10}H_6O_3$; 3-hydroxy 1,4-naphthoquinone, obtained from various species of *Juglans* (the walnut trees); a yellow crystalline substance, slightly soluble in hot water antifungal activity is claimed for it.

jug'u la (jug yoo lur jōōg'yoo lur) [L. *jugulum*, collarbone]. Pertaining to the neck above the clavicle, as the jugular vein.

jug'u lar The internal jugular vein. See Table of Veins in the Appendix.

juice [L. *jus*, broth] 1. The liquid contained in vegetable or animal tissues. 2. Any of the secretions of the body

gastric j. The secretion of the glands of the stomach; a clear colorless liquid, having an acid reaction, and a specific gravity of about 1 006, and containing about 0.5% of solid matter It contains hydrochloric acid, pepsin, rennin, and mucin.

intestinal j. The secretion of the intestinal glands, a pale yellow fluid, alkaline in reaction, having a specific gravity of 1 001 and possessing diastasic and proteolytic properties It also, to a certain extent, emulsifies and decomposes fats.

pancreatic j The secretion of the pancreas; thick, transparent, colorless, odorless fluid, of salty taste and strongly alkaline, containing proteolytic, lipolytic, and amylolytic enzymes.

ju jit su, jiu jit'su [Jap]. A Japanese method of physical training used also as a system of self-defense without weapons. The opponent's own weight is used to overthrow him Syn *judo*

ju'jube [F from G *zizyphon*, jujube]. The fruit of the jujube tree, *Zizyphus jujuba*, used for throat irrigation in the form of a lozenge or syrup.

j. paste. A paste containing the pulp of jujubes and used as a demulcent sialagogue. It is now made of gum arabic or of gelatin, variously flavored.

Jukes. A fictitious name given to the descendants of certain sisters in a study of the occurrence among them of crime, immorality pauperism, and disease in relation to heredity

J kes u it. See Bourquin-Sherman *unit*.

j men tous [L. *jumentum*, beast of burden] Similar to that of a horse applied to the odor of urine.

junc'tion [L. *junctio*, from *jungere*, to join]. The point or line of union of two parts; juncture interface.

cementoenamel j. That between the enamel and the cementum of a tooth.

dentinocemental j The interface between the dentin and the cementum in the root of a tooth.

dentinoenamel j. The interface between the enamel and dentin in the crown of a tooth.

dermoepidermal j. The site of a thin wavy membrane separating the basal cells of the epidermis from the underlying collagen fibrils of the dermis demonstrated by the periodic acid Schiff stain and electron microscopy

mucocutaneous j The transition from skin to mucous membrane at the body orifices.

mucogi gival j. The scalloped line between the gingiva and the alveolar mucosa.

myoneural j. The point of junction of a motor nerve with the muscle which it innervates also called *neuromuscular j*

sclerocorneal j. The boundary between the white, opaque sclera and the transparent cornea in the eye.

ureteropelvic j. The point at which the renal pelvis becomes the ureter proper the upper isthmus of Schwalbe.

junc tu're [L.]. 1. An articulation or suture of bones. 2. A junction, as of tendons.

June cold. That type of hay fever caused by sensitivity to grass pollen. Syn., *hay fever*

Jung, Carl Gustav (1875–) Swiss psychologist and psychiatrist; a pioneer in analytic psychology He regarded the libido not as an expression of the sex instinct but as the will to live; he classified individuals as either extroverts or introverts, and made comparative and historical researches concerning the nature of the unconscious mind. See feeling-type, intuitional-type, sensational-type, thinking-type *personality*

jun'gle ra tion (rash un, ray'shun) See under *ration*.

jung'l rot. Any cutaneous disturbance caused or induced by a tropic-like climate most often cutaneous bacterial and mycotic infections lay term.

ju'ni per [L. *juniperus*] (*juniperus*) 1 The fruit of *Juniperus communis*, containing a volatile oil, resin, and fixed oil. 2. Any evergreen shrub or tree of the genus *Juniperus*.

j. oil (*oleum juniperi*) The volatile oil from the fruit of *J communis*. A stimulant in chronic genitourinary disorders. Has been used as a diuretic

j. tar See *cade oil*.

junk [perhaps from L *juncus*, bulrush]. A quilted cushion forming a sling in which to suspend fractured limb *Obs.*

Junod, Victor Théodore [*French physician*, 1809–81] Invented a device, now obsolete, for producing passive congestion. *Junod's boot* consisted of a boot-shaped case enclosing the leg so that air could be removed from around the part.

ju"ris pru'dence [L. *jurisprudentia*, from *jus*, law *prudentia*, skill]. The science of law its interpretation and application.

medical j. Legal medicine.

ju'ry [L. *jurare*, to swear]. A body of adult persons chosen according to law to attend a judicial tribunal and to determine the true verdict upon a matter being tried or inquired into

coroner's j. That jury which attends a coroner's inquest, to determine the cause of a death.

j. of i quest. A coroner's jury

jury mast. An iron rod fixed in a plaster jacket; used to support the head in disease or fracture of the cervical spine.

Juster's reflex. See under *reflex.*

jus"to ma'jor [L.]. Greater than normal, larger in all dimensions than normal; applied t pelvis.

jus to mi'nor [L.]. Abnormally small in all dimensions: said of pelvis.

jute [Bengali *jhŭ*, from Skr *jūṭa*, matted hair]. The bast fiber of several species of the genus *Corchorus*, grown chiefly in India and Ceylon used in absorbent dressings.

ju've nile (jew'vi-nil, -nyle) [L. *juvenilis*, young]. Young; pertaining to youth or childhood. —**juvenile,** *n.*

jux"ta- [L.]. A combining form denoting nearness, *situated near*

jux"ta-ar tic'u lar Near a joint.

jux"ta glo mer'u lar [*juxta*, dim. from L. *glomus*, ball]. 1 Next to the glomerulus. 2. Referring to epithelioid cells near the glomerulus of the kidney

jux"ta po-si'tion [*juxta*, L. *positio*, from *ponere* to place]. 1. Situation adjacent to another; close relationship; apposition. 2. The act of placing near

jux"ta py lor'ic (juck stuh-pye-lor' ik, -pi-lor'ick) [*juxta*; G *pylōros*, gatekeeper]. Near the pylorus.

K

K The chemical symbol for potassium (*kalium*)

K_a Symbol for the dissociation constant of an acid.

K_b Symbol for the dissociation constant of base.

Kader Bronislaw [*Polish surgeon*, 1863–1937]. Originated an operation for gastrostomy in which plait is formed in the anterior gastric wall through which catheter passes, the plait being infolded by several rows of interrupted Lembert sutures.

Kaes, Theodor [*German neurologist*, 1852–1913]. Described layer of fibers parallel to the tangential fibers in the cerebral cortex called *Kaes layer Bekhterev fibers.*

Kaf'fir pox. A mild form of smallpox. Syn., *alastrim.*

Kahler Otto [*Austrian physician*, 1849–93]. Described multiple myeloma (1889) *Kahler' law* states that the ascending branches of the posterior spinal nerve roots, *after* entering the cord, pass successively from the root zone toward the mesial plane.

Kahn, Reuben Leon [*American bacteriologist* 1887]. Introduced flocculation test for the diagnosis of syphilis (1923) The *Kah test* requires an ether-purified alcohol extract of beef-heart muscle and cholesterol which, when correctly mixed with physiological NaCl solution, results in suspension of unstable aggregates. When this is added in proper ratio to inactivated serum and shaken, the aggregates disperse, remaining so in the case of negative serum. When positive serum is used, new stable aggregates or floccuti are formed.

Kahn' method. See Leiboff and Kahn *method.*

kai"no-pho'bi- (kyh no-fo'bee-uh) [G *kainos*, new; *phobos*, fear]. A morbid fear of anything new —**kai"nophobe** *n.*

Kaiserli g's method. See under *method.*

kak"er ga si a. See *mercrgasia.*

kak'ke. See *beriberi*

kak o-. See *caco-*

kak -dyl. See *cacodyl*

kak or-rhaph"i-o pho'bi-a [G *kakorrephia*, contrivance of ill *phobos*, fear]. Morbid fear of failure

ka"la-a zar' (kah'lah-ah-zahr' -ah zahr kal ah-y zar -az'ar) Visceral leishmaniasis: there are two types the Indian type which affects older children and adults in India, Indo-China, and Sudan, and the Mediterranean type which attacks infants in countries bordering the Mediterranean. *Leishmania donovani* is the etiologic agent of both types. The chief lesion is marked by hyperplasia of the cells of the reticuloendothelial system, particularly of the spleen and liver continued irregular fever emaciation, anemia, and leukopenia.

ka-le mi-a, kal"i-e mi a. See *potassemia.*

ka-lim'e ter See *alkalimeter* —**kalimetry** *n.*

ka'li um. Potassium.

Kal'li kak. A fictitious name given to the descendants of Revolutionary War soldier in study of the occurrence among them of feeblemindedness and immorality and the bearing of these on heredity

kal"li kre'in. A principle obtained from the pancreas, having peripheral modulating action used for treatment of peripheral vascular disorders, angina pectoris, hypertension, etc.

ka ma'la (kuh-may'luh, kam uh luh) **ka ma'la** (kuh-mee'luh) [Skr]. Rottlera. The glands and hairs from the capsules of *Mallotus philippinensis* (kamala tree) found in Asia, Africa, and Australia. Purgative and anthelmintic used for the expulsion of ascarid worms and tapeworms.

Kammerer Frederic [*American surgeon*, 1856–1928]. Introduced, coincidently with Battle, vertical abdominal incision in which the rectus sheath is opened, and medial retraction made, followed by vertical incision of the posterior rectus sheath and peritoneum for exposure of the abdominal cavity The *Kammerer-Battle incision* is useful when exploration is desired.

Kanavel, Allen Buckner [*American surgeon*, 1874–1938]. Contributed to the knowledge of infections of the hand and to the development of surgery of the hand. Devised technic for draining the thenar space by incision of the dorsal surface of the thumb-index web. Advocated full-thickness grafts, with all fat removed, for the relief of Dupuytren contracture, called *Kanavel' method.* See also Kanavel *sign.*

Kan da-har sore. See *oriental sore.*

kan ga-roo ten don. A tendon obtained from the tail of the kangaroo used for surgical ligatures and sutures

kan gri burn. A squamous epithelioma frequent on the skin of the abdomen and thighs of the natives of Kashmir and attributed to the irritation caused by charcoal heaters worn beneath the clothing in cold weather Also called *kangri cancer*

ka o-lin [F from the Chinese, high hill]. A native, hydrated aluminum silicate, powdered and freed from gritty particles by elutriation; occurs as a soft, white or yellowish white powder or as lumps; it is insol ble in water cold dilute acids, and solutions of the alkali hydroxides Externally it is used for its protective influence and for its power of absorbing moisture. As dusting powder it is sometimes pplied t freely discharging ulcers and similar affections. Internally it acts as an adsorptive in the treatment of various forms of enteritis. Do-e 15–60 Gm. (½–2 oz.)

k. cataplasm (*cataplasma kaolini*) Contains kaolin 565 Gm., boric acid 45 Gm., thymol 0.5 Gm., methyl salicylate 2 cc., peppermint oil 0.5 cc., glycerin 387 Gm. Used as carrier of heat in treating various local inflammations.

ka o-li no sis [*kaolin*, G *-ōsis*, condition]. Chronic inflammation of the lungs, occurring in workers in kaolin; form of benign pneumonoconiosis.

kaomagma. A proprietary preparation containing aluminum hydroxide gel and kaolin. Used in intestinal disorders.

kaomin. A proprietary preparation containing bismuth subcarbonate, kaolin, magnesium hydroxide, sucrose, and vegetable mucilage. Used in intestinal disorders.

kaopectate. A proprietary preparation containing kaolin and pectin in an aromatic and carminative vehicle. Used in intestinal disorders.

Kaposi, Moritz [*Hungarian dermatologist*, 1837 1902]. Described multiple idiopathic hemorrhagic sarcoma (1872) called *Kaposi's sarcoma*, and xeroderma pigmentosum (1882) called *Kaposi's disease*. Described lymphodermia perniciosa (1885) and impetigo herpetiformis (1887)

kap pa fac'tor See under *factor*

kappaxin. Trade-mark for brand of menadione.

Kappeler Ott [*German surgeon*, 1841 1909]. Described his operation for cholecystenterostomy performed in one stage. In *Kappeler operation*, the gallbladder is emptied by puncture with trocar the margins of the opening being united, after enlargement, by double row of sutures to the highest portion of the jejunum.

Kappers, Cornelius Ubbo Ariens (1877 1946) Dutch neuroanatomist, who made important contributions, with Edinger to the concepts of the neo- archi- and paleo-subdivisions of the parts of the brain. His first paper on neurobiotaxis (1907) stated theory which drew attention to certain general principles in comparati euroan tomy

ka ra ya gum (ka rah yuh, kar y-uh) An exudate from trees of the *Sterculia* or *Cochlospermum* species; with water it swells to form bulky mass. This hydrophili property is tilized in industry and in pharmaceutical manufacturing I medicine, karaya gum is sometimes employed as mechanical laxative. Dose, heaping teaspoonful. Also called *sterculia gum*.

Karell diet. See under *diet*.

Karrer Paul (1889-) Swiss chemist noted for studies on the constitution of carotenoids, flavins, and vitamins A and B. Nobel laureate in chemistry (1938)

Karr's method. See under *method*.

ka"ry-en chy ma (care ree eng'ki-muh, -en'ki) [G. *karyon*, kernel; *egchyma*, instillation]. The clear ground substance occupying the meshes of the uclear reticulum. Also called *karyolymph*, *nuclear sap*.

ka ry-o- ka ry- [*karyon*]. A combining form meaning ut or *kernel*, used especially in biology to denote *relation to the karyon* or *ucleus of cell*.

ka ry-o-blast" [*karyon*, G *blastos*, germ]. The most immature cell of the erythrocyte series. Also called *megaloblast*, *proerythroblast*.

ka ry o-chrome [*karyon*, G. *chrōma*, color]. 1 A nerve cell which has high ucleocytoplasmic ratio. 2. A nerve cell which the nucleus stains intensely

ka ry-oc'la-sis. Old term for *karyorrhexis*

ka ry-o-cyte See *normoblast*

ka ry-og'a-my [*karyon*, G *gamos*, marriage] A conjugation of cells characterized by a f on of the uclei —**karyogam'ic**, *adj*

ka ry-o ki ne sis (care ee ki nee sis, kigh nee sis) [*karyon*, G *kinēsis*, motion]. Mitosis or indirect cell division; especially the nuclear transformations, as opposed to *cytokinesis*. Also called *karyomitosis*. —**karyokinet'ic**, *adj*

ka ry o-l 'bic [*karyon*, G *lobos* lobe]. Concerning lobated nucleus. *O T*

ka'ry o-lymph" See *karyenchyma*.

ka ry ol'y-sis [*karyon*, G *lysis*, loosing]. The dissolution of the nucleus of the cell. —**karyolyt'ic**, *adj*

ka ry o mere [*karyon*, G. *meros*, part]. A segment of chromosome. See *chromomere*.

ka ry-o-mi"cro-so ma (migh"kro so muh, -mick ro so muh) [*karyon*, G. *mikros*, small; *sōma*, body]. Old term for the chromatin particles of the ucleus

ka ry o-mi'tome [*karyon*, G. *mitos*, thread]. Old term for the mitome threads f the nucleus. See *mitome*.

ka ry-o-mi to sis (care ee o-mi to sis, -migh to sis) [*karyon*, *mitos*; G. *-ōsis*, condition]. Karyokinesis.

ka ry on [G.]. Old term for the nucleus of cell.

ka ry-o phage [*karyon*, G *phagein*, to eat]. An intercellular parasite which destroys the nucleus of the infected cell.

ka ry-o-plasm [*karyon*, G *plasma*, anything formed]. Old term for nucleoplasm.

ka ry-or rhex'is [*karyon*, G. *rhēxis*, breaking] Fragmentation or splitting up of ucleus into number of pieces which become scattered in the cytoplasm.

ka ry o-some kar"y-o-so me [*karyon*, G *sōma*, body]. 1 A chromatin ucleolus or false nucleolus, by differentiation from true nucleolus or plasmosome. 2. A large, deeply staining body in the nucleus of many Protista, associated with the chromosomes or other structures.

ka ry-os'ta-sis [*karyon*, G *stasis*, standing]. The stage of the nucleus between mitotic divisions. Also called *interkinesis*, *interphase*, *resting nucleus*

kar"y the ca. Nuclear membrane.

kar"y o-type The total of characteristics, including umber form, and size, of hromosomes and their grouping in cell ucleus; it is characteristic of an individual, race, species, genus, or larger grouping.

Ka sai A syndrome seen in the Belgian Congo, characterized by depigmentation of the skin, anemia, edema, and digestive disturbances, and attributed to iron deficiency also called *Belgian Congo anemia*.

Kasanin-Vigotsky test. See under *test*.

Kashida' sign. See under *sign*.

kata-. See *cata-*

kat did'y mus [G *kata*, down; *didymos*, twin]. Duplication of th superior pole, as in diprosopus or dicephalism. Has been incorrectly used for inferior duplicity Also called *superior duplicity*

kat" pla si a. See *cataplasia*.

kat" ther mom'e-ter [*kata*, G. *thermē*, heat; *metron*, measure]. A double-bulbed, alcohol thermometer graduated from 100°–90° F hich records how quickly air is cooling, thus permitting an estimate of evaporation of moisture from the body

kat"a to ni a. See *catatonia*.

Kat" ya'ma (cat uh-yah muh, kah tah-) [Jap]. A genus of amphibious snails.

K. formosana. A species found in Formosa one of the intermediate hosts of *Schistosoma japonicum*.

K. nosophora. A species found in Japan and along the coast of China an intermediat host of *Schistosoma japonicum*.

ka thep sin. See *cathepsin*.

kath"i-so pho'bi [G *kathizein*, sitting; *phobos*, fear] Morbid fear of sitting down.

kath'ode. See *cathode*.

kat'i'on. See *cation*.

Katzman and Doisy method. See under *method*.

kau'ri (kou ree) [Maori]. The fossilized resinous exudate from the Kauri pine; used largely in the arts. A solution in alcohol has been used as substitute for collodion in treating wounds.

ka'va (kah vah, ka uh) ka"va-ka va [Maori kawa, bitter]. 1. An intoxicating beverage prepared in the Hawaiian Islands from the root of *Piper methysticum*. 2. The root of *Piper methysticum*, containing resin, kawine, and other constituents. The resin is motor depressant.

ka'wine (kah ween, -win) [kava]. A resin occurring in kava.

kaysquinone. Trade-mark for brand of menadione.

Kayser Bernhard [*German ophthalmologist*, 1869–]. Described sign of hepatolenticular degeneration. See Kayser-Fleischer *ring*.

kcal. Kilo calorie occasional usage.

Keefer Chester Scott [*American physician*, 1897]. Known for his work on chemotherapy especially in connection with the production and distribution of penicillin and streptomycin during World War II.

Keegan, Denis Francis [*Irish surgeon*, 1840–1920]. Remembered for his operation, rhinoplasty according to the Indian method, the flap being derived from the side of the forehead.

Keeler Leonarde [*American psychologist and criminologist*, 1903–1949]. Invented the lie detector called *Keeler' lie detector Keeler' polygraph*.

Keeley Leslie E. [*American physician*, 1832–1900]. Introduced method for treating alcoholics by means of secret remedy said to contain strychnine and gold chloride. Called *Keeley* or *gold cure*.

Keen, William Williams [*American surgeon*, 1837–1932]. Contributed to th development of neurosurgery With Silas Weir Mitchell and George Read Morehouse, made an important study of injuries of the peripheral nerves. Removed meningioma (1888) and successfully tapped the ventricles of the brain (1889) Devised an operation of linear craniotomy called *Keen operation*. Called attention to the surgical complications of typhoid fever (1898)

keep er [AS. *cépan*]. The armature of horseshoe magnet.

kef'i A beverage prepared, especially in certain European countries, from the milk of cows, sheep, or goats through fermentation by kefir grains, these containing unidentified species of yeast or bacterial organisms.

Kehr Hans [*German surgeon*, 1862–1916]. Introduced an operation for the establishment of a direct connection between the smaller hepatic ducts and the alimentary tract. A segment of liver is resected so that several moderate-sized bile ducts are opened; this area is then sutured, preferably to the duodenum. Called *Kehr' operation*. See also Kehr *sign*.

Kehrer Ferdinand Adalbert (1883–) German neurologist who discovered the pain reflex in increased intracranial pressure called *auriculopalpebral reflex*, and first described pupillotonic pseudotabes, called *Adie' syndrome or pupil*.

Kehrer Ferdinand Adolph [*German gynecologist and obstetrician*, 1837 1914]. Improved the classic technic of Cesarean section by opening the uterus at the level of the internal os by transverse incision; called *Kehrer operation*. Introduced an operation for depressed nipple in which crescent of skin is excised on either side of the nipple to permit cicatricial contraction.

Keith, Sir Arthur (1866–1955) Scottish anthropologist and anatomist who, with Flack, discovered the sinoatrial node, called *node of Keith and Flack*.

Keith, Norman Macdonald [*American physician*, 1885–]. With Rowntree and Geraghty introduced method of estimating the blood and plasma volume (1915); the method includes the intravenous injection of dye.

kelene. A trade-mark for brand of ethyl chloride.

ke'lis. 1 Localized scleroderma. 2. See *keloid*.

Keller's micromethod. See under *micromethod*.

Keller-Blake splint. See under *splint*.

Kelley William Joseph [*American pediatrician*, 1908–]. Described sign of pleural effusion in children, which consists of preference for lying upon the back or propped up high in bed and voidance of bending toward, or pressing upon, the affected side.

kel'lin. Khellin.

Kelling's test. See under *test*.

Kelly Howard Atwood [*American surgeon*, 1858–1943]. Pioneer in the surgical treatment of uterine displacement. Catheterized the ureters in the male (1898) Devised an operation for ureteroureteral anastomosis in which catheter served temporarily as splint. Designed rectal and vesical specula, called *Kelly specula*, and special artery forceps, called *Kelly' forceps*. Introduced wax-tipped bougies for locating stones in the urinary tract (1901)

ke'loid [G. *kēlis*, spot, *eidos*, form]. A fibrous hyperplasia usually at the site of scar elevated, rounded, white, sometimes pink, firm and with ill-defined borders. There is predilection for the upper trunk and face, and the condition is observed especially in young adults, females, and Negroes. Composed of parallel bundles of hyalinized connective tissue covered by thin epidermis with atrophic interpapillary epithelium.

kelp [ME. *culp*]. 1. A common name for group of large brown algae growing in the cool ocean waters. 2. Burnt seaweed from which potassium salts and iodine formerly were prepared.

Kelso, Richard Edward [*American pathologist*, 1910–]. Introduced test for pregnancy The *Kelso test* is modification of the Aschheim-Zondek test.

kel'vin [after William Thomson, Lord *Kelvin*, British physicist, 1824–1907]. A commercial unit of electricity 1000 watt-hours.

Kel'vin scale. An absolute scale of temperature which has its zero at −273° C.

kemithal. Trade-mark (British) for 5-allyl-5-(Δ^2-cyclohexenyl)-2-thiobarbituric acid, the sodium salt of which is used intravenously as an anesthetic.

Kendall, Edward Calvin [*American physiologist and chemist*, 1886–]. Isolated thyroxin (1914) and adrenal cortical hormones (1936); prepared Compound A by partial synthesis (1944) collaborated in the preparation of cortisone (Compound E) (1948) With Hench, Slocumb, and Polley first showed the influence of cortisone in rheumati and related diseases (1949) Nobel laureate with Philip S. Hench and Tadeus Reichstein (1950)

ke"nes-the'si-a. See *cenesthesia*.

Kennedy Foster [*American neurologist*, 1884–]. Described syndrome of unilateral optic atrophy and contralateral choking of the optic nerve with anosmia. *Kennedy' syndrome* is due usually to tumor underlying the frontal lobe of the cerebrum.

Kennedy's method. See Elvehjem and Kennedy *method*.

Kenny Elizabeth [*Australian nurse in the United States*, 1886–1952]. Introduced the *Kenny treatment* for anterior poliomyelitis. In the acute stage the affected muscles are treated with hot, moist

pecia. Passive exercise is started very early and is followed as soon as possible by active exercise.

ken o-, ken- [G *kenos*, empty]. A combining form meaning *empty*.

ken o-ph 'bi [*kenos*; G *phobos*, fear]. A morbid fear of large, empty spaces.

ken"o-tox'in [*kenos*; G. *toxikon*, poison] A hypothetical poisonous substance developed in the tissues during their activity which has been said to be responsible for their fatigue and for sleep.

Kent, bundle of. See under *bundle*.

Kent mental test. See under *test*.

keph' lin [G *kephalē*, head]. Cephalin.

keph'i keph yr See *kefir*

kephrine hydrochloride. Trade-mark for methyl-amino-aceto-catechol hydrochloride. The substance is white powder used as local hemostatic.

ker"a phyl'lo-cele [G *keras*, horn *phyllon*, leaf *kēlē*, tumor] A horny tumor on the inner side of the wall of horse hoof.

ker"a phyl'lous, ke raph yl lous [*keras*; *phyllon*]. *I veterinary medicine*, composed of horny layers.

ker'a sin. A cerebroside separated from the brain; contains sphingosine, galactose, and fatty cid.

ker"a tal'gi [*keras*; G *algos*, pain]. Pain in the cornea.

ker"a-tec ta si-a (kerr uh"teck'tay'shuh) [*keras*; G. *ektasis* extension] A protrusion of the cornea.

ker"a tec to-my [*keras*; G *ektomē*, excision] Surgical excision of part of the cornea.

ke rat'ic [*keras*]. Horny

ker'a tin [*keras*] Any of group of albuminoid or scleroproteins characteristic of horny tissues, hair nails, feathers, etc., insol bl in protein solvents, and having high content of sulfur Two main groups are distinguished eukeratins, which are not digested by common proteolytic enzymes, and pseudokeratins, which are partly digested. Both contai varied amino acids cystine and arginine generally predominate.

ker" ti i za'tion [*keras*]. 1 Development of horny quality in tissue. 2. Process whereby keratin is formed. 3. Coating of pills with keratin.

ke rat'i nous [*keras*]. 1 Relating to keratin 2. Horny

kér' tite en ban"de lette See band-shaped *keratitis*

ker" ti'tis [*keras*; G *-itis*, inflammation] Inflammation of the cornea.

nular k. An inflammation around the periphery of the cornea. Also called *marginal k.*

band-shaped k. An inflammation occurring in the f rm of an opaque transverse band across the cornea opposite the palpebral fissure; sometimes seen in patients with rheumatoid arthritis, it may result from prolonged uveitis Syn *kératite en bandelette*

dendritic k. A superficial form attributed to the virus of herpes simplex characterized by line of infiltration of the corneal tissue near the surface developing later into an arborescent ulcer Also called *furrow k* *herpetic k* *k arborescens*, *mycotic k*

exposure k. Inflammation of the cornea due t trauma from excessive drying or from foreign particles.

fascicula k. A form of phlyctenular keratitis marked by the formation of fascicle of blood vessels.

gonococcic k. That caused by the gonococcus.

interstitial k. A form of keratitis in hich the entire cornea is invested with diffuse haziness, almost complet l hiding the ri The surface of the cornea has ground-glass ppearance Later blood vessel form in the superficial layers of the cornea from ciliary injection, and produce dull-red color or the so-called salmon patch. Seen most frequently in children between 5 and 15, resulting from congenital syphilis Syn., *syphilitic k.*

k. bullosa. The formation of large or small blebs upon the cornea in cases of iridocyclitis, glaucoma, interstitial keratitis, or senile guttate keratitis

k. disciformis. A localized subacute nonsuppurative inflammation of the parenchyma charac terized by discoid opacity due to infection by an agent of low virulence and usually following traum or virus infection.

k. hypopyon. That accompanied by the formation of pus. Also called *serpiginous k.*

k. neuroparalytica. Keratitis following lesion of the phthalmic erve, caused by mechanical irritation and drying of the cornea. Syn *trophic k.*

k. parenchymatosa anaphylactica. An interstitial keratitis on an allergic basis.

k. punctata. The presence of white blood cells on the back of Descemet membrane. Not primary inflammation of Descemet membrane, since the cells derive from the ciliary body as result of its inflammation. Includes two varieties, **keratitis punctata leprosa** (that caused by leprosy) and **keratitis punctata profunda** (that of syphiliti origin) Syn., *descemetitis*.

k. purulenta. Old term for keratitis hypopyon.

k. pustuliformis profu da. That accompanied by the form tion of deep pustules due to acquired syphilis. Syn., *k. punctata profunda*.

k. rosacea. The occurrence of small, sterile infiltrates at th periphery of the cornea, which are approached but ot invaded by small blood vessels. They are most frequently seen unaccompanied by acne rosacea, but are most severe in this connection

lagophthalmic k. That due to the failure of the eyelids to close completely form of exposure keratitis.

lattice k. See familial corneal *dystrophy*

oyster-shucker' k. A form due to corneal traumatism from pieces of embedded oyster shell

parenchymatous k. I terstitial *k.*

phlyctenular k. See phlyctenular *conjunctivitis*

reaper's k. That due to irritation from grain wns.

sclerosing k. An interstitial form associated with scleritis

scrofulous k. See phlyctenular *k.*

superficial k. That affecting primarily the epithelium, Bowma membrane, and superficial lamellae of the substantia propria.

syphilitic k. See interstitial *k.*

trachomatous k. See *pannus*.

traumatic k. That consequent upon wounds or injury of the cornea.

trophic k. See *k* neuroparalytica.

tuberculous k. That associated with tuberculous infection.

xeroti k. See *keratomalacia*.

ker' to- kerat [*keras*] 1 A combining form meaning *horn* or denoting *horny tissue* 2 *I anatomy medicine*, nd *surgery* combining form denoting *th cornea*

ker to-ac an tho ma. Usually single epidermal nodule of 2 m or less in diameter located on exposed skin, characterized by acanthosis and increased keratin formation It occurs in the upper age groups and in oil and tar workers Syn *molluscum sebaceum*

ker" t an gi-o ma (kerr uh-to an"jee muh) See *angiokeratoma*.

ker' to-cele [*keras*; G *kēlē* hernia]. A hernia of Descemet membrane through the corneal descemetocele.

ker"a·to·cen·te'sis [*kerat-*; G. *kentēsis*, pricking]. Corneal puncture.

ker"a·to·chro"ma·to'sis [*kerat-*; G. *chrōma*, color; *-ōsis*, increase]. Discoloration of the cornea.

ker"a·to·con"junc"ti·vi'tis [*kerat-*; LL. *conjunctivus*, connective; G. *-itis*, inflammation]. Simultaneous inflammation of the cornea and the conjunctiva.

epidemic k. A virus infection, usually affecting adults; is epidemic and self-limited.

k. sicca. That due to dryness or excess secretion of tenacious mucoid discharge.

phlyctenular k. See phlyctenular *keratitis*.

ker"a·to·co'nus [*kerat-*; G. *kōnos*, cone]. A conic protrusion of the cornea.

ker"a·to·der'ma [*kerat-*; G. *derma*, skin]. A horny condition of the skin, especially of the palms and soles.

k. blennorrhagicum. See *keratosis* blennorrhagica.

k. climactericum. A circumscribed hyperkeratosis of the palms and soles occurring in women *during the menopause, and accompanied chiefly* by obesity and hypertension; also called *Haxthausen's disease*.

k. punctatum. See *keratosis* punctata.

ker"a·to·der"mat·o·cele. See *keratocele*.

ker"a·to·der'mi·a. See *keratoderma*.

ker"a·to·gen'e·sis [*kerat-*; G. *genesis*, production]. Development of horny growths.

ker"a·to·glo'bus [*kerat-*; L. *globus*, ball]. A globular protrusion of the cornea.

ker"a·to·hel·co'sis [*kerat-*; G. *helkōsis*, ulceration]. Ulceration of the cornea.

ker"a·to·hy'a·lin (kerr uh-to-high uh-lin) [*kerat-*; G. *hyalos*, glass]. The substance of the granules in the stratum granulosum of keratinized stratified squamous epithelium; an early phase in the *formation of keratin.* **—keratohy'aline**, *adj*

ker'a·toid [*kerat-*; G. *eidos*, form]. Hornlike.

ker"a·to·ir'i·do·scope (-irr'i-do-scope, -eye-ri-do-) [*kerat-*; G. *iris*, iris; *skopein*, to examine]. An apparatus for examining the cornea and iris.

ker"a·to·i·ri'tis (kerr"uh-to-eye-rye'tis, -i-rye-tis) [*kerat-*; *iris*; G. *-itis*, inflammation]. Combined in*flammation of the cornea and the iris.*

ker"a·to·leu·ko'ma (kerr"uh-to-lew-ko'muh) [*kerat-*; G. *leukōma*, white spot]. A leukoma or whitish opacity of the cornea.

ker"a·tol'y·sis [*kerat-*; G. *lysis*, loosing]. 1. Exfoliation of the epidermis. 2. A congenital anomaly in which the skin is shed periodically. **—keratolyt'ic**, *adj*

k. neonatorum. See *dermatitis exfoliativa neonatorum*.

ker"a·to·lyt'ic [*kerat-*; *lysis*]. An agent which causes exfoliation of the epidermis to a greater degree than that which occurs normally.

ker"a·to'ma. See *callosities*.

k. sulcatum plantarum. A pitted thickening of the soles seen in barefooted native adults in the tropics. Causative factors are obscure.

ker"a·to·ma·la'ci·a (kerr"uh-to-ma-lay'shee-uh, -see-uh) [*kerat-*; G. *malakia*, softness]. A softening of the cornea. Syn., *xerotic keratitis*.

ker'a·tome [*kerat-*; G. *tomos*, cutting]. A knife with trowel-like blade, for incising the cornea in the operation of *iridectomy*.

ker"a·tom'e·ter [*kerat-*; G. *metron*, measure]. An instrument for measuring the curves of the cornea. **—keratometry**, *n.*

ker"a·to·my·co'sis (kerr"uh-to-migh-ko'sis) [*kerat-*; G. *mykēs*, fungus; *-ōsis*, condition]. 1. A fungoid growth in or on the cornea. 2. Tinea nigra, occasional usage. Syn., *k. nigricans palmaris*.

ker"a·to·nyx'is [*kerat-*; G. *nyxis*, pricking]. Puncture of the cornea, especially the needling of a soft cataract by puncture of the cornea.

ker'a·to·plas"ty [*kerat-*; G. *plassein*, to form]. Plastic operation upon the cornea, especially the transplantation of a portion of cornea. **—keratoplas'tic**, *adj*

lamellar k. That in which the more superficial lamellae are replaced.

penetrating k. That in which the entire thickness of a portion of the cornea is replaced.

tectonic k. Corneal transplantation for repairing fistulating or ectatic corneal cicatrix, with or without incarceration of the iris.

ker"a·tor·rhex'is [*kerat-*; G. *rhēxis*, a breaking]. Rupture of the cornea, due to ulceration or traumatism.

ker"a·to·scle·ri'tis [*kerat-*; G. *sklēros*, hard; *-itis*, inflammation]. Inflammation of the cornea and the sclera.

ker'a·to·scope [*kerat-*; G. *skopein*, to examine]. An instrument for examining the cornea and testing the symmetry of its meridians of curvature. Also *called Plácido's disk.*

ker"a·tos'co·py [*kerat-*; *skopein*]. Examination of the cornea with the keratoscope.

ker'a·tose [*kerat-*]. Horny.

ker"a·to'sis [*kerat-*; G. *-ōsis*, increase]. Any disease of the skin characterized by an overgrowth of the cornified epithelium.

arsenical k. A patchy keratosis occurring after long-continued ingestion of arsenic.

gonorrheal k. See *k.* blennorrhagica.

k. blennorrhagica. A disease characterized by horny growths, chiefly of the hands and feet, and occurring during the course of an attack of gonorrhea. Syn., *keratoderma blenorrhagica*, *gonorrheal k.*

k. follicularis. A disease characterized by horny *prominent projections occurring* about the hair follicles; they are firmly adherent and produce roughness. Also called *Darier's disease*, *psorospermosis*.

k. nigricans. See *acanthosis* nigricans.

k. palmari et plantaris. A marked, congenital thickening of the volar surfaces of the hands and *feet. This condition may be complicated with* painful fissures. Sometimes called *congenital palmoplantar k.*

k. pharyngeus. A rare affection in which there is a hornlike outgrowth (composed of horny desquamated epithelium) from the crypts of the tonsils.

k. pilaris. A chronic affection of the skin marked by hard, conical elevations in the pilosebaceous orifices on the arms and thighs.

k. punctata. Keratosis of the palms and soles, characterized by numerous minute, crateriform pits set in patches of thickening of the stratum corneum. Syn., *keratoderma punctatum*.

k. seborrheica. Nummular and flat lesions covered with greasy scales; occurs in older people. The lesions are superficial and seldom become malignant.

k. senilis. A patchy keratosis of the skin of old people; found chiefly on the face and dorsal surfaces of the hands and feet, or those surfaces exposed to wind and sun. Some lesions may develop into epitheliomas.

k. universalis congenita. *See ichthyosis congenita.*

ker"a·to·to'mus (kerr"uh-to-toh'mus, keh-rat-o-toh'mus). *See keratome.*

ker"a·tot'o·my [*kerat-*; G. *tomē*, a cutting]. Incision of the cornea.

delimiting k. Incision into the cornea at points outside the area of a serpiginous ulcer (Gifford's operation).

ke-rau no pho'bi a [G *keraunos*, thunderbolt; *phobos*, fear]. Morbid fear of lightning; common symptom in psychoneurotic patients.

Kerckring, Theodor [*German physician and anatomist in Holland*, 1640–93]. Described the circular folds of the small intestine called *Kerckring folds* or *valves*. Described an independent ossification center in the occipital bone at the posterior margin of the foramen magnum; called *Kerckring' ossicle*.

ke-rec'to-my See *keratectomy*.

ke ri-on cel'si. A type of dermatophytosis of the scalp or beard, with deep, boggy infiltration. Also called *tinea kerion*.

ker'mes (kur meez) [Ar *qirmiz*]. The dried bodies of an insect found on *Quercus coccifera*, contains purplish red coloring matter said to be the oldest dyestuff known; has been used in medicine.

ker nic ter us (kair-nick'tair-ōōs, kur-nick tub-rus. *See* Notes § 35) [Ger from *kern*, kernel; G *ikteros*, jaundice]. Biliary pigmentation of gray matter of central nervous system, especially basal ganglions, accompanied by degeneration of nerve cells occurring as a rare, usually fatal complication of icterus neonatorum commonly associated with erythroblastosis fetalis; also called *nuclear jaundice*, *nuclear icterus*.

Kernig's sign. See under *sign*.

Kernohan, James Watson (1897–) American pathologist who, with H. W. Woltman, described the cross syndrome.

ker' -cele [G *keras*, horn; *kēlē*, tumor]. In *veterinary medicine*, a horny tumor on the inner surface of the wall of a horse's hoof.

ker'o-sene alt. A liquid mixture of hydrocarbons distilled from petroleum; sometimes called *coal oil*.

Kerr's sign. See under *sign*.

ke'tene $H_2C{:}CO$. A colorless gas of penetrating odor forming acetic acid upon hydrolysis. It may be employed to effect acetylization of free amino and hydroxyl groups.

ke'to-, ket- [Ger *keton*]. In *chemistry*, combining form denoting *the presence of the ketone group*.

ke'to ac'id. Any compound containing both a ketone (—CO—) and a carboxyl (—COOH) group.

ke to-adip'ic ac'id. COOH.CO.CH₂.CH₂.CH₂.COOH; α-ketoadipic acid; an intermediate compound in the biochemical conversion of lysine to glutaric acid.

ke to-bemi'i-done $C_{15}H_{21}NO_2$; 4-(m-hydroxyphenyl) 1-methyl-4-piperidyl ethyl ketone, a narcotic related to morphine and causing true addiction; used experimentally as an analgesic.

ketochol. Trade-mark for a combination of the keto forms of the biliary acids in approximately the same proportions as found in normal human bile. The preparation is used in gallbladder disorders.

ke"to-cho-lan'ic ac'id (kee"to-ko-la 'ick). Cholic acid in which one or more of the secondary alcohol groups have been oxidized to ketone groups.

ke"to-gen -sis [*keton*, G. *genesis*, production]. The production of ketone, or acetone, bodies.

ke"to-glu tar'ic ac'id (kee"to-gloo-tarr'ick, -tahr'ick). COOH(CH₂)₂CO.COOH. A dibasic keto acid, an intermediate product in the metabolism of carbohydrates and proteins.

ke to-hep tose. A general term for monosaccharides consisting of a seven-carbon chain and containing a ketone group.

ke"to-hex ose. A general term for monosaccharides consisting of a six-carbon chain and containing a ketone group.

ke"to-hy drox"y-es trin (kee"to-high-drock"see-es'trin, -ess trin). See *estrone*.

ke tol. Any compound containing both a ketone (—CO—) group and an alcohol (—OH) group.

ke'tole. Indole.

ke-tol y-sis [*keton*, G *lysis*, a loosing]. The dissolution of ketone bodies. —**ketolyt'ic**, *adj.*

ke'tone. An organic compound derived by oxidation from a secondary alcohol; it contains the characterizing group =CO.

ke"to-ne mi a [*keton*, G *haima*, blood]. The presence of ketone bodies in the blood.

ke"to nu ri a [*keton*, G *ouron*, urine]. The presence of ketone bodies in the urine.

ke"to-pro pi on'ic ac'id. α-Ketopropionic acid; pyruvic acid.

ke"to-re-duc'tase (kee"to-ri-duck'tace, -taze). An enzyme occurring in muscle, liver, and kidney which converts diacetic acid into beta-oxybutyric acid.

ke'tose. A carbohydrate containing the ketone group =CO.

ke'to-side. Any glycoside that yields, on hydrolysis, a ketose.

ke-to sis [*keton*, G *-ōsis*, condition]. 1. A condition in which ketones are present in the body in excessive number. 2. The acidosis of diabetes.

k. threshold. The critical ratio at which ketone substances can be oxidized by the tissues as they are put forth by the liver. Ketosis occurs when the ketosis threshold has been passed and the liver is spilling out ketone substances faster than they can be oxidized by the tissues.

ke"to-ster'oid (kee"to-sterr oyd, -steer oyd, ki-tos ti-royd) [*keton*, G *stereos*, solid; *eidos*, form]. One of a group of neutral steroids possessing ketone substitution, which produces a characteristic red color with m-dinitrobenzene in alkaline solution. The ketosteroids are principally metabolites of adrenal cortical and gonadal steroids; also called *17-ketosteroids*.

ke-tox'ime. An oxime resulting from action of hydroxylamine upon a ketone, having the general formula R(R')C:NOH.

Key, Charles Aston [*English surgeon*, 1793–1849]. Ligated the external iliac artery for femoral aneurysm (1822) and the subclavian for axillary aneurysm in the following year.

Key, Ernst Axel Henrik [*Swedish physician and anatomist*, 1832–1901]. With M. G. Retzius, described the lateral apertures of the fourth ventricle; called *foramens of Key and Retzius*, *foramens of Luschka*. See under *aperture*. Key and Retzius described sensory nerve endings resembling Herbst corpuscles, found in the skin of the beaks of certain birds; called *corpuscles of Key and Retzius*.

Keynes, Geoffrey Langdon [*English surgeon*, 1887–]. Contributed to the development of the treatment of mammary cancer by means of radium, also to the development of the use of blood transfusion and of thyroid surgery.

kg, kg. Kilogram.

khel'lin. $C_{14}H_{12}O_5$; 2-methyl-5,8-dimethoxyfuranochromone, reputed to be the therapeutically important constituent of the umbelliferous plant *Ammi visnaga*, the fruits of which have been used in Egypt as an antispasmodic in renal colic and ureteral spasm. A coronary vasodilator, it is claimed to be also a bronchodilator. Also called *kellin*, *chellin*, *visammin*.

khel'li nin. $C_{19}H_{20}O_{10}$; 2-hydroxymethyl-5-methoxyfuranochromone glucoside, a minor constituent of *Ammi visnaga*. It has been claimed and denied to have coronary vasodilator action. Syn. *khellol-glucoside*.

khel'lol-glu'co-side. Khellinin.

kid'ney [M.E. *kidenei*]. One of the paired glandular organs situated retroperitoneally lateral to the spine, caudal to the spleen on the left and the liver on the right side. The kidney has a characteristic bean shape, convex laterally and concave on the medial border. The hilum at the medial border expands into a central cavity, the renal sinus, which contains the renal calyxes. The calyxes are cup-shaped tubes embracing the renal papillas and unite to form a funnel-shaped sac, the renal pelvis. In the adult each kidney weighs about 150 Gm. and measures about 11.5 × 6 × 3.5 cm. It is covered by a fairly dense fibrous capsule and embedded in perirenal fat. The kidney consists of a medulla and cortex. The medulla consists of eight to eighteen conical masses, the renal pyramids; the apexes of the pyramids converge toward the renal sinus and project into the lumens of the minor calyxes. The cortex lies immediately beneath the capsule, and dips in between adjacent pyramids; the parts between the pyramids are called renal columns of Bertin. The kidney helps to regulate the normal concentrations of blood constituents by the excretion of water and various substances usually considered as waste products. It probably also furnishes products which have to do with control of systemic blood pressure. The filtering, excreting, and reabsorbing functions of the kidney take place in the nephrons, each composed of a renal corpuscle and tubule. The renal corpuscle consists of a tuft of capillary loops, the glomerulus, and a glomerular (Bowman's) capsule. The latter consists of a simple squamous epithelium seated on a basement membrane. It has a visceral layer fitting closely over the loops of the glomerulus and a parietal layer which is continuous with the epithelium of the renal tubule. The part of the tubule near the glomerulus is the proximal convoluted tubule, continuous with the medullary loop or loop of Henle which consists of a descending and ascending limb, the latter communicating with the distal convoluted tubule and thence with the collecting tubule. The renal artery (or arteries) enters at the hilum and divides dichotomously to provide branches for the medulla, the so-called arcuate arteries at the junction of pyramid and medulla, and the interlobar arteries of the cortex; the veins are distributed in parallel. See Plates 7, 8, 9, 14, 43.

aglomerular k. (a) A clinical medicine, a kidney having a greatly diminished number of functioning glomeruli, found in chronic glomerulonephritis and in other conditions in which scarring of the renal cortex is prominent. (b) A type found in some fishes in which glomeruli are entirely lacking; used in the study of renal physiology.

amyloid k. One which is the seat of amyloidosis.

cake k., caked k. Congenital fusion of both kidneys into a solid, irregularly lobate mass usually found over the sacrum. Syn., *clump k., lump k.*

cement k. A calcified kidney.

clump k. See cake *k.*

confluent k. Congenital fusion of two kidneys.

contracted k. The last stage of chronic glomerulonephritis, arteriolar nephrosclerosis, or chronic pyelonephritis.

cyanotic k. A chronically congested kidney with resultant dilated sinus, pigmentation, and some fibrosis.

cystic k. A kidney containing one to several cysts, usually unilateral.

definitive k. The metanephros.

disk, disc k. A congenital defect in which both kidneys are fused into one mass, usually on one side of the midline; one kidney is superimposed upon the other.

double k. A developmental condition in which one of the kidneys is subdivided into two.

ectopic k. A common congenital anomaly in which the kidney is held in abnormal position on its own or on the opposite side, where fusion with the other kidney may occur.

embryonic k. The mesonephros.

end-stage k. A chronic stage of renal disorder with accompanying extensive scarring of the renal tissue.

fatty k. Fatty degeneration of the renal epithelium.

floating k. One which is displaced from its bed becoming more freely movable, sometimes causing symptoms, as by kinking the ureter; also called *wandering k., ren mobilis.*

fused k. See horseshoe *k.*, sigmoid *k.*

head k. The pronephros.

horseshoe k. Greater or lesser degree of congenital fusion of the two kidneys, usually at lower poles.

intrathoracic k. One situated within the thoracic cavity as in some cases of diaphragmatic hernia.

k. stone. A concretion of the kidney. Syn., *renal calculus.*

large white k. Enlargement and pallor of kidney such as may be due to amyloidosis, marked nephrosis, chronic lipoid nephrosis, or chronic parenchymatous nephritis.

L-shaped k. See sigmoid *k.*

lump k. See cake *k.*

middle k. The mesonephros or Wolffian body.

monopyramidal k. See unilobar *k.*

movable k. See floating *k.*

multilobar k. One with more than one renal pyramid. Syn., *polypyramidal k.*

pelvic k. One abnormally located in the pelvis.

pigback k. The kidney of marked chronic passive hyperemia, with a longitudinal ridge over the vertex.

polycystic k. One containing a large number of cysts, usually of the congenital variety and most frequently bilateral.

polypyramidal k. See multilobar *k.*

primitive k. The pronephros.

sacculated k. Advanced stage of hydronephrosis.

sigmoid k. A congenital anomaly resulting from the fusion of the lower pole of one kidney to the upper pole of the other; also called *L-shaped k., unilateral fused k.*

small white k. One of the forms of chronic glomerulonephritis.

surgical k. Suppurative inflammation or tuberculosis of kidney.

triple k. A developmental condition in which one of the kidneys is subdivided into three.

unilateral fused k. See sigmoid *k.*

unilobar k. One consisting of a single lobe, as in rats, dogs, and many other animals but not in man. Syn., *monopyramidal k.*

wandering k. See floating *k.*

waxy k. A kidney which is the seat of amyloidosis.

Kielland, Christian Caspar Gabriel [Norwegian obstetrician, 1871–1941]. Invented obstetric forceps with blades articulated to allow them to move over each other. The cephalic curves of the blades are like those of other obstetric forceps, but the pelvic curves are very slight. Called *Kielland's forceps.*

Kienböck, Robert (1871–). Austrian radiologist who described acute atrophy of bone, occurring with different conditions of the extremities, called *Kienböck's atrophy.* He also described aseptic necrosis of the lunate bone

called *Kienböck' disease*. **Kienböck' photometric unit** of -ray dosage equals one-tenth of the erythema dose.

Kiernan, Fra ci (1800–1874) Irish surgeon and anatomist in England who described the portal canals in the liver called *Kiernan spaces*.

kie sel guhr" (kee zul-goor") See purified siliceous earth.

Kiesselbach, Wilhelm [*German laryngologist*, 1839–1902]. Remembered for his description of thin area of the nasal septum, frequently the site of epistaxis and likely to be the seat of perfora tion, called *Kiesselbach area* or *triangle*; also called *Little' area*.

Kilian Hermann Friedrich [*German gynecologist and obstetrician*, 1800–63]. Described pelvic splanes and spondylolisthetic pelvis each is known as *Kilian pelvis*. The transverse line formed by the promontory of the sacrum is called *Kilian line*.

Kiliani Heinri h [*German chemist*, 1855–1945]. Made an important study of digitalis. Described the synthesis of higher homolog of compound, brought about by the formation of nitrile, followed by hydrolysis; called *Kiliani' reaction*.

Killian, Gustav [*German laryngologist and rhinologist*, 1860–1921] Introduced direct bronchoscopy (1898) and suspension laryngoscopy (1912) Devised an operation in which he excised the anterior wall of the frontal sinus and formed permanent opening into the nose (1903); called *Killian operation*.

kil'o- [G *chilioi*, thousand]. A prefix meaning *thousand*.

kil'o-cal"o-rie kil'o-cal"o-ry [*chilioi*, L. *calor* heat] A large calorie; the amount of heat required to raise 1 kg of water from 15° to 16° C; used in the study of metabolism.

kil'o-gram [*chilioi*, G *gramma*, small weight]. One thousand grams, or bout 2.2 pounds avoirdupois. Abbreviated, kg, kg.

kil' gram-me ter kil' gram-me'tre [*chilioi*, *gramma*, G. *metron*, measure] A unit of energy; the amount of energy required to raise one kilogram one meter; approximately 7.233 foot-pounds.

kil'o-joule (kill'o-jool") [*chilioi*, after James P *Joule*, English physicist]. A unit of heat, equivalent to 239 1 small calories.

kil'o-li"ter kil' li"tre (kill o-lee tur) [*chilioi*, G *litra*, silver coin, pound]. On thousand liters, or 35.31 cubic feet. Abbreviated, kl, kl.

kil'o-me ter kil me"tre (kill'o-mee tur ki-lom'i-tur) [*chilioi*, G *metron*, measure]. One thousand meters, or 1093 6 yards. Abbreviated, km km.

kil'o nem [*chilioi*, G *nemein*, to feed on]. A unit of nutriment, equivalent to 667 calories.

kil'o-volt. Unit of electric power equal to 1000 volts. Abbreviated, kv kv

kil' watt" (kill o-wot") [*chilioi*, after James *Watt*, Scottish mechanical engineer]. A unit of electric power: one thousand watts. Abbreviated, kw kw

kil' watt" hou A unit of energy equivalent to the energy supplied by power of 1000 watts operating for 1 hour

kil'u-rane [*chilioi*, G. *ouranos*, heaven]. A unit of radioactivity; one thousand uranium units.

Kimmelstiel-Wilson syndrome. See *intercapil lary glomerulosclerosis*

ki nase (kigh nace, kin ace, kin ase) A substance which acts on zymogen to form an enzyme. See *activator*

kin" ma di g'ra phy (kin i-muh-dye-ag'ruh fee) [G *kinēma*, movement; *dia*, through; *graphein*, t write]. Cinematography

kin" mat'ics [*kinēma*] The science of motion.

kin"e-mat'o-graph [*kinēma*, G *graphein*, to write]. A device for making and demonstrating continuous record of moving body

kin e-plas"ty [G *kinein*, to move *plassein*, to form]. A method of amputation designed to provide direct transmission of voluntary motion from muscles in the stump to the artificial part. Now rarely used.

kin"e-ra di ther a py [*kinein*, L. *radius*, ray; G *therapeia*, treatment]. X-ray therapy whereby the tube is moved in relation to the patient, or the patient in relation to the stationary tube. The object is the ttainment of larger depth doses without overloading the skin.

kin e-scope [*kinein*, G *skopein*, to examine]. An instrument for testing the refraction of the eye; consists of moving disk with slit of variable width, through which the patient observes fixed object.

ki ne si- (ki-nee see- kigh-nee see-) [G *kinēsis*, motion]. A combining form meaning *movement*, *motion*.

ki ne si-a (ki nee shuh, -see-uh, -zhuh, -zee-uh, kigh-nee) [*kinēsis*]. 1 Any form of motion sick ness, such as seasickness 2. A suffix implying motion or movement, as hyperkinesia

ki ne si at rics [*kinēsis*; G *iatrikos*, skilled in the medical art] The treatment of disease by systemati active or passive movements Syn., *kinesitherapy kinetotherapy*

ki ne sic. See *kinetic*.

ki ne"si-es the si-om ter [*kinēsis*; G *aisthēsis*, perception; *metron*, measure]. An instrument for testing the muscular sense.

kin e sim e-ter ki ne si om'e-ter [*kinēsis*; *metron*]. An instrument for determining quantitatively the motion of part.

ki ne si ol'o-gy [*kinēsis*; G *logos*, word]. The science of the anatomy physiology and mechanics of purposeful muscle movement in man.

ki ne si om'e-ter See *kinesimeter*

ki ne'sis (ki-nee sis, kigh-nee sis) [G.]. The general term for transformation of physical forms of energy

ki ne sis par"a-dox'a. Th sudden and violent overexertion in walking and running observed in patients with paralysis agitans who, because of generalized muscular rigidity are ordinarily inactive or sluggish. Also called *Souques sign*.

ki ne"si ther' py See *kinesiatrics*.

ki ne"so-pho'bi a [*kinēsis*; G *phobos*, fear]. Morbid fear of motion.

kin"es-the si (kin ess-thee zhuh, -zee-uh) **kin es the si** [*kinēsis*; G *aisthēsis*, sensation]. The muscle sense the sense of perception of movement, weight, resistance, and position. Syn., *kinesthetic memory*. —**kinesthet'ic,** *adj*

kin"es-the si-om ter [*kinēsis*; *aisthēsis*; G. *metron*, measure]. Instrument for measuring the degree of muscle sense

ki-net'ic (ki-net'ick, kigh-net'ick) **ki ne sic** [G. *kinētikos*, of motion]. Pertaining to motion producing motion.

ki net'ics [*kinētikos*]. The science of force as producing motion.

ki ne tism. The bility to initiate or perform independent movement.

ki ne to-chore (ki nee to-kor ki net o- kigh-) [G *kinētos*, moving *chōra*, space]. The constriction in the chromosome where the spindle fiber is attached

ki ne'to-plast. The blepharoplast and parabasal body in hemoflagellates.

ki ne"to-ther' py (ki nee to ther uh-pee, ki-net o- kigh) See *kinesiatrics*.

Ki gsbury Francis Bullard [*American biochem-*

ist 1896-). With G. P. Clark, devised permanent albumin standards used in the life-insurance method of determining protein in urine. The *Kingsbury-Clark albumin standards* consist of tubes of gelatin containing small amount of formaldehyde, and graduated quantities of formazin in suspension. See also Kingsbury' *test*.

king's e'vil. Scrofula. So called because of belief that it could be cured by the touch of the king. Obsolete term since the time of the Stuart monarchs.

Kingsley, Norman William [*American dentist* 1829-1913]. Sometimes called the founder of modern orthodontics. Devised splint for fractures of the maxilla. *Kingsley' splint* consists of curved metal bar passing around the face with its lower edge at the level of the mandible, and headpiece fixed in plaster cast. A rubber band suspended from the headpiece may be stretched around the curved bar to exert downward traction.

King's operation. Arytenoidopexy.

King's stain. See *carbol-thionine (King)* under *stain*.

king's yel'low. See *arsenic trisulfide*.

kink. See *angulation*.

Kinnersley, Henry Wulf [*English biochemist*, 1877-1944]. With C. W. Carter and R. A. Peters, discovered vitamin B (1930). With Peters, devised thiamine test in which diazo-benzene-sulfonic acid in carbonate containing sodium hydroxide solution gives red color with thiamine and formaldehyde; called *Peters-Kinnersley test*.

Kinney' law. See under *law*.

Kinnier Wilson. See S. A. K. *Wilson*.

ki'no (kee'no, kigh'no) [Mandingo *keno*] (*kino*). The dried juice obtained from the trunk of *Pterocarpus marsupium*. Powerful astringent used chiefly in the treatment of diarrhea. Dose, 0.6-2.0 Gm. (8-30 gr.)

k. tincture (*tinctura kino*). Glycerin and 20% kino in alcohol. Dose, 2-4 cc. (30-60 min.)

ki"ne-cen'trum (kigh"no-sen'trum, kin"o-) [G. *kinein*, to move; *kentron*, center]. The centrosome.

kin'o-plasm (kin'o-plaz-um, kigh'no-). See *archoplasm*.

ki"no-tan"nic ac'id (kee"no-tan'ick). The tannic acid found in kino.

ki-no'vin, kin'o-vin. Quinovin.

Kinyoun stain. See Ponder-Kinyoun *stain*.

ki'o-tome [G. *kiōn*, uvula; *tomos*, cutting]. An instrument for amputating the uvula.

ki-ot'o-my (kigh-ot'o-mee) [*kiōn*; G. *tomē*, cutting]. Surgical removal of the uvula.

Kircher, Athanasius [*German scholar*, 1602-80]. Pioneer microscopist. Described microscopic worms in putrescent material and in blood taken from cases of plague (1658).

Kirchner, Wilhelm [*German otologist*, 1849-1935]. Described diverticulum of the auditory tube called *Kirchner' diverticulum*.

Kirkes, William Senhouse [*English physician*, 1823-64]. Gave classic description of embolism due to intracardiac blood clots (1852).

Kirmisson, Edouard [*French surgeon*, 1848-1927]. Introduced an operation involving transplantation of the Achilles tendon, for talipes varus; called *Kirmisson operation*.

Kirschner, Martin [*German surgeon*, 1879-1942]. Said to have been the first to operate successfully for the relief of pulmonary embolism (1943). Introduced method of treating fractures by means of wires, called *Kirschner' wires*, passed through drill holes in the bone; called *Kirschner' traction*.

Kisch's reflex. See auriculopalpebral *reflex*.

Kitasato, Shibasaburo [*Japanese bacteriologist*, 1852-1931]. With von Behring, produced antitoxins for tetanus and diphtheria (1890). This discovery of passive immunization was the starting point of modern serotherapy. Independently of Yersin, he discovered the plague bacillus (1894), now called *Pasteurella pestis*, and also *Kitasato bacillus*.

ki'tol [G. *kētos*, whale]. A precursor of vitamin A in whale-liver oil, which yields vitamin A on heating under low pressures.

Kjeldahl method. See under *method*.

Kjelland. See *Kielland*.

kl, kl. Kiloliter.

Klebs, Theodor Albrecht Edwin [*German bacteriologist*, 1834-1913]. Described glomerulonephritis (1870); called *Klebs' disease*. Made an experimental study in which syphilis was transmitted to apes. Discovered the diphtheria bacillus, called *Klebs-Loeffler bacillus*, now called *Corynebacterium diphtheriae*.

Kleb-si-el'la [after *Klebs*]. A genus of bacteria of the family Enterobacteriaceae frequently associated with infections of the respiratory tract and pathologic conditions of other parts of the body.

K. granulomatis. See *Donovania granulomatis*.

K. pneumoniae. A species of short, plump, heavily encapsulated, nonmotile, and Gram-negative bacteria, responsible for severe pneumonitis in man; formerly called *Bacillus mucosus capsulatum*, *Friedländer' bacillus*, pneumobacillus.

K. rhinoscleromatis. Encapsulated Gram-negative rod recovered from nasal granulomas of patients with rhinoscleroma; formerly called *Frisch bacillus*.

klein"re'gel (kline"ray'gl) [Ger. *klein*, small; *Regel*, menstruation]. Scant uterine bleeding at the mid-interval of the menstrual cycle. It may be associated with midpains or mittelschmerz.

Kleitman, Nathaniel (1895-). American physiologist who has contributed to the knowledge of the physiology of sleep; exponent of the evolutionary theory that primitive alternation of sleep and wakefulness is subcortical, whereas diurnal sleep-wakefulness rhythm is cortical in origin.

Klemperer's tuberculin. See *P. T. O.*

klep"to-lag'ni-a [G. *kleptein*, to steal; *lagneia*, coition]. Sexual gratification induced by theft.

klep"to-ma'ni-a [*kleptein*; G. *mania*, madness]. A morbid desire to steal; obsessive stealing; mental disorder in which the objects stolen are usually of symbolic value only, being petty and useless items.

klep"to-pho'bi-a [*kleptein*; G. *phobos*, fear]. 1. A morbid dread of thieves. 2. A morbid dread of becoming kleptomaniac, observed in psychasthenia.

Klim. Trade-mark for powdered, dry whole milk.

Kline test. A microscopic flocculation test for syphilis.

kli'no-. For words beginning with *klino-*, see words beginning *clino-*.

Klippel, Maurice [*French neurologist*, 1858-1942]. First to describe arthritic general pseudoparalysis (1893); called *Klippel' disease*. With Feil, described congenital fusion of the cervical vertebrae (1912). See Klippel-Feil *syndrome*.

klis"e-om'e-ter. See *clisemeter*.

klop e-ma'ni a. Old term for kleptomania.

klotogen. Trade-mark for solution in oil of vitamin-K concentrate.

Kluge, Karl Alexander Ferdinand [*German obstetrician*, 1782-1844]. Introduced his method for induction of premature labor by dilatation of the cervix with sponges. Described bluish discoloration of the vaginal mucosa as indicative of pregnancy; called *Kluge' sign*, *Jacquemier' sign*, *Chadwick' sign*.

Klumpke. See *Dejerine-Klumpke*.

km, km. Kilometer

Knapp, Arnold Herman [*American ophthalmic surgeon*, 1869–]. Devised an operation for cataract in which a wide iridectomy is made and, after subluxation with special forceps, the lens is removed in the capsule by external pressure on the cornea.

Knapp, Hermann Jakob [*American ophthalmologist*, 1832–1911]. Made important studies of the curvature of the cornea and of intraocular tumors.

knead'ing. Pétrissage.

knee [AS. *cnēo*]. The articulation between the femur and the tibia. Also see *genu*. See Table of Joints and Ligaments in the Appendix. See Plate 2.

snapping k. A condition in which the tibia on sudden extension of the knee rotates outward or glides forward on the femur with an audible snapping sound, occasionally caused by slipping of the biceps tendon or by displacement of one of the menisci.

knee cap [*cnēo*; AS. *caeppe*]. The patella.

knee-jerk". See patellar *reflex*.

knee-sprung". In veterinary medicine, an alteration in the direction and articulation of the bones which form the carpus in the horse, so that, instead of the leg appearing as a vertical line, the knee (wrist) is more or less bent forward.

knife [AS. *cnīf*]. A cutting instrument of varying shape, size, and design, used in surgery and in dissecting; scalpel. Also see *bistoury*.

amputating k. A long, pointed, single- or double-edged instrument, used for amputations.

cautery k. A knife to produce cautery usually with an insulated handle and heated by electricity or in a flame.

electrosurgical k. See radio *k*.

radio k. One operating on a high-frequency current, which divides tissues by means of an electric spark; used in electrosurgery.

tenotomy k. See *tenotome*.

knit'ting [AS. *cnyttan*]. A lay term to indicate the process of union in a fractured bone.

knob [ME. *knobbe*]. 1. A rounded prominence or protuberance. 2. End-foot. See *end-feet*.

embryonic k. In many mammals, that part of the inner cell mass consisting of primary ectoderm and entoderm after the migration of the endodermal cells forming the yolk sac.

synaptic k. See *end-feet*.

trophoblastic k. In rodents, the mass of trophoblast cells opposite to, and resembling, the embryonic knob from which the placenta develops.

knock'-knee". See *genu valgum*.

knock-out drops. Chloral hydrate so-called because of the rapid action of small doses of the compound, sometimes given to a victim in food or drink to render him helpless.

Knopf, Sigard Adolphus [*American physician*, 1857–1940]. Advocated the training of the tuberculous patient in the diaphragmatic type of respiration, in the hope of putting the lung apexes at rest; called *Knopf's treatment*.

knot [AS. *cnotta*]. 1. In *surgery*, the interlacing of the ends of a ligature, suture, bandage, sling, or cord, so placed that they remain fixed without slipping or detachment. 2. A small mass of cells or tissue.

clove-hitch k. One formed of two contiguous loops, placed around an object, such as a limb, the ends of the cord parallel and extending in opposite directions. This knot remains firm only so long as traction is applied.

double k. One in which the ends of the cord or suture are twisted twice around each other before tying; friction knot; surgeon's knot. It does not slip and can be adjusted.

enamel k. Cells in the enamel pulp in early stages of the enamel organ which have not yet differentiated into stellate reticulum. Also called *enamel node*.

false k. (a) See granny *k*. (b) External knotlike bulges of the umbilical cord caused by loops in the umbilical blood vessels.

granny k. A double knot in which, unlike the square knot, in the second loop the end of one cord is over and the other under its fellow; the loops, not being in the same plane, tend to slip. A false knot.

Hensen's k. See Hensen's *node*.

primitive k. Synonym for Hensen's node.

reef k. See square *k*. Also called *sailor's k*.

square k. A double knot in which the free ends of the second knot lie in the same plane as the ends of the first. The knot which is in most general use in surgery.

syncytial k. Protuberant masses of syncytiotrophoblast characteristic of placental villi.

true k. A knot of the umbilical cord formed by the fetus slipping through a loop in the cord.

Knott technique. See under *method*.

knuck'le [ME. *knokel*]. 1. An articulation of the phalanges with the metacarpal bones or with each other. 2. The distal convex ends of the metacarpals.

knuck'ling [*knokel*]. A condition in which the hoof of a horse is turned under; due to excessive flexion of the fetlock joint.

koagamin. Trade-mark for a hemostatic preparation representing an extract of the plant, shepherdspurse, and containing oxalic acid and related dicarboxylic acids.

koaxin. Trade-mark for a brand of menadione.

Kobert, Eduard Rudolf [*German biochemist*, 1854–1918]. Introduced *Kobert's test* for hemoglobin. The addition of zinc to the solution to be tested precipitates zinc hemoglobin, which turns red when an alkali is added.

Koch, Robert [*German bacteriologist*, 1843–1910]. Considered one of the founders of modern bacteriology. See *law of specificity of bacteria*, called *Koch's law* or *postulate*. Made an important study of the anthrax bacillus (1877). Demonstrated the bacterial character of traumatic infections (1878). Introduced improved methods of cultivating and staining bacteria. Discovered the tubercle bacillus (1882), formerly called *Koch's bacillus*. One of two bacilli which Koch discovered in two types of contagious conjunctivitis (1883) was later found by Weeks to be the causal agent of pinkeye; the *Koch-Weeks bacillus* is thought to be similar to *Hemophilus influenzae*. Infectious conjunctivitis is called *Koch-Weeks conjunctivitis*. Koch discovered *Vibrio comma* and demonstrated its transmission by food, drinking water, clothing, etc. (1884). He introduced tuberculin (1890) which, though disappointing in the treatment of tuberculosis, proved useful in diagnosis. When tuberculin is injected into the skin of an animal or human being previously exposed to the tubercle bacillus, a local inflammatory reaction indicates continued hypersensitivity; called *Koch's phenomenon*. Nobel laureate (1905).

Koch-McMeekin's method. See under *method*.

Kocher, Emil Theodor [*Swiss surgeon*, 1841–1917]. Made important studies of the pathology and surgery of the thyroid gland. Nobel laureate (1909). Devised operations for excision of the tongue, the hip joint, the rectum, and the ankle joint, and for hernia repair. Devised a technic for radical amputation of the breast. Introduced a method of reducing dislocation of the shoulder by means of outward rotation of the humerus, flexion, and adduction with inward rotation; the gaping of the rent in the joint capsule permits reduction.

Called *Kocher'* maneuver or method. *Kocher'* *forceps* are serrated forceps. See also Kocher' *reflex*.

Kocks, Joseph [German surgeon, 1846–1916]. Remembered for his operation for relief of uterine displacements by shortening the broad ligaments through vaginal approach.

Koeberlé, Eugène [French surgeon, 1828–1915]. Contributed to the development of gynecologic surgery. Introduced a type of hemostatic forceps, called *Koeberlé* *forceps*.

Koebner, Heinrich [German dermatologist, 1838–1904]. Described epidermolysis bullosa (1886) called Koebner' disease, and the isomorphous provocative reaction, called *Koebner'* *phenomenon* (1876).

Koelliker, Rudolph Albert von. See *Kölliker*.

ko'ha. A Japanese drug, cyanine dye derivative, given intravenously, claimed to stimulate the formation of leukocytes and new tissue and thus hasten wound healing. Also called rainbow wave drug.

Köhler, Alban [German physician, 1874–1947]. Improved the technic of radiography of the heart. Described osteochondrosis of the tarsal navicular bone, probably form of aseptic necrosis, found in children; called *Köhler'* disease, *Köhler'* tarsal scaphoiditis.

Köhler's method of illumination. See under *method*.

Kohlrausch's law of migration of ions. See under *law*.

koildin. Trade-mark for brand of menadione.

koi"lo-nych'i a (koy"lo-nick'ee-uh) [G. *koilos*, hollow; onyx, nail]. An trophic deformity of the nails in which the outer surface is concave, occurring in varied unrelated diseases, e.g., lichen planus and acanthosis nigricans, and also found as familial defect also called spoon nail.

koi not'ro-py [G. *koinos*, common; *trepein*, to turn]. *I* psychobiology, the state of being socialized the condition of being identified with the common interests of the people. —koinotrop'ic, *adj*.

Kojewnikoff's epilepsy. See continuous *epilepsy*.

ko jic ac'id. $C_6H_6O_4$. 5-Hydroxy-2-hydroxymethyl-γ-pyrone, formed from glucose by the action of certain molds. It possesses antibiotic activity against various bacterial species.

ko'la [Temne *kola*, cola tree]. The dried cotyledon of *Cola nitida* or of other species of *Cola* (cola nut). The chief constituent is caffeine, with traces of theobromine also present. The therapeutic effect of kola is the same as that of other sources of caffeine, such as coffee and tea.

Kolle, Wilhelm [German bacteriologist, 1868–1935]. Developed bacteriolytic serum used for the treatment of cerebrospinal meningitis. Introduced vaccine of killed cholera bacilli, for use as prophylactic; called *Kolle* *cholera vaccine*.

kolliidon. See *polyvinylpyrrolidone*.

Kölliker, Rudolph Albert von (1817–1905). Swiss histologist, anatomist, and zoologist, known for his pioneer work in histology and embryology. He proved that spermatozoa originate as cells in the testes, and described their function in fertilization. He isolated smooth muscle cells, described the relation of myelinated fibers to nerve cells, and described groups of myofibrils surrounded by sarcoplasm, called *Kölliker* *columns*, and described granules seen in sarcoplasm, called *Kölliker'* *granules*.

Kolmer's test. See under *test*.

kolp-. For words beginning with *kolp-* not found here, see words beginning *colp-*.

kol'po-. See *colpo-*.

ko"ly phre ni-a [G. *kōlyein*, to hinder; *phrēn*, mind]. A condition in which there is abnormal inhibition of lower brain centers by the cortex.

Kondoléon, Emmanuel [Greek surgeon, 1879–1939]. Introduced an operation for the relief of elephantiasis in which strips of skin, subcutaneous tissue, and scarred fascia are removed; called *Kondoléon* *operation*.

König, Franz (1832–1910). German surgeon who wrote on general and special surgery and tuberculosis of the bones and joints, and was the first to describe osteochondritis dissecans. The earliest type of autogenous graft in cranioplasty was the Mueller-König method of flap transposition, involving an interchange of scalp and dermatoperiosteo-osteal flaps. H perfected the technique of osseous resection.

ko"ni meo"ter (ko ni-mee"tur ko-nim'i tur) **ko no-mee"ter** (ko no mee tur ko-nom'i tur) [G. *konis*, dust; *metron*, measure]. An instrument for determining the number of dust particles in the air. A measured air sample is propelled against a perpendicular surface coated with an adhesive to which dust adheres. The particles are counted under microscope. Also see *dust count*.

ko ni-o-cor'tex [konis; L. *cortex* bark, rind]. Granular cortex characteristic of sensory areas.

ko"ni o sis. See *coniosis*.

ko no-me ter. See *konimeter*.

konseal. Trade name for form of cachet.

konsyl. A proprietary laxative prepared from *Plantago ovata*.

ko-pho'si a. See word *deafness*.

Koplik's sign. See under *sign*.

Koplik's spots. See Koplik *sign*.

kop o pho'bi-a [G *kopos*, exertion; *phobos*, fear]. Morbid fear of fatigue or exhaustion.

Kopp, Johann Heinrich [German physician, 1777–1858]. Described laryngismus stridulus which he ascribed to an enlarged thymus called *Kopp'* *thymic asthma*.

kop"ro-ste -rin. See *coprosterol*.

Korff's fibers. See dentinogenic *fibers*, osteogenic *fibers*.

Kornhauser's quadruple stain. See under *stain*.

ko-ros'co py. See *retinoscopy*.

Korotkov, Nikolai Sergeevich [Russian physician, 1874–]. Introduced the auscultatory method of determining blood pressure, applying stethoscope to the brachial artery below the pressure cuff of sphygmomanometer (1905); called *Korotkov'* *method*. The sounds heard in a normal individual as the cuff deflates are known as *Korotkov* *sounds*. In *Korotkov'* *test* for collateral circulation in aneurysm, an artery is compressed above the aneurysm. If the blood pressure in the peripheral circulation is moderately high, the collateral circulation is considered good.

korotrin. Trade-mark for brand of chorionic gonadotropin.

Korsakov, Sergei Sergeevich [Russian neurologist, 1853–1900]. Described polyneuritis with loss of memory retrograde amnesia associated with tendency to confabulation, caused by alcohol and severe deficiency of food intake (1887) called *Korsakov* *syndrome* or *psychosis*.

ko so-tox'in [Abyssinian *kosso*, G *toxikon*, poison]. The chief active constituent of brayera.

Kossel, Albrecht [German physiological chemist, 1853–1927]. Made important studies of the chemistry of the cell and its nucleus. Nobel laureate (1910). Discovered histidine (1896) and thymine (1900). See also Kossel' *test* for hypoxanthine.

Kossel and Siegfried' protamine nucleus hypothesis. See under *hypothesis*.

kous'sin (koo"sin) [Abyssinian *kusso*]. A resinous substance from brayera.

kous so (kōō s) See *brayera*.
Kowarsky's plate. See under *plate*.
Kozhevnikov Aleksei Yakovlevich (1836–1902) Russian neurologist, best known for his description of continuous epilepsy
Kr Chemical symbol for krypton.
Krabbe, Knud H [*Danish neurologist*, 1885–]. Described familial infantile diffuse cerebral sclerosis, called *Krabbe' disease*.
Kraepelin, Emil [*German psychiatrist*, 1856–1926]. Established the modern classification of mental disorders, introducing the clinical concepts of dementia precox (also known as *Morel-Kraepelin disease*) and mani depressive psychosis.
Krafft Ebing, Richard von [*German psychiatrist* 1840–1902]. Made classic study of sexual psychopathology
kraft. See *Bungarus*.
Krajian's Congo stain. See under *stain*.
Krajian's rapid staining. See under *stain*.
Kramer Tisdall method. See under *method*.
kra me ri-a [NL., after John George Henry *Kramer* Austrian physician and botanist, eighteenth century]. The dried root of *Krameria triandra*, known in commerce as Peruvian rhatany or of *Krameria argentea*, known in commerce as Para or Brazilian rhatany An active astringent. Dose, 1 2 Gm. (15–30 gr.)
Kraske, Paul [*German surgeon*, 1851 1930] Devised an operation for rectal carcinoma in which the coccyx and part of the sacrum are removed; called *Kraske operation*.
K ra'tion [rash un, ray shun] See under *ration*.
kra tom e-ter [G *kratos*, power; *metron*, measure]. A device consisting of prisms. It is used for correcting ystagmus, or in orthoptic exercises.
krau ro sis [G *krauros*, brittle; *-ōsis*, condition]. A progressive sclerosing, shriveling process of the skin due to glandular trophy
k. of penis. Balanitis xerotica bliterans.
k. of vulva. A disease of elderly women, characterized by pruritus, atrophy and dryness of the genitalia. Stenosis of the vaginal orifice and epithelioma may develop.
Krause Carl Friedrich Theodor [*German anatomist*, 1797 1868]. Described the accessory lacrimal glands of the upper eyelid called *Krause' glands*
Krause Fedor Victor [*German surgeon*, 1857 1937]. Independently of Hartley devised an operation of excision of the ganglion of the fifth cranial nerve for facial neuralgia, approaching through the temporal bone (1893) called *Hartley-Krause operation*. The full-thickness skin graft is known as the *Wolfe-Krause graft*. See under J R. *Wolfe*.
Krause, Wilhelm [*German anatomist*, 1833–1910]. Described the intermediate disk, called *Krause membrane*. See also Krause *corpuscle*.
kre tin. See *creatine*
kre-at'i nine. See *creatinine*.
Krebs, Hans Adolf [*English biochemist* 1900–] Formulated theory of aerobic carbohydrate oxidation. Described breakdown of carbohydrates through stages involving citric acid this he called the citric acid cycle See *Krebs cycle*. With Kurt Henseleit, postulated theory of urea production by the liver involving the breakdown of arginine to urea nd ornithine called *ornithine cycle*, *Krebs-Henseleit cycle* Nobel Prize winner with Fritz A. Lippmann, in medicine and physiology (1953)
kre o-tox'in [G *kreas*, flesh *toxikon*, poison] A meat poison or ptomaine that is formed by bacteria.
kre o-tox'ism [*kreas*; *toxikon*]. Poisoning by infested meat.
Kretschmer Ernst [*German psychiatrist*, 1888–] Described various psycho-physical types, including the pyknic, leptosome, and thletic.
Kreysig, Friedrich Ludwig [*German physician*, 1770–1839] Remembered for his description of sign bserved in adherent pericardium, in which retraction of the intercostal spaces occurs with the cardiac systole called *Kreysig sign*, *Heim-Kreysig sign*.
Krimer Johann Franz Wenzel [*German surgeon*, 1795–1834]. Described his operation for cleft palate in which he made wide mucoperiosteal flaps dissected pward and united in the midline.
Krogh August (1874–1949) Danish physiologist, known for outstanding investigations on the physiology of respiration and blood circulation, and particularly his studies of the anatomy and physiology of the capillaries. H discovered the regulation of the vasomotor mechanism of small vessels by studying how the circulation carries oxygen to the tissues. Nobel laureate in medicine and physiology (1920)
kro-kro. See *craw-craw*
Kromayer Ernst Ludwig Franz [*German dermatologist*, 1862–1933]. Known as the inventor of small, water-cooled, mercury-vapor lamp with quartz window which permits the emission of ultraviolet rays. *Kromayer lamp* is for therapeutic use.
Krompecher Edmund [*Hungarian pathologist*, 1870–1926] Described basal-cell carcinoma or rodent ulcer (1900); called *Krompecher tumor*
Kronecker Karl Hugo [*Swiss physiologist*, 1839-1914]. Studied the physiology of the heart. Described point in the interventricular septum, puncture of which is said to cause fibrillary contractions of the ventricles; called *Kronecker inhibitory center* Introduced solution of sodium chloride and sodium carbonate, known as *Kronecker' solution*, for use in the microscopical examination of fresh tissue.
Krönig, Georg [*German physician*, 1856–1911]. Described anterior and posterior areas of resonance over the apex of the lung called *Krönig' areas* or *fields*. A narrow area of resonance connecting Krönig' fields over the shoulder is called *Krönig' isthmus*.
Krönlein, Rudolf Ulrich [*Swiss surgeon*, 1847 1910]. Described his operation for removal of orbital tumors without enucleating the eye.
Krüger and Schmidt's method. See under *method*.
Krukenberg, Friedrich Ernst (1871 1946) German pathologist who described bilaterally located carcinoma of the vary called *Krukenberg tumor* (1896) See also Krukenberg *spindle*.
Kruse, Walther [*German bacteriologist*, 1864–1943]. Known for his research on bacillary dysentery The *Shigella dysenteriae* is also called *Shiga-Kruse bacillus*, *Shiga bacillus*.
kry mo-ther' py See *crymotherapy*.
kryp'to-. See *crypto-*
kryptok. Trade name of bifocal lens.
kryp'ton [G. *kryptos*, hidden]. Kr = 83 80; colorless, inert gaseous element which occurs in the tmosphere.
ku"bis- ga ri (kōō"bis ah-gah ree) **ku"bis ga ri** (kōō"bis gah ree) [Jap.]. A paralytic vertigo, endemic in J pan.
Kühne, Willie [*German physiologist and histologist* 1837 1900] Pioneer in estigator of enzymes. Made important contributions to the knowledge of the chemistry of digestion and of the physiology of muscles and nerves. Demonstrated that muscle proteins are coagulable (1859) Isolated trypsin

(1874). Extracted visual purple from the retina (1877).

Kuhnt, Hermann [*German ophthalmologist*, 1850–1925]. His name is associated with a number of operations: a canthoplasty in which a flap of skin is cut from the lid to be turned into the wound at the canthus; for ectropion, in which a wedge-shaped portion of the conjunctiva and tarsus is excised; for symblepharon, in which skin grafts are used to prevent adhesions; for the radical cure of frontal sinus disease, in which the anterior wall of the sinus is removed with curetting of the mucous membrane.

Kull's method. See *Champy-Kull's method* under *stain*.

Kultschitzky's hematoxylin. See under *stain*.

Kultschitzky's myelin stain. See under *stain*.

Kümmell, Hermann [*German surgeon*, 1852–1937]. Remembered for his description of a form of traumatic spondylitis (1891) or compression fracture of vertebrae, which is known as *Kümmell's disease*.

Kunzen method for indican. See under *method*.

Kundrat, Hans [*Austrian physician*, 1845–93]. Distinguished a type of lymphoid tumor called *Kundrat's lymphosarcoma*.

Kupffer cells. See under *cell*.

kur'chi (koor'chee) [Skr. *kūrcin*, long-bearded]. An extract of kurchi bark used in amebic dysentery; also called *Holarrhena antidysenterica*.

Kurlov, Mikhail Georgievich [*Russian physician*, 1859–]. Described inclusion bodies of unknown significance found in the lymphocytes and monocytes of the guinea pig; called *Kurlov bodies*. A cell containing one or more Kurlov bodies is known as a *Kurlov cell*, *Foà-Kurlov cell*.

Küss, Georges [*French physician*, 1867–1936]. Made important studies of tuberculosis in children. The primary lesion or Ghon tubercle, plus the satellite lymph node involvement, is known as the *primary complex*, *Küss-Ghon focus*, *Ghon complex*. Küss demonstrated that the children of tuberculous parents are not born with the disease, although they are likely to acquire it.

Kussmaul, Adolf [*German physician*, 1822–1902]. Made a study of the color phenomena of the fundus oculi (1845). With Maier described periarteritis nodosa (1866), called *Kussmaul's disease*, *Kussmaul-Maier disease*. Gave a classic description of the labored breathing associated with diabetic coma (1874), called *air hunger*, *Kussmaul's respiration* or *sign*. Described voluntary mutism, sometimes observed in psychotic cases (1877); called *Kussmaul's aphasia*.

kus'so (kōōs'oh, kuss oh). See *brayera*.

Küster, Ernst Georg Ferdinand von [*German surgeon*, 1839–1930]. Pioneer in performing thoracotomy for the relief of empyema (1889). Improved the technic of radical mastoidectomy. Devised an operation in which he resected the ureter for the relief of hydronephrosis (1892); called *Küster's operation*.

Küstner, Heinz (1897–). German gynecologist, who with Giles (Prausnitz) described local passive sensitization to a specific allergen. See Prausnitz-Küstner *test*.

Küstner, Otto Ernst [*German gynecologist*, 1849–1931]. Described a sign of ovarian dermoid cyst: the presence of a cystic tumor in the median line anterior to the uterus, disclosed by palpation; called *Küstner's sign*.

kv kv Kilovolt.

kw kw Kilowatt.

kwash-i-or'kor [Gold Coast, Africa, literally red boy]. A deficiency disease, probably of animal protein or some associated factor, characterized by fatty infiltration of the liver, pigmentary changes of the skin, edema, and pancreatic dysfunction. In varying forms it is probably seen throughout the tropics and subtropics.

Kwilecki's method. See under *method*.

ky"a-nop'si-a. See *cyanopsia*.

ky-es'te-in (kigh-ess'tee-in) [G. *kyein*, to be pregnant]. A filmy deposit upon decomposing urine, once thought to be diagnostic of pregnancy.

K-Y jelly. Trade-mark for a lubricating jelly containing boric acid, glycerin, chondrus, and tragacanth.

ky'mo-gram [G. *kyma*, wave; *gramma*, letter]. The record made on a kymograph.

ky'mo-graph [*kyma*; G. *graphein*, to write]. An instrument for recording physiologic cycles or actions in a patient or an experimental animal; consists of a clock- or motor-driven cylinder covered with paper on which the record is made. Time intervals can be recorded simultaneously with the phenomena. —**kymograph'ic**, *adj.*

ky-mog'ra-phy (kigh-mog'ruh-fee) [*kyma*; *graphein*]. Use of the kymograph.

roentgen k. See *roentgenkymography*.

ky"no-pho'bi-a. See *cynophobia*.

kyn"u-ren'ic ac'id (kin-yoo-ren'ick, -ree'nick, kigh-new-). $C_{10}H_7NO_3$. γ-Hydroxy-β-quinoline carboxylic acid. A product of the metabolism of tryptophan occurring in the urine of some animals, but not of man.

ky-nur'e-nine (kigh-new'ri-neen, -nin, kin-yoo-ree-neen, -nin). An intermediate product, $C_{10}H_{12}N_2O_3$, of tryptophan metabolism isolated from the urine of certain animals, but not man.

ky"pho-ra-chi'tis (kigh"fo-ra-kigh'tis) [G. *kyphos*, hunchbacked; *rhachis*, spine]. Rachitic deformity of the thorax and spine, resulting in an anteroposterior hump. The pelvis is sometimes involved. —**kyphorachit'ic**, *adj.*

ky"pho-sco"li-o-ra-chi'tis [*kyphos*; G. *skolios*, curved; *rhachis*; G. *-itis*, inflammation]. A combined kyphosis and scoliosis due to rickets. The pelvis and thorax may be involved in the deformity. —**kyphoscoliorachit'ic**, *adj.*

ky"pho-sco"li-o'sis [*kyphos*; G. *skoliosis*, obliquity]. Lateral curvature of the spine with vertebral rotation, associated with an anteroposterior hump in the spinal column. —**kyphoscoliot'ic**, *adj.*

ky-pho'sis (kigh-fo'sis) [G., a being hunchbacked]. Angular curvature of the spine, the convexity of the curve being posterior, usually situated in the thoracic region, and involving few or many vertebrae; the result of such diseases as tuberculosis, osteoarthritis, or rheumatoid arthritis of the spine, or an improper posture habit. Syn., *humpback*, *hunchback*. Also see *round shoulders*. —**kyphot'ic**, *adj.*

thoracic k. A posterior angular deformity of the spine in the thoracic area.

ky'rine (kigh'reen, -rin). A tripeptid obtained by slow hydrolysis of certain proteins. *Obs.*

kyr"tor-rha-chic. See *cyrtorrhachic*.

ky'to-. See *cyto-*.

L

L. Latin.

L_+ Symbol for limes death.

L_0 Symbol for limes zero.

L *In chemistry,* a prefix, written as a small capital letter, used to indicate the structural configuration of a particular asymmetric carbon atom, with reference to the standard substance L-glyceraldehyde, as distinguished from D-glyceraldehyde. For the basis of assigning this prefix, and of the significance of the usage of L(+)-, L(−)-, L_g, and L_s, see definition of D-.

L, l. Liter.

L. Left, left eye, libra, lethal.

l- 1. *In chemistry,* abbreviation for *levorotatory* referring to the direction in which the plane of polarized light is rotated by a substance; this usage may be confused with the following. 2. *In chemistry,* a prefix formerly used to indicate the structural configuration of a particular asymmetric carbon atom in a compound, in the manner that the small capital letter L- is now used.

La Chemical symbol for lanthanum.

lab lab-fer'ment. Rennin. *Obs.*

Labarraque's solution. See *chlorinated soda solution.*

Labbé, Leon [French surgeon, 1832–1916] *Labbé's triangle* is that area bounded by a horizontal line along the lower border of the cartilage of the ninth rib, by the left costal arch, and by the lower edge of the liver.

lab'da-cism. See *lambdacism.*

lab'da-num. See *ladanum.*

la'bi-a. Plural of labium.

la'bi-al-ism [L. *labium,* lip]. The tendency to pronounce any articulate sounds as if they were labial consonants, as *b, p,* or *m,* the addition of labial or labiodental quality to an articulate sound.

La"bi-a'tae (lay"bee-ay'tee). Lamiaceae.

la'bile (lay'bil, lab'il) [L. *labilis,* apt to slip]. Unstable; readily changing; moving from place to place.

la-bil'i-ty. 1. *In psychiatry,* very rapid fluctuations in intensity and modality of emotions, usually without adequate external cause and with inadequate control of their expression, seen most dramatically in the affective reaction or in certain organic brain disorders. 2. *In chemistry,* readily susceptible to change, such as a spontaneous atomic rearrangement of an organic molecule.

la'bi-o- [L. *labium,* lip]. A combining form denoting *the lips, labial.*

la"bi-o-al-ve'o-lar [*labium;* L. *alveolus,* small hollow]. Pertaining to the lip and to the alveolar process of maxilla or mandible.

la"bi-o-cer'vi-cal [*labium;* L. *cervix,* neck]. Pertaining to lip and neck; pertaining to the labial surface of the neck of a tooth.

la"bi-o-den'tal [*labium;* L. *dens,* tooth]. Pertaining to the lips and the teeth.

la"bi-o-gin'gi-val (lay"bee-o-jin'ji-vul, -jin-jy'vul) [*labium;* L. *gingiva,* gum]. Pertaining to the lips and gums.

la"bi-o-glos"so-la-ryn'ge-al [*labium;* G. *glōssa,* tongue; *larynx,* larynx]. Pertaining conjointly to the lips, tongue, and larynx, as labioglossolaryngeal paralysis, a form of bulbar paralysis.

la"bi-o-gres'si-on. Location of the anterior teeth in front of their normal position.

la"bi-o-men'tal [*labium;* L. *mentum,* chin]. Relating to the lip and chin.

la"bi-o-pal'a-tine (lay"bee-o-pal'uh-tyne, -tin) [*labium;* L. *palatum,* palate]. Relating to the lip and palate.

la'bi-o-plas"ty [*labium;* G. *plassein,* to form]. Cheiloplasty.

la'bi-um (pl. *labia*) [L.]. 1. A lip. 2. *In invertebrate zoology,* the lower lip as opposed to the labrum, the upper lip. See also *lip.* —**labial,** *adj.*

l. leporinum. OT for *harelip.*

l. majus. One of two folds (labia majora) of the female external genital organs, arising just below the mons pubis, and surrounding the vulval entrance. Also called *l. majus pudendi, major lip.* See Plate 41.

l. minus. One of the two folds (labia minora) at the inner surfaces of the labia majora. Also called *l. minus pudendi, minor lip.* See Plate 41.

la'bor [L., labor, toil]. Childbirth.

artificial l. That effected or aided by means other than the forces of the maternal organism.

dry l. That in which there is a deficiency of the liquor amnii, or in which there has been a premature rupture of the amniotic sac.

false l. Painful uterine contractions of the same intensity occurring usually at irregular intervals, frequently several days before normal labor. It is not associated with progressive dilation or effacement of the cervix or descent of the presenting part.

induced l. Labor brought on by artificial means.

instrumental l. One requiring instrumental means to extract the child.

l. pains. The pains associated with childbirth.

mechanism of l. The mechanism by which the fetus and its appendages traverse the birth canal. See Plate 43.

mimetic l. False labor.

missed l. Retention of the dead fetus in the uterus beyond the period of normal gestation.

obstructed l. That which is mechanically blocked, as from a contracted pelvis or pelvic tumor. Its severity is relative to the size of the fetus and the maternal structures.

postponed l. Delayed beyond nine months.

precipitate l. The sudden expulsion of the fetus and its appendages.

premature l. Labor taking place before the normal period of gestation, but when the fetus is viable.

protracted l. Labor prolonged beyond the usual limit (10–20 hours in primiparas, 3–6 hours in multiparas).

rotation stage of l. That period in the mechanism of childbirth in which the presenting part turns about its vertical axis to accommodate itself to the birth canal. This turning may be internal, occurring before the birth of the presenting part, or external, occurring afterward.

spontaneous l. That requiring no artificial aid.

stages of l. Arbitrary divisions of the period of labor; the first begins with dilatation of the os and ends with complete dilatation; the second ends

with the expulsion of the child; the third (placental) consists in the expulsion of the placenta.

lab'o-ra-to"ry [*labor*]. A place for experimental work in any branch of science.

general medical l. A large fully equipped U. S. Army laboratory in a theater of operations, with certain facilities comparable to those of the Army Medical Service Graduate School and Armed Forces Institute of Pathology.

l. unit. See medical *l.*

medical l. In *military medicine*, a medical establishment, generally a mobile unit, with personnel and equipment for medical tests and field research. Its main function is to prevent disease. There are two types: general, assigned to a theater of operations; medical, assigned on the basis of one to an army and one to each section of the communications zone.

Laborde's method. See under *artificial respiration.*

lab're-cyte [G. *labros*, boisterous; *kytos*, cell]. Mast cell. Obs.

la'brum, lab'rum [L., lip]. 1. A liplike structure. 2. In *invertebrate zoology*, the upper lip, as opposed to the labium, the lower lip.

l. glenoidale. The fibrocartilaginous ring that surrounds a socket in which the head of a large bone is received, such as the acetabulum or the glenoid cavity; glenoid lip.

lab'y-rinth [G. *labyrinthos*, labyrinth]. 1. An intricate system of connecting passageways; maze. 2. The system of intercommunicating canals and cavities that makes up the inner ear. —**labyrin'thine,** *adj.*

bony l. That part of the inner ear consisting of canals containing perilymph and the membranous labyrinth.

ethmoid l. That formed by the air cells in the lateral portions of the ethmoid bone.

membranous l. Those membranous canals corresponding to the shape of the bony labyrinth, suspended in the perilymph, and containing endolymph.

nasal l. The irregular cavity formed by the turbinate bones in the nasal passages.

osseous l. See bony *l.*

lab"y-rin-thec'to-my [*labyrinthos*; G. *ektomē*, excision]. The complete removal of the semicircular canals of the ear. Also see *fenestration operation.*

lab"y-rin-thi'tis [*labyrinthos*; G. -*itis*, inflammation]. Inflammation of the labyrinth of the inner ear. Syn., *otitis interna.*

serous l. That due to bacterial infection, toxins, or trauma, marked by increased perilymphatic pressure without suppuration.

suppurative l. That due to bacterial invasion, characterized by all of the diagnostic evidences of infection, including production of pus cells.

toxic l. Inflammation of the labyrinth due to drugs which cause nausea and vertigo.

traumatic l. Inflammation of the labyrinth due to trauma, as a fractured skull or such functional labyrinthine surgery as a fenestration operation.

lab"y-rin-thot'o-my [*labyrinthos*; G. *tomē*, a cutting]. Incision into the labyrinth, specifically into that of the inner ear.

lac [L.]. 1. Milk. 2. A term applied to various natural resins used in preparing shellac.

l. sulfuris. Sulfur milk or precipitated sulfur.

Lac Bismo. Trade-mark for bismuth magma.

lac'case. 1. An oxidizing enzyme present in many plants. 2. A class of oxidases which act on phenols.

lac'er-at"ed (lass'uh-ray"tid) [L. *lacerare*, to tear]. Torn.

lac"er-a'tion [L. *laceratio*, from *lacerare*]. 1. A tear. 2. The act of tearing or lacerating.

l. of perineum. A tearing of the wall separating the lower portion of the vagina and anal canal occurring occasionally during childbirth.

la-cer'tus [L., muscular part of the arm]. A small bundle of fibers.

l. fibrosus. An aponeurotic band from the biceps tendon to the fascia of the forearm.

Lach'e-sis (lack'i-sis) [G., one of the three Fates]. A genus of venomous pit vipers, the Crotalidae.

L. mutus. A species found in South America and in the extreme lower portion of Central America. Commonly known as the bushmaster. It attains a length of 11 or 12 feet and produces a powerful hemotoxic venom.

lach'ry-mal. See *lacrimal.*

la-cin'i-ate [L. *lacinia*, fringe]. Jagged, fringed; cut into narrow flaps, as laciniate ligament.

lac'moid. $[C_6H_3(OH)_2]_2N.C_6H_3(OH)_2$; an acid-base indicator prepared by interaction of resorcinol and sodium nitrite. It occurs as dark violet scales or granules, slightly soluble in water. Syn., *resorcinol blue.*

lac'ri-mal [L. *lacrima*, a tear]. 1. Pertaining to the tears, or to the organs secreting and conveying the tears. 2. The lacrimal bone. See Table of Bones in the Appendix.

lac"ri-ma'le (lack"ri-mah'lee, -may'lee) [*lacrimal*]. The point where the posterior lacrimal crest meets the frontolacrimal suture. This point may occasionally be coincident with the dacryon, and cannot be located in skulls from which the lacrimal bones have been lost.

lac"ri-ma'tion [L. *lacrimare*, to shed tears]. Normal secretion of tears; also, excessive secretion, as in weeping.

lac'ri-ma"tor [*lacrimare*]. Any substance, as a gas, which irritates the conjunctiva and causes secretion of the tears; a tear gas.

lac'ri-mo-tome [L. *lacrima*, a tear; G. *tomos*, cutting]. A cutting instrument used in operating on the nasolacrimal duct or lacrimal sac.

lac"ri-mot'o-my [L. *lacrima*, a tear; G. *tomē*, a cutting]. Incision of the nasolacrimal duct.

lac-tac"i-de'mi-a (lack-tass"i-dee'mee-uh) [L. *lac*, milk; *acidus*, sour; G. *haima*, blood]. Presence of lactic acid in the blood.

lac"ta-cid'o-gen. Name originally given by Embden and Zimmerman to a hexose-diphosphoric acid isolated from tissues. Obs.

lac-tac"i-du'ri-a (lack-tass"i-dew'ree-uh) [*lac*; *acidus*; G. *ouron*, urine]. Lactic acid in the urine.

lac'ta-gogue. See *galactagogue.*

lac"tal-bu'min [*lac*; L. *albus*, white]. A simple protein contained in milk which resembles serum albumin and is of high nutritional quality.

lactalumina. Trade-mark for an aqueous suspension of aluminum hydroxide.

lac'tam. An organic compound, containing a —NH—CO— group in ring form, produced by the elimination of a molecule of water from certain amino acids. It is the keto form of its isomer lactim.

lac-tam'ic ac'id. Alanine.

lac-tam'ide (lack-tam'id, -ide, lack'tuh-mide, -mid). $CH_3.CHOH.CONH_2$. The amide of lactic acid.

lac'tant [L. *lactare*, to suckle]. Suckling.

lac'tase. A soluble enzyme found in the animal body which hydrolyzes lactose to dextrose and galactose.

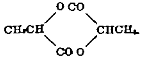
lac-tar"o-vi-o'lin. An antibiotic pigment, $C_{15}H_{14}O$, from *Lactarius deliciosus.*

lac'tate. A salt of lactic acid.

lac-ta'tion [*lactare*]. 1. Suckling; the period during which the child is nourished from the breast. 2. The formation or secretion of milk. —**lacta'tional,** *adj.*

lac'te-al [L. *lac*, milk]. Pertaining to milk.

lac'te al. Any of the lymphatics of the small intestine that take up the chyle.



la tes cence [L. *lactescere*, to turn to milk]. Milkiness often pplied t the chyle.

lac'tic [L. *lac*, milk]. Pertaining to milk or its derivatives.

lac'tic 'id. 2-Hydroxypropanoic acid or α-hydroxypropionic acid, existing in three forms. (a) (−)-lactic acid, $CH_3HCOH.COOH$, levorotatory biochemically produced from methylglyoxal under certain conditions, (b) L(+)-lactic acid, $CH_3.HOCH.COOH$, dextrorotatory the product of anaerobic glycolysis in muscle, hence called *sarcolactic acid*, ( ) DL-lactic acid, racemic mixture of (a) and (b) produced by the action of bacteria on sour milk and other foods, and prepared synthetically by fermentation of sugar or corn starch. The last form, medicinally important, occurs as colorless, syrupy liquid, miscible with water part of the acid exists as anhydride. It is used as an ingredient of infant-feeding formulas, and has been administered intraarticularly in treatment of arthritis externally t is used in spermatocidal compositions, and sometimes as caustic antiseptic.

l. a. dehydrogenase. An enzyme, in animal tissues, which catalyzes dehydrogenation of L(+)-lactic acid to pyruvic acid an anaerobic dehydrogenase which functions in the presence of coenzyme I

lac tide. 1. The ring compound produced by interaction of two molecules of an α-hydroxyacid in such way that the carboxyl group of one molecule is esterified with the hydroxyl group of the other and vice versa 2 The ring compound formed, according to the preceding definition, from two molecules of lactic acid It is

lac tif'er-ous [*lac*; L. *ferre*, to carry]. Conveying or secreting milk Syn., *lactigerous*.

lac'ti fuge [*lac*; L. *fugare*, to put to flight]. Lessening the secretion of milk.

lac'ti f ge. A drug or gent that lessens the secretion of milk.

lactigen. Trade-mark for lipoprotein antigen prepared from sterilized milk. Used in nonspecific protein therapy

lac tig'e-nous (lack-tidj'i-nus) [*lac*; G *gennathai*, from *gignesthai*, t be produced]. Producing milk.

lac tig'er-ous (lack-tidj rus) See *lact ferous*.

lac tim. An organic compound, containing —N:COH— group in ring form, produced by the elimination of molecule of water from certain amino acids. It is the enol form of its isomer lactam.

lac'tin. See *lactose*

lac"ti-su'gi um (lack ti-sue jee-um) [*lac*, L. *sugere* to suck]. Breast pump.

lac tiv -rous [*lac* L. *vorare*, to devour] Subsisting on milk

lac'to- lact [*lac*]. A combining form meaning *milk*.

la "to-ba cil'lic ac'id. $C_{19}H_{36}O_2$, fatty acid, probably methyleneoctadecanoic acid, containing cyclopropane ri g, elaborated by *Lactobacillus arabinosus*, and pparently essential for the growth f the organism

Lac"to ba-cil'lus [*lac*, L. *bacillus*, small staff] A genus of bacteria composed of microorganisms which are capable of producing lactic acid from carbohydra and carbohydratelike compounds, and which are ble to withstand degree of acidity usually destructive to nonsporulating bacteria.

L. acidophilus. Gram-positive rod found in milk, feces, saliva, and carious teeth, nonpathogenic and unusually resistant to acid also called *Bacillus acidophilus*, *L. gastrophilus*, and probably identical with *L. of Boas-Oppler* and *Bacillus vaginalis* (*Döderlein bacillus*)

L. bifidus. A nonmotile, anaerobic, Gram-positive rod the predominant organism in the intestine and feces of breast-fed infants.

L. bulgaricus. A species isolated from Bulgarian fermented milk.

L. casei factor See *folic acid*.

L. gastrophilus. See *L. acidophilus*.

L. lactis Dorner A microorganism used in the study of B_{12} since it requires this vitamin for growth.

L. of Boas-Oppler Gram-positive rod originally found in the gastric juice of patients with carcinoma of the stomach, but bearing no known causative relationship to this probably *L. acidophilus*.

lac'to-cele (lack'to-seel) Galactocele.

lac to-crit [*lac*; G *kritēs*, judge]. An pparatus for testing the quantity of fat in milk.

lac"to-fla'vin (lack"to-flay vin, -fla in) Riboflavin.

lac'to gen [*lac*; G. *gennathai*, from *gignesthai*, to be produced]. Any agent or substance which stimulates the secretion f milk.

lac"t gen'ic [*lac*; *gennathai*]. Activating or stimulating the mammary glands.

lac"to glob u lin [*lac*; L. *globulus*, small ball]. One of the proteins of milk.

lac tom'e-ter [*lac*; G *metron*, measure]. An instrument for determining the specif gravity of milk.

lac'tone. An anhydro-ring compound produced by elimination of water from molecule of an oxyacid.

lac ton'ic 'id. Galactonic acid.

lactopeptine. Trade-mark for mixture of pepsin, diastase, and pancreatin with lactic acid and hydrochloric acid.

lac"to per ox'i-dase. A peroxidase present in milk it has been isolated in crystallin form.

lac"to-phos'phate. A salt composed of base united to lactic and phosphoric acids.

lac"to pro te-in [*lac*; G *prōteios*, of first rank]. A protein in milk

lac"tor rhe a. Galactorrhea.

lac to sa zone. Characteristic osazone of lactose. See phenylhydrazine *test*.

lac'tose. $C_{12}H_{22}O_{11}$ 4-(β-D-galactopyranosido)-α-glucopyranose or 4-O-glucopyranosyl-β-D-galactopyranoside disaccharide representing D-glucose and D-galactose joined by 1 4-glycosidic bond; on hydrolysis t is converted to these sugars Two forms are known, *alpha-lactose* and *beta-lactose* milk of mammals contains an equilibrium mixture of th two Lactose of the U.S.P is the alpha form crystallization of this sugar t higher temperatures yields th beta form, which is more soluble in water Both are used as nutrients and occasionally as diuretic agent In pharmacy both are widely used as diluents and tablet excipients. Sy *lactin*, *milk sugar*

lac"to-su ri [*lac*; G *ouron*, urine]. The presence of lactose i the urine.

lac"to-ther py See *galactotherapy*.

la "to tox'in [*lac*; G *toxikon*, poison]. A poisonous substance found milk.

lac"to-veg" tar'i n [*lac*; L. *vegetus*, lively]. One who lives on diet of milk, eggs, and vegetables. —**lactovegetar'ian**, *adj*

lac"tu-car'i um (lack too kair ee m) [L. *lactuca*,

lettuce]. The concrete milky juice of *Lactuca virosa*. Contains a considerable amount of lactucerin, a mixture of acetyl esters of alpha-lactucerol and beta-lactucerol. Lactucarium is alleged to be sedative and anodyne; has been used in cough and nervous irritability.

lac-tu-cer-in. A mixture of acetyl esters of alpha-lactucerol and beta-lactucerol from lactucarium.

lac-tu'cer-ol. C H$_{2}$O. A crystalline substance from lactucerin; occurs in two isomeric forms, alpha-lactucerol and beta-lactucerol.

lac'tyl. The monovalent radical $CH_3CHOH.CO$— derived from lactic acid.

la-cu-na [L., hole, opening]. 1. A little depression or space. 2. The space in the matrix occupied by a cartilage cell or by the body of a bone cell. —**lacunar**, *adj.*

blood l. Any one of the cavities containing maternal blood in the early *syncytiotrophoblast* before the development of the true villi; they become the intervillous spaces of the placenta.

Howship's lacunae. See Joh. *Howship.*

lacunae urethrales. The openings of the urethral glands.

l. magna. An inconstant pouch extending upward from the dorsal wall of the navicular fossa of the penis.

l. musculorum. The space beneath the inguinal ligament which contains the iliopsoas muscle and femoral nerve.

l. vasorum. The space beneath the inguinal ligament which contains the femoral artery and vein.

l. venosa durae matris. Any small venous cleft between the layers of the dura mater connecting the emissary and diploic veins with the venous sinuses.

urethral l. An orifice of one of the larger urethral glands (of Littré).

la-cu'nu-le [dim. from L. *lacuna*, hole]. A small or minute lacuna; as air space, as seen in gray hair when magnified.

la-cu'nu-la. See *lacunule.*

la'cus. Lake.

lad'a-num [G. *ladanon*, gum-ladanum, from the Persian]. The resin of various species of *Cistus*, growing in the Mediterranean region. Also called *labdanum*. Ladanum oil distilled from the resin is used in perfumery.

Ladd-Franklin, Christine [*American psychologist and logician*, 1847–1930]. Advanced a theory of color vision developed upon a basis of evolution (1892). From a primitive black-white substance operative in rod vision in retinas without cones, the first stage in the development of color vision is said to have produced yellow and blue substances and cones; in the final stage, red and green substances were produced from the yellow, finishing the series of substances for white, yellow, red, and green vision. Called *Ladd-Franklin theory of vision.*

la dre-rie'. A chronic cutaneous helminthiasis characterized by multiple painless nodules containing parts of Taenia (*Cysticercus cellulosae*).

Lady Webster dinner pills. Aloe and mastic pills.

Laehr-Henneberg hard palate reflex. In pseudobulbar paralysis, contraction of the orbicularis oris and lowering of the upper lip when the hard palate is tickled.

Laennec, René Théophile Hyacinthe [*French physician*, 1781–1826]. Invented the stethoscope, and made a basic study of auscultation. Gave classic descriptions of tuberculosis, lobar pneumonia, pleurisy, bronchiectasis, pneumothorax, emphysema, and hydatid cysts of the lung. See also Laennec's cirrhosis, Laennec thrombus.

lae've (lee'veh) [L. *levis*, smooth]. Smooth; non-villous, as chorion laeve.

lae'vo- (lee'vo-). *laevo-*. See *levo-*.

Lafayette mixture. Copaiba mixture.

lag [perhaps Middle Danish *lakka*, to go slowly]. 1. The space of time between the application of stimulus and the resulting response. 2. See *lag phase.*

lag'am bal'sam (bawl'sum). A thick yellow liquid resembling Copaiba balsam.

la ge'na (la-jee'nuh) [G. *lagynos*, flask]. The curved, flasklike organ of hearing in lower vertebrates corresponding to the cochlea of higher forms.

la ge'ni form (la-jee'ni form, la-jen'i-) [*lagyna*; L. *forma*, form]. Flask-shaped.

lag ne'a (lag-nigh'uh) [G., coition]. Satyriasis or nymphomania; erotomania.

lag"neu-o ma'ni a [G. *lagneuein*, to have sexual intercourse; *mania*, madness]. A mental disorder characterized by lustful, sadistic, lewd, and lecherous actions.

lag"oph thal'mos [G. *lagōs*, hare; *ophthalmos*, eye]. A condition in which the eyes cannot be entirely closed; also called *lagophthalmia.* —**lagophthalmic**, *adj.*

Lagrange, Pierre Félix [*French ophthalmologist*, 1857–1928]. Devised an operation combining iridectomy and sclerectomy for the relief of glaucoma; called *Lagrange's operation.*

la grippe (lah grip). Old term for influenza.

la'i ty [G. *laos*, people]. Nonprofessional people as opposed to any professional group.

lake [L. *lacus*, lake]. 1. A small, fluid-filled hollow or cavity; lacus. 2. A pigment prepared by precipitating a vegetable or animal coloring matter with a metallic compound.

blood l. See *hematoma.*

lacrimal l. The space at the inner canthus of the eye, near the puncta lacrimalia, in which the tears collect.

lake. To hemolyze.

la'ky [F. *laque*]. Lake-colored; of a purplish red; said of blood serum which has a transparent red color after hemolysis.

lal"i-o-pho'bi a [G. *lalia*, talk; *phobos*, fear]. Morbid fear of talking or of stuttering. Also called *lalophobia.*

lal la'tion [L. *lallare*, to sing lalla or lullaby]. 1. Any unintelligible stammering of speech, as word-salad or the prattling of a baby. 2. Pronunciation of the letter r so that it sounds like l.

lal'ling (lallen). Speech marked by lallation.

lal"og no'sis. Recognition of words.

la lop a thy [G. *lalein*, to prattle; *pathos*, disease]. Any disorder of speech or disturbance of the function of language.

lal"o-pho'bi a. See *laliophobia.*

lal"o-pho-ne'a trist. A specialist dealing with defects in voice production, and especially with speech defects.

lal"o-ple gi a [*lalein*, G. *plēgē*, stroke]. Inability to speak, due to paralysis of the muscles concerned in speech, except those of the tongue.

lal"or-rhe a. See *logorrhea.*

Lalouette, Pierre [*French physician*, 1711–92]. Described the pyramidal lobe of the thyroid gland. This is an inconstant and variable third lobe, rising usually from the isthmus or from the adjacent part of the left lobe. It may extend as far as the hyoid bone. Called *Lalouette's pyramid.*

Lamarck, Jean Baptiste Pierre Antoine de Monet de (1744–1829). French naturalist, comparative anatomist, and biologist, who classified animals as vertebrates and invertebrates. He antedated Darwin in postulating some elements of Darwin's theory of evolution.

La marck'ism [after *Lamarck*]. The theory that organic evolution takes place through the inheritance of modifications caused by the environment, and by the effects of use and disuse of organs.

Lamballe. See *Jobert de Lamballe.*

lamb'da [G.]. 1. The eleventh letter of the Greek alphabet (Λ, λ). 2. Wavelength of light or other radiation. 3. The point where the sagittal suture meets the lambdoid suture.

lamb da cism [*lambda*]. 1. Difficulty in uttering the sound of the letter *l*. 2. Too frequent use of the *l* sound, or its substitution for the r sound.

lamb'doid [*lambda*, G. *eidos*, form]. Resembling the Greek letter lambda (Λ, λ), as lambdoid suture.

lam'bert [after Johann Heinrich *Lambert*, German physicist, 1728–77]. A photometric unit for describing the brightness of light reflected from surfaces. One lambert is the equivalent of one lumen per sq. cm.

Lambert's law. See *law* of Lambert.

Lambl' excrescences. See under *excrescence.*

Lam'bli a [from Wilhelm Dusan *Lambl*, Bohemian physician, 1824–95]. Synonym for *Giardia.*

lam bli' sis. See *giardiasis.*

la mel'la (pl. *lamellae*) [L., thin plate of metal]. 1. A thin scale or plate. 2. In ophthalmology, a medicated gelatin disk intended to be inserted under the eyelid.

circumferential l. A thin layer of bone deposited under the periosteum or endosteum.

concentric l. One of the plates of bone making up the Haversian systems in compact bone.

cornoid l. A horn plug penetrating the epidermis and having a central column of parakeratotic cells, microscopically diagnostic of porokeratosis.

enamel l. A thin organic sheet extending from the surface of the enamel toward and sometimes into the dentine of a tooth. It may be due to local developmental disturbance or a crack filled with organic matter.

ground l. See interstitial *l.*

Haversian l. One of the thin concentric layers of bone surrounding a Haversian canal.

interstitial l. One of the layers of bone of the regions between Haversian systems.

l. of bone. A thin layer of bone deposited during one period of osteogenic activity.

la mel'lar, **lam'el lar** [*lamella*]. Resembling a thin plate; composed of lamellae or thin plates, as lamellar cataract.

lame'ness [AS. *lama*]. Limping; weakness or partial loss of function of a leg, so that the gait is abnormal, whether due to acute disease, shortening, atrophy of muscle, pain, or to any other disturbance of the member. —**lame**, *adj.*

elbow l. Lameness in the horse, due to disease of the elbow joint.

intermittent l. See intermittent *claudication.*

lames foliacées [F.]. Fibrous tissue in concentric arrangement, resembling Meissner tactile bodies, found in the intradermal type of nevus pigmentosus.

La"mi a ce-ae (lay"mee-ay'see ee) [L. *lamium*, dead nettle]. A family of herbs, mostly aromatic. Syn., *Labiatae, Menthaceae.*

lam'i na [L.]. A thin plate or layer. —**laminar**, **laminated**, *adj.*

alar l. See alar *plate.*

anterior elastic l. The condensed, outer layer of the substantia propria of the cornea. Also called *l. elastica anterior, Bowman's membrane.*

basal l. 1. A homogeneous membrane covering the inner surface of the choroid. Also called *Bruch's membrane.* 2. See basal *plate.*

buccogingival l. See vestibular *l.*

choriocapillary l. The inner layer of the choroid, consisting of a capillary plexus.

cribriform l. See cribriform *plate.*

dental l. The epithelial ingrowth into the jaw which gives rise to the enamel organs of the developing teeth.

external elastic l. See external elastic membrane.

external medullary l. Fibers lying along the outer border of the thalamus and separating it from the internal capsule.

internal medullary l. A delicate band of fibers which divides the thalamus into lateral and medial parts.

labial l. See labiogingival *l.*

labiodental l. The epithelial ingrowth which forms the labiogingival lamina and the dental lamina.

labiogingival l. The portion of the vestibular lamina opposite the lips; also called *labial l.*

l. affixa. The line of union of a cerebral hemisphere with the thalamus.

l. cribrosa. (a) That portion of the sclera which is perforated for the passage of the optic nerve. (b) The fascia covering the saphenous opening. (c) The anterior or posterior perforated space of the brain. (d) The perforated plates of bone through which pass branches of the cochlear or auditory nerve.

l. dura. 1. See *dura mater.* 2. The bone lining a dental alveolus, so called because of its apparent density in roentgenograms.

l. elastica. The layer of interlacing elastic fibers in the mucous membrane of the pharynx, larynx, and respiratory tree.

l. fornicis. The fornix. See Plate 18.

l. modioli. The upper part of the osseous spiral lamina.

l. muscularis mucosae. The layer or layers of smooth muscle at the deep face of the mucous membrane of the digestive tube.

l. papyracea. A thin, smooth, oblong plate of bone which closes in the ethmoidal cells and forms a large part of the medial wall of the orbit. Also called *os planum.*

l. perpendicularis. Perpendicular plate.

l. propria. (a) The middle or fibrous layer of the tympanic membrane. (b) See *l.* propria mucosae.

l. propria mucosae. The connective tissue of mucous membrane. Syn., *tunica propria mucosae.*

l. quadrigemina. The alar plate of the midbrain from which the corpora quadrigemina are developed.

l. suprachoroidea. The delicate connective-tissue membrane uniting the choroid and sclerotic coats of the eye.

l. terminalis. The connecting layer of gray matter between the optic chiasma and the anterior commissure where it becomes continuous with the rostral lamina.

l. vasculosa chorioideae. The outer pigmented layer of the choroid, composed of small arteries and veins.

l. vasculosa testis. The vascular connective tissue deep to the tunica albuginea testis.

lateral pterygoid l. The lateral pterygoid plate.

medial pterygoid l. The medial pterygoid plate.

neural l. The lateral portion of the neural arch of a vertebra.

osseous spiral l. The thin shelf of bone projecting from the modiolus and partially subdividing the cochlea; the basilar membrane completes the division.

periclaustral l. The layer of white matter between the claustrum and the cortex of the insula.

posterior elastic l. An elastic, transparent, homogeneous membrane covering the posterior

surface of the substantia propria of the cornea. Also called Descemet's membrane.

reticular l. The hyaline membrane of the inner ear extending between the heads of the outer rods of Corti and the external row of the outer hair cells.

rostral l. The thin continuation of the rostrum of the corpus callosum into the lamina terminalis. See Plate 18.

secondary spiral l. A short partition projecting from the outer wall of the cochlea in the lower part only.

spiral l. A thin plate in the ear, osseous in the inner part and membranous in the outer, which divides the spiral tube of the cochlea into the scala tympani and scala vestibuli. See osseous spiral l. and basilar membrane.

vestibular l. The vertical sheet of oral ectoderm which splits to form the vestibule of the mouth; also called lip furrow band.

lam'i·na·gram. See tomogram.

lam"i·nag'ra·phy. See sectional radiography.

lam"i·na'tion [lamina]. 1. Arrangement in plates or layers. 2. An operation in embryotomy consisting in cutting the skull in slices.

la'mine. A hemostatic alkaloid occurring in the flowers of *Lamium album*.

lam"i·nec'to·my [lamina; G. *ektomē*, excision]. Surgical removal of one or more neural laminas of the vertebrae, often including the spinous processes of the vertebrae.

lam"i·ni'tis [lamina; G. *-itis*, inflammation]. Inflammation of the laminas of a horse's hoof. It is often an accompanying symptom to founder.

lam"i·nog'ra·phy. See sectional radiography.

lam"i·not'o·my [lamina; G. *tomē*, a cutting]. Division of a neural lamina of a vertebra.

La·mi'um [L., dead nettle]. A genus of plants of the Labiatae. *L. album* is a species furnishing the alkaloid lamine.

lamp [G. *lampas*, torch]. An apparatus for furnishing artificial light or heat.

annealing l. An alcohol lamp used by dentists for annealing gold leaf.

carbon arc l. A source of therapeutic light, produced by an electric arc between carbon electrodes. Such light contains a mixture of wavelengths from 2200 to 40,000 angstroms. The intensity of various wavelengths between these limits may be altered by impregnation of the carbon electrodes with different salts.

carbon filament l. A luminous heater with maximum emission between 10,000 and 20,000 angstroms. About 30% of the energy is in the range with greatest penetrability.

cold quartz mercury vapor l. A mercury vapor lamp emitting radiations which are practically devoid of heat.

infrared l. A source of heat rays, which emanate from a surface heated to a temperature of 300° to 400° C. The spectral emission ranges through infrared from 8000 to 150,000 angstroms. Such rays have poor penetrability for skin.

mercury vapor l. A hollow fused quartz lamp filled with mercury vapor, producing radiations a large proportion of which are at the radiation emission line of 2540 angstroms, having high germicidal action. This is probably the most suitable source of ultraviolet radiations for routine therapeutic use.

slit l. An instrument designed for examination of the anterior segment of the eye. It produces a bright beam of parallel light and has a microscope which can be focused on any opaque structure of the cornea, iris, or lens.

sunlight l. One which at a measured distance produces rays which imitate in range and intensity the wave lengths of sunshine.

tungsten filament l. A lamp with filament made of tungsten.

Wood's l. See Robert Williams *Wood*.

lam'pas [F., cf. *lamper*, to guzzle]. In veterinary medicine, congestion of the mucous membrane of the hard palate just posterior to the incisor teeth in horses.

lamp'black [G. *lampas*, torch; AS. *blaec*]. A fine black substance, almost pure carbon, made by burning oils, tars, fats, or resins in an atmosphere deficient in oxygen. The similar product (sometimes called lampblack) obtained by allowing a gas flame to impinge on a cold surface, is more properly designated *gas black* or *carbon black*.

lam·proph'o·ny, lam·pro·pho'ni·a [G. *lampros*, clear, brilliant; *phōnē*, voice]. Clearness of voice. —**lamprophon'ic,** *adj.*

La'mus me·gis'tus. Synonym for *Panstrongylus megistus*.

lam·ziek'te (lahm·seek'tuh) [S. Afr. D., lame-sickness]. A bone disease of cattle in South Africa, resulting from the eating of contaminated carrion. The disease is due to *Clostridium botulinum D*.

la'na (lay'nuh, lan'uh) [L.]. Wool. See wool fat.

lan·a'to·side. A natural glycoside from the leaves of *Digitalis lanata*; three such glycosides have been isolated and are designated **lanatoside A, lanatoside B,** and **lanatoside C,** formerly called digilanid A, digilanid B, and digilanid C, respectively. The aglycones are, respectively, digitoxigenin, gitoxigenin, and digoxigenin. All three lanatosides yield, on hydrolysis with acid, one molecule of D-glucose, three molecules of digitoxose, and one molecule of acetic acid. They are cardioactive.

Lancaster's advancement. See under advancement, 2.

lance [L. *lancea*, spear]. Cut or open, as with a lancet or bistoury.

Lancefield groups. See under *Streptococcus*.

Lancereaux, Étienne [French physician, 1829–1910]. Made important observations on syphilis. Described diabetes mellitus with extreme emaciation, often seen in association with pancreatic disease, called *Lancereaux' diabetes*. See also *Lancereaux' law of thrombosis*.

lan'cet [F. *lancette*]. A short, double-edged pointed knife, once in common use for bleeding patients and for lancing the gums of teething children.

spring l. One in which the blade is thrust out by means of a small spring operating on a trigger; often used to obtain small quantities of blood for laboratory examinations.

lan·ci·na"ting [L. *lancinare*, to tear to pieces]. Tearing; shooting, sharply cutting, as lancinating pains. —**lancinate**

Lancisi, Giovanni Maria [Italian physician, 1654–1720]. Made important contributions to epidemiology. Gave a classic description of aneurysm. See also stria longitudinalis, also called *stria of Lancisi*.

land'marks" [AS. *land*; *mearc*]. Superficial marks, as eminences, lines, and depressions, that serve as guides to, or indications of, deeper parts.

Landolt, Edmund [French ophthalmologist, 1846–1926]. Made important contributions to the knowledge of physiologic optics. Described small, elongated bodies lying between the rods and cones on the outer nuclear layer of the retina, called *Landolt's bodies*. The *Landolt ring* is an incomplete ring used as a test object for visual acuity.

Landouzy, Louis Théophile Joseph [French physician, 1845–1917]. Described spirochetal jaundice (1883), called *Landouzy's disease*, *Fiedler's disease*

Weil' disease. Independently and with Dejerine, described facioscapulohumeral atrophy called *Landouzy-Dejerine atrophy* or *type.* Neuralgia of the sciatic nerve with trophy of part or all of th affected leg is known as *Landouzy' sciatica.* A form of purpura with serious systemic symptoms is called *Landouzy purpura* The *Landouzy-Gr sset law* named for Landouzy and Joseph Grasset, states that in disease of singl cerebral hemisphere, if there are spasti symptoms, the patient' head inclines toward the side of the af fected muscles, if paralysis occurs, the head is turned toward the side of the cerebral lesion.

Landry de Thézillat, Jean Baptiste Octave (1826–1865) French physician who described acute ascending paralysis, also called *Landry paralysis.*

Landsteiner Karl (1868–1943) American pathologist who established the basis of blood grouping, discovered isoagglutinins in human blood serum and isoaggl tinogens in blood cells (1900) and discovered three of the four main blood groups. The classification adopted by the Permanent Commission on Biology Standards, which designates the four groups as O A, B, and AB is also know as the *Landsteiner classification.* He wa the first to transmit poliomyelitis from man to monkeys by injection of an emulsion of spinal cord from fatal case (1909) Landsteiner and Alexander S. Wiener discovered the Rh factor (1940) Nobel laureate (1930)

Lane, William Arbuth ot [*Scottish surgeon in England,* 1856–1943] Devised steel plates of various shapes, with holes for screws, for fixing fragments in position in cases of fracture called *Lane plates.* Described intestinal bends or twists, called *Lane' kinks, Lane kink* usually refers to an obstructive twist of the ileum. Devised an operation of ileosigmoidostomy for the relief of chronic constipation alled *Lane' operation.* Intestinal stasis is known as *Lane' disease.*

la nette' wax. An emulsifier ntroduced in England as an ingredient of washable ointment bases; it is said to be approximated in composition by mix ture of 9 parts of cetyl alcohol and 1 part of sodium lauryl sulfate.

Lange test. See under *test*

Langenbeck, Bernhard R dolph Konrad von [*German surgeon,* 1810–87]. Made umerous contributions to the development of orthopedic and plasti surgery Modified the Indian method of rhinoplasty Devised an operation for cleft palate in which closure was effected by means of periosteal flaps obtained from either side and sutured in the midline.

Langer Carl von [*Austrian anatomist,* 1819–87] Plotted lines indicating the direction of skin tension called *Langer lines* These clea age lines lie in the direction in which skin stretches least and perpendicular to the direction of greatest stretch Thus, linear scars following the direction of skin tension usually spread little, whereas scars crossing the tension lines have an opposite tendency Langer described an inconstantly present m sculotendinous slip of the latissimus dorsi extending across the xilla anterior to the vessels it insert in the region of the pectoralis major called *Langer axillary arch*

La gerhans, Paul [*Germa physician and anatomist* 1847–88] Described the islet of the pancreas (1869) called *islet or islands f Langerhans; see islet of pancreas.* Described two types of cells called *Langerhans cells* star-shaped cells in the stratum germinativum, and spindle-shaped cell in the lumens of the acini of the pancreas See also stellate *corpuscle,* called *Langerhans corpuscle*

Langhans, Theodor [*German anatomist and pathologist in Switzerland,* 1839–1915]. Described the cytotrophoblast, called *layer* or *stria of Langhans* The cells forming the cytotrophoblast are known as *Langhans cells.* See also Langhans giant cell.

Langley J hn Newport (1852 1925) English physiologist who observed the action of pilocarpine on the heart (1875) and demonstrated that large amounts of nicotine painted on sympathetic ganglia blocked the passage of impulses across them (1889) H contributed greatly to the knowledge of th autonomic nervous system, coined the terms *preganglionic* and *postganglionic,* and described the parasympathetic system (1905) separating it from the sympathetic outflow by differences in response to adrenalin, pilocarpine, and other drugs.

lan guor (lang'gur) [L.]. A condition of mind and/or body caused by exhaustion lassitude.

Lannelongue Odilon Marc [*French surgeon,* 1840–1911]. Transplanted the thyroid gland of an animal to human being for the relief of thyroid deficiency (1890) Devised number of operations, including one of craniectomy in which narrow strip of parietal bone near the sagittal suture was resected, for decompression as in microcephaly Called *Lannelongue operation.*

lan″o-ce ri ac'id (lan″o-seer'ick, lay″no-) A dibasi fatty acid occurring in wool fat.

lanolac. Trade-mark for sodium-free milk.

lan lin. See hydrous *wool fat.*

lan″ palm'ic ac'id (lan o-pal'mick, -pahl'mick, lay no) A fatty acid present in wool fat.

lan-os'ter ol lan″o-ster'ol. $C_{30}H_{50}OH$ $\Delta^{8,24}$-lanostadiene-3β-ol an unsaturated sterol from wool fat which differs from ordinary sterols in having three additional methyl groups ttached to the ring system.

Lantermann incisure. See *incisure* of Schmidt Lantermann.

lan tha nide. Any chemical element of series beginning with lanthanum, and including cerium, praseodymium, eodymium, promethium, samarium, europium gadolinium, terbium, dysprosium, holmium, erbium, thulium, ytterbium, nd l tetium, the group constituting th lanthanide series of elements, formerly called the *rare earth elements.*

lan'tha non. A y element belonging to the lanthanide series of elements

lan tha um [G *lanthanein,* t escape notice] La = 138.92 A rare metallic element.

l n thi o nine COOH CHNH₂.CH S CH CHNH COOH β,β′-thiodialanine or bis (β-amino-β-carboxyethyl) sulfide an amino acid obtained fr m wool, hai feathers, and lactalbumin previously treated with mild alkali.

lan'tho pine. $C_{23}H_{25}NO$; minor alkaloid from opium

la nu go [L., down] 1. The downlike hair that covers the fetus about the fifth month of gestation. 2. The fine downy hair that appears on all parts of the body except palms of hands and soles of feet, and those parts, such as the scalp, where other varieties of hair are found. —lanuginous, *adj*

lan u-lous [L *lanula,* small lock of wool]. Covered with short, fine hair

lanum. Trade me for hydrous wool fat.

lap chol. C H O_3; 2-hydroxy-3-(3-methyl-2-butenyl) 1 4-naphthoquinone yellow pigment in the grain of various woods.

la pac tic [G. *lapaxis,* t empty]. 1 An evacuant. 2 Any purgative substance.

lap -ro- lapar- [G. *lapara,* soft part of the body between the ribs and the hip]. *1 medicine and*

lapar-y combining form denoting *the flank* or more loosely *the abdomen*.

lap"a-ror'rha-phy [*lapara*; G. *rhaphē*, suture]. Suture of the abdominal wall.

lap"a-rot'o-mist [*lapara*; G. *tomos*, cutting]. A surgeon who performs laparotomies. *Obs.*

lap"a-rot'o-my [*lapara*; G. *tomē*, a cutting]. 1. An incision through the abdominal wall; celiotomy. 2. The operation of cutting into the abdominal cavity through the loin or flank.

lap"a-ro-tra"che-lot'o-my (-tray"kil-ot'o-mee, -track"il-ot'o-mee) [*lapara*; G. *trachēlos*, neck; *tomē*]. Low Cesarean section. The peritoneal cavity is not opened, the approach being through the cervix of the uterus.

Lapham, Maxwell E. (1899–) American obstetrician known for his research in breech presentation and on the effect of amytal on the uterus in obstetrics. He developed a simple, rapid procedure for laboratory diagnosis of early pregnancy, called the *Friedman-Lapham test*.

la'pis (lay'pis, lap'is) [L.]. A stone; an alchemic term applied to any nonvolatile substance.

l. calaminaris. Calamine.

l. infernalis. Silver nitrate. Also called *l. infernalis*.

l. mitigatus. Diluted silver nitrate.

l. pumicis. Pumice.

Laplace, Pierre Simon de [French astronomer and physicist, 1749–1827]. With Lavoisier demonstrated by means of an ice calorimeter that respiration is a form of combustion.

lap'pa [L., bur]. The root of the common burdock, *Arctium lappa*, or of *Arctium minus*. Contains a bitter principle, a resin, and tannin. It has been used as an aperient, diuretic, and alterative.

lap"pa-con'i-tine. $C_{32}H_{44}N_2O_8$ or $C_{32}H_{42}N_2O_8$; an alkaloid from *Aconitum septentrionale*.

lap'sus [L., from *labi*, to fall]. A fall or slip; ptosis.

l. calami. Slip of the pen; from the psychoanalytic point of view, it reveals an unconscious desire.

l. linguae. Slip of the tongue, considered by psychoanalysts to reveal an unconscious desire.

l. palpebrae superioris. Ptosis of the eyelid.

l. pilorum. Alopecia.

l. unguium. Falling of the nails.

Laqueur, Ludwig [German ophthalmologist, 1839–1909]. Introduced the use of physostigmine as a miotic in the treatment of glaucoma (1876).

lar'bish. A form of larva migrans that is seen in Senegal.

lard [L. *laridum*, lard] (*adeps*). The purified internal fat of the abdomen of the domestic hog. Used in pharmacy chiefly as an ingredient of ointment and cerate bases.

benzoinated l. (*adeps benzoinatus*). Lard with 1% of benzoin; used as a mild antiseptic and ointment base.

lar da'ceous [*laridum*]. 1. Resembling lard. 2. Containing diffuse amyloid infiltration.

largactil. Trade-mark for the antinauseant drug chlorpromazine hydrochloride.

lark'spur [AS. *lāwerce*; *spura*] (*delphinium*). The dried ripe seed of *Delphinium ajacis*; it contains the alkaloids ajacine and ajaconine.

l. tincture (*tinctura delphinii*). Larkspur 10% w/v in alcohol; used as a pediculicide.

larocaine hydrochloride. Trade-mark for p-aminobenzoyl-2, 2-dimethyl-3-diethylaminopropanol hydrochloride, an anesthetic of the procaine type used in surface and infiltration anesthesia in concentrations of 0.25–10.0%.

larodon. Trade-mark for phenyl-dimethyl-isopropyl-pyrazolon; the substance is a white, crystalline powder used as an analgesic and antipyretic.

larosan. Trade-mark for a compound of casein and calcium oxide.

larostidin. Trade-mark for a 4% solution of l-histidine hydrochloride used in gastroduodenal-ulcer therapy.

Laroyenne, Lucien [French surgeon, 1831–1902]. Known for his operation for draining a pelvic abscess by incising the rectouterine pouch, called *Laroyenne's operation*.

Larrey, Dominique Jean [French army surgeon, 1766–1842]. Devised numerous operations, including methods of amputation at the shoulder and hip joints. Improved the methods of treating war wounded, using advanced first-aid stations and fast ambulances.

Larrey's sign. See under *sign*.

Larsen method. See under *method*.

lar'va (pl. *larvae*) [L. *larva*, ghost]. An immature, free-living stage in the life cycle of various animals which reach the adult form by undergoing a metamorphosis.

l. migrans. Infestation of the dermis by various larvae, characterized by bizarre red irregular lines which are broad at one end and fade at the other, produced by burrowing larvae, most commonly in the United States by those of *Ancylostoma braziliense*. Syn., *dermamyiasis linearis migrans oestrosa*.

lar'val [*larva*]. 1. Pertaining to or in the condition of a larva. 2. Pertaining to an abortive form of a disease, the full clinical syndrome not developing; as larval pneumonia, larval scarlet fever.

lar'vate [L. *larvatus*, masked]. Concealed; masked; applied to diseases and conditions that are hidden by more obvious conditions, or by some peculiarity of their symptoms.

lar'vi cide [L. *larva*, ghost; *caedere*, to kill]. Any agent destroying insect larvae.

lar"yn gal'gi-a [G. *larynx*, larynx; *algos*, pain]. Pain or neuralgia of the larynx.

la-ryn'ge-al cri'sis (la-rin'jul, -jee-ul, lar"in-jee'ul). An acute laryngeal spasm, sometimes occurring in tabes dorsalis.

lar"yn gec'to-my (lar"in-jeck'to mee) [*larynx*; G. *ektomē*, excision]. Extirpation or partial excision of the larynx.

lar"yn gem phrax'is [*larynx*; G. *emphraxis*, stoppage]. Closure or obstruction of the larynx.

lar"yn gis'mus (lar"in-jis'mus, -jiz'mus) [*larynx*]. A spasm of the larynx. —**laryngismal**, *adj.*

l. stridulus. A spasmodic affection of the larynx, seen most commonly in rachitic infants and young children; characterized by a sudden crowing inspiration followed by an arrest of respiration of several seconds' duration, with increasing cyanosis, and ending with long, loud, whistling inspirations; also called *false croup, spasmodic croup*.

lar"yn gi'tis [*larynx*; G. *-itis*, inflammation]. Inflammation of the larynx. It may be acute or chronic, catarrhal, suppurative, croupous (diphtheritic), tuberculous, or syphilitic. —**laryngit'ic**, *adj.*

chronic catarrhal l. The most common form of laryngitis; consists of a hypertrophic and an atrophic stage. Symptoms are hoarseness, pain, dryness of the throat, dysphagia, and cough.

diphtheritic l. Inflammation of the larynx occurring with diphtheria. A false membrane, difficult to remove, forms on the mucosa.

dry l. A form characterized by sensations of heat and by fatigue in the throat, persistent cough, and sometimes aphonia. Also called *l. sicca, Türck's trachoma*.

granulomatous l. That associated with multiple

small ulcers of the larynx, as found in tuberculosis of the larynx.

spasmodic l. See *laryngismus* stridulus.

tuberculous l. A type usually secondary to active tuberculosis of the lung. It usually attacks the vocal folds and arytenoid region and later extends as a markedly destructive lesion.

la ryn go- (la ring go-) **laryng-** [*larynx*]. A combining form signifying *the larynx*.

la ryn go-cele [*larynx*; G. *kēlē*, hernia]. A saccular dilatation of the mucosa of the larynx occurring at some site between the hyoid bone and the cricoid cartilage.

ventricular congenital l. An abnormally deep pocket between the true and false vocal folds.

la ryn go-cen te sis [*larynx*; G. *kentēsis*, pricking]. Puncture of the larynx.

la ryn″go-fis′sure [*larynx*; L. *fissura*, fissure]. 1. Division of the larynx for the removal of tumors or foreign bodies. 2. The aperture made in the operation of laryngofissure.

la-ryn′go graph [*larynx*; G. *graphein*, to write]. An instrument for recording laryngeal movements. —**laryngog′raphy** *n.*

lar″yn gol′o-gist [*larynx*; G. *logos*, word]. One who specializes in laryngology.

lar″yn gol′o gy [*larynx*; *logos*]. The science of the anatomy, physiology, and diseases of the larynx. —**laryngolog′ic,** *adj.*

lar″yn gom e try [*larynx*; G. *metron*, measure]. The systematic measurement of the larynx.

la ryn″go pa ral′y sis [*larynx*; G. *paralysis*, paralysis]. Paralysis of the laryngeal muscles.

lar″yn gop′a thy [*larynx*; G. *pathos*, disease]. Any disease of the larynx.

la-ryn go-phan tom [*larynx*; G. *phantasma*, phantom]. An artificial larynx designed for illustrative purposes.

la ryn go-pha ryn ge al (la ring go-f -rin′jul, -jee ul, far″in-jee ul) [*larynx*; G. *pharynx*, pharynx]. Pertaining conjointly to the larynx and pharynx.

la ryn″go phar″yn gec′to my (-far in-jeck′to-mee) [*larynx*; *pharynx*; G. *ektomē*, excision]. Surgical removal of the larynx and a portion of the pharynx.

la ryn″go pha ryn ge us [*larynx*; *pharynx*]. Old term for the inferior constrictor of the pharynx.

la ryn″go phar″yn-gi′tis [*larynx*; *pharynx*; G. *-itis*, inflammation]. 1. Inflammation of the laryngopharynx. 2. Inflammation of the larynx and the pharynx.

la-ryn″go-phar′ynx [*larynx*; *pharynx*]. The inferior portion of the pharynx. It extends from the level of the greater cornua of the hyoid bone to that of the inferior border of the cricoid cartilage. Also called *hypopharynx*, *laryngeal pharynx*.

lar″yn goph′ony [*larynx*; G. *phōnē*, voice]. The sound of the voice observed in auscultation of the larynx.

la ryn go-plas″ty [*larynx*; G. *plassein*, to form]. Plastic operation upon the larynx.

la-ryn go ple gi a [*larynx*; G. *plēgē*, stroke]. Paralysis of one or more muscles of the larynx.

la ryn″go-pto si (la ring go t sis) [*larynx*; G. *ptōsis*, falling]. Mobility and falling of the larynx sometimes occurs in old age.

la ryn″go-rhi nol o gy (la ring go-rye-nol jee) [*larynx*; G. *rhis*, nose; *logos*, word]. The branch of medicine which treats of diseases of the larynx and the nose.

la ryn gor rha gi-a [*larynx*; G. *rhēgnynai*, to burst]. Hemorrhage from the larynx.

lar″yn gor′rha-phy [*larynx*; G. *rhaphē*, suture]. Suture of the larynx.

la ryn″gor-rhe a, la ryn″gor rhoe a (la-ring go-ree ah) [*larynx*; G. *rhoia*, flow]. Excessive secretion of mucus from the larynx, especially when it is used in phonation.

la ryn go scle ro ma [*larynx*; G. *sklērōma*, induration]. Induration affecting the larynx. *Rare.*

la ryn′go-scope [*larynx*; G. *skopein*, to examine]. A tubular instrument, combining a light system and a telescopic system, used in the visualization of the interior larynx and adaptable for diagnostic, therapeutic, and surgical procedures. —**laryngo-scop′ic,** *adj.*

lar″yn gos co-pist [*larynx*; *skopein*]. An expert in laryngoscopy.

lar″yn gos co py [*larynx*; *skopein*]. Examination of the interior of the larynx with the laryngoscope.

direct l. Examination of the interior of the larynx by direct vision with the aid of a laryngoscope.

indirect l. Examination of the interior of the larynx by means of a laryngeal mirror.

suspension l. A method of laryngoscopy devised by Killian, in which the head is suspended on a combined mouth gag and tongue spatula which are supported by a bar connected with a moving overhead crane. The advantages of the method are that it leaves both hands of the examiner free and gives excellent exposure of the larynx, as in examining laryngeal tumors.

la ryn go-spasm [*larynx*; G. *spasmos*, spasm]. Spasmodic closure of the glottis; laryngismus stridulus.

lar″yn gos′ta-sis. Croup.

la ryn″go-ste no sis [*larynx*; G. *stenōsis*, being straitened]. Contraction or stricture of the larynx.

lar″yn gos′to-my [*larynx*; G. *stoma*, mouth]. The establishing of a permanent opening into the larynx through the neck.

la ryn″go-stro′bo-scope (-stro′bo-scope, -strob o-scope) [*larynx*; G. *strobos*, a whirling round; *skopein*, to examine]. A laryngoscope combined with an adjustable intermittent source of illumination, used in the observation of the vocal folds. —**laryngostrobos′copy** *n.*

la ryn″go-syr′inx (la-ring go-sirr inks) (pl. *laryngosyringes*) [*larynx*; G. *syrinx*, pipe]. A laryngeal tube.

la ryn go tome [*larynx*; G. *tomos*, cutting]. A cutting instrument used in laryngotomy.

lar″yn got′o-my [*larynx*; G. *tomē*, cutting]. The operation of incising the larynx.

complete l. Incision of the larynx through its whole length.

inferior l. Incision of the larynx through the cricothyroid membrane.

median l. Incision of the larynx through the thyroid cartilage.

superior l. Incision of the larynx through the thyrohyoid membrane. Also called *subhyoid l.*, *thyrohyoid l.*

la ryn″go-tra che al (la-ring′go-tray′kee-ul) [*larynx*; G. *tracheia*, rough]. Pertaining conjointly to the larynx and the trachea.

la ryn go tra che-i′tis (-tray″kee eye′tis) [*larynx*; *tracheia*; G. *-itis*, inflammation]. Inflammation of the larynx and the trachea.

la ryn go-tra che-o bron-chi tis (-tray″kee-o-brong-kigh′tis) [*larynx*; *tracheia*; G. *bronchos*, windpipe; *-itis*]. Acute inflammation of the mucosa of the larynx, trachea, and bronchi.

la-ryn″go-tra″che-os′co py. Tracheoscopy.

la ryn″go-tra″che-ot′o my [*larynx*; *tracheia*; G. *tomē*, cutting]. Tracheotomy in which the cricoid cartilage and one or more of the upper rings of the trachea are divided.

la-ryn″go-xe ro sis (la ring go-zi-ro sis) [*larynx*; G. *xēros*, dry; *-ōsis*, condition]. Dryness of the larynx.

lar'ynx [*larynx*]. The organ of the voice, situated between the trachea and the base of the tongue. It consists of a series of cartilages: the thyroid, the cricoid, and the epiglottis, and three pairs of cartilages: the arytenoid, corniculate, and cuneiform, all of which are lined by mucous membrane and are moved by the muscles of the larynx. The mucous membrane is, on each side, thrown into two transverse folds that constitute the vocal bands or folds, the upper being the false, the lower the true, vocal folds. By the approximation or separation of the vocal folds, the changes in the pitch of the voice are produced. The space between the vocal folds is termed the *glottis* and the margins the *rima glottidis*. See Plate 12. —**laryn'geal** (la-rin'jul, -jee-ul, lar"in-jee'ul) *adj.*

las·civ'i·a [L. *lascivus*, wanton]. Satyriasis, nymphomania.

las·civ'i·ous [*lascivus*]. Libidinous; wanton; having an unlawful desire; lustful.

Lasègue, Ernest Charles [*French physician*, 1816–83]. Described a sign of sciatic nerve disease: elevation of the extended lower extremity produces pain in the nerve trunk. Called *Lasègue's sign*. *Lasègue's law* states that superficial lesions or simple functional ailments of an organ increase, whereas organic disease decreases the reflexes.

lash [M.E. *lasshe*]. 1 An eyelash. 2. A flagellum. *Obs.*

Laskmet and Newburgh's test. See under *test*.

Lassar's paste. See under *paste*.

las'si·tude [L. *lassitudo*, weariness, heaviness]. A state of exhaustion or weakness; debility.

la'tent [L. *latens*, lying hid]. Concealed; not manifest; potential. —**latency**, *n.*

lat'er·ad [L. *latus*, side; *ad*, toward]. Toward the lateral aspect.

lat'er·al [L. *lateralis*, from *latus*, side]. 1 At, belonging to, or pertaining to the side; situated on either side of the median vertical plane. 2 External, as opposed to medial (internal); away from the midline of the body.

lat"er·it'i·in I. An antibiotic substance isolated from cultures of *Fusarium lateritium*, perhaps identical with enniatin A.

lat"er·it'i·in II. An antibiotic substance isolated from cultures of a species of *Fusarium*, possibly a strain of *F. lateritium*.

lat"er·i'tious, lat"er·i'ceous (lat-ur-ish'us) [L. *latericius*, from *later*, brick]. Resembling brick dust, as the lateritious sediment of the urine.

lat"er·i·ver'sion. See *lateroversion*.

lat'er·o- [L. *latus*, side]. A combining form denoting *laterally, to one side*.

lat"er·o·ab·dom'i·nal [*latus*; L. *abdomen*, belly]. Pertaining to either lateral portion of the abdomen.

lat"er·o·duc'tion [*latus*; L. *ducere*, to lead]. Lateral movement, as of the eye.

lat"er·o·flex'ion (lat"ur-o-fleck'shun) [*latus*; L. *flectere*, to bend]. Bending or curving to one side; the alteration in position of the uterus in which the uterine axis is bent upon itself to one side.

lat"er·o·mar'gin·al [*latus*; L. *margo*, edge]. Placed on the lateral edge.

lat"er·o·pul'sion [*latus*; L. *pulsus*, a beating]. A tendency to move to one side in forward locomotion.

lat"er·o·spor'in. A multiple antibiotic, consisting of laterosporin A and laterosporin B, isolated from cultures of *Bacillus laterosporus*, active in vitro against a number of bacteria.

lat"er·o·tor'sion [*latus*; L. *torquere*, to twist]. A twisting to one side.

lat"er·o·ver'sion [*latus*; L. *vertere*, to turn]. The alteration in position of the uterus in which the entire uterine axis is displaced to one side.

la'tex (pl. *latices*) [L., liquid]. The milky juice of certain plants and trees. Rubber and gutta-percha are commercial products of latex.

l. cells. Cells giving rise to latex or milky juice.

lath'y·rism (lath'i-riz-um) [G. *lathyros*, a kind of pulse]. An affection produced by the use of meal from varieties of vetches, chiefly *Lathyrus sativus* and *L. cicera*. It is a form of spastic paraplegia with tremor, involving chiefly the legs. Syn., *lupinosis*.

la·tis"si·mus·con"dy·lo'i·de·us (?) The dorsoepitrochlearis muscle.

la·tis'si·mus [L., superlative of *latus*, wide]. Widest, as latissimus dorsi muscle. See Table of Muscles in the Appendix.

l. thoracis. BR name for the latissimus dorsi muscle.

la·trine' [L. *latrina*]. A water closet or privy, especially any of a number of types used in military installations, permanent or temporary.

Lat"ro·dec'tus [NL.]. A genus of small black spiders of the family Theridiidae which possesses potent venom and frequently causes serious symptoms in man. *L. hasseltii* of Australia and *L. lugubris* of Russia are toxic.

L. mactans. The species most dangerous in the Americas: the black widow or hourglass spider. The female of the species alone is dangerous.

lat'tah. A form of imitative neurosis in Malaya.

la'tus, -a, -um [L., wide]. Broad, as ligamentum latum, the broad ligament of the uterus.

Latzko, Wilhelm [*Austrian obstetrician*, 1863–1945]. Devised an operation of low Cesarean section in which the approach is extraperitoneal, with lateral displacement of the urinary bladder and peritoneal reflection. Called *Latzko's low Cesarean*, *Latzko's operation*.

laud'a·ble [L. *laudare*, to praise]. Healthy; formerly said of a copious pus thought to indicate an improved condition of the wound.

lau·dan'i·dine. $C_{20}H_{25}NO_4$; an alkaloid from opium.

lau'da·nine (law'duh-neen, -nin). $C_{20}H_{25}NO_4$. One of the alkaloids of opium.

lau·dan'o·sine (law-dan'o-seen, -sin, law"dun-o-). $C_{21}H_{27}NO_4$. A crystallizable alkaloid of opium.

lau'da·num [NL.]. Opium tincture.

laugh [AS. *hliehhan*]. Normally an audible expression of mirth. —**laugh**, *n.*

canine l. Risus sardonicus.

sardonic l. Risus sardonicus.

Laughlen test. A flocculation test for syphilis.

laugh'ter [AS. *hleahtor*]. A succession of rhythmic, spasmodic expirations with open glottis and vibration of the vocal folds, expressing mirth.

compulsive l. That seen in schizophrenia; it is without cause and mirthless; the patient usually does not know he is laughing. Also called *obsessive l.*

Laumonier, Jean Baptiste Philippe Nicolas René [*French anatomist and surgeon*, 1749–1818]. Described the carotid ganglion, also called *Laumonier's ganglion*.

Launois, Pierre Emile [*French physician*, 1856–1914]. With M. Cléret, described hypophyseal gigantism (1910), called *Launois' syndrome*, *Launois-Cléret syndrome*.

Laurence, John Zachariah [*English ophthalmic surgeon*, ca. 1830–1870]. With Moon, described familial retinitis pigmentosa associated with general defective development (1866). See Laurence-Moon-Biedl syndrome.

Laurentjew's phenomenon. See multiplication phenomenon of Laurentjew.

lau'ric ac'id. $CH_3(CH_2)_{10}COOH$. A fatty acid derived from cherry laurel and spermaceti.

lau'ro-, laur- [L. *laurus*, laurel]. *In chemistry*, combining form denoting *lauric acid*.

lauron. Trade-mark for aurothioglycanide, a gold compound used for treatment of rheumatoid arthritis.

lau·ro·tet·ra·nine (law·ro·tet'rah·neen, ·nin). $C_{19}H_{21}NO_4$. An alkaloid from the bark of *Litsea citrata*. A powerful poison, acting like strychnine on the spinal cord.

lau'rus [L.]. The leaves of *Laurus nobilis* (bay laurel) containing cineol, *l*-linalool, geraniol, eugenol, etc. Used as a spice.

Lauth, Ernest Alexandre [*Alsatian anatomist and physiologist*, 1803–37]. Described the venous sinus of the sclera (1829) called *Lauth's canal*, *Schlemm's canal*. See venous *sinus* of the sclera.

Lauth's violet. See *thionine* under *stain*.

la·vage (lah·vahzh', lav'idj) [F.]. The irrigation or washing out of an organ, such as the stomach, bowel, urinary bladder, or paranasal sinus.

la·va'tion [L. *lavatio*, from *lavare*, to wash]. Lavage; ablution.

lav'en·der [ML. *lavendula*]. The flowers of *Lavandula officinalis*. The active principle is a volatile oil.

compound l. tincture (*tinctura lavandulae composita*). Contains lavender oil, rosemary oil, cinnamon, clove, myristica, and red saunders in a hydroalcoholic menstruum. A popular remedy for nausea and flatulence. Dose, 2–4 cc. (30–60 min.)

l. oil (*oleum lavandulae*). The volatile oil distilled with steam from the fresh flowering tops of *Lavandula officinalis*; contains not less than 30% of esters calculated as linalyl acetate. Used chiefly as a perfume; sometimes as a carminative.

l. spirit (*spiritus lavandulae*). Stimulant and carminative. 5% of oil in alcohol. Dose, 0.6–2.0 cc. (10–30 min.)

la·ven'du·lin. An antibiotic substance, containing sulfur, isolated from a variant of *Actinomyces lavendulae*, active in vitro against a variety of bacteria.

Laveran, Charles Louis Alphonse [*French army physician and bacteriologist*, 1845–1922]. Discovered malarial parasites in blood cells (1880). Nobel laureate (1907).

Lavoisier, Antoine Laurent [*French chemist*, 1743–94]. Called the founder of modern chemistry. Named oxygen, previously isolated by Priestley and Scheele, and discovered its function in combustion; is sometimes called the discoverer of oxygen. With Laplace, demonstrated by means of an ice calorimeter that respiration is a form of combustion.

law [AS. *lagu*]. 1. Statement of a relation or sequence of phenomena invariable under the same conditions. 2. A rule of conduct prescribed by authority.

Adrian-Bronk l. The intensity of excitation of a nerve is directly related to the frequency of discharge of the individual neuron and to the number of neurons.

all-or-nothing l. The response of a single fiber of cardiac muscle, skeletal muscle, or nerve to an adequate stimulus is always maximal. The strength of response depends upon the number of fibers stimulated.

average localization l. Visceral pain is most accurately localized in the least mobile viscera.

Bastian-Bruns l. See Henry C. *Bastian*.

Beer's l. The transmittance of light through a stable solution is an exponential function of the product of the concentration of solute and the length of path in the solution.

biogenetic l. See recapitulation *theory*.

Boyle's l. The osmotic pressure is proportional to the concentration of the solute if the temperature remains invariable.

Cannon's l. of denervation. When in a series of efferent neurons a unit is destroyed, an increased irritability to chemical agents develops in the isolated structure or structures, the effects being maximal in the part directly denervated.

Courvoisier's l. In jaundice due to impaction of a stone in the common duct, the gallbladder will usually be contracted; that due to extrinsic pressure on the common duct (e.g., carcinoma of head of the pancreas) the gallbladder will be distended.

Dalton's laws. See John *Dalton*.

Donders's l. *In ophthalmology*, when the position of the line of fixation is given with respect to the head, there is correspondingly a definite angle of torsion, independent of the observer's volition and the manner in which the line of fixation arrived in the position in question.

Driesch's l. (*of constant volume*). The differences in the total mass of the organ are due to the number and not to the volume of the cells, e.g., the renal or hepatic cells of a bull, man, or mouse have approximately equal size.

Einthoven's l. *In electrocardiography*, the algebraic sum of the potentials of lead I plus those of lead III is equal to the potentials of lead II.

eugenic sterilization l. One providing for the sterilization of persons with certain inheritable mental disorders and deficiencies, who have been committed to mental institutions, and of certain criminals.

Fechner's l. The intensity of a sensation produced by a stimulus varies directly as the logarithm of the numerical value of that stimulus.

Fick's l. of diffusion. The rate at which a dissolved substance diffuses through a medium (solvent) will depend upon the concentration of the substance diffusing.

Fuerbringer's l. The embryological origin of muscle can be traced by its innervation.

Grotthus' l. Light must be absorbed in order to produce an effect. Frequently known as *Draper's l.*

isodynamic l. In metabolism, different foods are interchangeable in accordance with their caloric values.

Jadassohn-Lewandowsky l. Tubercles or tuberculoid structures tend to appear wherever microorganisms or their products are neutralized or overcome by the local immunological reactions. Thus chronic infections other than tuberculosis can produce the tuberculoid structure.

Kinney's l. A law of speech and hearing—a person with normal speech and hearing who subsequently loses all of his hearing, begins to show speech changes in a length of time that is directly proportional to the length of time that he had speech.

Kohlrausch's l. of migration of ions. Molecular conductivity of a binary electrolyte (one that dissociates into two univalent ions) is l_k plus l_a, where the symbol l_k is given to the part contributed by the cation and l_a to that contributed by the anion. These are constant values for the same ions, whatever salts they may form.

Lancereaux's l. of thrombosis. Marantic thromboses always occur at the points where there is the greatest tendency to stasis; that is, where the influence of the cardiac propulsion and of thoracic aspiration is least.

l. of Avogadro. Equal volumes of gases at the same pressure contain equal numbers of molecules.

l. of Blagden. The lowering of the freezing point is proportional to the concentration of the solution.

l. of Bunsen-Roscoe. The time required for reaction to light is inversely proportional to the intensity of the light.

L. of definite proportions. Any chemical compound is formed always by the same elements in the same proportion by weight.
L. of Dulong and Petit. The specific heat of an element varies inversely as its atomic weight.
L. of filial regression. According to Galton, children whose parents deviate from the average of the population likewise deviate from the average in the same direction as the parents, but regress by about one-third of the parental deviation toward the mean. For example, children whose parents are 3 inches above the average stature are themselves on the average about 2 inches above the mean stature of the population.
L. of Howland and Kramer. A maxim concerned with the production and healing of rickets, based on the fact that the solubility product of total serum inorganic phosphorus times total serum inorganic calcium remains approximately constant (40–55 mg per 100 cc in growing children); it states that rickets will occur in children if the product is below 35, and will heal if it rises above 40. The law, with proper modifications, is applicable in cases of osteomalacia in adults (normal value for the product of the ions, 30–40 mg per 100 cc).
L. of independent assortment. The members of different gene-pairs segregate at meiosis independently of one another, provided they are located on different pairs of homologous chromosomes.
L. of inverse squares. For point sources of radiant energy the intensity of the radiation at any point varies inversely as the square of the distance from the point source.
L. of Lambert. A mathematical expression of the amount of light absorbed when passed through a liquid or solid medium.
L. of Le Chatelier. A more general form of van't Hoff's principle of mobile equilibrium. See van't Hoff's *principle of mobile equilibrium.*
L. of mass action. The speed of a chemical reaction is proportional to the active masses of the reacting substances. Also called *Guldberg-Waage l.*
L. of Maxwell. The dielectric constant of a substance is identical with the square of its refractive index, as calculated for light of very long wave length or for electric waves.
L. of Müller. However excited, each nerve of special sense gives rise to its own peculiar sensation. Syn., *l. of specific energy.*
L. of multiple proportions. If more than one compound is formed by two elements, the weight of one of the elements remains constant, that of the other element varies as a multiple of the lowest amount of that element in the series of compounds.
L. of parsimony. Economy in the use of a specific means to an end.
L. of progress (Gaskell). The nervous system has been the dominant factor in evolution.
L. of reciprocal proportions. Two elements, which unite with each other, will unite singly with a third element in proportions which are the same as, or multiples of, the proportions in which they unite with each other.
L. of refraction. A ray of light passing from a rarer to a denser medium is turned toward a perpendicular to the surface and in passing from a denser to a rarer medium it is turned away from that perpendicular.
L. of refreshment. The rate of recovery of muscle from fatigue is proportional to its blood supply.
L. of segregation. The two members of any given pair of genes separate at meiosis so that a mature germ cell receives one or the other member of each pair of genes.
L. of similars. The Hahnemann rule of homeopathy that like cures like.
L. of Small Numbers. See *Poisson distribution.*
L. of specific energy of nerve. A theory first formulated by Johannes Müller that each nerve of special sense gives rise to its own specific sensation, no matter how it is excited.
L. of specific irritability. Every sensory nerve reacts to one form of stimulus and gives rise to one form of sensation. If under abnormal circumstances it is stimulated by other forms of excitation, the sensation produced is the same.
L. of specificity of bacteria. As elucidated by Robert Koch, the microorganism must be present in every case of the disease; it must be capable of cultivation in pure culture; it must, when inoculated in pure culture, produce the disease in susceptible animals. To this has been added a fourth condition, that the organism must be recovered and again grown in pure culture. Also called *Koch's l., Koch's postulate.*
L. of the heart. The force or amplitude of contraction of the heart is proportional within physiologic limits to its diastolic length. Syn., *Starling's law.*
L. of the intestines. A stimulus applied to a given *point in the intestinal wall initiates a band of constriction* on the proximal side and relaxation on the distal side of the stimulated point.
L. of velocities. Any process, which is on the way to an equilibrium, becomes slower and slower as the final state is approached. Sometimes known as *Newton's l. of cooling.*
linkage l. Different gene-pairs tend to segregate together if they are located on the same pair of homologous chromosomes. Linked genes may be separated with a frequency which varies from 0 to 50%, depending chiefly upon the relative linear distances between them.
Mendel's laws. The laws of heredity. They refer to the way in which the hereditary units, the genes, pass from one generation to the next by way of the germ cells. In neo-Mendelian terms the principles may be stated as follows: Genes segregate at the time of maturation, with the result that a mature germ cell gets either the maternal or the paternal gene of any pair. Genes of different pairs segregate independently of one another, provided they are located on different pairs of chromosomes. If they are located on the same pair of chromosomes, they are linked and consequently segregate in larger or smaller blocks depending mainly on their relative distances apart on the chromosome, i.e., on the percentage of crossing over.
Newton's l. of cooling. The rate of cooling depends on the difference of temperature between the hot body and its surroundings, so that it steadily diminishes as the temperature difference becomes less. Generally known as the *l. of velocities.*
periodic l. If the elements are arranged in the sequence of their atomic weights, elements having similar characteristics recur regularly in the series, that is, most of the physical and chemical properties of the elements are periodic functions of their atomic weights. Also called *Mendeléeff's l.*
Perrin's l. Particles constituting the internal phase of a colloidal system, if of sufficiently low concentration, must arrange themselves as a result of the influence of gravity as do the molecules of gases under comparable conditions.
Pflüger's laws. Laws pertaining to the alteration of excitability and conduction of nerves during and after the application of direct electric current.
psychophysical l. See *Fechner's l.*

Rosenbach's l. See under Ottomar *Rosenbach*.
Rubner's laws. See under Max *Rubner*.
Spallanzani's l. See Lazaro *Spallanzani*.
Starling's l. See *l.* of the heart also see Ernest Henry *Starling*.
Stokes' l. The relationship between velocity of fall of a spherical body as influenced by gravity and the radius of the particle, or the particle size.
van t Hoff's l. See Jacobus Henricus van t *Hoff*.
Weber's l. T exsits series of sensations differ ing by equal increments, the stimuli must increase in geometric proportion.
Weigert Meyer l. A urological maxim which states that in cases of reduplication of the upper urinary tract, the lower ureteral orifice belongs to the upper pelvis (Weigert) or in cases where the two orifices are located side by side, the medial orifice belongs to the upper pelvis (Meyer)
Wolff' l. Every change in the use or static relations of bone leads not only to change in its internal structure and architecture but also to change in its external form and function.

Läwen, George Arthur [*German surgeon*, 1876–]. Credited with introducing paravertebral injections in the treatment of angina pectoris (1922) Described pathologic fracture of the cartilage of the patella (1925); called *Büdinger Ludloff Läwen disease*.

Lawson Tait. See *Tait*.

lax'a-tive [L. laxare to lighten, relieve]. Aperient mildly cathartic.

lax' tive. An agent that relieves constipation; a mild purgative.

lax'i ty [L. laxitas, roominess]. 1. Lack or loss of tone, tension, or firmness. 2. Lack of strictness or precision. —**lax,** *adj*

lay'er [AS. *lecgan*]. A deposited material of uniform, or nearly uniform, thickness, spread over comparatively considerable area; cover; stratum.
basal-cell l. The deepest layer of cells in the germinative layer of stratified epithelium.
basal l. The nondeciduate stratum basalis of the endometrium, containing th blind ends of the uterine glands. Syn., *stratum basalis*.
choriocapillary l. See choriocapillary *lamina*.
compact l. The superficial layer of the endometrium during the secretory phase of the menstrual cycle; it is characterized by the presence of many decidual cells in pregnancy Syn., *stratum compactum*.
dermic l. The middle layer of the tympanic membrane.
ependymal l. A layer of elongated ectal near the central canal of the neural tube. Syn., *nuclear l.*
external granular l. of the cerebellum. A granular layer in fetal and neonatal cerebellar cortex also called *Obersteiner l.*
external granular l. of the cerebrum. Th second layer of the cerebral cortex, containing large number of small pyramidal and granule cells. Also called *layer of small pyramidal cells*.
xternal pyramidal l See *l.* of pyramidal cells
ganglionl l (a) The inner cell layer of the retina. (b) The deep layer of large pyramidal cells in the cerebral cortex in the motor area it contains the giant pyramidal cells: also called *internal pyramidal l.*
germinative l. The deeper proliferative layers of cells of the epidermis, including the basal-cell layer and the prickle-cell layer Syn., *stratum germinativum, malpighian l.*
germ l. One of the epithelial layers of the blastula or blastocyst from which the various organs of the embryo are derived See *ectoderm, entoderm, mesoderm*.
granule l. The layer deep to the molecular layer of the cerebellar cortex, containing large number of granule cells.
granular l. of Tomes. A thin zone of imperfectly calcified dentin immediately under the cementum in the roots of teeth.
half-value l. *In roentgenology*, that thickness of suitable absorber which reduces the intensity of given x-ray beam to half of its initial value.
horny l. The stratum corneum of the epidermis.
intragranular l. The ganglionic layer and the layer of fusiform cells of the cerebral cortex collectively
inner nuclear l. The layer of the retina made up chiefly of the cell bodies of the bipolar neurons.
internal granular l. The fourth layer of the cerebral cortex containing many small multipolar cells with short axons, and scattered small pyramidal cells.
internal pyramidal l. See ganglionic *l.* (b)
l. of fusiform cells. The deepest layer of the cerebral cortex, with irregular fusiform and angular cells, whose axons enter the subjacent white matter Syn., *multiform l.*
l. of Henle. The outermost layer of the internal root sheath of hair
l. of Huxley The middle layer of the internal root sheath of hair
l. of Langhans. The inner cellular layer of the ectoderm of th chorion. Syn., *cytotrophoblast*.
l. of pyramidal cells. The third layer of the cerebral cortex, having superficial stratum containing chiefly medium-sized pyramidal cells and deeper stratum containing large pyramidal cells also called *external pyramidal l.*
l. of rods and cones. Outer layer of the retina.
malpighian Malpighian l. See germinative *l.*
mantle l. A layer of neuroblasts between the ependymal and marginal layers of the (developing) neural tube.
marginal l. A narrow nonnuclear zone in the external part of the neural tube.
molecular l. (a) The outermost layer of the cerebral or of the cerebellar cortex, made up of neuroglia, few small ganglion cells, and reticulum of myelinated and unmyelinated nerve fibers. (b) One of the two layers, inner and outer of the retina, made up of interlacing dendrites. Also called *plexiform layer*
multiform l. See *l.* of fusiform cells.
nuclear l. See ependymal *l.*
Obersteiner's l. See external granular *l.* of the cerebellum.
osteogenic l. The deeper layer of periosteum, connected with the formation of bone.
outer nuclear l. The layer of the retina which contains the rod and cone granules, or cell bodies.
papillary l. The surface layer of the dermis, extending into the papillae formed by the uneven line of union of the dermis and epidermis.
pigment l. The external layer of the embryonic optic cup or retina.
plexiform l. See molecular *l.*
prickle-cell l. The germinative layer of the epidermis exclusive of the basal cells.
reticular l. The deeper layer of the dermis, composed of dense network of collagenous and elastic fibers.
somatic l. The external layer of the lateral mesoderm after the formation of the coelom, forming part of the somatopleure.
splanchnic l. The internal layer of the lateral mesoderm after the formation of the coelom, forming part of the splanchnopleure.
spongy l. The middle zone of the endometrium during the secretory phase of the menstrual cycle

characterized by the dilated portion of the glands and edematous connective tissue. Syn. *stratum spongiosum*.

subendocardial l. A layer of loose connective tissue binding the endocardium and myocardium together.

subendothelial l. The middle layer of the tunica intima of veins and of medium and larger arteries. It consists of collagenous and elastic fibers and few fibroblasts.

suprachoroid l. See *lamina suprachoroidea*.

supragranular l. The external granular layer and layer of pyramidal cells of the cerebral cortex collectively.

tympanic covering l. The connective-tissue layer covering the lower surface of the basilar membrane of the cochlea.

vestibular covering l. The connective-tissue layer covering the upper surface of the basilar membrane of the cochlea.

lay·ette [F.]. A full outfit of garments, bedding, etc. for a newborn child.

lay'man [G. *laos*, people; AS. *mann*]. A member of the laity; a person not a member of a given professional group, as distinguished from a member of the group.

laz'ar, laz'ar [G. *Lazaros*, from the Hebrew]. An old name for a leper or for any person having repulsive disease.

laz"a·ret'to [It.]. 1. A public hospital for the care of persons suffering from contagious diseases, especially lepers; pesthouse. 2. A building or vessel used for quarantine.

Lazear, Jesse William [American physician, 1866–1900]. Member with Reed, Carroll, and Agramonte y Simoni of the United States Army Yellow Fever Commission which proved that yellow fever is transmitted to man by mosquitoes (1900).

lb. *Libra*; pound (usually avoirdupois).

lb. *Libra*; pound (usually apothecaries').

LCT 50 See median lethal gas *exposure*.

LD Lethal dose; the smallest dose that kills the test animal; also written L.D.

LD 50 dose. Median lethal dose; also written LD_{50}.

LD 100 dose. Total lethal dose; also written LD_{100}.

L. D. Perception of light difference; also, lethal dose.

L. D. A. Left dorsoanterior position of the fetus.

L. D. P. Left dorsoposterior position of the fetus.

L.D.S. Licentiate in Dental Surgery.

LE Lupus erythematosus.

L. E. 1. Left eye. 2. Lupus erythematosus.

leach'ing [AS. *leccan*]. The process of washing or extracting the soluble constituents from insoluble material.

lead (led) [AS. *lēad*] (*plumbum*). Pb = 207.21. A soft, bluish-gray, malleable metal, occurring in nature chiefly as the sulfide PbS, known as *galena*. Its soluble salts are violent irritant poisons, formerly used as local astringents. Insoluble lead salts at one time were used as protectives, but due to the danger of absorption, the therapeutic use of lead compounds has been practically discontinued.

basic l. chromate. $PbO \cdot PbCrO_4$. A red pigment. Syn., *chrome red*.

colloidal l. A dispersion of lead or one of its compounds; has been administered intravenously with some good results, in treating cancer.

diluted l. subacetate solution. Lead subacetate solution diluted with approximately 30 volumes of water; applied externally. Syn., *l. water*.

l. acetate (*plumbi acetas*). $(CH_3COO)_2Pb \cdot 3H_2O$. Occurs as white crystals. A local astringent in 1–2% solution. Syn., *sugar of lead*.

l. and opium lotion (*lotio plumbi et opii*). Prepared from lead acetate, opium tincture, and water. An embrocation of doubtful value for sprains and bruises. Also called *l. and opium wash*.

l. arsenate. Approximately $PbHAsO_4$; a dense, white powder insoluble in water; used as a constituent of insecticides.

l. arsenite. Approximately $Pb(AsO_2)_2$, a white powder insoluble in water; used as a constituent of insecticides.

l. borosilicate. A mixture of the borate and silicate of lead; a constituent of certain optical glasses.

l. carbonate. Approximately $(PbCO_3)_2 \cdot Pb(OH)_2$, basic lead carbonate or lead subcarbonate; a white powder insoluble in water; used chiefly as a pigment.

l. chloride. $PbCl_2$. A white, crystalline powder sparingly soluble in water.

l. chromate. $PbCrO_4$. A yellow powder used as a pigment. Syn., *chrome yellow*.

l. dioxide. PbO_2. A dark-brown powder insoluble in water; used in preparation of electrodes, also as an oxidizing agent, and for industrial purposes. Syn., *lead peroxide*.

l. monoxide (*plumbi monoxidum*). PbO. A yellowish or reddish powder almost insoluble in water. An ingredient of lead plaster; occasionally used as an ingredient of external applications for relieving inflammation. Also called *litharge*, *yellow l. oxide*.

l. nitrate. $Pb(NO_3)_2$. Occasionally employed in solution as an astringent.

l. oleate. An unctuous material of varying composition; active ingredient of lead oleate plaster.

l. oleate ointment. See under *ointment*.

l. oleate plaster (*emplastrum oleatis*). Made by the interaction of lead monoxide, olive oil, and lard; formerly used as a protective for skin inflammations. Syn., *l. plaster*. Also called *diachylon plaster*.

l. orthoplumbate. Pb_2PbO_4 (or Pb_3O_4). An orange-red powder almost insoluble in water; formerly used externally as a protective. Also called *minium*, *red l.*, *red l. oxide*.

l. oxide. See *l.* monoxide and *l.* orthoplumbate.

l. peroxide. Lead dioxide.

l. plaster. See *l.* oleate plaster.

l. subacetate solution (*liquor plumbi subacetatis*). A solution of approximately $Pb_2O(CH_3COO)_2$; an externally applied astringent and sedative. Also called *Goulard's extract*. Also see diluted *l.* subacetate solution; *l.* water and laudanum.

l. tetraethyl. $Pb(C_2H_5)_4$. A colorless, inflammable liquid; used as an anti-knock ingredient in motor fuels. Acute or chronic poisoning may result from its inhalation.

l. water. See diluted *l.* subacetate solution.

l. water and laudanum. A mixture of lead subacetate solution with an equal volume of opium tincture; used as an external application to sprains and bruises.

sugar of l. See *l.* acetate.

white l. Lead carbonate; used in paints. Formerly used as an external astringent and protective.

lead (leed) [AS. *lǣdan*]. A pair of terminals or electrodes situated within or upon the body, each connected either directly or through resistors to a recording instrument for the purpose of measuring the difference in electrical potential between them.

augmented unipolar limb l. A form of unipolar limb lead whose amplitude is increased 50 per cent. Two limb leads connected to a central terminal constitute one electrode, and a connection with the other limb constitutes the other lead.

bipolar limb l. See standard limb *l.*

CF L. Precordial lead paired with the left leg (so-called indifferent electrode) and connected to the galvanometer so that an upright deflection in the finished record represents positivity

chest L. An electrocardiograph lead derived by placement of electrodes on the chest.

CL L. Precordial lead paired with the left arm (so-called indifferent electrode) and connected to the galvanometer so that an upright deflection in the finished record represents positivity

CR L. Precordial lead paired with the right arm (so-called indifferent electrode) and connected to the galvanometer so that an upright deflection in the finished record represents positivity

CV L. Precordial lead pairing with the precordial electrode and joining electrodes from the three extremities (central terminal) Connections are made with the galvanometer in such way that the finished record presents upward deflections of positive value.

electrocardiogram l A pair of terminals placed on the body surface which records electric potential differences due to cardiac action.

electroencephalographic L. A pair of terminals which measures th potential differences resulting from cerebral activity between two points on the skull.

esophageal L. An electrode placed in the esophagus adjacent to the heart and paired with an indifferent lectrode; used to study atrial waves or posterior myocardial infarction.

extremity L. A standard limb *l*

indirect L. An electrical connection in which all of the electrodes are distant from the current source, g., heart, brain, muscle, or spinal cord.

L. axis. See electric *axis*.

L. IV (R, L, F) Precordial electrode placed just external to the pex of the heart, paired with the right arm, left arm, and left leg, respectively

precordial L. One taken from the precordium, one electrode being placed over the precordium and the other at some distant or indifferent region precordial leads are CF CL, CR, and CV

semidirect L. An electrical connection in which the exploring electrode is placed in close proximity to the source of current (heart, brain, etc) while the indifferent electrode or combination of electrodes is far removed.

standard limb L. An electrocardiographic connection between electrodes placed on two limbs lead I, combination of right and left arms; lead II, of right arm and left leg lead III, of left arm and left leg. Syn., *bipolar limb l.*

unipolar L. An electrocardiogram taken with one electrode on region with potential variations of considerable magnitude and another on region with minimal potential changes

unipolar limb L. *I electrocardiography* one in which the exploring electrode is paired with an electrode that is relatively indifferent (central terminal)

voltage L. One taken by means of precordial electrode paired with central terminal (joining electrodes placed on the right arm left arm, and left leg); V right margi of sternum in fourth interspace, V left margin of sternum in fourth interspace, V midway between the left sternal margin and midclavicular line, V midclavicular line V left anterior axillary line, V midaxillary line, the latter three on line to the ape and then horizontal from the apex. Also called *V lead.*

Leadbetter Guy Whitman [*American orthopedic surgeon*, 1893–1918] Devised method of reduction in fracture of the femoral neck. The patient lies supine on table, the anterior superior spines of the ilium being held firmly The operator facing the patient's feet, places his shoulder under the patient calf to provide fulcrum, and with both hands over the front of the leg above the ankle, exerts downward pressure on the long axis of the femur Called *Leadbetter' procedure.*

lead'er (lee dur) [AS. *lædan*]. A sinew or tendon. *Obs*

lead'ing (led'ing) [AS. *lead*]. Vernacular for chronic lead poisoning.

lead poi son ing. A form of poisoning due to the introd ction of lead into the system. **Acut lead poisoning** is characterized by an immediate metallic taste and burning sensation in the throat. Severe abdominal pain occurs, and, later local paralysis and collapse. **Chronic lead poison ing** (saturnism or plumbism) occurs in persons long exposed to repeated absorption of small amounts of the element. There is anorexia, general lassitude, various dyspeptic symptoms, and obstinate constipation associated with violent pain. A blue line on the gums may appear as may basophilic degeneration of the red blood cells Various nervous symptoms may develop, such as the characteristi wrist drop.

leaf [AS. *lēaf*]. A term occasionally employed in anatomic descriptions of certain parts of the body as the right or left leaf of the diaphragm.

Leake nd Guy' method. See under *method.*

Le Ë o (lay-ow) **spread'ing de pres'sion.** See under *depression.*

learn'i g dis-tur'bance or de-fect' Any specific defect in the ability of child to learn one of the basic academic disciplines, as strephosymbolia, or a general defect in learning to read or write, or in learning mathematics It may be due to specific organic disorder and is often complicated by habit disturbances.

Leber Theodor [*German ophthalmologist*, 1840–1917]. Described rare hereditary form of axial neuritis of the optic nerve (1871) called *Leber' optic atrophy*

le Boë. See Franciscus *Sylvius.*

leo" nop a gus [*lekand; pagos*] Conjoined twins with union of the pelves and lower parts, and separate heads, necks, and upper thoraxes. Also called *dicephalus.*

lec"a nor'in A. An antibiotic substance isolated from the lichen *Lecanora esculenta.*

lec" no-so ma top gus [G *lekanē*, basin *sōma*, body *pagos*, that which is fixed]. Equal twins conjoined by the pelves and thoraxes, or by the vertebral col mns form of dicephalism.

Lecat, Claud Nicolas (1700–1768) French surgeon and anatomist Dilatation of the bulbous portion of the urethra is known as *Lecat' gulf*

Le Chatelier' law See *law* of Le Chatelier

le he de hi gue ron (lay chay day ee gay-roha *See* Notes § 35) [Sp.]. The crud sap of bastard fig tree, *Ficus glabrata* or *F doliara*, used in Central and South America as an anthelmintic, especially in trichuriasis.

lech"o-py're (leek o-pye rah, leck-op'i ruh) [G *lechō* woman in childbed; *pyr* fire]. Puerperal fever

lec'i thal (les'i-thul) [G. *lekithos*, yolk]. H ving yolk used especially in combination, as alecithal and telolecithal.

lec"ith al'bu min (less ith-alb yoo-min, -alb-yōō' min) [*lekithos*; L. *alb s*, white]. A more or less stable compound of albumin and lecithin, found in various organs.

lec'i thin (les thin) [*lekithos*]. Any of group of phospholipids of the general composition $CH_2OR.CHOR_1.CH_2OPO_3OHR_2$ in which R_1 and R are f tty acids and R_2 is choline; colorless to yellow-brown, waxy solid widely distributed in the body —**lec'ithoid** *adj*

lec"i-thi-nase. An enzyme which catalyzes the breakdown of lecithin to its constituents.

l. A. An enzyme catalyzing the removal of only one fatty acid from lecithin and yielding lysolecithin.

l. B. An enzyme catalyzing the removal of the fatty acid from lecithin or lysolecithin and yielding choline phosphate.

lec"i-tho-blast" (less'ith-o-blast, leh-sith'o-blast) [*lekithos*; G. *blastos*, germ]. The entoblast or primitive entoderm of the bilaminar blastoderk.

lec"i-tho-pro'te-in [*lekithos*; G. *prōteios*, of first rank]. A compound of lecithin with a protein molecule. See American Classification of Proteins in the Appendix.

lec"i-tho-vi-tel'lin. The lecithin-phosphoprotein complex as found in egg yolk.

lec'tin. A general term for blood-group specific agglutinins, occurring in seeds and other parts of certain plants; some lectins are also specific precipitins.

ledercillin. Trade-mark for a brand of penicillin G preparations for oral or topical use.

Lederer, Max [*American pathologist*, 1885–1952]. Known for his description of an acute hemolytic anemia of unknown cause associated with jaundice, fever, and severe systemic symptoms, but responding to blood transfusions (1925); called *Lederer's anemia*.

Leduc, Stéphane Armand Nicolas [*French physicist*, 1853–1939]. Remembered for his introduction of an interrupted, direct electric current used in the production of electric narcosis; called *Leduc's current*.

Lee, Robert (1793–1877). Scottish gynecologist and obstetrician in England who described the cervical ganglion found in the uterine nerve plexus, called *Lee's ganglion*.

Lee's test. See under *test*.

Lee-White method. See under *method*.

leech [AS. *lǣce*]. Any parasitic annelid of the class Hirudinea; some leeches have been detrimental, and some have aided medically. Infestation by leeches (hirudiniasis) may be either internal or external.

medicinal l. See *Hirudo medicinalis*.

leech'es [*lǣce*]. A mycotic disease of horses and mules characterized by localized lesions on the skin.

lees (leez) [OF. *lie*]. Dregs of viscous liquors.

Leeuwenhoek, Antonj van [*Dutch naturalist*, 1632–1723]. Pioneer microscopist, credited with the discovery of bacteria and protozoa, the first description of spermatozoa, which had been pointed out to him by a student, and the first reasonably accurate description of red blood cells. Described the crystalline lens and the rods of the retina.

Le Fort, Léon Clément (1829–1893). French surgeon who introduced an operation for uterine prolapse in which a rectangular area of vaginal mucosa is removed from the anterior and posterior walls of the vagina. These areas are then approximated by sutures, closing the vagina except for a small channel on either side. This is called *partial colpocleisis* or *Le Fort's operation*.

left [ME.]. Sinistral; opposite of right.

left. The left-hand side. Abbreviated, L.

left-hand"ed. Having the left hand stronger or more expert than the right, or using the left hand in preference to the right.

leg [ON. *leggr*]. The lower extremity, especially that part from the knee to the ankle.

bowleg. Genu varum. See *bowleg*.

milk l. Phlegmasia alba dolens.

restless legs. A disease of unknown mechanism characterized by paresthesia of the muscles and bones, pain, and weakness, especially in the legs. Relief generally is afforded by moving the legs and walking. Also called *Wittmaack-Ekbom syndrome*.

rider's l. Strain of the adductor muscles of the thigh.

Legal, Emmo [*German physician*, 1859–1922]. Described paroxysmal pains and tenderness of the scalp in the region supplied by the auriculotemporal nerve, associated with pharyngotympanic inflammation; called *Legal's disease*. Devised a test for acetone. See Legal's test.

Legallois, Julien Jean César [*French physician*, 1770–1814]. Investigated the relation of the vagus nerve to respiration; reported bronchopneumonia following the bilateral section of the vagus. Credited with locating the respiratory center in the medulla (1812).

Legg, Arthur Thornton [*American orthopedic surgeon*, 1874–1939]. Described osteochondritis deformans juvenilis, called *Legg-Calvé-Perthes disease*.

le-git'i-ma-cy [L. *legitimus*, legitimate]. The state of being born within wedlock.

le-gu-me-lin, leg"u-me'lin. An albumin found in most leguminous seeds.

le-gu'min, leg'u-min. A globulin found in the seeds of many plants belonging to the Leguminosae. —**legu'minous,** *adj.*

Leibert and Kahn's method. See under *method*.

Leichtenstern's phenomenon. See under *phenomenon*.

Leiner's disease. See *erythroderma desquamativa*.

lei'o- (lye-o-), **li'o-** [G. *leios*, smooth]. A combining form signifying *smooth*.

lei"o-der'ma-tous [*leios*; G. *derma*, skin]. Smooth-skinned.

lei"o-der'mi-a, li"o-der'mi-a [*leios*, *derma*]. A condition of abnormal smoothness and glossiness of the skin.

lei"o-my"o-fi-bro'ma (lye-o-my-o-figh-bro'muh) [*leios*; G. *mys*, muscle; L. *fibra*, fiber; G. *-ōma*, tumor]. A benign tumor composed of cells of smooth muscle and fibrous connective tissue.

lei"o-my-o'ma (lye-o-migh-o'muh) [*leios*; *mys*; *-ōma*]. A benign tumor consisting largely of smooth muscle cells; may be found in any position where there is preexisting smooth muscle. In the uterus, these tumors are usually multiple, and may reach a weight of several kilograms; in skin, they are usually small, though multiple and arranged in groups, and are at times painful. Also called *Hugier's disease*, *fibromyoma of uterus*, *myofibroma of uterus*.

malignant l., metastasizing l. Leiomyosarcoma.

lei"o-my"o-sar-co'ma [*leios*, *mys*; G. *sarkōma*, fleshy excrescence]. A malignant tumor composed in large part of smooth muscle cells, many of which are poorly differentiated or of embryonal form; multinucleated neoplastic cells are frequent. Also called *malignant* or *metastasizing l.*

lei-ot-ri-chous (lye-ot'ri-kus) [*leios*; G. *thrix*, hair]. Having smooth or straight hair.

lei"po-me-ri-a (lye-po-meer'ee-uh) [G. *leipein*, to leave; *meros*, part]. Congenital absence of one or more limbs.

Leishman's stain. See under *stain*.

Leishman-Donovan bodies. See under *body*.

Leish-ma'ni-a (leesh-may'nee-uh, -man'ee-uh, lyshe-) [after William Boog *Leishman*, 1865–1926]. A genus of protozoan flagellates whose species are morphologically similar but differ in serologic reactions; transmitted to man by the bite of a species of *Phlebotomus*.

L. brasiliensis. That species confined largely to Central and South America. This parasite shows

a predilection for the mucocutaneous borders of the nose and mouth and produces leishmaniasis americana. Syn., *L. peruviana*, *L. tropica* var *americana*.

L. donovani. A species which is the etiologic agent of kala-azar the visceral form of leishmaniasis.

L. infantum. A parasite, observed in the Mediterranean area, believed generally to belong to the species *L. donovani*, the causative agent of infantile leishmaniasis.

L. peruviana. *L. braziliensis*.

L. tropica. This species affects primarily the skin and produces oriental sore.

L. tropica var americana. *L. braziliensis*.

leish man i'a·sis (leesh man-eye uh-sis, lyshe man) [*Leishman*, NL. *-iasis*, condition]. A variety of visceral and superficial infections caused by protozoan parasites of the genus *Leishmania*. Several species of biting flies belonging to the genus *Phlebotomus* are chiefly responsible for transmission. In India, man constitutes the chief reservoir but in the Mediterranean region infected dogs are considered to be the reservoirs for the infantile form of the disease.

cutaneous l. An Old World skin infection caused by *Leishmania tropica*, and New World skin infection caused by *Leishmania braziliensis*. See *oriental sore*, *leishmaniasis americana*.

inf ntile l. A form of kala-azar bserved primarily in small children in the Mediterranean area, clinically identical with that of adults. It is acquired from dogs who act as reservoirs for the parasite *Leishmania infantum*.

l. mericana. A form of leishmaniasis caused by the *Leishmania braziliensis*, differing primarily from oriental sore by the fact that in 10–20% of the cases the mucous membranes are involved, leading to extensive necrosis of the nose, mouth, and pharynx also called *Bahia ulcer Bauru ulcer chiclero ulcer bosch yaws, forest yaws, uta*. Syn., *American l.*, *South American l.*, *espundia*.

South American l. See *l. americana*. Syn., *L. tropica var americana*; *L. peruviana*.

visceral l. See *kala-azar*

Leloir Henri Camille Chrysostome [*French dermatologist*, 1855–96]. Described an erythmoid variety of lupus vulgaris, called *Leloir disease*.

le mia [G *lēmē*, humor in the corner of th eye rheum]. A collection of dried secretion of the tarsal glands t the inner canthus of the eye

Lembert, Antoine [*French surgeon*, 1802–51]. Widely known and remembered for his introduction of an interrupted approximation suture adapted to uniting divided serous layers of intestine. This is regarded as having brought about new concept of intestinal surgery and is considered the basis for present-day gastric and intestinal surgery Called *Lembert' suture*.

Le Mesurier Arth Baker [*Canadian surgeon*, 1889–]. With Gallie, devised an operation for the radical cure of inguinal hernia. See under *Gallie*.

-lem ma [G. *lemma*, sheath, husk] A combining form denoting *sheath* or *envelope*.

lem'mo·cyt lem mo·cyte [*lemma*; G *kytos*, cell]. A formative cell for the neurilemma.

lem nis cus (pl *lemnisci*) [G. *lēmniskos*, fillet]. A secondary sensory pathway of the central nervous system, which usually decussates and terminates in the thalamus.

lateral l. The secondary uditory pathway arising in the cochlear uclei and terminating the inferior colliculus and medial geniculate body: it crosses in the trapezoid body formerly called *lateral fillet*

medial l. That arising in the nucleus gracilis and nucleus cuneatus, crossing immediately as internal arcuate fibers, and terminating in the posterolateral ventral nucleus of the thalamus formerly called *medial fillet*.

spinal l. The lateral and ventral spinothalamic tracts combined as they ascend in the brain stem.

trigeminal l. The secondary fibers from the main sensory nucleus of the trigeminal nerve and spinal nucleus of the trigeminal nerve, terminating in the posteromedial ventral nucleus of the thalamus also called *trigeminothalamic tract*.

lem'mo·blast [G. *lemma*, sheath, husk; *blastos*, germ]. A primitive neurilemma cell.

lem'mo·cyte. See *lemmocyte*.

lem on [F *limon*, from Ar *laymūn*]. The fruit of *Citrus limon*.

l oil (*oleum limonis*) The volatile oil obtained by expression, without the aid of heat, from the fresh peel of the fruit of *C limon*, its characteristic odor is due chiefly to citral, an aldehyde.

l. peel (*limonis cortex*) The outer yellow rind of the fresh ripe fruit of *C limon*. It contains volatile oil and the glycoside hesperidin.

l. tincture (*tinctura limonis*) An aromatic prepared by macerating lemon peel with alcohol.

le"mo·pa ral'y·sis [G *laimos*, gullet· *paralysis*, paralysis]. Paralysis of the esophagus.

le"mo·ste·no sis [*laimos*; G. *stenōsis*, being straitened]. Constriction of the pharynx or esophagus.

Lempert, Julius [*American otologist*, 1891]. Devised one-stage fenestration operation for the improvement of hearing in otosclerosis per manently mobile window is formed in the lateral semicircular canal. Called *Lempert' operation*.

Lenard rays. See under *ray*.

Lenhartz diet. See under *diet*.

Lenhossék, Mihály [*Hungarian anatomist*, 1863–1937]. Contributed to the knowledge of the histology of the central nervous system. Described the ascending roots of the vagus and glossopharyngeal nerves· called *bundle of Lenhossék*.

len'i ceps [L. *lenis*, mild, gentle *caput*, head]. Obstetric forceps with short handles.

lenigallol. Trade-mark for brand of pyrogallol triacetate.

len'i tive [*lenis*]. Soothing, emollient, demulcent.

len'i tive. An emollient remedy or application.

Lennander Karl Gustaf (1857 1908) Swedish surgeon who described a laparotomy in which he incised the anterior rectus sheath through paramedian incision, retracted the rectus abdominis muscle laterally and mad second incision through the posterior rectus sheath and peritoneum.

lens [L lentil]. 1. A piece of glass or crystal for the refraction of rays of light. 2. The crystalline lens of the eye. See Plate 19.

absorption l. One used in spectacles designed to prevent certain wavelengths from reaching the retina, may be yellow or amber lens, which bsorbs the upper range beyond violet (the actinic rays) which have been said to be harmful, or may be one designed t absorb determined amount of the entire spectrum, as in antiglare glasses or sunglasses, which, while altering the pparent color diminish visual acuity only when illumination is reduced to threshold.

achromatic l. A double lens, each part made of such optical glass that the one neutralizes the dispersive effects of the other without affecting the refraction.

aplanatic l. A lens corrected for spherical berration also called *rectilinear l.*

achromatic l. A compound lens corrected for spherical and chromatic aberration.
biconcave l. A negative or minus, thick-edged lens, having concave spherical surfaces upon its opposite sides used in spectacles in the correction of myopia.
biconvex l. A positive or plus, thin-edged lens, having two convex surfaces; used in the correction of hyperopia.
bifocal l. See *bifocal*.
contact l. A lens for the correction of refractive errors, consisting of plastic shell, the concavity of which is in contact with the globe of the eye; layer of liquid is interposed between the lens and the cornea.
converging l. A double convex or planoconvex lens that focuses rays of light.
convexoconcave l. A lens having convex and concave surface, which would not meet if continued. Its properties are those of convex lens of the same focal distance.
crystalline l. The lens of the eye, refractive organ of accommodation; biconvex, transparent, elastic body lying in its capsule immediately behind the pupil of the eye, suspended from the ciliary body by the ciliary zonule.
cylindrical l. A minus or plus lens, with plane surface in one axis and a concave or convex surface in the axis at right angles to the first. Abbreviated, C., Cyl.
decentered l. One with the optic center not opposite to the pupil of the eye
dispersing l. A concave lens.
eye l. That lens of microscope which is nearest to the eye the eyepiece.
im-mer'sion l. A lens, usually of high power the lower end of which is immersed in drop of some liquid, such as oil, that has nearly the same refractive index as glass, and is placed on the cover glass of the object under examination.
iseikonic l. A temporary lens, known as fit-over; may be of two kinds, over-all or meridional.
negative l. A lens with negative focal length, the edge of the lens being thicker than the center The three negative lenses are, according to their figure: planoconcave, double concave or biconcave, and diverging concavoconvex.
optical center of l. That which lies on the lens axis; ray of light passing through lens so that its angular magnification is unity will pass through the optical center of the lens.
orthoscopic l. One which gives flat, undistorted field of vision.
overcorrection of l. An aberration of lens causing the light rays passing the central zones to focus at point nearer to the lens than rays passing the outer zones.
periscopic l. One with concavoconvex or convexoconcave surfaces, the opposite sides being of different curvatures; known as meniscus lens
planoconcave l. A lens having one plane nd one concave surface.
planoconvex l. A lens having one plane and one convex surface.
positive l. Any lens with positive focal length it is thicker in the center than around the circumference. There are three types of pos ive lenses double convex or biconvex, planoconvex, and converging concavoconvex.
punktal l. One which is corrected for astigmatism in all powers throughout the entire field
rectilinear l. See planatic *l.*
spherical l. One in which the curved surface either concave or convex, is segment of sphere Abbreviated, S, sph.
toric l. A lens wherein the curvatures in two meridians t right angles are different.
undercorrection of l. The spherical aberration which normally exists in simple lens. Rays from the outer zones of the source are brought to focus closer to the lens than the rays from the central portion.

lens om'e-ter (len-zom'i-tur) [*lens*; G *metron*, measure]. An instrument for determining the refractive power of lens.

len"ti-co'nus [*lens*; G *kōnos*, cone]. A rare, usually congenital, anomaly of the lens marked by conical prominence upon its anterior or more rarely upon its posterior surface.

len tic u lar [L. *lenticula*, lentil, dim. of *lens*]. 1 Pertaining to or resembling lens. 2. Pertaining to the crystalline lens. 3. Pertaining to the lenticular nucleus of the brain.

len-tic'u lar pro gres sive de"gen-er a'tion. See hepatolenticular *degeneration*.

len tic'u late [*lenticula*]. Lens-shaped.

len tic"u lo-stri'ate [*lenticula*, L. *stria*, channel, furrow]. Pertaining to the lenticular nucleus of the corpus striatum, as lenticulostriate artery

len tic"u-lo-tha lam'ic (len-tick"yoo lo-tha-lam ick, -thal'uh-mick) [*lenticula*; G. *thalamos*, chamber]. Extending from the lenticular nucleus to the thalamus, as the lenticulothalamic tract.

len'ti form [L. *lens*, lentil *forma*, form]. Lens-shaped or lentil-shaped.

len"ti glo'bus [*lens*; L. *globus*, sphere]. A spherical bulging of the lens of the eye.

len ti go, len'ti go (pl. *lentigines*) [L., freckly eruption]. A dark-brown mark of small size present on both exposed and covered areas of the skin, and, in distinction to freckles, not influenced by the sun. There is an increase in melanocytes in the basal layer and the rete pegs are elongated. —**lentig'inous** (len-tidj i-nus) *adj*
lentigines leprosae. The pigmented spots of macular leprosy
l. maligna. Xeroderma pigmentosum.

len ti'tis. See *phakitis*.

Leocillin. Trade-mark for benzylpenicillin β-diethylaminoethyl ester hydriodide, reported to have specific action on lung tissue, and thus to be useful in treatment of pulmonary diseases.

Leonicenus, Nicolaus (Leoniceno) [*Italian physician*, 1428–1524]. Gave classic description of syphilis (1497) He recognized the fact that the disease produces visceral as well as cutaneous lesions.

le on ti'a-sis [G *leōn*, lion; NL. *-iasis*, condition] A lionlike ppearance of the face, seen in lepromatous leprosy
l. ossea. An overgrowth of the bones of the face through which the features acquire lionlike ppearance. Also called *megalocephaly*

Leopold, Christian Gerhard [*German physician*, 1846–1911]. Formulated law in obstetrics stating that insertion of the placenta into the posterior uterine wall pushes the uterine tubes forward, while insertion into the anterior wall causes them to turn backward and parallel to the longitudinal axis of the recumbent woman.

Lepehne-Pickworth method (for demonstration of cerebral capillary distributio). See benzidine and nitroprusside oxidase *method* for hemoglobin.

lep'er [G *lepros*, scaly]. One affected with leprosy

lep'i-do-, lepid- [G. *lepis*, scale]. A combining form meaning *scale* or *scaly*

lep"i do ma [*lepis*; G. *-ōma*, tumor]. A term proposed by Adami for tumor arising from lining membrane. Obs.

Lep"i-dop'ter [*lepis*; G. *pteron*, wing]. An order

of insects distinguished by featherlike scales and spirally coiled suctorial apparatus. The order includes butterflies, moths, and skippers. Their larvae may cause caterpillar dermatitis.

lep·o·thrix [G. *lepos*, scale; *thrix*, hair]. A skin condition in which masses of reddish, black, and yellow fungous material are found in nodular or diffuse distribution about the axillary or genital hair; usually seen in those who sweat freely. Also called *trichomycosis axillaris*, *trichomycosis rubra*, *trichomycosis flava nigra*.

lep'ra. Old term for leprosy.

l. mixta. Lepromatous leprosy accompanied by neural symptoms. *Obs.*

l. reaction. A febrile, acute hypersensitivity response of a patient having one of the major forms of leprosy as a result of aggressive treatment or overpotent lepromin test.

lep·rid [G. *lepra*, leprosy, from *lepros*, scaly]. See tuberculoid *leprosy*.

lep·re·lin. A vaccine prepared from an acid-fast bacillus; used unsatisfactorily in the treatment of leprosy. The term is often used erroneously as a synonym for lepromin.

lep·rol'o·gist [*lepros*; G. *logos*, word]. One who makes a special study of leprosy.

lep·rol'o·gy [*lepros*; *logos*]. The special study of leprosy. —**leprolog'ic**, *adj.*

lep·ro·ma [*lepros*; G. *-oma*, tumor]. The cutaneous nodular lesion of leprosy. —**leprom'atous**, *adj.*

lep·ro·min [*lepros*]. An emulsion prepared from ground and sterilized tissue containing the leprosy bacillus (*Mycobacterium leprae*), used for intradermal skin tests in leprosy but of little or no diagnostic utility.

lep·ro·pho'bi·a [*lepros*; G. *phobos*, fear]. Morbid dread of leprosy.

lep·ro·sar'i·um (lep"ro-sair'ee-um) [*lepros*]. An institution for the treatment of persons affected with leprosy.

lep·ro·ser"y, le·pro·ser·y. See *leprosarium*.

lep·ro·sin. A neutral, acid-fast, waxlike substance isolated from *Mycobacterium leprae*, consisting of a complex mixture of solid glycerides and waxes. Fatty acids liberated on saponification are myristic, palmitic, stearic, tetracosanic, and a new hydroxy acid, leprosinic acid. Glycerol is the only water-soluble component detected. Ether-soluble matter includes two higher secondary optically active alcohols.

lep·ro·sin'ic ac'id. A hydroxy acid occurring in the fatty acids of leprosin.

lep·ro·sy [*lepros*]. A chronic infectious disease occurring almost exclusively in tropical and subtropical countries; caused by *Mycobacterium leprae*. On the basis of clinical, bacteriologic and immunologic features, the Havana (Pan-American) classification defined lepromatous, tuberculoid, and an indeterminate form. Syn., *Hansen's disease*.

anesthetic l. See tuberculoid *l.*

bacillary positive tuberculoid l. Major tuberculoid *l.*

corneal l. Infection of the cornea by the causative agent of leprosy, sometimes causing corneal tumors.

cutaneous l. Lepromatous *l.*

indeterminate l. A nonspecific form with clinical manifestations chiefly of the skin and peripheral nerves, differentiated from the two major types, lepromatous or tuberculoid, by the absence of lepra cells and tuberculoid structures, the scarcity of bacilli which, when found, are not bunched, and the tendency to arrest or spontaneous recovery. Lepromin test gives variable results. Some cases may transform into a major type.

intermediate l. Formerly, indeterminate *l.*

lazarine l. See Lucio *l.*

lepromatous l. The contagious form of leprosy with lesions histologically characterized by lepra cells containing cigar-bunches or globi of bacilli and by lymphocytic infiltration. Clinically the skin may be first involved, showing leproma insensible to heat, cold, and pain. The face is frequently a favorite site (*facies leontina*) especially the mucous membranes of the eyes and upper respiratory tract. All organs may be involved, but involvement of peripheral nerves, when present, develops slowly and mutilations generally occur as a result of osteonecrosis. Lepromin test is negative, while body excretions and secretions of affected organs contain the organism. Also called *cutaneous l.*, *nodular l.*

Lucio l. A form of lepromatous leprosy exhibiting diffuse, generalized eruptions of lepromatous infiltrations with necrotizing lesions. Lepromin test may produce a brief intense positive response. It is synonymous with **lazarine leprosy** but some reserve this term for the ulcerative forms. Also called *spotted l.*, *manchada*, *lepromatous erythema necroticans*.

maculoanesthetic l. See tuberculoid *l.*

major tuberculoid l. A form in which large numbers of *Mycobacterium leprae* are found, but not in bunches or globi.

malignant l. Lepromatous *l.*

neural l. See tuberculoid *l.*

nodular l. Lepromatous *l.*

ocular l. Complications in the eye resulting from leprosy or from secondary invasions due to its presence.

spotted l. See Lucio *l.*

tuberculoid l. The noncontagious form of leprosy with lesions histologically characterized by a tuberculoid granulomatous structure and the absence of lepra cells; bacilli are absent or few and, when present, are never bunched. Grossly it is marked by peripheral nerve involvement, and mutilations result from septic processes which are associated with the neurological and trophic changes. Bacillary cutaneous involvement is minimal. The viscera are not affected. Lepromin test is positive in a high percentage of cases. This form is considered benign, as under hygienic conditions it is often nonprogressive, and shows a tendency toward spontaneous cure. During a hypersensitivity reaction, it may be transformed into lepromatous leprosy. Also called *neural l.*, *anesthetic l.*, *maculoanesthetic l.*, *Hansenid*, *leprid*, *neuroleprid*.

white l. Vitiligo.

lep're·tene. A naturally occurring provitamin A.

lep'rous, lep·rot'ic [*lepros*]. Applied to lesions caused by *Mycobacterium leprae*, and to persons affected with leprosy.

lep·tan'dra [G. *leptos*, thin; *anēr*, man]. The dried rhizome and roots of *Veronicastrum virginicum*. Its active principle is unknown. Leptandra is cathartic. Dose, 1–4 Gm. (15–60 gr.)

l. extract (*extractum leptandrae*). One gram represents four grams of leptandra. Dose, 0.25 Gm. (4 gr.)

leptazol. The British Pharmacopoeia name for pentylenetetrazol. See *metrazol*.

lep·to-, lept- [*leptos*]. A combining form signifying *thin*, *small*, *weak*, *fine*.

lep"to·ce·phal'i·a, lep"to·ceph'a·ly [*leptos*; G. *kephalē*, head]. Abnormal smallness of the skull. **leptocephal'ic**, *adj.*

lep"to·ceph'a·lus [*leptos*; *kephalē*]. An individual with an abnormally small head from premature union of the frontal and sphenoid bones.

lep"to·chro·mat'ic [*leptos*; G. *chrōma*, color]. Characterized by finely differentiated chromatin reticulum.

lep'to·cyte. A thin erythrocyte of decreased volume in relation to its diameter often characterized also by abnormal shape.

lep"to·cy'tic. 1. Of or pertaining to leptocytes. 2. Pertaining to blood picture in which leptocytosis is evident microscopically and in which the hypochromic microcytic anemia present is not amenable to iron therapy.

lep"to·cy·to'sis. A preponderance of leptocytes in the blood. See *thalassemia*.
hereditary l. Thalassemia.

lep"to·dac'ty·lous [*leptos*; G. *daktylos*, finger]. Characterized by slenderness of the fingers or toes, or both.

lep"to·don'tous [*leptos*; G. *odous*, tooth]. Having thin or slender teeth.

lep"to·me·nin'ges (lep"to-mi-nin'jeez) [*leptos*; G. *mēninx*, membrane]. The arachnoid and the pia mater considered together.

lep"to·me·nin"gi·o'ma [*leptos*; *mēninx*; G. *-ōma*, tumor]. A tumor of the pia mater or arachnoid.

lep"to·men"in·gi'tis [*leptos*; *mēninx*; G. *-itis*, inflammation]. Inflammation of the pia mater and arachnoid of the brain or the spinal cord.

lep"to·men"in·gop'a·thy [*leptos*; *mēninx*; G. *pathos*, disease]. Disease of the leptomeninges, or pia mater and arachnoid.

lep"to·me'ninx [*leptos*; *mēninx*]. The pia mater or the arachnoid.

lep"to·mi·cro·gnath'i·a (-migh"kro-nath'ee-uh, -nayth'ee-uh, -migh"krog-nath'ee-uh, -nayth'ee-uh) [*leptos*; G. *mikros*, small; *gnathos*, jaw]. A mild degree of micrognathia.

Lep"to·mi·cru'rus (lep"to-migh-kroor'us). A genus of coral snakes found in the Americas, with neurotoxic venom.

Lep"to·mo'nas, Lep"to·mo'nas [*leptos*; G. *monas*, unit]. A genus of the Trypanosomidae whose members are hemoflagellates of invertebrates.

lep'ton. An elementary particle of small mass, as the electron, positron, neutrino, or antineutrino.

lep"to·pel'lic [*leptos*; G. *pellis*, wooden bowl]. Having a very narrow pelvis.

lep"to·pho'ni·a [*leptos*; G. *phōnē*, voice]. Delicacy, gentleness, or weakness of the voice. —**leptophon'ic,** *adj.*

lep"to·pro·so'pi·a [*leptos*; G. *prosōpon*, face]. Narrowness of the face. —**leptoprosop'ic,** *adj.*

lep'tor·rhine" (lep'to-ryne, -rin) [*leptos*; G. *rhis*, nose]. 1. In craniometry, designating an apertura piriformis that is relatively long and narrow; having a nasal index of 46.9 or less. 2. In somatometry, designating a nose that is long and narrow; having a height-breadth index of 55.0 to 69.9.

lep'to·scope. An optical device for measuring the thickness and composition of the plasma membrane of a cell.

Lep"to·spi'ra [*leptos*; G. *speira*, coil]. A genus of spirochetes able to survive in water; characterized by sharply twisted filaments with one or both extremities hooked or recurved. These organisms are not predominantly blood parasites, but are also found in other tissues.
L. autumnalis. The causative agent of leptospirosis called *pretibial fever* in the United States and *autumnal fever* in the Far East.
L. canicola. The etiological agent of Stuttgart disease in dogs and of canicola fever in man.
L. grippotyphosa. The etiological agent of marsh fever.
L. hebdomadis. That species which is the causative agent of seven-day fever in the Far East.
L. icterohaemorrhagiae. A species which produces spirochetal jaundice in man.

lep"to·spi·rol'y·sin (lep"to-spy-rol'i-sin, -spy"ro-lye'sin) [*leptos*; *speira*; G. *lysis*, loosing]. A lysin operating on leptospiras.

lep"to·spi·ro'sis (lep"to-spy-ro'sis) [*leptos*; *speira*; G. *-ōsis*, condition]. Infection with *Leptospira*.
canine l. See Stuttgart *disease*.

lep'to·tene [*leptos*; G. *tainia*, ribbon]. In cytology, stage in the prophase of mitosis in which the chromosomes have a slender threadlike appearance.

Lep'to·thrix [*leptos*; G. *thrix*, hair]. A genus of unbranched filamentous organisms of the Chlamydobacteriaceae.
L. buccalis. A species which is a common inhabitant of the oral cavity. Pathogenic properties have been claimed for it, but its invasive power is probably slight.

lep"to·tri·cho'sis (lep"to-tri-ko'sis, -try-ko'sis) [*leptos*; *thrix*]. Any disease caused by a species of *Leptothrix*.
l. of the conjunctiva. A conjunctivitis caused by members of the genus *Leptothrix*, usually associated with swelling of the lacrimal gland and preauricular lymph nodes. Also called *Parinaud's conjunctivitis*.

lep'tus. See *chigger*.

le·re'sis [G. *lērēsis*, silly talk]. Garrulousness; senile loquacity.

Leri, André [*French physician*, 1875–1930]. Described a phenomenon observed in spastic hemiplegia. If the fingers of a normal person are passively folded into the hollow of the hand and the wrist is then forcibly flexed, the arm flexes at the elbow. In spastic hemiplegia, this reflex is absent.

Leriche, René (1879–). French surgeon known for his operation of periarterial sympathectomy for the relief of vasomotor disturbances (1917), called *Leriche's operation*. He was the originator of arteriectomy (1917) of surgery of the sympathetic nervous system, and of ganglionic blocking by procaine, especially in surgery in the field of childbirth.

Les'bi·an·ism (lez'bee-un-iz-um, les-) [G. *Lesbos*, Lesbos]. An abnormal affection between women; homosexuality between women. Syn., *Lesbian love*, *sapphism*, *tribadism*.

le'sion [L. *laesio*, hurting]. The alteration, structural or functional, due to injury; commonly limited to morphological alterations.
discharging l. A brain lesion which may be accompanied by irregular discharge of motor impulses, as Jacksonian epilepsy.
focal l. One in a focus; usually applied to circumscribed focus in the brain with such symptoms and signs as may lead to a diagnosis of its situation.
functional l. An alteration of function or functional capacity without demonstrable morphologic substrate.
initial l. See primary *l.*
lower motor neuron l. An injury to the cell body or axon of a lower motor neuron, characterized by flaccid paralysis of the muscle(s) innervated, diminished, or absent reflexes, muscle atrophy, reaction of degeneration (about two weeks after injury), and absence of pathological reflexes.
Luys body l. See *hemiballismus*, subthalamic *nucleus*.
peripheral l. One in the periphery of the body, especially in the peripheral nerves.
primary l. (a) In syphilis, the chancre. (b) In tuberculosis, the focus of the first infection, as the tuberculous, caseous mass near the hilum or periphery in the lung.

secondary l. One which follows, and is due to, primary lesion, as the secondary cutaneous lesions of syphilis; the involvement of mediastinal lymph nodes following pulmonary tuberculosis.

structural l. One in which there is demonstrable morphologic change.

systemic l. One which affects members of system, such as the nervous system or hematopoietic system.

upper motor neuron l. An injury to the cell body or axon of an upper motor neuron, resulting in spastic paralysis of the muscle involved, hyperactive deep reflexes but diminished or absent superficial reflexes, little or no muscle atrophy absence of reaction of degeneration, and the presence of pathological reflexes and signs.

vascular l. One which affects blood vessels.

Lesser's triangle. See under *triangle*.

le'thal [L. *letalis*, deadly from *letum*, death]. Deadly; pertaining to or producing death. Abbreviated, L.

leth'ar gy [G. *lēthargia*, drowsiness]. A morbid condition of drowsiness or stupor. —**lethar'gic**, *adj.*

le'the (leeth ee) [G. forgetfulness]. Total loss of memory; amnesia. *Obs.*

letheon. An old trade name for ethyl ether used as an anesthetic.

Letonoff and Reinhold's method. See under *method*.

Letterer, Erich (1895–) German pathologist who described form of nonlipid reticuloendotheliosis (1924) later described by the pediatrician Siwe from the clinical viewpoint. See *Letterer-Siwe disease*.

leu-coe'thi-op (lew eeth ee-op) [G. *leukos*, white; *Aithiops*, Ethiopian]. A Negro albino. —**leucoethiop'ic**, *adj.*

leu-co mi a. See *leukemia*.

leu'cine (lew'seen, -sin) $CH_3CH(CH_3)CH_2CH(NH_2)COOH$. The α-aminoisocaproic acid, an amino acid obtainable by the hydrolysis of milk and other protein-containing substances, and found in various tissues of the human body. It is essential to the growth of man. —**leucic**, *adj.*

leu"ci ne mia [*leukos*; G. *-emia*, increase]. Excessive proportion or production of leucine, as in the liver.

leu"ci nu'ri-a [*leukos*; G. *ouron*, urine]. The occurrence of leucine in the urine.

leu'co-, leuco-. See *leuko-*.

leu"co-fla'vin (lew"ko flay'vin, -flav'in). See *leucoriboflavin*.

leu"co lac"to fla vin (lew ko-lack to flay'vin, -flav'in). See *leucoriboflavin*.

leu-co'ma. See *leukoma*.

leu-co ma-ine (lew ko may-een, -in, -muh-een, -in, lew'ko-mayne). The name applied to any one of the nitrogenous bases normally developed by the metabolic activity of living organisms, as distinguished from the bases developed by putrefactive processes, and called ptomaines. —**leucomain'ic**, *adj.*

leu"co-ma i ne'mi a (lew"ko-may i-nee'mee-uh, -migh-nee mee-uh) [*leukos*; ptomaine, G. *haima*, blood]. An excess of leucomaines in the blood.

Leu"co nos'toc [*leukos*; NL. *Nostoc* coined by Paracelsus]. A genus of saprophytic bacteria of the family Lactobacteriaceae. Species of this genus are found in milk, fermenting vegetables, and slimy sugar solutions.

leu-cop'sin. See *leukopsin*.

leu co-ri"bo fla vin (lew ko ry bo flay vin, -flav'in, -rib o-). The dihydro compound resulting from reduction of riboflavin. It is colorless and bears no fluorescence. Also called *leucoflavin*.

leu'co-sin [*leukos*]. A simple protein of the albumin type found in wheat and other cereals.

leu"co-tax'in. A substance which appears to be liberated by injured tissues and toward which phagocytes are positively chemotactic.

leu' o tome. See *leukotome*.

leucovorin. A trade-mark for folinic acid (2) or 5-formyl-5,6,7,8-tetrahydrofolic acid.

leu'cyl. The univalent radical $(CH_3)_2CHCH_2CH(NH_2)CO—$ of the amino acid leucine.

leu"ka ne mi a [*leukos*; G. *anaimia*, want of blood]. A blood disease having characteristics of leukemia and pernicious anemia. Also called *erythroleukosis*.

leu kas'mus (lew-kaz'mus, -kas mus). See *leukoderma*, *albinism*.

leu ke'mi a [*leukos*; G. *haima*, blood]. Any disease of the reticuloendothelial system characterized by uncontrolled proliferation of the leukocytes. Immature leukocytes usually are present in the blood, often in large numbers, and characteristically infiltrate various organs. Leukemias are classified on the basis of rapidity of course (acute, subacute, or chronic) the cell count, and the cell type. Also called *leukosis*, *leukocythemia*. —**leuke'mic**, *adj.*

acute l. A form with rapid onset and progress, characterized by severe anemia, hemorrhagic manifestations, and susceptibility to infection; the predominant cells in the bone marrow and peripheral blood are blast forms. Also called *lymphoblastic l.*, *blast-cell l.*

aleukemic l. A form of leukemia in which the total leukocyte count is normal or low despite leukemic changes in the tissues and qualitative changes in the blood. Syn., *leukopenic l.*, *subleukemic l.*

basophilic l. A granulocytic leukemia in which the predominating cells belong to the basophilic series. Also called *basophilocytic l.*, *mast-cell l.*

blast-cell l. See *stem-cell l.*, *acute l.*

chloro-l. See *chloroma*.

chronic l. A form in which the expected duration of life is 1 to 20 years or more. The cell types are the less immature forms of the specific blood series (granulocytic, lymphocytic, or monocytic).

embryonal l. See *stem-cell l.*

eosinophilic l. A rare form in which the predominant cell type belongs to the eosinophilic series. Although the cells are relatively mature, the course is acute. Also called *eosinophilocytic l.*

giant-cell l. See *megakaryocytic l.*

granulocytic l. Leukemia in which the predominant cell types belong to the granulocytic series. Usually cells of the neutrophilic series are most numerous. Syn., *myelocytic l.*, *myelogenous l.* Also called *myeloid l.*, *myelosis*, *myelocythemia*, *myeloleukosis*.

hemoblastic l. See *stem-cell l.*

hemocytoblastic l. See *stem-cell l.*

histiocytic l. The Schilling type of monocytic leukemia.

l. of the skin. A state of the skin characterized by leukemic infiltration.

leukemic l. Leukemia in which the leukocyte count in peripheral blood is above 15,000 per cu. mm., and the cell types are in accord with the diagnosis of leukemia.

leukopenic l. See *aleukemic l.*

lymphatic l. See *lymphocytic l.*

lymphoblastic l. An acute lymphocytic leukemia.

lymphocytic l. A form of leukemia, acute or chronic, in which the predominating cell type belongs to the lymphocytic series. Syn., *lymphoid l.*, *lymphogenous l.*

lymphogenous l. See *lymphocytic l.*

lymphoid l. See *lymphocytic l.*

lymphosarcoma-cell l. See *leukosarcoma*.

mast-cell l. See *basophilic l.*

megakaryocytic l. A rare form in which large number of fragmented megakaryocytes are seen probably variant of granulocytic leukemia or manifestation of Hodgkin's *disease*. Also called *giant-cell l., plastrocemia.*

monocytic l. A form in which the predominant cell type belongs to the monocytic series. Two types are differentiated on the basis of the predominant cell present in the peripheral blood: **Naegeli (myelomonocytic) type,** in which atypical monocytes in some ways resemble immature granulocytes; **Schilling type,** in which the predominant cells are very large, bizarre-shaped monocytes having lacy chromatin structure. The Naegeli type is probably variant of granulocytic leukemia; the Schilling type is true monocytic leukemia, probably derived from the reticuloendothelium.

myeloblastic l. An acute granulocytic leukemia.

myelocytic l. See *granulocytic l.*

myelogenous l. Granulocytic leukemia.

myeloid l. See *granulocytic l.*

myelomonocytic l. See *monocytic l.*

Naegeli type l. See *monocytic l.*

neutrophilic l. A granulocytic leukemia in which the cells belong almost exclusively to the neutrophilic series sometimes called *granulocytic leukemia.*

plasmacytic, plasmocytic l. A rare form in which plasmacytes appear in large numbers or are the predominant cell type probably variant of multiple myeloma.

Schilling type l. See *monocytic l.*

stem-cell l. An acute leukemia in which the type of cell is so primitive and undifferentiated that it is difficult or impossible to identify its series also called *blast-cell l., hemoblastic l., hemocytoblastic l., embryonal l., undifferentiated-cell l.*

subacute l. A form with many features of acute leukemia, but of longer duration.

subleukemic l. Aleukemic leukemia: term proposed as less self-contradictory

undifferentiated-cell l. See *stem-cell l.*

leu keem'id [*leukos; haima*]. A cutaneous lesion which accompanies leukemia.

leu-ke moid [*leukos; haima*, G. *eidos*, form]. Similar to leukemia, but due to other conditions; usually refers to the presence of immature cells in the blood in conditions other than leukemia.

leu'kin. A substance, derived from leukocytes of certain animals, which is bactericidal or bacteriostatic against certain organisms, including ty- phoid ad anthrax bacilli, and micrococci.

leu'ko-, leuk- [*leukos*]. 1. A combining form meaning *white, colorless.* 2. *I chemistry* combining form denoting colorless or weakly colored compound. 3. *I medicine,* combining form denoting whitish *decolorization.*

leu'ko-blast [*leukos;* G *blastos*, germ]. A general term for the parent cell of the leukocytes

leu"k -blas t sis [*leukos; blastos;* G *-osis*, increase]. Excessive proliferation of immature leukocytes.

leu-ko ci-din (lew ko si-din, -kos'i-din, lew ko-sid'in, -sigh din) [*leukos;* L. *caedere*, to kill]. A toxic substance capable of killing and destroying neutrophil leukocytes.

leu'ko-cyt [*leukos;* G. *kytos*, cell]. One of the colorless, more or less ameboid cells of the blood, having nucleus and cytoplasm. Those found in ormal blood are usually divided according to their staining reaction int granular leukocytes, consisting of neutrophils, eosinophils, and basophils, and nongranular leukocytes, consisting of lymphocytes and monocytes. Those found in abnormal blood consist of myeloblasts, promyelocytes, neutrophilic myelocytes, eosinophilic myelocytes, basophilic myelocytes, lymphoblasts, plasma cells, and Türk' irritation cells. Syn., *white blood cell white corpuscle.* For methods of classifying leukocytes, see under *method.* See Plate 27

acidophil l. See *eosinophil l.*

basophil l. One containing granules which stain deep purple (basic dye) with Wright stain, and having nucleus without distinct lobulation.

endothelial l. A histiocyte.

eosinophil l. One containing coarse round granules which stain pink to bright red (acid dye) with Wright stain and usually having bilobed nucleus.

granular l. One of those containing granules in their cytoplasm. Syn *granulocyte.*

heterophil l. See *neutrophil l.*

lymphoid l. A nongranular leukocyte including lymphocytes and monocytes.

neutrophil l. A highly motile and phagocytic leukocyte having numerous fin granules whi h do ot stain definitely either blue (basic dye) or red (acid dye) Its polymorphous nucleus may be ribbonlike, bandlike, or segmented, having two to seven lobules.

nongranular l. One with clear homogeneous cytoplasm, such as lymphocyte or monocyte.

oxyphil l. Old term for eosinophil leukocyte.

polymorphonuclear l. The neutrophil leukocyt so-called because of its irregular-shaped and lobulated nucleus. Syn., *granulocyte.*

transitional l. Old term for monocyte

leu"ko cy thе mi-a (l w k sigh-theem ee-uh) See *leukemia.*

leu"ko-cy'to-blast [*leukos; kytos;* G *blastos*, germ]. The precursor of leukocyte.

leu"ko-cy"to-gen'e-sis [*leukos; kytos;* G. *genesis*, generation]. The formation of leukocytes.

leu"ko-cy"to ly sis (lew"ko sigh to-lye sis, -sigh-tol'i-sis) [*leukos; kytos;* G *lysis*, loosing]. A lysin which disintegrates leukocytes.

leu"ko-cy tol y-sis (-sigh-tol -sis) [*leukos; kytos; lysis*]. The destruction of leukocytes. —**leukocytolyt'ic,** *adj.*

leu"ko-cy to'ma (-sigh-to muh) [*leukos, kytos;* G *-oma*, tumor]. A tumorlike mass composed of leukocytes.

leu"ko-cy-tom e-ter (-sigh-tom'i-tur) [*leukos; kytos;* G. *metron*, measure]. A graduated capillary tube used for counting leukocytes.

leu"ko-cy"t pe ni a. See *leukopenia.*

leu"ko-cy t poi sis [*leukos, kytos;* G *poiesis*, production]. The formation of leukocytes. —**leukocytopoiet'ic,** *adj*

leu"ko-cy to sis (lew"ko sigh-to sis) [*leukos; kytos;* G. *-osis*, increase]. An increase in the leukocyte count above the upper limits of normal. It is physiologic during pregnancy and pathologi in many infections and toxemias. —**leukocytot'ic,** *adj*

leu"ko-der'ma [*leukos;* G. *derma*, skin]. A condition of defective pigmentation of the skin, especially congenital absence of pigment in patches or bands. —**leukodermic,** *adj*

l. acquisitum centrifugum. A vitiligo manifested by small round areas of depigmentation each with brown mole in the center; also called *Sutton disease circumnevic* or *perinevoid vitiligo.*

l. colli. A condition coincident with the appearance of the macular eruption of cutaneous syphilis; characterized by mottled skin on the neck, chin, or rarely on other parts.

l. psoriaticum. An affection of the kin characterized by areas of *hypopigmentation followi* psoriatic inflammation.

l. punctatum. An affection of the skin characterized by minute areas of hypopigmentation scattered through the melanosis following prolonged intake of arsenic.

l. syphiliticum. See *syphiloderm, 2*.

leu"ko-en ceph"a li tis. See *staggers*.

leu"ko e ryth"ro blas to sis. See *myelophthisic anemia*.

leu"ko-ker"a to sis. See *leukoplakia*.

leu'kol, leu'ko lin. Quinoline.

leu"ko-lym"pho-sar-co ma. Leukosarcoma.

leu kol y sis. Leukocytolysis.

venom l. Destruction of leukocytes by the action of venom.

leu ko ma [G. white spot in the eye]. 1. An opacity of the cornea as a result of an ulcer, wound, or inflammation, which presents an appearance of ground glass. 2. Leukoplakia buccalis. 3. Leukosarcoma. Syn., *albugo*. —**leukom atous, leukom'atoid** *adj*

leu ko ma ina (lew-ko may-een, -in, -muh een, -in, lew'ko myne) See *leucomaine*.

leu"ko-mel"a no-der'ma. See *syphiloderm, 2*.

leu"ko my o'ma (lew ko-migh muh) See *lipomyoma*.

leu"ko-nych'i-a (lew"ko-nick'ee-uh) [G. *leukos* white; *onyx*, nail]. A whitish discoloration of the nails; due to the presence of air beneath them.

leu kop a thy [*leukos*; G. *pathos*, disease]. Any deficiency of coloring matter. Albinism.

leu"ko-pe-de sis [*leukos*; G. *pēdēsis*, leaping]. Diapedesis of leukocytes through the walls of blood vessels.

l. gastrica. Leukocytes, particularly in increased numbers, in the gastric secretion.

leu"ko-pe'ni [*leukos*; G. *penia*, want]. A decrease below the normal number of leukocytes in the peripheral blood. For **idiopathic, malignant,** or **pernicious l.**, see *agranulocytosis*. —**leukopenic,** *adj*

leu"ko-phleg ma si a (-fleg-may'zhuh, -zee uh, -shuh, -see-uh) [*leukos*; G. *phlegmasia*, inflammation]. 1. A condition marked by dropsy, pale flabby skin, and general edema. 2. Phlegmasia alba dolens.

leu"koph thal'mous [*leukos*; G. *ophthalmos*, eye]. Having unusually white eyes.

leu"ko-pla'ki a [*leukos*; G. *plax*, anything flat and broad]. A disease characterized by whitish thickening of the epithelium of a mucous membrane. —**leukoplakial** *adj*

l. buccalis. One characterized by pearly-white or bluish white patches on the surface of the tongue or the mucous membrane of the cheeks, due to hyperplasia of the epithelium.

l. oris. See *l. buccalis*.

l. vulvae. Occurrence of irregular white patches on the mucosa of the vulva. There is thickening of the epithelium and the papillae may be hypertrophied. Also see *kraurosis* of the vulva.

leu"ko-pla'si-a (lew"ko-play'zhuh, -see-uh) See *leukoplakia*.

leu"ko-pro'te-ase (-pro'tee-ace, -aze) An enzyme in leukocytes which splits protein. In inflammation it causes liquefaction of necrotic tissue.

leu kop sin [*leukos*; G. *opsis*, vision] Visual white, produced by reaction of light on rhodopsin (visual purple) derived from vitamin A. Also spelled *leucopsin*.

leu"kor rha gi [*leukos*; G. *rhēgnynai*, to burst forth]. An excessive leukorrheal flow.

leu"kor-rhe a [*leukos*; G. *rhoia*, flow]. A whitish, mucopurulent discharge from the female genital canal. —**leukorrheal** *adj*

leu"k -sar-co ma [*leukos*; G. *sarkōma*, fleshy excrescence]. 1. Lymphosarcoma which has invaded the blood stream and in which lymphosarcoma cells (malignant lymphoblasts and lymphocytes) are circulating. Also called *leukolymphosarcoma*, *sarcoleukemia*. 2. Lymphocytic leukemia.

leu"ko-sar co ma to sis [*leukos*; *sarkōma*; G. *-ōsis*, condition]. A condition characterized by multiple sarcomatous tumors associated with leukemic blood picture. Also see *leukosarcoma*.

leu'ko-scope [*leukos*; G. *skopein*, to examine]. An instrument formerly used for testing for color blindness.

leu ko sis. See *leukemia*.

leu"ko tax'ine (lew ko-tack'seen, -sin) [*leukos*; G. *taxis*, arrangement]. A crystalline, nitrogenous substance present in inflammatory exudates, which exerts positive chemotaxis and appears to increase capillary permeability. It is probably produced by injured cells.

leu'ko-tome. An instrument for dividing nerve fibers of the white matter of the brain in leukotomy or lobotomy. Also spelled *leucotome*.

leu kot o my. See *lobotomy*.

leu"ko tox'ic [*leukos*; G. *toxikon*, poison]. Destructive to leukocytes.

leu"ko-tox'in [*leukos*; *toxikon*]. A cytotoxin obtained from lymph nodes.

leu"ko-trich'i a (lew"ko-trick ee-uh) [*leukos*; G. *thrix*, hair]. Whiteness of the hair; *canities*. —**leukot'richous,** *adj*.

leu"ko u"ro-bil'in (-yoor' bil'in, -bye'lin) [*leukos*; G. *ouron*, urine; L. *bilis*, bile]. A colorless decomposition product of bilirubin.

leu'kous [*leukos*]. White.

Levaditi's method. See under *stain*.

lev'an. A fructosan polysaccharide, composed of furanose-type D-fructose (D-fructofuranose) units linked by 2,6-β-glycosidic bonds, elaborated from sucrose by certain microorganisms, as *Bacillus subtilis* and *Bacillus mesentericus*.

l. sucrase. An enzyme that catalyzes formation of levan from sucrose.

Le-vant' root. Old term for cocculus, dried fruit of *Anamirta cocculus*.

Le vant' worm seed. See *santonica*.

lev"ar ter' e-nol bi tar'trate The United States Pharmacopeia name for the levorotatory form of *norepinephrine bitartrate*.

le va tor [L. from *levare*, to lift up]. 1. That which raises or elevates, as levator palpebrae superioris, the muscle which widens the palpebral fissure or opens the eye. See Table of Muscles in the Appendix. 2. An instrument used for raising a depressed portion of the skull.

l. anguli oris. The caninus muscle.

l. anguli scapulae. The levator scapulae muscle; old term.

l. ani. The chief muscle of the pelvic diaphragm.

l. claviculae. An occasional muscle arising from the transverse process of the first or second cervical vertebra and extending to the lateral end of the clavicle.

levatores costarum. Small muscles which aid in raising the ribs.

levatores costarum longi. Certain lower levatores costarum muscles.

l. epiglottidis. A variant part of the genioglossus muscle inserted into the epiglottis.

l. glandulae thyroideae. An occasional slip of muscle extending from the body of the hyoid to the isthmus of the thyroid gland.

l. labii superioris. A portion of the quadratus labii superioris muscle.

l. labii superioris alaeque nasi. The quadratus labii superioris muscle.

l. menti. The mentalis muscle; old term.

l. palati. The levator veli palatini muscle.

l. palpebrae superioris. The muscle which raises the upper eyelid.

l. prostatae. A few medial fibers of the pubococcygeus part of the levator ani muscle.

l. scapulae. The muscle which raises the shoulder and rotates the inferior angle of the scapula medially.

l. veli palatini. The muscle which raises the soft palate.

le'ver (lee'vur, lev'ur) [*levare*]. A vectis or one-armed tractor used in obstetrics.

le vid'u lin ose. A trisaccharide occurring in manna, on hydrolysis it yields 1 molecule of glucose and 2 of mannose.

lev"i ga'tion [L. *levigare*, to make smooth]. The reduction of a substance to a powder by grinding in water followed by fractional sedimentation, in order to separate the coarser from the finer particles. Also see *porphyrization*. —**lev'igate**, *v.*

Levin, Abraham Louis [*American physician*, 1880–1940]. Devised a nasal gastroduodenal catheter called *Levin tube*, for use in connection with gastric and intestinal operations (1921).

Levinson test. See under *test*.

lev"i ta'tion [L. *levitas*, lightness]. 1. The illusion of the suspension of a body in air; performed by modern magicians. 2. The subjective sense of rising into the air or being aloft without support, as in dreams or certain mental disorders.

le've-, lae've- (lee'vo-, lev'o-) [L. *laevus*, left]. 1. A combining form meaning *left, on the left side*. 2. In *chemistry*, a combining form signifying *levorotatory*.

le"vo-car'di gram [*laevus*; G. *kardia*, heart; *gramma*, letter]. An electrocardiogram in which the initial ventricular deflections are associated only with left ventricular activity; produced by blocking the right atrioventricular bundle.

le vo-con'dyl ism. Deviation of the mandibular condyles toward the left.

levo-dromoran tartrate. Trade-marked name for the morphinelike synthetic analgesic substance levorphan tartrate.

le vo-duc'tion [*laevus*; L. *ducere*, to lead]. Movement to the left, said especially of an eye.

le vo-gram. See *levocardiogram*.

le"vo-gy'rate. See *levorotatory*.

le vo-gy'rous [*laevus*; G. *gyros*, circle]. Rotating to the left, as the rotation of rays of polarized light.

levophed. A trade-mark for *l*-norepinephrine, primary pressor amine, supplied in the form of the bitartrate salt.

le"vo pho'bi-a [*laevus*; G. *phobos*, fear]. Morbid fear of objects on the left side of the body.

le vo-pho ri-a [*laevus*; G. *phoros*, bearing]. A tending of the visual lines to the left.

le"vo-ro-ta'tion [*laevus*; L. *rotare*, to turn round]. Rotation toward the left, especially of the plane of polarization of light.

le"vo-ro'ta to ry [*laevus*; *rotare*]. Rotating the plane of polarized light from right to left (counterclockwise).

lev-or'phan tar'trate. Generic name for levorotatory 3-hydroxy-N-methylmorphinan tartrate, potent synthetic analgesic related chemically and pharmacologically to morphine. See *levo-dromoran tartrate*, *racemorphan hydrobromide*.

le vo tar tar'ic ac'id (lee vo tahr-tar'ick, -tahr-tahr'ick). The optical isomer of tartaric acid which rotates polarized light to the left.

Levret, André [*French obstetrician*, 1703–80]. Made numerous contributions to the development of obstetrics. Devised improved forceps with cephalic and pelvic curves; called *Levret forceps*. *Levret law* states that in placenta previa the insertion of the umbilical cord is marginal.

lev'u lin [L. *laevus*, left]. A substance resembling starch occurring in some tubers; easily converted into levulose; synanthrose.

lev u lin'ic ac'id. $CH_3COCH_2CH_2COOH$. An acid obtained by boiling dextrose, sucrose, starch, or similar derivatives with dilute hydrochloric acid.

lev"u lo san (lev yoo-lo san, lev yoo-lo-san, lev'yoo lo-san') [*laevus*]. A sugar anhydride which yields levulose on hydrolysis; fructosan.

lev u lose [*laevus*]. $CH_2OH.CO.HCOH.HCOH.HCOH.CH_2OH$; monosaccharide occurring as such in many fruits and obtainable also by hydrolysis of sucrose and inulin; a white, crystalline powder freely soluble in water, at least as sweet as sucrose; used for parenteral alimentation. It may have special utility for diabetic patients requiring parenteral carbohydrate, as insulin is not required for activation of its phosphorylating enzyme. Syn., *fructose*, D-*fructose*, *fruit sugar*.

lev"u lo-se mi-a [*laevus*; G. *haima*, blood]. Presence of levulose in the blood.

lev"u lo-su ri-a [*laevus*; G. *ouron*, urine]. Presence of levulose in the urine.

lev u-rid. See *moniliid*.

Levy test. See Babcock-Levy *test*.

Lévy-Roussy syndrome. See under *syndrome*.

Lewandowsky, Felix [*German dermatologist*, 1879–1921]. Described rosacealike tuberculid, called *Lewandowsky disease*.

Lewis, Thomas [*English cardiologist*, 1881–1945]. Pioneer in electrocardiography by which he contributed to the analysis of cardiac arrhythmia. Studied atrial fibrillation. Described effort syndrome, a manifestation of neurocirculatory asthenia, in soldiers (1917).

lew'is-ite. $ClCH{:}CHAsCl_2$. Chlorovinyldichloroarsine, an oily substance having vesicant, lacrimatory, and lung irritant effects; it was developed for use as a chemical warfare agent.

lexo. Trade-mark for wafers containing soybean lecithin with thiamine hydrochloride and vitamins A and D.

Leyden, Ernst Viktor von [*German neurologist*, 1832–1910]. Described a type of hemiplegia resembling that noted by Gubler; called *Leyden paralysis*. Described an atrophic type of progressive muscular dystrophy seen in children, and usually beginning in the pelvic girdle and thighs; called *Leyden-Möbius dystrophy*. Described fatty infiltration of the heart. Acute ataxia is known as *Leyden ataxia* or *Leyden-Westphal ataxia*. See also *Charcot-Leyden crystals* under *crystal*.

Ley den jar (lye dun). A glass jar coated within and without, for its lower two-thirds, with metal foil, surmounted by a knobbed conductor in connection with the inner coating. It is designed for the temporary accumulation of electricity. A series of Leyden jars connected in parallel is known as *Leyden battery*.

Leydig, Franz von [*German histologist*, 1821–1908]. Described the interstitial cells of the testis, thought to be the source of the male sex hormone; called *Leydig cells*, *Gley's cells*.

ley-dig ar'che (lye-dig ar'kee) [*Leydig*; G. *archē*, beginning]. The time at which production of androgen by the interstitial cells of the testis begins.

Ley'dig pause. The hypothetical time of physiological cessation of the function of the interstitial cells of the testis; the male climacteric.

Lf. Limit of flocculation.

L. F. A. Left frontoanterior position of the fetus.

L. F. P. Left frontoposterior position of the fetus.

L. G. V. Lymphogranuloma venereum. See venereal *lymphogranuloma*.

LH Luteinizing hormone.

Lhermitte's sign. See under *sign*.

Li Chemical symbol for lithium.

lib·er·a·tion [L. *liberatio*, from *liberare*, to set free]. The act of freeing.

l. of the arms. In breech presentations, lowering of the arms of the fetus when they have become extended along the sides of the child's head.

li·bi'do (li-buy'do, li-bee'do) [L., longing]. 1. Sexual desire. 2. In *psychoanalysis*, the sum total of all instinctual forces; psychic energy. —**libid'inous,** *adj.*

Libman, Emanuel [American physician, 1872–1946]. With Sacks, described a form of valvular and mural endocarditis. See atypical verrucous *endocarditis*. *Lupus erythematosus disseminatus* is known as *Osler-Libman-Sacks syndrome*.

li'bra [L., balance]. A pound. A weight of twelve troy ounces. Abbreviated, l. Symbol, ℔.

lice Plural of louse.

li'cense [L. *licentia*, license]. An official permit or authority conferring on the recipient the right and privilege of exercising his profession.

li·cen'ti·ate (lye-sen'shee-ate) [*licentia*]. One who practices a profession by the authority of a license.

li'chen (lye'kin, -kun) [G. *leichēn*, lichen]. A generic term used to describe certain lesions of the skin which consist of solid papules with exaggerated skin markings. —**lichenoid,** *adj.*

l. chronicus simplex. The chronic stage of neurodermatitis characterized by lichenification of lesions in various regions. Also called *neurodermatitis circumscripta*.

l. corneus hypertrophicus. Thickening and induration of the skin, found in lichen chronicus simplex and the plaque type of lichen planus; also called *lichenificatio gigantea*.

l. nitidus. A chronic, inflammatory skin disease characterized by groups of tiny papules which are asymptomatic; found frequently in the genital region and the flexor region of a joint.

l. obtusus corneus. See *prurigo* nodularis.

l. pilaris. See *keratosis* pilaris.

l. planus. A common, inflammatory skin disease with an eruption of papules, broad and angular at the base, flat and glazed at the summit, slightly umbilicated, and of a dull purplish red color. The papules may be discrete or may coalesce, and itching may be slight or severe. The disease may be either acute and widespread or chronic and localized.

l. ruber acuminatus. See *pityriasis* rubra pilaris.

l. ruber moniliformis. A disease of unknown cause, with linear lesions of flat papules which resemble those of lichen planus, but it is probably a separate disease.

l. sclerosus et atrophicans. A chronic, atrophic disease of the skin in which the lesions evolve into white spots.

l. scrofulosorum. See *tuberculosis* lichenoides.

l. spinulosus. A skin disease of children, probably due to a vitamin-A deficiency, characterized by spines protruding from hair follicles or follicular papules.

l. striatus. A rare, sudden, self-limited disorder of the skin, occurring mostly in children, appearing as long strips of small lichenoid papules, usually on the extremities.

l. tropicus. See *miliaria*.

l. urticatus. See *urticaria* papulosa.

li"chen·i·fi·ca'ti·o gi·gan'te·a. See *lichen corneus hypertrophicus*.

li"chen·i·fi·ca'tion (lye"kun·if·i·kay'shun, lye-ken·if-) [*leichēn*; L. *facere*, to make]. The process whereby the skin becomes leathery and hardened; often the result of chronic pruritus and the irritation produced by scratching or rubbing skin eruptions.

li"chen·i·for'min. An antibiotic substance isolated from cultures of *Bacillus licheniformis*, active in vitro against a variety of bacteria.

li'chen·in (lye'kun·in) $C_6H_{10}O_5$. Moss starch; a carbohydrate obtained from Iceland moss. Does not give the starch reaction with iodine. Insoluble in cold water; forms a jelly with hot water. See *Cetraria*.

li"chen·i·za'tion (lye"kun·i·zay'shun, ·eye·zay'shun) [*leichēn*]. The development of lesions having the characteristics of lichen.

Lichtheim, Ludwig [German physician, 1845–1928]. Described subcortical aphasia, called *Lichtheim's disease*. Noted that in this disease the patient, although able to indicate by signs the number of syllables in a word, cannot articulate the word; called *Lichtheim's sign*. Drew attention to dorsolateral spinal degeneration associated with pernicious anemia; called *Lichtheim's syndrome*.

lic'o·rice, liq'uo·rice [G. *glykyrrhiza*, sweet-root]. Glycyrrhiza.

lid. Eyelid.

granulated lids. Trachoma.

l. lag. See von Graefe's *sign*.

li·do·caine hy"dro·chlo'ride. $(CH_3)_2C_6H_3NH·CO·CH_2N(C_2H_5)_2·HCl$; α-diethylamino-2,6-acetoxylidide or ω-diethylamino-2,6-dimethylacetanilid; a white, crystalline powder soluble in water; a potent local anesthetic agent useful for infiltration and block anesthesia and also effective topically. Syn., *lignocaine hydrochloride*. See *xylocaine hydrochloride*.

Lieben's test. See under *test*.

Lieberkühn, Johann Nathanael [German anatomist, 1711–56]. Described the simple straight tubular glands of the intestinal mucous membrane (1745), called *crypts of Lieberkühn, Lieberkühn's glands, Galeati's glands, intestinal glands*.

Liebermann reaction. See under *reaction*.

Liebermann–Burchard test. See under *test*.

Liebermann–Burchardt cholesterol reaction. See *Schultz's sterol reaction method for cholesterol* under *stain*.

Liebig, Justus von [German chemist, 1803–73]. Pioneer investigator of metabolism. Credited with discovering chloral and hippuric acid. Was among the first to prepare chloroform. Devised a method of estimating urea. See also Liebig's *test* for cystine, Liebig's *test* for cyanide.

lie de·tec'tor. A polygraph used to reveal a repressed sense of guilt or a fear of detection in a subject who is confronted by questions pertaining to a misdemeanor or crime. It records sudden changes in pulse rate, respiration, and blood pressure.

Liefson's method. See under *stain*.

li'en [L.]. The spleen. —**lienal** (lye'i·nal, lye·ee'nul), *adj.*

l. succenturiatus. Accessory spleen.

li·en·cu·lus. See *lienunculus*.

li"e·ni'tis [*lien*; G. *-itis*, inflammation]. Splenitis.

li·e·no- (lye·ee'no-, lye·en·o-, lye'e·no-), **lien-** [*lien*]. A combining form denoting *the spleen, splenic*.

li·e·no·cele [*lien*; G. *kēlē*, hernia]. Hernia of the spleen.

li"en·og'ra·phy [*lien*; G. *graphein*, to write]. Radiography of the spleen.

li·e·"no·ma·la'ci·a (-ma·lay'shuh, ·see·uh) [*lien*; G. *malakia*, softness]. Morbid softening of the spleen.

li·e·no·my"e·lo·ma·la'ci·a [*lien*; G. *myelos*, marrow; *malakia*]. Abnormal softening of the spleen and bone marrow.

li″e·nop′a·thy [lien; G. *pathos*, disease]. Disease of the spleen.

li·e″no·re′nal [lien; L. *renes*, kidneys]. Relating to the spleen and the kidney, as the lienorenal ligament, a fold of peritoneum between spleen and kidney.

li·e″no·tox′in [lien; G. *toxikon*, poison]. A cytotoxin with specific action on spleen cells.

li′en·ter″y [G. *leienteria*, passing one's food undigested]. A form of diarrhea in which undigested food is discharged. —**lienter′ic**, *adj.*

li″en·un′cu·lus [L., dim. from *lien*, spleen]. A detached part of the spleen; accessory spleen.

Liepmann, Hugo Carl (1863–1925). German neurologist who showed, in a study of alcoholic delirium, that hallucinations could be artificially produced, wrote on apraxia and differentiated the various forms, discovered the dominance of the left cortical hemisphere in right-handed individuals, and showed that isolated apraxia of the left side of the body is due to involvement of the corpus callosum.

Liesegang's phenomenon. See under *phenomenon*.

Lieutaud, Joseph [French physician, 1703–80]. Described the vesical trigone, formerly called *trigone of Lieutaud*.

life [AS. *lif*]. The sum of properties by which an organism grows, reproduces, and adapts itself to its environment; the quality by which an organism differs from inorganic or dead organic bodies.

average l. *In radiobiology*, the average amount of time an atom in a radioactive substance remains unchanged, equal to 1.443 of the radioactive half-life. Syn., *mean life*.

change of l. See *menopause*.

embryonic l. The life of the embryo.

expectation of l. See *expectation of life*.

mean l. Average *l.*

life ex·pec′tan·cy. See *expectation of life*.

lig′a·ment [L. *ligamentum*, band, tie]. 1. A band of flexible, tough, dense white fibrous connective tissue connecting the articular ends of the bones, and sometimes enveloping them in a capsule. 2. Certain folds and processes of the peritoneum. For ligaments listed by name, see Table of Joints and Ligaments in the Appendix. See Plate 2. —**ligamen′tous**, *adj.*

alar l. Lateral synovial folds of the capsule of the knee joint.

alar odontoid l. Either of the broad, strong ligaments arising on each side of the apex of the odontoid process and connecting the axis with the skull. Also called check *l.*, *odontoid l.*

annular l. of the stapedial base. A ring of elastic fibers encircling the base of the stapes and binding it to the rim of the vestibular window.

anococcygeal l. That which connects the tip of the coccyx with the external sphincter of the anus.

apical dental l. A fibrous cord extending from the summit of the dens of the epistropheus to the occipital bone near the anterior margin of the foramen magnum. Also called *apical odontoid l.*, *suspensory l.*

Arantius' l. See *ligamentum venosum*.

arcuate l. of diaphragm. One of the arched ligaments extending from the body of the diaphragm to the last rib and to the transverse process of the first lumbar vertebra.

arcuate l. of knee. That which extends from the back of the head of the fibula, arching medially over the popliteal tendon to join the capsule of the knee joint.

arcuate l. of pubis. The arched inferior portion of the capsule of the articulation between the two pubic bones; also called *subpubic l.*

auricular l. One of two extrinsic ligaments fixing the cartilage of the auricle to the temporal bone.

broad l. of uterus. A fold of peritoneum which extends laterally from the uterus to the pelvic wall and in which run the uterine blood vessels.

capsular l. A heavy fibrous structure surrounding a diarthrosis, and lined by synovial membrane. See Plate 2.

cardinal l. The lower portion of the broad ligament which is firmly united to the supravaginal portion of the cervix; also called *Mackenrodt's l.*

check l. A thickening of the orbital fascia running from the insertion of the medial rectus muscle to the medial orbital wall (**medial check ligament**) or from the insertion of the lateral rectus muscle to the lateral orbital wall (**lateral check ligament**).

circular l. Various fibers in the gingiva; old term.

Colles' l. The reflected *l.*

conoid l. A dense conical band of fibers attached by its apex to the base of the coracoid process medial to the trapezoid ligament and by its base to the coracoid tuberosity on the under surface of the clavicle.

coracoacromial l. A triangular ligament joining the coracoid process to the acromion.

coronary l. A reflection of the peritoneum between the liver and the diaphragm. Its right and left margins are called the **right triangular ligament** and the **left triangular ligament of the liver**.

coronary l. of knee. A thick inner portion of the capsular ligament of the knee joint which attaches the medial and lateral menisci to the tibia.

costocoracoid l. See *costocoracoid membrane*.

cruciate l. of the ankle. A band of deep fascia on the dorsum of the foot.

cruciate l. of atlas. That formed by the transverse ligament of the atlas and two vertical bands of fibers, the superior and inferior limbs, passing from the transverse ligament to the occipital bone and to the body of the axis respectively.

cruciate ligaments of knee. Two ligaments crossing in the middle of the knee joint, designated as anterior and posterior by their attachment to the tibia.

deltoid l. The medial collateral ligament of the ankle joint.

denticulate l. A narrow fibrous band separating the dorsal and ventral roots of the spinal cord throughout its entire length. Along its lateral border triangular toothlike processes are fixed at intervals to the dura mater. Also called *denticulate l.*

diaphragmatic l. The bandlike part of the urogenital fold formed by the degeneration of the cranial mesonephric tubules. It extends from the diaphragm to the persisting part of the mesonephros and forms a portion of the suspensory ligament of the ovary.

dorsal carpal l. The extensor retinaculum.

falciform l. of liver. The ventral mesentery of the liver extending from the diaphragm to the umbilicus and containing the round ligament of the liver. See Plate 13.

fundiform l. of penis. That arising from the front of the sheath of the rectus abdominis muscle and the linea alba, splitting into two bands to encircle the root of the penis.

gastrocolic l. The mesentery or portion of the omentum between stomach and transverse colon produced by fusion of the embryonic mesocolon with part of the great omentum.

gastrohepatic l. The portion of the lesser omentum extending between the liver and the stomach.

gastrosplenic l. The fold of peritoneum passing

from the stomach to the spleen; also called *gastrosplenic omentum*.

Gruber's l. Petrosphenoid *l.*, old term.

hammock l. An arrangement of the periodontal membrane related to the growing end of the root of a tooth.

Henle's l. The lateral expansion of the tendinous insertion of the rectus abdominis muscle situated posterior to the conjoined tendon.

hepatocolic l. A prolongation of the hepatoduodenal ligament downward to the transverse colon.

hepatoduodenal l. The portion of the lesser omentum extending between the liver and the duodenum.

hepatorenal l. A fold of peritoneum extending from the inferior surface of the liver to the right kidney.

hyaloideocapsular l. The circular fibers at the area of contact of the vitreous humor and the posterior surface of the lens of the eye.

hyothyroid l. See thyrohyoid *l.*

iliofemoral l. A strong ligament extending from the anterior inferior iliac spine to the lesser trochanter and the intertrochanteric line. Also called *Y l.* See Plate 2.

iliolumbar l. A fibrous band radiating laterally from the transverse processes of the fourth and fifth lumbar vertebrae to attach to the pelvis by two main bands. The lower part blends with the anterior sacroiliac ligament and the upper is attached to the ilium and is continuous above with the lumbodorsal fascia. See Plate 2.

infundibulopelvic l. See suspensory *l.* of ovary.

inguinal l. The lower portion of the aponeurosis of the external oblique muscle extending from the anterior superior spine of the ilium to the tubercle of the pubis and the pectineal line. Also called *Poupart's l.* See Plate 2.

interfoveolar l. Tendinous bands of the transversalis fascia curving downward medial to the abdominal inguinal ring; formerly called *Hesselbach's l.*

interspinal l. Thin membranous bands connecting adjacent spinous processes of the vertebrae.

labial l. A ligamentous cord developing in the labial swellings that forms the distal end of the round ligament of the uterus.

laciniate l. A strong fibrous band extending from the medial malleolus to the calcaneus.

lacunar l. The part of the aponeurosis of the external oblique muscle which is reflected backward and laterally to be attached to the pectineal line. Its base is thin and sharp and forms the medial boundary of the femoral ring.

lateral umbilical l. One of two cordlike folds extending from the urinary bladder to the umbilicus representing the degenerated distal parts of the umbilical arteries.

lienorenal l. A short fold of peritoneum extending from the front of the left kidney to the hilum on the visceral surface of the spleen.

l. of Cooper 1. Any of the fibrous bands which pass through the breast from the overlying skin to the underlying pectoral fascia. 2. A band of fibrous connective tissue overlying the pectineal line of the pubis.

Mackenrodt's l. The cardinal *l.*

median umbilical l. A fold of the peritoneum extending from the umbilicus to the urinary bladder containing vestiges of the urachus and its connective tissue. Also called *vesicoumbilical l.*

nuchal l. An elastic ligament extending from the external occipital protuberance and middle nuchal line to the spinous process of the seventh cervical vertebra.

odontoid l. See alar odontoid *l.*, apical dental *l.*

ovarian l. A band of connective tissue running from the uterine pole of the ovary to the side of the uterus.

palpebral l. The fibrous band running from the extremities of the tarsal plates to the wall of the orbit. There is a medial and a lateral one for each eye. Also called *tarsal l.*

pancreaticosplenic l. A fold of peritoneum uniting the tail of the pancreas with the lower part of the medial surface of the spleen.

patellar l. The ligament attaching the patella to the tuberosity of the tibia.

pectinate l. Trabecular tissue from the posterior elastic lamina which extends into the substance of the iris.

petrosphenoid l. A thickened portion of the dura mater joining the petrous apex with the posterior clinoid process; also called *Gruber's l.*

phrenicocolic l. A fold of peritoneum extending from the left colic flexure to the diaphragm serving to support the spleen.

proper l. of ovary The terminal portion of the genital ridge uniting the caudal end of the embryonic ovary with the uterus.

pterygospinous l. A band of fibrous tissue extending from the lateral pterygoid plate to the spine of the sphenoid.

puboprostatic l. A thickening of the pelvic fascia running from the capsule of the prostate gland to the pubic bone; medial and lateral ones on each side are described; in the female called *pubovesical ligaments*.

pubovesical l. A thickening of the pelvic fascia running from the urinary bladder to the pubic bone; medial and lateral ones on each side are described; in the male called *puboprostatic ligaments*.

pulmonary l. A fold of pleura extending between the lower part of the mediastinal surface of the lung and the pericardium.

quadrate l. A thickened band extending from the neck of the radius to the inferior border of the annular ligament below the radial notch.

radiate l. A fibrous band connecting the anterior part of the head of each rib with the sides of two vertebrae and corresponding intervertebral disk.

reflected l. An occasional band of fibers of the superior crus of one inguinal ligament which crosses the midline to an attachment on the tubercle of the other pubic bone; also called *triangular fascia*, formerly *Colles' l.*

rhomboid l. One joining the cartilage of the first rib and the tuberosity of the clavicle.

round l. of femur A flattened band extending from the fovea on the head of the femur to attach on either side of the acetabular notch between which it blends with the transverse ligament. Also called *ligamentum teres femoris*. See Plate 2.

round l. of liver A fibrous cord running from the umbilicus to the notch in the anterior border of the liver. It represents the remains of the obliterated umbilical vein. Also called *ligamentum teres hepatis*.

round l. of uterus A ligament running from the anterior surface of the lateral border of the uterus through the inguinal canal to the labium majus. Also called *ligamentum teres uteri*. See Plate 41.

sacrospinous l. A thin triangular band running from the spine of the ischium medially to the lateral margin of the sacrum and coccyx. See Plate 2.

sacrotuberous l. A ligament extending from the sacrum, coccyx, and posterior iliac spines to the tuberosity of the ischium. See Plate 2.

sphenomandibular l. A fibrous band extending from the angular spine of the sphenoid to the lingula of the mandibular foramen. It is derived from the embryonic Meckel's cartilage.
sphenomaxillary l. Old term for sphenomandibular ligament.
spiral l. The greatly thickened periosteum of the outer wall of the cochlear duct. See Plate 20.
stellate l. Radiate ligament.
stylohyoid l. A fibrous cord attached to the tip of the styloid process of the temporal bone and the lesser horn of the hyoid bone, derived from Reichert's cartilage.
subpubic l. The arcuate ligament of the pubis.
suspensory l. of lens. See ciliary zonule.
suspensory l. of ovary. A small peritoneal fold passing upward from the tubal end of the ovary to the peritoneum over the iliac vessels and psoas muscle. Also called *infundibulopelvic l.*
suspensory l. of penis. Fibers from the linea alba and symphysis pubis forming a strong fibrous band which extends to the upper surface of the root to blend with the fascial sheath of the penis.
sutural l. A thin layer of fibrous membrane separating bones forming an immovable articulation, as the bones of the skull.
tarsal l. See palpebral *l.*
thyrohyoid l. Thyrohyoid membrane.
transverse carpal l. See flexor *retinaculum* of the wrist.
transverse crural l. See superior extensor retinaculum.
transverse perineal l. The fibrous anterior margin of the urogenital diaphragm: formerly called *transverse pelvic l.*
trapezoid l. A broad quadrilateral ligament extending from the upper surface of the coracoid process to the oblique ridge on the under surface of the clavicle.
triangular l. Urogenital diaphragm.
triangular ligaments of liver. The right and left margins of the coronary ligament connecting the right and left lobes of the liver respectively with the diaphragm.
true lateral l. of bladder. A thickening of the pelvic fascia extending laterally on either side from the lower part of the urinary bladder or prostate gland.
uterosacral l. A concentric fold of peritoneum containing much fibrous tissue which passes backward from the cervix of the uterus on either side of the rectum to the posterior wall of the pelvis.
ventricular l. Ventricular fold.
vocal l. Vocal fold.
volar carpal l. A band of deep fascia of the wrist overlying the ulnar artery and nerve.
xiphocostal l. A ligament extending from the xiphoid cartilage to the cartilage of the eighth rib.
Y l. The iliofemoral *l.*

lig"a·men·to·pex"y [*ligamentum*; G. *pēxis*, fixing]. Suspension of the uterus by shortening or fixation of the round ligaments.

lig"a·men'tum (pl. *ligamenta*) [L.]. Ligament.
ligamenta auricularia. Fibrous bands which aid in fixing the auricle against the head.
l. arteriosum. The remains of the fetal ductus arteriosus, extending from the pulmonary trunk to the arch of the aorta.
l. caudale. An embryonic ligament formed by the degeneration and fusion of the last two or three somites; it is attached to the dermis under the coccygeal glabella and is closely related to the caudal medullary vestige.
l. flavum. Yellow elastic tissue which connects the laminas of contiguous vertebrae.
l. nuchae. The nuchal ligament.
l. pulmonale. The pulmonary ligament.
l. reflexum. The reflected ligament.
l. teres femoris. See round *ligament* of the femur.
l. teres hepatis. See round *ligament* of the liver.
l. teres uteri. See round *ligament* of the uterus.
l. testis. A short embryonic ligament developing in the caudal genital ridge forming the upper part of the gubernaculum testis.
l. venosum. A ligament of the liver representing the remains of the embryonic ductus venosus.

li·ga'tion (lye-gay'shun) [L. *ligatio*, from *ligare*, to bind]. The operation of tying, especially arteries, veins, or ducts, with some form of knotted ligature. —**li'gate,** *v.*

lig'a·ture [L. *ligatura*, a band]. 1. A cord or thread for tying vessels. 2. The act of tying or binding: ligation.
absorbable l. One composed of animal tissue, such as catgut, which can be absorbed by the tissues.
chain l. One used by tying broad pedicles in sections, the whole mass being constricted in sections by a chain of interlocking ligatures.
double l. The ligation of a vessel at two points, the vessel being divided distal to both.
elastic l. One of live rubber used for strangulation of tissue and the gradual cutting through of certain areas by constant pressure.
interlocking l. Chain ligature.
l. carrier. A specially designed forceps for passing or drawing ligatures through tissues.
nonabsorbable l. One which cannot be absorbed by the tissues, such as silkworm gut.
occluding l. One completely obstructing a vessel or channel.

light [AS. *leoht*]. Electromagnetic radiations that give rise to the sensation of vision when the rays impinge upon the retina.
axial l. Light rays that are parallel to each other and to the optic axis.
black l. See Robert Williams Wood.
central l. See axial *l.*
diffused l. That reflected simultaneously from an infinite number of surfaces, or that which has been scattered by means of a concave mirror or lens.
Finsen l. Light from which the heat rays and most visible rays are absorbed by filters, leaving only blue, violet, and notably ultraviolet rays; used in phototherapy.
monochromatic l. See monochromatic.
oblique l. Light falling obliquely on a surface.
polarized l. Light which has undergone polarization.
quartz l. A lamp fitted with a quartz lens, used in radiant light therapy.
reflected l. Light thrown back from an illuminated object.
refracted l. Light rays that have passed from one medium into another and have been bent from their original course.
refrigerated l. See Finsen *l.*
transmitted l. The light passing through an object.
ultraviolet l. Invisible radiant energy having wavelength of approximately 20 to 400.
Wood's l. See Robert Williams *Wood.*

light dif'fer·ence. 1. The difference between the two eyes in respect to their sensitiveness to light. 2. The smallest difference in illumination which can be distinguished by the eyes. Abbreviated, L. D.

light en'ing [AS. *liht*]. The sinking of the fetal head into the pelvic inlet with an accompanying descent of the uterus.

light'er·man's bot'tom. Inflammation of the bursa over the tuberosity of the ischium; due to prolonged sitting. Also called *weavers' bottom.*

light green S.F yel'low ish (C.C.) A dye derivative of brilliant green which fades rapidly; valuable plasma stain. It has been used to stain bacteria, yeasts, algae, and plant cells.

light'ning pains. The lancinating pains of spinal root disease, coming on and disappearing with lightninglike rapidity, as in tabes dorsalis.

light sense test'er. Any instrument used to test the sensitivity of the eye to light.

perimetric l. s. t. An attachment for a perimeter which may be used for determining the light threshold of the eye at any desired position or positions in the visual field.

lig'ne-ous [L. *ligneus*, wooden]. Woody or having woody texture.

lig"ni fi-ca tion [L. *lignum*, wood; *facere*, to make]. The process by which the cell wall of a plant acquires greater rigidity by deposition of lignin.

lig'nin. $C_{44}H_{50}O$. A modification of cellulose, constituting the greater part of the weight of most dry wood. A substance deposited in the cell walls of plants.

lig'no-caine hy"dro-chlo ride. British generic name for the local anesthetic agent lidocaine hydrochloride.

lig"no-cer'ic ac'id (lig no-serr'ick, -seer'ick). $C_{23}H_{47}COOH$. A fatty acid derived from kerasin.

lig'num [L.]. Wood.

l. benedict um. Guaiac wood.

l. cedrum. Cedar wood.

l. vitae. The tree, *Guajacum officinale.* See *guaiac.*

lig'ro-in. A liquid fraction obtained from petroleum; used as a solvent.

li gus'ti-cum (li-gus ti-kum, lye-). See *lovage.*

lik'mol-sis [G. *likmos* or *likmizo*, to winnow]. Chromatography; term suggested as being more rational designation.

Lilienthal, Howard [*American surgeon*, 1861-1946]. Well known for his many contributions to the knowledge of thoracic surgery. He described low posterior mediastinotomy by resection of the ninth rib, with transillumination of the esophagus for ease of access. Described esophagogastrostomy through the posterior approach, implanting the lower end of the esophagus into the stomach wall by intussusception, using traction sutures through a secondary stomach incision, called *Lilienthal's operation.* Inventor of a guillotine type of costotome for use in removing the first rib, called *Lilienthal costotome.*

Lillie stains. See under *stain.*

lily of the val'ley. See *convallaria.*

limb [AS. *lim*]. 1. One of the extremities attached to the trunk and used for prehension or locomotion. 2. An elongated limblike structure, as one of the limbs of the internal capsule.

anterior l. of the internal capsule. That portion which lies between the caudate and lentiform nuclei.

artificial l. See *prosthesis, 2.*

ascending l. The portion of a renal tubule which extends from the bend in Henle's loop to the distal convoluted portion.

descending l. The portion of a renal tubule which extends from the proximal convoluted portion to the bend in Henle's loop.

pelvic l. A lower extremity.

posterior l. of the internal capsule. That portion which lies between the lentiform nucleus and the thalamus.

thoracic l. An upper extremity.

lim'ber neck. An avian type of botulism; disease caused by *Clostridium botulinum* C and characterized by muscular incoordination, weakness, and death.

lim'bus (pl. *limbi*) [L., border]. A border; the circumferential edge of any flat organ or part. —**limbic,** *adj.*

corneoscleral l. The circumference of the cornea at its junction with the sclera.

l. alveolaris. The alveolar crest.

l. corneae. See *corneoscleral l.*

l. fossae ovalis. The thick margin of the fossa ovalis of the heart, representing the margin of the foramen ovale in the embryonic septum secundum. Syn., *annulus ovalis.*

l. of the spiral lamina. A thickening of the periosteum at the border of the osseous spiral lamina of the cochlea; to it is attached the tectorial membrane.

l. palpebralis anterior. The rounded anterior edge of the margin of the eyelid from which the eyelashes grow.

l. palpebralis posterior. The sharp posterior edge of the margin of the eyelid that is applied to the eyeball; it is the point of transition of skin to the conjunctival mucous membrane.

l. sphenoidalis. The sharp anterior edge of the groove on the sphenoid bone for the optic commissure.

l. spiralis. See *l. of the spiral lamina.*

lime [AS. *lim*]. CaO, calcium oxide. See under *calcium.*

chlorinated l. (*calx chlorinata*). The product of the chlorination of lime; consists chiefly of calcium hypochlorite and calcium chloride. Employed as disinfectant.

l. liniment. See *carron oil.*

l. milk. A milky fluid consisting of calcium hydroxide suspended in water.

l. water (*liquor calcii hydroxidi*). An aqueous solution containing 0.14% $Ca(OH)_2$ at 25° C. Used as an antacid. Dose, 30–120 cc. (1–4 fluid-ounces).

slaked l. Lime which has been acted on by water; it consists chiefly of calcium hydroxide.

lime [F.]. The fruit of *Citrus aurantifolia*; its juice is antiscorbutic and refrigerant.

li'men (pl. *limina*) [L., threshold]. 1. A boundary line. 2. See *threshold.*

l. insulae. The imaginary line separating the anterior perforated substance from the insula.

l. nasi. The boundary line between the osseous and the cartilaginous portions of the nasal cavity.

li mes (pl. *limites*) [L.]. Limit, boundary.

li mes death (lye'meez). The least amount of toxin which, when mixed with one unit of antitoxin and injected into a guinea pig weighing 250 Gm., kills within five days. Symbol, L_+.

li'mes ze ro. The greatest amount of toxin which causes no local edema when mixed with one unit of antitoxin and injected into a guinea pig weighing 250 Gm. Symbol, L_0.

lim'i na. Plural of limen.

lim'i nal [*limen*]. Pertaining to the limen or threshold, especially pertaining to the lowest limit of perception.

lim'it of floc"cu la'tion. The dose of toxin per unit of a certain antitoxin in the mixture which flocculates more rapidly under the same conditions, than all other mixtures, which contain other amounts of the same toxin per unit of the same antitoxin. Abbreviated, *Lf.*

lim'i troph'ic. Controlling nutrition.

Lim-na tis. A genus of aquatic leeches.

L. nilotica. A widely distributed species which produces internal hirudiniasis in man.

lim nol'o-gy [G. *limnē*, marsh; *logos*, word]. The study of inland waters; particularly the study of biologic, chemical, and physical conditions in ponds, lakes, and streams.

lim′o-nene. $C_{10}H$ monocyclic terpene hydrocarbon, existing in optically activ and racemic forms, occurring in many volatile oils.

li′mo-nite (lye′mo-night, lim′o-) Ferric oxide, f the approximate formula $2Fe_2O_3.3H_2O$; yellow powder. See *iron oxide*.

li mop h′thi-sis (li-mof′thi sis, lye-) [G *limos*, hunger; *phthisis*, wasting away]. Wasting of the body due to starvation.

limp [cf. AS. *lemphealt*, lame] A halting gait. See *claudication*.

lin-al′o-ol (lin-al′o-ole, -ol, -awl, lin ah-lool′) $C_{10}H_{17}OH$ An alcohol occurring in coriander lavender and bergamot oils. It exists in both dextrorotatory and levorotatory forms, designated *d*-linalool and *l*-linalool, respectively *d*-Linalool, also called *coriandrol*, is the chief constituent of coriander oil.

li tyl ac′ tate (ass′i-tayt) $C_{10}H_{17}OCOCH$ A constituent of lavender and other oils.

lin″ ma rin, lin-am′a rin. The toxic glycoside of flaxseed.

Lind, James [*Scottish physician*, 1716–94]. Made important observations on tropical diseases. Gave classic description of scurvy (1753). Is considered largely responsible for the fact that the British navy adopted lemon juice as preventive of scurvy

lin′dane. Generic name for the gamma isomer of 1,2,3 4,5,6-hexachlorocyclohexane ($C_6H_6Cl_6$) known also as benzene hexachloride, of purity of not less than 99 per cent; powerful insecticide.

Lindau, Arvid [*Swedish pathologist*, 1892–]. Studied angiomatosis of the central nervous system. Demonstrated that some cystic tumors of the cerebellum are due to angiomas, and that these vascular lesions can be found in other parts of the body including the retina and abdominal organs. The cerebellar tumor is known as *Lindau tumor* and the retinal lesion as von *Hippel′ disease*. The syndrome is called von *Hippel-Lindau′ disease*.

Lindbergh Charles Augustus [*American aviator* 1902–]. With Carrel, devised perfusion pparatus with which organs can be kept alive outside the body called *Carrel-Lindbergh pump*. He also devised flask with two chambers, one above the other for cultivating large number of tissue fragments in thin layer of well oxygenated and constantly circulating medium, called *Lindbergh flask*.

line [L. *linea*, line]. 1. Extension of dimension having length, but neither breadth nor thickness. 2. I anatomy anything resembling mathematical line in having length without breadth or thickness boundary or guide-mark. 3. The $\frac{1}{12}$ part of an inch. Obs 4. I genetics, lineage the succession of progenitors and progeny

bilateral lines. Transverse lines of the bdominal all also called *striae albicantes gravidarum*

alveolobasilar l. A line joining the basion and the alveolar point.

alveolonasal l. A line joining the nasal and alveolar points.

anocutaneous l. The junction between skin and mucous membrane at the anus.

anorectal l. The junction between the intestinal portion and the anal portion of the rectum.

anterior axillary l. A vertical line extending downward from the anterior fold of the axilla on the side of the trunk.

anterior gluteal l. A line beginning t the anterior extremity of the iliac crest and curving downward and backward to the upper part of the greater sciatic notch.

arcuate l. (a) The iliac portion of the iliopectineal line. (b) An arched thickening of the obturator fascia from which the levator ani muscle arises. Also called *arcus tendineus*.

auriculobregmatic l. One passing from the auricular point to the bregma, dividing the preauricular from the postauricular part of cranium.

base l. A line running backward from the infraorbital ridge through the middle of the external auditory meatus, and prolonged to the middle line of the head posteriorly

basiobregmatic l. The line joining the basion and the bregma.

biauricular l. The line separating the anterior from the posterior portion of the skull It extends from one external auditory meatus over the vertex to the other

blue l. See lead *l.*

cement l. The optically demonstrable interface between older bone matrix and more recently formed matrix.

cervical l. The line about the neck of tooth at the junction of enamel and cementum

cleavage lines. See Carl von *Langer*

costoarticular l. A line drawn between the sternoclavicular articulation and the tip of the eleventh rib.

costoclavicular l. See parasternal *l.*

epiphyseal l. 1 The scar left at the site of the epiphyseal plate after fusion of an epiphysis with the diaphysis of long bone. 2. I radiology, an epiphyseal cartilage.

equipotential l. Isopotential *l.*

facial l. A straight line tangential to the glabella and some point at the lower portion of the face. Also called *Camper′ l.*

genal l. A line running downward from the region of the zygomatic bone to join the nasal line; it is seen in the faces of children in certain diseases.

gi gival l. A line about the crown of tooth that conforms to the free margin of the gingiva.

iliopectineal l. The bony ridge marking the brim of the true pelvis, situated partly on the ilium and partly on the pubis.

imbrication l. One of the grooves in the surface of the dental enamel where lines of Retzius outcrop.

incremental l. One of the lines in sections of dentin (lines of Owen) and dental enamel (lines of Retzius) which mark zones of imperfect calcification at successive stages in the development of tooth.

inferior gluteal l. A line extending from the nterior inferior pine of the ilium to the middle of the greater sciatic notch. Formerly called *inferior curved line of the ilium*.

inferior nuchal l. A transverse ridge extending from the median uchal line across the outer surface of the occipital bone, short distance below the superior nuchal line. Formerly called *inferior curved line of the occipital bone*.

inferior temporal l. A line arching across the side of the cranium, marking the upper limit of the temporal fossa and of the attachment of the temporalis muscle.

intercondyloid l. A ridge on the posterior surface of the lower end of the femur forming the upper limit of the intercondyloid fossa.

intermediate l. A ridge on the iliac crest between the inner and outer lips.

intertrochanteric l. A line upon the anterior surface of the femur between the neck and shaft, and extending from the tubercle of the greater trochanter to point below the lesser trochanter

intertubercular l. An imaginary transverse line drawn across the abdomen at the level of the tubercles on the iliac crests.

isoelectric l. Isopotential line

isopotential l. The portion of an electrogram during which there is no potential difference between the two leading electrodes, and therefore no deflection from the base line.

Langer's lines. See Carl von *Langer*.

lead l. The blue line at the dental margin of the gums in chronic lead poisoning.

l. of demarcation. A line of division between healthy and gangrenous tissue.

l. of duty. 1. Authorized duty in service. 2. *In U. S. military medicine*, a classification of all sickness, injury, or death suffered by personnel in active military service, unless caused by individual fault or neglect and unless the disease, injury or condition existed prior to, and was not aggravated by, service.

l. of fixation. An imaginary line drawn from the object viewed through the center of rotation of the eye.

l. of Gennari. See under *Gennari*.

l. of occlusion. Line joining the areas of contact of teeth in occlusion.

l. of regard. *In optics*, the line connecting the center of rotation of the eye with the point of fixation or of regard.

l. of sight. An imaginary line drawn from the object viewed to the center of the pupil.

lines of Owen. Incremental lines of dentin.

lines of Retzius. Incremental lines of enamel.

lines of Schreger. Radial dark and light bands in the dental enamel or similar bands concentric with the surface of the dentin, produced by differential refraction and reflection of light used in microscopical examination of sections.

longitudinal l. A longitudinal ridge on a nail produced by unequal growth.

mammary l. See milk *l.*

mammillary l. A vertical line passing through the center of the nipple.

median nuchal l. A ridge or crest on the occipital bone extending from the external occipital protuberance to the foramen magnum. Syn., *external occipital crest*.

midaxillary l. A perpendicular line drawn from the apex of the axilla.

midclavicular l. A vertical line parallel to, and midway between, the midsternal line and a vertical line drawn downward through the outer end of the clavicle.

midsternal l. A vertical line through the middle of the sternum.

milk l. A ridge of thickened ectoderm, extending longitudinally between the bases of the limb buds, from which the mammary glands develop.

mylohyoid l. A ridge on the internal surface of the mandible, extending upward and backward from the sublingual fossa to the ramus. Also called *mylohyoid ridge*.

nasal l. A line from the upper margin of the ala nasi curving around the angle of the mouth, ending at the edge of the orbicularis oris. It is seen in diseases of the gastrointestinal tract.

nasobasilar l. A line drawn through the basion and the nasal point.

neonatal l. A prominent incremental line formed in the neonatal period in the enamel and dentine of a deciduous tooth.

nipple l. See mammillary *l.*

oblique l. of the fibula. The posteromedial border beginning at the medial side of the head and continuing downward into the interosseous crest.

oblique l. of the mandible. Continuation of the anterior border of the ramus downward and forward onto the lateral surface of the mandible.

oblique l. of the radius. A ridge of bone extending laterally and downward from the radial tuberosity; it gives origin to the flexor digitorum sublimis and flexor pollicis longus muscles.

oblique l. of the thyroid cartilage. A line running downward and forward on the lateral side of each lamina.

obturator l. A sign seen roentgenologically in early inflammatory disease of the hip in children.

parasternal l. An imaginary vertical line midway between the lateral margin of the sternum and the mammillary line.

Pastia's lines. Red streaks in the lateral folds of the skin in the antecubital, axillary, and inguinal regions and the neck in severe scarlet fever; also called *Pastia's sign*.

pectineal l. That on the posterior surface of the femur running downward from the lesser trochanter and giving attachment to the pectineus muscle.

popliteal l. An oblique ridge on the posterior surface of the tibia, extending from the fibular facet to the middle of the medial border.

posterior axillary l. A vertical line extending downward from the posterior fold of the axilla on the side of the trunk.

posterior gluteal l. A line beginning near the end of the posterior extremity of the crest of the ilium and curving downward to the posterior part of the greater sciatic notch. Formerly called *superior curved l. of the ilium*.

primitive l. See primitive *streak*.

pure l. See *pure line*.

quadrate l. A slight ridge extending downward from the middle of the intertrochanteric crest and giving attachment to the quadratus femoris muscle.

respiratory l. The line connecting the bases of the upward strokes in a tracing of the pulse.

scapular l. A vertical line drawn on the back through the inferior angle of the scapula.

semicircular l. The curved lower edge of the internal layer of the aponeurosis of the internal oblique muscle, where it ceases to cover the posterior surface of the rectus muscle. Also called *linea semicircularis of Douglas*.

semilunar l. A line, convex laterally, marking the transition of the internal oblique and transverse muscles of the abdomen to aponeuroses. Also called *linea semilunaris of Spigelius*.

sternal l. The median line of the sternum.

sternomastoid l. A line drawn from a point between the two heads of the sternocleidomastoid muscle to the mastoid process.

subcostal l. An imaginary transverse line drawn across the abdomen at the level of the lower border of the tenth costal cartilage.

superior nuchal l. A semicircular line passing outward and forward from the external occipital protuberance. Formerly called *superior curved line of the occipital bone*.

superior temporal l. A line arching across the side of the cranium and giving attachment to the temporal fascia.

supraorbital l. A line extending horizontally across the forehead immediately above the zygomatic process of the frontal bone.

temporal l. The ridge of bone curving upward and backward from the zygomatic process of the frontal bone. It divides into the superior and inferior temporal lines.

tension lines. See Carl von *Langer*.

terminal l. See iliopectineal *l.*

test l. A line for detecting shortening of the neck of the femur.

transpyloric l. A horizontal line drawn through a point midway between the jugular notch and the symphysis pubis.

transverse l. One of the lines of nails in the form of sulci limited proximally by slightly elevated ridges which appear at the lunula and progress forward with the growth of the nail until they disappear at the free edge. Also called *Beau lines*.
trapezoid l. The line of attachment of the trapezoid ligament on the inferior surface of the outer portion of the clavicle.
visual l. An imaginary line drawn from a point looked at, through the nodal point of the eye, to the macula lutea.
white l. The linea alba.
Z l. See *Z disk*.

lin'e-a (pl. *lineae*) [L.]. Line.
l. alba. A tendinous raphe extending in the median line of the abdomen from the pubes to the xiphoid process; it is formed by the blending of the aponeuroses of the oblique and transverse muscles. See Plate 4.
l. aspera. A rough longitudinal ridge on the posterior surface of the middle third of the femur serving as attachment for muscles.
lineae albicantes. Glistening white lines seen in the skin, especially that of the abdomen, after reduction of extreme distention, as in pregnancy (*l. gravidarum*, striae gravidarum) excessive adiposity tumors produced by rupture of the elastic tissue fibers.
lineae gravidarum. Lineae albicantes.
l. nigra. A dark pigmented line often present in pregnant women and extending from the pubes upward in the median line.
l. sinuosa analis. The junction between the columnar and intermediate zones of the anal canal. Also called *anorectal junction*.
l. splendens. A longitudinal fibrous band of pia mater along the median line of the anterior surface of the spinal cord.

lin'e-ar cor"re-la'tion. A correlation between two variables in which the regression equation is represented by a straight line; relationship that can be described graphically by a straight line.

lin'gua [L.]. The tongue. —**lingual** *adj*
l. nigra. See black hairy *tongue*.
l. plicata. Fissured tongue.

lin'gual (ling'gwal) The inferior and superior intrinsic longitudinal muscles of the tongue old term.

Lin-guat'u-la (ling gwach oo luh) [dim. from *lingua*]. A genus of the class Pentastomida, degenerate arthropods, endoparasites of vertebrates commonly known as tongue worms.
L. serrata. A species found in the nose or paranasal sinuses of dogs and other carnivores rarely infects man.

linguet. Trade-mark for a tablet designed to permit absorption of active ingredient through the buccal mucosa into the venous system.

lin'gu-la [dim. from *lingua*]. 1. A small lobule between the anterior medullary velum and the central lobule of the cerebellum. 2. A tonguelike structure. —**lingular** *adj*
l. of the ear The cartilaginous projection toward or into the upper portion of the lobe of the ear
l. of the mandible. The prominent, thin process of bone partly surrounding the mandibular foramen.
l. of the sphenoid. A small, tonguelike process extending backward in the angle formed by the body of the sphenoid and one of its greater wings.

lin"guo-dis'tal [*lingua*; L. *distare*, to be distant]. Distally and toward the tongue, as the inclination of a tooth.

lin"guo-gin'gi-val (ling gwo-jin'ji-val, -jin-jy'val) [*lingua*; L. *gingiva*, gum]. Relating to the tongue and the gingiva.

lin'i-ment [L. *linire*, to smear]. A liquid intended for application to the skin by gentle friction.

lin'in. 1. A strongly purgative principle obtainable from *Linum catharticum*, or purging flax. 2. In *biology*, the substance of the achromatic network of the nucleus of a cell.

li ni'tis (li-nigh tis, lye-nigh tis) Old term for gastritis.
l. plastica. Infiltrating scirrhous carcinoma of the stomach.

link'age [ME. *linke*]. 1 In *chemistry*, the lines used in structural formulas to represent valency connections between the atoms a single line represents a valency of one, a double line a valency of two, etc. 2 In *genetics*, the association of genes located in the same chromosome.

Linnaeus, Carolus (von Linné) [Swedish *physician and naturalist*, 1707–78]. Known for his work in classifying minerals, plants, and animals. Classified diseases (1763) Said to have given the first description of aphasia (1745)

lin"o-le'ic ac'id (lin o lee'ick, li-no'lee-ick). $C_{17}H_{31}COOH$; an unsaturated acid, 9,12-octadecadienoic acid, containing two double bonds, occurring in the glycerides of linseed and other oils. Syn., *linolic acid*.

lin o'le in. The glyceride of linoleic acid found in all drying oils.

lin" o-le nic ac'id (lin o-lee nick, -len ick) $C_{17}H_{29}COOH$; an unsaturated acid, 9,12-15-octadecatrienoic acid, containing three double bonds, occurring in the glycerides of linseed and other oils essential for normal nutrition.

lin o'lic ac'id. See *linoleic acid*.

lin o-no-pho'bi [G *linon*, anything made of flax phobos, fear]. Morbid fear of string.

lin seed [AS. *linsæd*] (*linum*) The dried ripe seed of *Linum usitatissimum*. It contains 30–40% of fixed oil, together with wax, resin, tannin, gum, and protein. *Linseed* is demulcent and emollient; infusions of the whole seed have been used in respiratory infections, and the whole seed is sometimes employed as a laxative. Syn., *flaxseed*.
l. oil (*oleum lini*) The fixed oil obtained from linseed (oil that has been boiled or treated with drier must not be used medicinally); used mostly in liniments and cerates, occasionally given for its laxative effect. Dose, 30–60 cc. (1 2 fluidounces)

lint [ME. *lynt*]. A loosely woven or partly felted mass of broken linen fibers, made by scraping or picking linen cloth. It was once much used as dressing for wounds.

lin'tin [*lint*]. Absorbent cotton rolled or compressed into sheets used for dressing wounds.

Linzenmeier's blood sedimentation tube. See under tube.

li'o- See *leio-*.

lip [AS. *lippa*]. 1. One of the two fleshy folds surrounding the orifice of the mouth. 2. One of the labia majora or labia minora. See *labium*. 3. A projecting margin rim.
cleft l. Harelip.
glenoid l. See *labrum glenoidale*.
l. of the cervix of the uterus. One of two surrounding the external os.
rhombic l. The lateral ridge produced by the union of the tela chorioidea of the fourth ventricle with the alar plate of the rhombencephalon.
tympanic l. The upper margin of the internal spiral sulcus in the cochlea.
vestibular l. The lower margin of the internal spiral sulcus in the cochlea.

li'pa [G oil]. Fat.

lip a-ro trich'i-a (lip a-ro-trick'ee uh) [G *liparos*, oily; *thrix*, hair]. Abnormal oiliness of the hair

lip a-rous [*liparos*]. Fat; obese.

li·pase (lye'pace, lip'ace). A fat-splitting enzyme contained in the pancreatic juice, in blood plasma, and in many plants. See Table of Normal Values of Blood Constituents in the Appendix.
pancreatic l. A fat-splitting enzyme secreted by the pancreas. Syn., *steapsin*.

lip·a·su'ri·a, li''pa·su'ri·a [G. *lipos*, fat; *ouron*, urine]. The presence of lipase in the urine.

lip·ec'to·my [*lipo-*; G. *ektomē*, excision]. Excision of fatty tissue.

li·pe'mi·a, li·pae'mi·a (li-pee'mee-uh) [*lipo-*; G. *haima*, blood]. The presence of a fine emulsion of fatty substances in the blood; also called *lipidemia, lipoidemia*. —**lipe'mic,** *adj.*
alimentary l. Lipemia due to the ingestion of high-fat diet.

lip·fan'o·gen. Any lipid substance present in blood serum (e.g., long-chain soaps, monoglycerides) which can be taken up by animal cells in tissue culture and converted to visible fat granules; thought to play a role in atherogenesis.

lip'id (lip'id, lye'pid), **lip'ide** (lip'yde, -id, ly'pyde, -pid) [*lipos*]. Any one of a group of fats and fatlike substances having in common the property of insolubility in water and solubility in the fat solvents. Included are fats, fatty acids, fatty oils, waxes, sterols, and esters of fatty acids containing other groups such as phosphoric acid (phospholipids), carbohydrates (glycolipids), etc. Also called *lipin*. See Table of Normal Values of Blood Constituents in the Appendix.

lip''i·de'mi·a. See *lipemia*.

lip''i·do'sis. See *lipoidosis*.

li'pin (lye'pin, lip'in). See *lipid*.

Lipiodol. The trade-mark for an iodized poppy-seed oil containing 10% or 40% iodine used as a substitute for inorganic iodides, or as a contrast medium for roentgenologic work.

Lipmann, Fritz A. (1899–). American biochemist, born in Germany; Nobel prize winner with Hans A. Krebs in medicine and physiology (1953). He discovered, isolated, and identified coenzyme A, and developed the concept of the generation and utilization of phosphate-bond energy in biochemical reactions.

lip·o-, lip- [*lipos*]. 1. In *medicine and physiology*, combining form denoting *fat, fatty*. 2. In *chemistry*, combining form denoting *lipid*.

lipo-bismol. Trade-mark for an antisyphilitic preparation containing bismuth cetyl oxyacetate used in bismuth therapy in syphilis.

lip'o·blast [*lipos*; G. *blastos*, germ]. A formative fat cell, small or moderate in size, polyhedral, and having numerous tiny droplets of fat in its cytoplasm.

lip''o·blas·to'ma. See *liposarcoma*.

lip·o·blas·to'sis. Multiple lipomas in subcutaneous and visceral fat deposits; rare. Syn., *systemic multiple l.*

lip·o·ca'ic. A substance, probably a hormone, found in the pancreas which prevents deposition of lipids in the liver.

lip·o·cal''ci·no·gran·u·lo·ma·to'sis. Lipoidosis characterized by painless symmetric tumors in the bursae mucosae and musculature; microscopic examination reveals deposits of cholesterol and calcium, degeneration and necrosis of surrounding tissues, and replacement granulation tissue.

lip·o·cere. See *adipocere*.

lip·o·chon·dro·dys'tro·phy (lip''o-kon-dro-dis'tro-fee) [*lipos*; G. *chondros*, cartilage; *dys-*, bad; *trophē*, nourishment]. Gargoylism.

lip·o·chon·dro'ma (lip''o-kon-dro'muh) [*lipos*; *chondros*; G. *-ōma*, tumor]. Chondroma containing fat cells.

lip'o·chrome [*lipos*; G. *chrōma*, color]. Any one of a group of fatlike substances containing a pigment or coloring matter and occurring in natural fats, such as egg yolk. Also called *chromolipoid*.

lip'o·cyte [*lipos*; G. *kytos*, cell]. A fat cell.

lip·o·di·er'e·sis (lip-o-dye-err'i-sis). See *lipolysis*.

lip·o·dys'tro·phy [*lipos*; G. *dys-*, bad; *trophē*, nourishment]. A disturbance of fat metabolism in which the subcutaneous fat disappears over large areas of the body but is unaffected in others.
cephalothoracic l. See *progressive l.*
intestinal l. A rare disease of unknown cause, described by George H. Whipple (1907) occurring almost exclusively in males over 30 years old, in which the intestinal mucosa and later the intestinal lymphatics become filled with fat; clinically very similar to sprue, and often associated with polyarthritis.
progressive l. Progressive loss of fat from face, neck, arms, thorax, and abdomen; also called *cephalothoracic l.*

lip·o·fi·bro'ma (lip''o-figh-bro'muh). See *fibrolipoma*.

lip''o·fi''bro·myx·o'ma [*lipos*; L. *fibra*, fiber; G. *myxa*, mucus; *-ōma*, tumor]. A mesodermal mixed tumor containing fatty tissue, fibrous tissue, and mucoid or myxomatous tissue.

lip·o·fi''bro·sar·co'ma. A fibrosarcoma with lipomatous component.

lip''o·fus'cin [*lipos*; L. *fuscus*, dark]. Lipid-containing granules, possibly waste products, which stain black with silver in the presence of a reducing substance such as ascorbic acid; one of the wear-and-tear pigments.

lip·o·gen'e·sis [*lipos*; G. *genesis*, production]. The formation or deposit of fat. —**lipogenic,** *adj.*

li·pog'e·nous (li-podj'-nus) [*lipos*; G. *genesthai*, from *gignesthai*, to be produced]. Fat-producing.

lip·o·gran·u·lo'ma [*lipos*; L. *granulum*, small grain; G. *-ōma*, tumor]. A nodule of fatty tissue, consisting of a center of degenerated and necrotic fat enclosed by granulation tissue. Due usually to trauma; may possibly be caused by faulty fat metabolism.

lip''o·gran·u·lo·ma·to'sis [*lipos*; *granulum*; *-ōma*; G. *-ōsis*, condition]. A condition marked by the presence of one or more lipogranulomas.

lip''o·he''mar·thro'sis. The extravasation of blood and lipids into the synovial sac following trauma.

lip·o'ic ac'id. $\overline{CH_2CH_2CH}(CH_2)_4COOH$. α-Lipoic acid or 6,8-dithio-n-octanoic acid, occurring in yeast and liver which replaces a growth factor necessary for oxidative decarboxylation of pyruvic acid by resting cells of *Streptococcus faecalis* and certain other organisms. Syn., *6-thioctic acid, protogen A.*

lip'oid (lip'oyd, ly'poyd) [*lipos*; G. *eidos*, form]. 1. Resembling fat or oil. 2. Having the character of lipid; lipoidic.

lip'oid. Old term for *lipid*, particularly one of the intracellular lipids which contain nitrogen. The chemists have officially adopted the term *lipid*, but many histologists still use the old term *lipoid*.

lip·oi·de'mi·a. See *lipemia*.

lip·oi·do'sis [*lipoid*; G. *-ōsis*, condition]. A general term for various conditions in which lipoproteins or lipids are deposited in different organs, particularly in the spleen or liver. Syn., *lipoid histiocytosis*. See *xanthomatosis*, Niemann-Pick *disease*, Hand-Schüller-Christian *disease*.
cerebroside l. See Gaucher's *disease*.
epidermal l. A term used by Sutton to define the reaction to fats in the epidermis and its appendages, especially the hair follicle in acne.

l. corneae. Fatty deposits in the cornea.

l. cutis et mucosae. See lipid proteinosis.

lipoiodine. Trade-mark for ethyl diiodobrassidate, $C_{21}H_{39}I_2COOC_2H_5$ used where iodide therapy is indicated and as contrast medium in roentgen-ray examinations.

lipo-lutin. Trade-mark for an oil solution of progesterone.

li·pol'y·sis [*lipo-*; G. *lysis*, loosing]. The decomposition of fat. —**lipolyt'ic**, *adj.*

li·po'ma [*lipo-*; G. *-ōma*, tumor]. A tumor which in the gross is obviously fatty; microscopically composed of fat cells usually of mature form but occasionally in part or wholly of embryonal type. —**lipom'atous, lipomatoid**, *adj.*

embryonal-cell l. See *liposarcoma*.

fetal fat-cell l. See *liposarcoma*.

infiltrating l. See *liposarcoma*.

lipoblastic l. See *liposarcoma*.

primitive-cell l. See *liposarcoma*.

li·po·ma·to'sis [*lipo-*; *-ōma*, G. *-ōsis*, condition]. Multiple lipomas. A general deposition of fat; obesity.

embryonal l. See *liposarcoma*.

lip·o·mer'i·a (lip·o·meer'ee·uh, lye·po-). See *leipomeria*.

lip·o·me·tab'o·lism [*lipo-*; G. *metabolē*, change]. The absorption and metabolism of fat.

li·pom·pha'lus [*lipo-*; G. *omphalos*, navel]. A fatty umbilical hernia.

lip·o·my·o·hem·an'gi·o'ma. A mesenchymoma.

lip·o·my·o'ma (lip·o·migh·o'muh) [*lipo-*; G. *mys*, muscle; *-ōma*, tumor]. A mesenchymoma.

lip"o·my·o·sar·co'ma. A malignant mesenchymoma.

lip"o·myx·o'ma [*lipo-*; G. *myxa*, mucus; *-ōma*]. See *liposarcoma*.

lip"o·myx"o·sar·co'ma. See *liposarcoma*.

Lip·o·nys'sus [*lipo-*; G. *nyssein*, to prick]. A genus of small parasitic mites.

L. bacoti. The common rat mite; this species will attack man, producing an uncomfortable dermatitis, and is thought to be a vector of endemic typhus.

lip"o·pe'ni·a [*lipo-*; G. *penia*, want]. Abnormal diminution of fat in tissues.

lip·o·pep'tide. Aminolipid. A poorly defined group of fatlike substances containing amino acids.

lip"o·pha'gi·a [*lipo-*; G. *phagein*, to eat]. Absorbing or destroying fat, as lipophagic granuloma, in which there is subcutaneous fat necrosis with indurated areas of various sizes. —**lipopha'gic**, *adj.*

lip·o·phil [*lipo-*; G. *philein*, to love]. Having affinity for fatty tissue; lipotropic.

lip·o·phil'i·a. Affinity for fat.

lip·o·phre'ni·a (lip·o·free'nee·uh, lye·po-) [G. *leipein*, to be wanting; *phrēn*, mind]. Failure of mental capacity.

lip·o·pro'te·in [G. *lipos*, fat; *prōteios*, of first rank]. One of a group of conjugated proteins consisting of a simple protein combined with a lipid. See protein. See American Classification of Proteins in the Appendix.

lip·o·rho'din [*lipo-*; G. *rhodon*, rose]. A red-colored lipochrome.

lip"o·sar·co'ma [*lipo-*; G. *sarkōma*, fleshy excrescence]. A sarcoma arising in adipose tissue, usually of the thigh, groin, and buttock, and rarely in bone. Its microscopic structure varies from fully developed fat cells to completely anaplastic cellular sarcoma, and often includes areas resembling myxosarcoma or immature mesenchymal tissue. Immature and giant lipoblasts showing all stages of vacuolization are common. Also called *lipoblastoma, embryonal-cell lipoma, fetal fat-cell lipoma, infiltrating lipoma, lipoblastic lipoma, primitive-cell lipoma, embryonal lipomatosis, lipomyxoma, lipomyxosarcoma, myxolipoma, myxoliposarcoma, myxoma lipomatodes, primitive fat-cell tumor.*

li·po'sis [*lipo-*; G. *-ōsis*, condition]. Lipomatosis.

li·po·si·tol. A name proposed by Folch and Woolley for inositol phospholipids.

lip·o·sol'u·ble [*lipo-*; L. *solutus*, from *solvere*, to loosen]. Soluble in fats.

li·pos'to·my (li·pos'to·mee, lye-) [G. *leipein*, to be wanting; *stoma*, mouth]. The congenital absence of a mouth.

lip·o·thi·am'ide py"ro·phos'phate. A factor representing α-lipoic acid joined to thiamine pyrophosphate by an amide bond, which, when added to enzyme preparations from *Escherichia coli*, effects oxidative decarboxylation of pyruvic acid to acetyl or succinyl coenzyme A.

lip"o·tro'pic (lip·o·tro'pick, -trop'ick) [G. *lipos*, fat; *trepein*, to turn]. 1. Having an affinity for lipids, particularly fats and oils. 2. Having preventive or curative effect on the development of fatty livers.

lip·o·vac'cine (lip·o·vack'seen, -sin) [*lipo-*; L. *vaccinus*, from *vacca*, cow]. A vaccine with a fatty or oily menstruum.

lip·o·vi·tel'lin. A lipoprotein occurring in egg yolk, a conjugated protein containing approximately 18 per cent of phospholipid.

lip·o·xan'thin (lip·o·zan'thin) [*lipo-*; G. *xanthos*, yellow]. A yellow lipochrome.

li·pox'e·nous (li·pock'si·nus, lye-) [G. *leipein*, to leave; *xenos*, host]. Term applied to a parasite which leaves its host after completing its development. —**lipoxeny**, *n.*

li·pox'i·dase. An enzyme catalyzing oxidation of long-chain unsaturated fatty acids to short-chain fatty acids.

lip·pa. Lippitudo.

lip·ping (AS. *lippa*). The perichondral growth of osteophytes which projects beyond the margin of the joint in degenerative joint disease.

lip·pi·tu'do, lip·pi·tude [L. *lippitudo*, bleariness, inflammation of the eyes]. A condition of the eyes marked by ulcerative marginal blepharitis; state of being blear-eyed.

lip read'ing. The ability to understand what a person is saying by observing the movements of his lips and other facial muscles, without hearing him speak; important in instruction of the deaf.

Lipschütz, Benjamin [*Austrian dermatologist*, 1878–1931]. Described acute vulvar ulcer, nonvenereal in origin, possibly caused by *Bacillus crassus*; called *Lipschütz ulcer disease*. The centrocyte is also known as the *Lipschütz cell*.

li·pu'ri·a [G. *lipos*, fat; *ouron*, urine]. The presence of fat in the urine.

liquaemin. Trade-mark for a sterile solution of the sodium salt of heparin.

liq·ue·fac'tion (lick·wi·fack'shun) [L. *liquefacere*, to make liquid]. The change to a liquid form, usually of a solid tissue to a fluid or semifluid state due principally to ordinance of blood supply or to bacterial or chemical corrosive action. Used in chemistry to indicate condensation of gases to liquid.

l. necrosis. See liquefactive necrosis.

liq'uid [L. *liquidus*, fluid]. A fluid or substance that flows readily. A state of matter intermediate between a solid and a gas, shapeless and fluid, taking the shape of the container and seeking the lowest level.

liq'uo·gel. A gel which, when melted, yields a sol of low viscosity.

li'quor [L., liquid]. 1. Any of certain medicinal solutions, usually including aqueous solutions of non-

volatile substances, except those solutions which belong to the class of syrups, infusions, or decoctions. 2. An English designation for any liquid, as dye liquor mother liquor etc. 3. An alcoholic drink.

l. amnii. The liquid contained in the amniotic sac.

l. amnii spurii s. The oxidation products formed by the mesonephros contained as fluid in the sac of the allantois. Syn., *allantoic fluid*.

l. folliculi Follicular fluid.

l. sanguinis. Old term for the blood plasma.

l. seminis. Old term for semen.

liq·uo·rice. See *licorice*.

Lisfranc de Saint Martin Jacques [*French surgeon*, 1790–1847]. Described the scalene tubercle on the upper surface of the first rib for the insertion of the scalenus anterior muscle called *Lisfranc' tubercle*. Partial amputation of the foot by disarticulation of the metatarsal bones from the tarsus is known as *Lisfranc' amputation*.

lisp [AS. *wlisp*ian]. Speak indistinctly· pronounce imperfectly the sibilant letters and *z*, as by giving them the sound of *th*, and by giving the letter *l* the sound of *w*. See *sigmatism*.

Lissauer Heinrich [*German neurologist*, 1861–91]. Described type of dementia paralytica in which focal symptoms are predominant. The disease is characterized by convulsions, aphasia, monoplegia, etc. Called *Lissauer paralysis*. The dorsolateral tract is also called *Lissauer' tract*.

lis"sen·ce·pha'li·a [G *lissos*, smooth; *enkephalos*, brain]. Agenesis of the cerebral gyri, resulting in smooth brain.

lis sen·ceph lous [*lissos*; *enkephalos*]. Having brain with few or no convolutions.

lissephen. Trade-marked name for mephenesin.

Lister Joseph [*English surgeon*, 1827 1912]. Considered the founder of antiseptic surgery; established the use of antiseptics in the operating room.

Lister Joseph Jackson [*English optician and wine merchant*, 1786–1869]. Made important improvements in microscope lenses. Discovered th law of aplanatic foci.

Lis"ter·el'la. Synonym for *Listeria*.

Lis te'ri [after Joseph *Lister*] A genus of bacteria of the family Corynebacteriaceae. Its members are small, non-spore-forming, Gram-positive rods, motile by means of single terminal flagell m.

L. monocytogenes. One cause of sporadic cases of purulent meningitis in man and the probable cause of an infectious mononucleosis-like syndrome

listerine. A proprietary antiseptic preparation containing, as active ingredients, thymol, eucalyptol, methyl salicylate, menthol, benzoic and boric acids.

Lis'ter ism [*Lister*]. A general name for the antiseptic and aseptic treatment of wounds according to the principles of Joseph Lister

Listi g, J hann Benedict [*Germ physicist and physiologist*, 1808–82]. Devised method of simplifying optical problems In *Listing' reduced schematic eye* the two nodal points are represented by one point and the two principal points by one point *Listing law* states that when the eyeball moves from the position of rest, its angle of rotation is the same as if it rotated on an axis perpendicular to both the line of vision in its new position and the line of vision in its former position.

Liston, Robert [*Scottish surgeon England*, 1794–1847]. Credited with introducing ether anesthesia in Europe (1846) Devised long-bladed knives, called *Liston knives*, for use in amputations, and bone-cutting forceps, called *Liston forceps*. Devised straight splint for the side of the leg, or the body called *Liston spl nt*.

li'ter (lee'tur) [G *litra*, pound]. The metric unit of volume. One liter is the volume occupied by 1 kg. of pure water at 4 C. and 760 mm. pressure. It is equal to 1.056 United States quarts. Abbreviated, l. L.

lith a gogue (lith ah-gog) [G *lithos*, stone; *agōgos*, leading]. Any agent which is supposed to expel calculi from the urinary bladder

lith'arge (lith ardj, li thardj") Lead monoxide.

lith ec'to my [*lithos*; G *ektomē*, excision]. Old term for lithotomy

li the mi a, li thee'mi·a (li-theem ee-uh) [*lithos*; G *haima*, blood]. A condition in which, owing to defective metabolism of th nitrogenous elements, the blood becomes charged with uric acid.

lith'i a. Li_2O Lithium oxide. **Lithia tablets** contain lithium citrate. **Lithia water** is mineral water containing lithium salts in solution.

li thi'a·sis [*lithos*; NL. *-iasis*, condition]. The formation of calculi in the body —**lithiasic,** *adj*

lith'i [*lithos*]. 1. Pertaining to calculi. 2. Pertaining to lithium.

lith'ic ac'id. Uric acid.

lith"i co sis [G *lithikos*, of stone; *-ōsis*, condition]. Silicosis occurring in stone cutters.

lith'i·um [G *lithos*, stone]. Li = 6.940. A soft, silver-white metal belonging to the alkali group. It is the lightest solid element, having specific gravity of 0.534. Salts of lithium have been used like salts of other alkali metals th belief that the former have special value in gouty conditions is unfounded. Under certain conditions lithium salts are toxic.

l. benzoat (*lithii benzoas*) C_6H_5COOLi. One Gm. dissolves in 3 cc. of water It has been used for the therapeutic effect of benzoates.

l. bromide (*lithii bromidum*) LiBr One Gm. dissolves in 0.6 cc. of water; used for its bromide effect. Dose, 0.65–1.3 Gm. (10–20 gr.)

l. carbonate (*lithii carbonas*) Li_2CO_3. One Gm. dissolves in 78 cc. of water; its effect is probably similar to that of other carbonates.

l. citrate (*lithii citras*) $C_3H_4OH.(COOLi)_3$ One Gm. dissolves in 1.4 cc. of water An ingredient of lithia tablets.

l. iodide. $LiI.3H_2O$ Used like potassium iodide.

l. salicylate (*lithii salicylas*) $C_6H_4OH.COOLi$. Very solubl in water It has been used for the effect of salicylate ion

lith'o-, lith- [*lithos*]. A combining form meaning *stone, calculus*

lith' ·chol'ic ac'id (lith kol'ick) $C_{24}H_{40}O_3$. $3(\alpha)$-hydroxycholanic acid, found in human and animal bile, also in gallstones from certain animals.

lith -di al'y·sis (lith o-dye-al'i-sis) [*lithos*; G. *dialysis*, dissolution]. 1 The solution of calculi in the urinary bladder 2. The breaking of vesical calculus previous to its removal.

lith"o·fel'lic ac'id. $C_{20}H_{36}O_4$ An acid occurring in the intestinal concretions of ruminants.

lith gen is, li th g' ny (li-thodj'i nee) [*lithos*; G *genesis*, production]. The formation of calculi or stones. —**lithogenet'ic, lithog'enous** (li thodj nus) *adj*.

lith oid, li thoi'dal [*lithos*; G. *eidos*, form]. Resembling stone.

lith"o·kel"y·pho·pe di on [*lithos*; G *kelyphos*, sheath *paidion*, child]. A calcified fetus (lithopedion) enclosed in calcified fetal membranes.

lith o-kel'y·phos. See *lithopedion*.

lith'o·labe [*lithos*; G. *labein*, from *lambanein*, t take] An instrument for grasping and holding vesical calculus during an operation for its removal. Obs.

li thol' pax"y (li-thol'ah-pack see, lith lah-)

[*lithos*; G. *lapaxis*, evacuation]. The operation of crushing a urinary calculus in the bladder by means of the lithotrite, and then removing the fragments by irrigation. A procedure now performed by a transurethral approach; also called *lithotrity*.

lith·o·ne·phri'tis [*lithos*; G. *nephros*, kidney; -*itis*, inflammation]. Inflammation of the kidney associated with the presence of renal calculi.

lith"o·ne·phrot'o·my [*lithos*; *nephros*; G. *tomē*, a cutting]. Lithotomy performed by means of an incision into the kidney parenchyma or the renal pelvis, renal lithotomy. *Rare.*

lith·o·pe'di·on [*lithos*; G. *paidion*, child]. A retained fetus that has become calcified.

lith'o·phone [*lithos*; G. *phōnē*, sound]. An instrument for detecting by sound the presence of calculi in the urinary bladder. *Obs.*

lith'o·scope [*lithos*; G. *skopein*, to examine]. An instrument for the visual detection and examination of vesical calculi; a cystoscope.

li·tho'sis [*lithos*; G. -*ōsis*, condition]. Pneumonoconiosis. *Obs.*

li·thot'o·mist [*lithos*; G. *tomos*, cutting]. 1. A surgeon who performs lithotomy. 2. A term applied in former times to an individual who cut for stone in the urinary bladder.

li·thot'o·my [*lithos*; G. *tomē*, a cutting]. The removal of a calculus, usually vesical, through an operative incision.

perineal l. A type in which the incision is made through the membranous urethra in the middle of the perineum. The calculus is then removed by means of a lithotrite or suitable forceps.

suprapubic l. A type in which the incision into the urinary bladder is made through the abdominal wall just above the symphysis, the stone being removed by forceps.

vaginal l. One in which the incision is made through the anterior vaginal wall.

lith·o·trip'sy, li·thot'rip·sy [*lithos*; G. *tripsis*, rubbing]. The operation of crushing calculi in the urinary bladder.

lith"o·trip'to·scope. See cystoscopic *lithotrite*.

lith'o·trite [*lithos*; L. *tritus*, from *terere*, to rub]. An instrument for crushing a vesical calculus. —**lith·o·trit'ic**, *adj.*

cystoscopic l. A lithotrite which operates under visual control by means of a cystoscopic attachment.

li·thot'ri·ty. See *litholapaxy*.

lith'ous [*lithos*]. Having the nature of a calculus. *Obs.*

li·thox"y·du'ri·a [*lithos*; G. *oxys*, sharp; *ouron*, urine]. Presence of xanthic oxide in the urine.

lith·u·re'sis [*lithos*; G. *ourēsis*, a making water]. Voiding of small calculi with the urine.

li·thu'ri·a [*lithos*; G. *ouron*, urine]. A condition marked by excess of lithic acid or its salts in the urine.

lit"mo·ci'din. An antibiotic substance elaborated by *Proactinomyces cyaneus* var. *antibioticus*, active in vitro against a variety of bacteria.

lit'mus [ON. *litmosi*, lichen used for dyeing]. A blue pigment obtained from *Roccella tinctoria*, a lichen. Employed for determining the presence of acids and alkalies.

blue l. paper. Unsized paper steeped in a solution of litmus; turns red on contact with acid solutions.

red l. paper. Unsized paper steeped in a solution of litmus colored red with acid; turns blue on contact with alkaline solutions.

li'tre (lee'tur). See *liter*.

Litten's sign. See diaphragmatic *sign*.

lit'ter [OF. *litiere*, from L. *lectus*, bed]. A stretcher or bed for carrying the sick or injured. It consists of parallel bars of wood or metal, the ends serving as handles, over which is stretched canvas for supporting the body. It may be made in the form of an open metal basket for greater safety especially for transfer of persons from shore to ship or vice versa.

lit'ter re'lay point. In military medicine, the point where a new litter team takes over further movement of a casualty and the first team returns for another casualty. The object is to provide short litter hauls for the bearers.

Little, William John [*English surgeon*, 1810–94]. Pioneer orthopedist. Described cerebral spastic paralysis of infants; called *Little's disease*.

Little's tube. See under *tube*.

Littré, Alexis [*French surgeon and anatomist*, 1658–1726]. Described the small mucous glands of the male urethra (1700); called *Littré's glands*. Described a hernia of Meckel's diverticulum; called *Littré's hernia*. In *Littré's operation* of inguinal colostomy a sigmoid loop is brought out on the left side through a small incision parallel to the inguinal ligament. See *spaces of Littré* under *space*.

lit·tri'tis. See *urethritis*.

Litzmann, Carl Conrad Theodor [*German gynecologist and obstetrician*, 1815–90]. Described the coxalgic, scoliotic, and kyphoscoliotic types of the female pelvis. Classified *female pelves*. See also posterior *asynclitism*.

live blood. Twitching of the eyelids.

li·ve'do re·tic"u·lar'is (li·vee'do reh·tick"yoo·lair'iss). See *cutis marmorata*.

liv'er [AS. *lifer*]. The largest gland or organ in the body, weighing approximately 1750 Gm. in the adult. It lies in the right upper part of the abdomen immediately under the diaphragm and is attached to it by the falciform and other ligaments. There are two principal lobes, the larger right and the smaller left; in addition there are smaller divisions of the right lobe, the quadrate lobe and caudate lobe. The inferior surface has a depression, the cystic fossa, in which lies the gallbladder. The organ is covered by a capsule, from which extensions penetrate throughout the organ, dividing it into lobules. These extensions, which only incompletely surround the lobules, contain divisions of bile duct, hepatic artery and portal vein, the portal triad, the whole being called the portal canal. The lobules are composed of polyhedral cells arranged in cords which radiate from the central vein toward the portal canal. Between the cords are the sinusoids, lined by endothelium and special reticuloendothelial cells, the Kupffer cells. Coursing in the cords and surrounded by hepatic cells are the biliary intralobular canals, which originate in bile canaliculi between the hepatic cells and drain into the bile ducts in the portal canal. Functions of the liver are multiple, including secretion of bile, protein breakdown, storage of glycogen and fat, maintenance of composition of blood, and detoxification. See Plates 8, 10, 13, 14.

amyloid l. Amyloidosis of the liver.

beavertail l. A liver with a large flat left lobe, suggesting resemblance to the tail of a beaver.

cardiac l. One in which there is severe passive hyperemia with enlargement, often tenderness, and sometimes pulsation.

cirrhotic l. One which is the seat of cirrhosis.

corset l. One in which a vertical or oblique groove, with fibrosis, appears on the anterior surface at about the line of the costal margin, due to compression from tight stays (now rare).

fatty l. One which is the seat of fatty change, as fat infiltration, fatty degeneration, or both.

foamy l. One containing many gas-filled spaces which give the organ a spongy appearance and

consistency; due to growth of gas-producing anaerobic bacteria, especially *Clostridium perfringens*.

gin-drinker's l. See Laennec cirrhosis.

hobnail l. See Laennec cirrhosis.

icing l. Chronic perihepatitis resulting in the formation of hyalinized, thickened capsule resembling the icing on cake hyalocapsulitis.

infantile l. Biliary cirrhosis.

lardaceous l. See amyloid l.

l. breath. A sweetness in the breath which often occurs in patients with Laennec cirrhosis.

l. extract (*extractum hepatis*) A dry brownish, somewhat hygroscopic powder containing that soluble thermostable fraction of mammalian livers which increases the number of red blood cells in the blood of persons affected with pernicious anemia. The approximate antianemia potency in pernicious anemia is expressed in U.S.P units (oral)

l. fluke. A trematode which lodges in the intrahepatic biliary passages, most frequently *Clonorchis sinensis*, rarely *Fasciola hepatica*.

l. injection (*injectio hepatis*) A sterile solution in water for injection of that soluble thermostable fraction of mammalian livers which increases the number of red blood cells in the blood of persons affected with pernicious anemia. The potency is expressed in terms of the equivalent of cyanocobalamin.

l. solution (*liquor hepatis*) A brownish liquid containing that soluble thermostable fraction of mammalian livers which increases the number of red blood cells in the blood of persons affected with pernicious anemia. The approximate antianemia potency in pernicious anemia is expressed in U.S.P units (oral)

l. spot. Chloasma.

nutmeg l. A liver the cross section of which shows a fine mottling of yellow and brown or dark red, somewhat suggestive of the cross section of nutmeg. In marked passive hyperemia the enlarged red central zones of adjacent lobules fuse to form network in the meshes of which are the peripheral zones, yellow because of fatty degeneration.

packet l. See syphilitic l., syphilitic *cirrhosis* (b)

syphilitic l. Rarely fine bands of connective tissue interlace to divide off small segments of hepatic tissue about centimeter or two in transverse dimension, the so-called packet liver See *hepar lobatum*.

waxy l. See amyloid l.

liv'er wort" (liv'er-wurt") See *Hepatica*.

liv'e-tin. A protein occurring in the yolk of egg.

liv'id [L. *lividus*, of leaden, bluish color]. Of pale lead color; black and blue; discolored, as flesh from contusion or from hyperemia. —livid'ity n.

li vid'i ty [*lividus*]. The state of having black and blue discoloration.

cadaveric l. The reddish or bluish discoloration in the dependent parts of corpse, due to the gravitation of laked blood. Syn *livor mortis*.

Livierato's sign. See abdominocardiac *sign*, orthocardiac *sign*.

li'vor [L., leaden color] 1 Lividity 2. Livid spots on cadaver

l. mortis. See cadaveric *lividity*

li xiv'i a'tion. The extraction and separation of soluble substance from mixture with insoluble matter; as leaching of salts from ashes.

Lizars, John [Scottish surgeon, ca. 1787 1860]. Devised an operation for excision of the upper jaw the incision running from the corner of the mouth to the zygoma; called *Lizars operation*.

Ljubinsky's stain. See under *stain*.

Lloyd test. See Sawyer and Lloyd serum protection *test*.

L. M A. Left mentoanterior position of the fetus.

L. M P Left mentoposterior position of the fetus; last menstrual period.

L. O. A. Left occipitoanterior position of the fetus.

Lo a [Kongo dial. *lowa*]. A genus of filarial worms.

L. loa. Species which invades the subcutaneous tissues of man; the eye worm.

lo i'a sis. A filariasis of tropical Africa, caused by th filaria *Loa*, and characterized by diurnal periodicity of microfilariae in the blood and transient cutaneous swelling.

lobe [G *lobos*, lobe] A more or less rounded part or projection of an organ, separated from neighboring parts by fissures and constrictions. —lo'bar lo'bate, *adj*.

accessory l. A small, separate part of the parotid gland, usually found immediately above the duct Syn., *socia parotidis*.

anterior cerebellar l. A median unpaired structure including all that part of the cerebellum which lies on the rostral side of the primary fissure.

anterior l. of hypophysis. (a) The anterior part of the adenohypophysis (b) In the lobar classifications of the pituitary gland, the anterior part separated from the posterior lobe by thin cleft and the pars intermedia. Syn., *pars anterior pars distalis*.

azygos l. A variable, partially separate portion of the upper medial part of the superior lobe of the right lung. When present, it is isolated from the main part of the lobe by deep groove occupied by the azygos vein.

caudate l. The tailed lobe of the liver that separates the right extremity of the transverse fissure from the commencement of the fissure for the inferior vena cava. See Plate 13.

developmental l. One of the portions of tooth germ which initiate enamel and dentin formation.

flocculonodular l. That part of the cerebellum consisting of the nodule of the vermis and the paired lateral flocculi.

frontal l. That part of the cerebral hemisphere in front of the central sulcus and above the lateral cerebral fissure. See Plates 16, 17

Home' l. The subtrigonal gland.

intermediate l. of hypophysis. (a) The intermediate part of the adenohypophysis. (b) In the lobar classifications of the pituitary gland, the part separated by thin cleft from the anterior lobe and in front of the posterior lobe sometimes erroneously classified with the posterior lobe

limbic l. Gyrus fornicatus.

occipital l. One of the lobes of the cerebrum, a triangular area t the occipital extremity

olfactory l. See *rhinencephalon*.

optic lobes. Superior colliculi of lower vertebrates. Also called *corpora bigemina*.

orbital l. That part of the frontal lobe which rests on the orbital plate of the frontal bone.

parietal l. The cerebral lobe above the lateral cerebral fissure and behind the central sulcus.

posterior cerebellar l. That part of the cerebellum which lies on the posterior side of the primary fissure.

posterior l. of hypophysis. (a) The pars nervosa of the neurohypophysis. (b) In the lobar classification of the pituitary gland, the posterior part separated from the anterior lobe by a thin cleft and the pars intermedia sometimes erroneously used to include the intermediate lobe (pars intermedia)

pulmonary l. One of the five lobes of the lung

pyramidal l. An inconstant portion of the thyroid gland extending upward from the isthmus

arises from the persisting caudal end of the thyroglossal duct. See Plate 45.
pyriform l. See pyriform area.
quadrate l. An oblong lobe on the inferior surface of the liver. See Plate 13.
renal l. One of the subdivisions of the kidney corresponding to a renal pyramid with its associated cortex; externally visible in the fetus and infant, or throughout life in some mammals.
semilunar l. A lobe on the upper surface of the cerebellum.
Spigelian l. See caudate *l.*
temporal l. That part of the cerebral hemisphere below the lateral cerebral fissure, continuous posteriorly with the occipital lobe. See Plates 18, 18.
lo·bec′to·my [*lobe*; G. *ektomē*, excision]. Excision of a lobe of an organ or gland; specifically the excision of a lobe of the lung.
lo″be·lan′i·dine. $C_{22}H_{29}NO_2$, an alkaloid from lobelia.
lo″be·lan′ine. $C_{22}H_{25}NO_2$, an alkaloid from lobelia.
lo·be′li·a [after Matthias de *Lobel*, Flemish botanist, 1538–1616]. The leaves and tops of *Lobelia inflata*; contains several alkaloids including lobeline. Lobelia is a respiratory stimulant, but unreliable. Produces slowing of heart, vomiting, and even convulsion when given in large doses. Formerly employed as an expectorant, especially in the form of the fluidextract or tincture.
lobelin. Trade-mark for an injectable solution of the hydrochloride of alpha-lobeline used as a respiratory stimulant.
lo′be·line (lo′bi·leen, ·lin, lob′i, lo·bee′) 1. A mixture of alkaloids obtained from lobelia; these have been separated into alpha-, beta-, and gamma-forms. 2. Alpha-lobeline $C_{22}H_{27}NO_2$, an alkaloid from lobelia having emetic, respiratory, and vasomotor actions similar to those of nicotine. The drug is potent, uncertain, and dangerous.
l. sulfate. The sulfate of lobeline 1, or 2.
lo′bi. Plural of lobus.
lo′bo·cyte. See segmented cell.
lo″bo·po′di·um [*lobe*; G. *pous*, foot]. A broad and thick pseudopodium.
lo·bot′o·my [*lobe*; G. *tomē*, a cutting]. Section of brain tissue. Also called *leukotomy*.
frontal l. Prefrontal *l.*
prefrontal l. Operative section of the white matter of the frontal lobes of the brain, as used in the treatment of certain mental disorders and intractable pain.
transorbital l. A lobotomy performed through the roof of the orbit.
Lobstein, Johann Georg Christian Friedrich Martin [Alsatian pathologist, 1777–1835]. Described osteogenesis imperfecta, called *Lobstein's disease*. Described ossification of the arteries. Introduced the term arteriosclerosis.
lob′ster-claw″. See *bidactyly*.
lob′ule [dim. from G. *lobos*, lobe]. A small lobe or subdivision of a lobe.—**lobular**, **lobulated**, *adj.*
anatomic l. of the liver. A polygonal prism with the central vein running through the center of its long axis, with branches of the portal vein, the interlobular bile ducts, branches of the hepatic artery and lymph vessels running in the periphery.
ansiform l. A lobule of the posterior lobe of the cerebellum, extending from the superior surface of the hemisphere around the posterior border to the inferior surface; the inferior and superior semilunar lobules and the biventral lobule collectively.
biventral l. The anterior inferior part of the ansiform lobule of the cerebellum.
central l. A lobule of the superior vermis of the cerebellum.
cuneate l. See cuneus.
flocculus l. One of the paired, small, irregular lobules on the inferior surface of the cerebellar hemisphere forming part of the flocculonodular lobe.
l. of the epididymis. One of the series of cones forming the head of the epididymis, composed of the coiled efferent ductules. Also called *vascular cone*.
l. of the testis. One of the conoid compartments of the testis, the cavity of which contains the terminal portions of one to three seminiferous tubules.
paracentral l. The quadrilateral convolution on the medial surface of the cerebral hemisphere surrounding the upper end of the central sulcus.
paramedian l. A rounded lobule on the inferior surface of the cerebellum, medial to the ansiform lobule.
parietal lobules. Subdivisions of the parietal lobe of the cerebrum. The **inferior parietal lobule** is that containing the supramarginal gyrus and the angular gyrus; the **superior parietal lobule**, that separated from the inferior by the interparietal sulcus.
physiologic l. of the liver. That portion of the liver tissue which surrounds and is drained by an interlobular bile duct.
pulmonary l. A respiratory bronchiole and its branches, the alveolar ducts and alveolar sacs, all with pulmonary alveoli in their walls, constituting a physiologic unit of the lung.
quadrangular l. The greater portion of the superior surface of the cerebellar hemispheres.
quadrate l. See precuneus.
semilunar lobules. Portions of the ansiform lobule. The **inferior semilunar lobule** is that on the inferior surface of the cerebellum; the **superior semilunar lobule**, that on the superior surface.
lob′u·lus (pl. *lobuli*) [L.]. Lobule.
l. medius medianus. A small lobule of the middle lobe of the cerebellum comprising the folium and tuber of the vermis.
l. simplex. The most rostral part of the posterior lobe of the cerebellum, forming a broad crescentic band across the superior surface.
lo′bus (pl. *lobi*) [L., from G. *lobos*, lobe]. A lobe.
lo′cal [L. *localis*, from *locus*, place]. Limited to a part or place; not general.
lo″cal·i·za′tion [*local*]. 1. The determination of the site of a lesion. 2. The limitation of a process to a circumscribed area.
cerebral l. (a) Determination of the position of the centers in the brain that preside over certain physiologic acts. (b) Determination of the seat of pathologic conditions interfering with the normal function of these centers.
experimental l. Localization of brain centers through experiments on animals.
lo′cal·ized [*local*]. Confined to a particular situation or place.
lo′cal·iz″er [*local*]. An instrument used in radiographic examination of the eye for localizing opaque foreign bodies.
lo′chi·a (lo′kee·uh, lock′ee·uh) [G., discharge after childbirth]. The discharge from the uterus and vagina during the first few weeks after labor.—**lochial**, *adj.*
l. alba. The whitish or yellowish white flow that takes place after the seventh day after labor.
l. cruenta. The sanguineous flow of the first few days after labor. Also called *lochia rubra*.
l. serosa. The serous discharge taking place about the fifth day after labor.
lo″chi·o·col′pos (lo″kee·o·kol′pos, lock″ee·o·) [lo-

chia, G. kolpos, vaginal. Distention of the vagina by retained lochia.

lo·chi·o·cyte [lochia; G. kytos, cell]. A decidual cell found in the lochia.

lo·chi·o·me·tra [lochia; G. mētra, uterus]. A collection of lochia in the uterus.

lo·chi·o·me·tri'tis [lochia; mētra; G. -itis, inflammation]. Puerperal metritis.

lo·chi·or·rha·gi·a [lochia; G. rhēgnynai, to burst forth]. Lochiorrhea.

lo"chi·o·rh·a, lo·chi·or·rhoe·a (lo"kee·o·ree·h, lock·ee·o·) [lochia; G. rhoia, flow]. An abnormal flow of the lochia.

lo·chi·o·schesis (lo"kee·os'ki·sis, lock·ee·) [lochia; G. schesis, checking]. Suppression or retention of the lochia.

lo" hi·o·me·tri'tis (lo"ko·mi·try·tis, lock"o·) [G. lochos, childbirth; mētra, uterus; -itis, inflammation]. Puerperal metritis.

lo·cho·per"i·to·ni'tis [lochos; G. peritonaion, membrane which contains the lower viscera; -itis]. Inflammation of the peritoneum following childbirth.

lo·ci (lo sigh). Plural of locus.

Locke–Ringer's solution. See under solution.

lock'jaw". See tetanus.

Lockwood, Charles Barrett (1856–1914). English surgeon who described thickening of the orbital fascia extending below the eyeball from the cheek ligaments, called suspensory ligament of Lockwood. See also Lockwood's sign of chronic appendicitis.

lo·co dis·ease. A poisoning produced in livestock by eating plants which take up selenium from the soil; the symptoms of the disease are loss of flesh, disordered vision, delirium, convulsive movements, and stupor, often terminating fatally.

lo·co·mo·tion [L. locus, place; motio, from movere, to move]. The act or power of moving from place to place. —locomotive, locomotor, adj.

lo·co weed. Those species of Astragalus which contain selenium.

loc·u·la'tion [L. loculus, little place]. The formation of loculi in tissue.

loc·u·lus (pl. loculi) [L.]. A small space or compartment. —loc·ulated, adj.

lo·cum te·nens (lo'kum ten·enz) [L.]. A physician who temporarily acts as substitute for another physician.

lo'cus (pl. loci) [L.]. 1. A place, spot, or organ. 2. In genetics, the point on a chromosome occupied by a gene.

l. caeruleus. A bluish-tinted eminence on the floor of the fourth ventricle of the brain, subjacent to which is an aggregation of pigmented cells. It receives fibers from the intertrigeminal nucleus and most of its axons form the fasciculus of Probst. Also called nucleus pigmentosus pontis.

l. minoris resistentiae. A spot of diminished resistance.

l. perforatus. A name formerly given to the anterior and the posterior perforated substance at the base of the brain through which the blood vessels pass.

Loeb, Jacques [American biologist, 1859–1924]. Advanced the theory of tropisms (1890) and the mechanistic theory of life. Made important studies of parthenogenesis; raised fatherless frogs to maturity.

Loeb, Leo (1869–). American pathologist, first to culture cell artificially (1898). He analyzed factors governing successful transplantation and growth of normal tissues in vitro; made important studies of the transplantation of tumors; showed that the incidence of mammary cancer in mice could be reduced in a quantitative way by oophorectomy in accordance with the time of life at which oophorectomy was performed, and described the formation of decidual tissue (deciduomata) in the uterus as a result of mechanical stimulation, called Loeb's decidual reaction.

Loeffler, Charles Wilhelm (1887–). Swiss physician who first described a syndrome of transient eosinophilic infiltration of the lungs and eosinophilia, called Loeffler's syndrome.

Loeffler, Friedrich August Johannes [German bacteriologist, 1852–1915]. Discovered the glanders bacillus. Gave the first full description of the diphtheria bacillus (1884), called Klebs-Loeffler bacillus. With Frosch, was first to discover a filtrable virus to be the cause of a disease of animals (foot and mouth disease, 1897). See also Loeffler's stain for flagella, Loeffler's alkaline methylene blue under stain.

Loef"fler·el'la mal'le·i (lef"lur·el'uh). Malleomyces mallei, the causative agent of glanders.

Loewenberg, Benjamin Benno [German surgeon, b. 1836]. Devised special forceps for removing adenoid growths from the posterior nasopharynx, called Loewenberg's forceps.

Loewenthal, Wilhelm [German physician, 1850–94]. Described the tectospinal tract called Loewenthal's tract.

Loewi, Otto (1873–). American pharmacologist who demonstrated that stimulation of both the vagus and the accelerator nerve produces its effect on the heart by liberation of chemical substances identical with acetylcholine or epinephrine.

log" a·dec'to·my (log uh·deck'to·mee, lo guh) [G. logades, whites of the eyes; ektomē, excision]. Excision of a piece of the conjunctiva.

log"a·di'tis (log uh·dye tis, lo guh) [logades; G. -itis, inflammation]. Old term for scleritis.

log"a·do·blen·nor·rhe·a [logades; G. blenna, mucus; rhoia, flow]. Inclusion blennorrhea.

log"ag·no'si·a (log ag·no see·uh, ·zee·uh, lo gag) log"ag·no·sis [G. logos, word; agnōsia, ignorance]. Aphasia, word blindness.

log" graph'i·a (log uh·graf'ee·uh, ·gray fee uh, lo guh). Agraphia.

log" am·ne'si·a (log"am·nee'zhuh, ·zee uh, lo gam) [logos; G. amnēsia, forgetfulness]. Word deafness; word blindness; sensory aphasia.

log'a·nin. $C_{17}H_{26}O_{10}$. A glycoside extracted from the seeds and pulp of the fruit of Strychnos nux-vomica.

log" pha·si·a (log uh·fay zhuh, ze·e·uh, lo guh) [logos; G. aphasia, speechlessness]. Motor aphasia.

log" ·clo·nia. See logospasm.

log"o·ko·pho'si·a [logos; G. kōphōsis, deafness]. Word deafness; incapacity to understand spoken language.

log"o·ma'ni·a [logos; G. mania, madness]. A form of mental disorder characterized by talkativeness.

log" neu·ro'sis [logos; G. neuron, nerve; -ōsis, condition]. A neurosis associated with speech defect. Obs.

log·op'a·thy [logos; G. pathos, disease]. Any disorder of the speech.

log" ·pe·di'a, log·o·pe·di [logos; G. pais, child]. The study, knowledge, and treatment of defective speech.

log" ph·si·a (log"o·fay'zhuh, ·zee·uh) [logos; G. phasis, utterance]. A speech disturbance characterized by loss of the ability to articulate correctly. Syn. dysarthria.

log·o·ple'gi·a [logos; G. plēgē, stroke]. Loss of the power of uttering articulate speech.

log"or·rhe·a [logos; G. rhoia, flow]. Excessive loquacity; may be incoherent. Syn., lalorrhea, tachylogia.

log'o·spasm [*logos*; G. *spasmos*, spasm]. Explosive or spasmodic enunciation of words.

log"o·ther'a·py The therapeutic influence of the spoken word.

log'wood" See *hematoxylon*.

Lohmann reaction. See under *reaction*.

Lohmann's reagent. See under *reagent*.

lo·i'a·sis [Kongo dial. *lowa*; NL. *-iasis*, condition]. Filariasis caused by *Loa loa*. The infestation is acquired from bites by *Chrysops dimidiata* and *C. silacea* and involves the subcutaneous tissues, particularly those of the eye.

loin [OF. *loigne*, from L. *lumbus*, loin]. The lateral and posterior region of the body between the so-called false ribs and the iliac crest.

lol'ism (lol'is-um, lo'lis-um) [L. *lolium*, darnel]. Poisoning by the seeds of *Lolium temulentum* (darnel ryegrass).

Lombroso, Cesare [*Italian physician and criminologist*, 1836–1909]. Advanced the theory that criminals constitute a definite physical and mental type.

Londe, Paul Frédéric Léon [*French neurologist*, 1864–1944]. Described progressive bulbar paralysis in early life; called *Fazio-Londe's atrophy*.

Long, Crawford Williamson [*American physician*, 1815–78]. Believed to have been the first to use ether as an anesthetic in a surgical operation (1842).

Long, John Harper [*American biochemist*, 1856–1918]. Introduced a method of determining the number of grams of solids in a liter of urine: the last two figures of the specific gravity of the specimen, determined at 25° C., are multiplied by the figure 2.6, which is called *Long's coefficient*.

lon·gev'i·ty [L. *longaevitas*, longevity]. Long life; length of life.

lon"gi·lin'e·al [L. *longus*, long; *linea*, line]. Referring to a long, lean type of body build. Syn., *asthenic*, *dolichomorphic*, *longitypical*.

lon"gi·ma'nous (lon"ji-may'nus, -man'us) [*longus*; L. *manus*, hand]. Long-handed.

long'ing [AS. *langian*]. The earnest desire for anything; a condition often present to an abnormal degree during pregnancy.

lon"gi·ped'ate (lon"ji-ped'ate, -pee'date) [L. *longus*, long; *pes*, foot]. Long-footed.

lon·gis'si·mus [superl. of *longus*]. The longest; applied to muscles, as longissimus dorsi. See Table of Muscles in the Appendix.

lon"gi·tu'di·nal [L. *longitudo*, length]. Lengthwise; in the direction of the long axis of a body.

lon"gi·tu"di·na'lis. The longitudinal intrinsic muscles of the tongue.

lon"gi·typ'i·cal [L. *longus*, long; G. *typikos*, conforming to type]. Referring to a long body type; dolichomorphic; longilineal.

lon'gus (long'gus) [L.]. A long muscle, as longus colli, a muscle attached to the anterior surfaces of the bodies of the cervical vertebrae. See Table of Muscles in the Appendix.

l. capitis. The rectus capitis anterior major muscle.

l. cervicis. The longus colli muscle.

l. colli. A deep muscle of the anterior neck region.

Looney and Dyer method for potassium in blood. See under *method*.

loop [ME. *loupe*]. 1. A bend in a cord or cordlike structure. 2. A platinum wire, in a glass handle, with its extremity bent in a circular form; used to transfer bacterial cultures.

Axenfeld's intrascleral nerve l. An anomalous loop of the ciliary nerve in the scleral layer of the eyeball.

bulboventricular l. The U-shaped or S-shaped loop of the embryonic heart involving chiefly the bulbus and ventricle.

lenticular l. Ansa lenticularis.

l. of Henle. The U-shaped section of a uriniferous tubule which is formed by a descending and an ascending limb.

Meyer's l. See Adolf *Meyer*.

Stoerk's l. See under Oscar *Stoerk*.

loose [ON. *lauss*]. Lax; without restraint.

loose'ness [*loose*]. 1. The state of being free, loose, or unrestrained. 2. Colloquial term for diarrhea.

l. of the teeth. A condition of the teeth due to disease of the gums and the gradual destruction of the alveolar processes. See *periodontosis*.

Looss, Arthur [*German parasitologist*, 1861–1923]. In experiments on dogs, discovered the route of migration of the hookworm from the skin through the lung to the intestine.

L. O. P. Left occipitoposterior position of the fetus in utero.

lo'pho·dont (lo'fo·dont, lof'o-) [G. *lophos*, ridge; *odous*, tooth]. Having the crowns of the molar teeth formed in crests or ridges; opposed to *bunodont*.

lo·phoph'o·rine (lo-fof'o-reen, -rin) $C_{13}H_{17}O_3N$. The most active of the alkaloids from mescal buttons. Has been used experimentally as a hypnotic.

lo·phot'ri·chous (lo-fot'ri-kus) [*lophos*; G. *thrix*, hair]. Pertaining to microorganisms characterized by a tuft of cilia or flagella at each pole.

lo·quac'i·ty (lo-kwas'i-tee) [L. *loquax*, talkative]. Volubility of speech; talkativeness; a condition that is frequently excessive in various forms of mental disorders.

Lorain, Paul Joseph [*French physician*, 1827–75]. Made a study of dwarfism and sexual infantilism, called *Lorain's syndrome*. See *infantilism*, 1.

Lóránd, Sándor (Löwi) [*Hungarian gynecologist*, contemporary]. Devised a tocograph for recording the uterine contractions, measured through the medium of the anterior abdominal wall; called *Lóránd tocograph*.

lor·do'sis [G., a curvature of the spine]. Forward curvature of the lumbar spine. —**lordot'ic**, *adj.*

Lorente de Nó, Rafael (1902–) American neurophysiologist known for his contributions to the anatomy and physiology of the cerebral cortex.

Lorenz, Adolf [*Austrian surgeon*, 1854–1946]. Devised a so-called bloodless method of reducing congenital dislocation of the hip. The adductor muscles of the thigh were forcibly stretched and kneaded with the hand, the femur being brought into extreme abduction. The quadriceps femoris and hamstring muscles then were similarly treated, until all the muscles were sufficiently stretched to allow the femoral head to be slipped into the shallow acetabular cavity. The femoral head was held in place by extreme abduction and inward or outward rotation of the femur. A heavy plaster cast was then applied and kept intact for several months. Called *Lorenz method* or *technic*.

Loreta, Pietro [*Italian surgeon*, 1831–89]. Known for his operation of gastrotomy and digital dilatation for the relief of pyloric stenosis. *Loreta operation* is now obsolete.

L. or'gan·isms. See under *organism*.

lo·ri'ca [L., leather cuirass]. A protective external covering or case.

Lorrain Smith's stain. See *Nile blue A* under *stain*.

Lossen, Hermann Friedrich [*German surgeon*, 1842–1909]. Devised an operation of section of the second division of the fifth cranial nerve, without division of the masseter muscle; called *Lossen operation*.

Lotheissen, Georg [*Swiss surgeon in Austria*, 1860–

]. Devised an improved operation using the inguinal approach, for the radical cure of femoral hernia (1898) called *Lotheissen's operation*.

lo'ti·o (lo shee-o, lo'toe-o) [L., from *lavare*, to wash]. A lotion.

lo tion [*lotio*]. An aqueous solution or suspension for local application wash.

lo"to fla vine (lo to-flay veen, vin, -fla een, -in) [G *lôtos*, lotus; L. *flavus*, yellow] A yellow pigment produced by the hydrolysis of lotusin.

Lo'tus [*lôtos*]. A genus of the Leguminosae. **L. arabicus** yields toxic glycoside, lotusin, and pigment, lotoflavine.

lo'tus·in. A toxic glycoside in *Lotus arabicus*; on hydrolysis yields HCN and the coloring matter lotoflavine.

Louis, Antoine [*French surgeon*, 1723–92]. Described the angle formed t the junction of the manubrium and the body of the sternum; called *angle of Louis*.

Louis, Pierre Charles Alexandre [*French physician*, 1787 1872]. Credited with introducing the statistical method in the study of disease (1825) Made important studies of t berculosis and typhoid fever Described the characteristic lenticular rose spots of typhoid fever (1829)

loupe (loop) [F]. A magnifying lens.

binocular l. A binocular magnifier consisting of a combination of lenses in an optical frame, worn like spectacles.

loup'ing ill (lou ping, lo ping) An enzootic and sometimes epizootic disease of sheep; form of encephalomyelitis caused by a virus and transmitted by the tick *Ixodes ricinus*. The virus is infectious also for monkeys, mice, horses, and cattle. Infected animals display taxia. Syn *ovine encephalomyelitis, trembling-ill*.

louse (pl. *lice*) [AS. *lūs*]. A small, wingless, dorsoventrally flattened insect which lacks true metamorphosis. An ectoparasite of birds and mammals, it is medically important as vector of disease and as producer of irritating dermatitis.

bird l. See *Mallophaga*.

body l. *Pediculus humanus* var *corporis*.

crab l. *Phthirius pubis*.

head l. *Pediculus humanus* var *capitis*.

rat l. *Polyplax spinulosa*. It carries the organism of murine typhus, *Rickettsia mooseri*, and transmits t to its rat host, but not to man.

lous'y [*lūs*]. Infested with lice See *pediculosis*, *phthiriasis*. —**lousiness**, n.

lov'age (luv'idj) [OF *levesche*, from L. *Ligusticus*, Ligurian]. The root of *Levisticum officinale* Formerly used as stimulant, aromatic, carminative, and emmenagogue.

Lovén's reflex. See under *reflex*

Lovibond unit. See under *unit*.

Lowenstein, Ernst [*Austrian pathologist*, 1878–]. *Löwenstein* medium for the culture of tubercle bacilli is an egg-potato meal type

Lower Richard [*English physician*, 1631–91]. Made important contributions to th knowledge of the anatomy and physiology of the heart. Described the intervenous tubercle, also called *Lower tubercle*. Experimented with blood transfusion.

Lowry substances. See *Brønsted and Lowry substance* under *acid*.

Lowsley Orwald Swi ney (1884–). American urologist who made an important tudy of the prostate, developed an operation for calculus in the renal pelvis, and an original method of repairing renal wounds. H also devised three-stage operation for the repair of hypospadias, called *Lowsley' operation*.

lox'a bark. Pale cinchona; the bark of *Cinchona officinalis*.

lox'i a. See *torticollis*.

lox'ic. See *loxotic*.

lox·ot'ic [G *loxos*, slanting]. Slanting; t isted.

loz'enge [OF *losenge*]. A medicated tablet; usually intended for throat medication; usually sweetened.

L. R. C. S. Licentiate of the Royal College of Surgeons.

L. R. C. S. E. Licentiate of the Royal College of Surgeons of Edinburgh.

L. R. C. S. I Licentiate of the Royal College of Surgeons of Ireland.

L. R. F P S. Licentiate of the Royal Faculty of Physicians and Surgeons.

L. S. A. Licentiate of the Society of Apothecaries left sacroanterior position of the fetus.

L. S. P Left sacroposterior position of the fetus.

Lu Chemical symbol for l tetium.

Lubarsch, Ott [*German pathologist*, 1860–1933]. Described minute crystals found in the epithelial cells of the testis; called *Lubarsch crystals*.

Luc, H nri [*French laryngologist*, 1855–1925] Devised an operation for the relief of severe disease of the maxillary sinus (1899) In addition to the usual nasomaxillary opening, an opening is made in the anterior wall through a supradental fossa. Called *Caldwell-Luc operation*.

lu·can thone hy"dro·chlo·ride. $C_{20}H_{24}N_2OS$ HCl 1-(2-diethylaminoethylamino)-4-methylthiaxanthone hydrochloride, bright yellow crystalline powder sparingly solubl in water effective in th treatment of certain types of human schistosomiasis. Syn., *miracil D* See *nilodin*.

Lucas, Richard Clement [*English surgeon*, 1846–1915]. Described distention of the abdomen early in rickets called *Lucas sign*.

Lucas and Beveridge method for cysteine. See under *method*.

Lucas-Championnière Just Marie Marcelli [*French surgeon*, 1843–1913]. Credited with introducing antisepsis in France. Chronic pseudomembranous bronchitis is known as *Lucas-Championnière' disease*.

Luciani Luigi (1840–1919) Italian physiologist who described three phases of cardiac activity preceding heart failure ttack, periodic rhythm, and crisis. known as *Luciani' phenomenon*. He studied the physiology of starvation in man; his studies of the physiology and pathology of the cerebellum in decerebellated dogs led to the theory of the function of the cerebellum as the center for tonic, sthenic, and static functions.

lu·cid'i ty [L. *lucidus*, clear]. Clearness; the state of being of clear mind. —**lu cid** *adj*

lu'ci·dum. See *septum lucidum*, *stratum lucidum*.

lu·cif'er ase. An oxidative enzyme which catalyzes the reaction between oxygen and luciferin to produce luminescence.

lu·cif'er in [L. *lux*, light *ferre*, to bring]. An organic substrate found in luminescent organisms which when oxidized in the presence of the enzyme, luciferase, emits light, as in fireflies and glowworms.

lu cif'u gal [*lux*; L. *fugere*, to flee]. Fleeing from, or voiding, light.

Lu·cil'i [NL]. A genus of blowflies whose species, **L. caesar**, **L. sericata**, may cause myiasis in man. Species of this genus have also been found feeding on human wounds and occasionally attacking the adjacent healthy tissue.

lu cite. See *acrylics*.

Lücke reaction for hippuric acid. See under *reaction*.

lu dic [L. *ludere*, to play]. Referring to the element of play in automatic action.

Ludloff Karl [*German surgeon*, 1864–1947]. Described pathologic fracture of the patellar carti-

lage (1910); called *Büdinger-Ludloff-Läwen disease*.

ludozan. Trade-mark for synthetic aluminum sodium silicate used as antacid.

Ludwig, Karl Friedrich Wilhelm [*German physiologist*, 1816–95]. Invented the kymograph (1846) Contributed to the knowledge of endosmosis. Developed the theory that the kidney glomeruli filter protein-free dilute urine which in passing through the tubules becomes concentrated because of the resorption of water; called *Ludwig' filtration theory*. Described the innervation of the submaxillary glands (1851). Investigated perfusion, using excised organs. With Elie de Cyon, is credited with discovering the vasomotor reflexes (1866)

Ludwig, Wilhelm Friedrich von [*German surgeon*, 1790–1865] Described cellulitis of the floor of the mouth (1836) see Ludwig's *angina*, *muscle* 1 Ludwig

Luer [*German instrument maker in France*, d. 1883]. Invented glass syringe with glass piston, for use in intravenous and hypodermic injections Called *Luer syringe*.

lu'es (lew'eez) [L., pestilence]. A euphemism for syphilis. Also called *l. venerea*. —**luet'ic**, *adj*.

lu'e-tin [lues]. An extract of the killed cultures of several strains of the *Treponema pallidum*, used in skin tests for syphilis.

Lugol's solution. See under *stain*. See also strong iodine solution.

Lukens test. See Boerner Jones, and Lukens *test*, Boerner-Lukens *test*.

luke'warm [AS. *hlēow*; *wearm*]. Tepid about the temperature of the body

lumalgin. Trade-mark for combination of luminal and acetylsalicylic acid in tablet form.

lum ba'go [L. from *lumbus*, loin]. A general term for backache in the lumbar or lumbosacral region.

lum'bar [lumbus]. Pertaining to the loins.

lum"bar i-za'tion. See *sacralization*.

lum'bo-, lumb- [*lumbus*]. A combining form denoting *the loin*, *lumbar*

lum"bo-co-los'to-my [lumbus; G. *kolon*, colon *stoma*, mouth]. Colostomy in the left lumbar region.

lum"bo-co-lot my [*lumbus*; *kolon*, G. *tomē*, cutting]. Incision of the colon through the lumbar region.

lum"bo-cos'tal [lumbus; L. *costa*, rib]. Pertaining to the loins and ribs, as lumbocostal arch.

lum"bo-dor'sal [lumbus; L. *dorsum*, back]. Pertaining to the lumbar and dorsal regions, as lumbodorsal fascia.

lum"bo-in gui nal (lum"bo-ing gwi nul) [*lumbus*; L. *inguen*, groin]. Pertaining to the lumbar and inguinal regions, as the lumboinguinal nerve, branch of the genitofemoral, distributed to the skin on the front of the thigh.

lum"bo-is chi al (lum"bo-iss'kee ul) [*lumbus*; G *ischion*, hip-joint]. Pertaining to the ischium and lumbar part of the vertebral column.

lum"bo sa cral [*lumbus*; L. *os sacrum*, lowest bone of the spine]. Pertaining to the lumbar vertebrae and t the sacrum, as the lumbosacral plexus, the plexus made up of the lower lumbar and upper sacral nerves.

lum'bri-coid [L. *lumbricus*, earthworm]. Relating to, or resembling, an earthworm or *Lumbricus*.

lum'bri-cal. One of four small muscles in the hand or foot (L., *lumbricalis*, pl *lumbricales*) See Table of Muscles in the Appendix.

Lum'bri-cus [L.] A genus of earthworms, formerly erroneously regarded as an intestinal worm. See *Ascaris*.

lu'men (pl. *lumens*, *lumina*) [L., light]. 1. The space inside of tube, as the lumen of thermometer blood vessel, duct. 2. The unit of flux of light; the flux in unit of solid angle from source of which the intensity is 1 candle.

residual l. The persisting lumen, or portion thereof, of Rathke pouch found in the hypophysis between pars distalis and pars intermedia.

lu'mi-chrome. $C_{12}H_{10}N_4O_2$ 7,8-Dimethyl-alloxazine. An oxidation product of riboflavin.

lu"mi fla'vin (lew"mi-flay'vin, -flav'in) [*lumen*, L. *flavus*, yellow]. A derivative of riboflavin produced by irradiation of riboflavin in alkaline solution.

luminal. Trade-mark for brand of phenobarbital.

luminal sodium. Trade-mark for brand of phenobarbital sodium.

lu"mi nance. The amount of light emitted from source and projected on measuring surface, also called *brightness*, although, technically brightness is subjective quality of light as measured by the eye.

lu"mi nes cence [lumen]. An emission of light without production of heat sufficient to cause incandescence. It is encountered in certain animals, as some protozoa and fireflies.

lu"mi nif'er-ous [lumen, L. *ferre*, to bear]. Conveying or bearing light.

lu'mi nol. 3-Aminophthalhydrazide. A substance which becomes strongly luminescent as it undergoes oxidation. See *chemiluminescence*.

lu"mi-nos'i ty [lumen]. The property of emitting light.

lu-mi-ste'ter-ol [lumen, G *stereos*, solid]. The first product obtained in the irradiation of ergosterol with ultraviolet light; further irradiation produces calciferol (vitamin D_2)

l ump [cf. D *lompe*, mass]. 1. A small mass; protuberant part. 2. Any localized swelling or tumor

lump y jaw See *actinomycosis*.

lu'na-cy [L. *luna*, moon]. 1. *I legal medicine*, mental disorder in which the individual is not legally responsible; insanity 2. Insanity: so-called because formerly believed to be caused by the moon. *Obs* —**lu'natic**, *adj*

lu nar [luna]. Pertaining to the moon or to silver (luna of the alchemists)

l. caustic. Toughened silver nitrate.

lu'nate [L. *lunatus*, crescent-shaped]. Semilunar bone, one of the carpal bones. See Table of Bones in the Appendix.

lu'na ti [L. *luna*, moon]. A psychotic person.

lu-nel'la. See *hypopyon*.

lung [AS. *lungen*]. The organ of respiration, in which the venous blood is oxidized by the air drawn through the trachea and bronchi into the alveoli. There are two lungs, right and left, the former consisting of three, the latter of two, lobes The lungs are situated in the thoracic cavity and are enveloped by the pleura. See Plates 5 12, 13, 14.

cardiac l. See brown *induration*.

honeycomb l. An emphysematous lung, or occasionally lung containing numerous small pusfilled cavities; nonspecific term.

iron l. A mechanical respirator; Drinker respirator; used in respiratory paralysis. Also called *artificial l*.

turtle l. See *bronchiectasis*.

l ng'mo"ter [lungen, L. *motor* from *movere*, to move]. An apparatus for pumping air or air and oxygen into the lungs.

lung'wort" (lung wurt") See *Verbascum*.

lunosol. Trade-mark for preparation of colloidal silver chloride in liquid and ointment form. The preparations are used as an antiseptic and germicide on mucous membranes.

lu'nu la, lun u la [L., little moon]. 1. The white, semilunar area of a nail near the root. 2. The thin, crescentic area of a semilunar valve of the heart, on either side of the nodule.

lu'pa nine. $C_{15}H_{24}N_2O$; an alkaloid from various species of *Lupinus*.

lu'pe-ose. Stachyose.

lu'pine (lew'pin, -peen) [L. *lupinus*, lupine]. A plant of the genus *Lupinus*. One or more poisonous alkaloids have been found in various species of the genus. The bruised seeds of *L. albus* have been used as an external application to ulcers.

lu pin'i-dine (lew-pin -deen, -din). An alkaloid obtained from various species of *Lupinus*.

lu'pin ine (lew'pin een, in) [*lupinus*]. An alkaloid from various species of *Lupinus*.

lu pi no sis. See *lathyrism*.

lu po ma [L. *lupus*, wolf; G. -*ōma*, tumor]. The primary nodule of lupus.

α-lu pu'lic ac'id. Humulon.

β-lu-pu'lic ac'id. Lupulon.

lu pu lin [NL. *lupulus*, dim. from *lupus*, hop] (*lupulinum*). The glandular trichomes separated from the strobiles of *Humulus lupulus*. It is reputedly antispasmodic and sedative.

lu'pu lon, lu'pu lone. $C_{26}H_{38}O_4$; an antibiotic constituent of humulus or hops. Syn., *β-lupulic acid*.

lu pu lus. See *humulus*.

lu pus [L., wolf]. A chronic tuberculous disease of the skin and mucous membranes, characterized by the formation of nodules of granulation tissue. Syn., *lupus exedens, lupus vulgaris*. —**lupoid, lupiform,** *adj.*

chilblain l. A form of lupus erythematosus that is aggravated in the cold seasons.

discoid l. erythematosus. Usually a chronic, but occasionally acute, disease of the skin characterized by red, scaly patches of various sizes and configurations which induce atrophy and superficial scar formation. It is a capricious disease, the acute form of which is often fatal. The chronic form causes follicular plugging, and occurs in the exposed areas, as the face, scalp, and hands. It is not caused by the tubercle bacillus. It is divided into the following forms: chronic discoid, subacute, and acute varieties. The latter may be a different disease. Syn., *l. sebaceus, l. superficialis, ulerythema centrifugum*. Also called *l. erythematodes*.

disseminated follicular l. A variety of lupus confined to the face, especially in the situations usually occupied by acne. The papules vary from a large pinhead to a pea in size, conical and deep red. Syn., *acnitis*.

disseminated l. erythematosus. A highly fatal disease of unknown cause, characterized clinically by fever, malaise and joint pains, anemia, leukopenia, and frequently by a skin eruption similar to discoid lupus erythematosus. Pathologically it is characterized by alteration in the connective tissue, especially of the arterioles, and the presence of hematoxylin-staining bodies in areas of fibrinoid degeneration of involved tissues. Primarily involved are the kidney, spleen, and endocardium.

exanthematous l. erythematosus. Disseminated lupus erythematosus.

l. crustosus. A crusted form of lupus vulgaris.

l. endemicus. Oriental sore.

l. erythematosus cell. A mature polymorphonuclear neutrophil with a vacuole containing lyzed nuclear material which has been phagocytized, found in bone marrow and peripheral blood preparations from patients with systemic lupus erythematosus. Abbreviated LE or L.E. cell or body.

l. erythematosus (LE) test. A test for disseminated lupus erythematosus made by incubating serum from patients with normal bone marrow, normal leukocytes, or the patient's leukocytes. A positive test consists of the presence of LE cells, homogeneous basophilic masses in the polymorphonuclear leukocytes, and rosettes of leukocytes about a basophilic amorphous substance.

l. erythematosus unguium mutilans. A type of lupus erythematosus affecting the dorsum of both hands in which the nails become reduced to irregular discolored, worm-eaten strips adherent to the ungual bed, with deformities of the ends of the fingers.

l. exedens. The ulcerating type of lupus vulgaris.

l. hypertrophicus. That variety of lupus in which new connective-tissue formation predominates over the destructive process, and markedly raised, thick patches result.

l. keloid. A scar tissue overgrowth in an area of lupus vulgaris.

l. of larynx. A condition caused by *Mycobacterium tuberculosis* which usually follows lupus of the nasopharynx or face; rarer and less destructive than tuberculous laryngitis. The nodules occur on the epiglottis or the aryteno-epiglottic folds.

l. lymphaticus. See *lymphangioma circumscriptum congenitale*.

l. maculosus. A variety of lupus characterized by the eruption of very soft, smooth, brownish red, semitranslucent miliary nodules that develop in the connective tissue of otherwise healthy skin without subjective sensations.

l. miliaris disseminatus. A more acute form usually occurring in children and at times following measles. Many small lesions appear rapidly. May be fatal.

l. miliaris disseminatus faciei. A form of tuberculosis of the skin characterized by tiny nodules usually over the face and especially the eyelids. Occur in crops and may involute. More often seen in Negroes.

l. pernio. A tuberculous affection that is usually classified as a sarcoid of the Boeck type. This term has also been used for chilblain lupus.

l. sebaceus. See discoid *l. erythematosus*.

l. serpiginosus. Spreads peripherally while cicatrizing centrally.

l. superficialis. See discoid *l. erythematosus*.

l. tumidus. A form with edematous infiltration.

l. vegetans. The formation in the lupus process of a warty-looking patch liable to become inflamed.

l. verrucosus. See *l. vegetans*.

l. vulgaris. True tuberculosis of the skin. A diverse and variable disease. Nodules of the apple jelly type are usually seen. It is a slow-developing, scarring, and deforming disease, often asymptomatic, and often involving the face. Syn., *tuberculosis luposa*. See Plate 31.

lu"pus-car"ci no ma [*lupus*; G. *karkinos*, crab; -*ōma*, tumor]. A carcinoma developing on the site of a lupus.

Luschka, Hubert von [German anatomist, 1820–75]. Described the pharyngeal bursa, called *Luschka's bursa*. Noted an inconstant, small, cartilaginous nodule in the anterior portion of the vocal fold, called *Luschka's cartilage*. Described the lateral apertures of the fourth ventricle; called *foramens of Luschka, foramens of Key and Retzius*. See also *Luschka's glands* under *gland*.

Lusk, Graham [American physiologist, 1866–1932]. Contributed much to the knowledge of the physiology of metabolism, and made important studies of nutrition.

Lusk, William Thompson (1838–1897). American

obstetrician who described the retraction ring observed during labor which, when pathologic, is also called *Lusk' contraction ring*

Lust's reflex. See under *reflex*.

lu'sus na tu'rae (na-tew'ree) [L.]. A freak of nature, monstrosity

lute [L. *lutum*, mud]. A pasty substance which hardens when dry; used to make joints water proof in pharmaceutical apparatus.

lu'te al [L. *luteus*, yellow]. Of or pertaining to the corpus luteum or to its principle, as the luteal hormone.

lu-te ci um. See *lutetium*.

lu te-in [L. *luteus*, yellow]. 1 $C_{40}H_{56}O_2$, yellow dihydroxy-α-carotene first isolated from egg yolk, but widely distributed in nature; it has been called *xanthophyll*. 2. A dried, powdered preparation of corpus luteum.

Lutembacher René [*French cardiologist*, 1884-]. Described mitral stenosis associated with defect of the interatrial septum (1916); called *Lutembacher' complex, disease syndrome*.

lu"te-no ma, lu"te-in-o'ma. See *luteoma*.

lu'te-o- [L. *luteus*, yellow]. 1. A combining form signifying *orange yellow* or *brownish yellow*. 2. *In botany*, combining form denoting *yellowish*. 3. *In chemistry*, combining form used in naming series of yellow ammoniacal cobaltic salts.

lu"te-o-blas to ma. See *luteoma*.

lu"te-o'lin. $C_{15}H_{10}O_6$ 3' 4, 5,7-tetrahydroxyflavone, occurring in many plants in glycosidic combination.

lu"te-o ma [*luteus*; G. *-ōma*, tumor]. An ovarian tumor made up of cells resembling those seen in the corpus luteum also called *carcinoma of corpus luteum, granulosa-cell carcinoma, luteoma, luteinoma, luteoblastoma, struma ovarii luteinocellulare, lipid-cell tumor of ovary*

lu"te-o-tro phin. Trade-mark for brand of prolactin.

lutestorone. Trade-mark for progesterone.

lu te'ti um. Lu = 174.99 A rare earth metal. formerly spelled *lutecium*.

lu'ti-dine. Any dimethylpyridine, C_7H_9N of which the commonest is the 2,6-isomer obtained by distillation of tar and bone oils.

lutocyclin. Trade-mark for progesterone.

lutocylol. Trade-mark for anhydrohydroxyprogesterone.

lux a'tion. 1 A dislocation. 2. *In dentistry* the partial or complete separation of tooth from its socket as result of trauma.

lux-u ri ant [L. *luxuriare*, to abound to excess]. Growing to excess, exuberant; specifically referring to the abnormal growth of certain body cells, as in granulation tissue.

lux'us [L.]. Excess.

heart l. Cardiac dilatation with hypertrophy of the left ventricle.

l. breathing. Excessively deep and forcible inspiration.

l. consumption. The metabolism of certain surplus protein material, which, though inside the body does not form component part of any of its tissues, but constitutes kind of reservoir of force upon which the organism may draw *Obs.*

Luys, Jules Bernard [*French neurologist*, 1828-97]. Described the degenerative process in the anterior horns of the spinal cord in progressive muscular atrophy (1860) Described nucleus in the hypothalamus (1865) formerly called *corpus Luysi*, the destruction of which results in hemiballismus. He also contributed to the knowledge of thalamic functions.

ly"ca-con'i tine. $C_{36}H_{46}N_2O_{10}$; an alkaloid from *Aconitum lycoctonum*.

ly-can'thro-py (lye-kan'thro-pee) [G. *lykos*, wolf *anthrōpos*, man]. A belief that one is wolf or some other wild beast, common among schizophrenic patients. Syn., *lycomania*. —**lycanthrop'ic**, *adj.*, **ly'canthrope** *n.*

ly'cine (lye seen, -sin) See *betaine*.

ly"co-ma'ni a. See *lycanthropy*

ly'co-pene $C_{40}H_{56}$, red carotenoid pigment occurring in ripe fruit, especially tomatoes.

ly co-per si cin. The antibiotic substance, now known as *tomatine*, obtained from *Lycopersicon pimpinellifolium*, the red-currant tomato plant.

ly"co po di um [*lykos*; G *pous*, foot]. The spores of *Lycopodium clavatum*, occurring in the form of light, fine, yellowish powder Used as desiccant and absorbent on moist and excoriated surfaces, and as an inert powder in which t embed pills to prevent their adhering to one another Can also act as an allergen. Also called *club moss*, witch meal, wolf' claw.

ly'co pus [*lykos*; *pous*]. Bugle weed, *Lycopus virginicus*; formerly used as an astringent and hemostatic.

ly"co-rex'i [*lykos*; G *orexis*, longing]. A wolfish or canine appetite.

lye [AS. *lēah*]. 1 An alkaline solution obtained by leaching wood ashes. 2 A solution of sodium or potassium hydroxide.

ly"go-phil'i-a [G *lygē*, twilight; *philein*, t love]. Morbid love of dark places.

lygranum. Trade-mark for antigens employed in the complement-fixation test and the Frei test for venereal lymphogranuloma. They are prepared by growing the virus on the chick embryo.

ly"ing-in 1 Confinement. 2. The puerperium.

Lyle-Curtman-Marshall method. See under *method*.

lymph [L. *lympha*, water]. 1 The fluid in the lymph vessels, collected from the interstitial fluid. 2. Old term for exudate. —**lymph oid**, *adj*

l. channel. Old term for tissue space or lymphatic.

l. follicle. Old term for lymph nodule.

l. nodes. Masses of lymphatic tissue 1 25 mm. long, often bean-shaped, intercalated in the course of lymph vessels, more or less well organized by connective-tissue capsule and trabeculae into cortical nodules and medullary cords which form lymphocytes, and into lymph sinuses through which lymph filters, permitting phagocytic activity of reticular cells and macrophages. Syn., *lymph glands* (BNA) See Plate 11.

vaccine l. The virus of vaccine.

lym-phad" nec'to-my [*lympha*, G *adēn*, gland; *ektomē* excision]. Excision of lymph node.

lym-phad" ni'tis [*lympha*; *adēn*, G *-itis*, inflammation] Inflammation of a lymph node.

aleukemic l. See lymphocytic *leukemia*.

dermatopathic l. See lipomelanotic *reticulosis*.

infectious l. Lymphadenitis associated with infectious diseases, e.g., scarlet fever mumps, and diphtheria.

mesenteric l. Inflammation of the mesenteric lymph nodes, commonly tuberculous. The tuberculous form was formerly called *tabes mesenterica*.

purulent l. (of the lung). An invasion of the peribronchial lymph nodes by streptococci, causing the lymphatics to become occluded, thereby spreading the infection toward the surface of the lung. A small area of focal pleurisy ensues, swiftly followed by the exudation of serofibrinous fluid, t first clear but becoming full of streptococci and leukocytes.

scrofulous l. The so-called caseous or suppurative hyperplasia of the lymph nodes. *Obs.*

tuberculous l. Tuberculous infection of the lymph nodes.

lym·phad″e·no′ma [*lympha*; *aden*, G. *-oma*, tumor]. A tumorlike enlargement of a lymph node, in which the architectural pattern is obliterated by proliferation of lymphocytes. It probably exists in two forms, the neoplastic and the hyperplastic.
malignant l. See *lymphoma*.
multiple l. See *lymphoma*.

lym·phad″e·no·ma·to′sis. Old term for Hodgkin's disease.

lym·phad″e·nop′a·thy [*lympha*; *aden*; G. *pathos*, disease]. Disease of the lymph nodes.
dermatopathic l. A type of chronic hyperplastic lymphadenitis, the result of chronic exfoliative dermatitis and other dermatoses. The pathologic changes are called *lipomelanotic reticulosis*.

lym·phad″e·no′sis. Lymphocytic leukemia.
l. benigna cutis. See *lymphocytoma cutis*.

lym·phad″e·not′o·my [*lympha*; *aden*; G. *tomē*, cutting]. Incision of a lymph node.

lym′pha·gogue (lim′fuh-gog) [*lympha*; G. *agōgos*, leading]. An agent that stimulates the flow of lymph. —**lym′phagogue**, *adj.*

lym·phan·gi·ec′ta·sis (lim-fan-jee-eck′tuh-sis) **lym·phan·gi·ec·ta′si·a** (-eck-tay′zhuh, -zee-uh, -shuh, -see-uh) [*lympha*; G. *angeion*, vessel; *ektasis*, extension]. Dilatation of the lymphatic vessels. It may cause elephantiasis. —**lymphangiectat′ic**, *adj.*

lym·phan″gi·ec·to·des. See *lymphangioma circumscriptum congenitale*.

lym·phan·gi·ec′to·my [*lympha*; *angeion*; G. *ektomē*, excision]. Excision of a pathologic lymphatic channel, as in surgery for cancer.

lym·phan″gi·o·en″do·the″li·o′ma [*lympha*; *angeion*; G. *endon*, within; *thēlē*, nipple; *-oma*, tumor]. A tumor composed of a congeries of lymphatic vessels, between which are many large mononuclear cells presumed to be endothelial cells.

lym·phan·gi·o′ma [*lympha*; *angeion*; *-oma*]. A dilated or varicose condition or tumor of the lymphatics; also called *simple l.* See also *hygroma*.
cavernous l. See *hygroma*.
cystic l. See *hygroma*.
l. circumscriptum congenitale. Lymphangiectodes; lupus lymphaticus; a very rare skin disease occurring in early life. Marked by the formation of straw-yellow vesicles, deeply situated in the skin, with thick and tense walls, and connected with the lymphatics. Of unknown cause.
l. tuberosum multiplex. A very rare skin disease, probably congenital, characterized by the formation of large, brownish-red papules or tubercles, the size of lentils, not arranged in groups or clusters, but scattered indiscriminately over the trunk. See *hygroma*.

lym·phan·gi·o·plas″ty (lim-fan′jee-o-plas-tee, lim-fan′jee-o-plas′tee) [*lympha*; *angeion*; G. *plassein*, to form]. Replacement of lymphatics by artificial channels.

lym·phan″gi·o·sar·co′ma [*lympha*; *angeion*; G. *sarkōma*, fleshy excrescence]. Lymphangioma or lymphangioendothelioma, invasive and containing poorly differentiated or undifferentiated cells.
postmastectomy l. A rare malignant neoplasm, histologically resembling lymphangiosarcoma, which occurs in women following radical removal of a breast and involving the arm on the same side; sometimes called *Stewart-Treves syndrome*.

lym·phan″gi·ot′o·my [*lympha*; *angeion*; G. *tomē*, cutting]. Cutting or dissection of lymphatic channels.

lym·phan·gi′tis [*lympha*; *angeion*; G. *-itis*, inflammation]. Inflammation of a lymphatic vessel; may be acute or chronic.
streptococcal l. (respiratory). Streptococcal infection of the lymphatics of the lower respiratory tract.

lym·phat′ic [L. *lymphaticus*, from *lympha*]. Pertaining to lymph.

lym·phat′ic. A vessel conveying lymph.
afferent l. A vessel conveying lymph to a lymph node.
efferent l. A vessel conveying lymph away from a lymph node.

lym·phat′ic block·ade. The bits of fibrinous exudate that pass into the local lymphatics and the fibrinous network thrown about a wounded part, blocking the passage of foreign bodies, notably microorganisms, to other body parts.

lym·phat″i·cos′to·my [*lymphaticus*; G. *stoma*, mouth]. Formation of an opening into a lymphatic trunk, as the thoracic duct.

lym′pha·tism [L. *lympha*, water]. See *status lymphaticus*.

lym·phe·de′ma. See under *edema*.

lym′pho-, lymph- [*lympha*]. A combining form denoting *connection with*, or *relation to*, *lymph* or *the lymphatics*.

lym′pho·blast [*lympha*; G. *blastos*, germ]. A blast cell, considered a precursor or early form of lymphocyte. As in other blast cells, the nucleus has a chromatin structure finer than that of the lymphocyte but coarser than that of the myeloblast, and has a large single nucleolus. A clear perinuclear area is frequently seen in the cytoplasm.

lym″pho·blas·to′ma [*lympha*; *blastos*; G. *-oma*, tumor]. A lymphosarcoma in which the predominant cell type has some of the features of lymphoblasts. The cells are larger and more pleomorphic, with fairly large, centrally placed vesicular nuclei; mitotic figures and multinucleation are numerous. See *follicular lymphoma*.
giant follicular l. See *follicular lymphoma*.
l. leucaemicum. The acute form of lymphocytic leukemia.
l. malignum. Hodgkin's disease.
scirrhous l. See Hodgkin's *disease*.

lym·pho·chlo·ro′ma. See *chloroma*.

lym′pho·cyte [*lympha*; G. *kytos*, cell]. A cell formed primarily in lymphoid tissue in many parts of the body, as lymph nodes, spleen, and tonsils, morphologically identical with a class of agranular leukocytes in the peripheral blood, and usually classified according to size. The small lymphocyte is the smallest leukocyte (7-10μ) with markedly clumped chromatin in the nucleus, and scant cytoplasm forming a rim around the nucleus. The large lymphocyte varies in diameter 10-20μ; the nucleus is often irregularly shaped, shows moderately clumped chromatin, and has a much larger proportion of clear light-blue cytoplasm than the small lymphocyte. See Plate 26. —**lymphocyt′ic**, *adj.*
atypical lymphocytes. Abnormal mononuclear cells seen in infectious mononucleosis, sometimes divided into three types (*Downey cell* I, II, III) correlating with the degree of immaturity. Also see *virocyte*.
plasmacytoid l. See *plasmacyte*.
young l. See *prolymphocyte*.

lym″pho·cy·thе′mi·a (lim″fo-sigh-theem′ee-uh). See lymphocytic *leukemia*.

lym″pho·cy′tic se·ries. Lymphocytes (small, large, young), prolymphocytes, and lymphoblasts.

lym″pho·cy·to′ma (lim″fo-sigh-to′muh) [*lympha*; *kytos*; G. *-oma*, tumor]. A lymphosarcoma in which the predominant cell type closely resembles mature lymphocytes. In contrast to *lymphoblastoma*, cells show fewer mitotic figures and no multinucleation.
l. cutis. A dense infiltrate of mature lymphocytes and some reticulum cells in the dermis. In the localized type there is either a single lesion or

group of nodules; in the disseminated type varying number of nodules, plaques, and tumors, from bluish-red to skin-color occur anywhere in the skin and may involve any organ of the body Also called *Spiegler-Fendt sarcoid, lymphadenosis benigna cutis.*

lym"pho-cy"to-pe ni a [*lympha, kytos;* G *penia,* want]. Decrease of the normal number of lymphocytes in the peripheral blood.

lym"pho-cy"to-poi-e sis [*lympha; kytos;* G *poiēsis,* production]. The genesis of lymphocytes.

lym"pho-cy to sis (lim fo-sigh-to sis) The condition of having an abnormally large number of lymphocytes in peripheral blood, seen with, or during convalescence from, certain acute infections, as pertussis, in chronic infections, as tuberculosis, infectious mononucleosis, or infectious hepatitis, and as an increase of abnormal lymphocytes in lymphocytic leukemia.

relative l. Percentage increase of lymphocytes in the differential leukocyte count, observed in most conditions associated with neutropenia.

lym"pho-der"mi-a [*lympha;* G. *derma,* skin]. Affection of the lymphatics of the skin.

l. perniciosa. Leukemic enlargement of the lymph nodes.

lym"pho-ep"i the"li o'ma [*lympha,* G *epi,* on; *thēlē,* nipple -*ōma,* tumor]. A rapidly growing tumor regarded by many as variant of an epidermoid carcinoma, found usually in the posterior nares, about the orifice of the auditory tube, in the vault of th pharynx in th tonsils, often with metastases to cervical lymph nodes. Microscopically there is an association of cells resembling lymphocytes and larger indistinctly outlined, mononuclear cells of epithelial character Responds readily to irradiation but often recurs. A more distinctly alveolated type sometimes occurs in which the epithelial cells are arranged as trabeculae.

lym phog'en-ous (lim-fodj'in us) [*lympha;* G *genesthai,* from *gignesthai,* to be produced] Producing lymph

lym"pho-glan du la [*lympha,* L. *glandula,* dim from *glans,* acorn]. BNA term for lymph node.

lym"pho-go ni [*lympha,* G *gonos,* offspring] Large lymphocytes having relatively large nucleus deficient in chromatin, and faintly basophil nongranular cytoplasm, observed in lymphocytic leukemia.

lym"pho-gran"u-lo ma [*lympha,* L. *granulum,* little grain; G -*ōma,* tumor]. Old term for Hodgkin disease.

l. inguinale. See venereal *l.*

l. venereum. Venereal lymphogranuloma. Abbreviated, L. G. V

venereal l. A virus disease characterized by an initial lesion, usually on the genitalia, followed by regional lymph-node enlargement and, at times, systemic involvement. The Frei test is specific skin test for this condition. A venereal disease. Also called *fourth venereal disease, l. inguinale, L. venereum, lymphopathia venereum, Nicolas-Favre disease, Durand-Nicolas-Favre disease Frei' disease* Syn *venereal adenitis.*

lym"pho-gran"u lo-ma to'sis. See Hodgkin's disease.

benign l. See *sarcoidosis.*

l. cu'tis. A specific autonomous venereal disease which typically involves the inguinal lymph nodes in subacute inflammation.

venereal l. See enereal *lymphogranuloma.*

lym-phol'de-cyte. See *hemocytoblast.*

lym"pho-ken'tric ac'id. A hydroxy acid, insoluble in water in the urine of patient with lymphoid leukemia as ater-soluble conjugate It causes proliferation of cells of the leukopoietic system and produces Hodgkin s-type lesions. It may be oxidized to myelokentric acid.

lym-pho ma [*lympha;* -*ōma*]. Loosely group of malignant or premalignant conditions of lymphoid tissue in which splenomegaly and lymphadenopathy usually are present. These conditions, which may represent variations of each other have similar clinical and pathological pictures, and generally include *Hodgkin disease, lymphosarcoma, leukolymphosarcoma, reticulum-cell sarcoma, follicular lymphoma,* and *lymphocytic leukemia.* Also called *malignant* or *multiple lymphadenoma, lymphomatosis.* —**lymphomatoid,** *adj*

benign l. See follicular *l.*

clasmatocytic l. See reticulum-cell sarcoma.

follicular l. A slowly progressive premalignant form of lymphoma, in which the lymph nodes show markedly enlarged follicles composed predominantly of closely packed, large reticuloendothelial cells It usually m tates to one of the malignant forms of lymphoma. Syn., *Brill Symmers disease, giant follicular l.* Also called *giant follicular lymphoblastoma, benign lymphoma, nodular lymphoma, lymphoreticulosis.*

granulomatous l. See Hodgkin's *disease.*

l. of orbit. A neoplastic disease of lymphoid cells occurring in the orbit and varying greatly in malignancy Clinically and histologically it is difficult to distinguish the localized disease of low-grade malignancy from focal manifestation of generalized neoplasm of lymphoid cells, as lymphosarcoma and lymphocytic leukemia. Also called *ocular l., lymphomatosis of orbit.*

malignant l. Old term for Hodgkin disease, or for lymphosarcoma.

nodular l. See follicular *l.*

ocular l. *L.* of orbit.

lym"pho-ma to sis. See *lymphoma.*

l. of orbit. See *lymphoma* of orbit.

lym"pho-path'i-a ve-ne re-um. Old term for venereal lymphogranuloma.

lym"pho-pe ni a. Decreased number of lymphocytes in the blood.

lym"pho-poi-e sis [*lympha;* G *poiēsis,* production]. Formation of lymphocytes. —**lymphopoiet'ic,** *adj*

lym"pho-pro'te-ase. An enzyme, capable of catalyzing hydrolysis of proteins, occurring in lymphocytes.

lym pho-re-tic u lo ma (Hodgkin') See Hodgkin disease

lym pho-re tic u lo sis. Follicular lymphoma.

benign l. See cat-scratch *fever*

lym pho-rhage, lym"phor rha'gi a. 1 A flow of lymph from ruptured lymphatic vessel 2 Aggregation of lymphocytes. Usually these aggregates seen in muscle and rarely in other organs in myasthenia gravis or spirochetal jaundice (Weil disease)

lym phor-rhe [*lympha;* G. *rhoia,* flow]. A discharge of lymph from wound, internally or externally

lym pho-sar-co ma [*lympha;* G. *sarkōma,* fleshy excrescence]. A malignant tumor of lymphatic tissue, distinguished from lymphocytic leukemia only by the absence of malignant cells from the peripheral blood, in which the lymph nodes show diffuse masses of uniform rounded cells highly resembling lymphocytes (*lymphocytoma*) or lymphoblasts (*lymphoblastoma*) according to the degree of differentiation. Syn., *lymphocytic sarcoma.* Also see reticulum-cell *sarcoma.*

pleomorphic l. Hodgkin sarcoma. See Hodgkin *disease.*

reticulum-cell, reticular l. See reticulum-cell *sarcoma.*

lym pho-sar"co-ma to sis [*lympha; sarkōma;* G

-*osis*, condition]. A condition or diathesis marked by the development of lymphosarcoma.

lymph scro tum. Elephantiasis of the scrotum.

lym phu ri-a [*lympha*, G. *ouron*, urine]. The presence of lymph in the urine

lynoral. Trade-mark for ethynyl estradiol.

ly'o- ly- [G *lysis*, to loose]. A combining form signifying to *dissolve*, *loose*.

ly' hroeme. See *lyxin*.

ly"o-en'zyme. See extracellular *enzyme*.

ly'o-gel. A gel rich in liquid.

ly"o-gly'co gen. That portion of glycogen in tissue readily extractable with water

Lyon's tube. See under *tube*.

ly'o-phile (lye file, fil) **ly"o-phil'ic.** Referring to the dispersed phase of colloidal system when there is strong affinity between the dispersion medium and the dispersed phase. Also see *lyophobe*.

l. complement. Complement prepared by freezing guinea-pig serum and dehydrating it rapidly under high vacuum.

l. process. A desiccation procedure involving rapid freezing of the material to be dried followed by evaporation of the moisture at low temperature under vacuum. Also called *l. method*. See *cryochem*, *desivac*.

ly" phil i za tion [*lysis*, G *philein*, to love] The process of rapidly freezing substance (pollen, blood plasma, antitoxin, serum, etc.) at an unusually low temperature, and then quickly dehydrating the frozen mass in high vacuum. —**lyophilized**, *adj*

ly'o-phobe ly"o-pho'bic. Referring to the dispersed phase of colloidal system when there is lack of strong affinity between the dispersed phase and th dispersion medium Also see *lyophile*.

ly'o-sol. A disperse system wherein a liquid is the dispersing medium for suspended liquid or solid particles.

ly"o sorp tion [*lysis*, L. *sorbere*, to suck in]. The preferential adsorption of the solvent constituent of solution or of the dispersing medium of colloidal system.

ly o-trope. 1 One of group of ions which, when arranged in series, influence in the sam order different phenomena which involve forces existing between the solvent and one or more other components of solution 2 A readily soluble substance. —**lyotrop'ic**, *adj*

ly"pe ma ni (lye pi may'nee-uh, lip i-) [G *lypē*, grief mania, madness] Old term for melancholia.

ly"po thy mi (lye po thigh mee-uh, lip o-) [*lypē*; G. *thymos*, mind] Old term for melancholia.

lyse. T cause or undergo lysis, 2 also spelled *lyze*

ly-ser'gic ac'id. $C_{16}H_{16}N_2O_2$ A component of ergot alkaloid

ly'si- (lye si- lis'i-) **lys-** [G *lysis*, loosing] A combining form signifying *loosening*

ly sim ter (lye-sim'i tur) [*lysis*; G metron, measure]. An pparatus for determining the solubility of substance.

ly'sin [*lysis*]. A cell-dissolving substance.

beta l. Certain thermostable bactericidal serum constituents similar to leukins and obtained from granulocytes and perhaps from blood platelets. The elation of these factors to immunity is not clear

ly'sine (lye seen, -sin) $NH_2CH_2(CH_2)_3CH(NH_2)$-COOH. The α-amino-ε-caproic acid, an amino acid obtainable by the hydrolysis of casein and other proteins. It is essential to the growth of man.

ly sis [G] 1 Gradual decline in the manifestations of disease, especially an infectious disease Syn *defervescence* 2. Gradual fall of fever 3 The solution of cell or tissue by the action of lysin. the solution of erythrocytes by chemical substances, by alteration of environment, or by action of a specific immune hemolysin and complement. —**ly'tic**, *adj*

osmotic l. Destruction of cells, e.g., erythrocytes, by hypotonic solutions.

-lysis [G.]. 1 A combining form signifying *dissolving*, *dissolution*. 2. *In biochemistry* combining form signifying *dissolution*. 3. *I chemistry* combining form signifying *decomposition*. 4. *I medicine*, combining form denoting *relief* or *reduction*, *detachment*, or *paralysis*.

lysivane hydrochloride. A trade-marked name for 10-(2-diethylamino-1-propyl)phenothiazine hydrochloride, official in the International Pharmacopoeia as *profenamine hydrochloride*; used to treat parkinsonism.

ly"so-ceph a lin. A substance derived from cephalin by the removal of one of the fatty acid components of the molecule, by the action of an enzyme contained in cobra venom. It possesses powerful hemolytic properties.

ly"so gen'e-sis. The production of lysins or lysis. —**lysogen'ic**, *adj*

lysol. Trade-mark for a disinfectant containing orthophenylphenol as the principal germicidal ingredient.

ly"so-lec'i thin (lye so les'i-thin) [*lysis*; G *lekithos*, yolk of an egg]. A substance having strong hemolytic properties produced from lecithin by the action of snake venom, which removes unsaturated fatty acids from th lecithin molecule.

ly'so-zyme [*lysis*; G en, in *zymē*, leaven]. An enzyme found in tears, leukocytes, mucous secretions, egg albumin, and many plants. It exerts strong antiseptic action, due to lysis of bacteria.

ly"so-zy mu ri a. Lysozyme in the urine, found in patients demonstrating the nephrotic syndrome and in some normal children.

lys sa. See *rabies*

lys'sic [G *lyssa*, rage]. Pertaining to rabies; due to rabies.

lys"so-dex'is [*lyssa*, G. *dēxis*, bite]. The bite of rabid dog.

lys'soid [*lyssa*, G *eidos*, form]. Resembling rabies.

lys"so pho'bi-a [*lyssa*; G *phobos*, fear]. 1. Morbid fear of hydrophobia; hydrophobophobia. 2. Morbid fear of becoming insane.

Lyster William John L. [*American Army physician*, 1869–1947]. Invented an apparatus for the rapid sterilization of water in canvas. The water is placed in large rubber-lined canvas bag, called *Lyster bag* which is fitted with faucets and th straps for suspension. Sterilization is accomplished by means of calcium hypochlorite contained in glass tubes, called *Lyster tubes*, which are broken and emptied int the bag.

ly'syl. Th univalent radical, $H_2NCH_2CH_2CH$ $CH_2CH(NH_2)CO$— of the amino acid lysine

ly te ri-an (lye teer ee un) [G. *lysis*, loosing]. Indicative of lysis, or of favorable crisis terminating an attack of disease.

-lyt'ic [*lysis*]. A suffix signifying *lysis* or *lysin*

Lyt'ta ves"i ca to ri-a. The Spanish fly species of Meloidae of the order Coleoptera. Characterized by the formation of cantharidin, toxin which may prod ce blisters of the skin.

ly"xo fla in. $C_{17}H_{20}N_4O_6$ th L-lyxose analog of riboflavin, first isolated from h man cardiac muscle. It has no riboflavin activity but possesses growth-promoting activity in rats. Also spelled *lyxoflavine*.

lyx'ose (licks ose) A syntheti pentose sugar that is isomeric with arabinose, ribose, and xylose.

lyze See *lyse*

Index of Illustrative Plates

-osis, condition]. A condition or diathesis marked by the development of lymphosarcoma.

lymph scro'tum. Elephantiasis of the scrotum.

lym"phu'ri-a [*lympha*; G. *ouron*, urine]. The presence of lymph in the urine.

lynoral. Trade-mark for ethynyl estradiol.

ly'o-, ly- [G. *lyein*, to loose]. A combining form signifying to *dissolve*, *loose*.

ly'o-chrome. See *flavin*.

ly"o-en'zyme. See extracellular *enzyme*.

ly'o-gel. A gel rich in liquid.

ly"o-gly'co-gen. That portion of glycogen in tissues readily extractable with water.

Lyon's tube. See under *tube*.

ly'o-phile (lye'o-file, fil), **ly"o-phil'ic.** Referring to the dispersed phase of a colloidal system when there is strong affinity between the dispersion medium and the dispersed phase. Also see *lyophobe*.

l. complement. Complement prepared by freezing guinea-pig serum and dehydrating it rapidly under high vacuum.

l. process. A desiccation procedure involving rapid freezing of the material to be dried followed by evaporation of the moisture at low temperature under vacuum. Also called *l. method*. See *cryochem*, *desivac*.

ly"o-phil"i-za'tion [*lyein*; G. *philein*, to love]. The process of rapidly freezing a substance (pollen, blood plasma, antitoxin, serum, etc.) at an unusually low temperature, and then quickly dehydrating the frozen mass in a high vacuum. —**lyophilized**, *adj.*

ly'o-phobe, ly"o-pho'bic. Referring to the dispersed phase of a colloidal system when there is lack of strong affinity between the dispersed phase and the dispersion medium. Also see *lyophile*.

ly'o-sol. A disperse system wherein a liquid is the dispersing medium for suspended liquid or solid particles.

ly"o-sorp'tion [*lyein*; L. *sorbere*, to suck in]. The preferential adsorption of the solvent constituent of a solution or of the dispersing medium of a colloidal system.

ly'o-trope. 1. One of a group of ions which, when arranged in a series, influence in the same order different phenomena which involve forces existing between the solvent and one or more other components of a solution. 2. A readily soluble substance. —**lyotrop'ic**, *adj.*

ly"pe-ma'ni-a (ly"pi-may'nee-uh, lip"i-) [G. *lypē*, grief; *mania*, madness]. Old term for melancholia.

ly"po-thy'mi-a (lye"po-thigh'mee-uh, lip"o-) [*lypē*; G. *thymos*, mind]. Old term for melancholia.

lyse. To cause or undergo lysis, 3; also spelled *lyze*.

ly-ser'gic ac'id. $C_{20}H_{25}N_3O_2$. A component of ergot alkaloids.

ly'si- (lye'si-, lis'i-), **lys-** [G. *lysis*, a loosing]. A combining form signifying *loosening*.

ly-sim'e-ter (lye-sim'i-tur) [*lysis*; G. *metron*, measure]. An apparatus for determining the solubility of a substance.

ly'sin [*lysis*]. A cell-dissolving substance.

beta l. Certain thermostable bactericidal serum constituents similar to leukins and obtained from granulocytes and perhaps from blood platelets. The relation of these factors to immunity is not clear.

ly'sine (ly'seen, -sin). $NH_2CH_2(CH_2)_2CH(NH_2)COOH$. The α-amino-ε-caproic acid, an amino acid obtainable by the hydrolysis of casein and other proteins. It is essential to the growth of man.

ly'sis [G.]. 1. Gradual decline in the manifestations of a disease, especially an infectious disease. Syn., *defervescence*. 2. Gradual fall of fever. 3. The solution of a cell or tissue by the action of a lysin, as the solution of erythrocytes by chemical substances, by alteration of environment, or by action of a specific immune hemolysin and complement. —**ly'tic**, *adj.*

osmotic l. Destruction of cells, e.g., erythrocytes, by hypotonic solutions.

-lysis [G.]. 1. A combining form signifying *dissolving*, *dissolution*. 2. *In biochemistry*, a combining form signifying *dissolution*. 3. *In chemistry*, a combining form signifying *decomposition*. 4. *In medicine*, a combining form denoting *relief* or *reduction*, *detachment*, or *paralysis*.

lysivane hydrochloride. A trade-marked name for 10-(2-diethylamino-1-propyl)phenothiazine hydrochloride, official in the International Pharmacopoeia as *profenamine hydrochloride*; used to treat parkinsonism.

ly"so-ceph'a-lin. A substance derived from cephalin by the removal of one of the fatty acid components of the molecule, by the action of an enzyme contained in cobra venom. It possesses powerful hemolytic properties.

ly"so-gen'e-sis. The production of lysins or lysis. —**lysogen'ic**, *adj.*

lysol. Trade-mark for a disinfectant containing orthophenylphenol as the principal germicidal ingredient.

ly"so-lec'i-thin (lye"so-les'i-thin) [*lysis*; G. *lekithos*, yolk of an egg]. A substance having strong hemolytic properties produced from lecithin by the action of snake venom, which removes unsaturated fatty acids from the lecithin molecule.

ly'so-zyme [*lysis*; G. *en*, in; *zymē*, leaven]. An enzyme found in tears, leukocytes, mucous secretions, egg albumin, and many plants. It exerts a strong antiseptic action, due to lysis of bacteria.

ly"so-zy-mu'ri-a. Lysozyme in the urine, found in patients demonstrating the nephrotic syndrome and in some normal children.

lys'sa. See *rabies*.

lys'sic [G. *lyssa*, rage]. Pertaining to rabies, due to rabies.

lys"so-dex'is [*lyssa*; G. *dēxis*, a bite]. The bite of a rabid dog.

lys'soid [*lyssa*; G. *eidos*, form]. Resembling rabies.

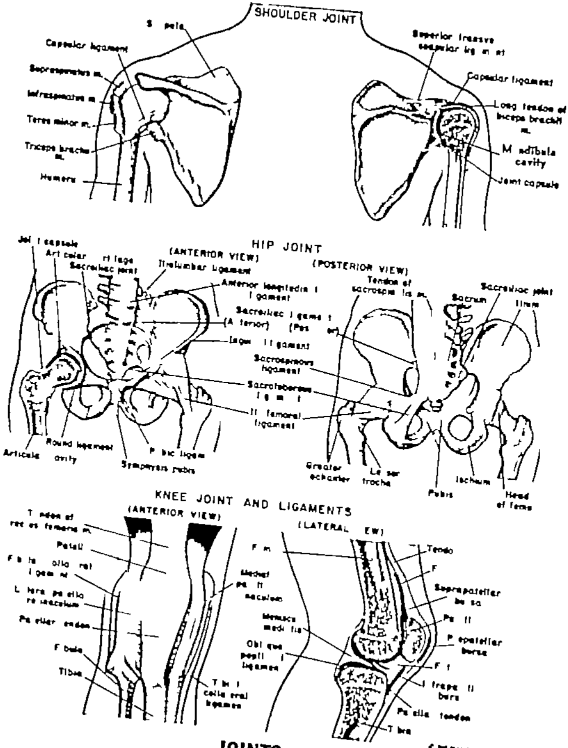
lys"so-pho'bi-a [*lyssa*; G. *phobos*, fear]. 1. Morbid fear of hydrophobia; hydrophobophobia. 2. Morbid fear of becoming insane.

Lyster, William John L. [*American Army physician*, 1869–1947]. Invented an apparatus for the rapid sterilization of water in camps. The water is placed in a large rubber-lined canvas bag, called *Lyster bag*, which is fitted with faucets and with straps for suspension. Sterilization is accomplished by means of calcium hypochlorite contained in glass tubes, called *Lyster tubes*, which are broken and emptied into the bag.

ly'syl. The univalent radical, $H_2NCH_2CH_2CH_2CH_2CH(NH_2)CO—$, of the amino acid lysine.

ly-te'ri-an (lye-teer'ee-un) [G. *lysis*, a loosening]. Indicative of a lysis, or of a favorable crisis terminating an attack of disease.

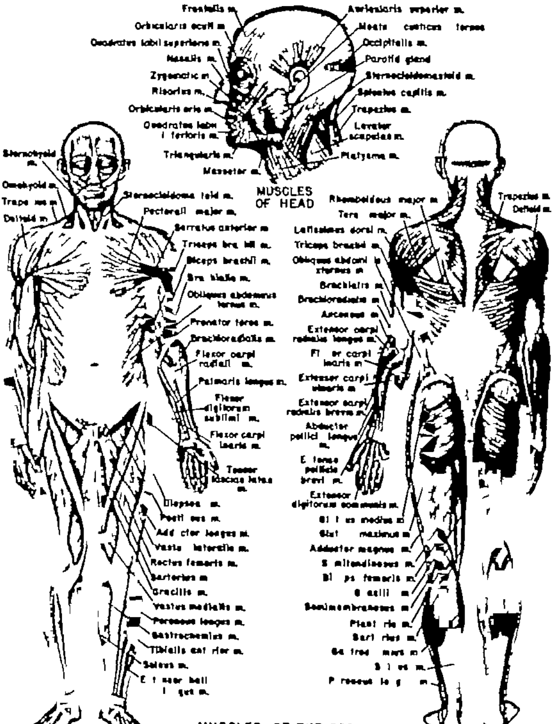
-lyt'ic [*lysis*]. A suffix signifying *lysis* or *lysin*.



Lyt'ta ves"i-ca-to'ri-a. The Spanish fly; a species of Meloidae of the order Coleoptera. Characterized by the formation of cantharidin, a toxin which may produce blisters of the skin.

ly"xo-fla'vin. C H₂₀N₄O₆; the D-lyxose analog of riboflavin, first isolated from human cardiac muscle. It has no riboflavin activity but possesses growth-promoting activity in rats. Also spelled *lyxoflavine*.

lyx'ose (licks'ose). A synthetic pentose sugar that is isomeric with arabinose, ribose, and xylose.



lyze. See *lyse*.

MONSTERS

PLATE 26

CELLS FROM SMEAR PREPARATION OF NORMAL HUMAN BLOOD WRIGHT'S STAIN

(1) Polymorphonuclear basophils.
(2) Polymorphonuclear eosinophils.
(3) Lymphocytes, some containing granules in the yt plasm.
(4) Polymorphonuclear neutrophil.
(5) Erythrocytes
(6) Blood platelets
(7) Polymorphonuclear neutrophils.
(8) Monocytes, some containing more protoplasmic granules th others. (In the younger cells the nuclei tend to be rounded in the adult cell they are horseshoe-shaped indented or lobed.)

NORMAL BLOOD CELLS

PLATE 97 MALARIA PARASITES

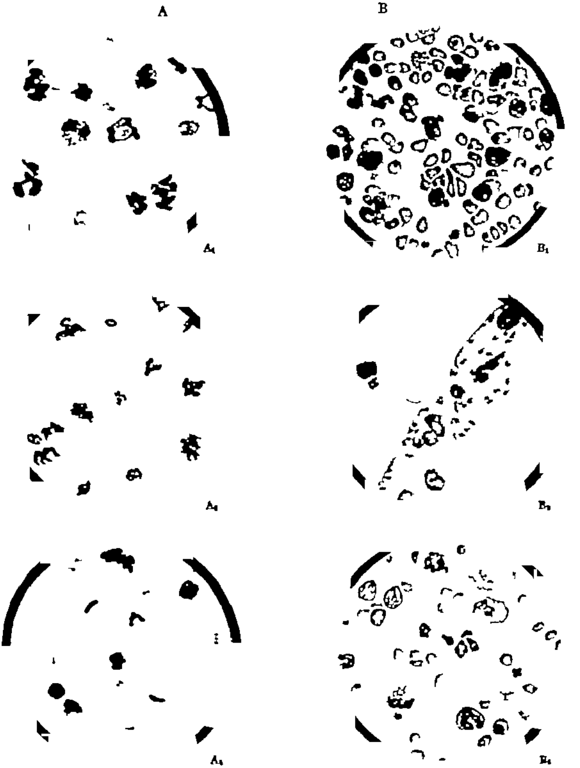
A. Thick Films

A1 *Plasmodium vivax*. Characteristic for the species in thick films is the presence of the parasite in various stages of development together with the distinctive ameboid form. The heavily pigmented parasite in the right portion of the field is a gametocyte. The large purplish objects are leukocytes showing the usual distortion seen in thick films.

A2 *Plasmodium malariae*. Various developmental stages are present as in *P. vivax* but the parasites are smaller, more compact, lack the ameboid shape, and are heavily pigmented.

A3 *Plasmodium falciparum*. Only ring forms of the trophozoites are seen. These, together with the characteristically shaped gametocytes (crescents), make identification possible.

B. Internal Organs



B Cerebral malaria. Smears taken post mortem from a fatal case of malignant tertian malaria. (From case of Lt. J. J. Sapero, Medical Corps, U. S. Navy.)

B1 Smear from spleen. Almost one-third of the red cells are parasitized with *P. falciparum*. Note the mature schizont in the upper portion of the field and three monocytes containing pigment.

B2 Smear from brain. A capillary of the brain distended and blocked with red cells, scarcely one of which has escaped being parasitized. A mature schizont is in the upper left part of the field.

B3 Smear from bone marrow. The parasites, though less numerous than in the smears from other organs, are present in considerable numbers. In the upper part of the field is a melaniferous leukocyte.

PLATE 27

MALARIA PARASITES

Plate [illegible]. Malaria Parasites

Benign Tertian Parasites

1. Normal red cell for comparison of size.
2. Trophozoite, young ring form.
3. Trophozoite, full grown. Red cell is enlarged and Schüffner's dots are present.
4. Schizont, young form, undergoing second nuclear division.
5. Schizont, quarter grown. Nuclei composed of fine chromatin granules in irregular clumps. Yellowish brown pigment is present.
6. Schizont, mature form. Nuclear division complete. Cytoplasm dividing preparatory to liberation of merozoites.
   Macrogametocyte (female gametocyte). Cytoplasm is blue, chromatin eccentric, compact, deep red, and surrounded by a halo.
   Microgametocyte (male gametocyte). Cytoplasm is greenish blue, chromatin central, diffuse and light red.

Quartan Parasites

1. Trophozoite, young ring form. Fine black pigment granules are present.
   Trophozoite, young band or equatorial form.
3. Trophozoite, more mature oval form showing beginning nuclear division.
4. Schizont, young, binucleate form, heavily pigmented.
5. Schizont, older band form. Pigment more abundant about periphery.
6. Schizont, mature. Chromatin clumps form eight nuclear masses arranged around a central mass of pigment.
   Macrogametocyte (female gametocyte). Chromatin is compact and deep red. Pigment abundant.
8. Microgametocyte (male gametocyte). Chromatin is diffuse and pale. Pigment abundant.

Malignant Tertian Parasites

1. Trophozoite, young, hairlike ring form.
   Trophozoites, young ring forms. Characteristic multiple infection of a red cell showing also peripherally placed forms.
3. Trophozoite, full grown. Rarely seen in peripheral blood except in very heavy infections.
4, 5, 6. Schizont in successive stages of maturity. Rarely seen in peripheral blood. Specimen from red cells in brain capillary of a fatal case of cerebral malaria.
   Macrogametocyte (female gametocyte). Shows characteristic crescent shape. Nucleus is compact, deeply stained. Pigment is clumped in center.
8. Microgametocyte (male gametocyte). Chromatin is pale, sausage and diffuse. Pigment is dispersed.

ENDOCRINE GLANDS

M

M Roman numeral for one thousand.

M. An abbreviation for mass, molar, molecular weight; misce, mix.

M. Misce, mix.

m, m. Meter.

m- *In chemistry,* meta-.

mμ Millimicron or micromillimeter; the one-thousandth part of a micron.

MA Mental age.

M. A. Master of Arts; mental age.

Ma Chemical symbol for masurium.

ma Milliampere.

McBurney, Charles [*American surgeon,* 1845–1913]. Introduced an incision, for use in appendectomy, in which the muscle fibers are separated rather than cut. The external oblique muscle is divided for three or four inches parallel to the inguinal ligament. At right angles to the first incision, the internal oblique and the transversus muscles are split by blunt dissection down to the peritoneum, to give access to the right iliac fossa. Called *McBurney's incision.* See also McBurney's *point, sign.*

MacCallum, William George [*American pathologist,* 1874–1944]. His investigations with Voegtlin proved that calcium metabolism is controlled by the parathyroid glands (1909). Studied the mode of fertilization of malarial parasites (1897). See also MacCallum's *stain.*

McCarthy, Joseph Francis [*American urologist,* 1874–]. Introduced a modification of the cystoscope, for use in transurethral surgery; called *McCarthy's electrotome* or *resectoscope.*

McCarthy's reflex. See under *reflex.*

Macchiavello's stain. See basic fuchsin under *stain.*

McClintock, Alfred Henry [*Irish physician,* 1822–81]. Described a pulse rate of more than 100 a minute, an hour or more after parturition, as indicative of postpartum hemorrhage; called *McClintock's sign.*

McCormac's reflex. See under *reflex.*

McCoy, George Walter (1876–). American public health administrator who first recorded tularemia in rodents (1911) and with Charles W. Chapin isolated *Pasteurella tularensis* (1912).

McCrudden method (*for calcium and magnesium*). See under *method.*

McCullagh's method. See under *method.*

McDonald, Ellice (1876–). American surgeon who introduced a solution of sodium orthophenylphenate, sodium oleate, acetone, and alcohol for hand sterilization, called *McDonald's solution.*

McDowell, Ephraim [*American surgeon,* 1771–1830]. Performed ovariectomy by abdominal section (1809); called *McDowell's operation.*

mace [ME. *of* L. *macis,* fictitious spice]. A spice derived from the dried covering of the seed of the nutmeg.

McElroy test. See Folin-McElroy *test.*

ma'cene (may'seen). $C_{10}H_{16}$. A hydrocarbon resulting from the distillation of nutmeg flowers.

mac'er·ate (mass'ur·ate) [L. *macerare,* to make soft]. Soften a solid or a tissue by steeping.
— **macera'tion.**

mac'er·a"tor [macerare]. A vessel used for macerating a substance.

Macewen, William [*Scottish surgeon,* 1848–1924]. Made important contributions to the development of surgery of the brain. Described the suprameatal triangle, also known as *Macewen's triangle.* Devised an operation for inguinal hernia in which the ligated sac is used as a plug to close the internal inguinal ring; called *Macewen's operation.* Designed osteotomes in three sizes; called *Macewen's osteotomes.* Devised an operation of subcutaneous supracondylar cuneiform osteotomy for the relief of knock-knee, called *Macewen's osteotomy.* See also Macewen's *sign.*

McFarlane's method. See under *method.*

McGill, Arthur Fergusson [*English surgeon,* 1846–90]. Remembered for his prostatectomy by the suprapubic method; called *McGill's operation.*

Machado-Guerreiro reaction. See under *reaction.*

McHardy, George Gordon [*American physician,* 1910–]. With D. C. Browne, invented an esophageal dilator (1939), called *Browne-McHardy dilator.*

Mache, Heinrich [*Austrian physicist,* 1876–]. Introduced a unit of radioactive emanation. A *Mache unit* is the quantity of emanation which produces a saturation current of one one-thousandth of an electrostatic unit.

McIntosh test. Möller, McIntosh, and Van Slyke test. See urea clearance *test.*

mac cis. See *mace.*

Mackenrodt, Alwin Karl [*German gynecologist,* 1859–1925]. Remembered for his description of an operation for the relief of uterine retrodisplacement by vaginal fixation of the round ligaments, called *Mackenrodt's method, operation.* Devised an operation for plastic reconstruction of the vagina (1896). *Mackenrodt's ligament* is also called *cardinal ligament.*

Mackenzie, James [*Scottish cardiologist in England,* 1853–1925]. Made important contributions to the knowledge of atrial fibrillation. Gave the name *—disease* to a syndrome of pathologic symptoms, including irregular respiration and pulse, sensitivity to cold, and dyspepsia, of unknown origin. Also called *Mackenzie's disease.*

Mackenzie, Richard James [*Scottish surgeon,* 1821–54]. Devised a technic of amputation at the ankle joint. See Mackenzie's *amputation.*

Mackenzie, Stephen [*English physician,* 1844–1909]. Described paralysis of the tongue, soft palate, and vocal fold on the same side, called *Mackenzie's syndrome.*

Mackenzie, William (1791–1868). Scottish ophthalmologist who drew attention to increased intraocular tension in glaucoma. He also gave a classic description of sympathetic ophthalmia (1830).

McLean, Franklin Chambers [*American physiologist,* 1888–]. Contributed to the knowledge of the physiology of bone. Devised an index of urea secretion; called *McLean's formula,* index: D = Gm. of urea excreted in 24 hours; C = Gm. of urea per liter of urine; Wt = body weight of the individual in kilograms; U = Gm. of urea per liter of blood.

$$\text{Index} = \frac{D\sqrt{C} \times 8.96}{Wt. \times U}$$

See also McLean and Van Slyke method.

Maclean test. See under *test*.

Macleod, John James Rickard (1876–1935) Scottish physiologist in America who made important studies of diabetes and was associated with Banting and Best in the discovery of insulin (1922). Nobel laureate with Banting (1923).

mac'ley ine mac-ley'ine. See *fumarine*.

ma clu'rin. $C_{13}H_{10}O_6 \cdot H_2O$; pentahydroxybenzophenone; morintannic or moritannic acid. Light yellow microcrystalline powder from the wood of *Chlorophora tinctoria* (*Morus tinctoria*, *Maclura tinctoria*) used in dyeing fabrics.

McMeekin's method. See Koch-McMeekin method.

McMillan, Edwin M. (1907–) American physicist; Nobel prize winner in chemistry (1951) with Glenn T. Seaborg for the *creation and discovery of the transuranium elements*.

MacNeal, Ward J. [*American pathologist*, 1881–1946]. With Novy devised a nutrient blood agar used especially for the cultivation of trypanosomes, called *Novy-MacNeal agar* or *medium*. Nicolle's modification of this for the cultivation of *Leishmania* is known as the *NNN medium*. See also MacNeal's tetrachrome *stain*.

McNeil test. See Schwartz-McNeil *test*.

Mac ra can"tho rhyn chus (mack"ruh can tho-ring'kus) [G. *makros*, long, large; *akantha*, spine; *rhynchos*, snout]. A genus of acanthocephalan worms.

M. hirudinaceus. A species attacking swine and formerly man in the Russian Volga valley.

mac ra cu si a (mack ra cue h h ee-uh, mack ra koo) [*makros*; G. *akousis*, hearing]. A cerebral disorder simulating epilepsy in which sounds are exaggerated.

mac"ren ce phal'ia, mac"ren ceph a lous [*makros*, G. *egkephalos*, brain]. Having an abnormally large brain.

mac"ren ceph ly [*makros*; *egkephalos*]. The condition of having an abnormally large brain.

McReynolds, John Oliver [*American ophthalmologist* 1865–1942]. Described a transplanting operation for the relief of pterygium; called *McReynolds' transplant*.

mac ro-, **macr-** [G. *makros*, long, large]. 1. *In anatomy and medicine*, a combining form denoting *an enlargement*. 2. *In botany and zoology*, a combining form signifying *having an unusually large or elongated part*.

mac ro-bac-te ri um [*makros*; G. *baktērion*, little staff]. A large bacterium.

mac ro blast'. See *procrythroblast*.

mac"ro bl phar'i a (m k"ro bli fair ee-uh, -fair ee-uh) [*makros*; G. *blepharon*, eyelid]. Abnormal largeness of the eyelid.

mac"ro bra'chi-a (mack"ro bray'kee-uh) [*makros*; G. *brachion*, arm]. Excessive development of the arms.

mac"ro ca di us [*makros*; G. *kardia*, heart]. A fetus with a greatly enlarged heart.

mac"ro-ce-pha'li a, mac"ro-ceph ly [*makros*; G. *kephalē*, head]. Abnormal largeness of the head. —**macroceph'alous**, *adj.*

mac"ro-ceph lus [*makros*; *kephalē*]. A fetus with excessive development of the head.

mac ro-chei'li (mack ro-kigh'lee-uh) [*makros*; G. *cheilos*, lip]. Excessive development of the lips characteristic of certain Negro tribes and of cretins; in the latter due to lymphangioma of the lips and cheeks.

mac"ro-chei ri a (mack"ro-kigh reeuh) [*makros*; G. *cheir*, hand]. Enlargement of the hands.

mac"ro co nid'i um (pl. *macroconidia*) [*makros*; G. *konis*, dust]. *In botany*, a large and usually multicelled conidium.

mac'ro-cyte [*makros*; G. *kytos*, cell]. An erythrocyte having either a diameter or a mean corpuscular volume (MCV), or both, exceeding by more than two standard deviations that of the mean normal, as determined by the same method on the bloods of healthy persons of the patient's age and sex group. Also called *macronormocyte*. See also *macrocytic anemia*. —**macrocyt'ic**, *adj.*

mac"ro-cy to'sis (mack"ro-sigh to sis) [*makros*; *kytos*; G. *-osis*, condition]. The presence of macrocytes, or abnormally large erythrocytes, in the blood as determined microscopically or by measurement of cell volume.

mac"ro dac tyl'i a, mac"ro dac'ty ly, mac"ro-dac'tyl ism [*makros*; G. *daktylos*, finger]. Abnormally large fingers or toes.

mac"ro-den'ti-a [*makros*; G. *odous*, tooth]. The condition of having abnormally large teeth; also called *macrodontism*. Syn., *megalodontia*. —**macrodont**, *adj.*

mac"ro-gam'ete (mack"ro-gam eet) [*makros*, G. *gametēs*, marriage]. A relatively large, nonmotile reproductive cell of certain protozoans and thallophytes, comparable to an ovum of the metazoans.

mac ro ga me'to-cyte (-ga-mee'to-sight, -gam'o-sight, -gam'i-to-) [*makros*; *gametēs*; G. *kytos*, cell]. The enlarged merozoite before maturation into the female cell, in propagative reproduction in sporozoa. See Plate 28.

ma crog' my [*makros*; *gamos*]. Conjugation of two adult protozoan cells.

ma crog'li a. See *astrocytes*.

mac ro glob"u lin mi a. A disorder of the blood, clinically manifested by a variable combination of generalized lymphadenopathy, hepatosplenomegaly, and increased lymphocytes in blood and bone marrow, together with normochromic anemia and hemorrhagic diathesis not associated with disturbance of clotting time, bleeding time, prothrombin time, or platelet count. Diagnosis rests on the finding by ultracentrifugation of the macroglobulin, and perhaps also upon immunological characteristics. Also called *m. of Waldenström*.

mac"ro-glos si a [*makros*; G. *glōssa*, tongue]. Enlargement of the tongue.

mac"ro-gnath'i (mack"ro-nath'ik, -nay'thick, mack rog-) [*makros*; G. *gnathos*, jaw]. Having long jaws; prognathous. —**macrog'nathism**, *n.*

mac ro gy'ri [*makros*; G. *gyros*, circle]. A congenital condition of excessively large convolutions of the brain.

mac ro lymph'o-cyte [*makros*; L. *lympha*, water; G. *kytos*, cell]. A large lymphocyte.

mac"ro-mas ti a [*makros*; G. *mastos*, breast]. Abnormal enlargement of the breast. Also called *macromazia*.

mac"ro me'li [*makros*, G. *melos*, limb]. Abnormally large size of arms or legs.

ma crom'e lus [*makros*; *melos*]. An individual having excessively large limbs.

ma-crom' ly. See *macromelia*.

mac ro m r"o zo'it (m ck"ro-merr o zo'ite, -mer o zo'ite) [*makros*; G. *meros*, part; *zōon*, living being]. A large merozoite.

mac" mo-lec u lar [*makros*; F. *molécule*, from L. *moles*, mass]. Having large molecules.

mac"ro-m n o-cyte [*makros*; G. *monos*, alone; *kytos*, cell]. An abnormally large monocyte.

mac"ro my'e-lo blast [*makros*; G. *myelos*, marrow; *blastos*, germ]. A excessively large myeloblast.

mac″ro-nor′mo-blast [*makros*; L. *norma*, rule; G. *blastos*, germ]. A large normoblast or definitive erythroblast. See *prorubricyte*.

mac″ro-nor′mo-cyte. See *macrocyte*.

mac″ro-nu′cle-us [*makros*; L. *nucleus*, nut]. The vegetative or trophic nucleus of protozoa as contrasted with the micronucleus which is reproductive in function.

mac″ro-nych′i-a (mack″ro-nick′ee-uh) [*makros*; G. *onyx*, nail]. Excessive size of the nails.

mac′ro-phage [*makros*; G. *phagein*, to eat]. A phagocytic cell, not a leukocyte, belonging to the reticuloendothelial system. It has the capacity for storing certain aniline dyes, as trypan blue or lithium carmine, in its cytoplasm in the form of granules.

fixed m. A nonmotile macrophage, as that found in loose connective tissue (histiocyte) or lining the sinuses in the liver (Kupffer cell), the spleen, bone marrow, or lymph nodes.

free m. An actively ameboid macrophage found in an area of inflammation. Also called *inflammatory m.*

mac″ro-po′di-a, mac-rop′o-dy [*makros*; G. *pous*, foot]. Abnormal size of the foot or feet. Syn., *pes gigas*, *sciapody*.

mac″ro-pol′y-cyte [*makros*; G. *polys*, many; *kytos*, cell]. Unusually large, neutrophilic leukocytes with six or more lobes in the nucleus. Sometimes called *P.A. polys*, because they are commonly found in the peripheral blood of patients with pernicious anemia.

mac″ro-pro-so′pi-a [*makros*; G. *prosōpon*, face]. Abnormal enlargement of the face.

mac″ro-pros′o-pus (mack″ro-pross′o-pus, -pro-so′pus) [*makros*; *prosōpon*]. An individual with an abnormally large face; also spelled *macroprosopy*.

mac-rop′si-a, mac-rop′sy [*makros*; G. *opsis*, vision]. A disturbance of vision in which objects seem larger than they are. Syn., *megalopsia*.

mac″ro-scop′ic [*makros*; G. *skopein*, to examine]. Large enough to be seen by the naked eye; gross; not microscopic.

mac″ros-mat′ic [*makros*; G. *osmē*, smell]. Possessing a highly developed sense of smell.

mac″ro-so′mi-a [*makros*; G. *sōma*, body]. Gigantism.

mac′ro-spore [*makros*; G. *spora*, seed]. 1. A spore of relatively large size. 2. One of the larger spores arising in the reproduction of certain protozoans, as Radiolaria. —**macrospor′ic**, *adj.*

mac″ro-sto′mi-a [*makros*; G. *stoma*, mouth]. Abnormally large mouth; a mild form of transverse facial cleft.

ma-cro′ti-a (ma-kro′shee-uh) [*makros*; G. *ous*, ear]. Abnormal largeness of the external ear.

mac′u-la (pl. *maculas*, *maculae*) [L., spot]. 1. A spot, usually upon the skin, not elevated above the surrounding level and distinguished by its discoloration. Syn., *macule*. 2. The area of most distinct vision of the retina. —**macular**, *adj.*

false m. The point on the retina of a squinting eye which receives the same impression as the macula of the fixing eye.

m. communis. The thickening in the medial wall of the otic vesicle, which divides to form the maculae, cristae, and organ of Corti of the internal ear.

m. corneae. A permanent corneal opacity from an ulcer or keratitis.

m. cribrosa. A small area of the wall of the vestibule perforated for the passage of the filaments of the vestibular nerve.

m. cribrosa inferior. A small area in the ampulla of the inferior superior semicircular canal perforated by nerve filaments to the corresponding ampulla of the membranous posterior semicircular canal.

m. cribrosa media. A small circular depression in the spherical recess of the vestibule perforated by filaments of the vestibular nerve to the saccule.

m. cribrosa superior. A small oval depression in the elliptical recess of the vestibule perforated by filaments of the vestibular nerve to the utricle and the superior and lateral semicircular canals.

m. densa. A thickening of the epithelium of the ascending limb of the loop of Henle, at the level of attachment to the vascular pole of the renal corpuscle.

maculae acusticae. The m. sacculi and m. utriculi.

m. germinativa. The nucleolus of the ovum.

m. lutea. The yellow spot of the retina; the point of clearest vision. See Plate 19.

m. sacculi. An oval thickened area in the anterior portion of the saccule where the saccular nerve filaments attach; also called *macula acustica sacculi*.

m. utriculi. An oval thickened area in the floor and anterior portion of the utricle where the utricular nerve filaments attach; also called *macula acustica utriculi*.

mac′ule. See *macula*, 1.

mac″u-lo-pap′u-lar [*macula*; L. *papula*, pimple]. Having the characteristics of a macule and papule.

mad [AS. *gemǣded*]. 1. Colloquial term for insane. 2. Affected with rabies; rabid.

mad″a-ro′sis [G. *madaros*, bald; *-ōsis*, condition]. Loss of the eyelashes or eyebrows. —**madarot′ic**, **mad′arous**, *adj.*

mad′der. 1. The Eurasian herb *Rubia tinctorum* L. and other species. 2. The root of *Rubia tinctorum* L. and other species, used for dyeing and from which alizarin and purpurin may be obtained; formerly used medicinally. See also *ruberythric acid*.

Maddox, Ernest Edmund [English ophthalmologist, 1860–1933]. Devised a test for heterophoria by means of a glass rod or several parallel glass rods set in an opaque disk. When held before one eye, the *Maddox rod* converts the image of a candle flame into a line of light. The relative positions of the images seen by the two eyes indicate the degree of heterophoria.

mad″e-fac′tion [L. *madefaction*, from *madefacere*, to moisten]. The act of moistening. Rare.

Madelung, Otto Wilhelm (1846–1926). German surgeon who described a deformity of the wrist, called *Madelung's deformity*.

mad′i-dans (mad′i-danz, -dans) [L. *madidare*, to moisten]. Weeping, oozing.

mad′ness [AS. *gemǣded*]. Colloquial term for mental disorder.

Ma-du′ra foot (mad-oor′uh, mad-yoor′uh, mad′yoo-ruh). See *mycetoma*.

Mad″u-rel′la [dim. from *Madura*, a city in southern India]. A genus of fungi of the Fungi Imperfecti; species of this genus are often isolated in cases of mycetoma.

mad″u-ro-my-co′sis. See *mycetoma*.

Magath, Thomas Byrd [American pathologist, 1895–]. With A. H. Sanford devised a graduated tube for use in the hematocrit, called *Sanford and Magath's centrifuge tube*.

ma′gen-bla-se (mah′gen blah′zeh) [Ger. stomach bubble]. In radiology, the bubble of gas in the stomach normally located under the left side of the diaphragm after eating.

Magendie, François [French physiologist, 1783–1855]. Made important studies of the function of the cerebellum, of cardiac function; of the

mechanism of deglutition, vomiting, and the venous flow; of vascular absorption; of the chemistry of blood and lymph; of the localized action of various drugs. With Pelletier isolated emetine (1817). Gave the earliest clear description of the cerebrospinal fluid (1825). Described th medial foramen in the membranous roof of the fourth ventricle of the brain (1825) called *foramen of Magendie. Magendie law* states that anterior spinal roots are motor, posterior roots are sensory.

mag'en-stras"se (mah gen-shtrah suh. See NOTES § 35) [Ger.]. A longitudinal groove in the mucous membrane of the stomach, along the lesser curvature from the cardiac end to the pyloric end. It is associated with the direct passage of food through the stomach, and is on f the most frequent sites of gastri ulcer.

ma gen ta [from *Magenta*, Italy]. Basi fuchsin.
acid m. Acid fuchsin.

mag'got [ME *mathek*]. The larval form of an insect, especially of the order Diptera. M ggots have been used in the healing of suppurating wounds. Also see maggot *therapy*.
Congo floor m. See *Auchmeromyia luteola*.

mag'is ter"y (madj'i-ster ee) [L. *magister* master]. Formerly preparation considered to have especial virtue as remedy.
bismuth m. Bismuth subnitrate.
tin m. Precipitated stannous oxide, SnO.

mag'is tral (madj -stral). Pertaining to medicines prepared on prescription. *Obs.*

mag'ma [G *magma*, thick unguent]. 1. Any pulpy mass, paste. 2. I pharmacy more or less permanent suspension of precipitate in water.
m. reticul re. The jellylike strands of xtraembryonic mesoderm bridging the extraembryonl coelom of the young human embryo.

mag na'li um. An alloy of al minum and magnesium.

magnamycin. Trade-mark for the antibiotic substance carbomycin.

Magnan, Valentin Jacques Joseph [*French psychiatrist*, 1835–1916]. Described an illusory sensation of foreign body under the skin. Th illusion is noted in cases of cocaine addiction. Called *Magnan sign*.

mag ne sia (mag-nee shuh, shuh). Magnesium oxide, MgO.
calcined m. Magnesium oxide prepared by ignition of the carbonate.
heavy m. Magnesium oxide prepared by ignition of heavy magnesium carbonate.
light m. Magnesium oxide prepared by ignition of light magnesium carbonate.
m. magma. Milk of magnesia.

mag'ne site. Native magnesium carbonate used as substitut for plaster of Paris.

mag ne si um (mag nee zee um, -shum, -shee-um, shum) [G *Magnēsia lithos*, Magnesian stone]. Mg = 24.32. A bluish white metal of the group to which calcium and barium belong. Abundantly distributed throughout inorganic and organic nature and essential to life; its salts are used in medicine. See Table of Normal Values of Blood Constituents in the Appendix. —**magnesic,** *adj.*
m. ammonium phosphate. $MgNH_4PO_4 \cdot 6H_2O$ white, crystalline salt, very slightly soluble in water. Its form tion provides the qualitative and quantitative basis of analyzing for magnesium or phosphate ion.
m. benzoate. $Mg(C_7H_5O_2)_2$; has been used in gout.
m. borate. $Mg(BO_2)_2 \cdot 3Mg(OH)_2 \cdot 7H_2O$. Used as preservative.
m. bromide. $MgBr_2 \cdot 6H_2O$ has been used as sedative.
m. carbonate (*magnesii carbonas*). Basic or normal hydrated magnesium carbonate. Exists in two forms light and heavy magnesium carbonate. Antacid and laxative. Dose, as antacid, 0.3–1.3 Gm. (5–20 gr.); as laxative, 2–8 Gm. (30–120 gr.)
m. chloride. $MgCl_2 \cdot 6H_2O$ has been used as an aperient and cathartic.
m. citrate solution (*liquor magnesii citratis*). Used as cathartic. Dose, 180–350 cc. (6–12 fluidounces).
m. hydroxide. $Mg(OH)_2$. Antacid and cathartic. Dose, 4–8 Gm. (60–120 gr.) Also called m. *hydrate*.
m. lactate. $Mg(C_3H_5O_3)_2 \cdot 3H_2O$; has been used as laxative.
m. mandelate. $(C_6H_5CHOHCOO)_2Mg$. A urinary antiseptic. Dose, 0.5–1.0 Gm. (8–15 gr.).
m. oxide. MgO. Obtained by calcining magnesium carbonate. Exists in two forms: light magnesia (*magnesii oxidum*) and heavy magnesia (*magnesii oxidum ponderosum*). Used as an antacid d laxative and as dusting powder. Dose, as an antacid, 0.25–0.6 Gm. (4–10 gr.); as laxative, 2–4 Gm. (30–60 gr.)
m. perborate. Approximately $Mg(BO_3)_2 \cdot 7H_2O$. Yields 8–9% oxygen; used in dentifrices.
m. perchlorate. $Mg(ClO_4)_2$ and several hydrates thereof. The anhydrous salt is bite, very hygroscopic, granular or flaky powder soluble in water used in various chemical procedures for absorption of water. See *anhydrone, dehydrite*.
m. salicylate. $Mg(C_7H_5O_3)_2 \cdot 4H_2O$; has been used as an intestinal antiseptic and antirheumatic.
m. sulfate (*magnesii sulfas*). $MgSO_4 \cdot 7H_2O$. Epsom salt, an active cathartic, especially useful in inflammatory affections. Dose, 4–30 Gm. (1–8 dr.)
m. trisilicate (*magnesii trisilicas*). Approximately $2MgO.3SiO_2$ with varying amounts of water. Almost insoluble in water; reacts slowly with acid; used as an antacid and adsorbent. Dose, 0.3–2.0 Gm. (5–30 gr.)
tribasic m. phosphate (*magnesii phosphas tribasicus*). $Mg_3(PO_4)_2$. A gastric antacid almost insol ble in water. Dose, 0.6–2.0 Gm. (10–30 gr.)

mag'net [G *Magnētis lithos*, magnet]. 1. Lodestone, iron that ttracts iron. 2. Any body having the power to ttract iron. See also *electromagnet*. —**magnet'ic,** *adj.*
giant m. A large, powerful, stationary magnet for extracting particles of steel from the eye.
horseshoe m. An iron magnet having the shape of horseshoe.
m. operation. The operation of removing foreign bodies of steel from the eye by means of magnet.
Mellinger m. A type of giant magnet, with magnetized core held in the surgeon's hand, the coil being over the patient eye, and devised for extracting steel particles from the eyeball.
permanent m. One whose magnetic properties are permanent.
temporary m. One which derives its magnetism from another magnet or from galvanic current.

mag'net ism [*Magnētis lithos*]. 1. The power possessed by magnet to attract or repel other masses. 2. The force formerly supposed to be transmitted from man to man, an important factor in hypnotism or mesmerism. Also called *animal m.*

mag'net ite. A naturally occurring oxide of iron of the composition Fe_3O_4.

mag"net i za'tion [*Magnētis lithos*]. The process of rendering substance magnetic.

mag ne to-e-lec"tric'i ty (mag-nee"to- mag nee to- mag net o-) [*Magnētis lithos*; G *ēlektron*,

amber]. Electricity produced by moving an electric conductor through a magnetic field.

mag·ne′to·graph [*Magnētis lithos*; G. *graphein*, to write]. An instrument for determining the strength of a magnetic field.

mag·ne″to·in·duc′tion [*Magnētis lithos*; L. *inductio*, from *inducere*, to lead into]. The induction of an electric current by placing a permanent or temporary magnet within a coil of wire.

mag″ne·tom′e·ter [*Magnētis lithos*; G. *metron*, a measure]. A series of magnets suspended to record graphically variations in direction and intensity of magnetic force.

mag·ne″to·op′tic (mag-nee″to-op′tick, mag-net″o-, mag-net-o-) [*Magnētis lithos*; G. *optikos*, of sight]. Pertaining to optic phenomena influenced by magnetic fields.

mag·ne″to·stric′tion. Magnetic phenomenon involving the change in length of a rod or tube of ferromagnetic material when it is exposed to a *magnetic field parallel to its length.*

mag·ne″to·ther′a·py [*Magnētis lithos*; G. *therapeia*, treatment]. The treatment of diseases by magnets.

mag′ne·tron. Microwave generator; a thermionic tube with a magnetic field acting transversely to the cathode-anode path.

mag″ni·fi·ca′tion [L. *magnificare*, from *magnus*, large, *facere*, to make]. Apparent enlargement, especially the enlargement of an object by means of lenses. —**mag′ni·fy**, *v.*

mag′num [*magnus*]. Large, as in *foramen magnum.*

mag′num. An old term for capitate bone (os magnum). See Table of Bones in the Appendix.

Magnus, Rudolf (1873–1927). German physiologist in Holland, best known for his monograph on postural mechanisms, *Körperstellung* (1924). He demonstrated the functions of the otoliths as compared to those of the semicircular canals (1926). The postural reflexes, especially the righting and supporting reflexes, and the tonic neck and tonic labyrinthine reflexes are called *Magnus-de Kleijn reflexes* after him and his chief collaborator. *He is also known for his technique of isolating* a loop of small intestine and research on the physiology of the surviving intestine.

Magnus-Levy, Adolf [*German clinical physiologist in the United States*, 1865–1955]. Demonstrated that thyroid deficiency is associated with reduced metabolism, and is correctible by the administration of desiccated thyroid (1895). Made important studies of diabetic coma and of metabolism in multiple myeloma and introduced dehydration by the use of potassium salts.

Magnuson splint. See under *splint.*

ma hu·ma·ri (mah-hah mah ree). See *plague.*

maid′en·head″ [AS. *maegden*, *hād*]. The hymen, the allusion being to the intact organ of the maid or virgin.

Maier, Rudolf [*German physician*, 1824–88]. Described a small, infundibular depression in the wall of the lacrimal sac called *Maier's sinus.* With Kussmaul, described polyarteritis nodosa (1866) called *Kussmaul-Maier disease.*

ma·ieu·si·o·ma′ni·a (may-yoo″see-o-may′nee-ah) [G. *maieusis*, delivery of a woman in childbirth; *mania*, madness]. Puerperal psychosis. *Obs.*

ma·ieu″si·o·pho′bi·a [*maieusis*; G. *phobos*, fear]. Morbid fear of childbirth.

ma·ieu′tic (may-yoo′tick, migh-yoo′tick) [G. *maieutikos*, skilled in midwifery]. A rubber bag used for dilating the cervix uteri.

ma·ieu′tics (*maieutikos*). Obstetrics. —**maieu′tic**, *adj.*

maim [ME. *maymen*]. Deprive a person or animal of any part of the body; disable or cripple.

main en griffe′ (man ong greef′. See Notes § 35). See *clawhand.*

main en lorgnette (man ong lor-nyet′). See *opera-glass hand.*

Maisonneuve, Jacques Gilles Thomas [*French surgeon*, 1809–97]. Devised a urethrotome with a concealed knife which is retracted until the instrument reaches the stricture; called *Maisonneuve urethrotome, maisonneuve.*

Maissiat, Jacques Henri [*French anatomist*, 1805–78]. Described the iliotibial tract, formerly called *Maissiat's band.*

Maitland, Hugh Bethune [*Canadian bacteriologist in England*, 1895–]. With Mary Cowan Maitland, developed a medium containing chicken kidney and serum, for the cultivation of vaccinia virus without tissue culture.

maize [Sp. *maíz*, from Taino *mahiz*]. Indian corn. A cereal grain, the seed of *Zea mays*. One of the principal foodstuffs. Deficient in niacin (nicotinic acid) and other vitamins. Consequently pellagra is frequent among maize eaters.

Majocchi, Domenico [*Italian dermatologist*, 1849–1929]. Described purpura annularis telangiectodes, called *Majocchi's disease.*

ma′jor med′i·cal as·sem′bly. In military medicine, an aggregation of medical supplies and equipment identified by a consignee combination.

make [AS. *macian*]. *In electricity*, the establishing of the flow of an electric current.

mak·ro-. See *macro-.*

mal [F.]. Disease.

grand m. See grand mal *epilepsy.*

haut m. See grand mal *epilepsy.*

m. de caderas. A disease of South American countries, affecting domestic animals, characterized by fever, emaciation, and paralysis of the hind legs, probably due to a trypanosome.

m. de Cayenne. Elephantiasis.

m. de coït. See *dourine.*

m. del pinto. Pinta.

m. d[illegible] mer. Seasickness.

m. de Meleda. The cutaneous form of onchocerciasis.

m. de rosa. See *pellagra.*

m. des bassines. A dermatitis affecting those in the silkworm industry; due to handling cocoons.

m. de sole. See *pellagra.*

m. perforant. Tabetic, perforating ulcer of the foot.

petit m. See petit mal *epilepsy.*

mal- [L. *malus*, bad]. A combining form denoting *ill, bad.*

mal′a·chite green (mal′uh-kite) (C.C.). Tetramethyl-di-p-aminotriphenylcarbinol, a triphenylmethane dye. Violet-green crystals or powder with bronze luster; soluble in water or alcohol; used as a bacteriologic stain. Has been used as a wound antiseptic and also in the treatment of trypanosomiasis.

ma·la′ci·a (ma-lay′shee-uh, -see-uh) [G. *malakia*, softness]. Softening of part of an organ or structure, the result of necrosis. Also see *encephalomalacia, osteomalacia.*

m. cordis. Softening of parts of the myocardium in infarction.

mal″a·co·pla′ki·a [G. *malakos*, soft; *plakion*, small slab]. Soft, pale plaques in the mucosa, especially of the urinary system, which are slightly elevated, well defined, and surrounded by a zone of hyperemia.

mal″a·die de Ro·ger (mal″a-dee′ duh ro-zhay′). See *ventricular septal defect.*

mal″ad·just′ment [L. *malus*, bad; F. *ajustement*, from *a*, to, *juste*, L. *justus*, right]. A state of faulty or inadequate conformity to one's environment,

due to the inability to adjust one desires, attitudes, or feelings to social requirements.

mal'a-dy [F *malade* sick]. Disease or illness.

ma-laise' (ma layz' *See* NOTES § 25) [F]. A general feeling of illness, sometimes accompanied by restlessness, lack of appetite, and decreased energy.

mal" ko pla'ki a. See *malacoplakia*.

mal'an-ders [L. *malandria*, blisters]. A disease of the horse characterized by *furfuraceous eruption* at the bend of the knee and on the inside of the hock. It is called malanders when affecting the foreleg and sallenders when affecting the hindleg.

ma'lar [L. *mala*, cheek]. Pertaining to the cheek or to the zygoma.

ma'lar Old name for zygoma. See Table of Bones in the Appendix.

ma lar'i a (ma lair ee uh) [It., from *mala aria*, bad air]. An infectious *febrile* disease, caused by four species of the protozoan genus *Plasmodium* (*P. falciparum*, *P. vivax*, *P. malariae*, *P. ovale*) characterized by intermittent fever, splenomegaly, debility and anemia, and tending to run a chronic course. The acute, clinical attacks or paroxysms are characterized by chills, high fever, and profuse sweating; these usually alternate with periods of comparative well-being; they occur in regular cycles, e.g., every day, every other day, or every fourth day. The disease is transmitted naturally only by the *anopheles* mosquito. Older classifications of malaria were based on the organ system involved, as cerebral m., gastrointestinal m., thoracic m., or on the most prominent symptom, as algid m. or bilious m. Syn., *Beers fever*. See Plates 27, 28, 29. —**malar'ial, malar'ious,** *adj.*

avian m. Malaria of birds and poultry due to numerous species of the genus *Plasmodium*.

benign tertian m. See vivax m.

equine m. Infectious anemia of horses.

falciparum m. A severe form caused by *Plasmodium falciparum*, characterized by paroxysms occurring at irregular intervals and often by the localization of the organism in a specific organ of the body, as the brain, lungs, intestinal mucosa, spleen, and kidney; also called *estivo-autumnal m.*, *malignant m.*, *malignant tertian m.*

ovale m. A form similar to vivax m., caused by *Plasmodium ovale*.

quartan m. That caused by *Plasmodium malariae*, characterized by short paroxysms occurring every third day.

quotidian m. *A form in which the* paroxysms occur every day, usually caused by two concomitant infections by *Plasmodium vivax*.

subtertian m. Falciparum m.

tertian m. See vivax m.

vivax m. That caused by *Plasmodium vivax*, characterized by typical paroxysms occurring every two or three days, typically every second day; also called *benign tertian m.*, *tertian m.*

ma lar"i ol' o gist [*malaria*; G. *logos*, word]. An expert in the diagnosis, treatment, and control of malaria.

ma lar"i-ol' o gy [*malaria*; *logos*]. The study of malaria.

ma lar"i-o ther'a py [*malaria*; G. *therapeia*, treatment]. Treatment of neurosyphilis by infecting the patient with malaria.

Mal"as-se zi a [after Louis Charles *Malassez*, French physiologist, 1842–1909]. A genus of fungi.

M. furfur That species which is the causative agent of pityriasis versicolor.

mal"as sim"i la'tion [L. *malus*, bad; *assimilare*, to make like]. Defective assimilation.

mal ate. Any salt or ester of malic acid.

mal"di ges tion (*malus*; L. *digere*, ... *digerer*, to digest). Disordered or imperfect digestion.

male [L. *masculus*, male]. 1. An individual of the male sex. The designative symbol is □, ♂ (that of the female is ○, ♀). 2. Of a double-bladed instrument, the blade which is received into a hollow of the other (female) blade. 3. *In botany*, a plant having stamens only. —**male,** *adj.*

ma le ate. Any salt or ester of maleic acid.

male fern. See *aspidium*.

ma le'ic ac'id (ma lee'ick, ma lay'ick) COOH-CH:CH.COOH. Cis-ethylene carboxylic acid. A dibasic acid, the cis-isomer of fumaric acid. Does not occur in nature.

ma le'ic an hy'dride $C_4H_2O_3$; 2,5-furandione, occurring as white crystals, soluble in water to form maleic acid, used commercially in synthesis of resins, dye intermediates, and other substances. It causes burns when in contact with the skin.

Malfatti formol titration method. See under *method*.

mal"for ma'tion [L. *malus*, bad; *formatio*, from *formare*, to form]. An abnormal development or formation of a part of the body; deformity.

Malgaigne, Joseph François [French surgeon, 1806–65]. Devised an operation of subastragalar disarticulation of the foot, called *Malgaigne's amputation*. He also described vertical fracture of the pelvis, called *Malgaigne's fracture*.

mal'ic ac'id (mal'ick, may'lick) COOH.CH$_2$.CHOH.COOH. A dibasic hydroxy acid found in apples and many other fruits. Exists in two optically active isomers and a racemic form. The iron salt has been used medicinally for the effect of the metal.

ma lig'nant [L. *malignus*, wicked, malignant]. Virulent; threatening life, as malignant tumors. —**malignancy** *n.*

ma lin'ger-er (ma ling gurur) [F *malingre*, sickly]. One who feigns illness or inability, usually to escape military duty or to secure benefit from an alleged injury. —**malingering,** *n.*

mal"in"ter-dig i ta tion (mal in tur-didj i tay shun) [L. *malus*, bad; *inter*, between; *digitus*, finger]. Abnormal occlusion of the teeth.

Mall, Franklin Paine [American embryologist, 1862–1917]. Developed a formula for estimating the age of human embryos with a vertex-breech length of 100 mm. or less. VB represents vertex breech length in millimeters.

$$\text{Age in days} = \sqrt{VB \times 100}$$

When *Mall's formula* was introduced, *the Peters* embryo was thought to be three or four days old. Since the Peters embryo is now known to be about 14 days old, it is necessary to correct the formula *as follows*:

$$\text{Age in days} = \sqrt{VB \times 100} + 10$$

Founder of the laboratory of embryology of the Carnegie Institution.

mal'le able [L. *malleus*, hammer]. Capable of being beaten or rolled into thin sheets. —**malleabil'ity** *n.*

mal"le a'tion [*malleus*]. A spasmodic action of the hands, consisting in continuously striking any near object.

mal'le-in [*malleus*]. A fluid obtained from cultures of *Malleomyces mallei* (glanders bacillus). When injected into the circulation of an animal having glanders, it causes an elevation of temperature. Mallein has been recommended for use in the early diagnosis of glanders.

mal"le-o-in'cu-dal (mal"ee-o ing cue'dul, -in cue'dul) [*malleus*; L. *incus*, anvil]. Relating to the malleus and the incus.

mal le o-lus (pl. *malleoli*) [L., small hammer]. A part or process of bone having a hammerhead shape. —**malleolar** *adj.*

lateral m. The lower extremity of the fibula. Also called *external m.* See Plate 1.

medial m. A process on the internal surface of the lower extremity of the tibia. Also called *internal m.* See Plate 1.

Mal″le-o-my′ces (mal″ee-o-migh′seez) [*malleus*; G. *mykēs*, fungus]. A genus of the family Parvobacteriaceae composed of small, slender Gram-negative, nonmotile, nonsporulating, rodlike bacteria sometimes developing into branched filaments.

M. mallei. That species which is the causative agent of glanders. Formerly called *Bacillus mallei*.
M. pseudomallei. That species which causes melioidosis in rodents and in man. Formerly called *Bacillus whitmori*.

mal″le-ot′omy [*malleus*; G. *tomē*, a cutting]. 1. Incision or division of the malleus. 2. Division of the ligaments attached to the malleoli.

mal′let fin′ger. See under *finger*.

mal′le-us [L.]. 1. One of the ossicles of the internal ear having the shape of a hammer. See Plate 20. See Table of Bones in the Appendix. 2. *Veterinary medicine*, glanders. —**mal′leal**, *adj.*

Mal·loph′a·ga [G. *mallos*, wool]. An order of small, wingless, flat insects which feed on hair, feathers, and epidermal scales, parasitic on birds and occasionally man; the bird lice.

Mallory, Frank Burr [*American pathologist*, 1862–1941]. Introduced a number of stains. See under *stain*.

Mal·lo′tus [G. *mallōtos*, fleecy]. A genus of trees and shrubs of the Euphorbiaceae. **M. philippinensis**, a species of India, yields the taeniafuge and dyestuff, kamala.

mal′low [L. *malva*, mallows]. Any plant of the genus *Malva*.

Malloy-Evelyn method for bilirubin in blood. See under *method*.

Malmsten, Per Henrik [*Swedish physician*, 1811–83]. Discovered *Balantidium coli* (1857).

mal″nu·tri′tion [L. *malus*, bad; *nutrire*, to nourish]. Imperfect nutrition. —**malnour′ish**, *v.*

mal″oc·clu′sion (mal″o-cloo′zhun) [*malus*; L. *occludere*, to close]. Any deviation from normal occlusion of the teeth usually associated with abnormal developmental growth of the jaws. **Angle's classification of m.** is based on the mesiodistal (anteroposterior) relations of the teeth, dental arches, and jaws which depend primarily upon the positions mesiodistally assumed by the first permanent molars on their erupting and locking.

Class I. Arches in normal mesiodistal relations.
Class II. Lower arch distal to normal in relation to the upper arch.

Division 1. Bilaterally distal, protruding upper incisors. Primarily, at least, associated with mouth-breathing.

Subdivision. Unilaterally distal, protruding upper incisors. Primarily, at least, associated with mouth-breathing.

Division 2. Bilaterally distal, retruding upper incisors. Normal breathers.

Subdivision. Unilaterally distal, retruding upper incisors. Normal breathers.

Class III. Lower arch mesial to normal in relation to upper arch.

Division. Bilaterally mesial.

Subdivision. Unilaterally mesial.

mal′o·nate. Any salt or ester of malonic acid.

ma·lo·nic ac′id (ma·lo′nick, ·lon′ick). COOH·CH₂·COOH. A dibasic acid found in many plants and obtainable from malic acid by oxidation.

mal′o·nyl (mal′o·nil, ·neel). $H_2C<^{CO-}_{CO-}$. The bivalent radical of malonic acid.

mal″o·nyl u·re′a. Barbituric acid.

Malpighi, Marcello [*Italian anatomist*, 1628–94]. Pioneer histologist. Discovered the capillary circulation (1661). Made important studies of the structure of the lungs (1661) and of the kidneys (1666). Described the metamorphosis of the silkworm (1669) and the development of the chick embryo as observed through the microscope (1672). Both the splenic corpuscles, or lymph nodules of the spleen, and the renal corpuscles, were called *Malpighian* (or *malpighian*) *bodies* or *corpuscles*. See also Malpighian (or malpighian) *pyramid*. The germinative layer of the epidermis was called the *Malpighian* (or *malpighian*) *layer*.

mal″po·si′tion [L. *malus*, bad; *positio*, from *ponere*, to place]. An abnormal position of any part or organ, as of the fetus.

mal pos′ture [*malus*; L. *positura*, from *ponere*, to place]. Faulty posture.

mal″prac′tice [*malus*; G. *praktikos*, fit for doing]. Improper medical or surgical treatment, through carelessness, ignorance, or intent.

mal″pres″en·ta′tion (mal·prez·un·tay′shun, ·pree·zen·tay′shun) [*malus*; L. *praesentare*, to present]. Abnormal position of the child at birth, making delivery difficult or impossible.

mal″re·duc′tion [*malus*; L. *reductio*, from *reducere* to bring back]. Faulty or incomplete reduction of a fracture.

malt (mawlt) [AS. *mealt*]. Grain, commonly of one or more varieties of barley, which has been soaked, made to germinate, and dried. The germinated grains contain diastase, dextrin, and maltose, as well as proteins. Malt is used as a nutrient in wasting diseases.

m. extract (*extractum malti*). A viscous, light-brown, aqueous extract. Dose, 4–15 cc. (1–4 fluidrachms).

Mal′ta fe′ver (mawl′tah). See *brucellosis*.

malt′ase (mawl′tace, ·taze). An enzyme found in the saliva and pancreatic juice which converts maltose into dextrose.

Malthus, Thomas Robert [*English political economist*, 1766–1834]. Evolved the theory that population, *in the absence of such checks on its growth as epidemics and war*, tends to increase more rapidly than the food supply. Advocated sexual continence as a means of limiting the birth rate. Acceptance of Malthus' doctrines is called *Malthusianism*. The term is incorrectly applied to advocacy of restriction of the birth rate by means of birth control.

mal″to·bi′ose (mawl·to·buy′ose). Maltose.

mal″to·dex′trin. A form of dextrin convertible into maltose.

malt′ose (mawl′tose). $C_{12}H_{22}O_{11}.H_2O$; 4-(α-D-glucopyranosido)-β-glucopyranose, a reducing disaccharide representing two molecules of D-glucose joined by α-glycosidic linkage, and yielding two molecules of D-glucose on hydrolysis. It does not appear to exist free in nature, being a product of enzymatic hydrolysis of starch by diastase, as in malt. It exists in two forms, α-maltose and β-maltose. Syn., *maltobiose*, *malt sugar*.

mal″to·su′ri·a [AS. *mealt*; G. *ouron*, urine]. The presence of maltose in the urine.

mal turned′ [L. *malus*, bad; AS. *turnian*]. Turned abnormally; applied to a tooth so turned on its long axis as to stand in malposition.

ma′lum [L.]. Disease.

m. Aegyptiacum. Diphtheria.
m. coxae senilis. Hypertrophic arthritis of the hip joint in the aged.
m. perforans pedis. Perforating ulcer of the foot.
m. pilare. Trichinosis.

m. venereum. Syphilis.

mal un'ion [L. *malus*, bad; *unire*, to unite]. Incomplete or faulty union of the fragments of a fractured bone.

Mal va [L., mallows]. The mallow; a genus of the Malvaceae. The leaves of **M. neglecta** and **M. sylvestris** are used as demulcents.

ma man pi an (mah mahn-pee-ahn. *See* Notes § 35). See mother yaws.

mam'ba (mahm'bah) [Kaffir snake]. Any snake of *Dendraspis*, a genus of venomous snakes of southern Africa, allied to cobras except that they have no hood. The common black mamba is *D. angusticeps*.

mam'e-lon [F. nipple]. One of the three elevations on the incisal edge of a recently erupted or little-worn incisor tooth.

mam ma (pl. *mammae*) [L. *mamma*, breast]. The breast, the milk-secreting gland.

m. aberrans. Supernumerary breast. Also called *m. erratica*.

m. virilis. The male breast.

mam mal [*mamma*]. An individual of the class Mammalia.

mam mal'gi a [*mamma*; G. *algos*, pain]. Pain in the mamma.

Mam ma'li a [*mamma*]. The highest class of vertebrates, including all animals that have hair and suckle their young. —**mamma'lian,** *adj.*

mam ma plas"ty [*mamma*; G. *plassein*, to form]. Plastic surgery of the breast.

mam ma ry [*mamma*]. Pertaining to the mammae.

mam mec'to-my [*mamma*; G. *ektomē*, excision]. Excision or amputation of the breast.

mam mi form [*mamma*; L. *forma*, shape]. Shaped like a breast or nipple.

mam mil'la (pl. *mammillae*) [L., nipple]. A small prominence or papilla; nipple.

mam mil lar"y (mam ler ee, mam il ar ee) [*mammilla*]. Nipple-shaped; pertaining to a nipple; shaped like a breast.

mam mil la"ted [*mammilla*]. Covered with nipple-like protuberances.

mam"mil la'tion [*mammilla*]. A granulation, especially on some mucous surface.

mam mil'li form [*mammilla*; L. *forma*, shape]. Nipple-shaped.

mam-mil"li-plas"ty [*mammilla*; G. *plassein*, to form]. Plastic surgery of the nipple. Syn., *thelyplasty*.

mam mil li'tis [*mammilla*; G. *-itis*, inflammation]. Inflammation of the mammilla, or nipple. Syn., *thelitis*.

mam"mil l tha lam'ic [*mammilla*; G. *thalamos*, chamber]. Connecting the mammillary body with the thalamus, as the mammillothalamic tract.

mam mi'tis. See *mastitis*.

mam mo-gen [L. *mamma*, breast; G. *gennathai*, from *gignesthai*, to be produced]. Old term for prolactin; also called *mammogenic hormone*. —**mammogen'ic,** *adj.*

mam-mog'ra-phy [*mamma*; G. *graphein*, to write]. Radiographic examination of the breast performed after injecting the ducts of the mammary gland with an opaque contrast medium.

mam mose (mam ohss, ma-mohss') [*mamma*]. Having full or abnormally large breasts.

mam mot o-my [*mamma*; G. *tomē*, a cutting]. Mastotomy.

mam mo-tro pin [*mamma*; G. *tropos*, turning]. Prolactin; formerly spelled *mammotroph*.

mam mo tro phin. See *mammotropin*.

mam pi ra. A tiny ceratopogon midge of the tropics which causes urticaria and subjective symptoms of burning pruritus. Syn., *merui*.

man. 1. *Homo sapiens*; the human race, mankind. 2. A male human being.

man a ca [Brazilian]. The dried root of *Brunfelsia hopeana*. Has been used as an antisyphilitic, diuretic, and cathartic.

man cha da. See Lucio *leprosy*.

Manchester operation. See under W. E. *Fothergill*.

M nicke's test. See insulin-glucose-water tolerance *test*, also called *Althausen-Mancke test*.

man de man. See *ammonium mandelate*.

M & B 693. A manufacturer's designation for sulfapyridine.

Mandelbaum, Meier (1881–1947). German physician who described filamentation of bacteria which is also called *Mandelbaum reaction*.

man del'ic ac'id (man-del'ick, -dee'lick) (*acidum mandelicum*). $C_6H_5CH(OH)COOH$. Alpha-hydroxyphenylacetic acid, occurring as white crystals or powder. 1 Gm. dissolves in about 6.5 cc. of water. Employed, chiefly in the form of one of its salts, as a urinary antiseptic; for maximum efficiency the pH of the urine should be below 5.5. Dose, 2–4 Gm. (30–60 gr.). Also called *amygdalic acid*, *inactive mandelic acid*, *racemic mandelic acid*.

man del"o-ni'trile. $C_6H_5CH(CN)OH$. Mandelic acid nitrile or benzaldehyde cyanhydrin, capable of existing in optically active and racemic forms. Hydrolysis of the racemic substance yields mandelic acid.

m. glucoside. $C_6H_5CH(CN)O.C_6H_{11}O_5$. A glucoside, existing in various plants in three isomeric forms, designated *d*-mandelonitrile glucoside (sambunigrin), *l*-mandelonitrile glucoside (prunasin), and *dl*-mandelonitrile glucoside (prulaurasin). On hydrolysis all three give D-glucose as the sugar and *d*-mandelonitrile, *l*-mandelonitrile, and *dl*-mandelonitrile, respectively, as the aglycone.

man di ble (man dib u-la) [L. *mandibula*, jaw]. The lower jawbone. See Plate 1. See Table of Bones in the Appendix. —**mandib'ular,** *adj.*

man dib u lo-glos'sus. A variant portion of the genioglossus muscle extending from the posterior border of the mandible to the side of the tongue.

man-dib"u lo mar"gin al'is. A variant part of the platysma muscle extending from the mastoid process forward over the angle of the mandible.

man di-o ca. See *manioc*.

Mandl, Felix (1892–). Austrian surgeon who, with F. Brunn, introduced the method of treating angina pectoris by the injection of alcohol into the sympathetic trunk (1924). He relieved osteitis fibrosa generalisata by extirpation of a parathyroid tumor (1925) and introduced infiltration of the frontal lobes instead of operation for intractable pain (1950).

M ndler fil'ter. See under *filter*.

Man-drag [G. *mandragoras*, mandrake]. The mandrake. A genus of solanaceous plants. **M. officinarum** has been used as a narcotic and hypnotic; contains an alkaloid, mandragorine.

man-drag'o-rine (man drag reen, -rin). A poisonous alkaloid from *Mandragora* resembling atropine in action.

man drake [ME., from *mandragoras*]. Common name for *Mandragora*.

man drin [F.]. A guide or stylet.

man du ca tion [L. *manducatio*, from *manducare*, to chew]. The chewing or mastication of food. —**man ducatory,** *adj.*

ma neu ver [F. *manoeuvre*, from L. *manu operari*, to work by hand]. Skillful procedure or manual method.

Jendrassik m. A method used in neurological examination to facilitate testing of a peripheral reflex, wherein the patient is asked to interlink his hand and pull them apart at time of testing.

Prague m. Delivery of the after-coming head by

grasping the shoulders from below with two fingers of one hand, while the other hand draws the feet up over the abdomen of the mother

ma neu'ver T manipulate

manexin. Trade-mark for *mannitol hexanitrate.*

man ga nese (mang guh niece, -neez, man guh) [It., from ML. *magnesia*]. Mn = 54.94. A brittle, hard, grayish-white metal resembling iron in its properties. Manganese salts are extensively used in medicine, but proof of their value is lacking.

m. butyrate. M (C H_7O_2) A red, water soluble powder: aqueous solutions have been administered intramuscularly in the treatment of furunculosis.

m. dioxide. MnO_2. A black powder insoluble in water has been used in treatment of amenorrhea, syphilis, and various skin diseases.

m. glycerophosphate (*mangani glycerophosphas*) $MnC_3H_5(OH)_2PO$ A white or pinkish-white powder slightly soluble in water: has been used in neurasthenia.

m. hypophosphite (*mangani hypophosphis*) M (PH_2O_2) H_2O A pink, crystalline powder soluble in water: has been used as hematinic.

m. iodide. MnI 4H_2O A yellowish-brown powder soluble in water: has been given in the anemias of tuberculosis and syphilis. Dose, 0.12–0.25 Gm. (2–4 gr.)

m. peptonate. A brown powder solubl in water representing about 3% manganese used in the treatment of anemias.

m. sulfate. $MnSO_4$ 4H_2O pale pink crystal, soluble in water: has been used as cholagogue and in treating anemias.

soluble m. citrate (*mangani citras solubilis*) Manganese citrate. [C_3H OH.(COO)$_3$]Mn; rendered soluble by the presence of sodium citrate: has been used as tonic.

man gan'ic (man-gan'ick, mang-gan ick) Referring to manganese when it has valence of four

man ga nous (mang guh us, man guh-nus) Referring to manganese when t has valence of two.

mange (maynj) [ME *manjewe* cf. F *manger* to eat]. Infestation of the skin of mammals by mange mites which burrow into the epidermal layer of the skin characterized by multiple lesions in the skin ith vesiculation and papule formation accompanied by intense itching.

follicular m. That form produced by the *Demodex folliculorum* which parasitizes the hair follicles or sebaceous glands of man and domestic animals

sarcoptic m. The form most common to man, caused by the *Sarcoptes scabiei* See *scabies*

man go (mang go) [Pg. *manga*, from Tamil *mânkây*]. The fruit of *Mangifera indica*, the seeds have been used as an anthelmintic and the bark has been used as an astringent and tonic to the mucous membranes.

man go steen (mang'go steen) 1 Fruit of *Garcinia mangostana*. 2. $C_{20}H_{22}O$ A crystalline bitter principle found in the pericarp of *Garcinia mangostana*.

ma' i (G., madness) 1 Excessive enthusiasm or excitement; violent desire or passion 2. A psychotic disorder See manic depressive *reaction* —ma 'ic, ma ic *adj* maniac, *n.*

Bell' m. Acute manic excitement.

brood i g m. A morbid mental state characterized by an impulse to prolonged and anxious meditation.

histrionic m. Mania in which the patient assumes dramatic manner playing the role of an actor *Obs.*

m. à potu. See pathologic *intoxication*.

periodic m. A succession of manic attacks. Also called *recurrent m*

puerperal m. See puerperal *psychosis*.

transitory m. A form characterized by sudden onset and short duration (one hour to few days)

man'ic-depres'sive re-ac'tion. See under *reaction*.

Man'i hot [F of Tupian origin]. A genus of the Euphorbiaceae yields cassava.

man'i ki [D *manneken*, dim. from *man*, man]. 1. A model of the body made of plaster papier mâché, or other m terial, and showing, by means of movable parts, the relations of the organs. 2. A model of term fetus: used for the teaching of bstetrics. 3. A little man with normal proportion of parts dwarf; homunculus.

man'i oc, ma ni oc [F of Tupian origin]. The cassava plant or its product, tapioca. See *Manihot*.

man'i ple [L. *manipulus*, handful]. A handful. *Obs.*

ma nip u la'tion [*manipulus*]. The use of the hands in skillful manner as reducing dislocation, returning hernia into its cavity or changing the position of fetus

combined m. The use of both hands in obstetric or gynecologic procedure, one being in the vagina and the other on the abdomen.

Ma n, Frank Charles (1887) American physiologist and surgeon who, with Carl S. Williamson, produced an experimental peptic ulcer in dogs, called Mann-Williamson *ulcer* W th Jesse L. Bollman, he introduced an intestinal fistula in animal experimentation, called Mann-Bollman *fistula*.

Mann, John Dixon [*English physician*, 1840–1912]. Described disturbance of the normal muscl balance in the two orbits, so that one eye appears to be on lower level than the other in exophthalmic goiter Called *M sign*.

Mann, Ludwig [*German neurologist*, 1866–1936]. Described pastic hemiplegia of the extremities; in the *Wernicke-Mann type* of paralysis some groups of muscles are relatively less affected than others.

Mann's eosin–methyl blue stain. See under *stain*.

man'na [G from the Hebrew]. The concrete, saccharine exudation of the flowering ash, *Fraxinus ornus*. A mild laxative containe sweet principle, mannite or mannitol, sugar mucilage, and resin. Some specimens also contain glycoside (fraxin)

m. sugar Mannitol.

man nan. See *mannosan*.

man' i no-tri'ose. A trisaccharide occurring in manna on hydrolysis it yields one molecule of glucose and two of galactose.

man ni tan. $C_6H_{12}O$ A sweet, syrupy substance the hydride of mannitol.

man nite. See *mannitol*

man i t l CH_2OH HOCH HOCH HCOH. $HCOHCH_2OH$ D-mannitol hexahydric alcohol from manna and other plant sources, occurring as colorless crystals, freely soluble in water sometimes used to measure the rate of glomerular filtration, and as an irrigating fluid in transurethral resection of the prostate In pharmacy used as diluent and excipient. Syn., manna *sugar mannite*.

m. hexanitrate $C_6H_8(ONO_2)_6$; an ester formed by nitration of mannitol, occurring as explosive, colorless crystals, insoluble in water It i supplied only in admixture with carbohydrates to render it nonexplosive It exerts the vasodilator action of nitrite ion, acting within 15 to 20 minutes and remaining effective for 4 to 6 hours. Syn., *nitromannite nitromannitol*. See *manexin*, *maxitate*, *nitranitol*.

ma ni tose See *mannose*

man'no-car'o-lose. A polysaccharide of unique structure, synthesized by the mold *Penicillium charlesii*, consisting only of mannose residues.

man"no ke"to-hep tose. $CH_2OH.CO(CHOH)_4$-CH_2OH. A polysaccharide obtained from the avocado pear *Persea gratissima*.

man non'ic ac'id (ma-non ik, ma-no nick) CH_2-$OH(CHOH)_4COOH$. An acid derived by the oxidation of mannitol.

m n"no-sac ch r'ic ac'id. COOH.HOCH.HOCH.HCOH.HCOH.COOH; the saccharic acid produced when both the aldehyde and primary alcohol groups of mannose are oxidized.

man no-san. A polysaccharide, occurring in plants, which upon hydrolysis yields mannose. Sometimes called *mannan*.

man nose. $C_6H_{12}O_6$. A fermentable monosaccharide obtained from manna. Occurs in two optically active forms.

man"no-tet'rose. Stachyose.

man no tri'ose. A trisaccharide having two molecules of galactose and one of glucose as the constituent monosaccharides, formed by partial hydrolysis of mannotetrose.

m n"nu ron'ic a 'id. CHO HOCH.HOCH HCOH.HCOH.COOH D-mannuronic acid the uronic acid resulting when the primary alcohol group of mannose is oxidized to carboxyl.

ma nom ter [G. *manos*, rare; *metron*, measure]. An instrument for measuring the pressure of liquids and gases. —**manomet ric,** *adj.*

Hamilt n m. A very accurate optical manometer which measures arterial pressure.

optical m. Device for the accurate registration of the details of pressure pulses, in which pressure changes are led through rigid, fluid-filled system to tense rubber or metallic membrane on which is mounted small mirror. The deflections of beam of light reflected from this mirror are recorded on moving photographic paper.

man"o met ric flames. Flames of different heights and characters seen in rotating mirror and due t the reflection of pulsating gas flame, when the supplying gas is set in motion by sound waves.

ma-nom'e-try. Use of manometers.

Cartesian diver m. That using micromanometric technique for the gasometric determination of isolated enzymes and the metabolic activity of minute quantities of tissue.

man o-scope [*manos*, G *skopein*, to examine]. An instrument for measuring the density of gases.

Manson, Patrick [*Scottish physician and parasitologist*, 1844–1922]. Sometimes called the father of tropical medicine. Demonstrated that the mosquito *Culex fatigans* serves as intermediate host to the parasite which causes elephantiasis (1879) this is said to be the first report of an invertebrate vector in disease of man. Studied intestinal schistosomiasis, also called *Manson disease*. The blood fluke causing the disease is called *Schistosoma mansoni*.

Man so-nel'la [NL., after *Manson*]. A genus of filarial worm transmitted t man by mosquitoes of th genus *Culicoides*.

M. ozzardi. A species which infests man but produces little tissue reaction.

Man-so ni a. A genus of mosquitoes which are important as vectors of human disease. Species of *Mansonia* subgenus *Mansonioides* are the principal carriers of *Wuchereria malayi*, and also are carriers of *Wuchereria bancrofti*.

man'tle [L. *mantellum*, mantle]. 1 Old term for that portion of the brain substance includi g the convolutions, corpus callosum, and fornix. 2 A mantle layer. See under *layer*.

Mantoux, Charles [*French physician*, 1877 1947]. Introduced intradermal injections of tuberculin as test for hypersensitivity (1908). The method was introduced independently in the same year by Felix Mendel. Called *Mantoux test*, *Mendel test*. Originally dilutions of old tuberculin were used, but today the term *Mantoux test* refers also to the intradermal injection of PPD (purified protein derivati) of th *Mycobacterium tuberculosis*.

ma nu'bri um [L., that which is grasped in the hand]. 1 A handle. 2. The first or upper piece of the sternum. —**manubrial,** *adj.*

m. of malleus. The handle-shaped process of the malleus of the ear.

man"u-duc'tion [L. *manus*, hand; *ducere*, to lead]. Operation performed by the hands in surgical and obstetric practice.

man u dy"na mom e-ter [*manus*; G *dynamis*, power *metron*, measure]. An instrument which measures the force exerted by the thrust of an instrument.

ma nus [L.]. The hand.

m. cava. Excessive concavity of the palm of the hand.

m. curta Clubhand.

m. extensa. Clubhand with backward deviation.

m. flexa. Cl bhand with forward deviation.

m. valga. Clubhand with ulnar deviation.

m. ra. Clubhand with radial deviation.

man"u-stu pra tion. Masturbation.

man y plies (men ee-plies) [E. *many*; plural of *ply*, fold]. The third compartment in the stomach of ruminants. See *omasum*, *psalterium*.

Manz, Wilhelm [*German ophthalmologist*, 1833–1911]. Described glandlike depressions in the ocular conjunctiva near the margin of the cornea. *Manz' utricular glands* are now thought to be simpl epithelial invaginations.

mapharsen. Trade-mark for oxophenarsine hydrochloride crystallized with half molecule of alcohol.

Maragliano, Edoardo [*Italian physician*, 1849–1940]. Introduced *Maragliano serum* for the treatment of tuberculosis. Described areas of degeneration seen in red blood cells after exposure to air called *Maragliano degeneration*.

Ma ran'ta. See *arrowroot*.

ma ran tic [G *marantikos*, wasting way]. 1 Pertaining to marasmus. 2. Pertaining to slowed circulation.

ma ras'mic ac'id. An antibiotic substance elaborated by the Basidiomycetes fungus *Marasmius conigenus*, active in vitro against variety of organisms.

ma-ras mus (ma raz'mus) [G withering] A gradual wasting of the tissues of the body from insufficient, imperfect food supply or from poor absorption of good food supply. —**marasmic, marasmoid,** *adj.*

mar'ble bones. See *osteopetrosis*.

mar"ble i za'tion [G *marmaros*, marble]. The condition of bei g marked or veined like marble.

Marburg, Ott (1874–1948) Austrian neuroanatomist, known for his work on multiple sclerosis, malformations, diseases and injuries of the nervous system, and the neurology of the ear.

marc (mark, mar) [F from *marcher* t trample]. The residue remaining after the extraction of the active principles from vegetable drug, or after the extraction of the juice or oil from fruits.

Marcha d, Felix Jacob [*German pathologist*, 1846–1928] Described the accessory adrenal bodies found in the broad ligament called *Marchand's adrenals*.

march col lec'ting post. I *military medicine*, location on th route of march at which casualties who cannot continue to march are given medical treatment and moved to medical stations in the rear.

marche -à-pet it-pas, (marsh ah pet I pah) [F

a walk with little steps]. A shuffling gait, with no swing of the arms and rigid movement of the whole body; often seen in arteriosclerotic parkinsonism.

march foot. See march *fracture*.

Marchi, Vittorio (1851–1908). Italian neurohistologist who contributed greatly to neurohistology and the study of secondary degeneration of nerves by showing that products formed in degenerating myelin sheaths could be stained specifically by osmic acid after mordanting with a chromic salt. See *Marchi's method* under stain.

Marchiafava, Ettore (1847–1935). Italian pathologist who established the life cycle of *Plasmodium falciparum*, first described syphilitic cerebral arteritis (1877), and was first to observe primary degeneration of the corpus callosum in alcoholic patients (*Marchiafava's disease*). Nocturnal hemoglobinuria is known as *Marchiafava-Micheli syndrome*.

Marckwald, Max [German surgeon, 1844–1923]. Devised an operation in which he removed two wedge-shaped sections of the vaginal portion of the cervix uteri, for the relief of stenosis of the external uterine os; called *Marckwald's operation*.

mar'cor. Marasmus.

Maresch stain. See *Bielschowsky-Maresch ammoniacal silver solution* under stain.

Marey, Étienne Jules [French physiologist, 1830–1904]. Inventor of the sphygmograph. Contributed to the knowledge of the circulation. *Marey's law* states that the heart rate is inversely related to pressure in the aortic arch and carotid sinus: increase in pressure produces cardiac slowing; decrease in pressure, acceleration; also called *Marey's reflex*.

Marfan, Antonin Bernard Jean [French pediatrician, 1858–1942]. Described progressive spastic paraplegia in children with hereditary syphilis; called *Marfan's disease*. Described arachnodactyly, unusual flexibility of the joints, and subluxation of the crystalline lens, often associated with spina bifida occulta; called *Marfan's syndrome*.

mar'fa nil. 4-Amino-2-methylbenzenesulfonamide, or α-amino-p-toluenesulfonamide, or benzylaminesulfonamide, effective against organisms made resistant to other sulfonamides but more toxic than the latter. It is not antagonized by p-aminobenzoic acid. In the form of the hydrochloride it appears to be superior to other sulfonamides for local chemotherapy. Also called *homosulfanilamide* and *mesudin*. See *sulfamylon*.

mar'ga rate. A salt or ester of margaric acid.

mar gar'ic ac'id. $CH_3(CH_2)_{15}COOH$. A synthetic fatty acid. Mixtures of stearic and palmitic acids have erroneously been called by the same name.

mar'ga rin. The glyceryl ester of margaric acid, $C_3H_5(C_{17}H_{33}O_2)_3$.

m.-needles. Fatty crystals found in putrid bronchitis and pulmonary gangrene.

mar"ga-ri to'ma [G. *margaron*, pearl; *-ōma*, tumor]. A true primary cholesteatoma formation in the auditory canal. Obs.

Mar-gar'o-pus an"nu-la tus. Synonym for *Boophilus annulatus*.

mar'gin [L. *margo*, edge]. The boundary or edge of a surface. —**marginal**, *adj*.

falciform m. The sharp, crescentic, lateral boundary of the fossa ovalis of the femoral triangle.

gingival m. The more or less rounded crest of the gingiva at the neck of a tooth. Syn., *gum margin*.

mar"gi-na'tion [margo]. Adhesion of leukocytes to the walls of capillaries in the early stage of inflammation.

mar'gi no-plas"ty [margo; G. *plassein*, to form]. Plastic surgery of the marginal portion of the eyelid.

mar'go (pl. *margines*). Margin.

Marie, Pierre [French neurologist, 1853–1940]. Described acromegaly (1886); also called *Marie's syndrome*. With Charcot, described the peroneal form of progressive neuropathic muscular atrophy (1886), called *Charcot-Marie-Tooth disease or type*. Described hypertrophic pulmonary osteoarthropathy (1890), called *Marie-Bamberger disease*, and hereditary cerebellar sclerosis (1893), called *Marie's ataxia*. Ankylosing spondylitis (1898) is known as *Marie-Strümpell arthritis* or *Strümpell-Marie disease*. Hysterical glossolabial hemispasm is called *Brissaud-Marie syndrome*.

ma"ri hua'na (mah ri-hwah nah). See *cannabis*.

Marinesco, Georges (1864–1938). Rumanian pathologist who first used x-rays in the study of bone changes in acromegaly; studied degeneration of nerve cells and coined the term *chromatolysis* (1909). First to destroy the pituitary of dogs by cautery (1892); he was able to maintain his hypophysectomized animals alive for over two weeks. He also made many contributions to the knowledge of hereditary and familial diseases affecting the central nervous system. The name is also spelled *Marinescu*.

Mariotte, Edme [French scientist, 1620–84]. Made many contributions to the knowledge of physics and of the anatomy of the eye. Is credited with discovering the macula lutea. See also blind *spot* of Mariotte. Boyle's law is also known as *Mariotte's law*; see under Robert *Boyle*.

Marjolin's ulcer. See under *ulcer*.

mar'jo-ram [ME. *majoran*]. **Sweet marjoram**, *Majorana hortensis* of the Labiatae, is widely cultivated as a seasoning herb. Its chief constituent is a volatile oil containing camphor and borneol. **Wild marjoram** or origanum consists of the dried leaves and flowering top of *Origanum vulgare*. Possesses a volatile oil containing carvacrol and thymol. Several other species are used to produce *oils* that have been used in veterinary liniments and in microscopical technic.

mark [AS. *mearc*, cf. L. *margo*, edge]. Birthmark, nevus.

port-wine m. See port-wine *nevus*.

Markee, Joseph Eldridge [American anatomist, 1904–]. Known for his studies of menstruation and uterine circulation as observed by means of intraocular transplants of endometrium. Described rhythmic, hormonally controlled phases of circulation in the endometrium; called the blush-and-blanch phenomenon.

Marriott method (for alkali reserve; alveolar carbon dioxide tension). See under *method*.

mar'row [ME. *marowe*, from AS. *mearg*]. The soft tissues contained in the medullary canals of long bones and in the interstices of cancellous bone.

hematopoietic m. See red *m*.

primary m. The embryonic marrow before it becomes hematopoietic.

red m. Marrow of all bones in early life and of restricted locations in adulthood in which active formation of blood cells (hematopoiesis) is taking place. Syn., *myeloid tissue*.

spinal m. Old term for the spinal cord.

yellow m. Marrow which has lost its hematopoietic function and become largely replaced by fat cells.

mar ru'bi in (ma-roo'bee in) [L. *marrubium*, horehound]. The crystalline, neutral, bitter substance found in horehound.

mar ru'bi-um (ma roo'bee-um) [L.]. Horehound. The dried leaves and tops of *Marrubium vulgare* of

the Lamiaceae. Contains a volatile oil, bitter principle (marrubiin), tannin, resin, and lignin. Used mainly in the form of candy or syrup for relieving sore throat.

Marsh s test. See under *test*.

M rshall, Eli Ke nerly J [*American pharmacologist*, 1889–]. With A. C. Bratton, J T Litchfield, and H. J White, introduced sulfaguanidine in the treatment of intestinal infections. With Bratton, L. B. Edwards, and E. Walker introduced this treatment for acute bacillary dysentery in children (1941) See also Bratton and Marshall *method* for determining concentrations of sulfonamides in blood and urine.

Marshall, John [*English surgeon and anatomist* 1818–91]. Described fold of the pericardium, between the left pulmonary artery and the left superior pulmonary vein, enclosing the fibrous remnant of part of the left common cardinal vein called *ligament of the left vena cava, vestigial fold of Marshall*. This joins the blique vein of the left atrium see blique vein of Marshall.

Marshall method. See Lyle-Curtman-Marshall *method*.

Marshall d Welker method. See under *method*.

marsh gas. Th gaseous products, chiefly methane, formed from decaying, moist organic matter in marshes and mines.

marsh mal"low See *althea*.

marsilid. Trade-mark for iproniazid, an antituberculosis drug having the composition of 1-isonicotinyl-2-isopropyl hydrazine.

Marston, William Moulton [*American psychologist*, 1893–1947]. Introduced systolic blood pressure test called *lie detector test, Marston deception test*.

mar-su"pi al i za'tion [G. *marsippion*, little bag]. An operation for retention, degeneration, and parasitic cysts (such as hydatid, pancreatic, etc.) when extirpation of the cyst walls and complete closure are not possible. The cyst is evacuated and the walls sutured to the edges of the wound, leaving the packed cavity to close by granulation. The procedure has been used also in cases of extrauterine pregnancy when the placenta cannot be removed.

Martin, August Eduard [*German gynecologist*, 1847 1933]. Devised an operation of hysterectomy by the vaginal route called *Martin operation*.

Martin, Henry Newell [*American physiologist*, 1848–96]. Isolated the mammalian heart m perfusion chamber (1881) With Edward Mussey Hartwell, demonstrated the function of the inter costal muscles in respiration.

Marti tti, Giovanni [*Italian pathologist*, 1857 1928]. Described nerve cells in the cerebral cortex with axons running toward the surface and ramifying horizontally; called *Martinotti cells*

Mar'ti us yel"low (mahr shus, -shee-us) (C C) An acid nitro dye used as stain and in preparing certain light filters for photomicrography Also called *Manchester yellow naphthol yellow*

Marwedel, Georg [*German surgeon*, contemporary]. Devised method of gastrostomy similar t Witzel's called *Marwedel' operation*

M + As. Symbol for compound myopic astigmatism.

mas cu line [L. *masculinus*, male] H ving the qual ties of male. —**masculin'ity** n.

mas cu lin i za tion [*masculus*]. The induction of male secondary sex characteristics in female or sexually immature animal

mas cu lin-o ma. See adrenocorticoid *adenoma* of ovary

mas cu lin vo blas t ma. See adrenocorticoid *adenoma* of ovary

mask [F *masque* from Ar *maskharah*, buffoon]. 1 A bandage applied to the face. 2. The characteristic expressionless facies seen in certain pathologic conditions, notably paralysis agitans. 3. A gauze shield, fitted with tapes, to enclose the mouth and nose during surgical operations. 4. An pparatus for covering the nose and mouth in giving anesthetics.

Boothby-Lovelace m. A mask used in the administration of oxygen.

death m. A plaster of Paris mold of dead person face, taken soon after death.

ecchymotic m. The cyanotic facies of traumatic asphyxia.

m. of pregnancy Irregularly shaped, yellowish patches of varying size which frequently appear on the face and neck during pregnancy

parkinsonian m. See James *Parkinson*, and *parkinsonism*.

mask'ing [*maskharah*]. The interference of given tone with the perception of other tones

mas'o-chism" (mas o-kiz um, mass) [after Leopold von Sacher *Masoch*, Austrian novelist, 1836–95]. A sexual perversion in which pleasure is obtained in receiving cruel treatment, pain, and humiliation. —**masochist**, n.

Mason, James Tate [*American surgeon*, 1882–1936]. Introd ced an incision permitting adequate exposure of any part of the upper abdomen, while protecting the erve supply of the rectus muscles. *Mason incision* begins below and to the left of the xiphoid process and extends downward along the left rectus to point about one inch bove the umbilicus, then across the midline to the right rectus, then downward along that muscle for one and one-half t two inches. Incisions in the muscle sheaths are connected transversely in pattern following that of the sk incision. The muscles are then rolled outward and the peritoneum is opened under the left rectus and transversely just above the umbilicus.

masque bil i are A condition, found more often in women, involving development of brown pigment in the eyelids. also called *periocular hyperpigmentation*.

mass [L. *massa*, from G. *maza*, barley-cake]. 1 An aggregation of particles f matter characterized by inertia. Abbreviated, M 2. A cohesive substance that may be formed into pills.

atomic m. Mass of an element measured on an arbitrary scale and expressed relatively to mass 16 for oxygen. Also called *atomic weight*.

cell m. See *cell mass*.

epithelial m. The internal mass of cells derived from and covered by the germinal epithelium of the ndifferent gonad.

ferrous carbonat m. (*massa ferri carbonatis*) Contains 36–41% $FeCO_3$ used in treating simple anemia and chlorosis. Dose, 0 3–1.0 Gm. (5–15 gr) Also called *Vallet' m.*

interfilar m. Hyaloplasm.

m. defect. The difference between the mass number of an tom and the mass determined by mass spectrograph energy equivalent to the mass defect is considered to be the binding energy of the tom.

m. number The whole number nearest the atomic weight of given atomic species the total number of nucleons (protons and neutrons) in the ucleus of the tom described.

mercury m. (*massa hydrargyri*) Contains 31–35% of mercury; used as an alterative and laxative. Dose, as an alterative, 0 06–0 2 Gm. (1–3 gr); as laxative, 0 3–1.0 Gm. (5–15 gr) Also called *blue m.*, *blue pill*.

Massa, Nicol [*Italian physician*, d. 1569]. Described the neurologic effects of syphilis (1532)

mas·sage' [F., from L. *massa*, mass]. The act of rubbing, kneading, or stroking the superficial parts of the body with the hand or with an instrument, for the purpose of modifying nutrition, restoring power of movement, breaking up adhesions, etc.

buttonhole method of cardiac m. A means of resuscitation after the heart has stopped beating. A buttonhole incision is made just below the xiphoid process, between the attachments of the two sides of the diaphragm; and the thumb of the right hand is thrust through the opening. The heart can then be compressed between the thumb, within the pericardium, and the fingers, beneath the diaphragm.

cardiac m. Manual massage of the heart in cases of cardiac standstill or ventricular fibrillation.

electrovibratory m. That performed by means of an electric vibrator.

vibratory m. Light, rapid percussion either by hand or by an electric apparatus.

mas'sa in"ter·me'di·a [BNA]. A mass of gray matter which joins the surfaces of the adjacent thalami across the third ventricle. It has no functional significance and is absent in over half of brains examined. See Plate 18.

mas·se'ter [G. *masētēr*, chewer]. A muscle of mastication, arising from the zygomatic arch, and inserted into the mandible. See Table of Muscles in the Appendix. —**masseteric**, *adj.*

mas·seur' (*ma·sur'*. See Notes § 35) [F.]. 1. A man who practices massage. 2. An instrument used for mechanical massage.

mas·seuse' (*ma·suz'*. See Notes § 35) [F.]. A woman who practices massage.

mas'si·cot. PbO. Lead oxide; litharge.

Massol, Léon [Swiss bacteriologist, 1837-1909]. *Lactobacillus bulgaricus* is known as "Massol" bacillus.

Masson's trichrome stain. See under *stain*.

mas"so·ther'a·py [L. *massa*, mass; G. *therapeia*, treatment]. Treatment by massage.

mast·ad·e·ni'tis [G. *mastos*, breast; *adēn*, gland; -*itis*, inflammation]. Mastitis.

mast"ad·e·no'ma [*mastos*; G. *adēn*, gland; -*ōma*, tumor]. A glandular tumor of the breast.

mas·tal'gi·a [*mastos*; G. *algos*, pain]. Pain in the breast.

mast"a·tro'phi·a, **mast·at'ro·phy** [*mastos*; G. *atrophia*, want of food]. Atrophy of the breast.

mas·taux'y (mas·tawk'see) [*mastos*; G. *auxē*, growth]. Increase in size, or excessive size, of the breast.

mas·tec"chy·mo'sis (mas·teck"i·mo'sis) [*mastos*; G. *ek*, out of; *chymos*, juice; -*ōsis*, condition]. Ecchymosis of the breast.

mas·tec'to·my [*mastos*; G. *ektomē*, excision]. Excision, or amputation, of the breast.

radical m. Surgical removal of the entire breast and also of adjacent tissue including the pectoralis minor muscle, part or all of the pectoralis major muscle, and all the lymphatic tissue of chest wall and axilla.

simple m. Surgical removal of the breast only.

mast"hel·co'sis [*mastos*; G. *helkōsis*, ulceration]. Ulceration of the breast.

mas'tic [G. *mastichē*, mastic]. The resin flowing from the incised bark of the *Pistacia lentiscus*. Formerly used as a styptic, as a filling for teeth, and as a varnish in microscopy.

mas"ti·ca'tion [L. *masticare*, to chew]. The act of chewing. —**mas'ticatory**, *adj.*

mas"ti·ca'tor. The motor portion of the fifth cranial nerve.

mas'ti·ca·to·ry [*masticare*]. A remedy to be chewed, but not swallowed; used for its local action in the mouth.

m. surface. The occlusal or biting surface of a tooth.

mas'ti·che (mass'ti·kee) [G. *mastichē*, mastic]. Old term for mastic.

Mas"ti·goph'o·ra [G. *mastix*, whip; *phoros*, bearing]. A class of flagellated protozoa which includes both free-living and parasitic species.

mastisol. Trade name of a mastic varnish; used in the treatment of wounds.

mas·ti'tis [G. *mastos*, breast; -*itis*, inflammation]. Inflammation of the breast.

carcinomatous m. See inflammatory *carcinoma*.

chronic cystic m. Any of various noninflammatory conditions of the breast, more properly called *mammary dysplasias*. See *adenosis*, *cystic disease*, *mastodynia*.

interstitial m. Inflammation of the connective tissue of the breast.

lactation m. Puerperal m.

parenchymatous m. Inflammation of the proper glandular substance of the breast.

puerperal m. A complication of the early puerperium, in which part or all of the breast becomes indurated from retention of milk and engorgement of the tissues. Syn., *lactation m.*

suppurative m. Inflammation of the breast with the formation of pus.

mas'to-, **mast-** [*mastos*]. 1. A combining form denoting *the breast*. 2. A combining form denoting *mastoid*.

mas"to·car"ci·no'ma [*mastos*; G. *karkinōma*, from *karkinos*, crab; -*ōma*, tumor]. Mammary carcinoma.

mas"to·id·al'gi·a [G. *mastoeidēs*, like a breast; *algos*, pain]. Pain in, or over, the mastoid process.

mas"to·dyn'i·a [G. *mastos*, breast; *odynē*, pain]. A condition affecting females, usually of low fertility between the ages of 25 to 40, clinically characterized by pain in one or both breasts which is more marked during the premenstrual period. Pain may be referred to an area that is tender, firmer, and more granular than the surrounding mammary tissue. There is imperfect lobular development and increase in periductal and intralobular stroma of the breast due to endocrine imbalance. Also called *mazoplasia*, *mastoplasia*.

mas'toid [G. *mastoeidēs*, like a breast]. Breast-shaped, as the mastoid process of the temporal bone.

mas·toid'. The mastoid process of the temporal bone which is classified by surgeons into four types: **pneumatic m.**, one completely honeycombed with air spaces; **diploic m.**, one possessing marrow within the bony substance; **sclerotic m.**, one composed of almost solid bone; **mixed m.**, one in which solid bone, air sinuses and cells, and marrow are all found.

mas"toid·ec'to·my [*mastoeidēs*; G. *ektomē*, excision]. Exenteration of the mastoid air cells.

modified radical m. An operation for the removal of as many potentially infected cells as is possible without disturbing hearing; a simple mastoidectomy is performed, the epitympanic air cells are exenterated without disturbing the ossicular chain, the posterior wall is partially taken down, and the perilabyrinthine cells are cleaned out.

radical m. The complete exenteration of mastoid, epitympanic, perilabyrinthine, and tubal air cells. The tympanic membrane, ossicular chain, middle ear mucous membrane, stapedius muscle, and tensor tympani muscle are also removed.

simple m. Exenteration of the air cells in the

mastoid process alone, without disturbing those air cells in the epitympanic space, the external auditory canal, or the perilabyrinthine area.

mas"toid i'tis [*mastoides*, G -*itis*, inflammation]. Inflammation of the mastoid air cells formerly called *mastoid abscess*.

mas"toid-ot'o-my [*mastoeides*; G. *tomē*, cutting]. Incision into mastoid air cells or the mastoid antrum.

mas ton cus [G *mastos*, breast; *onkos*, tumor]. Any tumor of the mammary gland or nipple.

mas top thy [*mastos*; G *pathos*, disease] Any disease or pain of the mammary gland.

mas'to pex"y [*mastos*; G *pēxis*, fixing]. Surgical fixation of pendulous breast.

mas"to-pla si-a (mas to-play zhuh, -see-uh, -shuh, -see-uh) [*mastos*; G. *plassein*, to form]. Hyperplasia of breast tissue. Also see *mastodynia*.

mas'to plas"ty [*mastos*; *plassein*]. Plastic surgery on the breast.

mas"tor rha gi [*mastos*, G *rhēgnynai*, to burst forth]. Hemorrhage from the breast.

mas"to-scir'rhus (mas to-skirr us, -sirr'us) [*mastos*; G *skiros*, hard]. Hardening, or scirrhus, of the breast usually cancer

mas t si [*mastos*; G. -*ōsis*, increase]. Hypertrophy of the breast.

mas tos'to my [*mastos*; G *stoma*, mouth] Incision into the breast.

mas-tot o-my [*mastos*; G. *tomē*, cutting]. Incision of the breast.

mas'tous [*mastos*]. H ving large breasts.

mas"tur ba tion [L. *masturbari*, t defile oneself] Production of an orgasm by self-manipulation of the genitalia Also called *self-abuse* *chiromania*

ma su'ri-um (ma-sue ree um, ma-see) [from *Masuria*, region in East Prussia]. Ma, atomic number 43 an element reported in 1925, but its existence not established. Subsequently it was prepared artificially and in 1947 it was named *technetium*.

Matas, Rudolph [*American surgeon*, 1860-]. Devised technic of endoaneurysmorrhaphy (1888) called *Matas' operation*.

ma te ri-a al'ba [L.]. A soft, cheeselike, white deposit on the necks of teeth and adjacent gums, made up of epithelial cells, leukocytes, bacteria, and molds

ma-t ri med'i ca [L.]. The science that treats of the sources and preparations of the substances used in medicine.

ma te ri-es mor'bi (ma teer'ee eez mor'buy mor' bee) [L.]. The material that is the cause of disease. *Obs.*

ma ter'nal [L *maternus*, of mother]. Pertaining t the mother

ma ter'ni ty [*maternus*] 1 Motherhood. 2 A lying-in-hospital. *Colloquial*.

Mathews method. See under *method*

ma ti'co (ma-tee'k) [Sp dim. from *Mateo* Matthew]. The leaves of *Piper angustifolium*, of the Piperaceae. Aromatic and stimulant; has been used as local and general hemostatic and as an alterative stimulant to mucous membranes

ma'ting [MLG. *mate*, companion]. The meeting of individuals for sexual reproduction

random m. A system of breeding in which individuals mate in accordance with the frequency with which they occur in the population as first pproxim tion, mating in any human population i of this type

mat"la za hua tl (mat"lah sah-what ul *See* NOTES § 35) A form of typhus fever found in Mexico tabardillo.

mat"ri ca ri [L *matrix* womb] German camomile; the flower tops of *Matricaria chamomilla*, of the order Compositae. Contains volatile oil and bitter principle has been used as an aromati bitter

ma'trine. $C_{15}H_{24}N_2O$; an alkaloid, existing in several forms, occurring in several *Sophora* species, and isomeric with lupanine.

ma trix, mat'rix [L.]. 1 A mold the cavity in which anything is formed. 2. That part of tissue into which any organ or process is set, as the matrix of nail. 3. The intercellular substance of tissue, as of cartilage.

interterritorial m. The lighter-stained area which separates the areas of territorial matrix from each other in hyalin cartilage. See territorial m.

territorial m. Matrix in hyalin cartilage differentiated into regions of high basophilia surrounding smaller or larger groups of cells.

mat ter [L. *materia*, matter wood] 1. Any material or substance, described as having three states of aggregation, solid, liquid, or gaseous. 2. Pus.

central gray m. See *substantia grisea centralis*.

gray m. The gray substance of the central nervous system. Also called *substantia grisea*.

suspended m. Solid particles, oils, *etc* which are either insoluble or ot dissolved in liquid.

white m. The white substance of the central nervous system. Also called *substantia alba*

Mattioli, Pier Andrea [*Italian physician*, ca. 1500-77]. A thor of an encyclopedia of pharmacology which was standard during the Renaissance.

mat u rate [L. *maturare*, to make ripe]. Bring to maturity; to ripen, especially to bring boil to head; to suppurate.

mat u ra'tion [*maturare*]. 1 The process of coming to full development. 2. The final series of changes in the growth and formation of the germ cells. It includes two divisions of the cell body but only one division of the chromosomes, with the result that the number of chromosomes in the mature germ cell is reduced to one-half the original number The term also includes the cytoplasmic changes which occur in the preparation of the germ cell for fertilization.

ma ture [L. *maturus*, ripe]. T become ripe.

ma ture Full-grown, ripe.

ma tu ri ty [L. *maturitas*, maturity]. The state or quality of being mature; full growth and development.

ma tu'ti nal [L. *matutinalis*, of the morning] Occurring in the morning, as matutinal nausea.

Mauchart, Burkhard David [*German anatomist*, 1696-1751]. Remembered for his description of the lateral or alar odontoid ligaments; also called *Mauchart' ligaments*

Maunoir, Jean Pierre [*Swiss surgeon*, 1768-1861]. Devised an operation for the construction of an artificial pupil Described congenital lymphatic cyst of the neck; called *Maunoir' hydrocele*.

Mau'rer's dots (mow rers) See under *dot*.

Ma riceau Françoi [*French surgeon*, 1637-1709] Made umerous contributions t the development of obstetrics. Refuted the theory that the pelvic bones separate in normal labor. Described brow presentation, strangulation by the mbilical cord, and tubal pregnancy

Mauthner Ludwig (1840-94) Bohemian ophthalmologist in Austria who described the axolemma, called *axolemma of Mauthner* *Mauthner sheath*.

max-il"l (pl. *maxillae*, *maxillas*) [L] w]. The bon of the pper jaw See Plat 1 See T ble of Bones in the Appendix. —**max'illary** *adj*.

max-il"l fa cial [*maxilla*; L. *facies*, face]. Pertaining t the lower half of the face I *plastic surgery* pertaining t subdivision called maxillofacial surgery

max·il″lo·fron·ta′le (-fron-tah′lee, -fron-tay′lee) [maxilla; L. *frons*, forehead]. The point where the anterior lacrimal crest or its prolongation meets the frontomaxillary suture.

max·il″lo·tur′bi·nal. See inferior nasal concha in Table of Bones in the Appendix.

max′i·mal [L. *maximus*, greatest]. Pertaining to the maximum; highest; greatest.

Maximow, Alexander A. (1874–1928). Russian-American histologist renowned for important investigations of inflammation and hematopoiesis, and of the normal and pathological histogenesis of connective tissues. For Maximow's method, see under *stain*.

max′i·mum (pl. *maxima*) [maximus]. The greatest possible degree or amount of anything; the highest point attained or attainable by anything.

maxitate. Trade-mark for *mannitol hexanitrate*.

Maxwell's law. See law of Maxwell.

May·ap′ple. See *podophyllum*.

May-Grünwald stain. See under *stain*.

Maydl, Karel [*Bohemian surgeon*, 1853–1903]. Devised an operation in which the ureters are transplanted into the rectum, for exstrophy of the bladder; and one of colostomy in which the unopened colon is held in place by means of a glass rod until adhesions have formed. Each technic is called *Maydl's operation*.

Mayer, Karl [*Austrian neurologist*, 1862–1932]. Described a reflex occurring in normal individuals but not in those with hemiplegia. When the extended middle finger is flexed against resistance, the thumb goes into a position of extension and opposition. Called *Mayer's reflex*.

Mayer, Paul [*German histologist*, 1848–1923]. Introduced a number of histological techniques. See *Mayer's albumen fixative*, *Mayer's acid carmine*, *Mayer's hemalum*, etc., under *stain*.

may′hem [M.E. *maynem*]. In *legal medicine*, the offense of depriving a person, by violence, of any limb, member, or organ, or causing any mutilation of the body.

Mayo, Charles Horace [*American surgeon*, 1865–1939]. Cofounder with W. J. Mayo of the Mayo Clinic in Rochester, Minnesota. Devised an operation for hallux valgus in which the head of the first metatarsal is excised and the flap containing the bursa is turned inward and sutured in place. Introduced an operation for varicose veins in which the varicosities are stripped out by means of a special dissector. Each is known as *Mayo's operation*.

Mayo, William James [*American surgeon*, 1861–1939]. Cofounder with C. H. Mayo, of the Mayo Clinic in Rochester, Minnesota. Devised an operation for umbilical hernia in which the aponeuroses of the abdominal muscles are overlapped, after excision of the sac. Devised technics of choledochoduodenostomy, of posterior gastrojejunostomy, and of excision of the rectum for carcinoma. Each of these is known as *Mayo's operation*.

Mayo-Robson, Arthur William [*English surgeon*, 1853–1933]. Described a point of extreme tenderness, above and to the right of the umbilicus, in gallbladder disease; called *Mayo-Robson's point*. Introduced a position of the patient to facilitate operations on the gallbladder and bile ducts. In *Mayo-Robson's* (or *Robson's*) *position*, the lumbar and lower costal regions are raised by means of a sandbag or a mechanical device. *Mayo-Robson's* (or *Robson's*) *incision* in operations on the biliary tract is made vertically over the middle of the right rectus muscle, and if necessary is extended upward parallel to the costal margin, between the costal margin and the xiphoid process.

ma·zal′gi·a (may-zal′juh, -jee-uh) [G. *mazos*, breast; *algos*, pain]. Mastalgia, or mastodynia.

maze [M.E.]. A network of paths, blind alleys, and compartments, used in intelligence tests and in experimental psychology for developing learning curves.

ma′zic [G. *maza*, barley cake]. Pertaining to the placenta. *Obs.*

ma·zo·ca·coth′e·sis [maza; G. *kakos*, bad; *thesis*, placing]. Faulty implantation of the placenta.

ma″zo·dyn′i·a. See *mastodynia*.

ma″zo·li′tis. See *mastitis*.

ma·zol′y·sis (may-zol′i-sis) [maza; G. *lysis*, loosing]. Separation of the placenta.

maz″o·rrhe′a (-ree′uh). A dermatosis associated with ancylostomiasis.

ma·zop′a·thy (may-zop′uth-ee) [maza; G. *pathos*, disease]. Any disease of the placenta.

ma·zop′a·thy (may-zop′uth-ee) [G. *mazos*, breast; *pathos*]. Mastopathy.

ma′zo·pex″y [mazos; G. *pēxis*, a fixing]. Surgical fixation of a pendulous breast; mastopexy.

ma″zo·pla′si·a (may″zo-play′zhuh). See *mastodynia*.

Mazzini, Louis Yolande [*American serologist*, 1894–]. Introduced a microscopic flocculation test for syphilis. In the *Mazzini test* the usual heart-muscle antigen is supplemented with powdered egg yolk, which supplies additional lecithin and thus renders the antigen more reactive with syphilitic serums.

Mazzoni, Vittorio. A contemporary Italian physician who described a sensory nerve-ending similar to Krause's corpuscle (1891), called *Mazzoni's corpuscle*; *Golgi-Mazzoni's corpuscle*.

M. B. *Medicinae Baccalaureus*, Bachelor of Medicine.

MBC Abbreviation for maximum breathing capacity.

M. C., M. Ch. *Magister Chirurgiae*, Master of Surgery.

mc Abbreviation for *millicurie*.

μc Abbreviation for *microcurie*.

mcg, mcg. United States Pharmacopeia abbreviation for microgram; also written μg.

MCH Mean corpuscular hemoglobin; an expression, in absolute terms, of the average content of hemoglobin of the individual erythrocyte, calculated from the equation

$$\mathrm{MCH} = \frac{\text{hemoglobin [(gm/100 ml)} \times 10]}{\text{erythrocyte count } (10^6/\text{mm}^3)}$$

and stated in micromicrograms (10^{-12} gm) per cell. Normal values are 28–32 μμg.

MCHC Mean corpuscular hemoglobin concentration; an expression, in absolute terms, of the average hemoglobin concentration per unit volume (per 100 ml) of packed red cells, calculated from the equation

$$\mathrm{MCHC} = \frac{\text{hemoglobin [(gm/100 ml)} \times 100]}{\text{hematocrit}}$$

and stated in grams per 100 ml of packed red cells. Normal values for adults are 32–36 gm/100 ml.

MCV Mean corpuscular volume; an expression, in absolute terms, of the average volume of the individual erythrocyte, calculated from the equation

$$\mathrm{MCV} = \frac{\text{hematocrit (per cent)} \times 10}{\text{erythrocyte count } (10^6/\text{mm}^3)}$$

and stated in cubic microns per cell. Normal values are 82–92 μ³.

M. D. *Medicinae Doctor*, Doctor of Medicine.

M. D. S. Master of Dental Surgery.

mead′ow saf′fron. See *colchicum*.

mean. See *arithmetic mean*, *geometric mean*.

mean af'ter life time See *expectation of life*

mean cor pus'cu lar he"mo-gl 'bin. See *MCH*

mean cor pus'cu lar he"mo glo'bin con cen-tra'tion. See *MCHC*

mean cor pus'cu lar vol ume. See *MCV*

mea sles [ME. *masel*]. 1 An acute, infectious disease, characterized by morbilliform eruption and by catarrhal inflammation of the conjunctiva and of the air passages. After period of incubation of nearly two weeks, the disease begins with coryza, cough, conjunctivitis, and the ppearance of Koplik spots on the oral mucous membranes on the third or fourth day chills and fever and dusky rose-red, maculopapular eruption ppear ar ranged in the form of crescents groups, at times becoming confluent, usually ppearing first on the face or behind the ears. I three or four days, the eruption gradually fades, and is followed by branny desquamation The symptoms are worse t the height of the eruption. The disease affects principally the young, is exceedingly contagious, and one attack usually confers immunity It is caused by virus. 2. *In veterinary medicine*, disease of hogs, cattle, and sheep, due to the presence in the body of the larval form of the *Taenia solium* and larvae of other tapeworms. 3. Cysticerci.

black m. A grave variety of measles in which the eruption is hemorrhagic and the constitutional symptoms are profound

German m. See *rubella*.

hemorrhagic m. See black *m*.

m. vaccine. The measles virus is grown on fertile eggs of the hen, thus attenuating the infective agent; injected under the kin or placed in the nose, it causes very mild form of measles in some individuals but causes no symptoms at all in others.

meas'ly 1 Infected with measles having or spotted with measles 2. Containing encysted Trichinella said of meat.

meas ure [L. *mensura*, measure]. For units of measure, see Tables of Weights and Measures in the Appendix.

me a-ti'tis [L. *meatus*, passing; G -*itis*, inflammation]. Inflammation of the wall of meatus

me- to- [L. *meatus*, passing]. *I surgery* combining form signifying *meatus* or *opening*

me tot'o-my [*meatus*; G *tomē*, cutting]. Incision int and enlargement of meatus

me-a'tus [L] An opening or passage. —**meatal**, *adj*

auditory m. See *m* acusticus externus and *m* acusticus internus.

m. custicus externus. The xternal uditory canal extending from the concha to the tympanic membrane. See Plates 1 3, 20

m. acusticus internus. The internal uditory canal.

m. nasopharyngeus. The communication between the nasopharynx and the nasal cavity

m. urethrae. The orifice of the urethra

urinary m. See *m.* urethrae.

mebaral. A trade-mark for *mephobarbital*.

Mec'ca bal'sam. See Gilead *balsam*.

mech nism [G *mēchanikos*, from *mēchanē*, machine] 1 An aggregation of parts arranged in mechanical way t perform specific function. 2. The manner in which mechanical act is performed, as the mechanism of labor See Plate 42.

trigger m. A region of anoxia in the heart muscle which sets off entricular extrasystoles or ventricular fibrillation

mech no ther' py (meek h no therr uh pee) [*mēchanē*; G *therapeia*, treatment] Treatment of injury or disease by mechanical means. —**mechanotherapi t, n.**

me chlor eth amine hy"dro-chlo ride. National Formulary designation for the nitrogen mustard methyl bis(β-chloroethyl)amine hydrochloride or 2,2-dichloro-N-methyldiethylamine hydrochloride, white, crystalline powder supplied as trituration with 9 parts of sodium chloride (*sterile mechlorethamine hydrochloride trituration*) Syn., *mustine hydrochloride*. See *mustargen hydrochloride*.

mecholin. See *mecholyl chloride*.

mecholyl bromide. Trade-mark for acetyl-beta-methylcholine bromide.

mecholyl chloride. Trade-mark for acetyl-beta-methylcholine chloride. The substance is hite, hygroscopic, crystalline powder Used in certain conditions in which the effects of parasympathetic stimulation are desirable. See *methacholine chloride*.

me cism [G *mēkos*, length]. A condition marked by bnormal prolongation of one or more parts of the body

Meckel Johann Friedrich (The Elder) [German *anatomist* ca. 1724–74]. Described the sphenopalatine ganglion, also called *Meckel' ganglion*. See also Meckel *cavity*.

Meckel, Johann Friedrich (The Younger) [German *anatomist*, 1781 1833]. Described the cartilage bar of the mandibular arch called *Meckel' cartilage*. Described the diverticulum ilei, the persistent proximal end of the yolk stalk called *Meckel' diverticulum*. The yolk stalk is also known as *Meckel' stalk Diverticulitis* of diverticulum ilei is also called *Meckel' diverticulitis*.

me cli zine hy"dro hlo ride. Generic name for the dihydrochloride of p-chlorobenzhydryl-4-m-methylbenzylpiperazine, compound effective in preventing motion sickness. See *bonamine*, *postafene*.

me-com ter [G *mēkos*, length *metron*, measure]. An instrument used in measuring newborn infants.

me co nal'gi [G *mēkōn*, poppy; *algos*, pain] Pain or neuralgia when the use of opium is discontinued.

mec'on te (meck nate, mee'ko-nate) A salt of meconic cid.

mec neu"ro path'I (meek o-new ro path ee-uh) [*mēkōn*, G *neuron*, nerve *pathos*, disease] Nervous disorder due to the abuse of opium or its narcotic derivatives.

me-con'ic ac'id (mi kon'ick, ko nick) $C_7H_4O_7$. A dibasic acid found in opium. Nearly devoid of physiologic activity

me con'I dine (mi kon deen, -din) $C_{21}H_{23}NO_4$. An amorphous alkaloid of opium

mec o- in, me co-nin. $C_{10}H_{10}O_4$ A principle occurring in opium and hydrastis; has been used as hypnotic.

mec"o-ni-or rhe a [G *mēkōnion*, discharge from the bowels of newborn children *rhoia*, flow]. An excessive discharge of meconium.

me-co ni um [*mēkōnion*]. The pasty greenish mass, consisting of m cus, desquamated epithelial cells, bile, lanugo hairs, nd vernix caseosa, that collects in the intestine of the fetus. It forms the first fecal discharge of the newborn and is not wholly voided until the third or fourth day after birth.

mec o-no- [G *mēkōn*, poppy] A combining form signifying *opium*.

me-cys'ta-sis. A process in which muscle increases in length but maintains its original degree of tension. Also called *mecystatic relaxation*

me di [L *medius* middle] 1 The middle coat of vein, artery or lymph vessel tunica media. See Plat 8. 2. Plural of medium

transparent m. of the eye. The cornea, aqueous humor lens, and vitreous humor

me'di ad [medius L. ad, toward]. Toward the median plane or line.

me di al [medius]. Internal, as opposed to lateral (external) toward the midline of the body

me"di a lec'i thal (mee dee lees'i thul) See mesolecithal.

me'di an [L. medianus, middle]. Situated or placed in the middle of the body or in the middle of part of the body as the arm.

me'di an. That value on the numerical scale of classification in frequency distribution below which and bove which half the observations fall.

me di as"ti ni'tis [ML. mediastinum, from medius, middle; G -itis, inflammation]. Inflammation of the tissues of the mediastinum.

me"di as ti"no per"i car di'tis (mee dee-as-tigh no- -ass"ti-no- -ass"tigh-no-) [mediastinum; G. pericardion, about the heart; -itis]. Combined inflammation of the mediastinum and the pericardium. Also see pericarditis.

me di as"ti not' my [mediastinum; G temé, cutting]. Incision into the mediastinum.

me"di-as ti num [mediastinus]. 1 A partition separating adjacent parts. 2. The space left in the middle of the chest between the two pleurae, divided into the anterior middle, posterior and superior mediastinum. The anterior mediastinum contains the internal mammary vessels of the left side, loose areolar tissue, lymphatic vessels, and few lymph nodes The middle mediastinum contains the heart and pericardium, the ascending aorta, the superior vena cava, the bifurcation of the trachea, the pulmonary arteries and veins, and the phrenic nerves. The posterior mediastinum contains part of the aorta, the greater and lesser azygos veins, the vagus and splanchnic nerves, the esophagus, the thoracic duct, and some lymph nodes. The superior mediastinum, that part lying bove the pericardium, contains the origins of the sternohyoid and sternothyroid muscles, and part of the longus colli muscles, the transverse portion of the aortic arch, the innominate, left carotid, and subclavian arteries, the superior vena cava and the innominate veins, the left superior intercostal vein, the vagus, cardiac, phrenic, and left recurrent laryngeal nerves, the trachea, esophagus, and thoracic duct, the remains of the thymus and lymphatics —mediastinal, adj

m. testis. A septum in the posterior portion of the testis, formed by projection inward of the tunica albuginea Formerly called *body of Highmore*

me di ate [L. mediare, to halve] Indirect performed through something interposed, as mediate percussion, percussion on pleximeter

med'i ca-ble [L. medicare, to heal] Amenable to cure

med'i-cal [L. medicus, medical] Pertaining to medicine, as medical ethics, medical books, medical school

med'i cal cen'ter 1 A medical clinic usually serving discrete geographical area 2 A group of medical facilities, incorporating all the medical specialties, and possessing the capacity for medical education, and the diagnosis, care and treatment of patients

Med'i-cal Corps. In the U S Army and Navy Departments and the Air Force the medical officers of the Regular Arm N vy and Air Force the National Guard, and the Reserv Corps, together with medical officers ppointed from civil lif during war

Med'i-cal De part'ment. In the U.S. Army and N vy Departments and the Air Force, sub-division consisting of commissioned officers, nurses, and enlisted and civilian personnel, with surgeon general as directing head.

med'i-cal de-tach"ment. *I* military medicine ( ) unit, consisting of medical personnel, organic to regiments and separate battalions of arms and services other than medical so named because its personnel are not of the same branch as the parent organization in the usual administrative sense (b) as integral part of certai hospitals (base, general, field, evacuation, and station) composed of enlisted personnel performing both administrative and professional services

med'i-cal eth'ics. The principles of conduct hich physicians follow

med'i cal ex am'in-er 1. A medical officer ppointed to an office of municipality or state whose duty it is to determine facts concerning causes of death and to testify thereto in courts of law The medical examiner in many states and counties replaces the former coroner or coroner' jury 2. An officer of corporation or bureau, whose duty it is to determine facts relating to injuries and deaths alleged to have occurred, to place responsibility on the part of the corporation or other agency and to make recommendations as to compensation. In certain cases, as in lif insurance pplications, etc., the examiner is charged with passing upon the state of health of the pplicant.

med'i-cal group. In the U.S. Army command embracing clearing companies, collecting companies, ambulance companies, and those elements required for emergency treatment and evacuation of combat casualties.

med'i-cal reg'u la"tor An officer of the U.S. Medical Service of one of the armed services who regulates and controls the movement of patients between various medical treatment facilities.

med'i-cal ser'vice. The professional service of U S military medical unit whose sections handle patients diagnosed in the various fields of medicine.

med'i cal treat'ment fa-cil'i ty A U.S. Armed Forces installation through which medical service is furnished to individuals of the U.S. Armed Forces regardless of service affiliation.

med'i-cal troops. The enlisted personnel of the U.S Army Medical Service, especially those who serve in medical element assigned or attached to, or in support of combat unit.

me-dic ment, med'i-ca ment [L. medicamentum, remedy]. A medicinal substance.

med"i-ca men to sus [L., medicinal]. Pertaining to drug or drug eruption.

med"i-ca men tum [L.]. See medicament.

m. arcanum. A proprietary or secret remedy Obs.

med'i ca"ted [L medicare, to heal]. Impregnated with medicinal substance

med"i-ca"tion [L. medicatio from medicare]. 1. Impregnation with medicine. 2. Treatment by medicines the administration of medicines.

endermic m. See cataphoresis

hypodermic m. Treatment by the introduction of medicines beneath the skin, usually by means of hypodermic syringe.

preanesthetic m. Administration of drugs, such as sedatives and anticholinergic agents, before the patient is anesthetized to facilitate induction by thus allaying pprehension, by reduction of basal metabolic rate and drying of oral and nasal secretions, thus reducing anesthetic requirements.

med'i-ca"tor [L., from medicare]. 1 A person who gives medicines for the relief of disease. Obs. 2. An pplicator

me·dic'i·nal [L. *medicinalis*, pertaining to medicine]. Pertaining to, due to or having the nature of, medicine, as medicinal rashes, eruptions on the skin following the internal administration of certain drugs.

med'i·cine [L. *medicina*, medicine]. 1. Any substance used for treating disease. 2. The science of treating disease the healing art. In restricted sense, that branch of the healing art dealing with internal diseases, which can be treated by physician rather than by surgeon.

anatomic m. That system which deals with the anatomi changes in diseased organs and their connection with symptoms manifested during life.

aviation m. That field which integrates and pplies the fundamentals of medicine and th basic sciences to viation; it deals with biological problems peculiar to viation, including selection, maintenance and treatment of the flier assistance in designing aircraft and related equipment to meet human requirements, adaptation of men to the conditions of flight, and the problems nvolved in evacuation of the sick and wounded by air also called *aeromedicine*.

clinical m. The study of disease by the bedside of the patient.

constitutional m. That branch of medicine which deals ith the relation between patient constitution and his susceptibility to disease. See *constitution*, 2.

domestic m. The treatment of disease or injuries, at home, by layman.

experimental m. That based upon experiments on animals by the observation of pathologic changes in diseases induced in them and the ffect of drugs administered.

forensic m. See legal m.

group m. (a) The practice of medicine by number of physicians working in systematic association, with joint use of equipment and technical personnel, and with centralized administrative and financial organization Its objectives are increased professional efficiency improved medical care of the patient, and increased economic efficiency (b) The practice of medicine carried on under legal agreement in community by body of registered physicians and surgeons, for the purpose of caring for group of persons who have subscribed to such service by the payment of definit sum for specified time, which entitles each subscriber to medical care and hospitalization under definite rules nd regulations.

internal m. That branch of medicine which treat of diseases that are nonsurgical.

legal m. That branch of medicine, involving any and all of it disciplines, employed by the legal thorities for the solution of legal problems Syn., *forensic m.*

military m. That part of general medicine dealing with the character epidemiology prevention, and treatment of diseases and injuries which are brought about by the special conditions incident to military lif Syn war m

osteopathic m. The principles and practice of medicine as employed by osteopaths.

patent m. ( ) Medicine, the manufacture of which is protected by patent. (b) Term commonly pplied to an advertised nostrum of secret composition.

physical m. A consultative, diagnostic, and therapeutic service coordinating and integrating the employment of physical and occupational therapy and physical reconditioning on the professional management of the diseased and injured.

practice of m. The practical app cation of the principles taught by the theory of edicine.

preventive m. Any activity which seeks to prevent disease, prolong life, and promote physical and mental health and efficiency especially the science of the etiology and epidemiology of disease processes, dealing with the predisposing factors which increase an individual's vulnerability the provoking factors which initiate or precipitate disease process, and the perpetuating factors which in noninfective or degenerative diseases tend to cause their progression.

proprietary m. One, the manufacture of which is limited or controlled by an owner because of patent, copyright, or secrecy as regards its constitution or method of manufacture.

psychosomatic m. That branch of medicine dealing with psychic and physical components as unit, and the interrelationship between them.

quack m. A medicine falsely advertised to the laity as being ble to cure certain diseases.

regula school of m. A term formerly used to designate the great mass of the profession as contrasted with the homeopathic and eclectic schools.

socialized m. The control, direction, and financing of the medical care of population by its government: assumption of legal, administrative, and financial responsibility for the practice of medicin by professional services and for the total care of the patients, as in the National Health Service of Great Britain.

social m. In its widest sense, an pproach to the maintenance and advancement of health and to the prevention, amelioration, and cure of disease, which has ts foundation in an inclusive and dynamic sociology and biology i.e., in the study of man and the environment in which he is an integral component. Social medicine seeks to integrate clinical and social pathology and the workers in these fields, the methods of biostatistics, and the data thus btained, and to be constantly guided by the concepts of normal ariability of human beings, and their capacity for adaptability Not to be confused with *socialized m.*

space m. A branch of viation medicine concerned with the human factor encountered in flights under the space equivalent conditions in the upper atmosphere and under the conditions found in free interplanetary space.

state m. (a) Legal medicine. (b) Socialized medicine as exercised by state or federal government.

tropical m. That branch of medical science concerned chiefly with diseases found commonly or exclusively in the tropical or subtropical regions.

veterinary m. That branch of medical practice which treats of the diseases and injuries of animals.

war m. See military m.

med'i·co·chi rur'gi·cal (med"i-ko-kigh-rur ji kal) [L. *medicus* medical; G *cheirourgos*, working by hand surgeon]. Pertaining conjointly to medicine and surgery

med"i co l gal [*medicus*; L. *legalis*, legal]. Relating both to medicine and law

med"i co-psy chol'o-gy [*medicus*; G. *psychē*, soul; *logos* word]. The study of mental diseases in relation to medicine.

med"i co-sta-tis'tic [*medicus*; ML. *statisticus*]. Relating to medicine as connected with statistics.

Medin, Karl Oskar [*Swedish physician*, 1847-1927] Drew attent on to the epidemic character of acute anterior poliomyelitis, sometimes called *Heine-Medin disease*

medinal Trade-mark for brand of barbital sodium.

Me-di'na worm. See *Dracunculus medinensis*.

me di-o-, me di- [L. *medius*, middle]. A combining

form meaning *middle*; used to denote *medially*, *relating to the middle* or *median plane*, or *intermediate*.

me·di·o·car′pal [*medius*; G. *karpos*, wrist]. Pertaining to the articulation between the two rows of carpal bones.

me″di·o·dor′sal [*medius*; L. *dorsum*, back]. Both median and dorsal; on the median line of the back.

me·di·o·fron′tal [*medius*; L. *frons*, forehead]. Pertaining to the middle of the forehead.

me·di·o·ne·cro′sis. Necrosis occurring in the tunica media of an artery; commonly associated with a dissecting aneurysm.

m. aortae idiopathica cystica. Degeneration of the muscle and elastic fibers of the aorta. Syn., *medial necrosis of aorta*.

me·di·o·tar′sal [*medius*; G. *tarsos*, flat of the foot]. Pertaining to the middle articulations of the tarsal bones.

Med″i·ter·ra′ne·an dis·ease′. See familial erythroblastic anemia.

Med″i·ter·ra′ne·an fe′ver. See *brucellosis*.

me′di·um [L.]. 1. That in which anything moves or through which it acts. 2. *In bacteriology*, substance used for the cultivation of bacteria; may be modified for certain purposes. Also see *culture*.

bismuth sulfite agar m. A highly selective medium for the isolation of *Salmonella typhosa* from feces, urine, sewage, and other infectious materials, especially valuable in detecting typhoid (and paratyphoid) carriers. The organisms reduce bismuth sulfite to the black sulfide. Also called *Wilson-Blair bismuth sulfite m.*

Bordet-Gengou m. See Jules Jean Baptiste Vincent *Bordet*.

Dorset′ egg m. A medium of fresh egg yolk used with or without diluent, for culture of *Mycobacterium tuberculosis* and other microorganisms.

Hiss's serum water m. A medium used for determining fermentative capacities of bacteria, containing water, serum, glucose, and phenol red.

Kauffmann's tetrathionate broth m. See tetrathionate broth base m.

Kligler's triple sugar m. See triple sugar iron agar m.

Littman ox-gall m. A selective medium containing bile salts, crystal violet, and streptomycin, used in the primary isolation of fungi from specimens having a mixed bacterial and fungal flora.

Löwenstein-Jensen m. An egg-potato-glycerin medium used for culture of *Mycobacterium tuberculosis*.

mounting m. See *mountant*.

NNN m. A medium for culturing *Leishmania donovani* which consists of 1000 cc. of water, 50 Gm. of beef extract, 20 Gm. of agar, 20 Gm. of neopeptone, 5 Gm. of sodium chloride, and 10 per cent defibrinated rabbit's blood. Also called *Senekjie m.*

rice-grain m. A medium of autoclaved rice grains in water, used for the confirmation and identification of the various species of *Microsporum* when microscopy is inconclusive.

selenite F m. A culture medium for the isolation of an organism causing an enteric infection.

Senekjie m. See NNN m.

tellurite m. A medium containing sodium tellurite, used for the isolation and identification of *Corynebacterium diphtheriae* and of certain fungi; it inhibits many species of bacteria.

tetrathionate m. A nutrient broth for isolation of organisms in enteric infections.

tetrathionate broth base m. A selective liquid enrichment medium used to isolate *Salmonella typhosa* and other members of the Salmonella group in laboratory diagnosis of enteric infections; also called *Kauffmann tetrathionate broth m.*

triple sugar iron agar m. A differential identification medium used to identify the Gram-negative enteric pathogens in routine stool examination. It indicates the ability of the organism to ferment lactose, saccharose, and dextrose to acid or gas or both and its ability to produce hydrogen sulfide.

trypsin digest agar m. A bacteriologic culture medium in which the products of meat digested with trypsin are substituted for meat extract.

Tween albumin m. (Dubos.) A medium especially for the culture of *Mycobacterium tuberculosis*. To a culture medium of defined composition are added the wetting agent Tween 80 (trademark for polysorbate 80) and albumin, to lower the toxicity of the Tween 80 to some strains of the *Mycobacteria*.

urea m. A nutrient agar containing potassium biphosphate, glucose, urea, and phenol red. Urease activity is denoted by reduction of the pH. Such organisms as *Proteus* and *Aerobacter* are urease-positive; *Escherichia*, *Salmonella*, and *Shigella* are urease-negative.

Wilson-Blair bismuth sulfite m. See bismuth sulfite agar m.

me′di·us [L.]. 1. The middle. 2. The middle finger.

me·dul′la [L.]. 1. The marrow. 2. The medulla oblongata. 3. Anything resembling marrow in its structure or in its relation to other parts, as a fatty substance or marrow occupying certain cavities; the central parts of certain organs as distinguished from the cortex. —**med′ullary**, *adj.*

m. oblongata. The lowest part of the brain extending from the pons to the spinal cord. See Plates 15, 18.

m. ossium. Bone marrow.

m. ossium rubra. Red bone marrow.

m. spinalis. Old term for the spinal cord.

med′ul·lat″ed (med′uh-lay-tid, mi-dull′ay-tid) [*medulla*]. Provided with a myelin sheath. Syn., *myelinated*.

med″ul·la′tion [*medulla*]. The process of acquiring a myelin sheath, as in the case of many nerve fibers in the course of their development.

med″ul·li·za′tion [*medulla*]. Conversion into marrow, as the replacement of bone tissue in the course of osteitis.

med′ul·lo·blast (med′uh-lo-blast, mi-dull′o-) [*medulla*; G. *blastos*, germ]. A primitive brain cell of the neural tube.

med″ul·lo·blas·to′ma (med-uh-lo-blas-to′muh, mi-dull-o-) [*medulla*; *blastos*; G. *-ōma*, tumor]. A malignant brain tumor with a tendency to spread in the meninges; most common in the cerebellum of children. The cells are small, with scanty cytoplasm, dense spheroid or oval nuclei, many mitoses, and a tendency to form pseudo rosettes. Also called *glioblastoma isomorphe*, *glioma sarcomatoides*, *embryonal neuroglioepithelioma*, *neurospongioma*.

med″ul·lo·ep″i·the″li·o′ma (med-uh-lo-ep″ith-ee-lee-o′muh, mi-dull-o-) [*medulla*; G. *epi*, on; *thēlē*, nipple; *-ōma*]. Old term for neuroepithelioma, ependymoma, or loosely for gliomas.

Meduna's method. See under *method*.

meg′a-, meg- [G. *megas*, large]. A combining form used to signify *great*, *extended*, *enlarged*.

meg″a·car′di·a [*megas*; G. *kardia*, heart]. A large heart. Hypertrophy of the heart.

meg″a·ce′cum. Cecum with a markedly distended lumen.

meg″a·coc′cus [*megas*; G. *kokkos*, berry]. A large coccus.

meg″a·co′lon [*megas*; G. *kolon*, colon]. Hyper-

trophy and dilatation of the colon, usually first seen in childhood, associated with prolonged constipation and consequent abdominal distention. It appears in two primary forms (1) **Hirschsprung's m.** (achalasic or congenital) characterized roentgenographically by narrowing and atony of the distal sigmoid and rectum, neuropathologically by absence in these structures of the myenteric plexuses, and therapeutically by the success of rectosigmoidectomy (2) **idiopathic m.**, characterized roentgenographically by dilatation of the colon, including sigmoid and rectum, clinically by slower development and lower morbidity and mortality than in Hirschsprung's m. Its causes are unknown, but are presumed to result from faulty bowel habits, anal sphincter spasm, imbalance of the autonomic nervous system with overactivity of the thoracolumbar portion. Megacolon may also be secondary to an obstructive lesion.

meg'a·dont [*megas*; G. *odous*, tooth]. Having abnormally large teeth; macrodont.

meg"a·du"o·de'num (meg uh-dew o-dee'um, -dew od'num) [*megas*; L. *duodeni*, twelve each]. Idiopathic dilatation of the duodenum.

meg'a·dyne [*megas*; G. *dynamis*, power]. A million dynes.

meg"a·e·soph'a·gus [*megas*; G. *oisophagos*, gullet]. A markedly enlarged esophagus.

meg"a·far'ad [*megas*; *Faraday*]. A million farads.

meg"a·ga·mete' (meg uh-ga·meet', -gam'eet) [*megas*; G. *gametes*, marriage]. Macrogamete.

meg"a·gna·thus (meg uh-nayth'us) [*megas*; G. *gnathos*, jaw]. Large-jawed.

meg"a·kar'y·o·blast (meg uh kar'ee-o-blast) [*megas*; G. *karyon*, kernel; *blastos*, germ]. An immature, developing megakaryocyte. It is a large cell with nongranular deeply basophilic cytoplasm, and nucleus showing fine chromatin structure and numerous nucleoli.

meg"kar"y·o·blas·to'ma [*megas*; *karyon*, *blastos*; G. *-oma*, tumor]. Old term for Hodgkin's disease.

meg"a·kar'y·o·cyte [*megas*; *karyon*, G. *kytos*, cell]. A giant cell of the bone marrow 30–70μ, containing a large, irregularly lobulated nucleus; the progenitor of blood platelets. The cytoplasm contains fine azurophil granules.

lymphoid m. See *promegakaryocyte*.

meg"a·kar"y·oph·thi'sis (meg uh kar"ee-off'thi-sis, kar ee-o-thigh'sis) [*megas*, *karyon*, G. *phthisis*, wasting away]. A scarcity of megakaryocytes in the bone marrow in thrombocytopenia.

meg"a·lec'i·thal (meg uh-less'i-thul) [*megas*; G. *lekithos*, yolk]. Large-yolked.

meg"a·ler"y·the'ma. See *erythema infectiosum*.

me·gal'gi·a [*megas*; G. *algos*, pain]. Excessively severe pain. *Obs.*

meg'a·lo-, megal- [*megas*]. A combining form meaning *large*, *great*, used especially to denote *abnormal enlargement*.

meg'a·lo·blast" [*megas*; G. *blastos*, germ]. A large erythroblast with a characteristic nuclear pattern formed in marrow in liver principle deficiency anemias during relapse. The basophilic, polychromatophilic, and acidophilic (orthochromatic) forms mature to become nonnucleated megalocytes. Megaloblasts may appear in the peripheral blood. They resemble erythroblasts from embryos and fishes. Megaloblast is not synonymous with macronormoblast, but is the same as the proerythroblast of some authors.

meg"a·lo·car'di·a [*megas*; G. *kardia*, heart]. A true hypertrophy of the heart.

meg"a·lo·ce·phal'ic [*megas*, G. *kephalē*, head]. Large-headed; applied to a skull the capacity of which exceeds 1450 cc.

meg"a·lo·ceph'a·ly [*megas*; *kephalē*]. 1. The condition of having a very large head. 2. A disease characterized by progressive enlargement of the head, face, and neck, involving both the bony and the soft tissues. Also called *leontiasis ossea*.

meg"a·lo·cer·a·tos (meg uh-lo-ser'uh-tos) [*megas*; G. *keras*, horn]. A monstrosity with hornlike projections on the forehead.

meg"a·lo·chei'rous (meg uh-lo-kigh'rus) [*megas*; G. *cheir*, hand]. Large-handed.

meg"a·lo·cor'ne·a [*megas*; L. *cornu*, horn]. An enlarged cornea.

meg'a·lo·cyte [*megas*; G. *kytos*, cell]. A large, nonnucleated, red blood corpuscle, usually oval, derived from a megaloblast. —**megalocyt'ic**, *adj.*

meg"a·lo·cy·to'sis (meg uh-lo-sigh-to'sis) [*megas*; *kytos*; G. *-osis*, condition]. The occurrence of megalocytes and megaloblasts in the peripheral blood.

meg"a·lo·dac·tyl'y. See *macrodactylia*.

meg"a·lo·don'ti·a. Macrodontia. —**meg'alodont**, *adj.*

meg"a·lo·en'ter·on [*megas*, G. *enteron*, intestine]. An excessively large intestine.

meg"a·lo·gas'tri·a [*megas*; G. *gastēr*, belly]. Abnormal enlargement of the stomach.

meg"a·lo·glos'si·a. See *macroglossia*.

meg"a·lo·he·pat'i·a [*megas*; G. *hēpar*, liver]. Enlargement of the liver. *Obs.*

meg"a·lo·kar'y·o·blast. Megakaryoblast.

meg"a·lo·kar'y·o·cyte. See *megakaryocyte*.

meg"a·lo·ma'ni·a [*megas*; G. *mania*, madness]. The delusion of personal greatness, a symptom common in schizophrenia and other psychotic reactions. The patient expresses and acts out ideas of exalted attainment. —**megalomaniac**, *adj.*; **megalomaniac**, *n.*

meg"a·lo·mel'i·a [*megas*; G. *melos*, limb]. Gigantism of one or more limbs.

meg"a·lo·ny·cho'sis (meg uh-lo-ni-ko'sis) [*megas*; G. *onyx*, nail; *-osis*, condition]. Universal, noninflammatory hypertrophy of the nails.

meg"a·lo·pe'nis. Abnormally large penis.

meg"a·loph·thal'mus [*megas*; G. *ophthalmos*, eye]. Excessive largeness of the eyes.

meg"a·lo·pi·a, meg"a·lop'si·a. See *macropsia*.

meg"a·lo·po'di·a [*megas*; G. *pous*, foot]. The condition of having large feet.

meg"a·lo·splanch'nic [*megas*; G. *splanchnon*, inward parts]. Possessing large viscera, especially large liver.

meg"a·lo·sple'ni·a. Old term for splenomegaly.

meg'a·lo·spore [*megas*; G. *spora*, seed]. A large spore; macrospore.

meg"a·lo·u·re'ter. A greatly enlarged ureter.

meg"a·mer"o·zo'ite (meg uh-merr"o-zo'ite) [*megas*; G. *meros*, part; *zōon*, living being]. A large merozoite. *Obs.*

meg"a·nu'cle·us [*megas*; L. *nucleus*, nut]. Formerly used for macronucleus.

meg'a·phone [*megas*; G. *phōnē*, sound]. An instrument used for assisting the hearing of the deaf, by means of large reflectors of the sound waves.

meg"a·pro·so'pous [*megas*; G. *prosōpon*, face]. Having an unusually large face.

meg"a·rec'tum [*megas*; L. *rectus*, straight]. A greatly enlarged rectum.

meg"a·sig'moid [*megas*, G. *sigmoeidēs*, of the shape of a sigma]. A greatly enlarged sigmoid colon.

meg'a·spore. See *macrospore*.

meg'a·volt [*megas*; Alessandro *Volta*]. A unit equal to 1,000,000 volts.

Méglin, Jean Antoine [French physician, 1756–1824]. Described the point at which the anterior palatine nerve emerges from the greater palatine foramen; called *Méglin's point*.

meg'ohm" [G. *megas*, large; G. S. *Ohm*]. An electric unit equal to 1,000,000 ohms.

meg"oph thal'mus. See *megalophthalmus*.

me'grim. Old term for migraine.

Meibom, Heinrich [*German physician and anatomist*, 1638–1700]. Described the tarsal glands, also called *Meibom glands*, *Meibomian glands*. Chalazion is also called *Meibomian cyst*.

Meier-Porges test. See under Otto *Porges*.

Meige, Henri [*French physician*, 1866–1940]. Described hereditary trophedema of the legs (1899); called *Meige disease*, *Milroy disease*.

Meigs, Arthur Vincent [*American physician*, 1850–1912]. Described the capillary vessels between the muscle fibers of the heart; called *Meigs capillaries*.

Meigs, Joe Vincent [*American gynecologist*, 1892–]. Described fibroma of the ovary with ascites and hydrothorax called *Meigs syndrome*.

Meiklejohn-Cohen indican method. See *method*.

Meinicke test. A flocculation test for syphilis

mei'o- (migh o-). See *mio-*.

mei"o-lec'i thal, mi"o-lec'i thal (migh les'i-thal) Alecithal.

mei-o'sis (migh-o sis) [G. *meiōsis*, diminution]. The nuclear changes which take place in the last two cell divisions in the formation of the germ cells. The chromosomes divide once but the cell body divides twice with the result that the nucleus of the mature egg or sperm contains the reduced (haploid) number of chromosomes. Also spelled *miosis*. Syn., *reduction division*. —**meiotic**, *adj*

Meissner, Georg [*German anatomist and physiologist*, 1829–1905]. With Rudolph Wagner described tactile nerve endings (1852) called *Meissner* or *Wagner' corpuscles*; see Meissner corpuscle. See also submucous plexus, also called *Meissner plexus*.

mel. [L.] Honey

mel- [G. *melos*, limb]. *I medicine*, combining form signifying *limb*.

mel-, mel'o- [G. *mēla*, cheeks]. *I medicine*, combining form meaning *cheek*.

me-lae na (mi lee nuh) See *melena*.

me la gra, me-lag'ra [G. *melos*, limb; *agra*, seizure]. Muscular pains in the extremities.

me lal'gi-a [*melos*, G. *algos*, pain]. Pain or neuralgia in the extremities.

nutritional m. A syndrome of painful burning feet and, in severe cases, hands, revealing neurovascular symptoms with the predominant pathology in the blood vessels It may be pantothenic acid deficiency

mel"an-cho'li a, mel an chol"y [G. *melancholia*, melancholy]. A form of mental disorder characterized by extreme depression, fear brooding, and painful delusions. All activity is usually inhibited, but melancholic patient may show psychomotor overactivity (agitated depression) or he may have many depressive ideas that shift rapidly (depressive mania) When mild, melancholic stat is called retardation. When average, it is called acut depression When severe, it may become stuperous depression. —**melanchol'ic**, *adj*.; **melancholiac**, *n*.

climacteric m. That occurring at the menopause

involutional m. A form of melancholia, arising durin the involutional period; characterized by agitation, anxiety and brooding in conjunction with narrow mental horizons and lack of adaptability See involutional psychotic reaction.

m. agitata. ( ) Old term for catatonia. (b) Agitated melancholia. A form associated with excessive motor excitement usually implies association with manic-depressive psychoses or with involutional melancholia.

m. attonita. The morbid state characterized by muscular rigidity Common in catatonia.

m. simplex. Simple depression. A mild form without delusions.

paranoid m. The depressive phase of manic-depressive psychosis when it assumes paranoid appearance. Syn., *melancholic insanity*

mel" ne mi [G *melas* black *haima*, blood]. The presence of melanin in the blood.

Me-la ni [*melas*]. A genus of fresh-water snails whose species serve as important intermediate hosts of the trematodes *Paragonimus westermani* nd *Metagonimus yokogawai*.

mel" n id ro sis. A form of chromhidrosis in which the sweat is dark-colored or black

mel" nif'er-ous [*melas*, L. *ferre*, to bear]. Containing melanin.

mel'a ni [*melas*]. A group of black or dark brown pigments produced by metabolic activity of certain specialized cells and containing carbon, nitrogen, hydrogen, oxygen, and probably sulfur; iron is probably an accidental impurity Occurs naturally in the choroid coat of the eye, the skin, hair cardiac muscle, and pia mater Some evidence indicates that melanin is 5,6-dihydroxyindole-α-carboxylic acid, and results from the action of the enzyme tyrosinase on tyrosine.

mel' -nism [*melas*]. Abnormal deposition of dark pigment (melanin) in tissues, in organs, or in the skin.

mel' no- melan- [*melas*]. A combining form signifying *dark-colored*, or *relating to melanin*.

mel"a-no-am"e-lo-blas to ma. Ameloblastoma in which melanin is found.

mel' no-blast" [*melas*; G *blastos*, germ]. 1. An immature melanin-forming cell. 2. Old term for (a) in *biology*, an immature pigment cell, of neural crest origin in certain vertebrates; (b) in *medicine*, the mature melanin-elaborating cell.

mel"a no-blas t ma See *melanoma*.

mel" no-car"ci no ma. See *melanoma*.

mel'a-no-cyte" [*melas*; G *kytos*, cell]. A mature melanin-forming cell in the dermoepidermal junction; it may be dopa or tyrosinase positive. In hematoxylin- and eosin-stained section, it appears as clear cell, in sections impregnated with silver as dendritic cell.

mel" no-der ma mel" no-der'mi a [*melas*; G *derma*, skin]. Black pigmentation of the skin. —**melanodermic**, *adj*

mel" no-der"ma ti'tis tox'i ca. A contact dermatitis, clinically and histologically identical with Riehl' melanosis, due to tars, oils, or greases.

mel" no-der"ma to'sis. An inflammatory condition of skin characterized by increased pigmentation.

mel" no-ep"i the"li-o ma. See *melanoma*.

me-l o gen [*melas*; G *gennethai*, from *gignesthai*, to be produced]. The colorless precursor which is transformed into melanin on oxidation. Patients, especially those with widespread melanomas, may excrete urine containing melanogen; on standing or oxidation, the urine becomes dark brown or black.

mel"a-no-gen'e-sis [*melas*; G. *genesis*, production]. The formation of melanin.

mel" no-glos'si [*melas*; G *glōssa*, tongue]. Blacktongue.

mel'a-noid [*melas*; G *eidos*, form]. Dark-colored; resembling melanosis.

mel" no ma [*melas*; G *-ōma*, tumor]. A malignant tumor derived from melanophores of skin, of the choroid, of the anus, of meninges, and perhaps of adrenals. The cells of the tumor are of immature type. Depending upon the content of melanins within the cells, the tumor varies from whi

(amelanotic m.) to black or blue-black. Also called *malignant m.*, *melanoblastoma*, *melanocarcinoma*, *melanoepithelioma*, *melanosarcoma*, *melanotic whitlow*, *nevocarcinoma*, *nevomelanoma*.

amela otic m. See *melanoma*.

juvenile m. A junction nevus which pathologically resembles malignant melanoma but which is clinically benign.

mel"a no-ma to sis [*melas*; -*oma*; G -*osis*, increase]. 1. Widespread distribution of melanoma. 2. Diffuse melan tic pigmentation of the meninges.

mel"a no nych'i-a (mel uh-no nick ee-uh) [*melas*; G *onyx* nail]. A condition in which the fingernails or toenails turn black.

mel' no phage A cell containing phagocytized melanin.

mel' no phore mee-lan o-phore [*melas*, G *phoros*, bearing]. 1 A dendritic cell containing melanin in its cytoplasm and having contractile properties. Melanophores are partly responsible for color changes in many animals, when, in response to certain stimuli, the pigment granules disperse into the dendrites or are concentrated in the perikaryon. 2. *I medicine*, formerly melanophage.

mel" no-pla'ki [*melas*; G *plax*, plat]. Pigmentation of the mucous membran of the mouth, usually in patches and occasionally with leukoplakia superimposed.

mel"a no-pro'te-in. A conjugated protein in which melanin is the associated chromogen.

mel" nor rha gi [*melas*, G *rhēgnynai*, to burst forth]. Old term for melena.

mel" nor-rhe a. Melena.

mel" no-sar co ma. See *melanoma*.

mel" no sis [*melas*; G -*osis* condition]. Dark brown or brownish black pigmentation of surfaces by melanins or in some instances, by hematogenous pigments. In the skin, melanosis is observed in such conditions as sunburn, Addison disease, various dermatoses, and about the nipples and elsewhere in pregnancy —**melanot'ic**, *adj*

m. coli. Pigmentation of mucosa of the colon in innumerable, pproximated, minute foci (shaven-beard appearance) due to hematogenous pigments; similar appearance may be due t deposits of bismuth in bismuth poisoning

m. iridis. The invasion of the iris by melanoblasts; form of melanoma of the eye.

Ri hl' m. Formerly *melanodermatosis* involving the face, eck, axillary folds, breasts, umbilical and inguinal areas described by G Riehl. Etiology was probably nutritional. Now any brown pigmentary dermatosis of the exposed skin of face and neck and f various causations, g hor monal disturbances and occupational irritants.

mel" no-trich'i a lin guae (mel h no trick' ee-uh ling gwee) See black, hairy tongue.

mel net'ri-chous (mel uh not'ri kus) [*melas*, G *thrix hair*]. Black-haired.

mel"a-nu ri [*melas*; G *ouron*, rine]. The presence of black pigment in the urine, the result of oxidation of melanogens. —**melanuric**, *adj*

mel ar'sen. The disodium salt of N-(4,6-diamino-3-s-triazinyl)arsanilic acid disodi m p-melam yl phenylarsonate, pentavalent arsenical which has been used as trypanocidal agent.

m. oxide. N-(4,6-Diamino-3-s-triazinyl)-p-aminophenyl arsine xide trivalent arsenical differing from melarsen in having the —AsO group replace —AsO(ONa) it possesses trypanocidal activity

me-las ma (mi las muh) Melanoderma.

me-le na, me lae na [*melas*] The discharge of stools colored black by altered blood.

m. neonatorum. An extravasation of blood into the stomach and intestines of the newborn infant, occurring most often in the first few hours of life.

mel'e tin. Quercetin.

me-lez'i tose. Trisaccharide obtained from an exudate of the Douglas fir and the larch. Yields D-fructose on hydrolysis. Also called *melicitose*.

mel'i- [G.] A combining form meaning honey.

Me'li a [G ash tree]. A genus of the Meliaceae. *M. azedarach* is indigenous to Asia, but naturalized in southern Europe and America. The bark and fruit have been used as an anthelmintic and antiperiodic. Also has been used as an emetic and cathartic, and, in large doses, as arcotic. Usually given as decoction.

mel"i bi'ase. An enzyme from certain brewer's yeasts catalyzing the hydrolysis of melibiose to dextrose and galactose.

mel"i bi'ose. $C_{12}H_{22}O_{11}$; a disaccharide resulting from hydrolysis of raffinose and also occurring naturally It may be hydrolyzed to glucose and galactose.

mel"i lot'i ac'id. $OH.C_6H_4(CH_2)_2COOH$. An acid found in *Melilotus* species and also obtainable from coumarin.

mel"i lot'in. $COOH.CH:CH.C_6H_4O.C_6H_{11}O_5$, glucoside occurring in flowers of *Melilotus altissima* and *M arvensis*; on hydrolysis it yields o-coumaric acid and D-glucose. Syn., *melilotoside*.

mel"i lot'o side. Melilotin.

Mel"i lo'tus [G. *melilōtos*, kind of clover]. A genus of the Leguminosae.

M. officinalis. Yellow sweet clover: contains coumarin, melilotic acid, and volatile oil. Has been used as local anodyne.

melin. See *rutin*.

me"li oi d sis [G *mēlis*, glanders; *eidos*, form; -*osis*, condition]. An infectious granuloma similar to glanders It is primarily disease of rodents but is occasionally communicable to man. This disease has been observed in Rangoon and the surrounding area and is caused by the *Malleomyces pseudomallei*.

Me lis'sa [G bee]. A genus of plants of the Labiatae.

M. fficinalis. Common balm; species growing in southern Europe. Contains volatile oil; has been used as carminative, diaphoretic, and flavoring agent.

me lis'si ac'id. $CH_3(CH_2)_{28}COOH$ An acid occurring in beeswax.

me-lis"so pho'bi-a [G. *melissa*, bee *phobos*, fear]. A morbid fear of bees.

me-li syl. Myricyl.

m. l'co-hol. Myricyl alcohol.

mel'i tin, mel'i tine. A filtrate of 20-day culture of *Brucella melitensis*, used for diagnosis of undulant fever

me li'ti [G *mēla*, cheeks; -*itis*, inflammation]. Inflammation of the cheek.

mel"i to-coc-co sis. See *brucellosis*.

mel'i tose. See *raffinose*.

mel"i tox'in. Dicoumarin.

mel"i tri'ose. Raffinose.

mel"i tu'ri [G *meli*, honey; *ouron*, urine]. General term indicating the presence of any sugar in urine.

Mellinger magnet. See under *magnet*.

mel lit'ic ac'id $C_6(COOH)_6$, benzenehexacarboxylic acid; crystalline substance occurring in certain coal and wood products and synthesized by oxidation of carbon with nitric acid.

mel li'tum [L. *mellitus* of honey]. *I pharmacy*, honey a preparation in which honey is the menstruum.

Mellon, Ralph R. (1883-) American bacteriologist, one of the earliest experimenters with

sulfa drugs in America; he pioneered in the application of sulfathiazole in pneumonia.

Melnick method. See Hochberg-Melnick-Oser method for ascorbic acid.

mel'o-. See mel-, melo-.

mel"o-di-dy mi a [G. *melos*, limb; *didymos*, twin]. The presence of an accessory limb or limbs. *Obs.*

mel"o-did'y mus [*melos*; *didymos*]. An individual with an accessory limb or limbs. *Obs.*

mel"o-ma ni a [G. *melos*, song; *mania*, madness]. A psychosis marked by an inordinate devotion to music. *Obs.* —**melomaniac**, *n.*

me-lom e-lus [G. *melos*, limb; *melos*]. An individual with one or more rudimentary accessory limbs attached to limb.

Me-loph gus [*melos*; G. *phagein*, to eat]. A genus of ticks ectoparasitic on mammals and birds.

M. ovinus. That species known as the sheep tick which transmits *Rickettsia melophagi* and the trypanosomiasis of sheep.

mel"o-rhe os t sis [*melos*; G. *rheein*, to flow; *osteon*, bone; *-osis*, condition]. A very rare condition of unknown cause in which certain bones, or parts of bones, undergo asymmetrical or local enlargement and sclerotic changes, typically confined to the bones of one extremity with distortion of affected bone, limitation of movement in the joints between the bones, and marked pain. Also called *Léri type of osteopetrosis, osteosis eburnisans monomelica.*

me-los chi sis (mi-los'ki-sis) [G. *melon*, cheek; *schisis*, cleavage]. A congenital cleft of the cheek.

mel" trid'y-mus. See *dipygus tripus.*

me-lo'tus [G. *melon*, cheek; *ous*, ear]. An individual showing congenital displacement of the ear which lies on the cheek.

melt'ing point. The degree of temperature at which fusible solids begin to melt. Abbreviated, m.p.

Meltzer, Samuel James [American physiologist 1851-1920]. With John Auer developed method of anesthesia by intratracheal insufflation (1909); called *Meltzer' method.*

mem'ber [L. *membrum*, limb]. A part of the body especially projecting part, as the leg or the arm.

mem'brane [L. *membrana*, membrane]. A thi layer of tissue surrounding part, separating adjacent cavities, lining cavity or connecting adjacent structures. —**mem'branous**, *adj.*

anal m. The dorsal part of the cloacal membrane caudal t the urorectal septum.

animal m. A membrane made from animal tissues, used in dialysing.

anterior atlanto-occipital m. A dense membrane extending from the ventral surface and cranial margin of the anterior arch of the atlas t the anterior border of the foramen magnum and inferior surface of the basilar part of the occipital bone.

arachnoid m. The arachnoid.

atlantoaxial m. One bridging the gap between the posterior arch of the tlas and the arch of the axis.

atlanto-occipital m. See anterior and posterior atlanto-occipital m.

basal m. of Bruch. That which forms the outer of the four layers of the choroid coat of the eye

basement m. The delicate, noncellular membrane on which an epithelium is seated.

basilar m. The membranous portion of the spiral lamina separating the scala vestibuli from the scala tympani, extending from the base to the apex of the cochlea and supporting the organ of Corti also called *cochlear zone*

birth membranes. The two fetal membranes, inner amnion and outer chorion, which enclose the amniotic fluid. A portion of the chorion contributes t the placenta.

Blastodermic m. See *blastoderm.*

Bowman's m. A thin membrane which separates the corneal epithelium from the substantia propria of the cornea.

brood m. The internal germinative layer of the hydatid cyst of *Echinococcus granulosus*, which on proliferation gives rise to scolices, brood capsules, or daughter cysts.

Bruch's m. See basal m. of Bruch.

bucconasal m. A thin epithelial membrane formed t the sit of primary choana by the apposition of stomodeal and olfactory epithelia. It ruptures during the seventh week.

buccopharyngeal m. The membrane separating stomodeum and pharynx, composed of ectoderm and endoderm. It ruptures in embryos of 2.5 mm. Syn., *oral m., pharyngeal m.*

cell m. See plasma m.

chorio-allantoic m. In Sauropsida, vascular extraembryonic membrane formed by fusion of the allantois and chorion.

choroid m. That part of the vascular tunic, or uvea, of the eye which extends anteriorly as far as the ora serrata.

cloacal m. A delicate membrane of ectoderm and endoderm separating the embryonic hindgut from the external or ectodermal cloaca.

costocoracoid m. A dense layer of fascia extending between the subclavius muscle and the pectoralis minor and forming the anterior portion of the sheath of the axillary vessels.

cricothyroid m. A ligamentous membrane between the cricoid and thyroid cartilages. Also called *cricovocal m., conus elasticus.*

croupous m. The yellowish whit membrane forming in the larynx in laryngotracheobronchitis.

decidual m. One of the membranes formed by the superficial part of the endometrium during pregnancy See *decidua basalis, decidua capsularis, decidua parietalis.*

Descemet's m. The posterior elasti lamina of the cornea which covers the posterior surface of the substantia propria.

diphtheritic m. A fibrinous layer formed on mucous membrane or cutaneous surface and extending downward for variable depth. It is the result of coagulation necrosis, generally brought about by the bacillus of diphtheria.

drum m. The tympanic membrane.

egg m. Any one of several membranes surrounding an ovum The primary egg membrane is one formed by the ovum itself such as the vitelline membrane; the secondary egg membrane is formed by the follicular cells of the ovary as the zona pellucida; the tertiary egg membrane is one formed by secretions of the oviduct or uterus, as in sauropsids and monotremes.

elastic m. One composed of elastic fibrous tissue.

elastic m. of the larynx. The quadrangular membrane and the conus elasticus, or elastic cone.

Elford m. Graded collodion membrane filters employed for the determination of the relative size of different filtrable viruses.

exocoelomic m. A delicate, mesothelium-like membrane bounding the exocoelom of the blastocyst continuous with the extraembryonic mesoderm and with the primary endoderm. It may be derived from either or both.

external elastic m. That of the wall of some arteries forming the boundary between the tunica media and tunica adventitia. See Plat 6.

external limiting m. (a) I the e the thin layer between the outer nuclear layer of the retina and that of the rods and cones. (b) I embryology the membrane investing the outer surface of the neural tube

extraembryonic m. Any of the membranes surrounding the embryo or fetus, shed at birth. See *amnion, chorion, yolk sac, allantois.*
false m. See diphtheritic *m.*
fenestrated m. One of the layers of elastic tissue in the tunica media and tunica intima of large arteries
fetal membranes. The chorion, amnion, or allantois.
fibroserous m. Thin, transparent, glistening structures forming closed sacs that contain certain organs. They are the peritoneum, the two pleurae, the pericardium, the tunica vaginalis testis, the arachnoid, and synovial membranes.
germinal m. See *blastoderm.*
germ m. See *blastoderm.*
glassy m. Basement membrane of clear highly refractive nature, as in the maturing ovarian follicle or in hair follicle.
granulosa m. The layer of small polyhedral cells within the theca of the Graafian follicle
Henle's fenestrated m. See fenestrated *m.*
Heuser's m. The exocoelomic membrane
hyalin m. (a) Basement membrane (b) The membrane between the inner fibrous layer of hair follicle and its outer root sheath. ( ) The basement membrane of Graafian follicle
hyaloid m. The limiting membrane surrounding the vitreous body and forming the suspensory ligament and zonula.
hyoglossal m. The membrane at the posterior portion of the tongue unites the tongue to the hyoid bone and gives attachment to the posterior fibers of the genioglossus muscle.
hyothyroid m. See thyrohyoid *m.*
intercostal m. Either of the membranes between the ribs, which replaces the internal or external muscles.
internal elastic m. Forms the boundary between the tunica intima and the tunica media, being prominent in arteries of medium and small caliber See Plate 6.
internal limiting m. (a) In the eye, the inner layer of the retina. (b) *In embryology* the membrane which lines the lumen of the neural tube.
interosseous m. ( ) Of the forearm, the strong fibrous membrane between the interosseous borders of the radius and ulna. (b) Of the leg, the strong fibrous sheet between the interosseous crests of the tibia and fibula.
intrachoroidal m. An ependymal membrane below the choroidal fissure in the embryo
limiting m. The membrane surrounding the vitreous body See hyaloid *m.*
meconii **m.** A la er within the rect m of the fetus, supposed t vest the meconium.
medullary m. Endosteum
m. bone. Any bone that originates, not in cartilage, but in membrane, as some of the cranial bones.
mucous m. The membrane lining those cavities and canals communicati g with the air It is kept moist by the secretion of various types of glands.
Nasmyth's m. See enamel *cuticle* ( )
nictitating m. The winking membrane of the lower animals, represented in the human eye by the plica semilunaris
Nitabuch's m. See *stria* of N tabuch
nuclear m. The layer of condensed protoplasm t the periphery of the nucleus.
obturator m. (a) That of the pelvis, the fibrous membrane closing the obturator foramen (b) That of the stapes, the thin membrane between the crura and footplate.
oral m. See buccopharyngeal *m*
oronasal m. A double la er of epithelium separating the nasal pits from th stomodeum of the embryo. Also called *bucconasal m.*
otolithic m. The gelatinous membrane covering the free surface of the sensory pithelium of the acoustic macula that bears the otoliths.
peridental m. See periodontal *m.*
perineal m. Fibrous membrane stretching across the pubic arch and dividing th urogenital triangle into a superficial and deep portion also called *inferior fascia of the urogenital diaphragm*
periodontal m. The connective tissue between the root of tooth and the bone of the alveolar process, or extending from the root into the gingiva. Syn., *pericementum.* Formerly called *peridental m.*
permeable m. One which permits the passage of water and certain dissolved substances.
persistent pupillary m. An anomaly of the eye, the result of the failure of the pupillary membrane of the fetus to disappear
pharyngeal m. See buccopharyngeal *m.*
pituitary m. The Schneiderian membrane. *Obs.*
placental m. The tissues of the placenta separating the maternal and fetal blood streams. Syn *placental barrier*
plasma m. That surrounding the cytoplasm of every living cell, consisting of fine flat network of elongated protein molecules to which lipid molecules are tightly bound. It maintains the life and integrity of the cellular interior
pleuropericardial m. The embryonic membrane, derived from the sept m transversum, that separates the pericardial coelom from the pleural canal.
pleuroperitoneal m. The embryonic membrane, derived in large measure from the septum transversum, that separates the pleural canal from the peritoneal part of the coelom. It forms part of the diaphragm.
posterior atlanto-occipital m. A broad membrane extending from the posterior surface and cranial border of the posterior arch of the atlas t the posterior margi of the foramen magnum
pseudoserous m. One presenting the moist, glistening surface of serous membrane, but differing from it in structure, as the endothelium of the blood vessels.
pupillary m. A membrane formed by the mesoderm on the anterior surface of the lens epithelium in the embryo It combines peripherally with pars iridica retinae to form the iris centrally it disappears to form the pupil of the eye.
pyogenic m. The lining of an abscess cavity or fistulous tract. The term should be restricted t the lining of an abscess that is spreading and in which the membrane produces pus.
quadrangular m. The membrane of the larynx which extends from the aryepiglottic folds to t the level of the ventricular folds below
Reichert's m. The delicate basement membrane of the trophoblast cells in the nonplacental area of the rodent blastoderm. It persists for some time after the trophoblast cells migrate into the decidua.
Reissner's m. See vestibular *m.*
reticula m. The membrane covering the space of the outer hair cells of the cochlea.
round-window m. See secondary tympanic *m.*
Schneiderian m. The mucosa lining the nasal cavities nd paranasal sinuses.
secondary tympa ic m. The membrane closing the fenestra rotunda also called *round-window m.*
semipermeable m. One which permits water t pass but which holds back salts and their ions.
serous m. A delicate membrane covered with flat, mesothelial cells lining closed cavities of the body

Shrapnell's m. The pars flaccida of the tympanic membrane, that is the part filling the notch of Rivinus.
sternal m. The fibrous layer ensheathing the sternum in front and behind.
submucous m. See *tela submucosa*.
suprapleural m. The extrapleural fascia attached to the inner margin of the first rib and covering the dome of the pleura. Also called *Sibson's fascia*.
sutural m. Fibrous tissue between the sutures of the cranium.
synaptic m. The single membrane at the synapse, demonstrated by special staining as separating the cytoplasm of the terminal enlargement of an axon from the cytoplasm of the nerve cell. Syn., *synaptolemma*.
synovial m. The lining of an articular capsule, concerned with secretion of synovial fluid into the articular cavity; it is lacking over articular surfaces.
tectorial m. A jellylike membrane covering the organ of Corti in the internal ear. See Plate 20.
thyrohyoid m. The membrane joining the thyroid cartilage and hyoid bone. See Plate 45.
tympanic m. The drum membrane; the membrane separating the external from the middle ear. It consists of three layers, an outer or skin layer, a fibrous layer, and an inner mucous layer. See Plate 20.
undulating m. A membrane projecting laterally from certain protozoa, especially seen in trypanosomes.
urethral m. See urogenital m.
urogenital m. That part of the cloacal membrane cranial or ventral to the urorectal septum; it forms the floor of the urethral groove of the phallus.
vestibular m. A thin membrane within the semicircular ducts of the ear stretching from the upper surface of the osseous spiral lamina to the outer wall of the cochlea, separating the cochlear duct from the scala vestibuli; also called *Reissner's m.* See Plate 20.
vitelline m. A structureless cytoplasmic membrane on the surface of the ovum.
vitreous m. The inner membrane of the choroid.
mem'brane po-ten'tial. Potential difference across the membrane of a living cell.
mem"bra-no-cra'ni-um [membrane; G. *kranion*, skull]. The membranous skull of the fetus, prior to ossification. Syn., *desmocranium*.
mem'brum [L.]. Member.
m. muliebre. The clitoris.
m. virile. The penis.
mem'o-ry [L. *memoria*, memory]. That faculty of the mind by which ideas and sensations are recalled.
anterograde m. Memory for events in the remote past; forgetfulness for recent occurrences, or retrograde amnesia, is implied.
cutaneous m. See *mnemodermia*.
kinesthetic m. See *kinesthesia*.
retrograde m. Memory for events in the recent past, as contrasted with retrograde amnesia, the loss of memory for recent events.
me-nac'me [G. *mēn*, month; *akmē*, prime]. The period of a woman's life during which menstruation persists.
men"a-di'ol. $C_{11}H_{10}O_2$. 2-methyl-1,4-naphthohydroquinone or 2-methyl-1,4-naphthalenediol, the alcohol obtained by reduction of the =CO groups of menadione.
m. diacetate. Acetomenaphthone.
m. sodium diphosphate. $C_{11}H_8Na_4O_8P_2 \cdot 6H_2O$; the hexahydrate of the tetrasodium salt of 2-methyl-1,4-naphthalenediol diphosphate; a white to pink powder, hygroscopic, very soluble in water. It has the actions and uses of menadione. Syn., *sodium menadiol diphosphate*. See *synkavite*.
men"a-di'one (men-ad'ee-ohn, men uh-dye'ohn) (menadionum). $C_{11}H_8O_2$. The 2-methyl-1,4-naphthoquinone, occurring as a bright yellow crystalline powder; practically insoluble in water. Possesses vitamin-K activity in hemorrhagic diatheses due to prothrombin deficiency in the blood; in cases of biliary obstruction bile salts must be administered simultaneously. Dose, 1–2 mg. ($^1/_{60}$–$^1/_{30}$ gr.) Syn., *menaphthone*, *synthetic vitamin K*, *vitamin K*. See *kappaxan*, *kavitin*, *kanadin*, *prokliet*, *thyloquinone*.
m. sodium bisulfite (*menadioni sodii bisulfis*). $C_{11}H_8O_2 \cdot NaHSO_3 \cdot 3H_2O$. A water-soluble compound containing 50% menadione; suited for parenteral administration. Dose, 2–3 mg. ($^1/_{30}$–$^1/_{20}$ gr.)
men"a-gogue (men'uh-gog"). Emmenagogue.
men-aph'thone. The British Pharmacopoeia name for menadione.
me-nar'che (mi-nar'kee) [mēn; G. *archē*, beginning]. The time when menstruation starts.
delayed m. Late onset of menstruation.
Mendel, Gregor Johann [Austrian botanist, 1822–84]. Discovered a principle, called *Mendel's law* or *Mendelian law*, governing the inheritance of certain characteristics: in a specific character the individual offspring is not intermediate between the parents, but is like one parent or the other, and a specific character may be dominant or recessive. For example, in crossing red and white flowers, Mendel found that the first generation of hybrids were all red, and when self-fertilized produced red- and white-flowering plants in the ratio of 3:1. See Mendelian ratio. In this case the red was dominant, the white recessive. When the second generation of hybrids was self-fertilized, the white bred true, as did one of each three reds; the remaining two reds produced both colors, again in the ratio of three dominant to one recessive. The term *Mendelism* applies to the body of knowledge growing out of Mendel's discovery; it refers to all inheritance through the chromosomes, in contradistinction to non-Mendelian inheritance depending on autonomous bodies in the cytoplasm. See also *Mendel's laws* under *law*.
Mendel, Kurt [German neurologist, 1874–1946]. Described dorsal flexion of the second to fifth toes in normal individuals when the dorsum of the foot is tapped; called *dorsocuboidal* or *cuboidodigital reflex*, *Mendel's dorsal reflex of the foot*, *Bekhterev-Mendel reflex*. Plantar flexion occurs in disease of the pyramidal tract.
Mendel's reaction test. See Mantoux test.
Mendeléev, Dimitri Ivanovich [Russian chemist, 1834–1907]. A discoverer of the periodic law, also called *Mendeléev's law*.
Men'del laws. See under Gregor Johann Mendel.
men"del-ism. Incorrect term for mendelism.
me-ner'ik. A Siberian mental disorder [illegible] in which the patient is incoherent, [illegible] and perhaps violent.
menformon. Trade name for [illegible].
men"hi-dro'sis (men"hi-dro'sis) [illegible] **men"i-dro'sis** [G. *mēn*, month; [illegible]]. Replacement of the menstrual [illegible] by bloody sweat.
Ménière, Prosper [French otologist, 1799–1862]. Described auditory vertigo, as [illegible] *Ménière's syndrome*. See under *syndrome*.
me-nin'ge-al [G. *mēninx*, membrane]. Pertaining to the meninges.
me-nin"ge-or'rha-phy [*mēninx*; [illegible] *rhaphē*, suture]. 1. Suture of membranes. 2. Suture of the meninges of the brain or spinal cord.

me·nin′ges (mi·nin′jeez) Plural of meninx.

me·nin″gi·o·blas·to′ma, me·nin″gi·o·fi″bro·blas·to′ma. See *meningioma.*

me·nin″gi·o′ma [*mēninx*; G. *-ōma*, tumor]. A tumor situated usually in the meninges, but occasionally in other parts of the central nervous system, probably derived from cells of the meningeal primordium. Grows by expansion but rarely it may be invasive. Also called *mesenchymal m.*, *durosarcoma*, *dural endothelioma*, *endothelioma of meninges*, *endotheliosis of meninges*, *meningeal fibroblastoma*, *meningioblastoma*, *meningiofibroblastoma*, *meningiomatosis*, *meningiosarcoma*, *meningiothelioma*, *mesothelioma of meninges*, *psammoma of meninges*, *meningeal sarcoma.*

parasagittal m. A common form of benign brain tumor. It is slow-growing and noninfiltrable, developing along the course of the superior longitudinal sinus.

suprasellar m. One situated above the sella turcica.

me·nin″gi·o″ma·to′sis. Multiple meningiomas.

me·nin″gi·o·sar·co′ma. Meningioma.

me·nin″gi·o·the″li·o′ma. Meningioma.

me·nis′gism, men′in·gism [*mēninx*]. 1. An acute, infectious state of meningeal irritation, usually associated with the specific fevers and pneumonias in childhood. 2. A hysterical state simulating meningitis.

men″in·gis′mus (men in jiss′mus, jiz′mus). See *meningism.*

men″in·git′i·des. Plural of meningitis.

men″in·gi′tis [*mēninx*; *-itis*]. Inflammation of the membranes of the brain or cord; that of the dura is termed *pachymeningitis*; that of the pia-arachnoid, *leptomeningitis*, or simply meningitis. According to etiology meningitis can be classified as *aseptic*, *epidemic*, *sporotrichotic*, etc. —**meningit′ic,** *adj.*

acute aseptic m. See lymphocytic *choriomeningitis.*

acute benign lymphocytic m. See lymphocytic *choriomeningitis.*

acute pyogenic m. Acute inflammation of the meninges due to the streptococcus, pneumococcus, micrococcus, and pyogenic organisms other than the meningococcus.

aseptic m. See lymphocytic *choriomeningitis.*

bacteroides m. Meningitis due to anaerobic, Gram-negative, non-spore-bearing bacilli (*Bacteroides*).

basilar m. Inflammation of the meninges at the base of the brain.

cancerous m. Metastatic neoplasm of the meninges with mild inflammatory reaction. Polyradiculoneuritis sometimes results from the infiltration of nerve roots in contact with the diseased meninges.

cerebrospinal m. Inflammation of the meninges of the brain and spinal cord.

chronic aseptic m. Chronic nonbacterial meningitis of unknown cause.

encephalitic m. See *meningo-encephalitis.*

epidemic cerebrospinal m. An acute purulent inflammation of the meninges of endemic and epidemic incidence caused by the *Neisseria meningitidis* (meningococcus).

fulminating adrenal m. See Waterhouse-Friderichsen *syndrome.*

gonococcal m. Meningitis caused by the gonococcus organism.

gummatous m. A granulomatous infection of the meninges occurring in the third stage of syphilis.

influenzal m. Inflammation of the meninges due to infection with *Hemophilus influenzae*, most commonly occurring in infants.

leptospiral m. A form caused by a member of the genus *Leptospira*, sometimes accompanied by jaundice.

m. circumscripta spinalis. Arachnoiditis of the spinal cord only.

m. serosa circumscripta. Inflammation of the meninges with formation of cystic accumulations of fluid which cause symptoms of tumors.

m. serosa spinalis. Arachnoiditis of the spinal cord.

meningococcic m. See epidemic cerebrospinal *m.*

plasmodial m. Meningitis caused by some form of *Plasmodium.*

pseudotyphoid m. A nonfatal louse-borne variety affecting swineherds, characterized by fever, headache, muscular pain, digestive disturbance, and foul diarrhea with occasional rectal hemorrhage.

rickettsial m. Meningitis caused by some member of the Rickettsiae.

serous m. Meningitis associated with a cranial focus of infection, for example mastoiditis, without the passage of organisms into the cerebrospinal fluid.

spinal m. Inflammation of the meninges of the spinal cord, usually secondary to osteitis of the vertebrae.

sterile m. Meningitis without infection, usually resulting from subarachnoid injection of foreign materials such as gases, serums, or chemical compounds.

streptococcal m. A form usually caused by streptococci of group A, often following otitis media, mastoiditis, or petrositis.

syphilitic m. Inflammation of the meninges caused by syphilis.

torular m. See yeast *m.*

traumatic m. Meningitis resulting from the invasion of organisms after injuries to the head or spine.

tuberculous m. Inflammation of the meninges due to the tubercle bacillus which reaches the brain from a distant focus via the blood stream; the disease occurs most commonly in children.

virus m. Meningitis caused by a virus.

yeast m. Meningitis caused by a form of yeast such as *Torula.*

men″in·git″o·pho′bi·a (men in jit o·fo′bee ah) [*mēninx*; G. *phobos*, fear]. 1. A morbid fear of meningitis. 2. A pseudomeningitis due to fear of that disease.

me·nin·go- (mi·ning go-, mi·nin go-, meh ning go-, meh nin go-), **mening-** [*mēninx*]. A combining form meaning *membrane* or denoting *the meninges.*

me·nin″go·ar″te·ri′tis [*mēninx*; G. *artēria*, artery; *-itis*, inflammation]. Meningeal arteritis.

me·nin′go·cele [*mēninx*; G. *kēlē*, hernia]. A protrusion of the cerebral or spinal meninges through a defect in the skull or vertebral column. It forms a cyst filled with cerebrospinal fluid.

me·nin″go·ceph″a·li′tis. See *meningoencephalitis.*

me·nin″go·cer″e·bri′tis. See *meningoencephalitis.*

me·nin″go·coc″ce′mi·a (-cock-see′mee ah) [*mēninx*; G. *kokkos*, berry; *haima*, blood]. The presence of meningococci in the blood.

me·nin″go·coc′cus [*mēninx*; *kokkos*]. Common name for the coccus *Neisseria meningitidis.* —**meningococcal, meningococcic** (-cock′sick) *adj.*

me·nin″go·cor′ti·cal [*mēninx*; L. *cortex*, bark]. Pertaining to the meninges and the cortex.

me·nin′go·cyte [*mēninx*; G. *kytos*, cell]. A flattened

epithelioid cell lining subarachnoid space, which may become phagocytic.

me-nin"go-en-ceph"a-li'tis. Inflammation of the brain and its membranes. —**menin"go-encepha-lit'ic,** *adj.*

brucellar m. Involvement of meninges during or after recovery from brucellosis.

me-nin"go-en-ceph'a-lo-cele. Hernia of the brain and its meninges through a defect in the skull.

me-nin"go-en-ceph"a-lo-my"e-li'tis. Combined inflammation of the meninges, brain, and spinal cord.

me-nin"go-en-ceph"a-lop'a-thy. Disease of the brain and meninges.

me-nin"go-my"e-li'tis [*mēninx*; G. *myelos*, marrow; *-itis*, inflammation]. Inflammation of the spinal cord and its meninges.

me-nin"go-my'e-lo-cele [*mēninx*; *myelos*; G. *kēlē*, hernia]. A protrusion of a portion of the spinal cord and membranes through a defect in the vertebral column.

men"in-gop'a-thy [*mēninx*; G. *pathos*, disease]. Any disease of the cerebrospinal meninges.

me-nin"go-ra-dic'u-lar [*mēninx*; L. *radicula*, small root]. Pertaining to the meninges and nerve roots (cranial or spinal).

me-nin"go-rha-chid'i-an (-ra-kid'ee-un) [*mēninx*; G. *rhachis*, spine]. Pertaining to the spinal cord and its membranes.

me-nin"gor-rha'gi-a [*mēninx*; G. *rhēgnynai*, to burst forth]. Hemorrhage from the meninges.

men"in-go'sis [*mēninx*; G. *-ōsis*, condition]. The union of bones by membranes.

me-nin"go-vas'cu-lar [*mēninx*; L. *vasculum*, small vessel]. Involving both the meninges and the cerebral blood vessels, as meningovascular syphilis. See *syphilis*.

men"in-gu'ri-a [*mēninx*; G. *ouron*, urine]. The passage, or presence, of membranous shreds in the urine.

me'ninx (pl. *meninges*) [*mēninx*]. A membrane, especially one of the brain or spinal cord. The meninges covering the brain and spinal cord consist of the dura, pia, and arachnoid.

m. primitiva. The layer of mesoderm surrounding the neural tube that forms the neurocranium and meninges.

men"is-cec'to-my (men"i-seck'to-mee) [G. *mēniskos*, any crescent-shaped body; *ektomē*, excision]. The surgical excision of a meniscus or semilunar cartilage.

men"is-ci'tis (men i-sigh'tis, -sky'tis) [*mēniskos*; G. *-itis*, inflammation]. An inflammation of any interarticular cartilage; specifically, of the semilunar cartilages of the knee joint.

me-nis'co-cyte [*mēniskos*; G. *kytos*, cell]. A sickle-shaped erythrocyte.

me-nis"co-cy-to'sis (mi-nis"ko-sigh-to'sis) [*mēniskos*; *kytos*; G. *-ōsis*, condition]. Sickle-cell anemia.

men"is-cot'o-my. Incorrect term for meniscectomy.

me-nis'cus (pl. *menisci*, *meniscī*) [*mēniskos*]. 1. A crescent or crescentic body, especially interarticular fibrocartilage. 2. A concavoconvex lens (positive meniscus) or convexoconcave lens (negative meniscus). 3. The curved surface of a column of liquid.

m. lateralis. The external, semilunar fibrocartilage of the knee joint.

m. medialis. The internal, semilunar fibrocartilage of the knee joint. See Plate 2.

tactile m. See *tactile disk*.

men"i-sper'mine, $C_{18}H_{24}N_2O$. A crystalline alkaloid obtained from the seed coat of *Anamirta paniculata*, pharmacologically inactive.

men"i-sper'mum. The rhizome and roots of *Menispermum canadense*. It contains the alkaloid menispine and has been used as a substitute for sarsaparilla. Syn., *Canada moonseed*, *yellow parilla*.

men'o- [G. *mēn*, month]. A combining form meaning *month*; denotes *relation to the menses*.

men"o-ce'lis [*mēn*; G. *kēlis*, spot]. Dark, erythematous or hemorrhagic spots occurring upon the skin in failure of menstruation.

men"o-lip'sis [*mēn*; G. *leipsis*, omission]. The retention or absence of the menses.

men'o-pause (men'o-paws) [*mēn*; G. *pausis*, stopping]. The physiologic cessation of menstruation, usually between the forty-fifth and fiftieth years. Also called *climacteric*. —**menopausic**, **menopaus'al**, *adj.*

artificial m. Permanent cessation of menses and normal ovarian function from other than normal physiological causes, e.g., by surgical removal of the ovaries or by irradiation. Surgical removal of the uterus alone produces permanent cessation of menstruation, but not necessarily an artificial menopause if the ovaries continue to function cyclicly.

men"o-pha'si-a [*mēn*; G. *phasis*, to appear]. The first appearance of the menses.

men"o-pla'ni-a [*mēn*; G. *planē*, wandering]. A discharge of blood occurring at the menstrual period, but derived from some part of the body other than the uterus; vicarious menstruation.

men"or-rha'gi-a [*mēn*; G. *rhēgnynai*, to burst forth]. An excessive menstrual flow. Syn., *hypermenorrhea*.

functional m. Excessive menstruation due to no demonstrable anatomic or pathologic lesion; usually assumed to be due to endocrine dysfunction. Also called *primary m.*

men"or-rhal'gi-a [*mēn*; G. *rhoia*, flow; *algos*, pain]. Pelvic pain at menstrual periods other than characteristic midline cramp; characteristic of endometriosis.

men"or-rhe'a, men"or-rhoe'a [*mēn*; *rhoia*]. 1. The normal flow of the menses. 2. Excessive menstruation.

me-nos"che-sis (mi-nos'ki-sis, men o-skee'sis) [*mēn*; G. *schesis*, checking]. Retention of the menses.

men"o-sta'si-a (men o-stay'zhuh, -zee-uh), **me-nos'ta-sis** [*mēn*; G. *stasis*, standing]. A suppression of the menstrual flow.

men"o-stax'is [*mēn*; G. *staxis*, dripping]. Prolonged menstruation.

men"o-xe'ni-a (men ock-see'nee-uh, men o-zee'nee-uh) [*mēn*; G. *xenos*, strange]. Irregularity of menstruation; vicarious menstruation. Obs.

mens [L.]. Mind. *Compos mentis*, of sound mind. *Non compos mentis*, of unsound mind. *Mens sana in corpore sano*, a sound mind in a sound body.

men'sa [L., table]. The chewing surface of the molars. Obs.

men'ses (men'seez) [L., months]. The recurrent monthly discharge of blood from the genital canal of a woman during sexual maturity.

men'stru-ant [L. *menstruus*, monthly]. Subject to, or capable of, menstruating.

men'stru-ant. One who menstruates.

men'stru-ate [L. *menstruare*, to menstruate]. Discharge the menses.

men"stru-a'tion [*menstruare*]. A periodic discharge of a sanguineous fluid from the uterus, occurring during the period of a woman's sexual maturity from puberty to the menopause. —**men'strual**, *adj.*

anovulatory m. That not preceded by the release of an ovum.

delayed m. Menstruation occurring later than expected from previous cyclic timing.

regurgitant m. A backflow through the uterine tubes.

supplementary m. Vicarious menstruation.

suppressed m. Nonappearance of the menstrual flow in patients who formerly menstruated. Syn., *menostasis*.

vicarious m. The discharge of blood at the time of menstruation from some place other than the vagina.

men'stru um [L.]. A solvent.

Pitkin m. A medium developed to retard the release of water-soluble drugs injected subcutaneously or intramuscularly composed of gelatin, dextrose, and glacial acetic acid used in the administration of heparin in thromboembolic disease.

men su al (men shoo-ul, men soo-ul) [L. *mensualis*, monthly]. Monthly.

men su ra'tion (men shoo-ray shun, men soo-) [L. *mensurare*, to measure]. The act of measuring one of the methods of physical diagnosis.

men tag'ra. See *sycosis*.

men tal [L. *mentalis*, mental]. Pertaining to the mind.

men tal [L. *mentum*, chin]. Pertaining to the chin. Syn., *genial*.

men'tal age. A score, derived from intelligence tests, expressed in terms of the age at which an average individual attains that score. Abbreviation, MA.

men'tal de-fi'cien cy 1 *In psychiatry*, a defect of intelligence existing since birth; it may be *primary* (hereditary or familial) that is, without demonstrated organic brain lesion or known prenatal cause, or *secondary* that is, associated with chronic organic brain disorder due to brain tissue anomalies, mongolism, prenatal maternal infectious diseases, or birth trauma. The degree of the defect may be indicated by the intelligence quotient for the specific test employed. 2. *In civil law* the condition as defined by statute is frequently divided into three grades idiocy the lowest imbecility the intermediate and moronity the highest.

mild m. d. That in which there is primarily impairment of vocational capacities the intelligence quotient is approximately 70 to 85.

moderate m. d. That in which there is impairment requiring special training and guidance the intelligence quotient is generally about 50 to 70.

severe m. d. That in which there is impairment requiring custodial or complete protective care the intelligence quotient is expected to be below 50.

men tal dis or ders. *In psychiatry*, groups of related psychiatric conditions, called *reactions*, and divided into two major groups 1 Those in which there is primary impairment of brain function, generally associated with an organic brain syndrome upon which diagnosis is based. The psychiatric picture is characterized by impairment of intellectual functions, including memory orientation, and judgment, and by shallowness and lability of affect. Additional disturbances, described as *psychotic*, *neurotic*, or *behavioral reactions*, may be associated with these disorders, but are secondary to the diagnosis When the syndrome is chronic, congenital or produced in infancy or early childhood, with primary defect in learning ability and intellectual development, the term *mental deficiency* is applied. 2. Those which are more directly the result of the individual difficulty to adapt to his environment, and in which any associated disturbance of brain function is secondary to the psychiatric reaction.

men ta'lis [*mentalis*] A muscle of the lower lip. See Table of Muscles in the Appendix.

men-tal'i ty [L. *mentalis*, mental]. Mental endowment, capacity or power; intellect.

men ta'tion. The mechanism of thought; mental activity.

Menten, Maud Lenore [American pathologist, 1879–]. With L. Michaelis, evolved theory of enzymatic behavior. In the *Michaelis-Menten theory* it is assumed that an enzymatic reaction proceeds by way of an intermediate compound of the enzyme and its substrate.

Men tha [L., mint]. A genus of plants of the Lamiaceae the mints.

M. piperita. Peppermint the dried leaves and flowering tops have been used as an aromatic stimulant. Also has been used to relieve nausea, flatulence, and spasmodic pain in the stomach and bowel.

M. pulegium. European pennyroyal, the leaves and tops of which are used as a carminative. See also *hedeoma*.

M. viridis. Spearmint. The dried leaves and flowering tops of *M. spicata*. The properties and uses of *M. viridis* are similar to those of *M. piperita*.

Men-tha'ce-ae (men-thay see-ee) Synonym for Lamiaceae.

men'thene. $C_{10}H_{18}$; colorless, liquid hydrocarbon derived from menthol or from peppermint oil.

men tho-, menth- [*mentha*]. A combining form denoting *menthol*.

men'thol (*mentholum*) $C_{10}H_{19}OH$ An alcohol obtained from peppermint oil or other mint oils, or prepared synthetically; may be levorotatory (*l*-menthol) or racemic (*dl*-menthol) the latter being solely of synthetic origin. Occurs in colorless crystals, in fused masses, or as crystalline powder; very slightly soluble in water but very soluble in alcohol. Used principally externally for its anesthetic, counterirritant, or antiseptic effects. Dose, 0.06–0.13 Gm. (1 2 gr.)

camphorated m. (*menthol camphoratum*). A liquid mixture of equal parts of menthol and camphor; used externally as a counterirritant and anodyne.

men'thone. $C_{10}H_{18}O$ The ketone of menthol; obtained from peppermint oil.

men thyl. The monovalent radical $C_{10}H_{19}$.

men'to- [L. *mentum*, chin]. *In anatomy*, combining form signifying *pertaining to the chin*.

men"to-hy'oid. A variant of the digastric muscle extending from the hyoid to the chin.

men ton. See *gnathion*.

men"tu la-ma ni a. Masturbation.

men'tum [L.] Chin.

men y an'thes (men ee an thees) [perhaps from Gr. *mēn*, month *anthos*, flower]. The dried leaves of *Menyanthes trifoliata*, contains a bitter principle menyanthin has been used as a simple bitter and febrifuge. Also called buckbean.

men y an'thin. $C_{33}H_{50}O$ A bitter glycoside found in menyanthes.

me'o nine. Trade-mark for *methionine*.

mep acrine hy dro-chlo ride (mep ah kreen hy-dro-klor ide, ...) British Pharmacopoeia name for quinacrine hydrochloride.

mep acrine meth ane-sul'fo nate. The name given by the British Pharmacopoeia to the salt quinacrine methanesulfonate. Used like quinacrine hydrochloride, but preferred over the latter for parenteral administration because of its greater solubility in water Dose intramuscularly 0.05–0.1 Gm (3/4 1 1/2 gr.)

me per'i dine hy dro- chlo ride (meh-perr i-deen ... -dra, mep uri deen ... -dra) $C_2H_5OOC.C(C_6H_5)$ $CH_2CH_2N(CH_3)CH_2CH_2$ HCl. The hydrochlo-

ride of ethyl 1-methyl-4-phenylpiperidine-4-carboxylate. A colorless, crystalline powder soluble in water. It exerts both the analgesic and sedative action of morphine and the antispasmodic action of atropine. Used to relieve pain, particularly that associated with smooth muscle spasm in the gastrointestinal, biliary and genitourinary tracts. Effective for preanesthetic medication and for control of postoperative pain. May be used instead of opiates. Dose, 0.025–0.1 Gm. (⅜–1½ gr.) orally or intramuscularly. See *demerol hydrochloride, dolantin, isonipecaine, pethidine.*

me·phen·e·sin, meph″e·ne′sin. $CH_3C_6H_4OCH_2CHOHCH_2OH$; 3-o-toloxy-1,2-propanediol or 1,2-dihydroxy-3-(2-methylphenoxy) propane, colorless crystals, sparingly soluble in water; a skeletal muscle relaxant and sedative. See *avosyl, diloxol, lissephen, myanesin, myoxane, oranixon, sinan, tolserol.*

me·phen′ter·mine. $C_6H_5CH_2C(CH_3)_2NHCH_3$; N-methyl-N-phenyl-tertiary-butylamine, a volatile, sympathomimetic amine used as a nasal decongestant. See *wyamine.*

m. sulfate. $(C_{11}H_{17}N)_2.H_2SO_4.2H_2O$; a white, crystalline powder soluble in water, used parenterally in treatment of hypotensive states. See *wyamine sulfate.*

me·phit′ic [L. *mephitis,* noxious exhalation from the ground]. Foul or noxious; stifling, as mephitic gangrene, necrosis of bone associated with the evolution of offensive odors. Obs.

meph″o·bar′bi·tal. $C_{13}H_{14}N_2O_3$; 5-ethyl-1-methyl-5-phenylbarbituric acid, a white, crystalline powder slightly soluble in water; a barbiturate characterized by slight hypnotic effect and marked anticonvulsant action, useful in the treatment of epilepsy. Syn., *methylphenobarbital, methylphenobarbitone, phemitone.* See *mebaral, prominal.*

mephyton. Trade-mark for 2-methyl-3-phytyl-1,4-naphthoquinone, identical with natural vitamin K or phytonadione. The substance is employed intravenously in the form of an aqueous emulsion stabilized with lecithin, as an antidote to anticoagulant-induced hypoprothrombinemia.

me·pip″er·phen′i·dol bro′mide. Generic name for the visceral anticholinergic agent supplied under the trade-marked name darstine bromide.

meprane dipropionate. Trade-mark for promethestrol dipropionate, a synthetic estrogen.

me″pro·bam′ate. Generic name for 2-methyl-2-n-propyl-1,3-propanediol dicarbamate, a substance having tranquilizing action. See *equanil, miltown.*

mep·y·ra·mine″ mal″e·ate. British Pharmacopoeia name for the antihistaminic salt pyrilamine maleate.

mEq, mEq. Milliequivalent.

me·ral′gi·a [G. *mēros,* thigh; *algos,* pain]. Neuralgic pain in the thigh.

m. paresthetica. Bernhardt's term for paresthesia of the skin of the lower and outer aspect of the thigh in the region supplied by the lateral cutaneous nerve of the thigh; also called *Roth-Bernhardt disease, Roth's disease.*

mer·al′lu·ride (meh·ral′yoo·ride, ·rid). A combination of methoxyhydroxymercuripropylsuccinylurea and theophylline in approximately molecular proportions; a mercurial diuretic, the sodium derivative of which is administered parenterally. See *mercuhydrin.*

me·ra·le·pi·a. Blurring of vision, with halos seen around objects viewed in bright light, often associated with the administration of oxazolidine derivatives for the control of petit-mal seizures.

mer″a·mau·ro′sis [G. *meros,* part; *amaurōsis,* darkening]. Partial amaurosis.

merbak. Trade-mark for the organomercurial topical antiseptic acetomeroctol.

mer′ba·phen. The double salt of sodium mercurichlorophenyl oxyacetate and diethylbarbituric acid, occurring as a white, crystalline powder soluble in water; used as a diuretic. See *novasurol.*

mer·bro′min (*merbrominum*). The disodium salt of 2,7-dibromo-4-hydroxymercurifluorescein, occurring as iridescent, green scales or granules but forming a red solution with yellow-green fluorescence; freely soluble in water. Merbromin, introduced as mercurochrome, is a surgical disinfectant.

m. solution (*liquor merbromini*). A 2% (w/v) aqueous solution of merbromin.

mer·cap′tal, mer″cap·tal′. A product of the union of a mercaptan and an aldehyde.

mer·cap′tan, mer″cap·tan′. 1. An organic compound of the general formula R.SH, representing an alcohol R.OH, in which oxygen is replaced by sulfur. Syn., *thioalcohol, thiol.* 2. Ethyl mercaptan, C_2H_5SH.

mer·cap′tide, mer″cap·tide′. Any metallic derivative of a mercaptan in which the hydrogen of the SH group of the latter is replaced by metal.

mer·cap′tol. A compound resulting from the interaction of a ketone and a mercaptan, of the general formula R.R.C(SR).

mer·cap″to·mer′in so′di·um. $C_{16}H_{25}HgNNa_2O_6S$; disodium N-[3-(carboxymethylmercaptomercuri)-2-methoxypropyl]-α-camphoramate, a hygroscopic, white solid, freely soluble in water; a mercurial diuretic, less irritating on injection and less toxic to the heart than other mercurial diuretics. See *thiomerin sodium.*

mer·cap″to·pu′rine. $C_5H_4N_4S$; 6-mercaptopurine, the mercapto analog of 6-aminopurine or adenine; a potent inhibitor of a strain of mouse sarcoma, possibly through its ability to block a metabolic step in conversion of adenine to guanine. It is under investigation as a possible chemotherapeutic agent in human neoplastic diseases.

mer″cap·tu′ric ac′id. Any detoxication product in which acetylated cysteine is conjugated with the foreign body undergoing the process of detoxication.

mercarbolide. Trade-mark for orthohydroxyphenylmercuric chloride, an externally applied antiseptic, germicide, and fungicide.

Mercier, Louis Auguste [French urologist, 1811–82]. Described the transverse ridge joining the openings of the ureters on the inner surface of the bladder and forming the posterior boundary of the triangle of the bladder; called *Mercier's bar.* Devised an operation of transurethral prostatectomy called *Mercier's operation.*

mer″co·cre′sols. Generic name for the preparation marketed under the trade-marked name mercresin.

mercresin. Trade-mark for an acetone-alcohol solution containing secondary amyltricresols and mercarbolide. The solution is used as an antiseptic and germicide. See *mercocresols.*

mercuhydrin. Trade-mark for the mercurial diuretic meralluride.

mer·cu″ma·til′in, mer″cu·mat′i·lin. Generic name for a mercurial diuretic preparation containing 8-(2′-methoxy-3′-hydroxymercuripropyl) coumarin-3-carboxylic acid (known as *mercumallylic acid*) and theophylline, the combination being supplied under the trade-mark *cumertilin.*

m. sodium. Generic name for a preparation containing the sodium salt of the mercurial compound described in the preceding and theophylline, the combination being supplied under the trade-marked name *cumertilin sodium.*

mercurettes. Trade-mark for preparation of metallic mercury in cacao butter pplied by inunction in syphilis.

mer'cu ri- [L. *Mercurius*, god and planet]. A combining form signifying *mercury*; used in chemistry to denote *mercuric*.

mer-cu'ri al [*Mercurius*]. Pertaining to or caused by mercury

mer-cu'ri al. Any preparation of mercury or its salts

mer-cu"ri-a'lis [*Mercurius*]. An herbaceous European plant, *Mercurialis annua*; formerly used as diuretic, emmenagogue, and vermifuge. Also called *mercury herb* *French mercury*

mer cu'ri al ism [*Mercurius*]. Poisoning due to absorption of mercury

mer cu"ri al-i za'tion [*Mercurius*]. The act of bringing under the influence of mercury —**mer cu'rialize** v.

mer-cu'ric [*Mercurius*]. Pertaining to mercury as bivalent element.

m. benzoate. $Hg(C_6H_5COO)_2 H_2O$ A white, crystalline powder slightly soluble in water; has been used for intramuscular injections in syphilis and locally in the treatment of gonorrhea.

m. cyanide. $Hg(CN)_2$ Colorless or white crystals, soluble in 13 parts of water; has been used hypodermically in treating syphilis, also as local germicide Dose, 0.004–0.008 Gm. (1/16–1/8 gr)

m. lactate $(C_3H_5O_3)_2Hg$. A white powder soluble in water has been used in the treatment of syphilis.

m. nitrate. $Hg(NO_3)_2$ A white or slightly yellow deliquescent salt, sol ble in water Applied locally usually in ointment form, for its stimulating and antiseptic effects.

m. oxycyanide. Approximately $Hg(CN)_2.HgO$ A white powder sol ble in bout 80 parts of water; used locally as an antiseptic, also intravenously in the treatment of syphilis.

m. salicylate (*hydrargyri salicylas*) A white powder of variable composition containing 54–59% Hg. practically insol ble in water; used locally as an antiseptic and, by intramuscular injection, in treating syphilis. Dose, by injection, 0 06 Gm. (1 gr) 2 or 3 times week.

m. succi imide (*hydrargyri succinimidum*) $C_8H_8N_2O_4Hg$. A white powder soluble in 20 parts of water used in the treatment of syphilis, generally hypodermically Dose, 0.01–0 02 Gm (1/6–1/3 gr) daily

m. sulfide. HgS. A scarlet powder turning black on heating; insol ble in water stabilized colloidal solution of the chemical is used intramuscularly in the treatment of syphilis.

red m. iodide (*hydrargyri iodidum rubrum*) HgI_2 A scarlet-red amorphous powder insol ble in water but sol ble in solutions of iodides, used locally as an antiseptic, occasionally also internally in syphilis. Dose, 0.003–0 005 Gm. (1/20–1/12 gr)

red m. oxide (*hydrargyri oxidum rubrum*) HgO An orange-red, crystalline powder almost insol ble i water used locally as antiseptic pplication to chancres, to ulcers, and to fungoid infections.

yellow m. oxide (*hydrargyri oxidum flavum*) HgO A yellow powder differing from the red variety in being more finely subdivided. Employed in the same manner as the red oxide but more effective because of the greater surface area of its particles

mercurochrome. Trade-mark for the disodium salt of 2,7-dibromo-4-hydroxymercurifluorescein. See *merbromin*.

mercurophen. Trade-mark for sodium hydroxymercuri-o-nitrophenolate, used as germicide

mer"cu ro phyl'line in jec tion (mur cue ro-fil' een, -in) (*injectio mercurophyllinae*) A sterile aqueous solution of the sodium salt of β-methoxy-γ-hydroxymercuripropylamide of trimethylcyclopentanedicarboxylic acid ($C_{14}H_{24}NO_6HgNa$), called the mercuri compound, and of theophylline in approximately molecular proportions. The commercial product represents 10% of the mercuri compound and approximately 4% of theophylline. Employed intravenously as diuretic. Dose, 1 2 cc. (15–30 min.) See *mercumatilin*.

mer-cu'rous, mer'cu-rous [*Mercurius*]. Pertaining to compounds containing mercury as a univalent radical.

m. acetate. $Hg_2(C_2H_3O_2)_2$. White crystals, soluble in about 100 parts of water; has been used as local pplication to syphilitic sores.

m. sozoiodolate. $HgC_6H_2I_2OSO_3$ A yellow powder sparingly soluble in water has been used locally in the treatment of syphilitic ulcerations, ozena, lupus, etc.

m. tannate. A variable substance containing 50% Hg has been used as an antisyphilitic.

mild m. chloride (*hydrargyri chloridum mite*). HgCl. A white powder insoluble in water; used as an antisyphilitic, cathartic, diuretic, and antiseptic. Dose, as alterative, 0.01–0.03 Gm. (1/6 1/2 gr); as cathartic, 0.13–0.3 Gm. (2–5 gr.). Syn., *calomel*.

yellow m. iodide (*hydrargyri iodidum flavum*) HgI. A yellow amorphous powder practically insoluble in water has been used as an antisyphilitic.

mer'cu ry (*hydrargyrum*) Hg = 200 61. A shining, silver-white, liquid, volatile metal, having specific gravity of 13.55. Insoluble in the ordinary solvents, in hydrochloric acid, and in sulfuric acid in the cold dissolves in the last when boiled with it readily soluble in nitric acid Boils at 356.9° C., and solidifies at −38.9° C. Is found pure, but is obtained chiefly as the native sulfide, or cinnabar Forms two classes of compounds (a) the mercurous, those in which two atoms of the metal are combined with bivalent radical, and (b) the mercuric, those in which one atom of the metal is combined with bivalent radical. The mercuric salts are more soluble and more poisonous than the mercurous. Mercury in the form of its salts was formerly used as purgative and cholagogue (calomel, blue mass, mercury with chalk) as an alterative in chronic inflammations, as an antisyphilitic, an antiphlogistic, an intestinal antiseptic, disinfectant, parasiticide, caustic, and an astringent. The absorption of mercury in sufficient quantity causes poisoning, characterized by coppery taste in the mouth, ptyalism, loosening of the teeth, sponginess of the gum ; in severer cases, ulceration of the cheeks, necrosis of the j ws, marked emaciation; at times neuritis develops, and peculiar tremor The soluble salts when taken i excess act as intense gastrointestinal irritants.

ammoniated m. (*hydrargyrum ammoniatum*) NH_2HgCl. White precipitate; mercuric ammonium chloride used chiefly locally to treat various skin conditions.

m. bichloride (*hydrargyri bichloridum*) $HgCl_2$ Corrosive sublimate; employed for the systemic effects of mercury as well as for its germicidal property Dose, 0 0015–0 008 Gm. (1/40–1/8 gr.).

m. gallate. Approximately $Hg[C_6H_2(OH)_3COO]_2$ A greenish black powder containing about 37% of mercury has been used as an alterative and antisyphilitic

m. mass (*massa hydrargyri*) Blue mass; blue pill. Dose, as an alterative, 0.06–0.2 Gm. (1–3 gr.); as laxative, 0.2–1.0 Gm. (5–15 gr.)

m. oleate (*oleatum hydrargyri*) Prepared by reaction of yellow mercuric oxide and oleic acid; has been used locally. Also see mercurial *ointment*.

m. with chalk (*hydrargyrum cum creta*) Gray powder used as a laxative and antisyphilitic. Dose, as cathartic, 0.25–0.6 Gm. (4–10 gr.); as antisyphilitic, 0.03–0.06 Gm. (½–1 gr.)

mercuzanthin. Trade-mark for mercurophylline injection.

mer"er ga si a (merr er-gay'zhuh, -zee-uh, -shuh, -see uh) [G. *meros*, part; *ergasia*, work]. In *psychobiology*, Meyer's term for a partial disturbance of the personality as a neurotic or psychoneurotic reaction. Syn., *kakergasia*.

me-rid'i an [L. *meridianus*, of midday]. A great circle surrounding a sphere and intersecting the poles.

m. of the eye. A line drawn around the globe of the eye and passing through the poles of the vertical axis (vertical meridian) or through the poles of the transverse axis (horizontal meridian). —**merid'ional,** *adj.*

Mering, Joseph von [German physician, 1849–1908]. Said to have produced glycosuria experimentally by the administration of phlorhizin (1886). With O. Minkowski, studied the diabetic syndrome following experimental pancreatectomy (1889). With E. Fischer introduced the use of barbital.

mer"in the pho'bi a (merr"in-tho-fo'bee-uh, mi-rin tho) [G. *mērinthos*, cord; *phobos*, fear]. A morbid fear of being bound.

mer'i-spore [G. *meros*, part; *spora*, seed]. A segment or spore of a multicellular spore body.

me-ris'tic [G. *meristikos*, fit for dividing]. Pertaining to, or divided into, segments.

Merkel, Friedrich Siegmund [German anatomist, 1845–1919]. Described tactile nerve endings, called *Merkel's corpuscles, disks, tactile disks*. See tactile *disk*.

mer'o-, mer- [G. *meros*, part]. A combining form meaning *part*.

mer"o- cra ni a [*meros*; G. *a-*, not; *kranion*, skull]. Congenital absence of a part of the cranium.

mer"o-blas'tic [*meros*; G. *blastos*, germ]. Dividing only in part, referring to an egg in which the cleavage divisions are confined to the animal pole, owing to the presence of a large amount of yolk.

mer' crine (merr' kryne, -krin) [*meros*; G. *krinein*, to separate]. Pertaining to glands in which the act of secretion leaves the cell intact. See *holocrine, apocrine*.

mer"o-gen'e-sis [*meros*; G. *genesis*, production]. Reproduction by segmentation; somite formation. *Rare.*

mer"o-mi"cro-so mi-a [*meros*; G. *mikros*, small; *sōma*, body]. Abnormal smallness of some part of the body.

me-ro pi [*meros*; G. *ōps*, eye]. Partial blindness; obscuration of vision.

mer"o hi bi i a (m rr ra kies ki a) [*meros*; G. *rhachis*, spine; *schisis*, cleavage]. Partial spina bifida.

me ros'mi (me roz'mee-uh, mer-oz mee-uh) [*meros*; G. *osmē*, smell]. Partial loss of the sense of smell so that certain odors are not perceived.

mer"o-som a-tous [*meros*; G. *sōma*, body]. Characterizing a monstrosity in which only part of the body is involved.

mer'o-tome [*meros*; *sōma*]. A somite or metamere.

me rot'o-my [*meros*; G. *tomē*, cutting]. The section of a living cell for the study of the alterations transformation of its segments; by extension it is also applied to experimental division of unicellular organisms, as amebas, etc.

mer"o-zo'ite, mer"ro zo'ite [*meros*; G. *zōion*, living being]. Any one of the segments resulting from the splitting up of the schizont in the asexual form of reproduction of sporozoa. See Plates 28, 29.

merphenyl. Trade-mark for certain phenylmercuric salt antiseptic preparations.

mer'sa-lyl (mur sah lil, -leel) (*mersalyl*) $NaOOC.CH_2O.C_6H_4.CO.NH.CH_2.CH(OCH_3).CH_2.HgOH$. The sodium salt of salicyl-(γ-hydroxymercuri-β-methoxypropyl)-amide-O-acetic acid, a white powder; 1 Gm. dissolves in about 1 cc. of water. Mersalyl was introduced as an antisyphilitic, but is now employed mainly as a diuretic generally administered parenterally in combination with theophylline. See *salyrgan*.

m. and theophylline injection (*injectio mersalylis et theophyllinae*) A sterile aqueous solution of approximately 10% of mersalyl and 5% of theophylline. The addition of theophylline reduces the toxicity and irritation of the mersalyl. Dose, 0.5–2.0 cc. (8–30 min.)

merthiolate. Trade-mark for thimerosal or sodium ethylmercurithiosalicylate, a bacteriostatic and fungistatic agent.

Me ru'li us [L. *merula*, blackbird]. A genus of fungi of the class Basidiomycetes. The mycelium of *M. lacrymans* causes dry rot in timber and diseases (sometimes fatal) of the respiratory passages are attributed to the inhaled spores.

me ru ta' See *menopause*.

Méry, Jean [French surgeon, 1645–1722]. Described the bulbourethral glands (1684) called *Méry's glands, Cowper's glands*.

mer'y-cism [G. *mērykismos*, ruminating action]. The voluntary regurgitation of food, remastication, and swallowing a second time; occurs in certain idiots and some psychiatric patients.

Merzbacher, Ludwig [German physician in Argentina, 1875–]. Described aplasia axialis extracorticalis congenita, also called *Merzbacher-Pelizaeus disease*. See under *aplasia*.

mes"e cor'i tine. $C_{20}H_{33}NO_{11}$ [illegible] crystalline alkaloid occurring in several species of *Mesembryanthemum*.

mes [illegible] **me'bold** [G. *mesos*, middle; [illegible]]. Minot's term for a primitive amoeboid [illegible] cell of the mesoderm functioning as [illegible] blast in the embryo and perhaps in the [illegible].

mes an'to-in. Trade-mark for [illegible].

mes" [illegible] **ti'tis** [*mesos*; G. *aortē*, aorta; [illegible] flammation]. Inflammation of the middle coat of the aorta.

giant-cell m. A rare histologic [illegible] consisting of patchy destruction of [illegible] lamellae involving the middle [illegible] with secondary inflammatory [illegible].

mes-ar"te-ri'tis [*mesos*; G. *artēria*, [illegible]]. Inflammation of the middle coat of [illegible].

mes-at"i ceph a-lus (mes"at-i- [illegible] [illegible] [illegible]) [G. *mesatios*, midmost; [illegible] craniometry, a person whose [illegible] index of between 75 and 80 [illegible] *adj.*

mes"a-ti pel'lic, mes"a ti pel- [illegible] pel'vick, mi sat"i-) [*mesatios*; [illegible] *anatomy*, designating [illegible] transverse diameter of the [illegible] equal to the conjugate [illegible] inlet index of 90.0 to 94.) [illegible]

mes-cal' [Sp. *mezcal*]. An [illegible] from Mexican pulque [illegible] **m. butt** [illegible]. The [illegible] cactus, *Lophophora williamsii* [illegible] ing inebriation and [illegible].

mes ca line. $C_{11}H_{17}NO_3$ [illegible]

thylamine crystalline alkaloid from the flowering heads of *Anhalonium* or *Lophophora* cactus (*L. williamsii*) also spelled *mezcaline*.

mes-ec'to derm [G *mesos*, middle; *ektos*, outside; *derma*, skin]. That part of the mesenchyme derived from ectoderm, especially from the neural crest in the head region anterior to the somites. It is said to contribute to the formation of meninges and, in some animals, the pigment cells or melanophores are derived from it.

mes em'brin, mes-em'brine. $C_{17}H_{23}NO_3$ tropane ester alkaloid, said to have cocainelike action, occurring in several *Mesembryanthemum* plants

Mes-em"bry an'the-mum. A large genus of largely South African herbs or subshrubs, including *M. aciniciforme* (more properly *Carpobrotus edulis*) which contains tannin and has been used in treating dysentery *M. crystallinum* used as diuretic, and *M. anatomicum* and *M. tortuosum*, both narcotic drugs containing the tropane ester alkaloid mesembrin.

mes"en ceph" l i'tis. Inflammation of the midbrain.

mes" n-ceph a-lon [*mesos*, G *enkephalos*, brain]. The midbrain that part of the brain developed from the middle cerebral vesicle and consisting of the corpora quadrigemina and cerebral peduncles, and traversed by the cerebral aqueduct. —**mesencephal'ic,** *adj*.

mes en ceph lot o-my Surgical incision of the spinothalamic tract in the midbrain, formerly used to control intractable pain, now in disuse because of resulting dysesthesia.

mes en chyme (mess eng-kim, kyme, mess en) **me sen chy me** (mi seng'ki muh, -sen'ki-muh, -seng'kigh-muh, -se'kigh-muh) [*mesos*; G *enchyma*, instillation]. The portion of the mesoderm that produces all the connective tissues of the body the blood vessels, and the blood, the entire lymphatic system proper and th heart the nonepithelial portions of the mesoderm —**mesenchymal,** *adj*

mes" n-chy"me-blas t ma. A gonadal tumor See *dysgerminoma, seminoma*

mes"en chy me ma. A tumor of the soft tissues, of mesenchymal origin, composed of two or more mesenchymal lements other than fibrous tissue Mesenchymomas are of particular interest because showing various combination of adipose, cartilaginous, muscular osteoid, vascular and ther tissues, they demonstrate the great ariability of the pluripotential mesenchymal cell The term *malignant* is reserved for those composed of tumor cells differentiating into two or more unrelated malignant forms other than differentiated fibrosarcomas. Syn., *mixed mesenchymal* or *mesodermal tumor*

me-sen na [Tigriña *musenna*]. The bark of th Abyssinian tree *Albizzia anthelmintica*, used as taeniafuge. Also called *musenna*.

mes"en ter-ec'to-my [G *mesos*, middle; *enteron*, intestine *ektomē*, excision]. Excision of the mesentery or part of it

mes" n ter"i-co mes col'l [*mesos*; *enteron*, *mesos*; G *kolon*, colon] Relating to the mesentery and the mesocolon.

mes"en ter"i lum (mess en terr"ee-o'lum, -tur eye' lum) [*mesos*; *enteron*]. A little mesentery especially the fold of peritoneum that sometimes connects the vermiform process with the mesentery O T

mes" ter'i-o pex y See *mesopexy*

mes n ter'i-or' ha phy [*mesos*; *enteron*, G *rhaphē* suture] Surgical repair of mesentery

mes en ter"i pli ca'tion [*mesos*, *enteron*, L *plicare*, to fold]. Mesenteriorrhaphy; reduction of folds of redundant mesentery by overlapping and suture.

mes"en-te ri um. A mesentery

mes-en ter on [*mesos*; *enteron*]. Old term for midgut.

mes'en ter"y [*mesos*; *enteron*]. A fold of the peritoneum that connects the intestine with the posterior abdominal wall that of the small intestine is termed mesentery proper; that of the colon, cecum, and rectum, mesocolon, mesocecum, mesorectum, respectively See Plate 13. —**mesenter'ic,** *adj*

caval m. An embryonic mesentery separated from the primitive mesentery of the stomach by the mesenteric recess, in which develops part of the inferior vena cava and the caudate lobe of the liver

dorsal m. The mesentery of the digestive tube attached to the dorsal bdominal wall.

ventral m. See *lesser omentum*, gastrohepatic *ligament*, hepatoduodenal *ligament*, ventral *mesogastrium*.

me-sen'to-derm [*mesos*; G *entos*, within; *derma*, skin]. 1 The entodermal division of the mesoderm. 2. The indifferent tissue from which both entoderm and mesoderm are developed. 3. The portion of the mesoderm from which certain digestive-tract structures are derived.

mes"en ter'rha phy [*mesos*; *enteron*; G *rhaphē*, suture]. Suture of the mesentery

me si al (mee zhul, -zee-ul, mes'ee ul, mee see ul). 1 Old term sometimes used for medial. 2. *In dentistry*, toward the midline following the curve of dental arch.

mes'i-o- (mee zee o- mee see-o-) [*mesos*]. *In dentistry* combining form which denotes the aspect of tooth *facing the midline, following the dental arch*.

me si-o-buc'cal [*mesos*; L *bucca*, cheek]. Pertaining to surfaces between the mesial and buccal aspects of the teeth.

me"si-o-buc"co-oc-clu'sal (-o clue zul) [*mesos*; *bucca*; L. *occludere*, to close]. Pertaining to the mesial, buccal, and occlusal surfaces of tooth

me" i-o clu sion, me"si-o-oc-clu'sion (-o clue zhun) [*mesos*; *occludere*]. Occlusion of the teeth in which the mandibular teeth are in an anterior relationship to the maxillary teeth

me si-o dis'tal [*mesos*; L. *distare*, to be distant]. Pertaining to line or plane between the mesial and distal surfaces f tooth.

me si-o-gres'sion. The location of teeth anterior to their normal position.

me si-o-in-ci'sal (-in-sigh zul) [*mesos*; L. *incidere*, t cut into]. Pertaining to the mesial and incisal surfaces of tooth or cavity

me si o-la'bi al [*mesos*; L *labium*, lip]. Pertaining to the mesial and labial surfaces of tooth

me si o-lin gual [*mesos*; L. *lingua*, tongue]. Relating to the junction of the mesial and lingual aspects of tooth.

me si-o-lin guo-oc-clu'sal (clue zul) [*mesos*; *lingua*, L *occludere*, to close]. Pertaining to the mesial, lingual, and occlusal surfaces of tooth.

me si o-oc-clu'sal [*mesos*; *occludere*]. Pertaining to the mesial and occlusal surfaces of tooth

me"si-o-oc clu'sion (-o clue zhun) See *mesiodusion*

me-si'ty lene. $C_6H_3(CH_3)_3$ 1,3,5-trimethylbenzene; liquid hydrocarbon btained from coal tar and crude petroleum, and also prepared synthetically insol ble in water but miscible with alcohol, ether and benzene.

Mesmer Franz Anton [German physician, 1734-1815]. I troduced the concept of animal mag-

netism (1779). Hypnotism is also called *Mesmerism*.

mes"o- (mess o-, mee so-) **mes-** [G. *mesos*, middle]. 1. A combining form signifying *middle*. 2. *In anatomy*, combining form denoting an *intermediate connective part*, *mesentery*. 3. *In medicine*, combining form which denotes *partial* or *secondary*.

mes"o-ap-pen'dix [*meso-*; L. *appendix*, that which hangs to anything]. The mesentery of the vermiform appendix.

mes"o-bil'i-ane. One of the products resulting from the reduction of bilirubin in the tissues by an enzyme manufactured in the reticuloendothelial system. See also *mesobilirubin*.

mes"o-bil"i-fus'cin. Either of two isomeric substances, each containing two pyrrole rings but not of definitely known structure, obtained as products of hydrolytic cleavage of mesobilirubinogen when the latter is prepared by reduction of bilirubin. They contribute significantly to the color of normal feces and may represent the prosthetic group of myobilin.

mes"o-bil"i-leu'kan. A colorless precursor of mesobilifuscin, apparently identical with promesobilifuscin.

mes"o-bil"i-rho'din. A product of dehydrogenation of the urobilin obtained from mesobilirubinogen. Mesobilirhodin is isomeric with mesobiliviolin, these substances differing only in the position of a side methyne bridge.

mes"o-bil"i-ru'bin. $C_{33}H_{40}N_4O_6$. A yellow crystalline substance formed by reduction of bilirubin, probably by conversion of two vinyl groups to ethyl groups. It occurs in the small intestine and some claim to have found it in bile.

mes"o-bil"i-ru-bin'o-gen. $C_{33}H_{44}N_4O_6$. A colorless, crystalline substance formed by reduction of bilirubin through conversion of two vinyl groups to ethyl groups and two methyne bridges to methene bridges. By various oxidative processes it may be converted to urobilin, stercobilinogen, or stercobilin.

mes"o-bil"i-vi-o'lin. A product of dehydrogenation of the urobilin obtained from mesobilirubinogen. Mesobiliviolin is isomeric with mesobilirhodin, these substances differing only in the position of a side methyne bridge.

mes'o-blast [*meso-*; G. *blastos*, germ]. Synonym (*O.T.*) for mesoderm. —**mesoblas'tic**, *adj.*

mes"o-blas-te'ma [*meso-*; G. *blastema*, offshoot]. The mesoderm as a whole.

mes"o-blas-tem'ic [*meso-*; *blastema*]. Derived from the mesoblastema.

mes"o-car'di-um [*meso-*; G. *kardia*, heart]. One of the embryonic mesenteries of the heart.

dorsal m. The dorsal mesentery of the heart; its disappearance creates the transverse sinus of the pericardium.

ventral m. A ventral mesentery of the heart; not formed in human development.

mes'o-carp [*meso-*; G. *karpos*, fruit]. The middle layer of the pericarp.

mes"o-ce'cum [*meso-*; L. *caecus*, blind]. The mesentery that in some cases connects the cecum with the right iliac fossa.

mes"o-ce-phal'ic [*meso-*; G. *kephalē*, head]. *In craniometry*, designating a head having a relatively moderate relationship between its greatest length and breadth; having a cephalic index of 75.0 to 80.9.

mes"o-cne'mic [*meso-*; G. *knēmē*, the tibia]. *In osteometry*, designating a tibia with moderate mediolateral flattening of the proximal portion of the diaphysis; having a cnemic index of 63.0 to 69.9.

mes"o-co'lon [*meso-*; G. *kolon*, colon]. The mesentery connecting the colon with the posterior abdominal wall. It may be divided into ascending, descending, and transverse portions. See Plate 8. —**mesocol'ic**, *adj.*

left m. See *mesosigmoid*.

mes"o-conch [*meso-*; G. *konchē*, mussel]. *In craniometry*, designating an orbit of medium height; having an orbital index of 76.0 to 84.9.

mes'o-derm [*meso-*; G. *derma*, skin]. The third germ layer, lying between the ectoderm and entoderm. It gives rise to the connective tissues, muscles, urogenital system, vascular system, and the epithelial lining of the coelom. —**mesoder'mal**, *adj.*

amniotic m. The extraembryonic mesoderm forming the external layer of the amnion, derived from trophoblast.

axial m. See paraxial m.

extraembryonic m. The earliest mesoderm of the embryo derived from the trophoblast that forms a part of the amnion, chorion and yolk sac, and the body stalk.

intermediate m. The unsegmented mass of mesoderm uniting the somite and the lateral mesoderm and from which the nephrogenic tissue of the embryonic and definitive kidneys is derived. Syn. *nephrotome*.

intraembryonic m. The mesoderm of the embryo formed largely from the primitive streak.

lateral m. The mesoderm lateral to the intermediate mesoderm. After formation of the coelom it is separated into the somatic and the splanchnic mesoderm.

paraxial m. The medial part of the mesoderm forming a platelike mass that eventually segments to form the somites.

pericardial m. The mesoderm anterior to the buccopharyngeal membrane from which the heart and pericardial coelom develop.

somatic m. The external layer of the lateral mesoderm associated with ectoderm after formation of the coelom.

splanchnic m. The internal layer of the lateral mesoderm associated with entoderm after formation of the coelom.

mes"o-du"o-de'num (mess o-dew"o-dee'num, -dew-od'i-num, mee so-) [*meso-*; L. *duodeni*, twelve each]. That part of the mesentery that sometimes connects the duodenum with the posterior wall of the abdominal cavity. Normally the true duodenum has no mesentery in its fully developed state.

mes"o-e-soph'a-gus [*meso-*; G. *oisophagos*, gullet]. The dorsal mesentery of the lower end of the embryonic esophagus.

mes"o-gas'ter, **mes"o-gas'tri-um** (*meso-*; G. *gastēr*, belly). The mesentery of the stomach.

dorsal m. The dorsal mesentery of the stomach. The great omentum is derived from it.

ventral m. The ventral mesentery of the stomach. See lesser *omentum*, gastrohepatic *ligament*.

mes"o-gle'a, **mes"o-gloe'a** (mess"o-glee'uh, mee"so-) [*meso-*; G. *gloios*, glutinous substance]. The amorphous, gelatinous substance interposed between the entoderm and ectoderm in coelenterates, considered to be more or less homologous to the third germ layer of triploblastic animals. Not to be confused with mesoglia.

me-sog'li-a [*meso-*; G. *glia*, glue]. A type of ameboid phagocyte found in the neuroglia, probably of mesodermal origin.

mes"o-gnath'ic, **mes"o-gnath'ous** [*meso-*; *gnathos*, jaw]. *In craniometry*, designating a condition of the upper jaw in which it has a mild degree of anterior projection with respect to the profile of the facial

skeleton, when the skull is oriented on the Frankfort horizontal plane; having a gnathic index of 98.0 to 102.9.

mes·o·gna·thi·on (mes''o-nayth'ee-on, -nath'ee-on, mes''so-) [meso-; G. gnathos, jaw]. The hypothetical lateral portion of the premaxilla, considered separate from the mesial portion, the endognathion.

mes''o-in·o'si·tol. Inositol. See also myoinositol.

mes·o·lec'i·thal (mes''o-les'i-thul, mee''so-) [meso-, G. lekithos, yolk]. Having a moderate amount of yolk. Syn., medialecithal.

mes'o·mere [meso-; G. meros, part]. The middle portion of the mesothelial lining of the coelom of primitive chordates, forming nephrogenous tissue.

mes·o·me·tri·um. That portion of the broad ligament directly attached to the uterus.

mes'o·morph. In the somatotype, an individual exhibiting relative predominance of mesomorphy.

mes'o·mor''phy [meso-, G. morphē, form]. Component II of the somatotype, representing relative predominance of somatic structures or the bony and muscular framework of the body derived from mesoderm. Mesomorphs tend toward massive strength and heavy muscular development. The counterpart on the behavioral level is somatotonia. —**mesomorph'ic,** adj.

mes·on [meso-]. In nuclear physics, any of several different elementary particles, having a rest mass between that of the proton and electron, the exchange of which between nucleons is believed to constitute the force which holds nucleons together in the nucleus of an atom. The various mesons are distinguished as mu, pi (two kinds), tau, V°, V°, V ±, chi, and kappa; all are unstable. See mesotron, meson.

mes·o·ne·phro·ma [meso-; G. nephros, kidney; -oma, tumor]. A term used to cover a variety of benign or malignant tumors supposed to be, but not proved to be, derived from mesonephros (Wolffian body) and occurring in the genital tract. Included are extrauterine adenomyomas, cystic or solid tumors of the ovary situated near the hilus, and tumors resembling the adenomyosarcoma of the kidney. Also called irradied adenocystoma.

m. ovarii. A cystic malignant tumor of the ovary which microscopically contains structures resembling primitive mesonephros. Its origin from the mesonephros is disputed. Also called papilloendothelioma ovarii.

mes''o·neph'ros [meso-; nephros]. The middle kidney of higher vertebrates, functional in the embryo; it is replaced by the metanephros. Syn., Wolffian body. —**mesoneph'ric,** adj.

caudal m. (a) The caudal part of the mesonephros, associated with the gonad, that does not undergo complete degeneration. (b) That part of the mesonephros caudal to the genital mesonephros, the tubules of which form the paradidymis or paroöphoron. Syn., paragenitalis.

cranial m. That part of the mesonephros anterior to the gonad, that degenerates during development.

genital m. That part of the mesonephros opposite to the gonad, the tubules of which become the ductuli efferentes.

mes·o·pex''y [meso-; G. pēxis, fixing]. The surgical fixation of a mesentery.

mes·o·phle·bi'tis. Inflammation of the middle coat of a vein.

mes·o·phrag'ma. See M disk.

mes·o·pic [meso-; G. ōps, face]. 1. In craniometry, designating a facial skeleton that is moderately wide and flat, having an orbitonasal index of 107.5 to 110.0. 2. In somatometry, designating a face that is moderately wide and flat, having an orbitonasal index of 110.0 to 112.9.

mesopin. A trade-mark for homatropine methylbromide.

mes''o·por·phyr·in. $C_{30}H_{32}N_4(COOH)_2$; any of the 15 isomers obtained by addition of hydrogen to the double bond of each vinyl group (thereby forming an ethyl group) in the 15 isomers of protoporphyrin. Mesoporphyrin 9 is the reduced form of the protoporphyrin occurring in hemoglobin.

mes·o·pul'mo·num [meso-; L. pulmo, lung]. The embryonic mesentery of the lung attached to the mesoesophagus.

mes·or·chi'um (mi-sor'kee-um, mehs-or'-) [meso-; G. orchis, testis]. The mesentery of the fetal testis by which it is attached to the mesonephros, represented in the adult by a fold between testis and epididymis.

mes''o·rec'tum [meso-; L. rectus, straight]. The narrow fold of the peritoneum connecting the upper part of the rectum with the sacrum.

mes''o·rop'ter [meso-; G. oros, boundary; optēr, spy]. The normal position of the eyes when their muscles rest.

mesocular m. The angle formed by the visual axes of the eyes when the lateral ocular muscles are at rest.

mes·or·rha·phy [meso-; G. rhaphē, suture]. Suture of a mesentery.

mes·or·rhine [meso-; G. rhis, nose]. 1. In craniometry, designating an apertura piriformis approximately twice as long as it is wide; having a nasal index of 47.0 to 50.9. 2. In somatometry, designating a nose that is moderately long and wide; having a height-breadth index of 70.0 to 84.9.

mes''o·sal'pinx [meso-; G. salpinx, trumpet]. The upper part of the broad ligament which surrounds the uterine tube.

mes·o·sig'moid [meso-; G. sigmoeidēs, in the shape of a sigma]. The mesentery of the sigmoid flexure of the colon.

mesotan. Trade-mark for methoxymethyl salicylate, an ester of salicylic acid, analogous to methyl salicylate and used as a counterirritant.

mes''o·tar·tar'ic ac'id (mess''o-tahr-tar'ik, -tahr-ick, mes''o-). Tartaric acid which is optically inactive by reason of internal compensation.

mes''o·ten'don [meso-; L. tendere, to stretch]. The fold of synovial membrane extending to a tendon from its synovial tendon-sheath.

mes''o·the''li·o'ma [meso-; G. thēlē, nipple; -oma, tumor]. A primary tumor, either benign or malignant, of the cells forming the lining of the peritoneum, pericardium, or pleura. These cells may resemble mesothelial or endothelial cells, but their appearance may vary markedly from tumor to tumor or within the same tumor. Also called celioma, coelothelioma, sarcoendothelioma, mesothelial sarcoma.

m. of the genital tract. A small firm tumor arising from peritoneal cells and composed of multiple tubes lined by swollen and vacuolated cells which secrete a mucoid material, found in the uterus, ovarian tubes, canal of Nuck, epididymis, and spermatic cord.

mes''o·the'li·um [meso-; thēlē]. 1. The lining of the wall of the primitive body cavity situated between the somatopleure and splanchnopleure. 2. The simple squamous-cell epithelium lining the pleural, pericardial, peritoneal, and scrotal cavities. —**mesothe'lial,** adj.

mes''o·tho'ri·um. Either of the radioactive disintegration products, mesothorium-1 (MsTh1) and mesothorium-2 (MsTh2) formed from thorium and ultimately converted to radiothorium.

me·sot·o·my. The separation of an optically in-

active mixture of isomers into its optically active components. Syn., *resolution*.

mes'o-tron. A meson, particularly the kind now known as the mu meson. *Obs.*

mes·o·var'i·um (mess·o·vair'ee·um, mee·so-) [*meso*-; NL. *ovarium*, from *ovum*, egg]. A peritoneal fold connecting the ovary and the broad ligament in the embryo with the Wolffian body.

mes'quite (mess'keet, mess·keet') [Sp. *mezquite*]. The tree or shrub, *Prosopis chilensis*, of the southwestern U. S., Mexico, and Hawaii. It yields gum resembling acacia.

me·stil'bol. Generic name for the estrogen supplied under the trade-mark *monomestrol*.

mesulfin. Marfanil.

met a-, met- [G.]. 1 A prefix signifying *over*, *after*, *beyond*, *among*, *between*, *change* or *transformation*. 2. *In chemistry*, prefix denoting the 1,3 position of benzene derivatives. Symbol, *m*-. 3. *In chemistry*, denoting an acid or base containing one less molecule of water than the parent substance, commonly referred to as the ortho compound; as meta-phosphoric acid, HPO_3, from ortho-phosphoric acid, H_3PO_4. 4. *In medicine*, prefix denoting *post*. 5. *In anatomy*, prefix denoting *dorso*-. 6. *In zoology*, prefix denoting *later* or *more highly developed form of* some type, as Metazoa.

met"a·bi·o'sis (met·ah·buy·o'sis) [G. *meta*, with; *biōsis*, way of life]. A form of symbiosis, in which only one of the organisms is benefited; the other may remain uninfluenced or injured.

met a·bol'ic equilibrium. See nutritive equilibrium.

met a·bol'ic fail'ure. Advanced, progressive debility characterized by rapid failure of mental and physical functions, terminating in death.

met" a·bo·lim' e·ter (met·ah·bo·lim'i·tur, met·ah·boh·lim'·tur) [G. *metabolē*, change; *metron*, measure]. An apparatus for estimating the rate of basal metabolism.

me·tab' o·lism [*metabolē*]. The phenomenon of synthesizing foodstuff into complex tissue elements (assimilation, anabolism) and complex substances into simple ones in the production of energy (dissimulation, catabolism). —**metabol'ic**, *adj.*

acid-base m. Those physiologic activities which pertain to the relative concentrations of hydrogen and hydroxyl ions.

aerobic m. Metabolism utilizing O_2.

anaerobic m. Metabolism carried on in the absence of O.

basal m. The minimum amount of energy expenditure necessary to maintain cellular activity when the body is at complete rest in a warm atmosphere 12-18 hours after the intake of food. Also see *basal metabolic rate*.

energy m. Physiologic activities concerned with the intake, interchange and output of energy.

intermediary m. The intermediate chemical steps in the intracellular transformation of foodstuffs within the body.

protoporphyrin m. In liver diseases, such as cirrhosis and epidemic jaundice, the protoporphyrin level of the blood is raised.

me·tab'o·lite [*metabolē*]. A product of metabolic change.

essential m. A substance necessary for proper metabolism, such as vitamins.

me·tab o·lize [*metabolē*]. Transform by means of metabolism.

met" a·bol'o·gy [*metabolē*; G. *logos*, word]. Study of the metabolic processes.

met" a·car'pal [G. *metakarpion*, bones forming the palm of the hand]. Pertaining to the metacarpus, or to a bone of it.

met"a·car pec'to·my [*metakarpion*; G. *ektomē*, excision]. Excision of a metacarpal bone.

met" a·car"po·pha·lan ge·al [*metakarpion*; G. *phalanx*, bone between two joints of the fingers]. Belonging to the metacarpus and the phalanges, as metacarpophalangeal ligaments. See Table of Joints and Ligaments.

met"a·car'pus [*metakarpion*]. That part of the hand between the carpus and the phalanges, consisting of five bones. See Table of Bones.

met"a·chlo'ral. A tasteless, polymeric form of chloral, said to have properties not unlike those of chloral hydrate.

metachloridine. Trade-mark for the synthetic antimalarial agent N^1-(5-chloro-2-pyrimidyl)metanilamide; $C_{10}H_9ClN_4O_2S$.

met a·chro'ma·si·a (met·ah·kro·may'zhuh, -see·uh, -zee·uh, -shuh) [G. *meta*, denoting change; *chrōma*, color]. The assumption of different colors or shades by different substances when stained by the same dye. —**metachromat'ic**, *adj.*; **metachro'matism**, *n.*

met a·chro'sis [*meta*; G. *chrōsis*, coloring]. *In biology*, the change or play of colors seen in the squid, chameleon, and other animals.

met' a·coele (met·uh·seel) [G. *meta*, beyond; *koilia*, hollow]. The coelom proper developing in the lateral plate of mesoderm.

met' a·cone [G. *meta*, behind; *kōnos*, cone]. The outer posterior (distobuccal) cusp of an upper molar tooth.

met" a·con'id, met" a·co'nid. The inner anterior (mesiolingual) cusp of a lower molar tooth.

met a·con' ule, met a·co·nule [*meta*; L. *conula*, from *conus*, cone]. A small intermediate cusp between the metacone and the protocone on the upper molar teeth of animals.

met" a·cer·car'i·a·cin. An early generic name for *prednisone*.

met"a·cor·tan'dra·lone. An early generic name for *prednisolone*.

met" a·cre'sol. $C_6H_4(CH_3)OH$. The meta form of cresol: a colorless liquid obtained from coal tar. It is more powerful germicide than phenol, but is less toxic.

met"a·cres'yl ac'e·tate. m-Cresylacetate.

met"a·cy·e'sis (met·a·sigh·ee·sis) [G. *meta*, beyond; *kyēsis*, pregnancy]. Extrauterine gestation.

met"a·di'l·e·do·sal [in. See *diiodosalicylate*.]

met a·dra si [*meta*; G. *drasis*, strength]. Overwork of body or mind.

met al·fil tra'tion. Filtration through superimposed metallic strips with beveled edges, the system depending on the formation of a filter bed in the interstices between the strips.

met" a·gen e·sis. Alternation of generations.

Met" a·gon'i·mus [G. *meta*, behind; *gonimos*, productive]. A genus of digenetic trematodes.

M. yokogawai. That species found most commonly in the Far East which infests the small intestine of man, producing a mild diarrhea.

met a·gran u·lo·cyte. See *metamyelocyte*.

met a·kar'y·o·cyte [G. *meta*; *karyon*, kernel; *kytos*, cell]. A normoblast or micronormoblast. Also called *orthochromatic erythroblast*.

met"a·kan'trin. See *luteinizing hormone*.

met'al [G. *metallon*, mine]. An elementary substance usually characterized by hardness, malleability, ductility, fusibility, luster, its conduction of heat and electricity, and the basic character of its oxides. Symbol, M.

alkali m. Any of the metals lithium, sodium, potassium, rubidium, or cesium, belonging to group I in the periodic classification of chemical elements.

cheoplastic m. Any low fusing metal or alloy

which may be employed in cheoplasty. An alloy composed of tin, silver and bismuth, with small trace of antimony is often used.

m. fume fever See brass founders' ague.

met·al'de·hyde. (C_2H_4O) A white, solid polymer of acetaldehyde.

me·tal''les·the·si·a (mi·tal·ess·thee·zhuh, ·zee·uh, meh·tal) [*metallon*, G *aisthēsis*, perception]. The ability to distinguish between various metals by the sense of touch, presumed to occur in hysterical or hypnotized subjects.

me·tal'lic [*metallon*]. 1. Resembling metal. 2. *I physical diagnosis*, referring to sound similar to that produced by metal. It is high-pitched, short in duration, and possesses overtones. A form of tympany.

m. tinkle. A faint, clear bell-like sound, heard after cough or deep breath in some cases of hydropneumothorax.

met' l·loid [*metallon*, G *eidos*, form]. An element which has metallic properties in the free state but which behaves chemically as an amphoteric or nonmetallic element. —**met aloid,** *adj*

met'' l·lo·pho'bi·a [*metallon*, G *phobos*, fear]. A morbid fear of metals or metallic objects.

met''al·lo·por'phy·rin [*metallon*, G *porphyra*, purple]. A compound formed by the combination of porphyrin with metal such as iron, copper cobalt, nickel, silver tin, zinc, manganese, or magnesium. Heme is metalloporphyrin in which porphyrin is combined with iron.

me tal''lo·pro'te·in. A protein enzyme containing metal as an inherent portion of its molecule.

met l·o·phil. Any of the reticular cells which stain with metallic salts, as silver carbonate. It may be fixed or ameboid cell or monocyte of peripheral blood.

met mer One of two or more compounds having the same number and kind of atoms but with different distribution of the component radicals.

met' mere [G *meta*, beyond *meros*, part]. One of the linear series of more or less similar segments of the body of many animals.

met a·mer'ic [*meta*; *meros*] Pertaining to metamere or metamerism.

me·tam er·ism [*meta*; *meros*]. 1. The repetition of more or less similar parts or segments in the body of many animals, as exhibited especially by the Annelida, Arthropoda, and Vertebrata. See *pseudometamerism*. 2. The relationship existing between two or more metamers.

met'' mor phic [G *metamorphōsis*, transformation]. Pertaining to metamorphosis.

met'' mor phop si·a [*metamorphōsis*; G. *opsis*, vision]. A defect of vision in which objects appear distorted due to disease of the retina or imperfection of the media.

met'' mor'pho·si (met uh·mor'f sis, ·mor·f sis) [G]. A structural change or transformation. *I pathology*, retrogressive change.

fatty m. Fatty degeneration, fat infiltration, or both.

sexual m. A variety of sexual perversion in which the individual has the tastes and feelings of, and assumes dress and habits of, the opposite sex.

met'' mor phous [*metamorphōsis*]. Amorphous, but with tendency to crystallize.

metamucil. Trade-mark for mixture of the powdered mucilaginous portion of blond psyllium seed and powdered anhydrous dextrose, bout 50% of each used as laxative.

met my' lo·cyte [*L. meta*, between; *myelos*, marrow; *kytos*, cell]. A cell of the granulocytic series intermediate between myelocyte and granular leukocyte, having full complement of specific granules and an indented, bean-shaped (juvenile) nucleus: also called *metagranulocyte*, *juvenile cell*.

metandren. Trade-mark for methyltestosterone, crystalline androgen.

met'' neph''ro·gen'ic [G *meta*, after *nephros*, kidney; *gennethei*, from *gignesthai*, to be produced]. Capable of forming, or giving rise to, the metanephros.

met''a·neph·ros (pl. *metanephroi*) [*meta*; *nephros*]. The definitive or permanent kidney of reptiles, birds, and mammals. It develops from the caudal part of the nephrogenic cord in association with the ureteric bud from the mesonephric duct. —**metanephric,** *adj*.

met·an'il yel'low Sodium salt of *m*-sulfanilic acid-azodiphenylamine. $NaSO_3.C_6H_4.N:N.C_6H_4.NH.C_6H_5$. Brownish yellow powder used as an indicator Red t pH 1.2; yellow at pH 2.3. Also called *tropaeolin G victoria yellow*.

met' phase (met uh·faze) [*meta*; G. *phasis*, phase]. The middle stage of mitosis when the chromosomes lie nearly in single plane at the equator of the spindle, forming the equatorial plate. It follows the prophase and precedes the anaphase.

metaphedrin. Trade-mark for an aqueous solution f ephedrine containing metaphen.

metaphen. Trade-mark for the anhydride of 4-nitro-3-hydroxy m rcuri-ortho-cresol, designated as nitromersol by the National Formulary

met''a·phos phor'ic ac'id. HPO_3 A clear viscous liquid; the commercial product, occurring in sticks, contains bout 17% Na_2O. Used as reagent.

metaphyllin. Trade-mark for *aminophylline*.

me·taph y·sis [G *meta*, between *phyein*, growth]. 1. The regio of growth between the epiphysis and diaphysis of bone. Also called *epiphyseal plate*. 2. The growing end of the diaphysis.

met'' phys·i tis. Inflammation of metaphysis.

met'' pla si·a (met uh·play see·uh, ·zee·uh, ·zhuh, ·shuh) [G *meta*, denoting change; *plasis*, molding] Transformation of one form of adult tissue to another such as replacement of respiratory epithelium by stratified squamous epithelium. —**metaplas tic,** *adj*

agnogenic myeloid m. Marked myeloid metaplasia of th spleen, apparently the result of compensatory reaction to failure of the hematopoietic function of bone marrow; presumably not disease entity since the bone-marrow picture, hematological picture, and jaundice are variable.

myeloid m. The occurrence of *hematopoietic* tissue in areas f th body where it is not normally found

prosoplasti m. Transformation in the direction of higher orders of differentiation.

regressive m. Transformation in the direction of lower orders of differentiation also called *retrogressive atrophy*.

me tap la sis [*meta*; *plasis*]. Fulfilled growth and development seen in the stage between anaplasis and cataplasis.

met'a·plasm (met uh·plaz·um) [G. *metaplasma*, metaplasm]. The lifeless inclusions in protoplasm collectively

met pneu m n'ic (met uh·new mon'ic) [G *meta*, after *pneumōn*, lung]. Secondary to, or consequent upon, pneumonia.

met'' ·poph y sis. Old term for mammillary process, as seen upon the lumbar vertebrae.

met'' pro'te in [*meta*; G *prōteios*, of first rank]. A product of acid or alkaline hydrolysis of protein. Sol ble in weak cids and alkalis, insoluble in water. See *protein*. See American Classification of Proteins in the Appendix.

met″ar·te′ri·ole [G. *meta*, between; *artēria*, artery]. A blood vessel, intermediate in position and structural characteristics, between an arteriole and true capillary. Also called *arteriolar capillary, precapillary, functional capillary*.

met″a·ru′bri·cyte. See *normoblast*, 1.

met″a·sta·ble. Of intermediate stability; changing readily either to a more or a less stable state.

me·tas′ta·sis [G., removal]. The transfer of disease from a primary focus to a distant one by the conveyance of causal agents or cells through the blood vessels or lymph channels. —**metastat′ic,** *adj.*

cannon-ball m. Large spherical lesions of the lung which result from metastatic carcinoma, sometimes characteristic of metastasis from primary renal carcinoma; descriptive term from x-ray findings. Also called cotton-ball m.

me·tas′ta·size [*metastasis*]. Transfer disease into a distant part by metastasis.

Met″a·stron″gy·lus (met″uh·stron′ji·lus) [G. *meta*, beyond; *strongylos*, round]. A genus of nematoid parasites.

M. apri. Synonym for *M. elongatus*.

M. elongatus. A species common to hogs, occasionally to sheep and cattle, which infests the respiratory tract and produces pneumonitis and bronchitis often fatal in young animals. A few cases of human infestation have been reported.

met″a·tar·sal′gi·a [G. *meta*, between; *tarsos*, flat of the foot; *algos*, pain]. Pain and tenderness in the metatarsal region.

Morton's m. A specific clinical type of metatarsalgia, described by T. G. Morton (1876) characterized by severe pain between the heads of the third and fourth metatarsal bones and due to a neurofibroma at the point of union of the digital branches from the medial and lateral plantar nerves; also called *Morton's foot* or *toe*.

met″a·tar·sec′to·my [*meta*; *tarsos*; G. *ektomē*, excision]. Excision of a metatarsal bone.

met″a·tar″so·pha·lan′ge·al [*meta*; *tarsos*; G. *phalagx*, bone between two joints of the fingers or toes]. Pertaining to the metatarsus and the phalanges, as the ligaments between these bones. See Table of Joints and Ligaments in the Appendix.

met″a·tar′sus [*meta*; *tarsos*]. The portion of the foot between the tarsus and the phalanges, containing five bones of the foot. See Table of Bones in the Appendix. —**metatarsal,** *adj.*

m. adductovarus. A congenital deformity of the foot; a deviation of the fore part of the foot toward the midline associated with an elevation of its inner border; the heel remaining in a neutral or slightly valgus position. It is caused by soft tissue contracture with bony deformity occurring only in older cases and is due to secondary adaptation. Syn., *skewfoot*.

m. adductus. A congenital deformity of the foot; deviation of the fore part of the foot toward the midline, the heel remaining in a neutral or slightly valgus position. At birth there is no bone deformity; the deviation of the metatarsals being produced by soft tissue contracture. In older cases bone deformity may develop due to secondary adaptation.

m. primus varus. An abnormality in the developmental process involving adduction of the first metatarsal.

m. varus. A congenital deformity of the foot; an elevation of the inner border of the fore part of the foot (varus); the heel remaining in a neutral or slightly valgus position.

met″a·thal′a·mus [*meta*; G. *thalamos*, chamber]. The lateral and medial geniculate bodies.

me·tath′e·sis [G., transposition]. A chemical reaction in which there is an exchange of radicals or elements of the type $A\overset{+}{}B\overset{-}{} + \overset{+}{C}\overset{-}{D} = \overset{+}{A}\overset{-}{D} + \overset{+}{C}\overset{-}{B}$ with no change in valence. —**metathet′ic,** *adj.*

met″a·troph′ic [G. *meta*, beyond; *trophē*, nourishment]. Deriving sustenance from organic matter said of bacteria.

Met″a·zo′a [*meta*; G. *zōion*, living being]. A subdivision of the animal kingdom, which includes all the multicellular forms, and so stands in contrast to the Protozoa.

Metchnikoff, Élie [*Russian biologist in France*, 1845–1916]. Developed the theory of phagocytosis. With P. P. E. Roux, introduced calomel ointment as a prophylactic against syphilis. For his researches on immunity shared the Nobel prize with Paul Ehrlich (1908).

me·te′ci·ous, me·toe′ci·ous. See *heteroecious*.

met″el·oi′dine. An alkaloid from certain *Datura* species.

met″em·pir′ic [G. *meta*, beyond; *empeirikos*, experienced]. Not derived from experience, but implied or presupposed by it.

met″en·ceph′a·lon [G. *meta*, behind; *egkephalos*, brain]. The cephalic part of the rhombencephalon, giving rise to the cerebellum and pons.

me″te·or′ic [G. *meteōros*, raised from the ground]. Pertaining to meteorism; also, pertaining to meteors or to atmospheric phenomena.

me′te·or·ism [*meteōros*]. Gaseous distention of the abdomen or intestine; tympanites.

me′te·or·o·graph (mee′tee·or·o·graf″, mee″tee·orr′graf) [*meteōros*; G. *graphein*, to write]. An apparatus for securing a continuous record of the pressure, temperature, humidity, and velocity of the wind.

me″te·or·ol′o·gy [*meteōros*; G. *logos*, word]. The science which treats primarily of atmospheric phenomena.

me″te·or·o·path″o·log′ic [*meteōros*; G. *pathos*, disease; *logos*]. Pertaining to the influence of weather on incidence, development, and course of disease.

me′ter [G. *metron*, a measure]. 1. The basic unit of linear measure of the metric system, 39.37 inches. Abbreviated, m., m. 2. An instrument for measuring and recording quantities, as a roentgen meter which measures roentgen-ray quantities in roentgens by ionization. —**met′ric,** *adj.*

dose-rate m. In *radiology*, any instrument for measuring the radiation dose rate.

integrating dose m. In *radiology*, an ionization chamber and measuring system designed to determine the total radiation administered during a single exposure, usually designed to be placed on the patient's skin.

respiratory ventilation m. One which gives a relatively accurate measurement of inspiratory volume.

viscosity-effusion m. An instrument for determining the concentration of anesthetic gases during surgical anesthesia.

me·tes′trus [G. *meta*, after; *oistros*, gadfly]. The period that follows the estrus when there is marked invasion of the vaginal walls by leukocytes.

meth″a·cho′line chlo′ride (meth″uh·ko′leen, ·lin) (*methacholinae chloridum*). The pharmacopeial name for acetyl-β-methylcholine chloride. See *mecholyl chloride*.

meth′a·done. Methadone hydrochloride.

meth′a·done hy″dro·chlo′ride. CH_3CH_2CO-$C(C_6H_5)_2CH_2CH(CH_3)N(CH_3)_2.HCl$; *dl*-6-dimethylamino-4,4-diphenyl-3-heptanone hydrochloride; a white, crystalline powder soluble in water. Its actions are similar to those of morphine and it is used similarly. The *l* isomer is about 2 times as potent as the *d* isomer. Syn., *amidone*

hydrochloride, methedon. See *adanon hydrochloride, dolophin hydrochloride.*

meth"am phet a min hy"dro-chlo'ride. [$C_6H_5CH_2CH(CH_3)N^+H_2CH_3]Cl^-$; *d*-1-phenyl-2 methylaminopropane hydrochloride a methyl derivative of amphetamine or desoxy derivative of ephedrine; it occurs as a white, crystalline powder freely soluble in water It is central stimulant and vasoconstrictor Syn. *desoxyephedrine hydrochloride, methylamphetamine hydrochloride.* See *desoxyn hydrochloride desoxal hydrochloride, doryfed hydrochloride, efroxine hydrochloride, methedrine, norodrin hydrochloride, semoxydrin hydrochloride syndrox hydrochloride.*

meth'an l. Formaldehyde.

meth ne CH Marsh gas. The first member of the homologous series of paraffins having the general formula C_nH_{2n+2} A colorless, odorless, inflammable gas.

meth"ane-ar-son'ic ac'id. Methylarsonic acid.

meth" no'l ac'id. Formic acid.

meth a nol Methyl alcohol

meth-an'thel ine bro mide $C_{21}H_{26}BrNO_3$; β-diethylaminoethyl-9-xanthenecarboxylate methobromide; white or nearly white powder very soluble in water parasympatholytic agent, producing the peripheral tion of anticholinergic drugs, such as tropine, and the ganglionic block ing action of drugs such as tetraethylammonium chlorid useful whenever anticholinergic spasmolytic action is desired. See *banthine bromide*

meth"a phen'l lene hy"dro-chlo ride Generic name for the antihistaminic substance N N-dimethyl N -phenyl N -(2-th yl) thylenediamine hydrochloride $C_{15}H_{20}N_2S.HCl$ marketed under the trade-marked name *diatrin hydrochloride.*

meth" pyr'l lene hy"dro chlo ride. $C_{14}H_{19}N_3S$ HCl; 2-[(2-dim thylam oethyl) 2-th yl amino]pyridine hydrochlorid ; white, crystalline powder very soluble in water; histamine-antagonizing agent with low incidence of sedation. Syn., *thenylpyramine hydrochloride* See *histadyl, semikon hydrochloride, thenylene hydrochloride*

meth-ar'bi tal. $C_9H_{14}N_2O_3$ 5,5-diethyl-1-methylbarbituric acid; white crystalline powder slightly soluble in water a barbiturate, less sedative than phenobarbital seful in the treatment of various forms of epilepsy See *gemonil*

meth-di'a-mer-sul fon a-mides. A generic name for mixture containing equal weights f sulfadiazine, sulfamerazine, and sulfamethazine

methedrine Trade-mark for *methamphetamine hydrochloride.*

met"he-mal'bu min. A product of the combination of hemati and serum albumin, comparable to methemoglobi Syn *pseudomethemoglobin*

met"he-m l"bu mi ne mi a. Methemalbumin in the blood of patient in whom intravascular hemolysis i taking place

met'heme Hematin.

met he m gl 'bin. The oxidized form of hemoglobin, in which th iron tom is trivalent, and which is not able to combine reversibly with xygen Found in the blood after poisoning by hlorates, nitrites ferricyanides, quinones, per oxides, acetanilid, acetophenetidin, etc t is dark brown in color Syn *ferrihemoglobi*

met he mo-glo"bi ne'mi a, met hee mo glo bi ne mi [G meta, with *haima,* blood L. *globus,* ball; *haima*]. The presence of methemoglobin in the blood, causing cyanosis, dizziness, headache d arrhea, and ataxia.

met he mo glo"bi nu ri a, met hee mo-gl bi nur' l [*meta; haima; globus;* G *ouron,* urine]. The presence of methemogl bin in the urine

me the na mine (meth-ee nah-meen, -min, meth i nh mee meth l nam in) (*methenamina*) $(CH_2)_6N_4$ Hexamethylenetetramine, occurring in colorless crystals or as white, crystalline powder 1 Gm. dissolves in 1.5 cc. of water Used mainly as a urinary antiseptic its effectiveness is dependent on hydrolyzing it, in acid urine, to formaldehyde. Dose, 0.3–1.3 Gm. (5–20 gr.) Syn., *hexamine.* See *formin, urotropin.*

m. tetraiodide. See *siomine.*

meth ene. 1. The first member of the ethylene (alkene) series of unsaturated hydrocarbons, having the formula CH It has never been isolated. 2. The hydrocarbon radical $CH_2=$ Syn., *methylene.*

meth e nyl The trivalent radical, ≡CH. Syn *methine, methyne*

m. tribromide Bromoform.

m. trichloride. Chloroform.

m. triiodide Iodoform.

methergine. Trade-mark for N-(α-hydroxymethyl-propyl)-*d*-lysergamide an oxytocic useful for shortening the third stage of labor and for reducing blood loss. The compound is said to cause more prolonged contraction of the uterus than ergonovine.

me-thim zole me-thi ma zole. The generic name for 1-methyl-2-mercaptoimidazole $C_4H_6N_2S$; white to buff powder soluble in water used as an antithyroid drug. See *tapazole.*

meth'ine, meth'yne. Methenyl.

meth i'o dal so'di um. CH_2INaO_3S; sodium monoiodomethanesulfonate a white, crystalline powder soluble in water used as radiopaque medium, especially for visualization of the urinary tract. See *skiodan sodium.*

meth i'o-nine (meth-eye o-neen, -nin). $CH_3S(CH_2)_2CHNH_2COOH$. α-Amino-γ-methylthiol-n-butyric acid. A naturally occurring amino acid, essential for normal growth and as source of methyl groups for the synthesis of choline, creatine, etc., in vivo. May be useful in preventing and treatment of certain types of liver damage

me thi'o-nyl. The univalent radical, $CH_3SCH_2CH_2CH(NH_2)CO-$ of the amino acid methionine.

methocel. Trade-mark for methyl cellulose.

meth od [G *methodos,* following after pursuit]. The manner of performance of any act or operation. The term embraces open and closed operations, reduction of fractures and dislocations, maneuvers and tests performed in a definite way and according to described and practiced plan. For methods of treatment, see *treatment;* for methods of staini g, see *stain,* for methods of making qualitative tests, see *test.* See also under *reaction* and under the designating name.

acetylene m. A method for estimating cardiac output by determining th arteriovenous differences in oxygen bsorption or carbon dioxide elimination in given period of time. The patient breathes into bag filled with air and acetylene.

Achard-Castaigne m. See methylene blue *test.*

Achucárro's silver tannin m. (*for astrocytes*) See under *stain.*

acid hematin m. (*for hemoglobin*) Blood is diluted with tenth normal HCl and the color is compared with glass standards or with standard hem tl solution. Modifications of this are the Haden-Hausser method, the Wintrobe method the Sahli method, and the Sanford, Sheard, and Osterberg method.

Addi m. A method for counting the sediment (casts nd cells) in 24-hour urine.

alkaline hematin m. (*for hemoglobin*) Determination of hemoglobin in blood by photoelectric colorimetry of alkaline hematin.

Allen-Bourne m. (*for zymohexase*) A histochemical method based on the formation of triose phosphate, when the enzyme acts on hexose diphosphat liberation of phosphate t room temperature in alkaline solution, and visualization of phosphate by the Gomori method.

alternate case m. A method of investigating the effects of different treatments by using alternate types of treatment on alternate patients who suffer from the same disease.

alternate paired case m. A method of investigating the effects of different treatments by pairing cases as to extent and similarity of disease, using one type of treatment on one pair and another type on the second pair

Altmann-Gersh m. (*for tissue fixation*) Tissue is frozen quickly t liquid air temperatures, dehydrated t −30° C. in low vacuum, and then prepared for examination.

Anfinsen m. (*for diphosphopyridine nucleotide*) A Cartesian-diver method based on conversion of hexose diphosphate to phosphoglyceric acid and phosphoglycerol in bicarbonate buffer where the amount of diphosphopyridine ucleotide (DPN) is the limiting factor. The phosphoglyceric acid produced causes liberation of CO_2 from the buffer; the amount of CO_2 is measure of the diphosphopyridine nucleotide concentration.

Armitage m. A method for determining the presence of peroxidase in smears of blood or bone marrow If yellow granules appear the test is positive

Arneth' m. A method of classifying neutrophils according to the shape of the nucleus, and the number of nuclear lobes See also Joseph *Arneth*.

Arnold and Gunning's m. A modification of the Kjeldahl method used in determining total nitrogen.

Askenstedt' m. (Parker' modification) (*for indican*) Urine is precipitated with mercuric chloride. Indican is converted to indigo with Obermayer' reagent and extracted with chloroform which is diluted with alcohol. The blue color is compared with standard solution of indigo.

Austin and Van Slyke's m. (*for blood chlorides*) Blood is laked with distilled water and the proteins are precipitated with picric acid. Procedure is completed as in McLean and Van Slyke method

Barber's m. A method for the isolation of single microorganism by the use of mechanically operated pipet under microscopic field.

Barker' m. (*for thiocyanate*) Ferric nitrate acts upon the thiocyanate of a blood filtrate to produce color which is compared with standard.

Barrett m. A modification of the urease method for the determination of blood urea nitrogen, which includes the addition of few drops of 10% sodium hypochlorite sol tion to the Nessler' reagent. This prevents any organic substance from clouding the final colored solution. The method can also be adapted for urine urea determinations.

Bauer-Feulgen m. (*for glycogen*) See *Bauer method* under *stain*.

Bell' m. (*for calcium*) The diffusible fraction of blood calcium is crystallized by the addition of oxalic acid. After dilution, the crystals are counted in Thoma chamber and compared with standard solution.

Benedict and Franke's m. (*for uric acid in urine*) Diluted urine is treated with arsenophosphotungstic acid reagent and sodium cyanide and the blue color compared with standard uric acid solution.

Benedict and Newton's m. (*for protein-free blood filtrate*) Blood is hemolyzed, and the proteins are precipitated with tungstomolybdic acid.

Benedict and Theis m. (*for inorganic phosphate*) A trichloroacetic acid filtrate of serum is treated with molybdic acid and reduced with hydroquinone sulfite reagent.

Benedict's m. (a) (*for glucose*) Glucose in the urine is estimated by titrating the urine with Benedict's quantitative sugar reagent. (b) (*for total sulfur*) Sulfur in the urine is estimated by adding urine to Benedict's sulfur reagent and evaporating to dryness. Precipitation with BaCl is followed by filtering, drying, and weighing. ( ) (*for uric acid*) A tungstic acid blood filtrate is mixed with acid lithium chloride and silver nitrate. After centrifuging, the supernatant fluid is mixed with sodium cyanide and arsenotungstic color reagent and compared with a standard uric acid solution in colorimeter

Benedict' picrate m. (*for glucose in urine*) Color produced by picric cid reduction is compared with permanent inorganic standards which represent definite concentrations of sugar Also called *Hi/ ...* m.

Bensley-Hoerr m. (*for isolation of mitochondria*) A method of isolation of mitochondria based on differential centrifugation. The cells of tissue are broken up by various methods of incomplet homogenization, and the mitochondria freed from other cell constituents and tissue fragments by repeated centrifugation at speeds determined by the size and density of the particular mitochondria. Now important in the study of the oxidative enzymes

Bensley's m. (*for glycogen*) See under *stain*.

benzidine and nitroprusside oxidase m. (*for leucoplakia*) Place sections for 30 minutes at 37° C. in fresh benzidine and nitroprusside reagent; agitate frequently; wash in distilled water; place in 0.04 to 0.06 per cent hydrogen peroxide at 37° C. for 30 minutes, shaking frequently; wash in distilled water dehydrate and mount Blood cells are colored black while other structures remain gray

Bessey-Lowry-Brock-Lopez m. (*for vitamin A and carotene*) A method based on destruction of vitamin A by ultraviolet light and bsorption measurements by spectrophotometer

Bessey-Lowry-Brock m. (*for phosphatase*) A colorimetric method based on the splitting of p-nitrophenyl phosphate by the enzyme to give the yellow salt of p-nitrophenol.

Bethe m. (*for chiti*) A method based on treatment of tissue with aniline hydrochloride, hydrochloric acid, and potassium dichromate to give green color

Bier's m. ( ) A method of producing anesthesia in limb by intravenous injections of ½% cocaine after the part has been rendered bloodless by elevation and constriction. (b) Anesthesia of the lower part of the body produced by the injection of an anesthetic agent into the spinal membranes.

biopsy m. for sex determination. A method, devised by Murray L. Barr of determining the sex-chromosome constitution of an individual of doubtful sex by microscopic examination of sections of excised skin.

blind-test, cross-over m. A clinical test in which the subjects are di ided into two or more statistically comparable groups. Under identical conditions, one group is given medication and the other placebo after period, the groups are reversed thus each group serves as control both for itself and the other group.

Bloch m. (*for dopa oxidase*) A histochemical method based on conversion of dihydroxyphenyl-

alanine to melanin on exposure to tissue containing dopa oxidase. Leukocytes and melanoblasts turn black due to their dopa-oxidase content. See dopa reaction.

Bodansky's m. (*for serum phosphatase*) The difference between inorganic phosphate before and after incubation with sodium glycerophosphate substrate is measure of phosphatase activity

Boettiger m. (*for glycogen*) A colorimetric method based on the color development through the action of diphenylamine on glycogen.

Borchardt m. (*for gold*) A histochemical method using silver nitrate followed by nitric acid to localize gold.

Bordley-Hendrix Richards m. (*for creatinine*) An adaptation of Folin method to capillary tube colorimetry

Bordley-Richards m. (*for uric acid*) An adaptation of Folin method to capillary-tube colorimetry

Borsook m. (*for allantoin*) A colorimetric method based on the enzymatic conversion of allantoin to allantoic acid, acid hydrolysis of the acid to urea and glyoxylic acid, and the measurement of the latter

Bott m. (*for sodium*) A capillary-tube colorimetric method based on the precipitation of uranyl zinc sodium acetate and the reaction of the latter with diphenylthiocarbazone to give red color

Bourne m. (a) (*for alkaline phosphatase*) A histochemical method based on the action of the enzyme on glycerophosphate and calcium chloride to produce calcium phosphate and the staining of the latter with alizarin sulfonate. (b) (*for ascorbic acid*) A histochemical method based on reduction of silver nitrate by ascorbic acid. ( ) (*for sulfhydryl groups*) A histochemical method using acetic acid, nitroprusside, ammonium sulfate, and ammonium hydroxide to obtain purplish-blue color

Bratton and Marshall's m. (*for sulfonamides in blood and urine*) A colorimetric method based upon the amount of purplish red azo dye formed by the coupling of diazotized sulfonamide with N-(1-naphthyl) ethylene diamine dihydrochloride. This method may be used for any sulfonamide derivative in which the amino group is free or can be made free.

breath alcohol m. A method for rapidly measuring the concentration of alcohol in the expired air of an individual to determine whether or not he is intoxicated Trade names for instruments used are *alcometer drunkometer intoximeter*

Breh and Gaebler's m. (*for potassium*) Potassium is precipitated from chloride-free blood filtrate as potassium silver cobaltinitrite which is estimated colorimetrically

Breda m. (*for magnesium*) A histochemical method using quinalizarin to give blue color titan yellow to give red color and azo blue to give violet color

brucine m. (*for determination of nitrates*) The development of yellow color by brucine in the presence of nitrates and concentrated sulfuric acid It will detect 5 micrograms of nitrate and may be used for quantitative estimation.

Buist's m. See under *artificial respiration*.

Butler and Tuthill's m. (*for sodium*) (Weinbach modification) Sodium is precipitated from blood filtrate uranyl zinc sodium acetate which is titrated with sodium hydroxide.

Cajal's gold-sublimate m. See under *stain*.

carbon tetrachloride m. (*for pollen*) Partially dried staminate flowers are soaked in carbon tetrachloride and gently beaten with pestle to loosen the pollen from the anthers. This is strained through muslin which passes only the carbon tetrachloride and pollen. The desired pollen is then obtained by passing the suspension through Buchner filter

Carere-Comes Siena orange m. (*for potassium*) A histochemical method based on the development of an orange color with Siena orange solution (sodium dipicrylamine)

Castañeda rat-lung m. A method for the production of vaccine in which high concentrations of Rickettsiae are obtained.

Castel m. (a) (*for arsenic*) A histochemical method using copper acetate to obtain green salt of arsenic. (b) (*for bismuth*) A histochemical method based on treating tissue with solution of brucine sulfate, sulfuric acid, and potassium iodide to obtain red granules.

cat m. A method of assay for digitalis.

cerimetric m. A titrimetric method using ceric salt. See Lindner Kirk cerimetric m. and Hoch-Brown-Kirk cerimetric m.

Chèvremont-Comhaire m. (*for riboflavin*) A histochemical method based on reduction of riboflavin to leucoriboflavin and reoxidation to red granules of rhodoflavin.

Christeller m (*for gold*) A histochemical method using stannous chloride to localize gold

Christopher's m. of spleen index. This consists of two measurements the umbilicus-nipple and the umbilicus-apex (of spleen) A correction is obtained from table.

chromate m. (*for lead*) A histochemical method based on precipitation of yellow lead chromate.

Claude m. (a) (*for isolation of mitochondria*). A method based on differential centrifugation for the separation of mitochondria from neoplastic cells developed after injection of leukemic cells into rats. The advantages of this source of material are the scant blood supply uniformity of cell type and abundance of mitochondria (b) (*for isolation of microsomes*) A differential centrifugation method for isolation of microsomes.

Claude-Potter m. (*for isolation of chromatin*). A method based on differential centrifugation of the nuclei of spleen and liver cells.

Conway-Byrne diffusion m. (*for ammonia and nitrogen*) A microcolorimetric method based on diffusion of ammonia from an alkalinized solution to standard acid solution followed by titration

Conway m. (*for chloride*) A method based on the oxidation of chloride to chlorine by acid permanganate, absorption of chlorine by iodide, and estimation of iodine liberated by titration or colorimetry

Cooke-Ponder m. (*for classifying leukocytes*) A method of making differential neutrophil count in which five different types of cells are classified according to the number of nuclear lobes.

Copenhagen m. See under *artificial respiration*.

copper sulfate m. (*for specific gravity and hemoglobin*) Drops of plasma or whole blood are put into graded series of copper sulfate solutions of known specific gravity Line charts are used for the conversion of plasma or whole blood gravities into hemoglobin or protein concentrations.

Corper and Cohn m. (*for tubercle bacilli in sputum*) Five to 20 cc. of homogenized sputum are mixed with 2 cc. of oxalic acid and put in 50-cc centrifuge tube and then 40 cc of sterile saline are added. After centrifuging for 25–30 minutes, the supernatant fluid is cultured for tubercle bacilli.

Cox yolk-sac m. A method for the production of vaccine in which high concentrations of Rickettsiae are obtained.

Crämer m. (*for nitrate*) A histochemical method based on the interaction of nitrate with nitron to give birefringent insoluble salt.

Crétin m. (*for minerals*) A histochemical method using gallic acid to obtain blue color for calcium, bright green for barium, blue-green for strontium and cadmium, yellowish rose for magnesium, violet-brown for iron, dull yellow for zinc and lead, and pure yellow for silicon.

Crétin-Pourymanne m. (*for nickel*) A histochemical method based on the precipitation of nickel as lilac or blue nickel ammonium phosphate.

Cunningham-Kirk-Brooks m. (*for chloride*) An electrotitrimetric method using silver-silver amalgam electrodes and determining the titration end point by plotting the volume of silver nitrate added against the resulting electromotive force values.

cyanmethemoglobin m. (*for hemoglobin*). Photoelectric colorimetry of hemoglobin in blood after reduction to the cyanmethemoglobin form.

da Fano cobalt nitrate m. for Golgi apparatus. See under *stain*.

Dalldorf m. See *suction test*.

Danzer and Hooker's m. (*for capillary blood pressure*) The observer measures the external pressure necessary to obliterate the flow of blood through capillaries while they are being observed microscopically

Denis' m. (*for serum magnesium*) Calcium is removed as oxalate and magnesium is precipitated as magnesium ammonium phosphate which is estimated colorimetrically

diaphanol m. (*for chitin*) A method for softening chitin, using diaphanol.

Diethelm's m. (*for bromide in blood*) The bromide in blood filtrate reacts with gold chloride to produce a color which is measured colorimetrically

diffraction m. See halo m.

dilatometric m. Measurement of the volume changes accompanying chemical reaction, as indicated by the displacement of drop of the reaction mixture in vertical column of nonaqueous medium.

displacement m. See Arthur Walter *Frost*.

Dounce-Lan m. (*for isolation of nuclei*) A method for isolation of nuclei of avian erythrocytes, based on hemolysis of cells by saponin and isolation of nuclei by differential centrifugation.

Dounce m. (*for isolation of nuclei*) A method based on rupture of cells at pH of 6.6 and separation of nuclei by differential centrifugation.

Drinker's m. See under *artificial respiration*.

Dubos-Brachet m. (*for ribonucleic acid*) A histochemical method using ribonuclease to break down ribonucleic acid and remove its basophilic staining properties.

Dunn m. (*for hemoglobin*) A method for detection of hemoglobin in tissues and erythrocytes, based on staining with aniline and counterstaining with safranin. Hemoglobin takes dark blue to bluish gray

Edwards-Scholander Roughton m. (*for total nitrogen*) A syringe capillary method based on the extraction of all the nitrogen and part of the oxygen with carbon dioxide, absorption of the oxygen and carbon dioxide with alkaline hydrosulfite, and the measurement of the nitrogen which remains.

Einarson's gallocyanin chrome alum m. (*for Nissl bodies*) See under *stain*.

electrophoresis m. The introduction of antigens into the skin by means of an induced current. This produces less trauma than scratch or intradermal test.

Elftman-Elftman m. (*for gold*) A histochemical method using hydrogen peroxide to obtain rose to blue colloidal gold.

Elvehjem and Kennedy' m. (*for iron*) The urine is ashed, the ash dissolved, and the iron present determined colorimetrically as thiocyanate

epidermic m. A method of administering medicinal substances by applying them to the skin.

Esbach's m. (*for albumin in urine*) Picric acid is added to urine to precipitate protein which settles to the bottom of graduated tube.

ester wax m. A method of embedding tissues which are unusually tough or of varied consistency

Evans blue m. A dye-dilution method using Evans blue (T 1824) for the determination of blood volume, cardiac output, and residual blood volume in the heart.

Eve's m. See under *artificial respiration*.

Exton's m. (*for specific gravity*) A method for determining the specific gravity of small amounts of fluid by suspending it in an immiscible medium of the same specific gravity as the specimen.

falling-drop m. A method of determining the specific gravity of solution by determining the time taken for drop of known size to fall given distance in nonmiscible fluid of known density

Farley St. Clair and Reisinger' m. A method of classifying neutrophils into filament and nonfilament types according to the shape of the nucleus.

Farmer and Abt's m. (*for ascorbic acid in blood*) Plasma is deproteinized, centrifuged, and titrated with 2,6-dichlorobenzenoneindophenol.

Faust's zinc sulfate centrifugal flotation m. A method of concentrating cysts of protozoa in the stool by using centrifugal flotation with zinc sulfate of specific gravity 1 180.

Fell-O'Dwyer m. See under *artificial respiration*.

fermentation m. (*for glucose*) The CO_2 evolved when urine undergoes fermentation with yeast is measured.

Fishberg and Dolin m. (*for serum proteins*) Serum is diluted and acidified. The color of the added indicator is an index of protein concentration.

flash m. A method of pasteurizing milk by heating it to 178° F and then chilling it promptly

flotation m. A technic employed for separating ova and larvae from stool specimens. The stool is put into salt solution where it sinks while the ova and larvae, due to their smaller specific gravity rise to the surface.

Folin and Denis m. (a) (*for phenols*) Phenols with solution of phosphotungstic-phosphomolybdic acid and alkali yield blue color proportional to their concentration. (b) (*for Bence-Jones protein*) The urine is heated to 60° C. and centrifuged The precipitated protein is washed with alcohol, dried, and weighed.

Folin and Svedberg's m. (*for urea*) Urease is added to blood filtrate to produce ammonium carbonate after which the ammonia is distilled off and determined colorimetrically after nesslerization.

Folin and Wu' m. (a) (*for protein-free blood filtrate*) Blood is laked and the proteins removed by precipitation with tungstic acid (b) (*for nonprotein nitrogen*) The nitrogen in the blood filtrate is estimated by the Kjeldahl method; the ammonia formed is determined colorimetrically after direct nesslerization. (c) (*for glucose in blood*) The blood filtrate is heated with copper solution and phosphomolybdic acid is added to form blue color which is compared with stand-

ard. (d) (*for total acidity*) Twenty-five cc. of mixed 24-hour urine are titrated with tenth normal sodium hydroxide using phenolphthalein for an indicator.

Folin and Youngburg's m. (*for urea*) Ammonia is removed from urine by an ion-exchange zeolite. The urea is decomposed with urease and the filtrate is nesslerized.

Folin, Cannon, and Denis m. (*for epinephrine*) Epinephrine is extracted from the suprarenals with acid. The amount is then determined by its reducing power on the uric acid reagent of Folin and Denis.

Folin-Farmer m. (*for total nitrogen*) A micromethod using the Kjeldahl procedure except that the ammonia solution is nesslerized and compared colorimetrically.

Folin-Shaffer m. (*for uric acid*) Phosphates and organic matter are removed with uranium acetate. Uric acid is precipitated as ammonium urate which is titrated with potassium permanganate.

Folin's m. (a) (*for uric acid*) A tungstic acid filtrate is mixed with a phosphotungstic acid reagent which produces a blue color that is compared with a standard. (b) (*for amino-acid nitrogen*) (Danielson modification) The color developed by amino acids with β-naphthoquinone-sulfonic acid is compared with a standard. (c) (*for ammonia*) Alkali is used to set free the ammonia of the urine. The ammonia is collected in a measured amount of acid which is then titrated. (d) (*for creatinine*) Creatinine in urine yields a red color with picric acid in alkaline solution which may be compared with a standard. (e) (*for protein*) Protein precipitated by heat and acetic acid is centrifuged, washed, dried, and weighed.

Feragren m. (*for bile acids*) A histochemical method treating the tissue with barium chloride, acid fuchsin phosphomolybdic acid, and aniline blue-orange G stain to obtain reddish-blue granules.

Frame, Russell, and Wilhelmi's m. (*for amino-acid nitrogen*) The amino nitrogen groups in protein-free blood filtrate combine with β-naphthoquinone sulfonate to form highly colored compounds which may be compared colorimetrically with a standard.

Friedemann and Graeser's m. (*for lactic acid*) Glucose of the blood is removed and the lactic acid converted to acetaldehyde which is combined with sodium bisulfite. The bound sulfite is then determined iodometrically.

Gersh-Macallum m. (*for potassium*) A histochemical method employing the freezing-drying process: potassium is precipitated as yellow sodium potassium cobaltinitrite.

Glick acidimetric m. (*for esterase, lipase, and cholinesterase*) Titrimetric methods based on the neutralization of the acid liberated with an alkaline buffer medium and measurement of the loss in alkalinity of the buffer with acid. Butyrate, tributyrin, and acetylcholine are used as substrates for esterase, lipase, and cholinesterase, respectively.

Glick-Linderstrøm-Lang-Holter m. (*for inorganic phosphate*) A microtitrimetric method based on precipitating the phosphate as magnesium ammonium phosphate, dissolving the latter in hydrochloric acid, and titrating the excess acid with ammonium acetate.

Glick m. (*for ascorbic acid*) A titrimetric method based on extraction of ascorbic acid with metaphosphoric acid, the conversion of dehydroascorbic acid, if present, to ascorbic acid with hydrogen sulfide and titration with 2,6-dichlorophenolindophenol.

Goldblatt m. The production of experimental persistent hypertension by the permanent constriction of the main renal arteries with a special clamp devised for the purpose.

Gomori m. (*for glycogen and mucin*). A histochemical method using chromic acid and silver nitrate-methenamine to obtain grayish to black granules of glycogen and mucin. Melanin and insoluble calcium salts also stain black with this method.

Gomori's acid phosphatase m. See under *stain*.

Gomori's alkaline phosphatase m. See under *stain*.

Gomori's lipase m. See under *stain*.

Goullart m. (*for hemoglobin*) A method for detection of hemoglobin in tissues and erythrocytes, using potassium iodid in glacial acetic acid to obtain birefringent crystals of protoiodoheme.

Graff m. (*for cytochrome oxidase*) A histochemical method based on conversion of Nadi reagent to indophenol to obtain a blue color.

Graham alphanaphthol pyronin m. (*for oxidase granules*) See under *stain*.

Greenberg's m. (*for serum protein*) Proteins are separated with sodium sulfate and determined colorimetrically after treatment with a phenol reagent.

Griffith's m. (*for hippuric acid*) Hippuric acid is extracted with ether. The residue from the ether distillation is treated with bromine and sodium hypobromite. Hippuric acid nitrogen is then determined by the Kjeldahl method.

Hackmann m. (*for sulfonamides*) A method by which colorless sulfonamides can be demonstrated by diazotizing with nitrous acid and coupling with alpha-naphthylamine. In frozen dried tissues, colored sulfonamides can be seen directly.

Haden-Hausser m. (*for hemoglobin*) An acid hematin method, in which the color is compared with a glass standard scale through a microscope in a special hemoglobinometer having a wedge-shaped dilution channel.

Haden m. A simplification of the Folin-Wu method for making protein-free filtrates in which the acid and tungstate solutions are combined before adding to the blood instead of adding separately.

Hagedorn and Jensen's m. (*for blood sugar*). Blood is precipitated with zinc hydroxide, filtered, and used to reduce potassium ferricyanide which is then titrated with sodium thiosulfate.

Hale m. (*for hyaluronic acid*) A histochemical method based on the combination of hyaluronic acid with iron and the development of a blue color by ferrocyanide.

halo m. A method for determining the mean diameter of a group of erythrocytes. A beam of white light is passed through an unstained blood film, the resulting spectrum is projected on a screen: the diameter of the halo on the screen varies inversely with the mean diameter of the erythrocytes. Also called *diffraction m.*

Hammerschlag m. (*for specific gravity of blood*). See under Albert *Hammerschlag*.

Hammett-Chapman m. (*for bile acids*) A histochemical method of treating tissue with ammonium hydroxide, nitroprusside, and ammonium sulfate.

Hand-Edwards-Caley m. (*for mercury*) A histochemical method based on the reduction of the mercuric form by stannous chloride and the mercurous form by thioglycollic acid to obtain black spheres of metallic mercury.

Hanus m. (*for iodine number*) See under *iodine*.

Heatley m. (*for glycogen*) A microtitrimetric

method based on the isolation of glycogen from tissue, hydrolysis with hydrochloric acid, and estimation of glucose produced by Linderstrøm-Lang Holter method.

Heck-Brown-Kirk cerimetric m. (*for reducing sugars*) A titrimetric method using ceric sulfate for titration.

Hellige m. (*for hemoglobin*) A colorimetric method for determination of hemoglobin by comparing acid hematin (prepared by diluting blood 1 to 100 with hydrochloric acid) with revolving disk of 18 known glass standards.

Henriques-Sørensen m. for amino-acid nitrogen. If formaldehyde is added to solution of amino acids, reaction takes place with the formation of derivatives which are strongly acid in reaction due t the destruction of the basic properties of the amino groups. The carboxyl groups may then be titrated using phenolphthalein as an indicator. The acidity as shown by the titration is measure of the amino-acid nitrogen present.

Herter-Foster m. (*for indole*) T 10 ml. of unknown, 2 drops of 2% solution of beta-naphthoquinone sodium monosulfonate and 2 ml. of 10% NaOH are added, the mixture is allowed to stand for 15 minutes, then shaken with 2 ml. of chloroform. A red color indicates the presence of indole.

Hildebrand m. for hydrogen-ion concentration. An electrometric method for the determination of hydrogen-ion concentration.

Hittorf m. for ionic mobilities. The determination of the mass of the particles passing from one electrode chamber to the other in given time under the influence of an pplied electric field.

Hochberg-M lnick-Oser m. for ascorbic acid. Ascorbic acid is determined in the presence of other reducing substances by photometric measurement of the rate of decolorization of the dye, 2,6-dichlorophenol indophenol.

Höjer m. for vitamin C. A quantitative technic based on the histologic examination of the incisors of guinea pigs after test period of 14 days.

Holtze-Doyle m. (*for catalase*) A titrimetric method based on the oxidation of iodide to iodine, by oxygen liberated from hydrogen peroxide, and titration of iodine with thiosulfate.

Horowitz-Beadle m. for choline. Measurement of choline by the growth stimulation of mutant strain of *Neurospora crassa*, produced artificially by exposure to ultraviolet radiation. Methionine, which can replace choline for the microorganism, is removed by absorption of the extract on an ion-exchange silicate followed by elution with sodium chloride solution.

Hortega's silver m. (*for oligodendrocytes*) See under stain.

Hotchkiss m. (*for polysaccharides*) A histochemical method based on oxidation of hydroxyl groups in the polysaccharide to aldehydes and the coloring of the aldehydes with Feulgen reaction.

H ward's m. See under *artificial respiration*.

Howell m. (*for coagulation time*) Venous blood is put into test tube of 21 mm. diameter, coagulation time being complet when the clot is firm enough to permit inversion of the tube

Hulett nd Bonner m. A method for the preparation of standard HCl from constant boiling solution.

Humphrey m. (*for urea*) A histochemical method using dixanthydrol to stain a bright dark-green color against reddish or brown background.

Hunter and Givens' modification of the Krüger-Schmid m. The Krüger-Schmid process is combined with the microchemical colorimetric method for uric acid. The modification is recommended where the amount of uric acid present is minute.

hypobromite m. A method of estimating the quantity of urea in body fluids, based upon the fact that when urea is acted upon by sodium hypobromite it is decomposed into nitrogen, carbon dioxide, and water From the volume of nitrogen evolved the quantity of urea can be determined.

India ink m. A method of isolating and observing single bacterium.

investing m. The process of enveloping or covering wholly or in part an object such as denture, tooth, wax form, crown, orthodontic band, etc., with some heat-resisting investment compound before vulcanizing, soldering, or casting.

iodometric permanganate m. See Sive m.

isotope-dilution m. A procedure in which known quantity of an elemental isotope is introduced into system containing an unknown amount of that element after equilibration the concentration or specific activity of the isotope in the system is used to calculate the amount of element originally present. When the isotope is part of chemical compound, then the amount of that compound can be determined

Jackson m. (*for lipid*) A histochemical method, using acetic-carbol-Sudan III to stain those lipids (red) which are refractory to ordinary Sudan-staining methods.

Jephcott m. A method for the preparation of insulin from finely minced pancreas.

Kaiserling's m. A method of preparing museum specimens to preserve their color Ther are three steps ( ) Fix organs for one to 14 days in formalin 40 cc., water 2000 cc., potassium nitrate 30 Gm., and potassium acetate 60 Gm. (b) Restore optimum color by immersing in 80% ethyl alcohol for 10 to 60 minutes. (c) Keep permanently in glycerin 400 cc., 1% aqueous arsenious acid 200 cc., water 2000 cc., potassium acetate 250 Gm., thymol 2.5 Gm.

Karr's m. (*for urea*) Similar to Folin and Svedberg' method except that the ammonium carbonate is nesslerized directly in the presence of gum ghatti as protective colloid.

Katzman and Doisy m. A method for the preparation of chorionic gonadotrophin from human pregnancy urine.

Kirk-Bentley m. (*for iron*) A microtitrimetric method based on the reduction of iron by cadmium amalgam, the addition of excess ceric sulfate and the titration of the excess with ferrous ammonium sulfate.

Kjeldahl m. (*for total nitrogen*) A method to determine the amount of nitrogen in an organic compound. Concentrated sulfuric acid reacts with the material to produce ammonia which is distilled into an acid solution. The excess of acid is determined by titration with standard alkali solution.

Knott m. Ultraviolet irradiation of blood.

Koch-McMeekin's m. (*for nonprotein nitrogen*) The organic matter is digested with sulfuric acid and hydrogen peroxide and the resulting solution is nesslerized. M y also be used for total nitrogen of urine.

Köhler's m. of illumination. A method of microscopical illumination in which an image of the source is formed in the lower focal plane of the microscope condenser and the condenser in turn, forms an image of the lamp lens in the object field.

Kramer Tisdall m. (*for serum calcium*) (Clark-

Collip modification) Calcium is precipitated from serum as oxalate and titrated with potassium permanganate.

Kretschmer Hillman-Barr m. (*for iodine number*) See under *iodine*.

Krüger and Schmid's m. (*for determination of uric acid and purine bases*) The principle involved is the precipitation of both uric acid and the purine bases in combination with copper oxide and the subsequent decomposition of this precipitate by means of sodium sulfide. The uric acid is then precipitated by HCl and the purine bases are separated from the filtrate in the form of their copper or silver compounds. The nitrogen content of the precipitates is determined by the Kjeldahl method and the corresponding values for uric acid and purine bases calculated. See also Hunter and Givens modification of the Krüger-Schmid m.

Kumon m. for indican. A specific procedure based upon the color reaction between indican and ninhydrin.

Kwilecki's m. (*for albumin*) A solution of ferric chloride is added to urine before proceeding with Esbach method.

Laborde's m. See under *artificial respiration*.

Laidlaw m. (*for dopa oxidase*) An adaptation of Bloch method.

Larsen m. for allantoin in urine. Urine is treated with phosphotungstic acid to remove interfering substances. Basic lead acetate is then added to remove excess phosphotungstic acid and residual interfering substances. Excess lead is removed by sulfuric acid and excess acid neutralized by sodium hydroxide. The solution is then boiled with Folin ammoniacal reagent and acid molybdate reagent added to the cool solution. A colorimetric comparison is made against 1.0 mg. allantoin standard.

Laskowski m. (*for isolation of nucleic acids*) A method for isolation of nuclei of avian erythrocytes, based on hemolysis of cells by lysolecithin and isolation of nuclei by differential centrifugation.

Lazarow m. A method for isolation of lipoprotein and glycogen particles from liver cells, based on differential centrifugation. The resulting red precipitate, containing lipoprotein and glycogen, is treated with diastase to obtain pure lipoprotein.

Leake and Guy's m. (*for platelets*) Consists of diluting the blood in order to count the platelets in a solution composed of formalin 6 cc., sodium oxalate 1.6 Gm., crystal violet 0.01 Gm., and water 94 cc.

Lee-White m. A modification of Howell's method of measuring coagulation time of blood.

Leiboff and Kahn's m. (*for urea*) Urea in blood filtrate is converted to ammonia by acid hydrolysis under pressure and directly nesslerized.

Lepehne-Pickworth m. (*for demonstration of cerebral capillary distribution*) See benzidine and nitroprusside oxidase m. (for hemoglobin)

Leschke m. (*for urea*) A histochemical method based on treatment with mercuric nitrate followed by hydrogen sulfide to obtain black mercuric sulfide precipitate at the site of urea in the tissue.

Letonoff and Reinhold m. (*for inorganic sulfate in serum*) After deproteinization with uranium acetate the sulfate is precipitated, dissolved, and determined colorimetrically.

Levy m. (*for total nitrogen*) A microcolorimetric method based on the nesslerization of an acid digested sample.

Levy-Palmer m. (*for total nitrogen*) A colorimetric method based on the reaction of ammonia with excess hypobromite and measurement of the excess iodometrically.

Iff Insurance m. (*for protein*) Clarified urine is treated with sulfosalicylic acid and the turbidity is compared with artificial standards.

Lillie's azure-eosin m. See *Lillie's azure eosinate in buffered solutions* under *stain*.

Linderstrøm-Lang Duspiva m. (*for protease*). A microtitrimetric method based on exposure of peptides to protease and titration of the carboxyl groups of the proteolytic products with tetraethylammonium hydroxide.

Linderstrøm-Lang-Engel m. (*for amylase*). A titrimetric method based on the measurement of an increase in reducing sugar after the action of the enzyme on starch.

Linderstrøm-Lang-Glick m. (*for cholinesterase*). A Cartesian-diver method based upon the fact that when choline ester is broken down in bicarbonate buffer the acid produced causes equivalent liberation of carbon dioxide which is measured by the Warburg apparatus.

Linderstrøm-Lang-Holter m. (a) (*for proteases*) A titrimetric method based upon the addition of acetone indicator to the products and the titration of their amino groups with hydrochloric acid. (b) (*for reducing sugars*) A microtitrimetric method based on reduction of iodide to iodine and titration of the latter with thiosulfate.

Linderstrøm-Lang-Lanz m. (*for peptidase*). A dilatometric method using L-alanylglycine as the substrate for peptidase.

Linderstrøm-Lang m. (*for combined potassium and sodium*) A microtitrimetric method based on the conversion of potassium and sodium to chlorides by an ashing reagent, removal of other chlorides, and electrometric titration of the residual chloride with silver nitrate.

Linderstrøm-Lang-Palmer-Holter m. (*for chloride*) A method using the same principle as Cunningham-Kirk Brooks m.

Linderstrøm-Lang-Weil-Holter m. (*for arginase*) (a) *Urease m.* A titrimetric method based on the action of the enzyme on arginine to liberate urea, the action of urease on urea to release ammonia, and the measurement of ammonia. (b) *Acetone-alcohol m.* A method based on titration of ornithine and urea, formed on the breakdown of arginine by acetone-alcohol mixture.

Lindner-Kirk cerimetric m. (*for calcium*) A titrimetric method based on the precipitation of calcium as oxalate, treatment with excess ceric sulfate, and titration of the excess with ferrous ammonium sulfate.

Loef m. (*for alphanaphthol oxidase*) A histochemical method based on the effect of the enzyme on alphanaphthol dissolved in potassium hydroxide to give violet or black granules.

Looney and Dyer m. for potassium in blood. Potassium is precipitated from the protein-free, chloride-free serum filtrate as the insoluble potassium silver cobaltinitrite. The washed precipitate is decomposed by alkali to liberate the nitrite, which is then determined colorimetrically.

Lowry-Lopez Bessey m. (*for ascorbic acid*) A colorimetric method based on the conversion of ascorbic acid to dehydroascorbic acid which is treated with 2,4-dinitrophenylhydrazine to give an osazone; the osazone is treated with sulfuric acid to give a colored dehydration product.

Lowry-Lopez m. (*for inorganic phosphate*). A method using the same principle as the Fiske m. using ascorbic acid for reduction.

Lucas and Beveridge m. for cysteine. A procedure for preparing cysteine from human hair by means of cuprous oxide.

Lundsteen-Vermehren m. (*for inorganic phosphate and phosphatase*) A microcolorimetric

method based on the same principle as the Hawk m. using amidol for reduction.

Lyle-Curtman-Marshall m. A modification of the benzidine test for blood in which the benzidine reagent is prepared by a different procedure.

Macallum m. (a) A method for changing organic iron to free ferric form, using nitric or sulfuric acid in alcohol. (b) (*for potassium*) See Gersh-Macallum m.

McCrudden m. (*for calcium and magnesium*) Calcium is precipitated as calcium oxalate and is either ignited and weighed as CaO or determined volumetrically by titration with potassium permanganate. Magnesium ammonium phosphate is precipitated, ignited, and then weighed as pyrophosphate.

McCullagh's m. (*for iodine*) Iodine is converted to iodide, then oxidized to iodate which liberates iodine from an excess of added iodide. The iodine is then titrated with sodium thiosulfate.

McFarlane's m. (*for copper*) Sodium diethyldithiocarbamate is added to an extracted ashed blood and the blue color which develops is extracted with amyl alcohol and compared with a standard.

McJunkin m. (*for catalase*) A histochemical method based on the oxidation of benzidine by the oxygen liberated from hydrogen peroxide, to give a blue color which changes to brown.

MacKee-Herrmann-Baker-Sulzberger m. (*for sulfonamides*) A histochemical method based on the formation of a yellow to orange precipitate of p-dimethylaminobenzylidene derivative when sulfonamides react with p-dimethylaminobenzaldehyde.

McLean and Van Slyke's m. (*for chlorides*) The excess of silver nitrate which has been used to precipitate chlorides from oxalated plasma is titrated with potassium iodide and starch.

Malfatti formol titration m. A method based on the reaction that takes place when formalin solution is added to a solution containing ammonium salts. An acid reaction is produced in the mixture which is then titrated with standard alkali using phenolphthalein as an indicator. Amino acids give the same reaction so that the result of titration represents ammonia plus amino-acid nitrogen.

Mallory-Parker m. (*for lead and copper*) (a) *Hematoxylin m.* A method by which lead appears grayish blue and copper intense blue. (b) *Methylene blue m.* A method by which lead appears intense blue and copper pale blue.

Malloy-Evelyn m. for bilirubin in blood. Blood is treated with Ehrlich's reagent and the bilirubin reacts to form a colored compound, azorubin or azobilirubin. The quantity of azorubin formed is determined photometrically.

Marriott m. (*for alkali reserve; alveolar carbon dioxide tension*) By rebreathing air under certain definite conditions, a sample is obtained whose carbon dioxide tension is virtually that of venous blood. The collected alveolar air is allowed to pass rapidly through a standard sodium bicarbonate solution to which an indicator has been added. The reaction of the saturated solution will depend on the relative amount of the alkaline bicarbonate and the acid carbon dioxide present. This in turn will depend on the tension of carbon dioxide in the air with which the mixture has been saturated. High tensions of CO_2 change the reaction of the solution toward the acid side. Low tensions have the reverse effect; hence the reaction of such a solution is a measure of the tension of CO_2 in the air with which it has been saturated.

Marshall and Welker m. A procedure for the preparation of hemoglobin.

Marshall Hall's m. See under *artificial respiration*.

Mathews m. A procedure for distinguishing fermentable sugar (glucose) from nonfermentable reducing substances (lactose, etc.) by the use of yeast.

Maximow's hematoxylin-azure II-eosin m. (*for blood-forming organs*) See under *stain*.

Meduna's m. Convulsion therapy in dementia precox.

Meiklejohn-Cohen indican m. A photometric modification which is based upon calibration of the photometer with standard indican solutions.

Mendel-Bradley m. (*for zinc*) A histochemical method based on precipitation of zinc by nitroprusside and the treatment of the precipitate with sulfide to obtain a deep-purple color.

Menke m. (*for isolation of chloroplasts*) A method based on grinding leaves, suspending them in phosphate, and precipitating the chloroplasts by ammonium sulfate.

Menten-Junge-Green m. (*for alkaline phosphatase*) A histochemical method based on the liberation of betanaphthol from calcium betanaphthol phosphate and the reaction of betanaphthol with diazotized alphanaphthylamine to obtain a reddish-purple precipitate.

metatrophic m. A therapeutic method of modifying the nutrition by changes in the food, with a view of administering some drug, as suppression of sodium chloride in food of epileptics in order to reinforce the action of bromides.

m. for alkali reserve. See Van Slyke and Cullen m.

m. for ascorbic acid. See Farmer and Abt m.

m. for Bence-Jones protein. See Folin and Denis m. (b)

m. for bromide in blood. See Wuth m.

m. for capillary blood pressure. See Danzer and Hooker's m.

m. for carbon dioxide combining power. See Van Slyke and Cullen m. for alkali reserve. Also called *carbon dioxide capacity*.

m. for cholesterol. See Schoenheimer and Sperry m.

m. for copper. See McFarlane's m.

m. for creatinine. See Folin m. (d)

m. for digitalis. See cat m.

m. for epinephrine. See Folin, Cannon, and Denis m.

m. for hemoglobin. See acid hematin m.

m. for hippuric acid. See Griffith m.

m. for icterus index. See Meulengracht m.

m. for indican. See Askenstedt m.

m. for iodine. See McCullagh m.

m. for lactic acid. See Friedemann and Graeser's m.

m. for magnesium. See Denis' m.

m. for phosphatase. See Bodansky's m.

m. for phosphate. See Benedict and Theis m.

m. for pollen. See carbon tetrachloride m.

m. for potassium. See Breh and Gaebler m.

m. for prothrombin activity. See one-stage m. and two-stage m.

m. for serum amylase. See Somogyi's m.

m. for sodium. See Butler and Tuthill's m.

m. for sulfonamides. See Bratton and Marshall m.

m. for sulfur. See Letonoff and Reinhold's m. and Benedict m. (b)

m. for thiocyanates. See Barker's m.

m. for total acidity of urine. See Folin and Wu m. (d)

m. for urobilinogen. See Wallace and Diamond's m.

m. of least squares. The method of finding statistical constant or the equation of straight line or curve in such manner that the sum of the squares of the deviations about the mean, line, or curve is minimum.

methods for amino-acid nitrogen. See Folin's m. (b) and Frame, Russel, and Wilhelmi's m.

methods for ammonia. See Folin m. (c) and permutit m.

methods for bile pigment. See Meulengracht's m. and van den Bergh m.

methods for calcium. See Bell m. and Kramer Tisdall m.

methods for chlorides. See Whitehorn m. Van Slyke m., Austin and Van Slyke m., and McLean and Van Slyke m.

methods for classifying leukocytes. See Arneth's m., Schilling's m., Cooke-Ponder m., and Farley St. Clair and Reisinger m.

method for glucose. See Benedict m. (a) Folin and W m. (a) Hagedorn and Jensen m., Benedict's picrate m., and fermentation m.

methods for iron. See Wong's m., and Elvehjem and Kennedy's m.

method for nonprotein nitrogen. See Folin and W m. (b) and Koch-McMeekin m.

methods for phenols. See Theis and Benedict m and Folin and Denis' m. (a)

methods for protein-free blood filtrate. See Folin and W 's m. (a) Benedict and Newton m.

methods for proteins in urine. See Folin's m. ( ) and lif insurance m

method for serum proteins. See Greenberg' m., and Fishberg and Dohn m.

method for specific gravity See falling-drop m. and copper sulfate m.

methods for total nitrogen. See Kjeldahl m Folin-Farmer m and Koch-McMeekin m.

methods for urea. *See* Folin and Svedberg' m., Karr m., Myers m., Leiboff and Kahn m., Folin and Youngburg m and hypobromite m.

methods for uric acid. See Folin m. (a) Benedict m ( ) Benedict and Franke's m and Folin-Shaffer m

methylene blue m. See Mallory-Parker m. (b)

Mett m. (*for determination of peptic activity*) Small glass tubes, filled with coagulated egg albumin, ar introduced into the solution to be tested and kept for definite length of time in the incubator The protein column is digested at both ends of the t be t an extent depending on the amount of pepsin present.

Meulengracht's m. (*for bile pigment*) The yellow color of serum is compared with a standard potassium dichromate solution. Also called the icterus index

Michaelis indicator m. A method for colorimetric determination of hydrogen-ion concentration without the use of buffer solutions. The procedure is most simply carried out by using a single-color indicator

Milovidov m. (*for starch*) A staining method using toluidine blue, gentian violet, or methyl green, which give blue, violet, and green colors, respect vel

Mirsky-Pollister m. A procedure for the preparation of chromonucleoprotein from liver

Monaldi m. Drainage and continuous aspiration. See under Vincenzo *Monaldi.*

M ntgomery m. (*for hydrogen ion*) A capillary tube colorimetric method for determination of hydrogen ion concentration.

Morris's wet-film m. A technique for staining tissue removed *from* the brain either by craniotomy or with brain needle. Films of tissue are spread on a slide and fixed while still wet.

moving-boundary m. See moving-boundary *electrophoresis.*

Myers and Wardell m. (*for cholesterol*) The serum or plasma is dried on plaster of Paris and extracted with chloroform. The total cholesterol of the extract is determined colorimetrically by the *Liebermann-Burchard* reaction with acetic anhydride and sulfuric acid.

Myers m. (*for urea*) Urea is converted to ammonium carbonate with urease. The ammonia is aerated off and determined by nesslerization.

Najjar riboflavin m. The riboflavin is extracted with *acetic acid*-pyridine-butanol mixture after interfering urinary pigments are oxidized with permanganate. The concentration of riboflavin in the extract is measured fluorometrically

Neish m. (*for isolation of chloroplasts*) A method for isolation of chloroplasts from leaves, based on grinding and differential centrifugation.

Neumann m. for total phosphorus. The organic matter is destroyed by digestion with mixture of sulfuric and nitric acids or some other oxidizing agent. The phosphorus is then precipitated as the phosphomolybdate and determined gravimetrically or volumetrically

Newcomer m. for hemoglobin. Hemoglobin is converted to acid hematin with hydrochloric acid and then compared with yellow groundglass filter which approaches the spectroscopic properties of acid hematin, in balancing type of colorimeter

Newton m. for uric acid determination. Interfering material in the blood filtrate is removed by the acid silver chloride precipitation method. The uric acid remaining is determined colorimetrically by reaction at room temperature in the presence of cyanide with special arsenotungstate reagent.

Nielsen's m. See under *artificial respiration.*

Norberg titrimetric m. (*for potassium*) A microtitrimetric method based on the precipitation of potassium as chloroplatinate, the conversion of chloroplatinate to iodoplatinate, and the titration of the latter with thiosulfate.

Ochoa-Peters m. (*for thiamine*) A manometric method based on the stimulating effect of thiamine on decarboxylation of pyruvic acid by yeast and the measurement of carbon *dioxide* liberated by the Warburg pparatus.

Ogata and Ogata's silver m. (*for chromaffin cells*) See under *stain.*

Okamoto m. (*for metals*) A histochemical method based on development of reddish-violet precipitate by most metals upon their reaction with p-dimethylaminobenzylidene rhodanine

Okkels m. (*for gold*) A histochemical method using ultraviolet light to btain black gold granules.

one-stage m. (*for prothrombin activity*) A method for determination of plasma prothrombin activity by the addition of thromboplastin and calcium to decalcified plasma. The clotting time or prothrombin time is then used as an *index of* prothrombin concentration.

Ormsby's m. (*for urea*) A blood filtrate is heated with biacetyl monoxime in acid solution and yellow color develops. The color is deepened by oxidation with potassium persulfate and compared colorimetrically with standard urea solution similarly treated.

Orr Trueta m. Treatment of severe open wounds, especially in compound *fractures*, by packing with petroleum gauze after careful debridement and reduction, and applying plaster

cast, which is left on for 6 to 8 weeks; used most frequently in military surgery.

Oster-Mulinos m. A method for differentiation of aldehydes from nonaldehydes giving the Feulgen reaction; the purple color developed by Feulgen reaction can be eliminated by sodium hydroxide in both and can be restored by hydrochloric acid in aldehydes but not in nonaldehydes.

Oster Schlesinger m. (*for amine oxidase*) A histochemical method based on Feulgen reaction of the aldehyde formed as the product of action of the enzyme on tyramine.

Palmer m. for hemoglobin. The diluted blood is treated with carbon monoxide gas before the photometric reading is taken. This method is more accurate than the direct photometric method, since it is free from any error due to the presence of carbon monoxide hemoglobin in the blood as drawn.

Pap m. (*for reticulum*) A special staining method for reticulum fibers, using ammoniacal silver nitrate.

Parker's m. for fibrinogen. See Ashenstedt m.

Penfield's m. for glia. See *Penfield's method* under *stain*.

permutit m. (*for ammonia*) Urine is shaken with permutit ion-exchanger to remove the ammonia which is set free with alkali, followed by nesslerization and comparison with a standard.

Peters m. A procedure for determining urinary creatine under conditions whereby the diluted sample is treated by methods similar to those used for blood filtrates, thus permitting the determination of both blood and urine creatine in essentially the same manner.

Pohl m. (*for ultraviolet intensity*) A photochemical method in which the index is the time required for the ultraviolet energy to produce a blue color in a solution containing potassium iodide, sodium thiosulfate, and starch.

polar m. A method of applying electricity; the pole, the distinctive effect of which is wanted, is placed over some part to be treated, and the other pole over some indifferent part.

Pollack m. (*for calcium*) A histochemical method using sodium alizarin sulfonate to give a red precipitate.

Popper m. (*for lipids*) A histochemical method using phosphine 3R which gives neutral fats a silver-white fluorescence on a brown background.

Post-Laudermilk m. (*for cellulose*) A staining method for cellulose by applying iodine and lithium chloride to the fibers to obtain blue, yellow, or green color.

Pragma m. (*for delivery of the aftercoming head*) See under *maneuver*.

Price-Jones m. See Cecil *Price-Jones*.

Prochownick's m. See under *artificial respiration*.

prone pressure m. See *Schafer (prone pressure) m.* under *artificial respiration*.

Pryce slide-culture m. A method of preparing sputum, body fluid, or tissue for examination for *Mycobacterium tuberculosis*. A smear is made, air-dried, incubated, and stained for acid-fast bacilli.

pulp traction m. A means of finger extension limited to compound fracture of the phalanges, where the corresponding flexor surfaces of the fingers are wounded. A stainless steel wire is passed through the pulp of the distal phalanx, and then is attached to a banjo hand splint, using rubber bands for traction.

quartz-rod m. (*for illuminating living organs*) The use of a fused quartz rod to conduct light from an intense source to a living internal organ, to permit direct microscopic study in situ while maintaining experimental conditions which disturb as little as possible the structures and processes to be observed. The normal temperature of the illuminated living structures is maintained with a slowly flowing isotonic and isothermal wash solution.

Quick and Csonka m. (*for conjugated glucuronic acids*) The compound is extracted with ether, hydrolyzed with dilute acid, and finally determination of the liberated glucuronic acid is made by a copper reduction method.

Quick m. See one-stage m.

Ralph m. (*for hemoglobin*) A method for the detection of hemoglobin in tissues and erythrocytes by using benzidine and hydrogen peroxide to obtain a black color.

Ramón y Cajal's gold-sublimate m. See *Cajal's gold-sublimate m.* under *stain*.

Ramsay m. (*for iron*) A microtitrimetric method using titanous sulfate for titration.

Rapkine m. (*for sulfhydryl groups*) A histochemical method of treating tissue with zinc acetate, nitroprusside, ammonium sulfate, and ammonium hydroxide to obtain a red color.

Rasorian m. In phlebotomy, repeated bleeding.

Rehfuss m. (*for fractional gastric analysis*) See under M. E. *Rehfuss*.

Reinhold and Shiels m. (*for blood cholesterol*) The serum or plasma is dried on anhydrous sodium sulfate and extracted with chloroform. The total cholesterol of the extract is determined colorimetrically by the Liebermann-Burchard reaction with acetic anhydride and sulfuric acid. A modification of the Myers and Wardell method.

Riggs and Stadie m. (*for pepsin activity*) Enzyme activity is measured photometrically as the decrease in turbidity of a standardized homogenized suspension of coagulated egg white under specified conditions.

rocking m. See *Eve's m.* under *artificial respiration*.

Roe-Kahn m. (*for blood calcium*) Calcium is precipitated from the protein-free serum filtrate as tricalcium phosphate, which is then determined colorimetrically.

Roese-Gottlieb m. (*for analysis of milk fat*) The milk is made alkaline and extracted repeatedly with petroleum benzine and the filtered extract evaporated to dryness in a flask.

Rosenfield-Tuft m. A variation of the one-stage m. of Quick.

Roth's m. A method for the intravenous injection into a mouse using a tin mailing tube to hold the body while the tail protrudes from one end.

Roughton-Scholander m. Micromethod for determination of gases in capillary blood, using a glass syringe fused to a graduated capillary tube which has a cuplike expansion at its free end. With appropriate procedure and reagents, separate determinations can be made for O_2, CO_2, CO, and N_2. Also called *syringe-capillary m.*

rowing m. See under *artificial respiration*.

Russel m. (*for ammonia*) A colorimetric method based on the reaction of phenol and hypochlorite with ammonia in alkaline solution to give an intense blue product.

Sahli m. (*for hemoglobin*) An acid hematin method, in which the acid hematin solution is diluted in a special graduated tube by dropwise addition of water until it matches a glass standard.

Sahyun m. (*for amino acids*) A method based on the color developed by the reaction between amino acids and β-naphthoquinone-4-sulfonic acid in alkaline solution. Heating develops the color.

pulp traction m. A means of finger extension limited to compound fracture of the phalanges, where the corresponding flexor surfaces of the fingers are wounded. A stainless steel wire is passed through the pulp in the distal phalanx, and then is attached to a banjo hand splint, using rubber bands for traction.

quartz-rod m. (*for illuminating living organs*) The use of a fused quartz rod to conduct light from an intense source to a living internal organ, to permit direct microscopic study in situ while maintaining experimental conditions which disturb as little as possible the structures and processes to be observed. The normal temperature of the illuminated living structures is maintained with a slowly flowing isotonic and isothermal wash solution.

Quick and Cosnka m. (*for conjugated glucuronic acid*) The compound is extracted with ether, hydrolyzed with dilute acid, and finally determination of the liberated glucuronic acid is made by a copper reduction method.

Quick m. See one-stage m.

Ralph m. (*for hemoglobin*) A method for the detection of hemoglobin in tissues and erythrocytes by using benzidine and hydrogen peroxide to obtain a black color.

Ramón y Cajal's gold-sublimate m. See *Cajal's gold-sublimate m.* under *stain*.

Ramsay m. (*for iron*) A microtitrimetric method using titanous sulfate for titration.

Rapkine m. (*for sulfhydryl groups*) A histochemical method of treating tissue with zinc acetate, nitroprusside, ammonium sulfate, and ammonium hydroxide to obtain a red color.

Recorian m. In phlebotomy, repeated bleeding.

Rehfuss m. (*for fractional gastric analysis*) See under M. E. *Rehfuss*.

Reinhold and Shiels m. (*for blood cholesterol*) The serum or plasma is dried on anhydrous sodium sulfate and extracted with chloroform. The total cholesterol of the extract is determined colorimetrically by the Liebermann-Burchard reaction with acetic anhydride and sulfuric acid. A modification of the Myers and Wardell method.

Riggs and Stadie m. (*for pepsin activity*) Enzyme activity is measured photometrically as the decrease in turbidity of a standardized homogenized suspension of coagulated egg white under specified conditions.

rocking m. See *Eve's m.* under *artificial respiration*.

Roe-Kahn m. (*for blood calcium*) Calcium is precipitated from the protein-free serum filtrate as tricalcium phosphate, which is then determined colorimetrically.

Roese-Gottlieb m. (*for analysis of milk fat*) The milk is made alkaline and extracted repeatedly with petroleum benzine and the filtered extract evaporated to dryness in a flask.

Rosenfield-Tuft m. A variation of the one-stage m. of Quick.

Roth's m. A method for the intravenous injection into mice using a tin mailing tube to hold the body while the tail protrudes from one end.

Roughton-Scholander m. Micromethod for determination of gases in capillary blood, using a glass syringe fused to a graduated capillary tube which has a cuplike expansion at its free end. With appropriate procedure and reagents, separate determinations can be made for O_2, CO, CO_2, and N_2. Also called *syringe-capillary m.*

rowing m. See under *artificial respiration*.

Russel m. (*for ammonia*) A colorimetric method based on the reaction of phenol and hypochlorite with ammonia in alkaline solution to give an intense blue product.

Sahli m. (*for hemoglobin*) An acid hematin method, in which the acid hematin solution is diluted in a special graduated tube by dropwise addition of water until it matches a glass standard.

Sahyun m. (*for amino acids*) A method based on the color developed by the reaction between amino acids and β-naphthoquinone-4-sulfonic acid in alkaline solution. Heating develops the color

Sanford, Sheard, and Osterberg m. (*for hemoglobin*). Blood is diluted with 0.1 per cent sodium carbonate, and the resulting oxyhemoglobin is read in a special [illegible] colorimeter with green glass filter.

Satterthwaite' m. See under artificial respiration.

Schafer (prone pressure) m. See under artificial respiration.

Schales and Schales m. (*for blood chlorides*). The serum is titrated with standard mercuric nitrate solution at the proper acidity in the presence of diphenylcarbazone as indicator. Chloride present reacts with the added mercuric ion to form soluble, but undissociated, mercuric chloride. When an excess of mercuric ion has been added, the indicator turns purple.

Schill[illegible] m. A method of classifying neutrophils. See Victor [illegible].

Schmidt Nielsen m. (1) (*for lipids*). A microtitrimetric method based on saponification of lipids by alcoholic alkali in the presence of toluol, liberation of free fatty acids by excess mineral acid, [illegible] the fatty acids in the toluol phase, and titration of the toluol phase. (2) (*for* [illegible]) See [illegible].

Schmorl' alizarin SX m. for calcium. See under stains.

Schneider m. (*for* [illegible]). A histochemical method based on the precipitation of dark-brown [illegible] ferrocyanide.

Schoenheimer and Sperry' m. (*for cholesterol*). The cholesterol is precipitated from an acetone-alcohol extract with digitonin. The digitonide undergoes the Liebermann-Burchard reaction and the color is compared with a standard.

Schroeder's m. See under artificial respiration.

Schultze m. (*for* [illegible]). A staining method which consists of subjecting half of the specimen to the [illegible] and the other half to iodine followed by sulfuric acid. The latter test gives brown color with cutin and blue color with cellulose.

Schultze m. See under artificial respiration.

Schultz's sterol reaction m. for cholesterol. See under stains.

sedimentation m. A method of concentrating helminth eggs by washing stools one or more times and discarding the supernatant fluid. Water or fluids of greater density may be used so long as the specific gravity of the wash is less than that of the eggs.

Semenoff m. (*for succinic dehydrogenase*). A histochemical method based on the reduction of [illegible] by the enzyme.

Sendroy m. (*for chloride*). A colorimetric method based on the conversion of [illegible] by silver iodate and reaction of the liberated iodate with potassium iodide to give free iodine which is titrated by thiosulfate. (2) (*for calcium*). A [illegible] method based on the precipitation of calcium as oxalate, treatment with excess ceric sulfate, and reaction of the excess with potassium iodide to liberate [illegible]-free iodine.

Seri m. (*for urease*). A histochemical method based on decomposition of urea on exposure to urease with [illegible] of carbon [illegible] which is converted [illegible] latter to brown or black precipitate [illegible].

Serra m. (*for* [illegible]). A method using the same principle as Th[illegible] m.

Serra-Queiroz Lopes m. (*for inorganic phosphate*). A histochemical method based on the [illegible] using benzidine for reduction.

Shinowara, Jones, and Reinhart m. A procedure for phosphorus determination, using stannous chloride as reducing agent, which requires as little as 0.05 ml. of serum.

Shock and Hastings m. A procedure for determining the hydrogen-ion concentration of blood by use of a special pipet which not only permits the determination of cell volume as well as plasma pH, but also makes possible the transfer of the diluted plasma to the manometric apparatus for CO_2 determination.

Shohl and King m. A procedure for the colorimetric determination of hydrogen-ion concentration of gastric contents.

Sicke m. A hemoglobinometric method using reduced hemoglobin as pigment and [illegible] special comparator.

silver impregnation methods. See under stain.

Silvester' m. See under artificial respiration.

Siwe m. (a) (*for calcium*). Titrimetric methods based on the precipitation of calcium by oxalate. **Iodometric permanganate m.** Calcium oxalate precipitate is dissolved in acid, an excess of permanganate is added followed by iodide, and the iodine liberated by excess permanganate is titrated with thiosulfate. **Acidimetric m.** Calcium oxalate is converted to calcium carbonate by heating, and an excess of hydrochloric is added and titrated with sodium hydroxide. (b) (*for inorganic phosphate*). A colorimetric method based on conversion of phosphate to phosphomolybdic acid and the reduction of the latter by aminonaphtholsulfonic acid.

Snell-Strong m. (*for riboflavin*). Riboflavin is determined by measurement of the growth stimulation of *Lactobacillus casei*. The acid produced by the microorganism is determined by titration with sodium hydroxide.

Sobel-Kaye m. (*for calcium*). A method using the same principle as the Siwe m. (a) determining the excess acid iodometrically.

Somogyi' m. (*for serum amylase*). *First method*: Amylase of serum acts upon starch to form reducing sugar which is determined by Somogyi copper-iodometric procedure. *Second method* (amyloclastic method): The amyloclastic effect of amylase is measured by means of color reaction with iodine.

static tadpole m. A method used for assay of the thyroid-stimulating hormone.

Stehle gasometric m. (*for urea*). A determination based on the liberation of nitrogen by treatment with hypobromite.

Steiger m. (*for vitamin A and carotene*). A histochemical method using sulfuric acid to produce dark-blue color.

Stimson' m. A method for reducing dislocated shoulder or hip joint by continuous traction with a 10-pound weight. The patient is placed on canvas sling, and the dislocated extremity passed through a hole in the sling, hanging free of the floor for about 5 to 6 minutes, after which reduction occurs without pain. See Plate [illegible].

Stockholm and Koch m. (*for total sulfur*). A procedure for complete oxidation of biological material, in which strong hydrogen peroxide and nitric acid are used.

Stoddard and Drury m. (*for fatty acids in blood*). The blood is extracted with alcohol-ether, the extract saponified, the fatty acids separated, filtered, washed, dissolved in alcohol, and titrated with phenol [illegible] as indicator.

Stoll' m. A technic for estimating the number of ova in stool specimens in which the stool fecal [illegible] are disintegrated with N/10 sodium hydroxide.

Summerson-Barker m. (*for lactic acid in blood*)

The glucose and other interfering material of the protein-free blood filtrate are removed by treatment with copper sulfate and calcium hydroxide. An aliquot of the resulting solution is heated with concentrated sulfuric acid to convert lactic acid to aldehyde, which is then determined colorimetrically by reaction with *p*-hydroxydiphenyl in the presence of copper ions.

Sumner m. (*for glucose in urine*) Urine is heated with dinitrosalicylic acid reagent which is reduced by the sugar and the resultant color is compared with standards.

Sumner Somers m. A modification of method for the preparation of glucose-1-phosphate.

Sunderman m. A method for calculating the approximate concentration of total base in the serum by measuring the specific conductance and the specific gravity or protein of the serum.

surface fixation m. (*for brucellosis*) A loopful of mixture of antigen, stained black with hematoxylin, and serum is placed on filter paper; the edge of the paper is dipped in isotonic NaCl solution, or droplets of the solution may be placed over the antigen. When the serum contains antibodies, the antigen is fixed to the paper and not washed away by the NaCl.

syringe-capillary m. Roughton-Scholander m.

Tallqvist m. (*for hemoglobin*) A crude, semiquantitative method for the determination of hemoglobin content in which the color of spot of blood is matched to lithographed standards.

Terry's m. A method for the rapid preparation of tissue sections by using slice 0.5 to 1 mm. thick and covering the exposed surface with modified polychrome methylene blue stain.

Theis and Benedict m. (*for blood phenols*) Diazotized *p*-nitroaniline reacts with phenols to produce an orange color which is compared with standard.

thick film m. A method of making blood smear in order to increase the chances of finding parasites in the blood.

thin film m. A method of making blood smears for microscopical examination.

Thomas-Lavollay m. (*for iron*) A histochemical method using hydroxyquinoline and ammonium hydroxide. Iron appears as greenish-black precipitate.

Thomas m. (*for arginine and arginine-containing proteins*) A histochemical method based on development of an orange-red color when arginine reacts with alphanaphthol and hypobromite or hypochlorite in alkaline medium.

Thunberg and Ahlgren m. (*for study of tissue oxidations*) Finely divided tissue is suspended in solution containing methylene blue, phosphate solution to regulate the acidity and the substance whose action it is desired to determine. After subjection to partial vacuum, the tube is placed in water bath, and the time required for the methylene blue to be decolorized is determined. This is measure of the rate of oxidation in the mixture.

Tirmann-Schmelzer m. for ionic iron. See under stain.

transparent-chamber m. Insertion of chamber with transparent top and bottom into suitable part of an animal, e.g., rat back or rabbit ear to permit microscopic study of enclosed cells or tissues.

transtympanic m. A surgical approach, working backward on the outer wall of the attic, using the external acoustic meatus, to the regions of the middle ear and mastoid process; useful in performing fenestration and radical mastoidectomy. It eliminates blind groping for landmarks through sclerotic mastoid cortex.

turbidity m. for standardizing vaccines. A method of estimating the number of bacteria in suspension by diluting them to correspond with the density of standard nephelometer tube.

Turchini-Castel Kien m. A method for the differentiation of ribonucleic from desoxyribonucleic acid based on hydrolysis by hydrochloric acid and staining by phenyl- (or methyl-) trihydroxyfluorone. Ribonucleic acid gives a yellow-pink, and desoxyribonucleic acid gives blue-violet color.

two-stage m. (*for prothrombin activity*) A method of determination of plasma prothrombin activity by the addition of thromboplastin and calcium to decalcified and defibrinated plasma (*first stage*) and the estimation of the thrombin which evolves by the addition of fibrinogen (*second stage*).

van den Bergh's m. (*for bile pigment*) (Gibson and Goodrich modification) Plasma or serum is diazotized with Ehrlich reagent and the red color developed is compared with standard.

Van Slyke and Cullen's m. (*for alkali reserve*) Fresh oxalated plasma is brought into equilibrium with expired air so that it combines with as much carbon dioxide as it is able to hold under normal tension. The plasma is then acidified and the carbon dioxide given off is measured.

Van Slyke and Kirk m. A nitrous acid procedure for determining the α-amino acid nitrogen content of urine.

Van Slyke and Neill m. A manometric method of analysis of gases in blood and other solutions.

Van Slyke and Palmer m. (*for organic acids in urine*) Carbonates and phosphates are precipitated and the filtrate titrated with acid from pH 8 to pH 2.7. In diabetes this titration approximates closely the amount of β-hydroxybutyric and acetoacetic acids in the urine.

Van Slyke, MacFadyen, and Hamilton ninhydrin m. (*for amino-acid nitrogen*) The urine sample, previously freed from urea by treatment with urease, is heated at 100° in closed reaction vessel with ninhydrin. Amino acids present yield carbon dioxide quantitatively under these conditions.

Van Slyke's m. (*for acetone bodies in urine*) The method is based on combination of Shaffer's oxidation of β-hydroxybutyric acid to acetone and Denigès' precipitation of acetone as a basic mercuric sulfate compound. Glucose and certain other interfering substances are removed by precipitation with copper sulfate and calcium hydroxide. Preservatives other than toluene or copper sulfate should not be used.

Van Slyke's m. (*for chlorides*) Proteins are oxidized and chlorides precipitated with silver nitrate. Excess silver is titrated with thiocyanate.

Van Slyke titration m. (*for plasma bicarbonate*) Plasma is treated with an excess of standard acid which is titrated back with standard alkali to the original pH of the plasma as drawn.

Van Wagtendonk Simonsen-Hackett m. (*for glycogen*) A colorimetric method using Lugol's solution.

Volhard and Löhlein m. (*for pepsin activity*) The pepsin is added to casein solution. The unaltered casein is salted out. The filtrate from this contains the digestion products of casein which can be estimated by titration.

Volhard-Arnold m. (*for chlorides in urine*) The urine is acidified with nitric acid and the chlorides are precipitated with measured excess of standard silver nitrate solution. The silver chloride formed is filtered off and in the filtrate the excess silver nitrate is titrated back with

standard ammonium thiocyanate solution. Ferric ammonium sulfat is used as an indicator A red color due to the formation of ferric thiocyanat indicates that an excess of thiocyanat is present and that the end-point has been reached.

Volhard-Harvey m. (*for chloride in urine*) Differs from the Volhard-Arnold method in that the excess of silver nitrat is titrated directly without filt ring and hence in the presence of the silver chloride. The procedure is thus more rapid but the end-point is more difficult to determine.

Voltorra m. (*for phenols in urine*) The urine is distilled from slightly alkaline solution to btain the free volatile phenols in the distillate. After acidification, second distillate is obtained; this represents the conjugated volatile phenols present. Ether extraction of the remaining fluid separates the aromati hydroxy-acids from esidual phenols. Each fraction, after proper preparation, is treated with the phosphotungstic-phosphomolybdic acid color reagent of Folin and Ciocalteu and the esulting color compared with that btained from standard phenol solution.

Von Kóssa's $AgNO_3$ m. (*for demonstration of calcification*) See under stain.

W elstein-Zak m. (*for bismuth*) A histochemical method based on the oxidation of bismuth sulfide, the form occurring in tissues, to sulfate by hydrogen peroxide and conversion of the sulfat to orange-red brucine iodide salt.

Walker m. (*for inorganic phosphate*) A capillary colorimetric-tube method based on the same principle as the Briggs method, using stannous chloride for reduction.

Walker-Reisinger m. A capillary tube microcolorimetric adaptation of the Sumner dinitrosalicylic acid method of determining the amount of reducing substances in blood or urine.

Wallace and Diamond's m. (*for urobilinogen*) A series of dilutions of urine is carried to the point where the red color resulting from the reaction between urobilinogen and Ehrli h's aldehyde reagent is just discernible.

Waterhouse m. (*for copper*) A microhistochemical method using sodium diethyl dithiocarbamate t btain yellow product with copper

Watson m. A method for the determination of urobilin and urobilinogen in urine and feces.

Webster Hill, and Eidinow m. (*for ultraviolet radiation*) The fading of the blue color in an acetone-methylene blue solution is measured by comparison with known standards.

Weigl's m. A method for the production of vaccine against b man typhus made from triturated intestine of lice infected by rectal injection of rickettsia.

Weil m. (*for trypsi*) A titrimetric method based on th employment of casein as the substrat and enterokinase as the activator the addition of formol, and titration with tetramethylammonium hydroxide.

W ll-Russel m. (*for phosphatase*) A capillary colorimetric method using the same reactions as the B we method

Wei bach m. (*for sodi m in blood*) After deproteinization, the sodium in the filtrate is precipit ted in alcoholic medium as the triple salt, uranyl zin sodi m acetate, which is washed, dissol ed in water and titrated with standard sodium hydroxide

Welker and Tracy m. Aluminum hydroxid cream, when added to urine will remove albumin so that nitrogen partition can be made.

Westerbrink m. (*for thiamine*) An adaptation of the Ochoa-Peters method to the Cartesian diver

Westergren m. A method to determine the blood sedimentation rate in which normal for men is 0 to 15 and for women is 0 to 20 mm. in one hour

Westfall-Findley-Richardson m. (*for chloride*). A capillary colorimetric method based on the reaction of chloride with silver chromate to liber te the yellow chromate ion. Addition of diphenylcarbazide gives an intense purple-red color

Whitehorn's m. (*for blood chlorides*) Chlorides from blood filtrate are precipitated with silver nitrate and the excess silver is titrated with standard thiocyanate solution.

Wiggers nd Dean m. A method for the optical registration of heart sounds using a stethoscope bell attached by a rubber tube to sound recorder consisting of capsule protected from outside vibrations by housing having conical vent to equalize pressures.

Wigglesworth m. (*for chloride*) A microtitrimetric method for chloride, based on the addition of excess silver nitrate and back-titration with thiocyanate.

Wijs m. (*for iodine number*) See *Hanus m.* under *iodine number* under *iodine*.

Wilbur and Addis m. A spectroscopic procedure for the determination of urobilinogen.

Willis salt flotation m. A method for concentration of helminth eggs in which feces and concentrated sodium chloride solution are mixed, allowing the eggs to gravitate to the top of the solution where they are collected and examined

Willstätter Waldschmidt-Leitz, and Hesse m. (*for amylolytic activity*) The reducing sugar formed is determined by hypoiodite titration.

Wintrobe-Landsberg m. See under M. M. Wintrobe.

Wintrobe m. (*for hemoglobin*) An acid hematin method, using a special hemometer with yellow glass standard.

Wohlgemuth m. A method for the quantitative determination of mylase in feces.

Wolff m. A procedure for the protein concentration of the gastric contents.

Wong's m. (*for iron*) Blood is treated with sulfuric acid and potassium persulfate. The proteins are removed with tungstic acid and the iron in the filtrat is determined colorimetrically

xanthydrol m. (*for urea*) A histochemical method based on fixation of tissue in xanthydrol in acetic acid to precipitat dixanthylurea which is birefringent under th polarizing microscope.

Y snda m. (*for iodine number*). See *Fritsch–Hahman-Burr m.* under *iodine number* under *iodine*

Youngburg nd Folin m. (*for urea*) The diluted urine is treated with an alcoholic urease solution to con ert urea into ammonia, and the mmoni present is then determined by direct nesslerization.

Zenda m. (*for chitin*) A method based on the treatment of tissue with fresh iodine in potassium iodide followed by zinc chloride to give violet color

Ziehl-Neelsen m. (*for Mycobacterium tuberculosis*) See *carbolfuchsin solution* under *stain*.

Zinsser's agar slant tissue culture m. A method for the production of vaccine in which high concentrations of Rickettsiae are obtained.

meth ln. 3-Methyl-5-phenyl-5-ethylhydantoin an antiepileptic substance especially useful in grand mal seizures. See mesantoin.

meth mu ni a. See methylopelia.

me tho i um. A generic name for homologous series of compounds containing the ion $(CH_3)_3N(CH_2)_nN(CH_3)_3$. The compounds in which n is 5 (pentamethonium) 6 (hexamethonium) or

10 (decamethonium) possess therapeutically useful actions.

meth-or'phi nan hy"dro-bro mide. A former generic name for the substance now designated racemorphan hydrobromide.

meth-ox'a mine hy"dro- hlo ride. $(CH_3O)_2C_6H_3CHOHCH(CH_3)NH_2 \cdot HCl$ β-hydroxy-β-(2,5-dimethoxyphenyl)isopropylamine hydrochloride, occurring as colorless or white crystals or white crystalline powder freely soluble in water. It possesses prompt, potent pressor action useful in maintaining blood pressure during anesthesia, treating circulatory collapse (hypotension) caused by myocardial infarction, and counteracting hypotensive effect of hexamethonium compounds. See *vasoxyl hydrochloride*.

meth-ox'y-chlor Bis-(p-methoxyphenyl)trichloroethane, an effective insecticide of low toxicity for human beings and animals.

meth-ox"y-phen'a mine hy"dro-chlo'ride. $CH_3O.C_6H_4CH_2CH(CH_3).NH.CH_3.HCl$; β-(o-methoxyphenyl)isopropylmethylamine hydrochloride; crystalline white powder freely soluble in water a sympathomimetic compound whose predominant actions are bronchodilatation and inhibition of smooth muscle its pressor activity is minimal. See *orthoxine hydrochloride*.

meth'yl. The univalent radical CH_3. —**methyl'ic**, *adj*

meth"yl -ac'y lene. Allylene.

meth"yl al' meth'yl al. $CH_2(OCH_3)_2$ Dimethoxymethane; water-soluble liquid; formerly used as hypnotic and antispasmodic.

meth'yl al'co-hol. CH_3OH. A colorless, narcotic liquid, obtained in the destructive distillation of wood and by synthesis. Syn., *carbinol*, *methanol*, *wood alcohol*, *wood spirit*.

meth yl al'de hyde. Formaldehyde.

meth"yl am'ine (meth il-am een, -in, -a-meen') CH_3NH_2 A colorless gas formed during putrefaction of fish and in cultures of the Vibrio comma (comma bacillus)

meth"yl am phet a mine hy"d hlo ide Methamphetamine hydrochloride

meth"yl an thran'i late. $NH_2C_6H_4COOCH_3$ methyl 2-aminobenzoate; the odoriferous constituent of number of essential oils.

meth"yl-ar-son'ic ac'id. $CH_3AsO(OH)_2$ crystalline substance, freely soluble in water the disodium salt of which has been employed therapeutically in the same manner as sodium cacodylate sometimes misspelled *methylarsinic acid*. Syn., *methanearsonic acid*.

meth yl ate. A compound formed from methyl alcohol by the substitution of the hydrogen of the hydroxyl by base. —**methylated**, *adj*

meth"yl-a'tion. The process of substituting methyl group for hydrogen atom.

meth yl at're-pine bro mide (meth il t ro peen, pin) See *atropine methylbromide*.

meth"yl at'ro pine ni'trate. See *atropine methylnitrate*.

meth"yl ben' ene. Toluene.

meth"yl benz" the ni-um hlo ride. $C_{28}H_{44}ClNO_2.H_2O$ benzyldimethyl{2-[2-(p-1 1,3,3-tetramethylbutylcresoxy)ethoxy]ethyl} ammonium chloride forming colorless crystals, readily sol ble in water quaternary ammonium salt with surface-active and disinfecta t properties used especially for bacteriostasis of urea-splitting organisms in diaper dermatitis. See *diaparene chloride*

meth"yl ben"zo yl ec go-nine. Cocaine.

meth yl blue. Sodium triphenyl-pararosaniline trisulfonate as antiseptic used as local pplication in diphtheria. Not to be confused with methylene blue.

meth'yl bro'mide. CH_3Br; bromomethane; colorless gas at ordinary temperature, liquefying to colorless liquid, slightly soluble in water freely soluble in alcohol. A high concentration in air causes local irritation and lung injury. It is used in organic synthesis, also as refrigerant, and fire-extinguishing agent.

meth'yl bu tyr ate. $CH_3(CH_2)_2COOCH_3$; colorless liquid, sparingly soluble in water miscible with alcohol used in the formulation of fruit essences.

meth"yl car'bi nol. Alcohol, 2.

methyl cellosolve. Trade-marked name for ethylene glycol monomethyl ether; $CH_3O.CH_2.CH_2OH$ colorless liquid, soluble in water used as an industrial solvent.

meth"yl cel'lu lose. A methyl ether of cellulose, occurring as grayish-white fibrous powder swelling in water to produce clear to opalescent, viscous, colloidal solution used in the treatment of chronic constipation because it imparts bulk and blandness to the stool in pharmacy used to produce stable dispersions.

meth'yl hlo ride. CH_3Cl. A liquid local anesthetic when pplied as spray it volatilizes rapidly and produces localized freezing.

meth"yl chlo ro form. CH_3CCl_3. A volatile liquid, obtained by chlorinating ethyl chloride. It is anesthetic.

meth"yl-cho-lan'threne (meth il ko lan'threen) $C_{21}H_{16}$ 3-methylcholanthrene or 20-methylcholanthrene pentacyclic hydrocarbon obtained by degradation of desoxycholic acid and certain cholesterol derivatives potent carcinogen when applied locally

meth'yl cy'a nide. Acetonitrile.

meth'yl-ene [G methy, wine hyle, wood, material]. The bivalent hydrocarbon radical, $=CH_2$

meth'yl-ene blue (*coeruleum methylenum*) $C_{16}H_{18}ClN_3S.3H_2O$ A aniline dye belonging to the class of thiazines; it occurs as dark green crystals or as crystalline powder having bronzelike luster. Solutions have deep blue color The medicinal grade of the dye is employed, by intravenous injection, in the treatment of hydrocyanic acid or carbon monoxide poisoning it has also been used in variety of systemic infections. It is an ingredient of many biologic staining solutions. Syn., *methylthionine chloride*.

meth'yl ene chlo ride. CH_2Cl_2; a colorless, volatile liquid; ts vapor is not flammable. It has been used as an anesthetic for minor operations, but principally used as solvent. Also called *dichloromethane*, *methylene bichloride*.

meth yl-ene di"tryl-sal"i-cyl'ic ac'id. See *mesarpris*.

meth'yl-ene vi' let (C.C.) A weakly basic thiazine dye an oxidation product of methylene blue used as blood stain.

meth"yl-en'o-phil (meth il en o-fil, -ee no fil) Capable of being stained with methylene blue methylenophilous.

meth"yl ep'si [methy, lepsis, seizing]. Morbid desire for intoxicating drink. Syn., *methomania*, *methylmania*.

meth yl 'ther $(CH_3)_2O$ Dimethyl oxide gas having anesthetic properties.

meth yl-eth"yl a-ce'tic ac'id. See under *valeric acid*.

meth yl for'mate. $HCOOCH_3$, colorless, flammable liquid, soluble in water used as f migant and larvicide for fruit, cereals, and tobacco

meth"yl gly-ox'al. CH_3COCHO The ald hyde of pyruvic acid, capable of transformation into glycogen by the liver

meth yl green (C C.) An aniline dye used in staining tissues.

meth yl hex ane-a mine CH CH CH(CH₃) CH CH(CH₃) NH 1,3-dimethylamylamine colorless to pale-yellow liquid, very slightly soluble in water volatile sympathomimetic amine used as an inhalant for its local vasoconstrictor action on nasal mucosa. See *forthane.*

1-meth″yl hex′yl a mine. The sympathomimetic agent known by the generic name *tuaminoheptane* and the trade-marked name *tuamine.* Syn., *2-aminoheptane.*

meth yl hy′drate. Methyl alcohol.

meth yl hy dride. CH Methane or marsh gas.

meth″yl hy drox″y ben zo′ic ac′id (meth il-high-drock see ben-zo′ick) Cresotic acid.

meth yl i′ dide CH_3I. A colorless liquid, insoluble in water Has been used as vesicant. Syn., *iodomethane*

meth′yl lac′tate. $CH_3.CH(OH)$ COOCH color less, transparent liquid, decomposed by water miscible with most organic liquids used as solvent for cellulose derivatives.

meth yl ma ni a. See *methylepsia.*

meth yl mer-cap′tan. CH_3SH Methyl hydrosulfide gas, found normally in the intestines through protein decomposition. It has highly disagreeable odor

meth yl meth ac ryl ate See *acrylics*

meth″yl meth ne. See *ethane*

meth″yl mor phine (meth″il mor feen. fin, -mor feen′) See *codeine.*

2 meth yl 1 4, n ph tho qui n n M adione.

m th yl ni tin m′id [(CH C H N) CONH₂]OH N¹-methylnicotinamide th principal excretory product of nicotinamide, eliminated in the rine

meth yl or nge (C C.) Dimethylaminoazobenzene sodium sulfonate, an indicator used in vol metric analyses.

meth yl par′ ben (*methylparabenum*) C_6H OH. COOCH Methyl parahydroxybenzoate, white powder solubl in 400 parts of water an antiseptic used to preserve medicinal preparations See *nipagin M solbrol*

meth″yl par fy′nol. 3-Methyl-1-pentyn-3-ol hypn tic supplied under th trade-m rk *dormison.*

meth yl par″a hy drox y ben zo-at (par uh-high drock see-ben zo-ate) Methylparaben

meth yl phe no bar′bi tal. Mephobarbital.

meth yl phe no-bar′bi tone. British Pharmacopoeia name for *mephobarbital*

meth yl phe nol. Cresol

meth yl psy h trine. $C_{29}H_{38}N_2O_4$. O-methylpsychotrine an alkaloid occurri g in ipecac

meth yl pu′rine (meth il pure een, in) Any compound in which one or more methyl radicals have been introduced into the purine eleus. Among the more important compounds of this type are caffeine heobromine and theophylline

meth yl red. Dimethylaminoazobenzene-o-carboxylic acid an indicator used in volumetric analysis.

meth yl ros an′i line hl rid (meth il ro zan i leen, lin) (*methylrosanilinae chloridum*) Hexameth lpararosaniline hloride usually containing also pentameth lpararosaniline chloride and tetrameth lpararosaniline chloride A dark green powder or glistening pieces ith met llic luster sol ble 30 t 40 part of water t form purple solution Used an anthelm tic and bactericide being et against Gram-po tive organisms. Also sed in he treatment of burn and as biologic stai Also called *gentian violet, methyl violet, crystal violet.*

meth′yl sal′i cyl″ate (sal′i-sil ate, sa lis′ i-late, sal″i-sil′ate) (*methylis salicylas*) $C_6H_4(OH)$-COOCH Synthetic wintergreen oil an oily liquid of peculiar odor identical with the essential constituent of wintergreen oil; used internally in rheumatism and externally as counterirritant. Dose, 0.3–1.2 cc. (5–20 min.)

meth″yl ste ar′ic ac′id. 10-Methylstearic acid, more commonly known as *tuberculostearic acid.*

meth yl-sul′fo-nal See *sulfonethylmethane.*

meth yl tes tos′ter-one. 17-Methyl testosterone. $C_{20}H_{30}O$ An orally effective male sex hormone. See *metandren, neo-hombreol-M oreton-M*

meth yl the bro mine. Caffeine.

meth″yl thi′o-nine chlo ride (meth il thigh o-neen, -nin) Methylene blue.

meth″yl thi″ u′ra cil. $C_5H_6N_2OS$ 6-methyl-2-thiouracil or 4-hydroxy-2-mercapto-6-methylpyrimidine white crystalline powder slightly soluble in water having the action and uses of propylthiouracil, and useful with patients unable to tolerate or refractory to other antithyroid drugs.

meth′yl vi′ let. M thylrosaniline chloride.

meth yl i let 2B (C.C.) A mixture consisting mainly of pentamethylpararosaniline chloride with some hexamethylpararosaniline chloride and tetramethylpararosaniline chloride It is germicidal. See *gentian violet, methylrosaniline chloride.*

meth yl yel′low See *dimethyl aminoazobenzene.*

meth yne Methenyl.

meth y-sis [G *methysis*, drunkenness] Intoxication.

meticortelone. Trade-mark for *prednisolone*

meticorten. Trade-mark for *prednisone.*

met″my-o glo′bin. The oxidized form of myoglobin, analogous to methemoglobin

met″o-don ti′a-sis [G *meta*, after *odontiasis*, teething] 1 The second dentition. 2 Loosely any bnormality of teething.

me-toe ci-ous (mi tee shus, -see-us) See *heteroecious.*

metol. Trade-mark for *methyl-para-aminophenol.*

me top a gus [G *metōpon*, forehead *pagos*, that which is fixed]. Twins united t the foreheads. Syn., *craniopagus frontalis.*

met″o-pan tral′gi a [*metōpon*; G *antron*, cave; *algos*, pain] Pain or neuralgia of the frontal sinus Obs

me top′ic, me to pi [*metōpon*] 1 Relating to the forehead frontal. 2 Pertaining to or describing cranium having mediofrontal suture

me-to pi-on [G forehead]. The craniometric point where the line th t connects th highest points of the frontal eminences crosses the sagittal plane.

me to pi um [*metōpion*] Metopon.

me to pi um. Expressed almond oil.

me-to pon, met′ pon [G forehead]. *I anatomy,* old term for forehead.

m t′ pon hy″dro- hlo ride. $C_{18}H_{21}NO_3.HCl$ Methyl dihydromorphinone hydrochloride A derivative of morphine having at least double its analgesic effectiveness and about the same duration of action It is nearly devoid of emetic action. Tolerance appears t develop more slowly and to disappear more quickly and physical dependence builds p more slowly than with morphine Therapeutic analgesic doses produce little or no respiratory depression and much less mental dullness than does morphine and it is relatively highly effective by oral administration It is employed in treating the chronic suffering of cancer Dose, 6–9 mg. (¹⁄₁₀–¹⁄₇ gr)

met pryl. $CH_3CH_2CH_2OCH_3$ n-Propyl methyl ether colorless liquid, isomeric with, but less volatile than, ethyl ether It is under investigation to determine its usefulness as general anesthetic.

met·ox'e·nous. See *heteroecious*.

me·tral'gi·a. Metrodynia.

met"ra·pec'tic (met'ruh-peck'tick, mee'truh-) [G. *mētra*, womb; *apechein*, to keep away from]. Referring to a disease which is transmitted through the mother but which she herself escapes (such as hemophilia).

met"ra·to·ni'a (met'ruh-to-nee'uh, mee'truh-) [*mētra*; G. *atonia*, slackness]. Atony of the uterus.

met"ra·tro'phi·a [*mētra*; G. *atrophia*, want of food]. Atrophy of the uterus.

me·trauxe' (meh-trawk'see) [*mētra*; G. *auxē*, increase]. Hypertrophy or enlargement of the uterus.

metrazol. A trade-mark for pentamethylenetetrazol (pentylenetetrazol) $CH_2(CH_2)_4C.N.N.N.N$

white, crystalline powder, soluble in water. In doses of 0.1 Gm. (1½ gr.) the compound is a circulatory and respiratory stimulant; in doses of 0.4–0.5 Gm. (6–7½ gr.) given intravenously it produces convulsions and has been used in the shock treatment of mental depressions and in the catatonic form of schizophrenia. See *cardiazol*, *leptazol*.

me'tre. See *meter*.

me'tree (mee'treck) [F., *optics*, a unit of curvature: the curvature of a surface whose radius of curvature is one meter; contraction of meter-curvature.

met"rec·ta'si·a (met'reck-tay'zhuh, -see-uh, mee'treck-) [*mētra*; G. *ektasis*, extension]. Enlargement of the nonpregnant uterus.

met"rec·to'pi·a (met'reck-to'pee-uh, mee'treck-), **me·trec'to·py** [*mētra*; G. *ektopos*, away from place]. Displacement of the uterus.

me·tre'mi·a [*mētra*; G. *haima*, blood]. Congestion of the uterus.

met"reu·ryn'ter (met'roo-rin'tur, mee'troo-) [*mētra*; G. *eurynein*, to make broad]. An inflatable bag for dilating the cervical canal of the uterus.

met·reu'ry·sis (met·roor'i-sis) [*mētra*; G. *eurys*, broad]. Dilatation of the uterine cervix with the metreurynter.

me'tri·a [*mētra*]. 1. Any uterine affection. 2. Any inflammatory condition during the puerperium.

met'ric sys'tem. The most widely used system of weights and measures in the world today, originated in France about 1790, now the officially adopted system in most countries, and nearly universally employed for scientific purposes. It is a decimal system based primarily on the meter as the fundamental *unit of length*. The meter is approximately one ten-millionth of the distance from the equator to the North Pole. It is defined as the distance between two scratches on a platinum-iridium bar designated as the international prototype meter deposited at the International Bureau of Weights and Measures at Sèvres, near Paris. It is equivalent to exactly 39.37 U.S. inches, the inch being so defined by statute. The basic *unit of mass*, and *of weight*, is the gram, defined as 1/1000 of the international prototype kilogram, also deposited at the International Bureau of Weights and Measures. The main *unit of capacity* is the liter, which is the volume of a kilogram of water at the temperature of maximum density under normal atmospheric pressure, and which very closely approximates 1000 cubic centimeters (1/1000 of a cubic meter). Multiples of the principal units are designated by the prefixes deca- meaning 10, hecto- meaning 100, and kilo- meaning 1000. For fractional units the corresponding prefixes are deci- 1/10, centi- 1/100 and milli- 1/1000. The following equivalents of U.S. units in metric units are close enough for most purposes:

1 inch = 2.54 centimeters
1 ounce (avoirdupois) = 28.35 grams
1 pound (avoirdupois) = 453.6 grams
1 fluidounce = 29.57 milliliters (or cubic centimeters)
1 quart = 0.9463 liter
1 minim = 0.0617 milliliter (or cubic centimeter)

Also see Tables of Weights and Measures in the Appendix.

met"ri·o·ce·phal'ic [G. *metrios*, moderate; *kephalē*, head]. Applied to a skull in which the arch of the vertex is moderate in height, neither acrocephalic (pointed) nor platycephalic.

me·tri'tis [G. *mētra*, womb; -*itis*, inflammation]. Inflammation of the uterus, involving the endometrium and myometrium.

puerperal m. Inflammation of the uterus following childbirth.

me'tro- (mee'tro-, met'ro-), **metr-** [*mētra*]. A combining form denoting *relation to the uterus*.

me'tro·cele [*mētra*; G. *kēlē*, hernia]. Hernia of the uterus.

me'tro·clyst [*mētra*; G. *klyzein*, to wash]. An instrument for giving uterine douches.

me"tro·col"po·cele (mee"tro·kol'po·seel, met'ro-) [*mētra*; G. *kolpos*, vagina; *kēlē*, hernia]. Protrusion or prolapse of the uterus into the vagina, with prolapse of the anterior vaginal wall.

me"tro·cys·to'sis (mee"tro·sis·to'sis, met'ro-) [*mētra*; G. *kystis*, bladder; -*ōsis*, condition]. 1. The formation of uterine cysts. 2. The condition giving rise to uterine cysts.

me'tro·cyte [*mētra*; G. *kytos*, cell]. A large, uninuclear spheroidal cell whose protoplasm contains hemoglobin, and which is supposed to be the source of the red cells of the blood. *Rare*. Syn., *megaloblast*, *polychromatic erythroblast*.

me"tro·dy"na·mom'e·ter [*mētra*; G. *dynamis*, power; *metron*, measure]. An instrument for measuring uterine contractions.

me"tro·dyn'i·a [*mētra*; G. *odynē*, pain]. Pain in the uterus; metralgia.

me"tro·ec·ta'si·a (mee'tro·eck·tay'zhuh, -see·uh, met'ro-). Metrectasia.

me"tro·en"do·me·tri'tis [*mētra*; G. *endon*, within; *mētra*; -*itis*, inflammation]. Combined inflammation of the uterus and endometrium. *Rare*.

met·rog'ra·phy [*mētra*; G. *graphein*, to write]. Roentgenography of the uterus through the injection of contrast medium into the uterine cavity; uterography.

me·trol'o·gy [G. *metron*, measure; *logos*, word]. The science that deals with methods of measurement and units of measure.

me"tro·lym·phan·gi'tis (mee'tro·lim·fan·jy'tis, met'ro-) [G. *mētra*, womb; L. *lympha*, water; G. *angeion*, vessel; -*itis*, inflammation]. Inflammation of the lymphatic vessels of the uterus; uterine lymphangitis.

me"tro·ma·la'ci·a (mee'tro·ma·lay'shee·uh, -see·uh, met'ro-) [*mētra*; G. *malakia*, softness]. Softening of the tissues of the uterus.

met'ro·nome. An instrument for indicating exact time intervals, usually by means of a pendulum and an audible clicking device.

me"tro·pa·ral'y·sis [*mētra*; G. *paralysis*, paralysis]. Uterine paralysis, usually that which may occur immediately following childbirth.

me"tro·path'i·a hem"or·rha'gi·ca. Abnormal uterine bleeding, now generally considered to be of endocrine origin.

me·trop'a·thy [*mētra*; G. *pathos*, disease]. Any uterine disease. —**metropath'ic**, *adj.*

me"tro·per"i·to·ni'tis [*mētra*; G. *peritonaion*, membrane which contains the lower viscera; -*itis*, inflammation]. 1. Combined inflammation of uterus and peritoneum. 2. Peritonitis secondary

to inflammation of the uterus. 3. Inflammation of the peritoneum about the uterus.

me tro pex'i me'tro pex y. See *hysteropexy*.

me"tro phle bi'tis [*mētra*; G. *phleps*, blood vessel; *-itis*]. Inflammation of the veins of the uterus.

me"trop-to sis [*mētra*; G. *ptōsis*, falling]. Uterine prolapse.

me tror ha gi a (mee tro-ray'juh, -jee-uh, met ro-) [*mētra*; G. *rhēgnynai*, to burst forth]. Uterine hemorrhage independent of the menstrual period. Also called *intermenstrual flow*, *polymenorrhea*.

me"tror-rhe a, **me"tror-rhea** [*mētra*; G. *rhoia*, flow]. Any pathologic discharge from the uterus.

me tror rhex'is [*mētra*; G. *rhēxis*, breaking]. Rupture of the uterus.

me"tro sal"pin gi'tis [*mētra*; G. *salpinx*, tube; *-itis*, inflammation]. Inflammation of the uterus and oviducts.

me tro sal"pin gog ra phy (mee tro-sal"ping gog'ruh fee, met"ro-) [*metra*; *salpinx*; G. *graphein*, to write]. Radiography of uterus and oviducts after injecting an iodized oil contrast medium into the cervical canal under pressure. Same as hysterosalpingography and uterosalpingography.

me'tro scope [*mētra*; G. *skopein*, to examine]. An instrument for examining the uterus.

me"tro-stax'is [*mētra*; G. *staxis*, dripping]. Slight but persistent uterine hemorrhage.

me"tro ste-no sis [*mētra*; G. *stenōsis*, a being straitened]. Abnormal contraction of the cavity of the uterus.

me'tro-tome (mee tro tohm, met'ro-tohm) [*mētra*; G. *tomos*, cutting]. An instrument for incising the uterine neck.

me tr t' my. See *hysterotomy*.

me-try"per ci ne sis (mi try"pur-si nee sis, mee try-) [*mētra*; G. *hyper*, over; *kinēsis*, motion]. Excessive uterine contraction.

me-try"per-e mi a. See *metremia*.

me try"per-es-the si a (mi try pur-es-thee'zhuh, -zee-uh, mee try-) [*mētra*; *hyper*; G. *aisthēsis*, perception]. Hyperesthesia of the uterus.

me-try per tro phi [*mētra*; *hyper*; G. *trophē*, nourishment]. Hypertrophy of the uterus.

Mett method for determination of peptic activity. See under *method*.

metubine iodide. Trade-marked name for *dimethyltubocurarine iodide*.

metycaine hydrochloride. Trade-marked name for the local anesthetic substance piperocaine hydrochloride.

Meulengracht diet. See under *diet*.

Meulengracht method. See under *method*.

mev Abbreviation for 1 million electron volts.

Mex'i can scam mo ny. See *ipomea*.

Meyer, Adolf (1866–1950) American psychiatrist and neurologist who developed the concept of *psychobiology* and introduced the term in the United States (1915). This approach to psychiatry as a biological and social science has left a deep imprint upon American psychiatry. He also described that portion of the optic radiation which curves around the inferior horn of the lateral ventricle subjacent to the temporal cortex and ends in the calcarine fissure, called *Meyer's loop*.

Meyer, Georg Hermann von [*German anatomist*, 1815–92]. Described an aggregation of glands opening on the surface of the posterior part of the tongue, called *Meyer's glands* or *organ*. A line extended from the axis of the big toe, passing through the center of the heel in the normal foot is known as *Meyer's line*.

Meyer-Overton theory. See under *theory*.

Meyerhof, Otto (1884–1951) German biochemist who studied the relationship between chemical reactions and energetic transformations in living tissues, mainly in muscle. With A. V. Hill, he was named Nobel laureate in medicine and physiology (1922). See Meyerhof *cycle*.

Meyerhof scheme. See Meyerhof *cycle*.

Meynert, Theodor Hermann [*German neurologist and psychiatrist in Austria*, 1833–92]. Described the fasciculus retroflexus, also called *Meynert's bundle* or *fasciculus*. See also Meynert's *commissures*, solitary *cell* of Meynert.

Meynet, Paul Claude Hyacinthe [*French physician*, 1831–92]. Described nodular growths sometimes found attached to tendon sheaths and joint capsules in rheumatic conditions, called *Meynet's nodosities*.

mez-cal (mes-kahl, mez kahl'). See *mescal*.

mez cal'ine. See *mescaline*.

me-ze re-on. See *mezereum*.

me-ze're-um [NL., from Ar. *māzaryūn*]. The dried bark of *Daphne mezereum* and other species of *Daphne*, of the Thymelaeaceae. It contains a glycoside, daphnin, and an acrid resin. Locally applied, mezereum is an irritant and vesicant, and has been used to stimulate indolent ulcers. Internally it has been employed in syphilis, scrofula, chronic rheumatism, and various skin diseases.

mez-quite (mess-keet, mess-kee'tay). See *mesquite*.

Mg Chemical symbol for magnesium.

mg., mg. Milligram, milligrams.

mg %, mg. %. Milligrams per cent.

mgh, mgh. Milligram-hour: the radium dosage obtained by the application of one milligram of radium element for one hour.

mho, mho. The unit of electric conductance; the reciprocal of the ohm.

mi a sma. See *relapsing fever*.

Mibelli, Vittorio [*Italian dermatologist*, 1860–1910]. Described angiokeratoma and porokeratosis, each of which is also called *Mibelli's disease*.

mi'ca [L.]. 1. A crumb. 2. A silicate mineral occurring in the form of thin, shining, transparent scales.

mi-ca ce ous (migh kay shus, -shee us) [*mica*]. Resembling mica; composed of crumbs, friable.

mi celle (mi sell'), **mi cel'la** (mi sell'uh, migh sell'uh) [dim. from *mica*]. 1. One of the fundamental submicroscopic structural units of protoplasm. 2. Originally a highly hydrated and charged colloidal aggregate, now extended to include also any unit of structure composed of an aggregate or oriented arrangement of molecules, as in cellulose and rubber.

Michaelis, Gustav Adolf [*German obstetrician*, 1798–1848]. Made an important study of pelvic deformities. A diamond-shaped area formed over the sacrum by the sacrospinalis and gluteus maximus muscles is known as *Michaelis' rhomboid*.

Michaelis, Leonor [*American physical and physiological chemist*, 1875–1949]. With Menten, evolved a theory of enzymatic behavior. In the *Michaelis-Menten theory* it is assumed that an enzymatic reaction proceeds by way of an intermediate compound of the enzyme and its substrate.

Michaelis indicator method. See under *method*.

Michailow test. See under *test*.

Michel clip. See skin *clip*.

Michell syndrome. Nocturnal hemoglobinuria. Also called *Marchiafava-Micheli syndrome*.

mi"cra-cous'tic (migh"kruh koo'stick) [G. *mikros*, small; *akoustikos*, of hearing]. Pertaining to or adapted to the hearing of very faint sounds.

mi"cra-cous tic. An instrument adapted to the audition of very faint sounds.

mi"cren-ceph a lo [*mikros*; G. *enkephalos*, brain]. 1. An abnormally small brain. 2. Obsolete term for the cerebellum.

mi″cren-ceph′a-lous [*mikros*; *enkephalos*]. Having an abnormally small brain.

mi″cren-ceph′a-ly [*mikros*; *enkephalos*]. The condition of having an abnormally small brain.

mi′cro-, micr- [*mikros*]. 1. A combining form meaning *small* or *petty*, or *one-millionth*. 2. A combining form denoting *microscopic*. 3. *In botany*, combining form signifying *very small* in specified feature. 4. *In chemistry*, combining form signifying *of* or *pertaining to very small amounts of material*. 5. *In medicine*, combining form signifying *abnormally small*.

mi″cro-ab-scess. An abscess which is seen only microscopically.

Munro′ m. One frequently occurring in, or directly below the stratum corneum of the epidermis and containing chiefly degenerating polymorphonuclear leukocytes and epithelial cells, found in seborrheic dermatitis, psoriasis, and other skin lesions.

Pautrier′s m. One occurring in the epidermis, primarily containing lymphocytic and histiocytic cells. It is pathognomonic of mycosis fungoides. Syn., *Darier′* abscess.

mi″cro-a″er-o-phil′ic. A term applied to microorganisms which require free oxygen for their growth, but which thrive best when the oxygen is less in amount than that in the atmosphere.

mi″cro-a-nal′y-sis. See microchemical analysis.

mi″cro-a-nat′o-mist. See histologist. *Obs.*

mi″cro-au′di-phone [*mikros*; L. *audire*, to hear; G. *phōnē*, sound]. An instrument for rendering very slight sounds audible.

Mi″cro-bac-te′ri-um [*mikros*; G. *baktērion*, dim. of *baktron*, staff]. A genus of small non-spore-forming bacteria commonly found in milk. It is not killed readily during pasteurization of milk. It is harmless and has no relation to the *Microbacterium multiforme psittacosis* of Levinthal.

Mi″cro-bac-te′ri-um mul″ti-for′me psit″ta-co′sis. A term formerly proposed for the pleomorphic elementary bodies of psittacosis virus considered as the causative organism of psittacosis.

mi′crobe [*mikros*; G. *bios*, life]. A living organism of very small size; microorganism; applied to bacteria, especially those of pathogenic nature. Also see *dissociation*, 4. —**micro′bial, micro′bian, micro′bic,** *adj.*

blue-pus m. *Pseudomonas aeruginosa.*

mi-cro′bi-cide (migh-kro′bi-sid) [*mikros*; *bios*; L. *caedere*, to kill]. Destructive to microbes.

mi-cro′bi-cide. An agent that destroys microbes. Syn., *germicide*. —**microbici′dal,** *adj.*

mi″cro-bi-o-ert′ness. Failure to support microbial growth because of absence of necessary nutrients. *Obs.* —**microbioinert,** *adj.*

mi″cro-bi-ol′o-gist (migh″kro-bye-ol′-jist) [*mikros*; *bios*; G. *logos*, word]. An expert in microbiology.

mi″cro-bi-ol′o-gy [*mikros*; *bios*; *logos*]. The science of the nature, life, and actions of microorganisms. —**microbiolog′ic,** *adj.*

mi″cro-bi″o-pho′bi-a (migh kro-bye″o-fo′bee-uh, migh″kro-bee-o-, migh-kro-bee-o-). See *microphobia*.

mi″cro-bi-ot′ic (migh kro-bye-ot′ick) [*mikros*; G. *biōtikos*, of life]. Any antibacterial substance produced by molds, bacteria, or other organisms; an antibiotic or antibacterial.

mi′cro-bism. Infection with microbes.

latent m. The presence in the body of inactive organisms awaiting favorable condition to become active.

mi′cro-blast [*mikros*; G. *blastos*, germ]. 1. An immature blood cell. 2. A small, nucleated, red blood cell.

mi″cro-bleph′a-ron, mi″cro-ble-pha′ri-a (migh″kro-ble-fay′ree-uh), **mi″cro-bleph′a-rism** [*mikros*; G. *blepharon*, eyelid]. Abnormal smallness of the eyelids.

mi″cro-bra′chi-a (migh kro-bray′kee-uh) [*mikros*; L. *brachium*, arm]. Abnormally (congenital) small arms.

mi″cro-brach″y-ce-pha′li-a (-brack-i-sef-ay′lee-uh, -bray″ki-) [*mikros*; G. *brachys*, short; *kephalē*, head]. Brachycephalia combined with microcephaly.

mi″cro-bu-ret′ [*mikros*; F. *burette*, cruet]. An apparatus for delivering or measuring small quantities of liquids or gases.

mi″cro-cal′o-rie, mi″cro-cal′o-ry [*mikros*; L. *calor*, heat]. A small calorie; the quantity of heat necessary to raise the temperature of 1 Gm. of water from 15° to 16° C. Also see *calorie*.

mi″cro-car′di-a [*mikros*; G. *kardia*, heart]. Congenital smallness of the heart.

mi″cro-car′di-us [*mikros*; *kardia*]. An individual with an abnormally small heart.

mi″cro-cen′trum [*mikros*; G. *kentron*, point]. The centrosome or central apparatus constituting the lesser center of cell activity in contrast to the nucleus.

mi″cro-ceph′a-lus [*mikros*; G. *kephalē*, head]. An individual with an unusually small head.

mi″cro-ceph′a-ly [*mikros*; *kephalē*]. A congenital hypoplasia of the cerebrum with thick skull and early closure of the fontanels, resulting in small head. —**microcephal′ic, microceph′alous,** *adj.*

mi″cro-chei′li-a (migh″kro-kigh′lee-uh) [*mikros*; G. *cheilos*, lip]. Abnormal smallness of the lips.

mi″cro-chem′is-try [*mikros*; G. *chymos*, juice]. 1. The study of chemical reactions, using small quantities of materials, frequently less than 1 mg., and often requiring special small apparatus and microscopical observation. 2. The chemistry of individual cells and minute organisms. —**microchemical,** *adj.*

mi″cro-chi′ri-a (migh″kro-kigh′ree-uh) [*mikros*; G. *cheir*, hand]. Smallness of the hand to an unnatural degree.

microcidin. A brand of betanaphthol sodium.

Mi″cro-coc-ca′ce-ae (migh kro-cock-ay′see-ee) [*mikros*; G. *kokkos*, berry]. A family of bacteria containing the genera *Micrococcus*, *Gaffkya*, *Sarcina*, and *Staphylococcus*.

mi″cro-coc′cin. An antibiotic substance derived from species of *Micrococcus* resembling *Micrococcus varians*, active in vitro against variety of bacteria.

Mi″cro-coc′cus [*mikros*; *kokkos*]. A genus of bacteria of the family Micrococcaceae.

M. albus. *M. pyogenes* var. *albus*.

M. ascoformans. The causative organism of botryomycosis in horses.

M. aureus. *M. pyogenes* var. *aureus*.

M. catarrhalis. Bacteria found in the secretions of patients afflicted with the common cold, but not supposed to be the causative agent.

M. citreus. A common laboratory contaminant; formerly called *Staphylococcus citreus*.

M. gazogenes. Synonym for *Veillonella gazogenes*.

M. gonorrhoeae. Synonym for *Neisseria gonorrhoeae*.

M. intracellularis meningitidis. Synonym for *Neisseria meningitidis*.

M. lanceolatus. Synonym for *Diplococcus pneumoniae*.

M. melitensis. Synonym for *Brucella melitensis*.

M. meningitidis. Synonym for *Neisseria meningitidis*.

M. parvulus. Synonym for *Veillonella parvula*.

M. pneumoniae. Synonym for *Diplococcus pneumoniae.*

M. pyogenes. Pathogenic Gram-positive cocci, having tendency to form grapelike clusters, often the cause of boils, abscesses, and other pathogenic lesions. *M. pyogenes* var *albus* (formerly called *Staphylococcus albus*) is an organism whose colony is white on nutrient agar usually considered of low pathogenicity. *M. pyogenes* var *aureus* (formerly called *Staphylococcus aureus*) is an organism whose colony is golden or orange-yellow on nutrient agar; this species has th highest pathogenicity.

M. tetragenus. A species of parasitic cocci frequently found on the mucous membranes of the upper respiratory tract. They occur typically in tetrads or groups of four and are of low grade virulence. Syn., *Gaffkya tetragena.* See Table of the Most Common Microorganisms Pathogenic to Man in the Appendix.

mi″cro·co′lon [*mikros*; G. *kolon*, colon]. An abnormally small colon.

mi″cro·co·nid′i·um (pl. *microconidia*) [*mikros*; G. *konis*, dust]. I botany small and single-celled conidium.

mi″cro·co·ri′a. Miosis.

mi″cro·cor′ne· [*mikros*; L. *corneus*, horny]. Abnormal smallness of the cornea.

mi″cro·cos′mic salt. Sodium ammonium phosphate.

mi″cro·cou′lomb (migh kro koo′lom, koo lom′). The one-millionth part of coulomb.

mi″cro·cou·tie′ (migh″kro-koo-teek). Synonym of *microscutis.*

mi″cro·crys′tal·line [*mikros*; G. *krystallos*, rock crystal]. Composed of crystals of microscopic size.

mi″cro·cu·rie [*mikros*; *Curie*]. The amount of radioactive substance which undergoes 3.7×10^4 disintegrations per second equivalent to one-millionth of curie. Abbreviated *μc.*

mi″cro·cyst [*mikros*; G. *kystis*, bladder]. A cyst of small size, visible only microscopically.

mi″cro·cy′tase. An enzyme in leukocytes capable of digesting microorganisms.

mi′cro·cyte [*mikros*; G. *kytos*, cell]. An erythrocyte having either diameter or mean corpuscular volume (MCV) both more than two standard deviations below the mean normal, determined by the same method on the blood of healthy persons of the patient age and sex group. —**microcyt′ic,** *adj.*

mi″cro·cy·the′mi·a. A blood condition characterized by abnormally small erythrocytes.

mi″cro·cy·to′sis (migh kro sigh-to′sis) [*mikros*, *kytos*; G. *-osis*, condition]. A condition of the blood, characterized by preponderance of microcytes, as observed microscopically or determined by measurement of cell volume.

mi″cro·dac·tyl′i·a, mi″cro·dac′ty·ly [*mikros*; G. *daktylos*, finger]. Abnormal smallness of one or more fingers or toes. —**microdac′tylous,** *adj.*

mi″cro·dent′ism. See *microdontia.*

mi″cro·de·ter″mi·na′tion [*mikros*; L. *determinare*, t enclose within boundaries]. The identification of minute amounts of substance.

mi″cro·dis·sec′tion [*mikros*; L. *dissecare*, to cut in pieces]. Dissection with the aid of microscope.

mi′cro·dont [*mikros*; G. *odous*, tooth]. Having abnormally small teeth.

mi″cro·don′ti·a [*mikros*; *odous*]. The condition of having one or more abnormally small teeth; also called *microdontism*. Syn. *microdentism*.

mi″cro·dont′ism [*mikros*; *odous*]. Microdontia.

mi″cro·drep″a·no·cyt′ic dis·ease. A rare hereditary anemia resulting from the presence of both thalassemia and sickle-cell traits, characterized by marked hypochromia, microcythemia, sicklemia, target cells, and marked anisocytosis and poikilocytosis. The clinical signs and symptoms, when present, are those of sickle-cell anemia. The sickled, hypochromic microcytes are called *microdrepanocytes*. Also called *sickle-cell-thalassemia disease*.

mi″cro·e·lec″tro·pho·ret′ic [*mikros*; G. *elektron*, amber; *phoresis*, from *pherein*, to bear]. Pertaining to electrophoresis of minute quantities of solutions.

mi″cro·e·lec″tro·pho·ret′ic cells. Both flat and cylindrical cells, the flat cell containing layer of colloidal sol 0.6 mm. in depth, and the cylindrical cell consisting of capillary tube through which colloidal particles pass under the influence of an electric field.

mi″cro·e·ryth′ro·cyte (-eh-rith′ro-sight, -err ith-ro-). See *microcyte.*

mi″cro·far′ad. The one-millionth part of farad.

mi″cro·fi·lar′i·a (migh″kro·fi·lay′ree·uh) (pl. *microfilariae*) [*mikros*; L. *filum*, thread]. The embryonic or prelarval forms of filarial worms; slender motile forms, 150–300 *μ* in length, found in the blood stream and tissues. On ingestion by the proper blood-sucking insects the microfilariae pass through developmental stages in the body of the host and become infective larvae.

sheathed microfilariae. Microfilariae encased in delicate membrane which usually protrudes beyond the ends of the parasite. The membrane is thought to be the remains of the egg shell. When the membrane or shell breaks, an unsheathed microfilaria results.

mi″cro·flu″o·ro·met′ric scan·ner. A device for the differential detection of cancer cells based on the principle that cancer cell absorb more basic fluorescent dye than normal cells. Cancer cells fluoresce more under long-wave ultraviolet light, and the amount of light emitted can be measured by microphotometer.

mi″cro·frac′ture [*mikros*; L. *fractura*, fracture, from *frangere*, to break]. One of several minute multiple fractures in bone.

mi″cro·gam′ete (migh″kro-gam eet, -ga meet′) [*mikros*; G. *gamos*, marriage]. A male reproductive cell in certain Protozoa, corresponding to the sperm cell in Metazoa.

mi″cro·ga·me′to·cyte [*mikros*; *gamos*; G. *kytos*, cell]. The cell which produces the microgametes in Protozoa. See Plate 28.

mi·crog′a·my (migh krog uh-mee) [*mikros*; *gamos*]. Fusion of male and female reproductive cells in certain Protozoa and Algae.

mi″cro·gas′tri·a. Abnormal smallness of the stomach.

mi″cro·gen′e·sis [*mikros*; G. *genesis*, production]. Abnormally small development of part.

mi″cro·ge′ri·a [*mikros*; G. *gerion*, chin]. Abnormal smallness of the chin.

mi″cro·gen″i·tal′ism [*mikros*; L. *genitalis*, genital]. Having extremely undersized genital organs. See *hypogenitalism.*

mi·crog′li·a (migh-krog′lee-uh) [*mikros*; G. *glia*, glue]. Small neuroglia cells of the central nervous system, having long processes and exhibiting ameboid and phagocytic activity under pathologic conditions. Probably mesodermal in origin.

mi″cro·glos′si·a [*mikros*; G. *glossa*, tongue]. Abnormal smallness of the tongue.

mi″cro·gna′thi·a (migh″kro-nay′thee-uh, -nath ee uh, migh″krog-) [*mikros*; G. *gnathos*, jaw]. Abnormal smallness of the jaws, especially of the lower jaw. —**microg′nathous, micrognath′ic,** *adj.*

mi″cro·go·ni·o·scope [*mikros*; G. *gonia*, angle

skopein, to examine]. An apparatus for measuring extremely small angles, as in ophthalmology.

mi′cro-gram [*mikros*; G. *gramma*, scruple]. One one-thousandth of a milligram. Symbol, μg. Sometimes called *gamma*, a designation which should be abandoned.

mi′cro-graph [*mikros*; G. *graphein*, to write]. 1. A pantographic device for enabling one to draw sketches on a very small scale. 2. An instrument that magnifies the vibrations of a diaphragm and records them on a moving photographic film.

mi-crog′ra-phy (migh-krog′ruh-fee) [*mikros*; *graphein*]. 1. A description of bodies studied under the microscope. 2. Very minute writing.

mi″cro-gy′ri-a (migh″kro-jy′ree-uh, -jirr′ee-uh) [*mikros*; G. *gyros*, circle]. Abnormal smallness of the convolutions of the brain.

mi′cro-hm [*mikros*; after G. S. Ohm]. One one-millionth of an ohm.

mi″cro-in-cin″er-a′tion [*mikros*; L. *in*, in; *cinis*, ashes]. Reduction of microscopic sections to ash on a quartz slide for microscopic study of the amounts and distribution of inorganic components of tissues and cells.

mi″cro-in-jec′tion [*mikros*; L. *injectio*, from *inicere*, to throw into]. The injection of solutions into cells by means of a micropipet.

mi″cro-len′ti-a [*mikros*; L. *lens*, lentil]. Having an abnormally small crystalline lens.

mi″cro-leu′ko-blast (migh″kro-lew′ko-blast) [*mikros*; G. *leukos*, white; *blastos*, germ]. A small leukoblast.

mi′cro-li″ter. A millionth of a liter or a thousandth of a milliliter.

mi′cro-lith [*mikros*; G. *lithos*, stone]. A microscopic calculus.

mi″cro-li-thi′a-sis [*mikros*; *lithos*; NL. *-iasis*, condition]. The formation of very minute calculi.

m. alveolaris pulmonum. A rare form of pulmonary calcification of uncertain cause in which, at autopsy, a great many minute, spherical, concentrically calcified bodies (calcospherites or microliths) together usually with osseous nodules of larger size are found; first described by Ludwig Puhr (1933).

mi″cro-ma′ni-a [*mikros*; G. *mania*, madness]. A delusional state in which the patient believes himself diminutive in size and mentally inferior.

mi″cro-ma-nip″u-la′tive tech-nique′. 1. A procedure or technique designed to investigate living or preserved biological material on the microscopic level by means of microdissection, microinjection, and other manual maneuvers. 2. Any technique demanding small, careful, and delicate manipulation, usually under a microscope.

mi″cro-ma-nip′u-la″tor [*mikros*; L. *manipulus*, handful]. A device for moving exceedingly fine instruments, under the magnification of a microscope, for dissection of cells or for other operations involving minute objects.

mi″cro-mas′ti-a [*mikros*; G. *mastos*, breast]. Abnormal smallness of the breasts. Syn., *micromazia*.

mi″cro-ma′zi-a [*mikros*; G. *mazos*, breast]. Abnormal smallness of the breasts.

mi″cro-me′li-a, mi-crom′e-ly (migh-krom′e-lee) [*mikros*; G. *melos*, limb]. Abnormal smallness of the limbs.

mi-crom′e-lus (migh-krom′e-lus) [*mikros*; *melos*]. An individual characterized by the presence of abnormally small limbs.

mi-crom′e-ter (migh-krom′i-tur) [*mikros*; G. *metron*, measure]. 1. An instrument designed for measuring minute distances, or apparent diameters, used with a microscope or telescope. 2. (migh′kro-mee″tur, migh-krom′i-tur) The millionth part of a meter; a micron, generally represented by the Greek letter μ. —**micrometry**, *n.*

eyepiece m. A micrometer to be used with the eyepiece of a microscope. Also called *ocular m.*, *filar ocular m.*

screw m. A fine screw with a scale attached showing the distance passed at each fraction of a revolution.

stage m. A micrometer placed on the stage of a microscope and used with the objective lenses.

mi-crom′e-ter disk. A glass disk engraved with a suitable scale, used at the diaphragm of a micrometer ocular. The scale can be focused by the eye lens and seen in the field of view.

mi″cro-meth′od [*mikros*; G. *methodos*, a following after]. A method of laboratory examination in which very small quantities of the substances to be examined are used.

Keller's m. (*for urea*). The solution resulting from incubation of a protein-free blood filtrate with urease and buffer is nesslerized and compared colorimetrically with a similarly treated standard urea solution.

mi″cro-mi′cron [*mikros*; *mikron*]. The millionth part of a micron, generally denoted by μμ.

mi′cro-mil [*mikros*; L. *mille*, thousand]. A micromillimeter.

mi″cro-mil′li-mee″ter [*mikros*; *mille*; G. *metron*, measure]. The one-millionth part of a millimeter or the one-thousandth part of a micron. Incorrectly used to denote the one-thousandth part of a millimeter or the one-millionth part of a meter. Symbol, mμ. Also called *millimicron*.

mi″cro-mon″o-spo′rin [*mikros*; G. *monos*, alone; *spora*, seed]. An antibiotic substance produced by species of the genus *Micromonospora* of the family Streptomycetaceae.

mi″cro-mo′to-scope [*mikros*; L. *motus*, from *movere*, to move; G. *skopein*, to examine]. A apparatus for photographing and exhibiting motile microorganisms.

mi″cro-my-e′li-a (migh″kro-migh-ee′lee-uh) [*mikros*; G. *myelos*, marrow]. Abnormal smallness of the spinal cord.

mi″cro-my′e-lo-blast [*mikros*; *myelos*; G. *blastos*, germ]. An extremely small myeloblast.

mi″cro-my″e-lo-lym′pho-cyte [*mikros*; *myelos*; L. *lympha*, water; G. *kytos*, cell]. A small lymphocyte of myeloid tissue, regarded as a hemocytoblast.

mi′cron [*mikros*]. The one-thousandth part of a millimeter or the one-millionth part of a meter. Generally represented by the Greek letter μ.

mi″cro-nee′dles [*mikros*; AS. *nǣdl*]. Exceedingly fine glass needles for use in microdissection with the micromanipulator.

mi-cro-ne′mous (migh-kron′e-mus) [*mikros*; G. *nema*, thread]. Furnished with short filaments.

mi″cro-nu′cle-us [*mikros*; L. *nucleus*, nut]. 1. A small or minute nucleus. 2. In *biology*, the paranucleus, or the nucleolus. 3. The reproductive nucleus of protozoa as contrasted with the macronucleus.

mi″cro-nu′tri-ents [*mikros*; L. *nutrire*, to nourish]. The vitamins and minerals occurring in traces essential for growth, development, and health. The essential minerals are also called trace minerals.

mi″cro-nych′i-a (migh″kro-nick′ee-uh) [*mikros*; G. *onyx*, nail]. The presence of one or more small nails which in every other respect seem normal.

mi″cro-or′chism. Congenital hypoplasia of the testes; when severe, it may be associated with the eunuchoid state.

mi″cro-or′gan-ism [*mikros*; G. *organon*, instrument for making or doing a thing]. A microscopic organism, either animal or plant, especially a

M. pneumoniae. Synonym for *Diplococcus pneumoniae.*

M. pyogenes. Pathogenic Gram-positive cocci, having a tendency to form grapelike clusters, often the cause of boils, abscesses, and other pathogenic lesions. *M. pyogenes* var. *albus* (formerly called *Staphylococcus albus*) is an organism whose colony is white on nutrient agar; usually considered of low pathogenicity. *M. pyogenes* var. *aureus* (formerly called *Staphylococcus aureus*) is an organism whose colony is golden or orange-yellow on nutrient agar; this species has the highest pathogenicity.

M. tetragenus. A species of parasitic cocci frequently found on the mucous membranes of the upper respiratory tract. They occur typically in tetrads or groups of four and are of low grade virulence. Syn. *Gaffkya tetragena.* See Table of the Most Common Microorganisms Pathogenic to Man in the Appendix.

mi"cro-co'lon [mikros; G. *kolon*, colon]. An abnormally small colon.

mi"cro-co-nid'i-um (pl. *microconidia*) [mikros; G. *konis*, dust]. In botany, a small and single-celled conidium.

mi"cro-co'ri-a. Miosis.

mi"cro-cor'ne-a [mikros; L. *corneus*, horny]. Abnormal smallness of the cornea.

mi"cro-cos'mic salt. Sodium ammonium phosphate.

mi"cro-cou'lomb (migh"kro-koo'lom, koo-lom'). The one-millionth part of a coulomb.

mi"cro-cous'tic (migh-kro-koos'tick). Synonym of *microacoustic.*

mi"cro-crys'tal-line [mikros; G. *krystallos*, rock crystal]. Composed of crystals of microscopic size.

mi"cro-cu'rie [mikros; *Curie*]. The amount of radioactive substance which undergoes 3.7 × 10⁴ disintegrations per second; equivalent to one-millionth of a curie. Abbreviated *μc.*

mi"cro-cyst [mikros; G. *kystis*, bladder]. A cyst of small size, visible only microscopically.

mi"cro-cy'tase. An enzyme in leukocytes capable of digesting microorganisms.

mi'cro-cyte [mikros; G. *kytos*, cell]. An erythrocyte having either a diameter or a mean corpuscular volume (MCV) or both more than two standard deviations below the mean normal, determined by the same method on the bloods of healthy persons of the patient's age and sex group. —**microcyt'ic**, *adj.*

mi"cro-cy-the'mi-a. A blood condition characterized by abnormally small erythrocytes.

mi"cro-cy-to'sis (migh"kro-sigh-to'sis) [mikros; *kytos*; G. *-osis*, condition]. A condition of the blood, characterized by a preponderance of microcytes, as observed microscopically or determined by measurement of cell volume.

mi"cro-dac-tyl'i-a, mi"cro-dac'ty-ly [mikros; G. *daktylos*, finger]. Abnormal smallness of one or more fingers or toes. —**microdac'tylous**, *adj.*

mi"cro-dent'ism. See *microdontia.*

mi"cro-de-ter"mi-na'tion [mikros; L. *determinare*, to enclose within boundaries]. The identification of minute amounts of a substance.

mi"cro-dis-sec'tion [mikros; L. *dissecare*, to cut in pieces]. Dissection with the aid of a microscope.

mi'cro-dont [mikros; G. *odous*, tooth]. Having abnormally small teeth.

mi"cro-don'ti-a [mikros; *odous*]. The condition of having one or more abnormally small teeth; also called *microdontism.* Syn. *microdentism.*

mi"cro-dont-ism [mikros; *odous*]. Microdontia.

mi"cro-drep"a-no-cyt'ic dis-ease. A rare, hereditary anemia resulting from the presence of both thalassemia and sickle-cell traits, characterized by marked hypochromia, microcythemia, sicklemia, target cells, and marked anisocytosis and poikilocytosis. The clinical signs and symptoms, when present, are those of sickle-cell anemia. The sickled, hypochromic microcytes are called *microdrepanocytes.* Also called *sickle-cell-thalassemia disease.*

mi"cro-e-lec"tro-pho-ret'ic [mikros; G. *ēlektron*, amber; *phorēsis*, from *pherein*, to bear]. Pertaining to electrophoresis of minute quantities of solutions.

mi"cro-e-lec"tro-pho-ret'ic cells. Both flat and cylindrical cells, the flat cell containing a layer of colloidal sol 0.6 mm. in depth, and the cylindrical cell consisting of a capillary tube through which colloidal particles pass under the influence of an electric field.

mi"cro-e-ryth'ro-cyte (-eh-rith'ro-sight, -err'ith-ro-). See *microcyte.*

mi"cro-far'ad. The one-millionth part of a farad.

mi"cro-fi-lar'i-a (migh"kro-fi-lay'ree-uh) (pl. *microfilariae*) [mikros; L. *filum*, thread]. The embryonic or prelarval forms of filarial worms, slender motile forms, 150–300 μ in length, found in the blood stream and tissues. On ingestion by the proper blood-sucking insects the microfilariae pass through developmental stages in the body of the host and become infective larvae.

sheathed microfilariae. Microfilariae encased in a delicate membrane which usually protrudes beyond the ends of the parasite. The membrane is thought to be the remains of the egg shell. When the membrane or shell breaks, an unsheathed microfilaria results.

mi"cro-flu"o-ro-met'ric scanner. A device for the differential detection of cancer cells based on the principle that cancer cells absorb more basic fluorescent dye than normal cells. Cancer cells fluoresce more under long-wave ultraviolet light, and the amount of light emitted can be measured by a microphotometer.

mi"cro-frac'ture [mikros; L. *fractura*, fracture, from *frangere*, to break]. One of several minute multiple fractures in bone.

mi"cro-gam'ete (migh"kro-gam'eet, -ga-meet') [mikros; G. *gametē*, marriage]. A male reproductive cell in certain Protozoa, corresponding to the sperm cell in Metazoa.

mi"cro-ga-me'to-cyte [mikros; *gametē*; G. *kytos*, cell]. The cell which produces the microgametes in Protozoa. See Plate 28.

mi-crog'a-my (migh-krog'uh-mee) [mikros; *gamos*]. Fusion of male and female reproductive cells in certain Protozoa and Algae.

mi"cro-gas'tri-a. Abnormal smallness of the stomach.

mi"cro-gen'e-sis [mikros; G. *genesis*, production]. Abnormally small development of a part.

mi"cro-ge'ni-a [mikros; G. *geneion*, chin]. Abnormal smallness of the chin.

mi"cro-gen'i-tal-ism [mikros; L. *genitalis*, genital]. Having extremely undersized genital organs. See *hypogenitalism.*

mi-crog'li-a (migh-krog'lee-uh) [mikros; G. *glia*, glue]. Small neuroglia cells of the central nervous system, having long processes and exhibiting ameboid and phagocytic activity under pathologic conditions. Probably mesodermal in origin.

mi"cro-glos'si-a [mikros; G. *glōssa*, tongue]. Abnormal smallness of the tongue.

mi"cro-gna'thi-a (migh"kro-nay'thee-uh, -nath'ee-uh, migh"krog-) [mikros; G. *gnathos*, jaw]. Abnormal smallness of the jaws, especially of the lower jaw. —**microg'nathous, micrognath'ic,** *adj.*

mi"cro-go"ni-o-scope [mikros; G. *gōnia*, angle;

the image contrast may be varied to give increased visibility.

proton m. A microscope, similar to the electron microscope, utilizing protons rather than electrons and having a magnifying power of 600,000 diameters.

reflecting m. One using mirror pairs in the objective, thus extending the range of achromatism throughout the optical spectrum.

simple m. One of one or more lenses or lens systems acting as a single lens. The rays of light that enter the observer's eye after refraction through these lenses proceed directly from the object itself.

slit-lamp m. An apparatus which, in combination with the corneal microscope, enables the physician to observe the endothelium on the posterior surface of the cornea. See *ultramicroscope*.

television m. A television camera fitted to a microscope; large audiences may simultaneously view microscopic phenomena.

mi″cro·scop′ic, mi″cro·scop′i·cal [mikros; skopein]. 1. Pertaining to the microscope. 2. Visible only with the aid of a microscope. 3. Colloquial term for of extremely small size.

mi·cros′co·pist (migh·kros′ko·pist) [mikros; skopein]. One who is skilled in the use of the microscope.

mi·cros′co·py, mi′cro·sco″py [mikros; skopein]. The use of the microscope; examination with the microscope.

bright-field m. Microscopy utilizing transillumination of the specimen with light rays in the optical axis of the microscope.

fluorescence m. Study by means of the microscope of the emission of radiant energy which is the result of the absorption of radiation of different wavelength.

phase m. A method for controlling the contrast in the image by means of absorption and optical path differences within the microscope. Transparent materials with small optical path differences or of low absorption contrast may be examined with phase microscopy when bright-field microscopy fails to reveal detail. Also called *phase difference m.*, *phase contrast m.*

mi″cros·mat′ic. Having a poorly developed sense of smell. Man is classified as a microsmatic animal.

mi′cro·some [mikros; G. sōma, body]. A noncommittal term for any granule found in a cell.

mi″cro·so′mi·a [mikros; sōma]. Abnormal smallness of the whole body. Syn. *dwarfism, nanosomia*.

mi″cro·spec·trog′ra·phy [mikros; L. spectrum, image; G. graphein, to write]. Spectrographic methods applied to the study of the composition of protoplasm.

mi″cro·spec″tro·pho·tom′e·try. Measurement of different wavelengths of light absorbed, reflected, or emitted by objects in a microscope field.

mi″cro·spec′tro·scope [mikros; spectrum; G. skopein, to examine]. A spectroscope used in connection with the ocular of a microscope, and by means of which the spectrums of microscopic objects can be examined.

mi″cro·spher′o·cyte. A characteristically small, spheroidal erythrocyte observed in congenital hemolytic icterus.

mi″cro·sphyg′my [mikros; G. sphygmos, pulse]. Diminished amplitude of the pulse with small oscillometric index.

mi″cro·sphyx′i·a [mikros; G. sphyxis, pulse]. Weakness or smallness of the pulse.

mi″cro·splanch′nic [mikros; G. splagchna, inward parts]. Synonym for *hypovegetative*.

Mi″cro·spo·rid′i·a [mikros; G. sporos, seed]. An order of Sporozoa which infest chiefly invertebrates, insects in particular.

mi″cro·spo′rin [mikros; sporos]. Extract prepared from a culture of a species of *Microsporum*, used intracutaneously or as patch test to determine sensitivity to the fungus.

Mi″cro·spo′ron [mikros; sporos]. Former name for genus of fungi.

M. audouini. Synonym for *Microsporum audouini*.

M. furfur. Synonym for *Malassezia furfur*.

M. minutissimum. Synonym for *Nocardia minutissima*.

mi″cro·spo·ro′sis [mikros; sporos; G. -ōsis, condition]. Dermatophytosis caused by a species of *Microsporum*.

Mi″cro·spo′rum, Mi·cros′po·rum (migh·kros′po·rum) [mikros; sporos]. A genus of dermatophytes which attack only the hair and the skin.

M. audouini. That species which is sometimes the causative agent of tinea capitis marginata. This species produces low-grade scaling lesions.

M. canis. That species which causes the kerion type of tinea capitis, an inflammatory form.

M. gypseum. That species which is found mainly in South America and is one cause of dog favus. This, too, is an inflammatory form. Syn. *Achorion gypseum*.

M. lanosum. *M. canis*.

mi″cro·steth′o·phone [mikros; G. stēthos, breast; phōnē, voice]. A stethoscope which amplifies the sounds heard.

mi″cro·steth′o·scope [mikros; stēthos; G. skopein, to examine]. A stethoscope which amplifies the sounds heard.

mi″cro·sto′mi·a [mikros; G. stoma, mouth]. Abnormal smallness of the mouth.

mi″cro·sur′ger·y [mikros; G. cheirourgia, working by hand]. Surgery practiced on single cells or ova, using a microscope and special minute cutting instruments.

mi″cro·syr′inge. See *syringe*.

mi″cro·the′li·a [mikros; G. thēlē, nipple]. Congenital hypoplasia of the nipple of the breast.

mi′cro·therm [mikros; G. thermē, heat]. An organism in which the life processes are carried on at low temperature.

mi·cro′ti·a (migh·kro′shee·uh) [mikros; G. ous, ear]. Abnormal smallness of the external ear(s).

mi′cro·tome [mikros; G. tomos, cutting]. An instrument for making thin sections of tissues for microscopical examination, the tissues usually being embedded in paraffin or celloidin.

freezing m. One in which the tissue is frozen, in order to secure the hardness required for properly cutting sections of tissue that is fixed but not embedded in a hardening medium.

mi·crot′o·my (migh·krot′o·mee) [mikros; G. tomē, cutting]. Section cutting.

mi″cro·trau′ma. Injury resulting from repeated mechanical stimuli which individually are not recognizably injurious.

Mi·cro′tus (migh·kro′tus) [mikros; G. ous, ear]. A genus of field voles of the Orient that may transmit leptospirosis, rat-bite fever, and tsutsugamushi disease.

mi″cro·u′nit [mikros; L. unitas, unity]. A unit of minute measurements; the one-millionth part of an ordinary unit.

mi′cro·volt [mikros; Alessandro Volta, Italian physicist, 1745–1827]. One one-millionth of a volt.

mi′cro·wave. The region of the electromagnetic spectrum extending from a few tenths of a millimeter to a few meters, the limits varying to some degree according to the investigator.

bacterium or protozoan. For list of the microorganisms pathogenic to man, see Table in the Appendix. —microorgan'ic, *adj.*

pyogenic m. A microorganism producing pus; usually staphylococci and streptococci but may other organisms may produce pus.

mi"cro·par'a·site [*mikros*, G. *parasitos*, parasite]. A parasitic microorganism.

mi"cro·pe'nis [*mikros*; L. *penis*, penis]. Abnormal smallness of the penis. Syn., *microphallus*.

mi'cro·phage [*mikros*; G. *phagein*, to eat]. 1. A neutrophil granulocyte in tissues. 2. Formerly small phagocyte.

mi"cro·pha'ki·a [*mikros*, G. *phakos*, lentil]. A congenital or developmental anomaly in which there is an abnormally small crystalline lens.

mi"cro·phal'lus [*mikros*, G. *phallos*, phallus]. Abnormal smallness of the penis. Syn., *micropenis*.

mi"cro·pho'bi·a [*mikros*; G. *phobos*, fear]. 1. Morbid fear of microbes. 2. Morbid fear of small objects.

mi'cro·phone [*mikros*; G. *phōnē*, sound]. An instrument in which feeble sounds modulate an electric current which can be amplified so that the sounds become audible.

mi"cro·pho'ni·a, mi·croph'o·ny (migh·krof'o·nee) [*mikros*; *phōnē*]. Weakness of voice.

mi"cro·pho'no·graph [*mikros*; *phōnē*; G. *graphein*, to write]. A combination of microphone and phonograph used for the recording of sounds.

mi"cro·pho'no·scope [*mikros*; *phōnē*; G. *skopein*, to examine]. A binaural stethoscope with membrane in the chestpiece to accentuate the sound.

mi"cro·pho'to·graph [*mikros*; G. *phōs*, light; *graphein*, to write]. 1. A photograph of microscope size. 2. Photomicrograph.

mi"cro·pho·tom'e·ter [*mikros*; *phōs*; G. *metron*, measure]. A photometric device, made to fit onto the microscope tube, which measures the intensity of light reflected or transmitted from the specimen.

mi"croph·thal'mi [*mikros*; G. *ophthalmos*, eye]. Synonym for microphthalmus.

mi"croph·thal'mus [*mikros*; *ophthalmos*]. 1. A condition in which the eyeball is abnormally small. Also called *microphthalmia*, *nanophthalmus*, *nanophthalmos*, *nanophthalmia*. 2. A person manifesting such condition.

mi"cro·phys'ics [*mikros*; G. *physikos*, natural]. That branch of science which deals with electrons, atoms, and molecules.

mi'cro·phyte [*mikros*; G. *phyton*, plant]. Any microscopic plant, especially one that is parasitic.

mi·cro'pi·a (migh·kro'pee·uh). See *micropsia*.

mi"cro·pi·pet [*mikros*; F., dim. of *pipe*, tube]. An exceedingly fine pipet used in microinjection.

mi"cro·pla'nar [*mikros*; L. *planus*, flat]. Anastigmatic objective of perfect correction, designed especially for use in photographing small objects, like embryos, and for microprojection.

mi"cro·ple·thys·mog'ra·phy The recording of small volume changes. —**microplethysmogram**, *n.*; **microplethysmograph**, *n.*

mi"cro·po'di·a [*mikros*, G. *pous*, foot]. Unnatural smallness of the feet.

mi·crop'o·dy See *micropodia*.

mi"cro·po·lar'i·scope (migh"kro·po·lar'i·scope) [*mikros*; L. *polus*, pole; G. *skopein*, to examine]. A polariscope used in connection with a microscope.

mi"cro·pro·jec'tion [*mikros*; L. *projectio*, from *projicere*, to throw before]. The projection of the image of microscopic objects on a screen.

mi"cro·pro·so'pi·a [*mikros*; G. *prosōpon*, face]. Congenital abnormal smallness of the face. —**micropros'opy**, *n.*

mi"cro·pro'so·pus (migh"kro·pro'so·pus, ·pro·so'pus) [*mikros*; *prosōpon*]. An individual with small and imperfectly developed face.

mi·crop'si·a (migh·krop'see·uh) [*mikros*; G. *opsis*, vision]. Disturbance of visual perception in which objects appear smaller than their true size.

mi"cro·psy'chi·a (migh"kro·sigh'kee·uh) [*mikros*; G. *psychē*, soul]. Feeblemindedness. Obs.

mi'cro·pus (migh'kro·pus, migh·kro'pus, migh·kro·pus) [*mikros*; G. *pous*, foot]. Abnormal smallness of the feet; a congenital defect.

mi"cro·pyk·nom'e·ter An instrument for determining the specific gravity of minute amounts of liquid or solutions.

mi'cro·pyle [*mikros*; G. *pylē*, gate]. A minute opening in the investing membrane of many ova, permitting entrance of the sperm.

mi"cro·ra·di·og'ra·phy Radiography using a photographic emulsion so fine that enlargement (of the order of 100 times) does not reveal silver grains of the emulsion, thereby permitting great magnification of the original image of very small objects.

mi"cro·res·pi·ra·tor An instrument used to measure metabolic activity of minute amounts of tissue.

mi"cro·rhi'ni·a [*mikros*; G. *rhis*, nose]. Congenital atrophy or smallness of the nose.

mi"cro·ruth'er·ford [*mikros*; after Ernest *Rutherford*, English physicist, 1871–1937]. A unit equivalent to 1/1,000,000 of a rutherford or 1 disintegration per second. See *rutherford*. Abbreviated, *µrd*.

mi"cro·scel'ous (migh"kro·skel'us, migh·kros'ki·lus) [*mikros*; G. *skelos*, leg]. Short-legged.

mi'cro·scope [*mikros*; G. *skopein*, to examine]. An apparatus through which minute objects are rendered visible. It consists of a lens, or group of lenses, by which a magnified image of the object is produced.

binocular m. A microscope having two oculars, one for each eye, so that the object is seen with both eyes.

centrifuge m. A high-speed centrifuge provided with windows which permit microscopic observation of the material being sedimented.

compound m. One that consists of two or more lenses or lens systems, of which one, the objective, placed near the object, gives a large and inverted real image; the other, the ocular, acting like a simple microscope, gives an enlarged virtual image of the real image.

corneal m. A microscope used to examine the cornea in the living patient.

electron m. A device for directing streams of electrons by means of electric and magnetic fields, in a manner similar to the direction of visible light rays by means of glass lenses in an ordinary microscope. Since electrons carry waves of much smaller wave lengths than light waves, correspondingly greater magnifications are obtainable. The electron microscope will resolve detail fifty to one hundred times finer than the optical microscope. Images can be studied on a fluorescent screen or recorded photographically.

fluorescence m. A microscope with quartz lenses, which transmit ultraviolet wavelengths, or any microscope used in fluorescence studies.

Greenough binocular m. A binocular microscope equipped with erecting prisms; it has an objective for each tube and so is truly stereoscopic.

phase m. A compound microscope with an annular diaphragm at the front focal plane of the condenser and a diffraction plate at the back focal plane of the objective of the bright-field compound microscope. By suitable choice of diffraction plate

mil'i-ar"y (mil-ee-err'ee, -ehr'ee, mil'yuh-ree) [*miliarius*]. 1. Of the size of millet seed, 0.5 to 1.0 mm., as miliary aneurysm, miliary tubercle. 2. Characterized by the formation of numerous lesions the size of millet seed distributed rather uniformly throughout one or more organs, especially as in miliary tuberculosis.

milibis. Trade-mark for bismuth glycolylarsanilate or glycobiarsol, compound of pentavalent arsenic and bismuth, used in intestinal amebiasis.

mi lieu' ex-té rieur' (mee'lyuh ex-tay'ryur. See Notes §35) [F.]. Literally, the external environment.

mi'lieu in-té rieur' (mee'lyuh ahn-tay'ryur. See Notes §35) [F.]. Literally, the internal environment. Claude Bernard's concept of the *milieu intérieur* now fundamental for modern physiology postulates that the living organism exists not so much in its gaseous or aqueous external environment (*milieu extérieur*) as within its aqueous internal environment. Formed by circulating liquid, the blood plasma and interstitial fluid including lymph, this *milieu intérieur* bathes all tissue elements, and is the medium in which all elementary exchanges of nutrient and waste materials take place. Its stability is the primary condition for independent existence of the organism, and the mechanisms by which stability is achieved ensure maintenance of all conditions necessary to the life of tissue elements.

mil'i um [L., millet]. A disease of the skin characterized by the formation of small, pearly noninflammatory elevations or globoid masses situated mainly on the face or genitalia. They often become quite hard and may last for years.

colloid m. A rare skin disease characterized by the presence, especially on the face, of minute, shining, flat, or slightly raised lesions of pale lemon or bright lemon color. It is form of colloid degeneration of the skin, affecting persons of middle or advanced age.

milk [AS. *meolc*]. 1. The whitish fluid secreted by the mammary gland for the nourishment of the young. It is composed of carbohydrates, proteins, fats, mineral salts, vitamins, antibodies. 2. Any whitish fluid resembling milk, as coconut milk. 3. A suspension of certain metallic oxides, as milk of magnesia, iron, bismuth, etc.

AVERAGE COMPOSITION OF MILKS OF VARIOUS MAMMALS
(From Allen Commercial Organic Analysis, Vol. IX, The Blakiston Company)

Species	*Water* %	*Casein* %	*Albumin* %	*Fat* %	*Lactose* %	*Ash* %
Human	87.41	0.91	1.23	3.76	6.29	0.31
Cow	87.27	2.95	0.52	3.66	4.91	0.69
Goat	84.14	3.01	0.89	6.00	5.02	0.81
Sheep	81.90	4.57	1.26	6.52	4.82	0.83
Buffalo	82.14	4.29	0.49	7.44	4.81	0.83
Camel	87.04	3.49	0.40	2.76	5.57	0.74
Horse	90.03	1.27	0.75	1.17	5.77	0.36
Ass	89.83	0.73	1.31	1.50	6.09	0.49
Reindeer	68.2	8.4	2.0	17.1	2.05	1.6

acidophilus m. Milk inoculated with cultures of *Lactobacillus acidophilus*; used in various enteric disorders to provide change of bacterial flora.

adapted m. Milk that is modified to suit the digestive capacity of the child.

after-milk. The strippings, or the last milk obtained at each milking.

albumin m. Milk high in casein and fat, but poor in lactose and salts, preparation devised by Finkelstein.

bacillary m. Proprietary milk containing *Lactobacillus bulgaricus*.

blue m. Milk which develops bluish tint due to contamination with *Pseudomonas cyanogenes*.

budde-ized m. Sterilization of milk by adding hydrogen peroxide (H_2O_2) and heating; the heat causes decomposition of the hydrogen peroxide, liberating oxygen.

buttermilk. That which remains after churning butter.

casein m. See albumin m.

centrifugalized m. Milk from which the cream has been separated by whirling it in centrifuge.

certified m. Milk, the purity of which is certified by special commission of physicians, bacteriologists, or sanitarians.

citric acid m. A special preparation in which 4 Gm. of dehydrated citric acid is added to one quart of milk.

condensed m. Milk that is partially evaporated and enriched by the addition of sugar.

diabetic m. One that contains only small amount of lactose.

dialyzed m. Milk with the sugar removed by dialysis through parchment membrane.

evaporated m. Milk treated with heat to lose about half of its water content. It is then canned and sterilized, and usually fortified by ultraviolet radiation. Popular in making infants' formulas.

fore-milk. (a) That first withdrawn at each milking. (b) Colostrum.

fortified m. That which is enriched by the addition of albumin, cream, or vitamins.

homogenized m. Milk especially processed so that the fat globules are very minute and emulsification is so complete that the cream does not separate from the rest of the milk.

hydrochloric acid m. Acidified milk, prepared by adding 5 cc. of one-tenth normal hydrochloric acid to 100 cc. of milk.

lemon juice m. An acid milk made by adding 22 cc. of lemon juice to one quart of milk.

litmus m. One which contains litmus used as an indicator in bacteriology.

metalized m. That containing minute traces of iron, copper and magnesium; used in treating anemia.

m. crust. Seborrhea of the scalp in nursing infants; form of eczema.

m. cure. Treatment of disease by diet of milk or milk products.

modified m. One altered so that its composition approximates mother's milk.

pasteurized m. One treated by pasteurization.

peptonized m. Milk partially digested by the use of pepsin or pancreatic extract.

perhydrase m. See budde-ized m.

protein m. One containing high percentage of protein, and low percentage of sugar and fat.

red m. One with red tint due to contamination by blood or certain microorganisms, or to the ingestion of madder root.

ropy m. Milk that becomes viscid so that it may be drawn out into stringy mass caused by a growth of bacteria, *Alcaligenes viscosus*.

skim m. Milk after the cream is removed.

soft curd m. Milk that is treated by boiling or by the addition of cream or sodium citrate, to produce soft, flocculent curd.

sour m. Milk containing lactic acid produced by the lactic acid bacteria normally present.

uterine m. A whitish fluid found between the placental villi of the pregnant uterus.

uviol m. Milk sterilized by exposure to ultraviolet rays.

vegetable m. Synthetic milk expressed from various vegetables, as the soybean used to replace natural milk for those with milk allergy

vinegar m. An acid milk made by adding one ounce of vinegar to 16 ounces of cow's milk.

vitamin-D m. Cow's milk fortified by the direct addition of vitamin D by exposure to ultraviolet rays, or by feeding irradiated yeast to the animals.

witch's m. Milk sometimes secreted from the breasts of the newborn.

milk agent. A filtrable substance found in the milk and organs of certain inbred strains of mice, which is essential for the production of mammary carcinoma in the offspring of these mice

milk-drinker's syndrome. Milk poisoning. See pathologic *calcification* ( )

milk fever See under *fever*

milk'ing [*meolue*] 1 The process of expressing milk from the mammary gland, manually or mechanically 2. Pressing finger along compressible tube or duct in order to squeeze out the contents.

Milkman, Louis Arthur (1895–) American radiologist known for his description of clinical and roentgenological syndrome associated with certain degree of bone decalcification See Milkman *syndrome*.

Millar John [*Scottish physician in England* 1733–1805]. Described laryngismus stridulus, called *Millar's asthma*.

Millard, August Louis Jules [*French physician*, 1830–1915]. Described syndrome due to lesion in the pons, of paralysis of the lateral rectus muscle and often of the peripheral facial muscles on the side of the lesion, with paralysis of the limbs on the other side. Called *Millard-Gubler syndrome*. Alternate hemiplegia of various types is known as *Millard-Gubler syndrome Gubler's paralysis*, *Weber-Gubler syndrome*. See also Hermann David Weber

mil'le pedes (mil'i-peeds) See *millipedes*.

Miller Thomas Grier [*American physician*, 1886–]. With W O Abbott, developed an intestinal drainage tube. See Miller-Abbott *tube*.

Mil'ler so u la disk. See Miller *disk*.

mil'let seed. The edible seed of grass frequently used to designate the approximate size of small lesions or tumors, being about 2 mm. in diameter

mil'li- [L. *mille*, thousand]. A combining form denoting *thousand* or *thousandth*.

mil"li am me"ter [*mille*; A. M *Ampère* G *metron*, measure]. An ammeter which records electric current in milliamperes. Used in measuring currents passing through roentgen-ray tube

mil"li-am'pere [*mille*; *Ampère*]. One one-thousandth of an ampere Abbreviated, ma.

mil"li-am'pere-me"ter Obsolete term for milliammeter

mil'li bar [*mille*; G. *baros*, weight]. Unit of atmospheric pressure, the one-thousandth part of bar

mil"li-cu"rie [*mille*; *Curie*] The amount of a radioactive substance which undergoes 3.7×10^7 disintegrations per second, equivalent to one-thousandth of curie. Abbreviated mc

mil'li cu"rie-hour' A dosage unit of radon; the amount of radiation emitted by millicurie of radon multiplied by time of treatment in hours

mil"li-e-quiv'alent [*mille*; L. *aequus*, equal *valere*, to be strong]. The weight of substance contained in, represented by or equivalent to 1 cc. of solution of specified normality usually one-normal. Abbreviated, mEq.

mil'li gram [*mille*; G *gramma*, scruple]. One one-thousandth of gram. Abbreviated, mg, mg

mil'li gram age. See *milligram-hour*

mil'li gram-hour' A dosage unit of radium; the amount of radiation emitted by milligram of radium multiplied by the time of treatment in hours. Abbreviated, mgh mgh.

mil'li grams per cent. In biochemistry, indicating milligrams of substance per 100 cc. of blood. Symbol, mg % mg. %.

Millikan rays. See under *ray*

mil'li li"ter (mil'i lee tur) [*mille*; G *litra*, pound]. The one one-thousandth part of liter for all practical purposes equivalent to a cubic centimeter. Abbreviated, ml ml.

mil'li me"ter [*mille*; G *metron*, measure]. One one-thousandth of meter Abbreviated, mm, mm.

mil"li mi'cron [*mille* G *mikros* small]. One one-thousandth of micron. Also called *micromillimeter* Symbol, mμ.

mil'li mol [*mille* L. *moles*, mass]. One one-thousandth of gram molecule. —**millimol'ar** *adj*

mil"li nor'mal [*mille*; L. *normalis*, made according to the square]. Containing a thousandth part of the quantity designated as normal.

mil"li os mol. The concentration of an ion in solution expressed as milligrams per liter divided by atomic weight. In univalent ions, milliosmolar and milliequivalent values are identical; in divalent ions, 1 milliosmol equals 2 milliequivalents. —**millios molar** *adj*

mil'li pedes, mil'le pedes (mil'i-peed) [*mille* L. *pes*, foot]. Wingless, vermiform arthropods with two pairs of legs on each body segment. Some species are incriminated as hosts of *Hymenolepis diminuta*.

mil"li ruth er ford [*mille*; after Ernest *Rutherford*, English physicist, 1871 1937]. A unit of radioactivity representing 10^3 disintegrations per second. Abbreviated, mrd.

mil'li volt. One one-thousandth of volt.

mil'li volt sec ond. A measurement of an electric current, equal to one one-thousandth of a volt per second.

Millon's reagent. See under *reagent*.

Mills, Charles Karsner [*American neurologist*, 1845–1931]. Described unilateral progressive ascending paralysis (1900) called *Mills' disease*. Described unilateral descending paralysis (1906)

milontin. Trade-mark for N-methyl-α-phenylsuccinimide $\overset{|}{C}H_2CO.N(CH_3)CO\overset{|}{C}H(C_6H_5)$; an anticonvulsant drug effective in petit mal.

mil pho sis [G *milphōsis*, falling off of the eyelashes]. Baldness of the eyebrows.

Milroy William Forsyth [*American physician*, 1855–1942]. Described hereditary edema of the legs (1892); called *Milroy's* or *Meige's disease*.

miltown. A trade-mark for meprobamate.

milz'brand" (milts'broont See NOTES § 35) [Ger.] Anthrax.

mi mo sis (mi mo sis, migh mo sis) [G., imitation]. 1 Mimicry as of an organic disease. 2 The assumption of the symptoms of one disease by another disease Also called *mimesis*. —**mimet'ic, mim'ic,** *adj*

mim ma tion [Ar *mim*, the letter m.] The unduly frequent use of the sound of the letter M in speech.

min. Minim.

mind [AS *gemynd*]. 1. The understanding; the reasoning and intellectual faculties considered as whole. 2. In psychiatry the psyche.

mind cure. The alleged cure of disease through mental influence; mental healing.

Min der-e rus spir'it. See ammonium acetate solution.

min'er·al [NL. *minera*, ore]. An inorganic chemical compound found in nature, especially one that is solid.

m. glycerin. Petrolatum.

m. oil. Petroleum; also the liquid petrolatum used medicinally.

m. pitch. Bitumen.

m. water. Water naturally or artificially impregnated with sufficient inorganic salts to give it special properties.

min"er·al·o·cor'ti·coid. An adrenal cortical steroid hormone that primarily regulates mineral metabolism and, indirectly, fluid balance.

min'er·al spring. A spring reputed to be of value in restoring health, especially to persons with arthritic diseases, through the action of the minerals in its waters.

Mingazzini, Giovanni (1859–1929). Italian pathologist who contributed to knowledge of the lenticular nucleus and the disorders resulting from lesions in it and to knowledge of the corpus callosum.

min'im [L. *minimus*, least]. A unit of volume in the apothecaries' system. It equals $1/60$ fluidrachm or about 1 drop (of water). Symbol, ♏. Abbreviated, min.

min'i·mal (minimum). Least; lowest. Of doses, the smallest quantity that is effective.

min'i·mum (pl. *minima*) [minimus]. The least; the lowest; the lowest intensity or level; threshold.

m. cognoscibile. In physiologic optics, the lowest limit at which recognition of complicated detail of form occurs.

m. discernibile. The smallest discernible light difference, i.e., the differential threshold of light sense.

m. legibile. In physiologic optics, the lowest limit at which recognition of letters or numbers occurs.

m. separabile. In physiologic optics, visual acuity for more than one detail. Originally, the minimum angular distance by which two stars must be separated to be perceived as two. See minimum separable acuity.

m. visibile. The smallest amount of light (expressed in watts of light energy) just perceptible, the absolute threshold of light sense.

Minkowski, Oskar (Lithuanian pathologist in Germany, 1858–1931). Noted the relation of enlargement of the pituitary gland to acromegaly (1887). With von Mering, studied the diabetic syndrome following experimental pancreatectomy (1889). Described congenital familial cholemia, which is also called Chauffard-Minkowski syndrome.

mi·nom'e·ter. An instrument for measuring the total amount of radiation which passes through the dosimeter from the time it is charged until the remaining charge is measured.

Minor, Lazar Salomovich (Russian neurologist, 1855–). Described central hematomyelia, also called Minor's disease, and essential tremor, also called Minor's tremor.

mi'nor [L., less]. Less; lesser; smaller.

mi'nor. An individual under legal age; one under the authority of parents or guardians.

mi'nor med'i·cal as·sem'bly. In military medicine, an aggregation of medical supplies and/or equipment not assigned contiguous cataloguing numbers, such as kits and chests.

Minot, George Richards (American physician, 1885–1950). With William Parry Murphy introduced the Minot-Murphy diet, consisting chiefly of liver, in the treatment of pernicious anemia (1926). This led to the present-day therapeutic use of liver extracts. Nobel laureate with W. P. Murphy and G. H. Whipple (1934).

minot. See *Mendez*.

mi'o- [G. *meiōn*, smaller, less]. 1. A combining form denoting *smaller, less*. 2. In medicine, a combining form denoting *decrease* or *contraction*.

mi"o·car'di·a [meio-; G. *kardia*, heart]. The systolic diminution of the volume of the heart.

mi"o·did'y·mus, mi·od'y·mus [meio-; G. *didymos*, twin]. A dicephalic monster with a small head fused occipitally with a large head.

mi"o·lec'i·thal. See meiolecithal.

mi·o·pus (migh-o pus, migh o-pus) [meio-; G. *ōps*, face]. A type of diprosopus in which one face is rudimentary.

mi·o'sis (migh-o sis) [G. *meiōsis*, diminution]. 1. Constriction of the pupil of the eye. 2. See meiosis.

senile m. Miosis associated with increase in the connective tissue and hyalinization of the septa of the sphincter pupillae muscle, seen usually in the aged.

mi·ot'ic [G. *meiōtikos*, diminishing]. 1. Pertaining to or characterized by miosis. 2. Causing contraction of the pupil.

mi·ot'ic. An agent which constricts the pupil.

mi"ra·cid'i·um [G. *meirakidion*, youthful person]. The first larval form of the digenetic trematodes which develops from the fertilized ovum and which emerges from the egg as a ciliated, free-swimming, pear-shaped organism. On penetration into the tissues of an appropriate species of snail the miracidium undergoes metamorphosis into a sporocyst.

miracil D. Lucanthone hydrochloride, a drug useful in the treatment of certain types of human schistosomiasis. See nilodin.

Mirault, Germanicus (French surgeon, 1796–1879). Devised an operation in which the lingual arteries were tied as a preliminary to excision of the tongue, and one for the plastic repair of unilateral harelip by means of a flap turned down on one side and attached to the opposite side. Each is known as *Mirault's operation*.

mir'bane oil. Nitrobenzene.

mire (meer) [L. *mirare*, to wonder]. Figures used upon the perimeter bar of the ophthalmometer; by noting the variations of their images, as reflected by different meridians of the cornea, the measurement of corneal astigmatism is effected.

mir'ror [mirare]. A polished surface for reflecting light or forming images of objects placed in front of it; used in rhinoscopy, ophthalmoscopy, laryngoscopy, dentistry, etc.

concave m. One with a concave reflecting surface.

convex m. A mirror with a convex reflecting surface.

frontal m. A head mirror.

head m. A circular mirror with a central perforation, strapped to the head by a band, and used to throw light on parts to be examined.

laryngeal m. A small circular mirror affixed to a long handle, used in laryngoscopy; a similar instrument is used by dentists, in the examination of the teeth.

plane m. A mirror with a flat reflecting surface.

mir'ror writ'ing. A peculiar kind of writing in which the letters appear backward, as if seen in a mirror.

Mirsky-Pollister method. See under method.

mis·an'thro·py (mi-san'thro-pee, mi-zan) [G. *misanthrōpos*, hating mankind]. An aversion to society; hatred of mankind. —**mis'an·thrope,** n.

mis·car'riage [AB. mis- + ONF. *cariage*]. 1. Expulsion of the fetus before it is viable. 2. Abortion.

mis·car'ry [mis- + ONF. *carier*]. Give birth to a nonviable fetus.

mis ce (mies ee) [L., imperative of *miscere* to mingle] Mix, direction placed under the ingredients of compound prescriptions, and usually abbreviated M

mis"ce-ge-n tion [*miscere* L. *genus*, race]. Intermarriage or interbreeding of different races of man.

mis ci ble [*miscere*]. Capable of mixi g or dissolving in all proportions.

mis'o- (miss o- migh so-) **mis-** [G *misein*, to hate]. A combining form denoting *hatred*, *hating*.

mi sog'a my (mi-sog uh-mee, migh-sog) [*misein*, G. *gamos*, marriage]. Aversion to marriage —**misogami t**,

mi sog y ny (mi sodj'i nee migh-sodj) [*misein*, G *gynē*, woman]. Hatred of women. —**misogynist**, *n.*

mi sol'o-gy (mi sol' jee, migh sol') **mis"o l gi** [*misein*, G *logos*, word]. Unreasoning version t intellectual or literary m tters, or to argument or peaking.

mis"o-ne'ism [*misein*, G *neos*, new]. H tred or horror of novelty or hange —**misoneist** *n.*

mis o-pe di [*misein*, G *pais*, child]. Morbid hatred of all children, but especially of one own

mis o psy' hi (miss sigh'kee uh, miss op-my so- my sop) [*misein*, G. *psychē* li] Morbid disgust with lif hatred of li ing. *Obs.*

mist. *Mistura*, mixture.

mis tl toe [AS. *misteltā*]. The woody parasites *Viscum album* (European mistletoe) and P *flavescens* (American mistl toe) Preparations of the former may be useful in hypertension.

Mitchell Silas Weir [*American physician, physiologist* nd *author* 1829-1914]. Made important studies of the physiologi effects of various poisons, especially snake venoms, and of the physiology of the cerebellum. With George Read Morehouse and William Williams Keen, studied injuries of the peripheral nerves Gave classic description of erythromelalgia (1872) called *Mitchell' disease*. Advocated rest bed in the treatment of functional nervous disease called *Weir Mitchell treatment*

mite [AS. *mite*]. Any representative of large group of small arachnids, which together with the larger tick constitute the order Acarina.

chicke m. *Derma yssus gall nae.*

follicular m. *Demodex folliculorum.*

grain itch m. *Pediculoides ventricosus.*

harvest m. *Trombicula irritans.*

it h m. *Sarcoptes scabei.*

ma ge m. Any species of the Sarcoptoidea.

rat m. *Liponyssus bacoti*

red m. Any member of the genus *Trombicula*

sarcopti m. See itch m.

mith ri date [G *Mithridates*, king of Pont us 132-63 B.C.]. An old confection believed to contain an antidote to every known poison

mi'ti-cide A substance destructive to mites —**miticid'dal**, *adj*

mit'i gate [L. *mitigare*, to soften]. Allay make milder moderate

mi'tis [L] Mild.

mit" -chon dri-a (mit kon dree h, my to) (G *mitos*, thread; *chondrion*, granule] Cytoplasmic organelles in th form of granules, short rods, or filaments, present in all cells. —**mitochon drial**, *adj*

mit"o-chon'dri on. Singular of mitochondria.

mit" gen -sis (mit jen'i sis, my to-) [*mitos*; G *genesis*, production] Formation as result of mitosis. —**mitogenic, mitogenet'ic**, *adj*

mi'tome (*mitos*) The threads of the reticulum of the cytoplasm of cell (cytomitome) or of the nucleoplasm (karyomitome)

mit o plasm. See *chromatin*.

mi t sis (mi-to sis, my to sis) [*mitos*; G. *-osis*, condition]. 1 Indirect nuclear division usually divided into series of stages prophase, metaphase, anaphase, and telophase Syn., *karyokinesis*. 2. The indirect division of the cytoplasm and ucleus. —**mitot'ic**, *adj*

abortive m. See pathologic m.

neutral m. Mitosis occurring without the form tion of asters.

heterotypic m. Applied to the first miotic division in the maturation of the germ cells; the reduction division.

h meotypic m. Applied to the second miotic d vision in the maturation of the germ cells, an equational division.

patholog1 m. Irregular atypical, asymmetric and multipolar mitosis, an indication of malignancy also called *abortive m.*

mit' some (mit sohm, my to-) [*mitos*; G. *sōma*, body]. A cytoplasmic body derived from the spindle fibers of the preceding mitosis Also called *spindle remnant*.

mi'tral [G *mitra*, girdle headband]. 1 Resembling bishop miter 2. Pertaining t the atrioventricular valve of the left side of the heart. See also mitral *cell*

fish-mouth m. Advanced degree of constriction of the mitral orifice of the heart.

mi'troid (*mitra*, G *eidos*, form] Shaped like miter cap

Mitsuda' test. See *lepromin test*.

mit tel schmerz [Ger middle pain] Pain or discomfort in the lower bdomen of women occurring midway in the intermenstrual interval, thought to be secondary t the irritation of the pelvic peritoneum by fluid or blood escaping from the point of vulation in the ovary

mi ed chan cre (shang'kur) A lesion, the result of infection with both *Treponema pallidum* and *Hemophilus ducreyi* (Ducrey bacillus).

mix" -sco pi a [G *mixis*, intercourse *skopein*, to examine]. A form of sexual perversion in which the orgasm is excited by the sight of coitus —**mixoscop'ic**, *adj*

mix't re [L. *mixtura*, from *miscere* to mingle] *I pharmacy* preparation made by incorporating insol ble ingredients in liquid vehicle preferably with the aid of suitable suspending agent so that the insol ble substances d not readily settle out. Occasionally the term is pplied to aqueous solutions, containing two or more solutes. For mixtures not found here see under the names of the most active ingredients. Also see *emulsion*.

Basham's m. See *iron* and *ammonium acetate solution*.

brown m. Compound opium and glycyrrhiza mixture

carminative m. (*mistura carminativa*) Composed of opium tincture 25 cc.; magnesium carbonate, 65 Gm. potassium carbonate, 3 Gm.; volatile oils, syrup, and water sufficient to make 1000 cc. Dose for an infant, 0 3-0 6 cc. (5-10 ml) Also called *Dalby' carminative*.

copaiba m. An aqueous emulsion containing 12.5 per cent copaiba; formerly used as diuretic. Syn., *Lafayette m.*

expectorant m. (*mistura pectoralis*) A nauseating expectorant prepared from fluidextracts of senega and squill, camphorated opium tincture, ammonium carbonate, and tolu balsam syrup. Dose, 4 cc. (1 fluidrachm) Also called *Stokes' expectorant*.

freezi g m. A mixture of salt and snow or ice which bsorbs heat in undergoing solution.

Lafayette m. Copaiba mixture.

Mi·ya·ga″wa·nel′la [for Yoneji *Miyagawa*, Japanese bacteriologist (1885–)]. Proposed name for a genus of large viruses, family Chlamydozoaceae, which includes the causative agents of venereal lymphogranuloma (*M. lymphogranulomatosis*), of a type of viral pneumonia (*M. pneumoniae*), of psittacosis (*M. psittacii*), ornithosis (*M. ornithosis*), and several other animal diseases.

ml, ml. Milliliter.

MLD Minimal lethal dose.

mm, mm. Millimeter.

Mn Chemical symbol for manganese.

mne·mas·the′ni·a (nee·mass·thee′nee·uh) [G. *mnēmē*, memory; *astheneia*, weakness]. Weakness of memory not due to organic disease.

mne·mic hy·poth′e·sis (nee′mick, nem′ick). A hypothesis that a stimulus or irritant, when continuous, tends to produce a habit which may persist even when the stimulus ceases; these stimuli are supposed to leave impressions on the cells affected, such impressions being called engrams.

mne″mo·der′mi·a. Pruritus and discomfort of the skin hours and days after the cause of the symptoms has been removed and recovery is well established, usually stimulated by scratching or rubbing, sometimes by heat and other stimuli. Syn., *cutaneous memory*.

mne·mon′ics (nee·mon′icks) [G. *mnēmonikos*, of memory]. The science of cultivation of the memory by systematic methods.

mne″mo·tech′ny, mne·mo·tech″nics (nee·motek″). Mnemonics.

Mo Chemical symbol for molybdenum.

moan [ME. *mone*]. To utter a low dull sound expressive of suffering. —**moan,** *n.*

mobenate. Trade-mark for sodium benzylsuccinate.

mo′bile med′i·cal serv′ice u′nit. A mobile unit of the U.S. Army Medical Service composed of a number of professional teams and necessary service elements.

mo′bile op′ti·cal u′nit. A U.S. Army Medical Department installation, equipped to make or repair spectacles in the field; no refraction or eye examination is done.

mo·bil′i·ty [L. *mobilitas*, mobility]. The condition of being movable.

mo″bil·i·za′tion [L. *mobilis*, movable]. 1. The act of rendering an ankylosed part movable. 2. Freeing an organ during surgical operation to make it accessible. 3. The liberation of a substance stored in the body, as the mobilization of glycogen stored in the liver. —**mo′bilize,** *v.*

Möbius, Paul Julius [German neurologist, 1853–1907]. Described periodic ophthalmoplegic migraine, called *Möbius' disease*. An atrophic type of progressive muscular dystrophy, seen in children, is known as *Leyden-Möbius dystrophy*; this usually begins in the pelvic girdle and thighs. See also Möbius' sign.

mo·dal′i·ty. A form of sensation, such as touch, pressure, vision, or audition.

mode [L. *modus*, measure]. That value in a series of observations which occurs most frequently.

mod′el [L. *modulus*, small measure]. 1. The form or material pattern of anything to be made, or already existing. 2. A reproduction in plaster or metal of an object, as a tooth or the dental arch, made by pouring the material into an impression taken from that object. Also see cast.

compound m. In dentistry, one constructed of plaster, stone, or investment material prepared from dental impressions; used in jaw fractures to fashion wax models for the construction of dental splints.

investment compound m. See compound m.

Rutherford-Bohr atom m. A concept of atomic structure; the positive charge is located in a centrally located nucleus, negatively charged electrons, in elliptical orbits around the nucleus.

mod′er·a″tor. A substance (e.g., graphite, water, heavy water, beryllium, paraffin) used to slow down the motion of nuclear particles, especially to slow down neutrons to a thermal equilibrium state and thus to promote a chain reaction.

mo·di′o·lus [L., the nave of a wheel]. The central pillar or axis of the cochlea, around which the spiral canal makes two and one-half turns.

mod′u·la″tor. A receptive sensory end organ in light-adapted eyes, of relatively infrequent type, occurring in narrow spectral sensitivity curves or absorption bands in three preferential regions of the spectrum, 5800–6000 angstroms, 5200–5400 angstroms, and 4500–4700 angstroms, thought to be related to color sensation and discrimination.

mod′u·lus [L., small measure]. 1. The measure of force, of properties of mass, or their effects. 2. A constant which converts a proportionality into an equality.

mo′dus [L.]. A mode or method.

m. operandi. The method of doing something.

Moeller, Julius Otto Ludwig [German physician, 1819–87]. Described infantile scurvy (1859); also called *Moeller-Barlow disease*.

Moeller's glossitis. See chronic superficial glossitis.

Moeller's method. See under stain.

Mo·ha′ve an·e′mi·a. See PTC deficiency disease.

Moens, Adriaan Isebree [Dutch physiologist, 1847–91]. Introduced a formula for determining the velocity of the pulse wave; called *Moens' equation* or *formula*.

mog″i·graph′i·a (modj″i·graf′ee·uh, ·gray′fee·uh) [G. *mogis*, with difficulty; *graphein*, to write]. Writers' cramp.

mog″i·la′li·a [*mogis*; G. *lalia*, talk]. Difficult or painful speech, as stammering or stuttering. Syn., *molilalia*.

mog″i·pho′ni·a [*mogis*; G. *phōnē*, sound]. Difficulty in speaking, excited by an effort to sing or speak loudly.

Mohr's salt. Ferrous ammonium sulfate.

Mohrenheim, Joseph Jacob von [Austrian surgeon, d. 1799]. Described the infraclavicular fossa, called *Mohrenheim's fossa*.

moi′e·ty. A part or portion, especially of a molecule, generally complex, having a characteristic chemical or pharmacological property.

moist [L. *mucidus*, moldy]. Damp; slightly wet; characterized by the presence of fluid.

mol. See gram molecule.

mo′lal [L. *moles*, mass]. Pertaining to moles of solute per 1000 Gm. of solvent. Also see molar, 2.

mo′lar [L. *molaris*, from *mola*, mill]. A grinding tooth or grinder. Abbreviated, M. —**molar′i·form,** *adj.*

dome-shaped molars. Small first molars with cusps abnormally close together; their imperfect development is due to congenital syphilis. Also called *Fournier's molars*, *Moon's molars*, *mulberry molars*.

peg m. A molar, usually the third, of diminutive size.

six-year molars. The first of the permanent molar teeth.

twelve-year molars. The second permanent molars.

mo′lar [L. *moles*, mass]. 1. Pertaining to masses, in contradistinction to molecules. 2. Pertaining to moles of solute in a definite volume of solution, usually 1 liter. Also incorrectly called *molal*.

mo·las′ses [L. *mel*, honey]. The syrupy liquid

obtained in the refining of sugar It contains considerabl quantity of uncrystallizabl sugar and coloring matter Combined ith sulfur it is employed as a domestic remedy for constipation.

mold [L. *modulus*, small measure]. A cavity or form in which a thing is shaped

acrylic m. *I dental surgery*, plastic stent used in the edentulous mouth, when all or part of the mandible has been lost, to secure immobilization for an intraoral skin graft for restoring the contour of the face

mold. To make conform to given shape as th fetal head.

mold [ME. *moul*]. Any one of those saprophytic fungi which form slimy or cottony growths on foodstuffs, leather etc.

mold'ing [L. *modulus*, small measure]. The act of shaping or modeling, as changing the shape of child head in vertex present tions, resulting from pressure during labor

mole [L. *moles*, mass] 1 A mass formed in the uterus by f tal membranes or fetus, the growth of which has become arrested or hi h has undergone degeneration. 2. See *nevus*

blood m. A mass of coagulated blood and retained fetal membranes and placenta, sometimes found i the terus after an abortion.

blue-black m. See *melanoma*.

Bren m. See tuberous m.

carneous m. See fleshy m.

common m. See *nevus*.

cystic m. See *hydatidiform m.*

destructive m. See *horioadenoma*.

false m. One not containing any tissues derived from fetus or fetal membranes.

fleshy m. 1 A blood mole wh ch has become more solid and has assumed fleshy ppearance 2. The more or less amorphous remains of dead fetus in the uterine cavity

hairy m. See hairy *nevus*.

hematoma m. See tuberous m.

hydatidiform m. One formed by proliferation and cystic degeneration of the chorionic villi It may be partial or complete, involving the entire placenta. When trophoblastic proliferation is extensive, invasion of the blood vessels of the terine wall may occur but metastases rarely occur Also called *hydatid m.*

invasive m. See *chorioadenoma*.

malignant m. f placenta. See *chorioadenoma*.

pigmented m. See pigmented *nevus*

true m. One which is the remains of fetus or fetal membranes.

tubal m. Remains of fetus or f tal membranes in incomplete tubal bortion which have become infiltrated with blood.

tuberous m. A blood mole of highly nodular ppearance, due to multiple localized hematomas of varying size under the amnion and chorionic membrane also called *Bren m tuberous subchorial hematoma, ovum tuberculosum*.

vesicular m. See hydatidiform m.

mole, mol [*moles*]. A gram molecule, or formula weight expressed in grams. —**mo'lar** *adj*

mo-lec u lar dis"til la tion. Distillation performed under very high vacuum and short path between the distilland and the condenser so that on the verage molecule of distilland will reach the condenser surface without colliding with another molecule more properly called *short-path, high-vacuum distillation*. See Hickman molecular distillation *process*.

mol'e-cule [dim. from *moles*]. 1. A minute mass of matter 2. The smallest quantity into which substance can be divided and retain its characteristic properties; or the smallest quantity that can exist in free state. —**molec ula** *adj*

mol"i la'li a. See *mogilalia*.

mo-li men, mo'li men (pl. *molimina*) [L., endeavor]. 1 Effort. 2. *I physiology*, laborious functioning 3. *I gynecology* nervous or circulatory symptoms accompanying menstruation.

Molisch's test. See under *test*.

Moll, Jacob Antonius [*Dutch ophthalmologist*, 1832 1914]. Described the ciliary glands, also called *Moll' glands*.

Möller McIntosh, and V n Slyke's test. See urea clearance *test*.

Moller test. See Fabricius-Moller urine *test*.

Mollier' quadruple tain. See under *stain*.

mol li'ti-es (mo lish ee-ees) [L.]. Softness.

m. ossium. See *osteomalacia*.

mol lus cum [L. *molluscus*, soft]. 1 A term applied to certain diseases of the skin. 2. A chronic skin disease with pulpy nodules. —**molluscous**, *adj*

m. contagiosum. A chronic disease of the skin, characterized by the formation of pinhead-sized to pea-sized, rounded sessile or pedunculated, waxlike elevation of yellowish white or pinkish color usually with central umbilication. The lesions on microscopical examination are found to contain peculiar ovoid, sharply defined bodies—molluscum bodies—which generally are considered to be forms of epithelial degeneration (the older idea that they are parasitic molluscs bodies has been abandoned) Syn., *m. epitheliale*

m. epitheliale. See *m.* contagiosum.

m. fibrosum. Neurofibromatosis.

m. sebaceum. See *keratoacanthoma*

Moloney test. See under *test*.

Moloy Heward Carman [*American gynecologist*, 1903-1963]. With W E. Caldwell, classified varieties of the female pelvis according to measurement and form (1933) Called *Caldwell Moloy classification*.

molt, moult (mohlt) [ME. *mouten*, from L. *mutare*, to change]. T shed skin, feathers, or hair

mo lyb date. Any salt of molybdic acid

mo-lyb de-nosis. See *molybdic*.

m lyb de num (me lib di num, mol" b dee num) [G. *molybdaina*, piece of lead]. M = 95.95 A heavy metallic element. Its principal ende, moly bdite, MoO_3, forms molybdic acid.

mo lyb dic [*molybdaina*]. Containing trivalent or hexavalent molybdenum.

mo-lyb dic ac'id. H_2MoO Molybdic hydroxide. Colorless needles; sol ble in alkalis. Used as reagent.

mo lyb do-, molybd- [G *molybdos*, lead]. 1 A combining form meaning *lead* 2. *I chemistry*, combining form denoting *molybdenum*. 3 *I medicine*, combining form denoting *lead poisoning*.

m lyb dous. Containing divalent molybdenum.

mo-lys"mo pho'bi-a (mo lis mo-fo'bee uh, molis mo-) [G. *molysma*, pollution; *phobos*, fear]. Morbid dread of infection or contamination.

mo ment [L. *momentum*, moment]. The arithmetic mean of the deviations of the observations in frequency distribution from any selected value, each raised to the same power First power for first moment, second power for second moment, etc

mo-men'tum [L., from *movere*, t move]. The mass of body multiplied by its linear velocity

mon-. See *mono-*.

mon d, mo nad [G. *monas*, unit]. 1 A univalent element or radical. 2. Any of the small flagellate protozoa. 3. In miosis, one of the elements of the tetrad produced by the pairing and splitting of homologous chromosomes Each monad is separated int different daughter cell as the result of the two miotic divisions.

Monakow, Constantin von [*Russian neurologist in Switzerland*, 1853–1930]. Reported contralateral hemiplegia due to occlusion of the anterior choroid artery; called *Monakow's syndrome*. The rubrospinal tract is also called *Monakow's bundle, fibers, tract*.

Monaldi, Vincenzo [*Italian physician*, 1899–]. Introduced method of draining pulmonary cavities in advanced tuberculosis, with the object of facilitating eventual closure by natural process. Negative pressure is maintained within cavity by means of rubber catheter passing through the chest wall. Called *Monaldi drainage* or *method*.

mon″al·kyl′a·mine. See *alkylamine*.

mon·am′ide. An amide formed by the replacement of hydrogen in one molecule of ammonia by an acid radical.

mon·am′ine (mon am een, -in). An amine formed by the replacement of hydrogen in one molecule of ammonia by an alkyl radical.

mon″a·my′cin. An antibiotic extracted from the green actinomycete found about the roots of the banana plant, highly active against Gram-positive bacteria.

Mo·nar′da [after *Nicolas Monardes*, Spanish physician and botanist, 1493–1588]. A genus of labiate plants, comprising **M. didyma**, the Oswego bee-balm, **M. fistulosa**, the wild bergamot, and **M. punctata**, the horsemint. The last is diaphoretic, carminative, and stimulant. It is also source of thymol.

mon ar′thric [G. *monos*, alone; *arthron*, joint]. Pertaining to one joint.

mon″ar·thri′tis [*mono-*; G. *arthritis*, arthritis]. Arthritis affecting only single joint.

mon″ar·tic′u·lar [*mono-*; L. *articulus*, joint]. Pertaining to one joint.

mon as′ter [*mono-*; G. *astēr*, star]. 1. The chromosomes in the equatorial plate at the end of the prophase of mitosis; the mother-star. 2. The single aster formed in an aberrant type of mitosis, in which the chromosomes are doubled but the cell body does not divide.

mon″a·the·to′sis [*mono-*; G. *athetos*, not fixed; *-ōsis*, condition]. Athetosis affecting one limb or side.

mon″a·tom′ic [*mono-*; G. *atomos*, uncut]. 1. Having but one atom of replaceable hydrogen, as monatomic acid. 2. Having only one atom, as monatomic molecule. 3. Having the combining power of one atom of hydrogen, as monatomic radical. 4. Formed by the replacement of one hydrogen atom in compound by radical, as monatomic alcohol.

Mönckeberg, Johann Georg [*German pathologist*, 1877–1925]. Described medial arteriosclerosis (1903); also called *Mönckeberg's arteriosclerosis* or *disease*.

Mondeville, Henri de [*French surgeon*, ca. 1260–ca. 1320]. Pioneer advocate of cleanliness in surgery. Among the first to regard suppuration as harmful development, not natural stage of healing.

Mondino de' Luzzi (Mundinus, Mondinus) [*Italian anatomist*, ca. 1270–ca. 1326]. Author of textbook of anatomy (1316) regarded as standard for more than two centuries.

mo·ne′si·a (mo nee′shuh, -zhuh, -see·uh, -see·zuh) [of unknown origin]. An extract from the Brazilian tree *Pradosia lactescens*. Has been used as stomachic, alterative, and astringent.

mo·nes′trous [G. *monos*, alone; *oistros*, gadfly]. Having only one estrus period in each sexual season, said of animals.

Monge, Carlos (1884–). Peruvian physician who described discrete forms of chronic mountain sickness affecting natives and men acclimatized at high altitudes, and relieved by descent to sea level; called *Monge's disease*. See chronic mountain sickness.

mon′go·lism [Mongolian *Mongol*]. A type of idiocy having some similarities to myxedema and cretinism; characterized by broad face, flat or stubby nose, obliquely set eyes, open mouth, fat and soft skin, and flaccid muscles. Also called *mongolian idiocy*.

mon′go·loid. Having physical characteristics resembling those of mongolism.

mo·nil′e·thrix, mon″i·leth′rix [L. *monile*, necklace; G. *thrix*, hair]. A congenital and hereditary disease of the hair characterized by dryness and fragility of the scalp hair with nodes regularly or irregularly along the hair shaft, giving it beaded appearance. Also called *moniliform hair, beaded hair*.

Mo·nil′i·a. Synonym for Candida.

mo·nil·i′a·sis (mo·ni·lye′uh·sis, mon i) [*monile*; NL. *-iasis*, condition]. A condition produced by infection with fungus of the genus *Candida*, usually *C. albicans*. Various parts of the body may be involved: skin, mucous membrane, nails, bronchi, lungs, vagina, and gastrointestinal tract. Rarely septicemia may occur. Also see *thrush*, *intertrigo*, *onychomycosis*, *paronychomycosis*, *perlèche*, *erosio interdigitalis blastomycetica*.

oral m. An infection in the mouth by *Candida albicans*, precancerous when chronic; occurring alone or in association with beta hemolytic streptococcus or diphtheria organism.

pharyngeal m. (a) An infection of the throat by *Candida albicans*. (b) A condition of the throat caused by debilitating systemic disease, diabetes, or unhygienic conditions.

mon′i·lid. See *moniliid*.

mo·nil′i·form [*monile*; L. *forma*, form]. Constricted or jointed at intervals, as antennae; resembling string of beads.

Mo·nil″i·for′mis [*monile*; *forma*]. A genus of acanthocephalan worms.

M. moniliformis. A species of worms which infests some mammals and accidentally man.

mo·nil′i·id [*monilia*]. A secondary eruption characterized by sterile, grouped, vesicular lesions. It is result of hypersensitivity and hematogenous spread from the primary focus which is caused by *Candida*. Also called *levurid*.

mon′i·tor·ing. *I* nuclear science, the periodic or continuous determination of the amount of ionizing radiation or radioactive contamination in an occupied region, or in or on personnel, as safety measure for health protection.

Monk's. See *Egon Moniz*.

monks′hood. Aconite.

Monneret, Jules Edouard Auguste [*French physician*, 1810–68]. Drew attention to the soft, slow full pulse associated with jaundice; called *Monneret's pulse*.

mon o-, mon- [G. *monos*, alone]. 1. A combining form meaning *single*, *one*, or *alone*. 2. (mon o-, mo no-) *I* *chemistry*, combining form denoting the presence of *one atom* or *group* of that to the name of which it is attached.

mon″o·ac′id (mon o·ass′id, mo no-), **mon o·a·cid′ic** (mon ad′ick, mo no-). 1. Having one replaceable hydroxyl group (OH), as monoacid base. 2. Capable of uniting directly with molecule of monobasic acid, with half molecule of dibasic acid, etc.

mon″ ar tic u lar. Monarticular.

mon o·ba′sic (mon o·bay′sick, mo no-). Having one hydrogen which can be replaced by metal or positive radical, as monobasic acid.

mon'o·blast [*monos*; G. *blastos*, germ]. The undifferentiated progenitor of the monocytes. The nucleus has a finely granular or lacy chromatin structure, nucleoli are present, the cytoplasm shows more gray-blue than other blast cells, and may have pseudopods. Auer bodies are often present.

mon"o·blep'si·a, mon"o·blep'sis [*monos*; G. *blepsis*, act of sight]. 1. A condition in which either eye has a better visual power than both together. 2. The form of color blindness in which but one color can be perceived.

mon"o·bra'chi·us (mon"o·bray'kee·us) [*monos*; G. *brachiōn*, arm]. An individual lacking one arm congenitally.

mon"o·bra'chi·us. Characterizing a one-armed condition, congenital or acquired.

mon"o·bro'mo·ted (mon"o·bro'may·tid, mo) Containing one atom of bromine in the molecule.

monocaine. Trade-mark for 2-isobutylaminoethyl-p-aminobenzoate, a local anesthetic. See *butethamine*.

mon"o·car'di·an [*monos*; G. *kardia*, heart]. Having a heart with a single atrium and ventricle.

mon"o·car'di·o·gram. Vectorcardiogram.

mon"o·cel'lu·lar [*monos*; L. *cellula*, small storeroom]. Unicellular.

mon"o·ceph'a·lus [*monos*; G. *kephalē*, head]. A monster consisting of a single head, with two bodies more or less completely fused. Syn., *cephalothoracopagus*.

mon"o·chlo·ro·a·ce'tic ac'id. $CH_2ClCOOH$; colorless or white, deliquescent crystals, very soluble in water; used in manufacturing dyes and organic chemicals.

mon"o·chlo·ro·ac'e·tone (mon"o·klor·ass'i·tone, mo·no). 1-Chloro-2-propanone, $CH_2Cl.CO.CH_3$. Used in organic syntheses. In mice it inhibits cell glycolysis and stimulates tumor formation by chemical agents. Also called *chloroacetone*.

mon"o·chlor"o·meth'ane. Methyl chloride.

mon"o·chlo·ro·phe'nol. See *chlorophenol*.

mon'o·chord [G. *monochordos*, with but one string]. Old instrument for testing hearing, particularly for the higher tones of speech.

mon"o·cho·re'a (mon"o·ko·ree'uh) [G. *monos*, alone; *choreia*, dance]. Chorea confined to a single part of the body.

mon"o·cho·ri·on'ic (mon"o·kor·ee·on'ick) [*monos*; G. *chorion*, chorion]. Having a common chorion, as monochorionic twins.

mon"o·chro'ic [*monos*; G. *chroia*, color]. See *monochromatic*.

mon"o·chro·ma'si·a, mon"o·chro'ma·sy (mon"o·kro·may'shuh, ·see·uh, ·shuh, ·see·uh) [*monos*; G. *chrōma*, color]. See total *colorblindness*.

mon"o·chro'mat, mon"o·chro'mate [*monos*; *chrōma*]. A person in whom all the variations of the world of color are reduced to a system of one color.

mon"o·chro·mat'ic. 1. Referring to or possessing one color or substantially one wavelength of light. 2. *In color optics*, having no variation in hue and saturation, and varying only in brightness.

mon"o·chro'ma·tism. See total *colorblindness*.

mon"o·chro·mat'o·phil [*monos*; *chrōma*; G. *philein*, to love]. Exhibiting a strong affinity for a single stain.

mon"o·chro'ma·tor [*monos*; *chrōma*]. A light-dispersing instrument used to obtain light of substantially one wavelength, or at least of a very narrow band of the spectrum.

mon"o·chro'mi·a. See *monochroic*.

mon"o·clin'ic [*monos*; G. *klinein*, to incline]. Applied to crystals in which the vertical axis is inclined to one but is at a right angle to the other, or lateral axis.

mon"o·coc'cus [*monos*; G. *kokkos*, berry]. A coccus occurring singly, not united in chains, pairs, or groups.

mon"o·cra'ni·us [*monos*; G. *kranion*, skull]. A double monster having a single cranium; also called *monocephalus*, *cephalothoracopagus*.

mon"o·cro'ta·line (mon"o·kro'tuh·leen, ·lin, ·mo·no·) A toxic alkaloid, $C_{16}H_{23}NO_6$, from *Crotalaria spectabilis* and *C. retusa*. Many species of this genus are used as soil-enriching legumes.

mon"o·crot'ic [*monos*; G. *krotos*, beating]. Having but a single beat (as the normal pulse) for each cardiac systole; not dicrotic.

mon"oc'u·lar [*monos*; L. *oculus*, eye]. 1. Pertaining to or affecting only one eye, as monocular diplopia, performed with one eye only, as monocular vision. 2. Having a single ocular or eyepiece, as a monocular microscope.

mon"oc'u·lus [*monos*; *oculus*]. 1. A monster with but one eye; cyclops. 2. *In surgery*, a bandage for covering one eye.

mon"o·cy·e'sis (mon"o·sigh·ee'sis) [*monos*; G. *kyēsis*, pregnancy]. Pregnancy with but one fetus.

mon"o·cys'tic [*monos*; G. *kystis*, bladder]. Composed of, or containing, but one cyst.

mon'o·cyte [*monos*; G. *kytos*, cell]. A large mononuclear leukocyte with a more or less deeply indented nucleus, slate-gray cytoplasm, and fine, usually azurophilic granulation; synonymous with, or related to, the large mononuclear cell, transitional cell, resting wandering cell, clasmatocyte, endothelial leukocyte, or histiocyte of other classification. See Plates 26, 27. —**monocyt'ic,** *adj.*

mon"o·cy·to·poi·e'sis (mon"o·sigh·toe·poy·ee'sis) [*monos*; *kytos*; G. *haima*, blood]. Producing, or having the ability to produce, monocytes.

mon"o·cyt'ic se'ries. The cells concerned in the development of the adult monocyte. See *monoblast*, *promonocyte*.

mon"o·cy·to'ma. A rare tumor which may be derived from a stem cell of the reticular system.

mon"o·cy"to·pe'ni·a [*monos*; *kytos*; G. *penia*, poverty]. Diminution in the number of large mononuclear leukocytes in the peripheral circulation.

mon"o·cy·to'sis (mon"o·sigh·to'sis) [*monos*; *kytos*; G. -*ōsis* increase]. Increase in the number of large mononuclear leukocytes in the peripheral circulation.

mon"o·dac'ty·lism [*monos*; G. *daktylos*, finger]. The presence of only one toe or finger on the foot or hand.

mon"o·der'mo·ma. See *teratoma*.

mon"o·di·plo'pi·a [*monos*; G. *diploos*, double; *ōps*, eye]. Double vision with a single eye.

mon"o·dro'mal [*monos*; G. *dromos*, course]. Unidirectional conduction in muscle or nerve.

mo·nog'a·my [*monos*; G. *gamos*, marriage]. Marriage with only one person at a time.

mon"o·gas'tric [*monos*; G. *gastēr* belly]. Having one digestive cavity.

mon"o·ger'mi·nal [*monos*; L. *germen*, sprout]. Having or developing from a single ovum, as twins with but one chorionic sac.

mo·nog'e·ny [*monos*; G. *gonē*, offspring]. Asexual reproduction. Syn., *agamogony*, *agamocytogony*. —**monogeneous,** *adj.*

mon"o·hy'brid [*monos*; G. *hybris*, outrage]. An individual or type heterozygous in respect to a particular pair of genes.

mon"o·hy'drate. A crystal containing one molecule of water of crystallization. —**monohydrated,** *adj.*

mon″o·hy′dric. Containing one replaceable hydrogen atom, as a monohydric alcohol or a monohydric acid.

mon″o·hy′drol. Hydrol.

mon″o·i·de′ism (mon″o·eye·dee′iz·um) [*monos*; G. *idea*, idea]. A mental condition marked by the domination of a single idea; induced by suggestion or hypnosis, wherein an elementary idea or image is left isolated and is not synthesized or associated with other ideas or impressions. Persistent and complete preoccupation with one idea.

mon″o·i·o″do·a·ce′tic ac′id. CH_2ICOOH; colorless or white crystals, soluble in water. Salts of the acid markedly inhibit absorption of glucose through interference with the enzyme system involved in phosphorylation of glucose; the sodium salt is used in studies of carbohydrate metabolism. Also called *iodoacetic acid*.

mon″o·ke′tose. A ketose containing one CO group.

mon″o·loc′u·lar. See *unilocular*.

mon″o·ma′ni·a [*monos*; G. *mania*, madness]. A form of mental disorder in which the patient's thoughts and actions are dominated by one subject or one idea, as in paranoia. —**monomaniac,** *adj., n.*

mon″o·mel′ic [*monos*; G. *melos*, limb]. Pertaining to one limb, as monomelic hyperostosis.

m. hyperostosis. See *melorheostosis*.

mon′o·mer. The simplest molecular form of a substance, as *distinguished* from a *dimer* or from a *polymer*.

mon″o·mer′ic [*monos*; G. *meros*, part]. Consisting of a single piece or segment.

monomestrol. Trade-mark for the monomethyl ether of diethylstilbestrol, a white, crystalline powder practically insoluble in water but soluble in oil. It is employed as an estrogen. See *mestilbol*.

mon″o·mo′ri·a. Melancholia. *Obs.*

mon″o·mor′phic [*monos*; G. *morphē*, form]. Having or existing in only one form.

mon″o·mor′phous [*monos*; *morphē*]. Having a single form or the same appearance; not polymorphous.

mon″o·om·pha′lus [*monos*; G. *omphalos*, navel]. Conjoined twins with a common umbilical cord.

mon″o·neph′rous [*monos*; G. *nephros*, kidney]. Limited to one kidney.

mon″o·neu′ral [*monos*; G. *neuron*, nerve]. 1. Pertaining to a single nerve. 2. Receiving branches from but one nerve; said of muscles.

mon″o·neu·ri′tis [*monos*; *neuron*; G. *-itis*, inflammation]. Neuritis affecting a single nerve.

m. multiplex. Neuritis affecting simultaneously single nerves remote from each other.

mon″o·nu′cle·ar. Possessing only one nucleus.

mon″o·nu′cle·ar cell. A monocyte or a histiocyte. Occasional usage.

mon″o·nu·cle·o′sis [*monos*; L. *nucleus*, nut; G. *-osis*, condition]. A condition of the blood or tissues in which there is an increase in the number of large mononuclear leukocytes or monocytes above the normal.

infectious m. A communicable disease of unknown etiology, with fever, sore throat, generalized swollen lymph nodes, especially those of the posterior cervical area, and an increase in abnormal mononuclear cells. There may be a rubelliform eruption and enlargement of the spleen. Also called *Pfeiffer's disease*, *glandular fever*, *lymphocytic angina*, *monocytic angina*. Syn., *acute benign lymphoblastosis*.

mon″o·nu′cle·o·tide. A product obtained by hydrolytic decomposition of nucleic acid; it is a compound of phosphoric acid, a hexose or pentose, and a purine or pyrimidine base such as guanine, adenine, cytosine, or uracil.

mon″o·pa·re′sis (mon″o·pa·ree′sis, ·par′i·sis) [*monos*; G. *paresis*, paralysis]. Paresis of a single part of the body, as of one limb.

mon″o·pha′gi·a [*monos*; G. *phagein*, to eat]. 1. Desire for a single article of food. 2. The eating of a single daily meal.

mo·noph′a·gism [*monos*; *phagein*]. Habitual eating of a single article of food.

mon″o·pha′si·a (mon″o·fay′zhuh, ·zee·uh) [*monos*; G. *phasis*, utterance]. A form of aphasia in which speech is limited to a single syllable, word, or phrase.

mon″o·pha′sic (mon″o·fay′zick) [*monos*; *phasis*]. Having a single phase.

mon″o·pho′bi·a [*monos*; G. *phobos*, fear]. Morbid dread of being alone.

mon″o·phos′phate. A phosphate with but one atom of phosphorus in the molecule.

mon″oph·thal′mi·a [*monos*; G. *ophthalmos*, eye]. Congenital absence of one eye. Also called *unilateral anophthalmia*.

mon″o·phy·let′ic (mon″o·figh·let′ick) [*monos*; G. *phyletikos*, of a tribe]. Pertaining to or derived from a single original ancestral type; opposed to *polyphyletic*.

mon″o·phy′o·dont [*monos*; G. *phyein*, to grow; *odous*, tooth]. Having but a single set of teeth, the permanent ones.

mon″o·ple′gi·a [*monos*; G. *plēgē*, a stroke]. Paralysis of a single limb or of a single muscle or group of muscles. It is designated as brachial, crural, or facial, when affecting the arm, the leg, or the face, respectively; and as central or peripheral, according to the seat of the causal lesion.

mon″o·po′di·a [*monos*; G. *pous*, foot]. The condition of having but one lower limb.

strumoid m. Congenital absence of a lower limb in gastroschisis.

mon′o·ops. See *cyclops*.

mo·nop′si·a. See *monophthalmia*.

mon″o·psy·cho′sis (mon″o·sigh·ko′sis) [*monos*; G. *psychōsis*, a giving soul or life to]. Old term for monomania.

mon″o·ptych′i·al (mon″o·tye′kee·ul) [*monos*; G. *ptychē*, fold]. Arranged in a single layer, as the epithelial cells of some glands.

mon′o·pus [*monos*; G. *pous*, foot]. An individual with congenital absence of one foot or leg.

mon″o·ra·dic′u·lar [*monos*; L. *radicula*, small root]. Having only one root, said of teeth.

mon·or′chid (mon·or′kid) [*monos*; G. *orchis*, testis]. A person who has but one testis, or in whom only one testis has descended into the scrotum.

mon·or′chid·ism, mon·or′chism [*monos*; *orchis*]. Congenital absence of one testis. —**monorchid,** *adj.*

mon″o·rhi′nous [*monos*; G. *rhis*, nose]. Having a single median nasal cavity.

mon″o·sac′cha·ride (mon″o·sack′uh·ride, ·rid, ·ree) A carbohydrate which cannot be hydrolyzed to a simpler carbohydrate, hence called *simple sugar*; chemically a polyhydric alcohol having reducing properties associated with an actual or potential aldehyde or ketone group. It may contain 2–10 carbon atoms, and on this basis be classified as a triose, tetrose, pentose, hexose, heptose, octose, nonose, or decose. A diose, glycolaldehyde, is by some classed as a monosaccharide, but does not exhibit the characteristic properties of the class.

mon″o·scel′ous [*monos*; G. *skelos*, leg]. One-legged. *Rare.*

mon′o·ses. See *monosaccharide*.

mon″o·so′di·um glu′ta·mate. $HOOC.CH(NH_2)\text{-}CH_2CH_2COONa$. White or nearly white powder very soluble in water; possesses a meatlike taste.

Employed to impart meat flavor to foods and to enhance other natural food flavors. Syn. *sodium glutamate, MSG*

mon"o-so'ma-tous (mon"o-so'muh-tus, -so'muh-tus) [*monos*; G. *sōma*, body]. Pertaining to monstrosity involving a single individual.

mon'o-some [*monos*; *sōma*]. Accessory chromosome.

mon'o-so-mus [*monos*; *sōma*]. A double monster with a fused trunk and two heads.

Mon"o-spo-ri'um [*monos*; G. *sporos*, seed]. A genus of the Fungi Imperfecti. The species *M. apiospermum* and *M. sclerotiale* have been isolated in cases of white-grained mycetoma.

mon"o-ste'a-rin. Glyceryl monostearate.

mon"o-stot'ic. Involving only one bone.

mon"o-stra'tal [*monos*; L. *stratum*, covering]. Arranged in a single layer or stratum.

mon"o-symp"to-mat'ic [*monos*; G. *symptōmatikos*, accidental]. Having but one dominant symptom.

mon"o-ter'pene. A terpene having a composition represented by $C_{10}H_{16}$.

mon"o-ther'mi-a [*monos*; G. *thermē*, heat]. Evenness of body temperature.

mon"o'tic, mon-ot'ic [*monos*; G. *ous*, ear]. Pertaining to or affecting but one of the ears.

mo-not'o-cous [*monos*; G. *tokos*, childbirth]. Producing one young at a birth.

mo-not'ri-chous (mo-not'ri-kus), **mon"o-trich'ic** (mon"o-trick'ick) [*monos*; G. *thrix*, hair]. Characterizing a unicellular organism in which there is but one flagellum.

mon"o-trop'ic. Describing a substance occurring in one crystalline form only.

mon"o-va'lent, mo-nov'a-lent. See *univalent*.

mo-nox'e-nous [*monos*; G. *xenos*, host]. In *parasitology*, confined to a single species of host.

mon-ox'ide. 1. An oxide containing a single oxygen atom. 2. A popular name for carbon monoxide.

mon"o-zy-got'ic (mon"o-zye-got'ick, -go'tick) [*monos*; *zygōtos*, yoked]. Developed from a single fertilized egg or zygote, as identical twins.

Monro, Alexander (Primus) [*Scottish anatomist*, 1697-1767]. Described an intratendinous bursa of the olecranon (1726); called *Monro's bursa*. Is sometimes credited with describing the structures named for his son.

Monro, Alexander (Secundus) [*Scottish anatomist*, 1733-1817]. Made a study of the nervous system. Described the interventricular foramen, also called *foramen of Monro*, and the hypothalamic sulcus, also called *sulcus of Monro*.

mons (pl. *montes*) [L., mountain]. In *anatomy*, an eminence.

m. pubis. The eminence in front of the body and superior ramus of the os pubis.

m. veneris. The mons pubis of the female.

Monsel's salt. Ferric subsulfate.

Monsel's solution. Ferric subsulfate solution.

mon'ster [L. *monstrum*, evil omen]. A fetus (rarely an adult) which, through congenital faulty development, is incapable of properly performing the vital functions, or which, owing to an excess or deficiency of parts, differs markedly from the normal type of the species. See teratism. For a simplified classification of monsters, see Table in the Appendix. See Plate 25.

mon-stri-cide [*monstrum*; L. *caedere*, to kill]. The killing of a monster.

mon-strip'a-ra [*monstrum*; L. *parere*, to bring forth]. A woman who has given birth to one or more monsters.

mon-stros'i-ty [*monstrum*]. 1. The condition of being a monster. 2. A monster. See Plate 25.

mon'tan wax. A hard wax obtained by extraction of lignite; a dark-brown substance which becomes white on bleaching, insoluble in water, soluble in chloroform and carbon tetrachloride; a substitute for carnauba and beeswax.

Monteggia, Giovanni Battista [*Italian surgeon*, 1762-1815]. Dislocation of the hip toward the anterior superior iliac spine is known as *Monteggia's dislocation*. A fracture of the upper shaft of the ulna, associated with a dislocation of the head of the radius, is known as *Monteggia's fracture-dislocation*.

Montenegro's test. See under *test*.

Montgomery, William Fetherston [*Irish obstetrician*, 1797-1859]. Described epithelial depressions in the uterine mucosa; called *Montgomery's cups*. See also *areolar glands*, under *gland*; also called *Montgomery's tubercles* or *glands*.

mon-tic'u-lus [L., small mountain]. A small elevation.

m. cerebelli. The prominent central portion of the superior vermiform process of the cerebellum.

mont"mo-ril'lo-nite. $Al_2Si_4O_{10}(OH)_2.nH_2O$; the principal mineral constituent of bentonite and fuller's earth, occurring as a white or grayish to rose-blue claylike substance with a smooth, greasy texture.

mood [AS. *mōd*, mind]. In *psychology*, a sustained emotional or feeling tone, such as in mania or melancholia.

moogrol. Trade-mark for *ethyl chaulmoograte*.

Moon, Robert Charles [*American ophthalmologist*, 1844-1914]. With Laurence, described familial retinitis pigmentosa associated with general defective development (1866). See Laurence-Moon-Biedl *syndrome*.

Moon's molars. See *dome-shaped molars*, under *molar*.

Moore, Austin Talley [*American orthopedic surgeon*, 1899-]. Known for his device for maintaining position in intracapsular fractures. It consists of a large metal pin with threaded ends for holding a nut, the metal rod being passed through the cortical bone of the femur into the femoral head. Several pins are used, all joined by wire to prevent extrusion; called *Austin Moore pins*.

Moore, Charles Hewitt [*English surgeon*, 1821-70]. With Charles Murchison, introduced an operation for aneurysms in which a fine wire is introduced into the aneurysmal sac (1864). Formulated certain principles on which the modern surgical treatment of cancer is based (1867).

Moore, Robert Foster [*English ophthalmologist*, 1878-]. Introduced the treatment of neoplasms of the choroid by means of intraocular radon seeds (1930); called *Foster Moore technic*.

Moore, Thomas [*English biochemist*, 1900-]. Introduced a unit of vitamin A equal to 60 international units; called *blue unit of Moore*.

Moore's test. See under *test*.

Mooren, Albert [*German ophthalmologist*, 1828-99]. Rodent ulcer of the cornea is known as *Mooren's ulcer*.

Mooser test. See Neill-Mooser *test*.

mor-ad'e-ine (mor-ad'ee-een, -in). An alkaloid from the bark of *Pogonopus tubulosus*, of South America.

mor"a-men'ti-a (mor"uh-men'shuh). The state of being entirely without moral sense. *Obs.*

moranyl. A trade-mark for *suramin*.

Morax, Victor [*French ophthalmologist*, 1866-1935]. In the same year as Axenfeld, isolated *Hemophilus duplex*, also called *Moraxella lacunata, Morax-Axenfeld bacillus* (1896). Chronic conjunctivitis caused by this diplobacillus is known as *Morax-Axenfeld conjunctivitis*.

Mor"ax-el'la [after Victor *Morax*]. A genus of bacteria, family Parvobacteriaceae.

M. lacunata. The type species of the genus. It is a nonmotile, Gram-negative, short rod, occurring singly in pairs, or in short chains. Also called *Morax-Axenfeld bacillus.*

mor'bi (mor'bye) [L. *morbus,* disease]. Of a disease, as *materies morbi,* the agent producing a disease.

mor'bid [L. *morbidus,* diseased]. Pertaining to disease or diseased parts, as morbid anatomy, an old term for pathologic anatomy.

mor·bid'i·ty [*morbidus*]. 1. The quality of disease or of being diseased. 2. The conditions inducing disease. 3. The ratio of the number of sick individuals to the total population of a community.

mor·bid'i·ty rate. The number of cases of a specific disease in a calendar year in a given place per 100,000 actual or estimated population at the middle of the year.

mor·bif'ic [L. *morbus,* disease; *facere,* to make]. Old term for producing disease; pathogenic.

mor·bil'li (mor·bil'eye) [ML.]. Old term for measles. —**morbilliform,** *adj.*

mor'bus [L.]. Obsolete term for disease.

cholera m. See *cholera morbus.*

m. anglicus. Rickets.

m. arcuatus. Icterus.

m. caducus. Epilepsy.

m. caeruleus. Congenital cyanosis due to venoarterial shunt; also called *maladie bleu.*

m. cardiacus. See m. cordis.

m. castrensis. Classic epidemic typhus.

m. coeliacus. See *celiac disease.*

m. cordis. Chronic cardiac disease.

m. coxae. Hip disease; tuberculous coxitis.

m. cucullaris. Pertussis; whooping cough.

m. divinus. Epilepsy.

m. gallicus. Syphilis.

m. hungaricus. Classic epidemic typhus.

m. maculosus Werlhofi. See idiopathic thrombocytopenic purpura.

m. maculosus neonatorum. A fatal disease occurring during the first few days of life and consisting of hemorrhages in various parts of the body.

m. magnus. Epilepsy.

m. major. Epilepsy.

m. medicorum. The mania of those who seek the advice of physicians for imaginary diseases.

m. miseriae. Any disease due to poverty.

m. Pageti papillae. See Paget's *disease* (b).

m. phlyctenoides. Pemphigus.

m. pulicaris. Classic epidemic typhus.

m. regius. Jaundice.

m. sacer. Epilepsy.

m. saltatorius. Chorea.

m. vesicularis. Pemphigus.

m. virgineus. Chlorosis.

m. vulpis. Alopecia.

mor"cel·la'tion [F. *morceler,* to divide into pieces]. The act of reducing to fragments, as the fetus in embryotomy; the removal of a tumor or fetus piecemeal. Obs.

mor·da'cious [L. *mordax,* biting]. Biting, pungent.

mor'dant [L. *mordere,* to bite]. A substance, such as alum, phenol, aniline oil, that fixes the dyes used in coloring textiles or in staining tissues and bacteria.

Morel, Ferdinand [French psychiatrist, 1855–]. Described as a stigma of degeneracy a large prominent ear in which the ridges and grooves appear to have been obliterated; called *Morel ear.* Metabolic craniopathy is known as *Morel's syndrome, Morgagni's syndrome, Stewart-Morel syndrome* (for Morel and R. M. Stewart). Dementia praecox is also called *Morel-Kraepelin disease.*

Morgagni, Giovanni Battista [*Italian anatomist and pathologist,* 1682–1771]. Considered the founder of the science of pathologic anatomy. Described aortic insufficiency, mitral stenosis, and angina pectoris (1761). Gave a classic description of heart block (1761), called *Morgagni's disease, Stokes-Adams syndrome.* Metabolic craniopathy is known as *Morgagni's syndrome.* Small mucous glands in the male urethra are known as the *glands of Morgagni* or *Littré's glands,* and their orifices are called the *lacunae of Morgagni.* The middle lobe of the prostate is called *Morgagni's caruncle.* The *columns of Morgagni* are the vertical folds of the rectum. The spaces between them just above the anal canal are known as the *sinuses of Morgagni;* here the columns join to form the *valves of Morgagni.* The term *sinus of Morgagni* also refers to the space between the upper border of the levator veli palatini and the base of the skull; this is closed by the pharyngeal aponeurosis. The laryngeal ventricle is known as the *ventricle of Morgagni.* The superior nasal concha is called *Morgagni's concha.* See also Morgagnian *cataract, hydatid* of Morgagni, *foramen* of Morgagni.

Morgan, Thomas Hunt (1866–1945). American geneticist who discovered the function of chromosomes in heredity; his studies of Drosophilae provided evidence that the chromosomes actually bear the genes. Nobel laureate in medicine and physiology (1933).

Morgan's bacillus. See *Proteus morganii.*

morgue [F.]. 1. A place where unknown dead are exposed for identification. 2. A place where dead bodies are stored pending disposition.

mo'ri·a [G. *mōria,* folly]. 1. A dementia characterized by talkativeness and silliness. 2. A morbid desire to joke.

mor'i·bund [L. *moribundus,* dying]. In a dying condition.

Morison, James Rutherford [*English surgeon,* 1853–1939]. With David Drummond, devised an operation of omentopexy to relieve ascites in cirrhosis of the liver by establishing collateral circulation (1896). A similar technic was introduced independently by Talma (1898). The operation is known as the *Morison-Talma* or *Talma-Morison operation.* Also see *hepatorenal pouch.*

Mörner's reagent. See under *reagent.*

morn'ing sick'ness. Nausea and vomiting occurring on arising, an early symptom of pregnancy.

Moro reflex. See under *reflex.*

Moro test. See under *test.*

mo'ron [G. *mōros,* dull, stupid]. One afflicted with moronity.

mo·ron'i·ty [*mōros*]. The highest grade of mental deficiency in which the subject's mental age is from 7 to 12 years and his I.Q. between 50 and 74. Syn., *morosis.*

mo·ro'sis. See *moronity.*

mor·phe'a [G. *morphē,* form]. Localized scleroderma.

mor'phi·a. See *morphine.*

mor'phine (mor'feen, ·fin, mor·feen') (*morphina*) $C_{17}H_{19}NO_3.H_2O$. Discovered by Sertürner in 1806. A colorless or white crystalline alkaloid obtained from opium, to which the chief effects of the latter are due. Differs from opium in being less constipating, and less likely to produce disagreeable aftereffects. Frequently acts as an allergen. Because of its insolubility in water morphine is used principally in the form of its salts. Dose, of morphine salts, 0.008–0.032 Gm. (⅛–½ gr.)

m. acetate. $C_{17}H_{19}NO_3.C_2H_4O_2.3H_2O$. Once popular but now rarely used because of its instability.

m. hydrochloride (*morphinae hydrochloridum*) $C_{17}H_{19}NO_3.HCl.3H_2O$. A morphine salt much used in Great Britain but not in the United States.

m. stearate. $C_{17}H_{19}NO_3.C_{17}H_{35}COOH$, contains 50% of morphine; used in oil or fat vehicles.

m. sulfate (*morphinae sulfas*) $(C_{17}H_{19}NO_3)_2 \cdot H_2SO_4 \cdot 5H_2O$; in this country the most frequently prescribed morphine salt.

m. tartrate. $(C_{17}H_{19}NO_3)_2 \cdot C_4H_6O_6 \cdot 3H_2O$ formerly official in the British Pharmacopoeia recommended for hypodermic use because it is slightly more soluble in water than either the hydrochloride or the sulfate.

mor'phin·ism [G. *Morpheus*, god of dreams]. 1 The condition caused by the habitual use of morphine. 2. The morphine habit.

mor"phi·no·ma'ni·a, mor"phi·o·ma'ni·a [*Morpheus*; G. *mania*, madness]. A morbid craving for morphine.

mor"pho·bi·om'e·try. The statistics of the shape, size, and structure of living things or parts thereof. —morphobiomet'ric, *adj.*

mor"pho·gen'e·sis [G. *morphē*, form; *genesis*, production]. The morphologic transformations including growth, alterations of germinal layers, and differentiation of cells and tissues during development. Also called *topogenesis*. —morphogenet'ic, *adj.*

mor·phog'e·ny. See *morphogenesis*.

mor'pho·line. C_4H_9NO, tetrahydro-1,4 *2H*-oxazine, colorless, hygroscopic, oily base with an ammonialike odor possessing caustic alkaline properties, soluble in water and miscible with organic solvents, used as solvent for resins, waxes, shellac, and dyestuffs.

mor·phol'o·gy [*morphē*; G. *logos*, word]. The branch of biology which deals with structure and form. It includes the anatomy, histology, and cytology of the organism at any stage of its life history. —morpholog'ic, morpholog'ical, *adj.*; morphol'ogist, *n.*

mor·phom'e·try [*morphē*; G. *metron*, measure]. The measurement of the forms of organisms.

Morquio, Luis (1867-1935). Uruguayan physician known for his description (1929) of chondroosteodystrophy, also called *Morquio-Brailsford disease*.

mors [L.]. Death.

m. putativa. Apparent death.

m. subita. Sudden death.

mor'sal [L. *morsus*, biting]. Relating to the cutting or grinding portion of a tooth; occlusal.

Morson's naphthine. See British *scarlet*.

mor'sus [L.]. A bite.

m. stomachi. See *cardialgia*.

m. ventriculi. See *cardialgia*.

mor'tal [L. *mortalis*, mortal]. Liable to death or dissolution; terminating in death; causing death; deadly.

mor·tal'i·ty [L. *mortalitas*, mortality]. 1. The quality of being mortal. 2. The death rate.

mor'tar [L. *mortarium*, large basin or trough in which mortar is made]. An urn-shaped vessel of porcelain, iron, or glass used for pulverizing substances by means of a pestle.

mor"ti·fi·ca'tion. Old term for gangrene.

mor"ti·na·tal'i·ty [L. *mors*, death; *natalis*, natal]. The stillbirth rate.

Morton, Dudley J. (1884-). American orthopedist who described Morton's *syndrome*.

Morton, Thomas George (1835-1903). American surgeon who described a specific type of metatarsalgia.

Morton, William Thomas Green [*American dentist*, 1819-68]. Independently of Crawford W. Long, discovered the anesthetic properties of sulfuric ether and demonstrated its value first in tooth extraction and later in a surgical operation performed by John Collins Warren (1846). Sometimes called the discoverer of ether anesthesia, although probably the credit should go to Long.

mor'tu·ar"y (mor'choo-err ee) [L. *mortuarium*, of the dead]. A morgue.

mor'tu·ar"y. Relating to death or burial.

mor'u·la (mor'yoo·luh, mor'oo·luh) [dim. from L. *morum*, mulberry]. A type of solid blastula, without a blastocoele but having central cells not reaching the free surface. Frequently used, incorrectly, for the late cleavage stage of the mammalian ovum.

Mo'rus. See *mulberry*.

Morvan, Augustin Marie [*French physician*, 1819-97]. Described a form of syringomyelia characterized by atrophy and analgesic paralysis of the forearms and hands and by paronychia; called *analgesic panaris*, *Morvan's disease*.

mor·vin. See *mallein*.

moryl. Trade-mark for carbachol.

mo·sa'ic [ML. *musaicus*, from G. *Mouseios*, belonging to the Muses]. 1. A pattern made on a surface by the assembly and arrangement of many small pieces. 2. *I. genetics*. an individual with adjacent tissues of different genetic constitution, as a result of mutation, somatic crossing over, or chromosome elimination. 3. *I. embryology*. an egg in which the cells of the early cleavage stages have already a type of cytoplasm which determines its later fate. See *regulative*. 4. *I. plant pathology*. a plant infected with a virus which produces a characteristic spotting, as in tobacco mosaic disease.

mo·sa'ic bone. Microscopically bone appearing as though formed of small pieces fitted together due to cement lines indicating regional alternating periods of osteogenesis and osteoclasis; characteristic of Paget's disease.

mo·sa'ic fun'gus. See under *fungus*.

Moschcowitz, Alexis Victor [*American surgeon*, 1865-1933]. Introduced improvements in the technic of the operation for femoral hernia by the inguinal approach. Devised an operation for rectal prolapse in which an abdominal approach is made and the rectum is sutured to the pelvic fascia to obliterate the cul-de-sac. Each operation is called *Moschcowitz's operation*.

Moschcowitz, Eli [*American physician*, 1879-]. Contributed to the knowledge of sclerosis of arteries and veins. Made important studies of the natural history of disease.

Mosenthal test. See under *test*.

Mosetig-Moorhof, Albert von [*Austrian surgeon*, 1838-1907]. Introduced iodoform dressings in surgery (1882). Introduced a bone wax consisting of iodoform, spermaceti, and sesame oil; called *Mosetig-Moorhof bone wax*.

mos·qui'to [Sp., from L. *musca*, fly]. An insect of the family Culicidae.

Moss, William Lorenzo [*American hematologist*, 1876-]. Independently of Janský demonstrated that human blood can be classified in four groups (1910); see *blood groups*.

moss [ME. *mos*]. Low green bryophytic plants of the class Musci.

Ceylon m. See *agar*, 1.

club m. See *lycopodium*.

Iceland m. See *Cetraria*.

Irish m. See *Chondrus*.

rei·ndeer m. *Cladonia rangiferina*.

Mossman fever. A fever noted among agricultural workers in the Mossman District of Australia. It is transmitted by a mite of the genus *Trombicula*, and is characterized by swelling of the inguinal lymph nodes.

Mosso, Angelo [*Italian physiologist*, 1846-1910]. Made many contributions to the knowledge of physiology. Introduced an ergograph for the study of voluntary contraction of muscle (1890).

Made important studies in fatigue (1891). Engaged in researches on the action of respiration at high altitudes (1897). Inventor of a sphygmomanometer (1895).

mos'sy foot. See *chromoblastomycosis*.

Moszkowicz, Ludwig [*Austrian surgeon*, 1873–]. Devised a test to determine the proper site for amputation of a limb, as in gangrene. The limb is elevated until pallor is observed. An elastic bandage or a tourniquet is then applied as high as possible on the limb, to obstruct the artery, and is left in place for a few minutes. When the bandage or tourniquet is removed, a hyperemic blush spreads rapidly over the well-vascularized areas, but pallor persists where the blood supply is inadequate. Amputation should not be performed within the paler areas. Called *Moszkowicz test*, *hyperemia test of Moszkowicz*.

Motais, Ernst [*French ophthalmologist*, 1845–1913]. Devised an operation for ptosis in which the middle portion of the tendon of the superior rectus muscle of the eyeball is transplanted into the eyelid; called *Motais' operation*.

moth'er [AS. *modor*]. 1. A female parent. 2. The source of anything.

moth'er [MD. *modder*, filth]. A slimy film formed on the surface of fermenting liquid, as on vinegar.

moth patch, **m.** Chloasma. *Obs.*

mo'tile (mo'til) [L. *motum*, from *movere*, to move]. Able to move; capable of spontaneous motion, as motile flagellum.

mo·til'i·ty [*motum*]. Ability to move spontaneously.

gastric m. The movements of the stomach walls, including those caused by gastric secretions and peristalsis.

mo'tion [L. *motio*, from *movere*]. 1. The act of changing place; movement. 2. An evacuation of the bowels; the matter evacuated.

passive m. The movement produced by external agency and not by the person himself.

vermicular m. Peristalsis.

mo'tion sick'ness. A syndrome characterized by nausea, vertigo, and vomiting; occurs as the result of the motion of a ship, airplane, train, or automobile. See *airsickness*, *seasickness*.

mo"to·neu'ron. See *motor neuron*.

mo·to·neu"ro·ni'tis. See *Guillain-Barré syndrome*.

mo'tor [L., from *movere*]. That which causes motion.

club m. See *plastic m.*

knob m. See *plastic m.*

loop m. See *plastic m.*

m. end-plate. Myoneural junction. An area of specialized structure beneath the sarcolemma where a motor nerve fiber makes functional contact with a muscle fiber.

m. neuron. See under *lower neuron*.

m. oculi. The third cranial or oculomotor nerve supplying all the extrinsic muscles of the eye except the superior oblique and lateral rectus. *Obs.*

m. points. The points on the surface of the body where the various branches of the motor nerves supplying the muscles may be excited by electric stimuli.

plastic m. A tissue motor fashioned from muscle or tendon covered with skin, in the form of a knob, loop, or tunnel to which is attached a loop or ring; devised in certain kineplastic amputations and used in connection with a prosthesis, notably in amputations of the upper extremity. Where the point of attachment is a knob, it is known as a club motor; where the attachment is formed by joining opposing tendons and muscles, it is called a loop motor; where it is in the form of a tunnel through the muscle, it is referred to as a tunnel motor.

tunnel m. See *plastic m.*

mo'tor. Pertaining to or involving motion, as motor cell, motor center, motor nerve.

Mott, Frederick Walter (1853–1926). English neurologist who demonstrated the thalamic connections of the medial lemniscus, and showed that the projection of impulses from each ear was bilateral.

Mott, Valentine [*American surgeon*, 1785–1865]. Known for his vascular and bone surgery. Ligated the innominate artery (1818). Ligated the carotid artery for tumor of the jaw (1833). Ligated the common iliac artery (1827) and the subclavian (1831). Amputated successfully at the hip joint (1824).

mot'tled en·am'el. A dappled condition of the teeth caused by hypocalcification or hypoplasia with or without later extraneous staining; chronic dental fluorosis.

mot'tling [L. *mustela*, weasel]. A spotted condition.

mouches vo·lantes. See *muscae volitantes*.

mou"lage' (moo"lahzh') [F.]. A mold or cast made directly from any portion of the body, used especially to show a surface lesion or defect.

mould. See *mold*.

mound [D. *mond*, protection]. An elevation.

anal m., *I* *embryology*, a mound produced by the anterior median union of the anal tubercles.

mound'ing [*mound*]. The rising in a lump of muscle fibers when struck by a slight, firm blow. It is observed in the thin and feeble, and in certain diseases, as pulmonary tuberculosis and advanced locomotor ataxia. See *myoedema*.

moun'tain balm. *Eriodictyon californicum.*

moun'tain sick'ness. See *chronic mountain sickness* under *sickness*.

moun'tant [F. *montant*, from *monter*, to rise]. Any medium such as balsam or glycerin in which histological sections or specimens are embedded on slides for microscopic study. Syn. *mounting medium*.

mouse pox'. A contagious disease of mice characterized by a puffy appearance about the face and inflammation of the foot pads. At autopsy the liver is pale and mottled; the proximal portion of the small intestine is hemorrhagic and there is pulmonary congestion and consolidation. The disease is highly contagious, and is usually fatal.

mouth [AS. *muth*]. 1. The commencement of the alimentary canal; the cavity in which mastication takes place. In a restricted sense, the aperture between the lips. 2. The entrance to any cavity or canal.

primitive m. See *blastopore*.

trench m. Vincent's stomatitis.

mouve·ment' de ma·nège' (moov·mahn' deh ma·nezh'. See Notes §35) [F.]. The movement of the trunk to the same side as that on which a unilateral lesion has been produced experimentally in the frontal lobe, in front of the areas controlling the arm, face, and jaw.

move'ment [L. *movere*, to move]. The act of moving.

accessory m. See *synkinesis*.

active m. Movement effected without any outside help.

ameboid m. A movement produced in certain cells, as the white blood cells, by the protrusion of processes of the cytoplasm into which the whole cell then seems to flow; so called from the resemblance of the movement to that of the ameba.

angular m. The movement between two bones that may take place forward or backward, inward or outward.

associated automatic m. See *synkinesis*.

associated movements. Synergic, coincident, or consensual movements of muscles other than th

leading one, which are involuntarily connected with its action; as in reading both eyeballs move alike although one eye may be blind.

bowel m. Lay term for: (a) the evacuation of feces; an act of defecation; (b) the feces evacuated by defecation; stool.

Brownian m. A physical phenomenon, a form of communicated motion observed in aggregations of minute particles, and consisting of a rapid oscillating movement without change of the relative position of the moving particles. Also called *pedesis*.

ciliary m. A lashing movement produced by delicate hairlike processes termed cilia, as on the epithelium of the respiratory tract and in certain microorganisms.

circus m. Rapid, circular movement, or somersaults, produced by injury on one side to some part of the posture-controlling mechanisms of the nervous system, as the vestibular apparatus or the cerebral peduncles.

dead beat m. A movement of the string of the electrocardiograph which shows no preliminary overshooting of its proper mark.

eccentric m. Any movement of the mandible away from centric occlusion.

fetal m. The movement of the fetus in the uterus.

forced m. Movement of the body from injury of the motor centers or the conducting paths.

gliding m. The simplest movement that can take place in a joint, one surface gliding or moving over another without any angular or rotatory movement.

idiomuscular m. Unconscious movement when the attention is otherwise absorbed.

index m. Movement of the cephalic part of the body about the fixed caudal part.

molecular m. See Brownian m.

passive m. Movement effected by the aid of some outside agency.

percussion movements. *In massage*, a series of blows delivered to the surface of a region in rapid succession, called beating, clapping, hacking, slapping, and tapping. Syn. *tapotement*.

rolling m. The rolling of an animal on its long axis.

segmenting m. Of the small intestine. Spaced constrictions of the intestinal lumen at successive points along the intestine, acting to expose repeatedly new surfaces of the intestinal contents to the action of digestive juices.

Swedish m. Kinesitherapy. See *kinesiatrics*.

synkinetic m. See *synkinesis*.

vermicular m. Peristalsis.

mox'a [J. p. *mee kusa*, burning herb]. A combustible material which is applied to the skin and ignited for the purpose of producing an eschar or counterirritant. It is made with the down of dried leaves of several species of *Artemisia*. **Artificial moxa** is made from cotton saturated with niter.

electric m. A faradic brush used as an active electrode upon dry skin.

Moynihan, Berkeley George Andrew [*English surgeon*, 1865–1936]. Introduced several procedures in gastrointestinal surgery. Devised a clamp called *Moynihan clamp*. Hunger pain three or more hours after eating, indicative of duodenal ulcer, is known as *Moynihan symptom complex*.

Mo zam bique' ul'cer See tropical *ulcer*.

m.p. Melting point.

MPI Multiphasic personality inventory. See *Minnesota multiphasic personality inventory* under *test*.

M. R. C. Medical Reserve Corps.

M. R. C. P. Member of the Royal College of Physicians.

M. R. C. P. E. Member of the Royal College of Physicians of Edinburgh.

M. R. C. P. I. Member of the Royal College of Physicians of Ireland.

M. R. C. S. Member of the Royal College of Surgeons.

M. R. C. S. E. Member of the Royal College of Surgeons of Edinburgh.

M. R. C. S. I. Member of the Royal College of Surgeons of Ireland.

M. R. C. V. S. Member of the Royal College of Veterinary Surgeons.

mrd Millirutherford.

M. S. Master of Surgery. Master of Science.

M. Sc. Master of Science.

MSG Monosodium glutamate.

MSH Melanocyte-stimulating hormone.

MsTh Mesothorium-1.

MsTh₂ Mesothorium-2.

M. U., M. u. Mache unit.

m. u. Mouse unit.

Much, Hans Christian R. (1880–1932) German physician who described Gram-positive, nonacid-fast granules, seen in sputum, which he believed to be modified tubercle bacilli, called *Much bacilli*, or *granules*. With Holzmann, he claimed that the serum of dementia precox patients inhibited hemolysis by cobra venom; this is called the *Much-Holzmann reaction*.

mu cic acid COOH.HCOH.HOCH.HOCH.HCOH.COOH; the dibasic acid resulting from oxidation of D-galactose or from carbohydrates yielding this sugar. Syn., *D-galactosaccharic acid*.

mu·cif'er·ous [L. *mucus*, mucus; *ferre*, to bear]. Producing or secreting mucus.

mu ci gen [mucus; G. *gennaein*, from *gignesthai*, to be produced]. A substance producing mucin. It is contained in epithelial cells that form mucus. —**mucig'enous**, *adj.*

mu ci lage (mew'si lidj) [mucus]. *In pharmacy*, a solution of a gum in water. Mucilages (mucilagines) are employed as applications to irritated surfaces, particularly mucous membranes, as excipients for pills, and to suspend insoluble substances. The most important are **acacia mucilage** and **tragacanth mucilage**. —**mucilag'inous**, *adj.*

mu"ci la go. See *mucilage*.

mu cin [mucus]. A mixture of glycoproteins that forms the basis of mucus. It is soluble in water and precipitated by alcohol or acids. —**mucinous**, *adj.*

gastric m. Trade name for a product made from hog stomach linings and intended for use in the treatment of peptic ulcers as a demulcent and adsorbent.

mu cin o-blast", **mu-cin o-blast** [mucus; G. *blastos*, germ]. The cell which forms a mucous cell.

mu cin o-gen [mucus; G. *gennaein*, from *gignesthai*, to be produced]. The antecedent principle from which mucin is derived.

mu cin-oid [mucus; G. *eidos*, form]. 1. Resembling mucin. 2. Mucoid.

mu-cip a rous [mucus; L. *parere*, to bring forth]. Secreting or producing mucus.

mu'co-, muc- [mucus]. A combining form denoting *relation to mucus or mucous membrane*.

mu"co-al bu'min ous. See *mucoserous*.

mu co-cele [mucus; G. *kēlē*, tumor]. 1. A mucous tumor. 2. An enlarged lacrimal sac.

mu"co-co li'tis. See mucous *colitis*.

mu"co-col'pos [mucus; G. *kolpos*, vagina]. A collection of mucus in the vagina.

mu co-cu ta ne-ous [mucus; L. *cutis*, skin]. Pertaining to a mucous membrane and the skin, and to the line where these join.

mu'co-derm [mucus; G. derma, skin]. The tunica propria of a mucous membrane. Obs.

mu"co-en"te-ri'tis [mucus; G. enteron, intestine; -itis, inflammation]. Inflammation of the mucous membrane of the intestine.

mu"co-hem"or-rhag'ic (mew"ko-hem-o-radj'ick) [mucus; G. haimorrhagikos, liable to bleeding]. Related to, or accompanied by, mucus and blood.

mu'coid [mucus; G. eidos, form]. Resembling mucus.

mu'coids [mucus; eidos]. A group of glycoproteins, differing from true mucins in their solubilities and precipitation properties. They are found in cartilage, in the cornea and crystalline lens, in white of egg, and in certain cysts and ascitic fluids.

mu-co'i-tin-sul-fu-ric ac'id. A component of the mucin of saliva; on hydrolysis, yields sulfuric acid, glucuronic acid, glucosamine, and acetic acid.

mu-con'ic ac'id. HOOC.CH:CH.CH:CH.COOH. An oxidation product of benzene resulting from detoxication of the latter in the animal body.

mu"co-per"i-os'te-um [mucus; G. periosteos, around the bones]. Periosteum with a closely associated mucous membrane.

mu"co-pol"y-sac'cha-ride. A polysaccharide containing an amino sugar as well as uronic acid units.

mu"co-pro'te-in. A glycoprotein, particularly one in which the sugar component is chondroitinsulfuric or mucoitinsulfuric acid.

mu"co-pu'ru-lent [mucus; L. purulentus, purulent]. Containing mucus mingled with pus.

mu"co-pus' [mucus; L. pus, pus]. A mixture of mucus and pus.

Mu'cor [L., moldiness]. A genus of the class Phycomycetes, including fungi, which produce nonseptate mycelium. The genus includes some of the black bread molds; species are secondary invaders but rarely primary invaders and are also common allergens. Also called Absidia.

mu"co-rif'er-ous [mucor; L. ferre, to bear]. Covered with a moldlike substance.

mu'cor-in [mucor]. An albuminoid substance from many species of the mucorinous molds.

mu"cor-my-co'sis (mew"kor-migh-ko'sis) [mucor; G. mykēs, fungus; -ōsis, condition]. An infection with certain species of the fungus Mucor. Species of this genus have been reported in cases of paronychia, otomycosis, and pulmonary lesions. These organisms are common secondary contaminants and seldom produce disease.

mu-co'sa [L. mucosus, mucous]. A mucous membrane; tunica mucosa. —mucosal, adj.

alveolar m. The vestibular mucous membrane between the attached gingiva and the fornix of the vestibule of the mouth.

mu"co-san-guin'e-ous (mew"ko-sang-gwin'ee-us) [L. mucus, mucus; sanguis, blood]. Consisting of mucus and blood.

mu"co-se'rous [mucus; L. serum, whey]. Mucous and serous; containing mucus and serum.

mu'co-sin [mucus]. A term suggested for mucin from nasal, uterine, and bronchial mucous membranes, because of their special viscous properties, as contrasted with mucins from other regions.

mu"co-si'tis. Inflammation of mucous membranes.

mu-cos'i-ty [L. mucosus, mucous]. Sliminess.

mu"co-stat'ics. In dentistry, a method of obtaining an impression with minimum displacement or distortion of the oral mucosa.

mucotin. A trade-mark for an antacid composition known by the generic name almagucin.

mu'cous [L. mucus, mucus]. Relating to mucus; secreting mucus, as mucous gland; depending on the presence of mucus, as mucous rales.

mu"co-vis-ci-do'sis. See pancreatic fibrosis.

mu-cro-nate [L. mucronatus, pointed]. Tipped with a sharp point.

mu-cu-lent [L. muculentus, sniveling]. Rich in mucus. Rare.

Mu-cu'na [Tupi mucuná]. A genus of leguminous herbs. The hairs of the pods of Stizolobium pruriens (cowage) were formerly used as a vermifuge and counterirritant.

mu'cus [L.]. The viscid liquid secreted by mucous glands. It consists of water, mucin, inorganic salts, epithelial cells, leukocytes, etc., held in suspension.

Mueller, Paul [Swiss research chemist, 1899–]. In 1939 he discovered the insecticidal action of DDT, for which work he was awarded the Nobel prize in physiology and medicine in 1948.

Mueller's snake. See Pseudechis muelleri.

mu"guet' (mew-gay'. See Notes § 35) [F.]. Thrush.

mu-i-ra-pu-a-ma (mooee-rah-poo-ah-mah, -ma uh). The dried root of Liriosma ovata. Used by the Brazilian aborigines in dysentery and as an aphrodisiac.

mu-laire. A subcutaneous lesion occurring in verruga peruana which presses against the skin, finally eroding it. This lesion looks very much like that produced by the same disease in mules.

mul'ber-ry [ME. mulberie, from G. moron, mulberry]. A tree of the genus Morus. M. nigra is the source of a juice or a syrup used as a drink in fevers and added to gargles in pharyngitis. The leaves of M. alba are used as food for silkworms.

m. calculus. See mulberry calculus.

m. mark. Nevus.

m. mass. See morula.

Mulder's test. See xanthoproteic test.

mu"li-e'bri-a (mew"lee-ee'bree-uh, -eb'ree-uh) [L. muliebris, of a woman]. The female genitals.

mu"li-eb'ri-ty [L. muliebritas, from muliebris]. 1. Womanliness. 2. Puberty in the female. 3. Assumption of female qualities by the male.

mul'lein (mul'in). See Verbascum.

Müller, Carl (1886–). Norwegian physician known for describing Müller's syndrome.

Müller, Heinrich [German anatomist, 1820–64]. Discovered visual purple (1851). Demonstrated electric current in contraction of frog's heart (1856). See also Müller's fibers.

Muller, Hermann Joseph [American geneticist, 1890–]. Known for his research on the artificial transmutation of genes by means of roentgen rays. Nobel laureate (1946).

Müller, Johannes [German anatomist and physiologist, 1801–58]. A pair of embryonic ducts on the external surface of the mesonephric ducts are called Müllerian ducts. In the female they become the oviducts and vagina, the lower extremity becoming the hymen. In the male they leave vestiges, the prostatic utricle and the appendices testis. See also utricle. Discovered chondrin and glutin (1837). See also Müller's tubercle. See law of Müller; law of specific energies of nerve.

Müller, Leopold [Czechoslovakian ophthalmologist, 1863–1936]. Remembered for his description of an operation for retinal detachment, in which he resected the sclera; called Müller's operation. See muscle of Müller.

Müller, Otto Friedrich [Danish microscopist, 1730–84]. Made a systematic classification of bacteria. Said to have coined the terms bacillus and spirillum.

Müller, Rudolf [Austrian dermatologist, 1877–1934]. Introduced a complement-fixation reaction, with Maurice Oppenheim, used in the diagnosis of gonorrhea; called Müller-Oppenheim reaction.

Müller's fixing fluid. See under fixing fluid.

Müller's test. See under test.

mul-tan'gu-lum [L. multus, many; angulus, angle]. A bone with many angles. Also called multangular

m. major. The trapezium lateral carpal bon of the distal row Also called *greater multangular* See T bl of Bones in the Appendix.

m. minus. Th trapezoid bone second carpal bone of the distal row Also called *lesser multangular* See Tabl of Bones in the Appendix.

mul'ti- [*multus*] 1. A combining form meaning many much. 2. *I medicine*, combining form signifying *fecting many parts*.

mul"ti-cap su lar [*multus*, L. *capsula*, little box]. *I biology* composed of many capsules.

mul"ti cel'lu la [*multus*; L. *cellula*, small storeroom] H ving many cells.

Mul'ti ceps [*multus*; L. *caput*, head]. A genus of tapeworms.

M multiceps. A species which in its larval form causes gid in sheep nd also infest other herbivorous animals. H ma infestation is rare.

M. serialis. A species hich in its adult form infests the intestinal tract of the dog. Human infestation is rare.

mul"ti-cos'tate [*multus*; L. *costa*, rib] H ving many ribs.

mul"ti-cus pid [*multus*; L. *cuspis*, point]. H ving several cusps, as the molar teeth. Also called *multicuspidate*

mul"ti den'tate [*multus*; L. *dentatus*, toothed]. Having many teeth or toothlike processes.

mul"ti-dig'i tate (mul ti-didj'i tate) [*multus*; L. *digitatus*, having fingers or toes]. H ving many digits or digitat processes.

mul"ti fa mil'i l [*multus*; L. *familia*, family]. Attacking several successive generations of family as certain diseases.

mul"ti fe ta tion. See *superfetation*.

mul'ti fid [L. *multifidus*, divided into many parts]. Divided into many parts.

mul tif'i dus. A deep muscle of the back. See Table of Muscles in the Appendix.

m. spi ae Multifidus muscle old term.

mul"ti flag'el late (mul ti-fladj late) [L *multus*, many; *flagellare*, to whip] H ving many flagella.

m l'ti form [*multus*; L. *forma*, form]. Polymorphic.

mul"ti gan gli on ate [*multus*; G. *ganglion*] H v ing many ganglions.

m l"ti glan'du lar [*multus*; L *glandulae*, glands of the throat]. Pertaining to several glands, as multiglandular secretions, mixture of secretions from two or more glands.

mul"ti grav'i da [*multus*, L. *gravidus*, pregnant]. A pregnant woman ho has had two or more previous pregnancies

mul"ti in fec tion [*multus*; L. *infectio*, from *inficere*, to infect] A mixed infection.

mul"ti lo'bar mul"ti lo'bate, mul"ti lob ed [*multus*, G *lobos*, lobe]. Composed of many lobes

mul"ti lob u lar [*multus*, *lobus*]. Having many lobules.

mul"ti loc'u lar [*multus*; L *loculus*, little place]. Many-celled polycystic

mul"ti mam mae (mul ti-mam ee) [*multus*; L. *mamma*, breast]. Polymastia; the presence of more than two breasts in human being *Obs*

mul"ti nod u lar [*multus*; L. *nodulus*, little knot]. Having many nodules.

mul"ti nu'cle ar mul"ti nu cle ted [*multus*; L. *nucleus*, t]. Having two or more nuclei

mul tip ra [*multus*; L *parere*, to bring forth]. A pregnant woman who has already borne one or more children.

mul"ti par'i ty (mul ti par'i-tee) [*multus*; *parere*]. The condition of having borne several children. —**multip arous**, *adj*

mul'ti ple [L *multiplex*, that has many folds] Manifold affecting many parts at the same time, as multiple sclerosis.

mul"ti po'lar [L. *multus*, many; *polus*, pole]. Ha i g more than one pole as multipolar nerve cells, those having more than one process.

mul"ti va'lent, mul tiv' lent [*multus*; L. *valere* t be strong]. Capable of combining with more than one atom of univalent element.

mum mi fi ca tion [Ar *mûmiya*, mummy from Per *mûm* wax; L. *facere* to make]. The change of part into hard, dry mass dry gangrene.

mum mi fied [*mûmiya*, *facere*]. Dried, as mummified pulp, the condition f the dental pulp when it is affected by dry gangrene.

mumps [E. dial., m mp lump or bump]. An acute infectious disease caused by virus characterized by swelling of the parotid and at times of the other salivary glands as well as the pancreas, ovaries, and testes. After period of incubation of from two to three weeks, the disease begins with fever pain below the ear and swelling of the parotid gland. I the course of week, the swelling subsides without suppuration. One ttack usually confers immunity Syn., *epidemic parotitis*

metastatic m. Complication involving organs other than the salivary glands, such as the testis or ovary

Münchmeyer [*German physician*, nineteenth century]. Described progressive ossifying myositis (1869); also called *Münchmeyer disease*

mun-dif'i-cant [L. *mundificare*, to make clean]. H vi g the power to cleanse, purge, or heal. —**m ndif'icant**, n.

Mu di us. See *Mond no de Luzzi*.

Munsell Hazel E. (1891) American chemist who, with H C. Sherman, introduced the rat growth t, called the *Sherman-Munsell unit*.

Munson-Walker values. Standard values for the quantitative measurement of sugar concentration.

mu on. The m meson.

mu ral [L. m rus, wall]. Pertaining t wall, as mural fibroid, mural bscess, or mural pregnancy

mu rex'ide. $C_8H_4O_6N_5NH_4 \cdot H_2O$. Ammonium purpurat purple coloring matter resulting from uri cid by treatment with nitric acid and then neutralizing with ammonia. Formerly used as dye.

mu ri ate. An old term for chloride —**muriated**, *adj*.

mu"ri at'ic [L. *muriaticus*, from *muria*, brine]. Pertaining to brine

mu"ri-at'ic 'id. An old term for hydrochloric acid.

mur'mur [L., humming, roaring]. A blowing or rasping sound heard on auscultation.

accidental m. A murmur due t an accidental circumstance such as compression of an artery by the stethoscope.

anemic m. A hemic murmur

aneurysmal m. The murmur or bruit heard over an aneurysm.

aortic m One produced t the aortic orifice.

apex m One heard best in the area directly over the pex of the heart. Also called *apical m.*

arterial m. The sound made by the arterial current.

attrition m. A pericardial murmur

Austin Flint m. See Flint m.

blood m. See hemic m

Bright' m. A creaking sound heard over the heart in pericarditis or pleurisy

cardiac m. Any adventitious sound heard over the region of the heart. In relation to their seat of generation, cardiac murmurs are designated as mitral, aortic, tricuspid, and pulmonary according to the period of the heart cycle at which they occur they are divided into systolic, those occurring during systole; diastolic, those occurring in

diastole; and presystolic, those occurring just before systole.

cardiopulmonary m. One produced by the impact of the heart against the lung.

continuous m. One lasting throughout systole and diastole, as in patent ductus arteriosus, arteriovenous aneurysm, and venous hum at the base of the neck.

diastolic m. A cardiac murmur occurring during diastole.

direct m. A murmur produced by obstruction to the blood as it is passing in its normal direction.

Duroziez's m. The double murmur heard over the femoral artery in aortic regurgitation.

endocardial m. A murmur produced within the cavities of the heart.

exocardial m. A murmur connected with the heart, but which is produced outside of its cavities.

Flint m. An apical diastolic murmur sometimes heard in aortic regurgitation. It is probably due to the fact that because of the extreme ventricular dilatation the valves cannot be forced back against the walls and produce a relative narrowing of the atrioventricular orifice.

Fraentzel m. One heard in patients with mitral stenosis, loudest at the beginning and end of diastole.

friction m. A sound produced by the rubbing of two inflamed serous surfaces upon each other.

functional m. See innocent m.

Graham Steell m. A murmur of pulmonary valve incompetence. It may occur in cases of severe mitral stenosis and cardiac insufficiency.

heart m. A cardiac murmur.

hemic m. A murmur heard over the heart or jugular bulb in severe anemia, due to decreased viscosity of the blood and increased rapidity of the blood stream. Syn., *bruit de diable*.

humming-top m. See venous hum.

indirect m. One produced by the blood flowing in a direction contrary to the normal current.

innocent m. One occurring in the absence of structural changes in the heart, usually faint, of blowing quality and systolic in time. Syn., *functional m.*

inorganic m. A murmur not due to valvular lesions. A hemic or functional murmur.

lapping m. One which occurs following rupture of the aorta.

machinery m. A loud, continuous, rough cardiac murmur heard in cases of patent ductus arteriosus.

mitral m. One produced at the mitral orifice.

muscular m. (a) The sound heard on auscultation of a contracting muscle. (b) The first sound of the heart.

musical m. A cardiac murmur having a musical quality.

organic m. A murmur due to structural changes in the heart.

paradox m. A systolic murmur prolonged so as to appear to be followed by a diastolic murmur.

pericardial m. A murmur produced in the pericardium.

placental m. A sound attributed to the circulation of the blood in the placenta. Formerly called *placental bruit*.

presystolic m. A cardiac murmur occurring just before systole.

pulmonary m. One produced at the pulmonary orifice.

regurgitant m. One due to regurgitation.

respiratory m. The sound produced by the air entering and escaping from the lungs during respiration.

Roger m. A long loud systolic murmur heard best to the left of the sternum in the third or fourth intercostal space in cases of uncomplicated congenital interventricular septal defect.

steam-tug m. One which accompanies aortic obstruction and insufficiency.

systolic m. A cardiac murmur occurring during systole.

to-and-fro m. A pericardial murmur heard during both systole and diastole.

tricuspid m. One produced at the tricuspid orifice.

venous m. One occurring in a vein.

vesicular m. A fine inspiratory breath sound heard over the chest during normal breathing.

whiffing m. A humming rushing sound heard in the veins in anemia.

whistling m. See whiffing m.

Murphy, John Benjamin [*American surgeon*, 1857–1916]. Internationally known as surgeon, educator and inventor. He exercised a great influence in many surgical fields, including orthopedic surgery. Contributed to the knowledge of ankylosed joints and their treatment. Invented the metal button used in rapid, end-to-end anastomosis of divided intestine (1892) called *Murphy button*. Introduced a method of approach to the hip joint especially adapted to arthroplasty; called *Murphy's operation*. Described punch tenderness at the costovertebral angle in perinephritis, became called *Murphy sign, punch*. Described sign of cholecystitis. See Murphy's sign.

Murphy, William Parry [*American physician*, 1892–]. With George Richards Minot, introduced the *Minot-Murphy diet*, consisting chiefly of liver, in the treatment of pernicious anemia (1926). This led to the present-day therapeutic use of liver extracts. Nobel laureate with G. R. Minot and G. H. Whipple (1934).

mur·ri'na (muh-rye nuh, moo ree nah) [Sp. *murriña*]. A form of trypanosomiasis caused by *Trypanosoma hippicum*, seen in horses and mules, with cattle acting as reservoir hosts; characterized by weakness, emaciation, edema, anemia, enlarged spleen, and paralysis.

Mus [L., mouse]. A genus of small rodents including the common house mouse (**Mus musculus**) and other small species. Some members of the genus are medically important as intermediate hosts and reservoir hosts of diseases transmissible to man.

mu·sa·rin (mew'sar'in). An antibiotic substance elaborated by Meredith's actinomycete, named for the banana plant, *Musa sapientum*, host to the parasitic *Fusarium oxysporum* var. *cubense*, against which it is active.

Mus·ca [L., fly]. A genus of flies of the family Muscidae.

M. domestica. The most important species, the common housefly; it carries and frequently transmits the causal agents of a number of diseases, including typhoid fever, infantile diarrhea, bacillary and amebic dysentery, cholera, trachoma, and tuberculosis.

M. vetustissima. The Australian housefly.

M. vicina. The common housefly of the Orient.

mus·cae vol·i·tan·tes (mus'ee vol"i-tan'teez, mus'kee) [L.]. Floating specks in the field of vision, due to opacities in the media of the eye. Also called *mouches volantes*.

mus·ca·rine (mus'kuh-reen, -rin, mus·kay') [L. *muscarius*, pertaining to flies]. A poisonous alkaloid obtained from certain mushrooms, as *Agaricus muscarius*. Stimulates the parasympathetic nerves and so slows the heart, increases the secretions of the salivary and lacrimal glands and of the intestine; produces contraction of the pupil.

mus"ca·rin'ic ac'tion. Peripheral drug effects similar to those produced by muscarine, resulting

in parasympathetic stimulation at the receptor levels.

mus'ca·ri·nism [*muscarine*]. Mushroom poisoning.

mus·ci·cide (mus'i-side) [L. *musca*, fly; *caedere*, to kill]. An agent which is poisonous or destructive to flies.

Mus·ci·dae (mus'i-dee) [*musca*]. A family of the Diptera, which includes the common houseflies.

mus'cle [L. *musculus*, muscle] 1. Muscle tissue composed of individual muscle fibers or muscle cells. Classified by microscopical appearance as nonstriated (smooth) or striated; by volitional control as voluntary or involuntary; by location in the body as skeletal, cardiac, or visceral. 2. A contractile organ composed of muscle tissue, effecting the movements of the organs and parts of the body; particularly that composed of a belly of skeletal muscle tissue attached by tendons to bone on either side of a joint effecting movements at the joint by contraction of the belly drawing the more movable attachment, the insertion, toward the more fixed attachment, the origin. For muscles listed by name, see Table of Muscles in the Appendix. See Plates 3, 4. —**muscular** *adj.*

accessory m. A muscle slip additional to a muscle, as scalenus minimus, a muscle inserted on the first rib in addition to the scalenus anterior.

antagonistic m. One acting in opposition to another as the triceps, which extends the elbow in opposition to the biceps, which flexes the elbow.

antigravity muscles. Muscles, chiefly extensors, the contraction of which support the body against gravity as in standing.

appendicular m. A muscle inserted on the upper or lower extremity.

articular m. A muscle inserted in part into the fibrous capsule of a joint, holding the capsule taut in sudden movements of the joint.

axial m. One attached to the vertebral column.

bicipital m. One having two heads or attachments of origin.

bipennate m. A muscle whose fibers are inserted on two sides of a central tendon.

Brücke's m. The meridional portion of the ciliary muscle.

cardiac m. The muscle of the heart.

ciliary m. The smooth muscle of the ciliary body. See Table of Muscles in the Appendix.

circumpennate m. A muscle whose fibers are inserted on all sides of a central tendon.

conjoined m. The combined insertion of internal oblique abdominal and transverse abdominal muscles into the pubes in cases where muscle fibers are present in the insertion.

cutaneous m. One having an insertion into the skin or both origin and insertion in the skin.

dermal m. See cutaneous m.

digastric m. One having two muscular bellies joined by a central tendon.

extrinsic m. One which has its origin outside, its insertion into an organ, as a rectus muscle of the eye. See intrinsic m.

fibulocalcaneus m. An occasional muscle arising from the lower third of the fibula and inserted into the tendon of the quadratus plantae or of the flexor digitorum longus, found as an anterior or a medial variant.

fibulotibialis m. An occasional small muscle arising from the medial side of the head of the fibula and inserted into the posterior surface of the tibia beneath the popliteus.

fixation m. One which holds a part from moving to allow more accurate control of a distal part, as a muscle which holds the wrist steady to allow more precise control of finger movement.

fusiform m. A spindle-shaped muscle.

intercostal muscles. Muscles lying between adjacent ribs, divided into external and internal, and sometimes a third group, the intermediate, as a subdivision of the internal. See Table of Muscles in the Appendix.

intra-aural m. One in the ear particularly inside the tympanic cavity; includes the tensor tympani and the stapedius muscles.

intrinsic m. One which has both its origin and its insertion within an organ, as the transverse muscle of the tongue. See extrinsic m.

involuntary m. One not under the control of the will; usually consists of smooth muscle tissue and lies within a viscus, or is associated with skin.

mimetic m. One of the muscles of facial expression.

multicipital m. One having more than two heads or attachments of origin.

multipennate m. See circumpennate m.

m. of Bell. A band of smooth muscle of the urinary bladder running from the orifice of the ureter toward the median lobe of the prostate gland in the male and toward the neck of the bladder in the female.

m. of Gantzer (a) The accessorius ad flexorem carpi radialis muscle. (b) The accessorius ad flexorem profundum digitorum muscle. (c) The accessorius ad pollicem muscle.

m. of Gegenbaur The auriculofrontalis muscle.

m. of Gruber The peroneocalcaneus externus muscle.

m. of Henle. The epicraniotemporalis muscle.

m. of Hall. The ischiobulbosus muscle.

m. of Horner Lacrimal part of orbicularis oculi muscle.

m. of Houston. The compressor venae dorsalis muscle.

m. of Jung. The procerus muscle.

m. of Klein. The compressor labii muscle.

m. of Landström. Smooth muscle fibers in the fascia about the eyeball; the smooth muscle associated with the levator palpebrae superioris muscle in a portion of it.

m. of Ludwig. The aryvocalis muscle.

m. of Macalister The fibulocalcaneus medialis muscle.

m. of Müller (a) The orbital muscle. (b) The tarsal muscles. (c) The innermost, circular portion of the ciliary muscle.

m. of Raux. The rectourethralis muscle.

m. of Riolan. Ciliary portion of the orbicularis oculi muscle.

m. of Santorini. (a) The risorius muscle. (b) The incisurae helicis muscle.

m. of Sappey The temporalis superficialis muscle.

m. of Treitz. (a) Muscle tissue sometimes associated with the suspensory ligament of the duodenum; it arises from the right crus of the diaphragm and inserts on the duodenum at the jejunal junction also called *suspensory m. of the duodenum* (b) The rectococcygeus muscle.

m. of Wood. The extensor carpi radialis intermedius muscle.

nonstriated m. See smooth m.

papillary m. The muscular eminences in the ventricles of the heart from which the chordae tendineae arise. See Plate 5.

pectinate m. One of the small muscular columns traversing the inner surface of the auricles of the heart.

pennate m. One whose fibers are inserted on a central tendon.

postaxial m. One on the posterior aspect of an extremity.

postural m. See antigravity m.

preaxial m. One on the anterior aspect of an extremity.
red m. A muscle which appears red in the fresh state; in the fibers of red muscles, the longitudinal striation is more prominent and the transverse striation is somewhat irregular. The red color probably is due to muscle hemoglobin and cytochrome.
skeletal m. One attached to bone or bones of the skeleton and concerned in body movements.
smooth m. One consisting of spindle-shaped, unstriped muscle cells and found in the walls of viscera and blood vessels; involuntary muscle. Also called *nonstriated m.*, *unstriated m.*
striated m. Muscle consisting of cross-striated muscle fibers.
striped m. See striated m.
supernumerary m. See accessory m.
suspensory m. of duodenum. The m. of Treitz.
synergistic m. One which, though not directly concerned as prime mover in a particular act, helps some other muscle to perform the movement more efficiently.
tensor m. of the choroid. The outer portion of the ciliary muscle.
tricipital m. One having three heads.
two-joint m. A muscle which crosses two joints and effects the movements at each joint.
unipennate m. One whose fibers are inserted obliquely into one side of a tendon.
unstriated m. See smooth m.
unstriped m. See smooth m.
vestigial m. One that is rudimentary in man but well developed in lower animals.
visceral m. (a) Muscle of viscera. (b) Muscle associated with the visceral skeleton.
voluntary m. One directly under the control of the will. Also called *skeletal m.*
white m. Skeletal muscle which appears paler in the fresh state than red muscle, and is associated with slow movements.

mus'cle plate. See *myotome*, 2.
mus'cle sense. See *proprioception*.
mus'cle splint'ing, guard'ing. The involuntary limitation of motion of an extremity or the rigidity of trunk muscles, by muscle spasm.
mus"cu·lar'is mu·co'sae (mus-cue-lar'is mew-ko'see). The single or double thin layer of smooth muscle in the deep portion of some mucous membranes, as in most of the digestive tube.
mus"cu·lar'i·ty [*muscular*]. The quality of being muscular.
mus'cu·la·ture [*muscular*]. The muscular system of the body or a part of it.
mus·cu·lo- (musculo-) [*muscular*]. A combining form denoting *relating to the muscles*.
mus"cu·lo·ap"o·neu·rot'ic [*musculus*; G. *apo*, from; *neuron*, nerve]. Composed of muscle and of fibrous connective tissue in the form of a membrane.
mus"cu·lo·cu·ta'ne·ous [*musculus*; L. *cutis*, skin]. Pertaining to or supplying the muscles and skin, as the musculocutaneous nerve of the arm. See Table of Nerves in the Appendix.
mus"cu·lo·fas'ci·al (mus-cue-lo-fash'ee-al) [*musculus*; L. *fascia*, band]. Consisting of both muscular and fascial elements, as in an amputation flap.
mus"cu·lo·fi'brous. Pertaining to tissue which is partly muscular and partly fibrous connective tissue.
mus"cu·lo·phren'ic [*musculus*; G. *phrēn*, midriff]. Pertaining to or supplying the muscles of the diaphragm, as the musculophrenic artery. See Table of Arteries in the Appendix.
mus"cu·lo·spi'ral [*musculus*; G. *speira*, coil]. 1. Old term for radial, as the musculospiral or radial nerve. 2. Referring to the radial groove on the posterior surface of the humerus.
mus"cu·lo·ten'di·nous [*musculus*; L. *tendere*, to stretch]. Pertaining to both muscle and tendon.
mus'cu·lus. See *muscle*.
mush'room [ME. *musscheron*]. A fleshy fungus of the Basidiomycetes. See *fly agaric*.
mu"si·co·ma'ni·a (mew"zi-ko-may'nee-uh) [G. *mousikos*, musical; *mania*, madness]. Monomania for or insane devotion to, music. *Obs.*
mu"si·co·ther'a·py [*musical*; G. *therapeia*, treatment]. The use of music in the treatment of mental and nervous diseases.
musk [G. *moschos*, from the Sanskrit]. The dried secretions from the preputial glands of musk deer. Occurs in grains or lumps, possessing a peculiar penetrating odor. Was formerly employed for the treatment of low fevers and nerve exhaustion but today is employed only in the manufacture of perfumery.
artificial m. One of several musk substitutes, as xylene musk, ketone musk, and musk ambrette, each having a characteristic composition. Used in perfumery; also has had some usage in medicine based on reported antispasmodic action.
Muskens's tonometer. See under *tonometer*.
musk root. Sumbul.
mus·sa·e·nine (mus-uh-seen, -nin). An alkaloid resembling saponin, from the bark of *Acacia anthelmintica*. Also called *mussenine*.
mus"si·ta'tion [L. *mussitare*, to mutter]. Speechless movement of the lips.
Mussy, François de. See *Guéneau de Mussy*.
mus'tard [L. *mustum*, must]. 1. A plant of the genus *Brassica*. 2. The dried ripe seed of *Brassica alba* or *B. nigra*.
black m. The finely ground seeds of *Brassica nigra*. Contains a fixed oil; a pungent, irritant essential oil; an enzyme (myrosin); and a glycoside (sinigrin).
m. flour. Black and white mustard seeds mixed and pulverized.
m. paper. Charta sinapis. See *m. paper*.
nitrogen m. See under *nitrogen*.
red m. Black mustard.
volatile oil of m. Allyl isothiocyanate.
white m. The finely ground seeds of *Brassica hirta*, contains the same constituent as black mustard except for a different glycoside (sinalbin). Used as a condiment or as a counterirritant and stimulant.
mustargen hydrochloride. A trade-marked name for mechlorethamine hydrochloride, a cytotoxic agent acting mainly on proliferating cells.
mus'tine hy"dro·chlo'ride. Mechlorethamine hydrochloride.
mu'ta·cism. See *mytacism*.
mu'ta·gen. Any substance or agent causing genetic mutation.
mu'tant [L. *mutare*, to change]. An individual with characteristics different from those of the parental type, or the stock established from such individuals, due to a genetic constitution that includes a mutation.
mu"ta·ro·ta'tion [*mutare*; L. *rotatio*, rotation]. A change in optical rotation of solutions of certain sugars occurring while standing and continuing until equilibrium between the isomeric forms present in the solution is attained.
mu'tase [*mutare*]. An enzyme which simultaneously catalyzes the oxidation of one molecule and reduction of another molecule of the substrate. See Table of Enzymes in the Appendix.
aldehyde m. An enzyme, occurring in liver and yeast, which catalyzes conversion of two molecules

f acetaldehyde to one each of acetic acid and ethyl alcohol.

mu ta tion [L. *mutatio* from *mutare*]. 1. A change of small or moderate extent, which represents a definite stage in the gradual evolution of organism, such may be recognized in a series of fossils from successive geologic strata (Waagen, 1868). 2. A change in the characteristics of an organism produced by an alteration of the hereditary material. The alteration in the germ plasm may involve an addition of one or more complete sets of chromosomes, the addition or loss of whole chromosome, or some change within a chromosome, ranging from gross rearrangement loss or addition of a larger or smaller section, down through minute rearrangements to a change at single locus. The latter are gene mutations, or simply mutations in the restricted use of the term.

induced m. That produced by experimental treatment, as by x-rays.

lethal m. One causing death of the organism during any stage of its development.

natural m. Mutation in nature which forms the basic materials for evolution.

somatic m. A mutation during the course of development in a somatic cell, resulting in mosaic condition.

spontaneous m. Natural mutation.

mute [L. *mutus* silent]. Unable to articulate.

mu"ti la'tion [L. *mutilatio*, from *mutilo* to mutilate]. The act of maiming or disfiguring; depriving of a limb, member part or organ.

mu tism [L. *mutus*, silent]. The condition or state of being speechless.

deaf-m. The condition of being both deaf and mute.

hysterical m. That of psychic or hysterical origin, seen in stupors and in schizophrenic patients; there is an obstinate and voluntary silence, although the vocal organs are uninjured and there is no visible lesion of the cerebral speech centers.

mu"tu al ism [L. *mutuus*, borrowed]. The living together of two organisms of different species, for the advantage that each derives from the other. Syn., *symbiosis*.

muz'zle [ML. *musellum*]. The projecting jaws and nose of an animal; snout.

my Symbol for myopia.

Mya, Giuseppe [*Italian pediatrician*, 1857–1911]. Described congenital megacolon, called *Mya disease*, *Hirschsprung's disease*.

my-al'gi a (migh al'juh, jee-uh) [G. *mys*, muscle; *algos*, pain]. Pain in the muscles; muscular rheumatism. —**myalgic**, *adj.*

epidemic m. An allergic reaction to certain specific substances in which the patient suffers from pulling, drawing, tightness, and aching in the cervical muscles.

spastic m. See muscle-contraction headache.

myanesin A trade-mark for mephenesin.

my"as the ni a (migh as thee nee uh, -as thigh uh) [mys; G. *astheneia*, weakness]. Muscular debility. —**myasthe nic**, *adj.*

congenital m. Myasthenia present at birth, involving the muscles symmetrically.

m. gravis pseudoparalytica. A disease characterized by an abnormal exhaustibility of the voluntary muscles, manifesting itself in a rapid diminution of contractility both when the muscle is activated by the will and when stimulated by electric current. It may be associated with overactivity of the lymphatic tissues of the thymus. —**myasthen'ic**, *adj.*

neonatal m. Myasthenia occurring in children of myasthenic mothers.

my" to ni a [mys; G. a- not; *tonos*, tone]. Absence of muscular tone. Syn., *myatonia*.

m. co g ita See *myatonia congenita*.

my ce"li an ami'de A antibiotic substance derived from *Penicillium griseofulvum*, having no activity against Gram-negative bacteria but active against other bacteria.

my-ce'li oid (migh see'lee-oyd) [G. *mykēs*, fungus; *hēlos*, nail; *eidos*, form]. Moldlike, as colonies of bacteria having the appearance of mold colonies.

my ce'li um [*mykēs*; *hēlos*]. The vegetative filaments of fungi, usually forming interwoven masses. —**mycelial**, *adj.*

racquet m. Hyphal configuration in which the distal end of hyphal cells in many fungi (including *Microsporum audouini*) is swollen.

my-ce tes (migh-see'teez) [*mykēs*]. The fungi.

my ce tin. An antibiotic substance derived from *Streptomyces violaceus*, active against Gram-positive but not against Gram-negative bacteria.

my ce to gen'ic (migh-see to-jen ik, migh-set o-) **my ce-tog e nous** (migh si tod;) [*mykēs*; G. *genethai*, from *gignesthai*, to be produced]. Produced or caused by fungi.

my ce't id my ce toid [*mykēs*; G. *eidos*, form]. Resembling fungus.

my ce-to ma [*mykēs*, G. -*ōma*, tumor]. 1. A chronic infection affecting usually the foot but may be found in other parts. Nodules of variable size appear in skin and subcutaneous tissues, which break down with discharge of oily seroanguineous pus in which are small granules, the color of which varies from case to case: black, white, red, or intermediate shades. Microscopically masses of fungi simulating actinomyces granules lie in abscesses, which are surrounded by granulation tissue and fibrosis. Occurs most frequently in tropical and subtropical regions. Due to a wide variety of fungi of the classes Schizomycetes, Ascomycetes, and Fungi imperfecti. Syn., *madura foot*, *maduromycosis*. 2. Any tumor mass occurring in tissues which is largely composed of fungus elements.

mycifradin sulfate. Trade-marked name for the sulfate of the antibiotic neomycin.

my'co-, myc- [*mykēs*]. 1. A combining form meaning *fungus*. 2. A combining form signifying *mucus* or *mucous membrane*.

my" co-an gi neu ro sis (migh ko an"jee-o-new ro sis) [L. *mucus*, mucous; G. *aggeion*, vessel; *neuron*, nerve; -*ōsis*, condition]. A neurosis accompanied by hypersecretion of mucus, producing mucous colitis.

My"co bac ter"i ace-ae (migh"ko-back teer ee-ay see ee) [G. *mykēs*, fungus; *baktērion*, small staff]. A family of the order Actinomycetales containing one genus, *Mycobacterium*.

My"co bac te ri um [*mykēs*; *baktērion*]. A genus of rod-shaped, aerobic bacteria of the family Mycobacteriaceae. Species of this genus are rarely filamentous and occasionally branch but produce no conidia. They are Gram-positive and stain with difficulty but are acid-fast.

M. leprae. That species which is the causative organism of leprosy; formerly called *Bacillus leprae*.

M. paratuberculosis. The causative agent of chronic enteritis of cattle, sheep, and deer; nonpathogenic for man. See Johne's disease.

M. tuberculosis. A species of bacilli which produces tuberculosis in mammals; is subdivided into the Mycobacterium tuberculosis var. hominis, var. bovis, and var. muris. Also called *Bacillus tuberculosis*. See Plate 20.

M. ulcerans. The causative agent of chronic or subacute ulceration of the skin and sub-

cutaneous tissue on the upper or lower extremity also called *Bernstein's bacillus*.

my"co-ci'din. An antibiotic substance extracted from mold of the Aspergillaceae family. It is active in vitro against *Mycobacterium tuberculosis*.

my'coid [*mykēs*; G. *eidos*, form]. Resembling, or appearing like, fungus; fungoid.

my'co-in. An antibiotic believed to be identical with *Escherichia coli* factor, corylophilline, notatin, penatin, and penicillin-B.

α-my-col'ic ac'id. A fatty acid, of high molecular weight, isolated from human test strain of *Mycobacterium tuberculosis*.

my-col'o-gy [*mykēs*; G. *logos*, word]. The science of fungi.

my"co-myr"in-gi'tis (-mir"in-jigh'tis, migh rin). See *myringomycosis*.

my"co-phe-nol'ic ac'id. An antibiotic derived from *Penicillium brevi-compactum* and *P. stoloniferum*, in vitro active against variety of microorganisms.

my"coph-thal'mi-a [*mykēs*; G. *ophthalmia*, ophthalmia]. Ophthalmia due to fungus.

my'co-se. Trehalose.

my-co'sis (pl. *mycoses*) (migh ko'sis; pl. migh ko seez) [*mykēs*; G. *-ōsis*, condition]. An infection caused by fungus. It may be superficial mycosis as in tinea capitis, tinea barbae, when the fungus first invades the stratum corneum, later the hair follicle and eventually the deeper portions of the hair; or it may be deep mycosis where the infection is essentially or potentially systemic, as in actinomycosis, mycetoma, and coccidioidomycosis. —**mycot'ic,** *adj.*

m. fungoides. A form of lymphoma, with special cutaneous manifestations, characterized by eczematoid areas, infiltrations, nodules, tumors, and ulcerations; possibly cutaneous form of Hodgkin disease; also called *fibroma fungoides*. Syn., *granuloma fungoides*.

m. fungoides d'emblée. The presence of mycosis fungoides without previous erythema or plaques.

secondary m. See *mycetization*.

my-cos'ter-ol. Any sterol occurring in yeast or fungi.

my"co-sub'til-in. An antibiotic derived from strain of *Bacillus subtilis*, active in vitro against variety of yeasts and fungi.

my cot"i za'tion. Superimposition of mycotic infection on nonfungous lesion; secondary mycosis.

mycoxel. Trade-mark for fungicidal ointment containing chlorotone, salicylic acid, and mercury salicylate.

my"c-ter-o-pho'ni [G. *mykter*, nostril; *phōnē*, sound]. A nasal quality of the voice.

my-de'sis (migh-dee'sis) [G. *mydēsis*, dampness]. 1. Putrefaction. 2. A discharge of pus from the eyelids.

mydriatine. Trade-mark for atropine methylbromide.

my-dri'-a-sis (mi dry'uh sis, migh-dry) [G. dilatation of the pupil]. Dilatation of the pupil of the eye. —**mydriat'ic,** *adj.* n.

alternating m. Mydriasis which, by normal light and convergence reaction, attacks first one eye and then the other; due to disorder of the central nervous system. Also called *leaping m.*, *springing m.*

paralytic m. That due to the paralysis of the oculomotor nerve.

spasmodic m. That caused by overaction of the sympathetic or dilator nerve of the iris. Also called *spastic m.*

spinal m. That produced by irritation of the ciliospinal center of the spinal cord.

my-ec'to-my (migh eck'to-mee) [G. *mys*, muscle; *ektomē*, excision]. Excision of portion of muscle.

my-ec'to-py [*mys*; G. *ektopos*, away from place]. The abnormal placement of muscle.

my"e-lap-o-plex"y. Hemorrhage into the spinal cord. *Obs.*

my"e-lat'ro-phy [G. *myelos*, marrow; *atrophia*, want of nourishment]. Atrophy of the spinal cord.

my"el-e-mi a. See *granulocytic leukemia*.

my"e-len-ceph a lon [*myelos*; G. *enkephalos*, brain]. The lower part of the embryonic hindbrain, from which the medulla oblongata develops. —**myelencephal'ic,** *adj.*

my-el'ic (migh el'ick) [*myelos*]. Pertaining to the spinal cord.

my' e-lin [*myelos*]. 1. The white, fatty substance forming sheath of some nerves, also called *white substance of Schwann*. 2. A complex mixture of lipins extracted from nervous tissue. It is doubly refractile and contains phosphatides and cholesterol.

my"e-li nat'ed. Provided with myelin sheath; medullated.

my"e-li na'tion [*myelos*]. Myelinization.

my" e-lin'ic [*myelos*]. 1. Relating to myelin. 2. Medullated. *Rare.*

my"e-li ni za'tion [*myelos*]. The process of supplying or accumulating myelin during the development, or repair of nerves.

my" e-lin o-cla sis. Demyelination, destruction of the myelin.

acute perivascular m. Postinfection encephalitis.

my" e-lin o-gen e sis. Myelinization.

my" e lin op'a thy [*myelos*; G. *pathos*, disease]. Any disease of the myelin.

my e-li no'sis [*myelos*; G. *-ōsis*, condition]. Decomposition of fat with the formation of myelin.

my"e-li'tis [*myelos*; G. *-itis*, inflammation]. 1. Inflammation of the spinal cord. 2. Inflammation of the bone marrow. See *osteomyelitis*. —**myelit'ic,** *adj.*

acute ascending m. An ascending form of inflammation of the spinal cord, usually occurring as manifestation of anterior poliomyelitis or of postvaccinal or postexanthematous myelitis. It may be simulated by progressive diphtheritic polyneuritis or by the toxic effect of tick bites. Also called *Landry's paralysis*.

acute m. Acute inflammation of the spinal cord.

amyotrophic syphilitic m. See *syphilitic amyotrophia*.

apoplectiform m. Paralysis of sudden onset, due to inflammation of the spinal cord.

disseminated m. Diffuse, irregular patchy inflammatory lesions of the spinal cord.

funicular m. See *subacute combined degeneration of spinal cord*.

neuroeptic m. See *neuroencephalomyelopathy*.

postvaccinal m. Inflammation of the spinal cord which sometimes follows vaccination. Also see *acute ascending m.*

pressure m. Myelitis from pressure on the cord.

syphilitic m. Inflammation of the spinal cord due to syphilis.

transverse m. Inflammation extending across the spinal cord at specific level.

my' e lo-, myel- [*myelos*]. A combining form denoting *myelin*, *the spinal cord*, or *the bone marrow*.

my' e-lo-blast" [*myelos*; G. *blastos*, germ]. The youngest of the precursor cells of the granulocytic series, having nucleus with finely granular or homogeneous chromatin structure and

nucleoli and intensely basophilic cytoplasm. Also called *granuloblast*.

my″e·lo·blas·te′mi·a [*myelos*; *blastos*; G. *haima*, blood]. Presence of myeloblasts in the circulating blood.

my″e·lo·blas′tic [*myelos*; *blastos*]. Originating from, or characterized by, the presence of myeloblasts.

my″e·lo·blas·to′ma [*myelos*; *blastos*; G. *-ōma*, tumor]. A malignant tumor composed of undifferentiated myeloid cells.

my″e·lo·blas·to′sis [*myelos*; *blastos*; G. *-ōsis*, condition]. A manifestation of myeloblastic leukemia characterized by the presence of myeloblasts in the circulating blood and proliferation of myeloblasts in hematopoietic and other tissues and other viscera.

my′e·lo·cele [*myelos*; G. *kēlē*, hernia]. Spina bifida, with protrusion of the spinal cord.

my″e·lo·chlo·ro′ma. See *chloroma*.

my″e·lo·cys′to·cele [*myelos*; G. *kystis*, bladder; *kēlē*]. A hernial protrusion, in spina bifida, in which there is accumulation of fluid in the central canal of the spinal cord.

my′e·lo·cyte [*myelos*; G. *kytos*, cell]. 1. Any cell concerned in development of granular leukocytes. See *granulocytic series*. 2. A granular leukocyte precursor in the stage of development intermediate between the myeloblast and metamyelocyte, characterized by granularity of the cytoplasm. The early cells of this stage (*promyelocytes* or *progranulocytes*) include *myelocyte A* and *B*. **Myelocyte A** has fewer than ten usually nonspecifically staining granules, which cover the nucleus and are present in greatest number in the myelocyte B stage. In **myelocyte B**, the nonspecifically staining granules decline, so that few or none are present, while specific (basophilic, eosinophilic, neutrophilic) granules appear. The specific ones are fully developed, and attain greatest number in the late or *differentiated myelocyte*, **myelocyte C**; these granules, unlike nonspecific ones of this series, do not cover the nucleus. In myelocyte A and B the nucleus is round and usually centrally placed; in myelocyte C, the nucleus may be eccentrically placed. —**myelocyt′ic**, *adj.*

my″el·o·cy·the′mi·a. See *granulocytic leukemia*.

my″e·lo·cy·to′ma. See *myeloma*.

my″e·lo·cy·to′sis (migh″e·lo·sigh·to′sis) [*myelos*; *kytos*; G. *-ōsis*, increase]. An excess of myelocytes in the blood.

my″e·lo·dys·pla′si·a (migh″e·lo·dis·play′zhuh, ·zee·uh, ·shuh, ·see·uh) [*myelos*; G. *dys-*, bad; *plasis*, to form]. Defective development of the spinal cord, especially in its lumbosacral portion.

my″e·lo·en·ceph″a·li′tis [*myelos*; G. *enkephalos*, brain; *-itis*, inflammation]. Inflammation of both spinal cord and brain.

my″e·lo·fi·bro′sis (migh″e·lo·figh·bro′sis) [*myelos*; L. *fibra*, fiber; G. *-ōsis*, condition]. Fibrosis of the bone marrow.

my″el·o·gen′e·sis. The development of the myelin sheath of a nerve fiber.

my″e·lo·gen′ic, my″e·log′e·nous (migh″e·lodj′i·nus) [*myelos*; G. *genesthai*, from *gignesthai*, to be produced]. Produced in, or by, bone marrow, as in myelogenous leukemia, leukemia due to disease of the bone marrow. Also see *granulocytic series*.

my′e·lo·gone [*myelos*; G. *gonē*, offspring]. A primitive blood cell of the bone marrow from which the myeloblast develops.

my′e·lo·gram [*myelos*; G. *gramma*, letter]. Radiograph of the *spinal cord, made after the injection of* a contrast medium into the subarachnoid space.

my″e·log′ra·phy [*myelos*; G. *graphein*, to write]. Roentgenographic demonstration of the spinal subarachnoid space after the introduction of contrast mediums such as lipiodol, air, or pantopaque.

my′e·loid [*myelos*; G. *eidos*, form]. Pertaining to bone marrow. Also see *granulocytic series*.

m. reaction. A proliferation of the cells of the granulocytic series with appearance in the bloodstream of immature granulocytes and an increased number of granulocytes, seen in association with many infectious diseases, as rubella, scarlet fever, etc.; not a leukemic process.

my″e·lo·ken·tric a′cid. A keto acid, insoluble in water, in the urine of patients with myeloid leukemia as a water-soluble conjugate. It causes proliferation of cells of the leukopoietic system, and produces Hodgkin's-type lesions. It may be reduced to lymphokentric acid.

my″e·lo·lym·phan·gi·o′ma. See *elephantiasis*.

my″e·lo·lym′pho·cyte [*myelos*; L. *lympha*, water; G. *kytos*, cell]. A small lymphocyte formed in the bone marrow.

my″e·lo′ma [*myelos*; G. *-ōma*, tumor]. A primary malignant tumor of bone marrow generally composed of tumor cells which are uniform, small, and superficially resemble plasmacytes, or dominated by variegated, large cells. Mixtures appear and the cytologic variations are considered to represent stages in maturation of the tumor cells. It appears most commonly as multiple m. or Kahler's disease, characterized by diffuse osteoporosis or areas of bone destruction often resulting in pathologic fractures and bone pain, by anemia, hyperglobulinemia, the finding of Bence-Jones protein, hypercalcemia, and increased number of cells resembling immature plasmacytes in bone marrow. Infrequently it appears as a solitary m., identified by microscopical examination, exclusion of multiple myeloma, and examination of bone marrow. Rarely a primary extramedullary m. occurs, almost exclusively in the upper respiratory and digestive tracts. In older classifications also called, according to predominant cytologic appearance, *erythroid m.*, *leukocytic m.*, *lymphocytic* or *lymphoid m.*, *myeloid m.*, *plasma cell m.*, *plasmacytic* or *plasmacytic m.*, *plasmacytoma*, *plasmocytoma*, *plasmoma*, *plasmacytic* or *plasmocytic sarcoma*, *myelocytic sarcoma*, or *myeloid tumor*.

endothelial m. See Ewing's sarcoma.

my″e·lo·ma·la′ci·a (migh″i·lo·ma·lay′shee·uh, ·see·uh) [*myelos*; G. *malakia*, softness]. Softening of the spinal cord.

my″e·lo·ma·to′sis [*myelos*; G. *-ōma*, tumor; *-ōsis*, increase]. Multiple myeloma.

my″e·lo·men″in·gi′tis [*myelos*; G. *mēninx*, membrane; *-itis*, inflammation]. Inflammation of the spinal cord and its meninges.

my″e·lo·me·nin′go·cele [*myelos*; *mēninx*; G. *kēlē*, hernia]. Spina bifida with protrusion of a meningeal sac containing elements of the spinal cord or cauda equina.

my′e·lo·mere [*myelos*; G. *meros*, part]. A segment of the spinal cord; a neuromere.

my″e·lo·mon′o·cyte [*myelos*; G. *monos*, alone; *kytos*, cell]. A monocyte developing in the bone marrow.

my′el·on. The spinal cord.

my″e·lo·neu·ri′tis (migh″i·lo·new·rye′tis) [*myelos*; G. *neuron*, nerve; *-itis*, inflammation]. Multiple neuritis combined with myelitis.

my″e·lo·pa·ral′y·sis [*myelos*; G. *paralysis*, paralysis]. Spinal paralysis.

my″e·lo·path′ic [*myelos*; G. *pathos*, disease]. Relating to disease of the spinal cord.

my″e·lop′a·thy [*myelos*; *pathos*]. Any disease of the spinal cord, or of myeloid tissues.

toxic m. Any disease of the spinal cord caused by toxic substances.

transverse m. Disease of the spinal cord localized to a definite cross-sectional level of the cord.

my"e-lop'e-tal [myelos; L. petere, to seek]. Moving toward the spinal cord.

my"e-loph-thi'sis [myelos; G. phthisis, a wasting away]. 1. Synonym for tabes dorsalis. 2. Aplastic anemia.

my'e-lo-plaque. See myeloplax.

my'e-lo-plast [myelos; G. plassein, to form]. A leukocyte of the bone marrow.

my'e-lo-plax" (migh'e-lo-placks") [myelos; G. plax, anything flat and broad]. A giant cell of the marrow; myeloplaque; an osteoclast. Obs.

my"e-lo-ple'gi-a [myelos; G. plēgē, stroke]. Paralysis of spinal origin.

my"e-lo-poi-e'sis [myelos; G. poiēsis, production]. The process of formation and development of the blood cells in the bone marrow.

ectopic m. The formation in the adult of erythrocytes and granulocytes in regions other than bone marrow. Also called extramedullary m., extramedullary hematopoiesis.

my'e-lo-pore [myelos; G. poros, passage]. An opening in the spinal cord.

my"e-lo-pro-lif'er-a-tive dis-or'ders, syndromes. Those hematological conditions in which there is diffuse or irregular abnormal proliferative activity of all the hematopoietic bone marrow cells; a concept which postulates that such disorders as chronic granulocytic leukemia, megakaryocytic leukemia, polycythemia vera, agnogenic myeloid metaplasia, and acute erythremia are closely related. Syn., panmyelosis, panmyelopathy.

my"e-lo-ra-dic"u-li'tis [myelos; L. radicula, small root; G. -itis, inflammation]. Inflammation of the spinal cord and roots of the spinal nerves.

my"e-lo-ra-dic"u-lo-dys-pla'si-a (-dis-play'zhuh, -zee-uh, -shuh, -see-uh) [myelos; radicula; G. dys-, prefix meaning bad; plassein, to form]. Congenital abnormality of the spinal cord and roots of the spinal nerves.

my"e-lo-ra-dic"u-lop'a-thy [myelos; radicula; G. pathos, disease]. Disease of the spinal cord and roots of the spinal nerves.

my"e-lor-rha'gi-a [myelos; G. rhēgnynai, to burst forth]. Hemorrhage into the spinal cord.

my"e-lo-sar-co'ma. Myeloma.

my"e-los'chi-sis [myelos; G. schisis, cleavage]. Complete or partial failure of the neural plate to form a neural tube, resulting in a cleft spinal cord.

my"e-lo-scin'ti-gram. A myelogram using human serum albumin labeled with radioactive iodine as the localizing substance.

my"e-lo-scin-tog'ra-phy. A technique of introducing iodinated human serum albumin, containing radioactive iodine-131 as a tracer substance into the spinal subarachnoid space and then of determining the distribution of the radioactive iodine-131 and a profile of the tissue by means of scintiscanner.

my"e-lo-scle-ro'sis [myelos; G. sklērōsis, hardening]. 1. Sclerosis of the spinal cord. 2. A rare, slowly progressing disease of the skeletal system of unknown cause, characterized by an irregular increase of fibrous or bony tissue or both in the bone marrow; a form of agnogenic myeloid metaplasia. Splenomegaly with extramedullary hematopoiesis is the most prominent symptom.

my"e-lo'sis [myelos; G. -ōsis, condition]. 1. Myelocytosis. 2. The formation of myeloid tumors. 3. Granulocytic leukemia.

acute erythremic m. Acute erythremia.

funicular m. See subacute combined degeneration of spinal cord.

leukopenic m. See aleukemic leukemia.

my"e-lo-spon'gi-um (migh"e-lo-spon'jee-um, -spun'jee-um) [myelos; G. spongion, dim. of spongos, sponge]. A network in the wall of the neural tube of the embryo, composed of protoplasmic fibers of the spongioblasts.

my"e-lo-syr"in-go-cele. See syringomyelocele.

my-en-ta-sis (migh-en'tuh-sis) [G. mys, muscle; entasis, a straining]. The extension or stretching of a muscle.

my"en-ter'ic [mys; G. enteron, intestine]. Relating to the muscular coat of the intestine.

my-en-ter-on [mys; enteron]. The muscular coat of the intestine.

Myers' method. See under method.

Myers and Wardell method for cholesterol. See under method.

my"es-the'si-a (migh"es-thee'zhuh, -zee-uh) [mys; G. aisthēsis, perception]. Muscle sense; the perception of a muscular contraction.

my'i-a-sis (migh-yuh-sis, migh-eye'uh-sis) [G. myia, fly; NL. -iasis, condition]. Invasion by the larvae of flies. The type of disease produced depends upon the area or cavity invaded; may be aural, nasal, intestinal, ophthalmic, cutaneous, etc.

my"i-o-de-op'si-a, my"i-o-des-op'si-a (migh"yo-, migh"eye-o-) [G. myiōdēs, like a fly; opsis, vision]. The condition in which muscae volitantes appear.

my-i-o'sis (migh-yo'sis, migh"eye-o'sis). See myiasis.

my"lo-ceph'a-lus [G. mylē, mill; a-, not; kephalē, head]. A placental parasitic twin (omphalosite) which has but vestiges of a head and limbs, hence is only a degree above an amorphic fetus.

my'ler-an. $CH_3SO_2O(CH_2)_4OSO_2CH_3$; 1,4-dimethanesulfonyloxybutane, a drug used experimentally with some degree of success, in the treatment of myelogenous leukemia.

my'lo-, myl- [mylē]. A combining form denoting molar.

my'lo-don (pl. mylodontes) [mylē; G. odous, tooth]. A molar tooth. Obs.

my"lo-glos'sus [mylē; G. glōssa, tongue]. 1. That portion of the superior constrictor of the pharynx which arises from the mylohyoid ridge of the lower jaw. 2. An anomalous slip joining the styloglossus.

my"lo-hy'oid [mylē; G. hyoeidēs, shaped like the letter upsilon]. Pertaining to the region of the lower molar teeth and the hyoid bone, as mylohyoid muscle. Also called mylohyoideus. See Table of Muscles in the Appendix.

my"lo-pha-ryn'ge-us. A portion of the superior constrictor muscle of the pharynx.

my'o-, my- [G. mys, muscle]. A combining form denoting muscle.

my"o-ar-chi"tec-ton'ic (migh"o-ark"i-teck-ton'ick) [mys; G. architektonikos, of a master-builder]. Pertaining to the structure and arrangement of muscle fibers.

my"o-bil'in. A brown pigment excreted in feces in conditions associated with rapid atrophy or destruction of muscle tissue. It appears to consist of a protein component and a prosthetic group, mesobilifuscin.

my'o-blast [mys; G. blastos, germ]. A cell which develops into a muscle fiber. —**myoblas'tic,** adj.

my"o-blas-to'ma [mys; blastos; G. -ōma, tumor]. See granular-cell m.

embryonal m. A mesenchymoma.

granular-cell m. A tumor of controversial origin, considered by many to be made up of myoblasts, widely distributed but most frequently found in the extremities, trunk, and tongue. It is composed of large polygonal cells with deeply staining nuclei and cytoplasm containing many fine acidophilic granules. It is usually benign, but may form one of two types of malignant granular-cell myoblas-

tomas. Also called *granular myoblastoma, myoblastic myoma, myoblastoma, epulis of newborn, granular-cell neurofibroma, embryonal rhabdomyoblastoma, Abrikosov tumor.*

granula -cell m. of ear canal. See glomus jugulare t mor

malignant granula -cell m. A malignant tumor showing two different forms. The less common one morphologically resembles the benign type. The more common type is organoid in appearance with larger cells growing in masses outlined by fibrous septa. The cytoplasm of the cells, while granular, may be vacuolated; some contain lipid material. These tumors are usually found in the striated muscles of the extremities and often metastasize. Also called *malignant myoblastoma, polymorphous sarcoma, alveolar soft part sarcoma.*

my" -car'di al in"suf fi' ien cy. See *cardiac failure.*

my"o-ca di'tis [*myo-*; G. *kardia*, heart; *-itis*, inflammation]. Inflammation of the myocardium.

acute bacterial m. Myocarditis caused by bacterial infection.

acute isolated m. See Fiedler's m.

Fiedler's m. An inflammation of the myocardium unrelated to known forms of infection and commonly causing myocardial failure. Also called *acute isolated m., idiopathic m., interstitial m.*

idiopathic m. See Fiedler's m.

interstitial fibroid m. Inflammation of the stroma of an already diseased, fibrotic heart, seen in recurring rheumatic fever.

interstitial m. See Fiedler's m.

rheumatic m. A myocarditis of unknown etiology characterized by the formation of Aschoff nodules in the myocardium.

suppurative m. Inflammation of the myocardium characterized by a purulent exudate, either localized or diffuse.

my" car'di-um [*myo-*; *kardia*]. The muscular tissue of the heart. See Plate 5. —**myocardial,** *adj.*

myocardone. *Trade-mark for a purified and concentrated heart-muscle extract, used therapeutically in various heart diseases.*

my" car de si [*myo-*; *kardia*; G. *-osis*, condition]. Any noninflammatory disease of the myocardium.

myochrysine. Trade-mark for an ampuled solution of gold sodium thiomalate, $C_4H_3O_4SAuNa$, used by intramuscular injection in rheumatoid arthritis, pulmonary tuberculosis, and lupus erythematosus.

my -clo ni [*myo-*; G. *klonos*, confused motion]. Any disorder characterized by myoclonus.

infectious m. Chorea.

my"o-clo nus (migh-o-klo'nus, migh-ock'lo-nus) [*myo-*; *klonos*]. Clonic spasm of a muscle or of various muscles. —**myoclonic,** *adj.*

palatal m. Rhythmic contractions of the palate seen in patients with lesions in the brain stem when these lesions involve the olives or their connections with the tegmentum. Also called *palatal nystagmus.*

Unverricht's familial m. A hereditary form of myoclonic epilepsy most frequently affecting the tongue, pharynx, and diaphragm; occurs mainly in girls about 10 years of age.

my -coele. The cavity of a myotome, 2.

my'o-cyte [*myo-*; G. *kytos*, cell]. A muscle cell.

Anitschkow m. See Anitschkow cell.

my" -dys-to ni [*myo-*; G. *dys-*, bad; *tonos*, tone]. A condition in parkinsonism marked by the rapid response of the muscles to faradic stimulation, contrasted with the prolonged and interrupted contraction time.

my" dys'tro-phy [*myo-*; *dys-*; G. *trophē*, nourishment]. Degeneration of muscles.

my" -e-de ma [*myo-*; G. *oidēma*, swelling]. Edema of muscle.

my o-e las ti [*myo-*; G. *elaunein*, to drive]. Pertaining to the layer of intimately interrelated smooth muscle cells and elastic fibers in bronchi and bronchioles.

my o-ep"i the'li l [*myo-*; G. *epi*, on; *thēlē*, nipple]. Referring to contractile cells of ectodermal origin.

my"o-ep"i the"li ma. A slow-growing sweat-gland tumor appearing as a solitary or rarely multiple firm, well circumscribed intracutaneous nodule usually less than 2 cm in diameter. The two types of cells found are the secretory and the myoepithelial cells. Also called *myoepithelial tumor, myoepithelial sweat-gland tumor, nodular hidradenoma.*

my"o-fas i al (migh"o-fash'ee-ul) [*myo-*; L. *fascia*, band]. Pertaining to the fascias of muscles, as myofascial inflammation.

my" fas i'tis (migh"o-fa-sigh'tis) [*myo-*; *fascia*; G. *-itis*, inflammation]. A term, both anatomic and descriptive, indicating low back pain of obscure pathology with symptoms severe enough to indicate probable inflammatory origin.

my"o fi'bril [*myo-*; L. *fibra*, fiber]. A fibril found in the cytoplasm of muscle.

my o-fi bro ma (migh"o-figh-bro'muh). See *leiomyoma.*

my" fi"bro sar-co ma. A leiomyosarcoma with rich fibromatous component; occasional term.

my" ge-l sis [*myo-*; L. *gelare*, to freeze; G. *-osis*, condition]. A hardened region in a muscle; specifically, hard nodules localized at the head of muscle.

my o-gen. Collectively, the water-soluble proteins of muscle, largely located in the sarcoplasm and consisting of various enzymes.

my o-gen'i [*myo-*; G. *genesthai*, from *gignesthai*, to be produced]. Of muscular origin, used in myogenic contraction of muscle, as opposed to neurogenic contraction.

my gl 'bin [*myo-*; L. *globus*, ball]. Myohemoglobin, muscle hemoglobin; the form of hemoglobin occurring in the muscle fibers. It differs somewhat from blood hemoglobin in showing a displacement of the spectral absorption bands toward the red, higher oxygen affinity and hyperbolic dissociation curve, smaller Bohr effect, lower affinity for carbon monoxide, and a lower molecular weight. It serves as a short-time oxygen store, carrying the muscle from one contraction to the next.

my" glo"bi u ri a. The presence of free myoglobin in the urine, seen in Haff disease, trauma, ischemia, and other primary lesions of striated muscle which result in muscle necrosis.

paroxysmal paralytic m. A rare disease of unknown cause characterized by sudden painful muscle spasms, probably corresponding to the onset of focal necrosis in the affected muscles, and excretion of a brownish urine, found to contain myoglobin. It may be a sporadic variant of Haff disease.

traumatic m. That following severe physical damage to striated muscle as the result of crushing injuries, high voltage currents, or even extreme physical punishment.

my"o-gnath us [*myo-*; G. *gnathos*, jaw]. A form of double monster in which a rudimentary head is joined to the jaw of the autosite by means of muscle and integument only.

my o-gram [*myo-*; G. *gramma*, letter]. The tracing made by the myograph.

my' graph [*myo-*; G. *graphein*, to write]. An instru-

ment for recording the phases of muscular contraction. —**myograph'ic,** *adj.*

my"o·he·ma·tin (migh"o·hee'muh·tin, ·hem'uh·tin). A respiratory enzyme; an iron porphyrin compound allied to hematin. Important in animal and plant tissue oxidation.

my"o·he·mo·glo'bin (·hee"mo·glo'bin, ·hem"o·) [*myo*; G. *haima*, blood; L. *globus*, ball]. Myoglobin.

my"o·he·mo·glo"bin·u'ri·a. Myoglobinuria.

my·oi'des (migh·oy'deez) [*myo*; G. *eidos*, form]. See *platysma.*

my·o·in·o·si·tol. New name proposed for the common inositol, sometimes called *meso-inositol,* to distinguish it from the eight other possible stereoisomers.

my"o·ki'nase, my·ok'i·nase. An enzyme present in muscle tissue which enables myosin to bring about the reaction by which two moles of adenosinediphosphate yield one mole of adenylic acid and one mole of adenosinetriphosphate. It also facilitates the action of hexokinase in catalyzing the reaction between glucose or fructose and adenosinetriphosphate by which glucose-6-phosphate or fructose-6-phosphate and adenosinediphosphate are formed.

my"o·ki·ne·si·o·gram [*myo*; G. *kinēsis*, motion; *gramma*, letter]. The curve obtained in myokinesiography.

my"o·ki·ne"si·og'ra·phy. 1. A method of recording graphically the movement of muscle either in vivo or in vitro. 2. Specifically, a method for studying muscle action during walking. It reveals disturbances in motor activity and coordination.

my·o·ky'mi·a (migh·o·kigh'mee·uh, ·kim'ee·uh) [*myo*; G. *kyma*, wave]. Constant quivering of muscle. See *myoclonus.*

my·o·li·po·ma. A myxochymoma.

my·ol'o·gy (migh·ol'o·jee) [*myo*; G. *logos*, word]. The science of the nature, structure, functions, and diseases of muscles.

my·o'ma (migh·o'muh) [*myo*; G. *-ōma*, tumor]. A tumor derived from muscle. When it is derived from smooth muscle, it is called a *leiomyoma;* when derived from striated muscle, it is called *rhabdomyoma.* —**myom'atous,** *adj.*

myoblastic m. See granular-cell myoblastoma.

m. striocellulare. Rhabdomyoma.

m. telangiectodes. A myoma with many blood vascular spaces, often cavernous. Also called *angiomyoma.*

my"o·ma·la'ci·a (migh"o·ma·lay'shee·uh, ·see·uh) [*myo*; G. *malakia*, softness]. Degeneration, with softening, of muscle tissue.

m. cordis. Softening of a portion of the heart muscle, usually resulting from thrombosis or embolism.

my"o·mec'to·my [*myo*; G. *-ōma*, tumor; *ektomē*, excision]. Excision of a uterine or other myoma.

my·o·me·lan·to·sis (migh·o·me·lan·to·sis) [T.]. A solitary leiomyoma occurring usually in the external genitalia or rarely in the nipples.

my'o·mere. Old term for myotome, 2.

my·o·me·tri'tis [*myo*; G. *mētra*, womb; *-itis*, inflammation]. Inflammation of the uterine muscular tissue.

my"o·me'tri·um [*myo*; *mētra*]. The uterine muscular structure.

my·o·neme [*myo*; G. *nēma*, thread]. One of the long contractile fibrillae in protozoa.

my·o·neu'ral [*myo*; G. *neuron*, nerve]. 1. Pertaining to both muscle and nerve. 2. Relating to the nerve endings in muscle tissue.

my·o·pal'mus [*myo*; G. *palmos*, quivering motion]. Twitching of the muscles.

my"o·pa·ral'y·sis [*myo*; G. *paralysis*, paralysis]. Paralysis of a muscle or muscles.

my"o·pa·re'sis (migh"o·pa·ree'sis, ·par'i·sis) [*myo*; G. *paresis*, paralysis]. Slight paralysis of muscle.

my"o·path'i·a ra·chit'i·ca (ra·kit'i·kuh). The muscular atonia of rachitic infants.

my·o·path'ic [*myo*; G. *pathos*, disease]. Depending upon or relating to disease of the muscles.

my·op'a·thy, my'o·path"y [*myo*; *pathos*]. Any disease of the muscles.

my'ope [G. *myōps*, closing or contracting the eyes]. A person affected with myopia.

my"o·per"i·car·di'tis [G. *mys*, muscle; *perikardios*, around the heart]. A combination of pericarditis with myocarditis.

my·o'pi·a (migh·o'pee·uh) [G. *myōps*, closing or contracting the eyes]. Nearsightedness; an optical defect, usually due to too great length of the anteroposterior diameter of the globe, whereby the focal image is formed in front of the retina. Symbol, my. —**myop'ic,** *adj.*

high m. A degree of myopia greater than 6.5 diopters.

low m. One less than 2 diopters.

malignant m. Rapidly progressing myopia.

progressive m. of children. Continuous increase of myopia, due to increasing growth of the eyeball.

twilight m. A phenomenon of normal eyes in which they become myopic in dim light, a factor of great importance in night flying.

my'o·plasm [G. *mys*, muscle; *plasma*, anything formed]. The cytoplasm of a muscle cell or fiber.

my·o·plas"ty [*myo*; G. *plassein*, to form]. Plastic surgery on a muscle or group of muscles.

my"o·por·tho'sis [G. *myōps*, closing or contracting the eyes; *orthōsis*, a making straight]. The correction of myopia.

my"o·psy·chop'a·thy (migh"o·sigh·kop'uth·ee) [G. *mys*, muscle; *psychē*, soul; *pathos*, disease]. A disease of the muscles associated with feebleness or defect of mind. Syn., *myopsychosis.*

my"o·psy·cho'sis (migh"o·sigh·ko'sis). Myopsychopathy.

myoragal. Trade-mark for a preparation of nucleosides free of choline, histamine, and epinephrine. The preparation is used as a vasodilator.

my·or'rha·phy (migh·orr'uh·fee) [G. *mys*, muscle; *rhaphē*, suture]. Suture of a muscle.

my'o·san [*myo*]. A protein derivative of the class of proteans which is formed by the action of dilute acid or water on myosin.

my"o·sar·co'ma [*myo*; G. *sarkōma*, fleshy excrescence]. A sarcoma derived from muscle.

granular-cell m. See malignant granular-cell *myoblastoma,* 1.

my"o·schwan·no'ma. See *neurilemmoma.*

my·o·scle·ro'sis [*myo*; G. *sklērōsis*, hardening]. Fibrous myositis.

my'o·sin [*myo*]. One of the principal proteins occurring in muscle, comprising up to one-half of the total muscle protein. It combines with actin to form actomyosin, and as such is believed to be responsible for the birefringent, contractile, and elastic properties of muscle. It is closely associated with the enzyme adenosine triphosphatase (ATPase). Its coagulation after death is the cause of rigor mortis.

my·o·si'tis [*myo*; G. *-itis*, inflammation]. Inflammation of muscle, usually referring to voluntary muscle. —**myosit'ic,** *adj.*

fibrous m. Chronic myositis with formation of fibrous tissue.

gas-gangrene m. Inflammation of a muscle followed by or concomitant with a necrotizing infection by anaerobic gas-producing bacteria.

interstitial m. Inflammation of the stroma of muscle.

ischemic m. Inflammatory reaction in muscle due to marked reduction of blood supply, as by prolonged tight bandaging of a fracture.

m. ossificans. Myositis with formation of bone. It includes a circumscribed form, with bone formation in a scar; traumatic form with bone formation in the injured part of the muscle; and multiple progressive form, characterized by bone formation in many foci in muscles, tendons, ligaments, etc., beginning in early life and progressively increasing.

parenchymatous m. Inflammation affecting the muscle fibers.

rheumatoid m. That characterized by focal inflammation, lesions occurring in muscles during the course of rheumatoid arthritis.

trichinous m. That due to *Trichinella spiralis* in the muscle.

my″o-stat′ic [*myo-*; G. *statikos*, causing to stand]. Referring to a muscle of fixed length in relaxation, as in myostatic contracture.

my″o-su′ture [*myo-*; L. *sutura*, a sewing together]. Suture of a muscle; myorrhaphy.

my″o-syn″o-vi′tis. Inflammation of synovial membranes and surrounding musculature.

my″o-tac′tic [*myo-*; *tactum*, from L. *tangere*, to touch]. Relating to muscular sense.

my-ot′a-sis (migh-ot′uh-sis) [*myo-*; G. *tasis*, stretching]. Stretching of a muscle. —**myotat′ic,** *adj.*

my″o-ten″o-si′tis [*myo-*; G. *tenōn*, tendon; *-itis*, inflammation]. Inflammation of a muscle and its tendon.

my″o-te-not′o-my [*myo-*; *tenōn*; G. *tomē*, a cutting]. Surgical division of muscles and tendons.

my′o-tome [*myo-*; G. *tomos*, cutting]. 1. An instrument for performing myotomy. 2. That part of a somite that differentiates into skeletal muscle. Syn., *muscle plate*. 3. The muscle group innervated by a single spinal nerve.

head m. One of the specialized head somites present in many vertebrate embryos that give rise to the eye muscles.

my-ot′o-my (migh-ot′o-mee) [*myo-*; G. *tomē*, a cutting]. Division of a muscle, particularly through its belly.

my″o-to′nia [*myo-*; G. *tonos*, tone]. Tonic muscular spasm.

m. acquisita. A disease of unknown cause characterized by tonic muscular spasm.

m. atrophica. See muscular *dystrophy*.

m. congenita. A congenital and usually hereditary disease characterized by tonic spasms in the voluntarily moved muscles. Also called Thomsen's disease.

m. congenita intermittens. See *paramyotonia congenita*.

m. dystrophica. See muscular *dystrophy*.

my″ot′ro-phy. Nutrition of muscle.

myoxane. Trade-mark for mephenesin.

myr′cene. $C_{10}H_{16}$; 7-methyl-3-methylene-1,6-octadiene; a terpene hydrocarbon occurring in myrcia oil and other volatile oils.

myr′i-a-chit (meer-yah-chit. See Notes § 35). See *palmus*, 1.

myr′i-a-gram [G. *myrioi*, ten thousand; *gramma*, scruple]. Ten thousand grams.

myr″i-a-li′ter (murr″ee-uh-lee′tur) [*myrioi*; G. *litra*, pound]. Ten thousand liters.

myr″i-a-me″ter [*myrioi*; G. *metron*, measure]. Ten thousand meters.

myr′i-a-pods. Millipedes and centipedes.

my-ri′ca [G. *myrikē*, tamarisk]. The dried bark of the root of *Myrica cerifera* and *M. pennsylvanica*, formerly used as an astringent and tonic. Also employed in diarrhea. Also called bayberry bark.

myr′i-cin. Myricyl palmitate, $C_{30}H_{61}O_2C_{16}H_{31}$, a constituent of beeswax.

myr′i-cyl. The univalent hydrocarbon radical $CH_3(CH_2)_{29}$—. Syn., *melissyl*.

m. alcohol. $CH_3(CH_2)_{28}CH_2OH$; an alcohol present in beeswax as the palmitate ester known as *myricin*. Syn., *melissyl alcohol*.

my-rin′ga [ML., from G. *mēninx*, membrane]. The tympanic membrane.

myr″in-gec′to-my (mirr″in-jeck′to-mee). See *myringodectomy*.

myr″in-gi′tis (mirr″in-jy′tis, my″rin-) [*mēninx*; G. *-itis*, inflammation]. Inflammation of the tympanic membrane.

m. bullosa. Myringitis with bullous lesions on the tympanic membrane. These may contain serum or blood.

my-rin″go-dec′to-my [*mēninx*; G. *ektomē*, excision]. Excision of a part or of the whole of the tympanic membrane.

my-rin″go-my-co′sis (mi-ring″go-migh-ko′sis) [*mēninx*; G. *mykēs*, fungus; *-ōsis*, condition]. An infection of the eardrum due to fungi, usually as the result of spread from the external auditory canal, as otomycosis.

my-rin′go-plas″ty [*mēninx*; G. *plassein*, to form]. A plastic operation on the tympanic membrane. —**myringoplas′tic,** *adj.*

my-rin′go-tome [*mēninx*; G. *tomos*, cutting]. Instrument used in incising tympanic membrane.

myr″in-got′o-my [*mēninx*; G. *tomē*, a cutting]. Incision of the tympanic membrane.

my′rinx. See *myringa*.

my-ris′ti-ca (mi-ris′ti-kuh, migh-ris′-). Nutmeg.

my″ris-tic′ ac′id (mi-ris′tick, migh-ris′tick). $CH_3(CH_2)_{12}COOH$. A fatty acid occurring in the glycerides of many fats.

my-ris′ti-cin. $C_{11}H_{12}O_3$. A liquid constituent of myristica (nutmeg) oil.

my-ris′ti-col. $C_{10}H_{16}O$. An oily substance extracted from nutmeg oil.

my-ris′tin. $(C_{13}H_{27}O_2)_3C_3H_5$. Glyceryl trimyristate, a component of spermaceti, nutmeg butter and other fats.

my′ro-nate. A salt of myronic acid.

my-ron′ic ac′id (migh-ron′ick, mi-ron′ick). $C_{10}H_{19}NS_2O_{10}$. The acid component of the glycoside, sinigrin, found in black mustard, which on hydrolysis yields allyl isothiocyanate.

myr′o-sin (mirr′o-sin, migh′ro-sin). An albuminous ferment found in mustard seed; liberates the mustard oil from potassium myronate.

myrrh (mur) [G. *myrra*]. A gum resin obtained from *Commiphora molmol*, *C. abyssinica*, or other species of *Commiphora*. Contains a volatile oil, a resin, myrrhin, and a gum; used as an aromatic stimulant mouthwash. Has been used as a local application in various forms of stomatitis.

myrticolorin. See *rutin*.

myr′til-lin (mur′ti-lin) [L. *myrtus*, myrtle]. An extract from the berries of *Vaccinium myrtillus*, one of the Ericaceae with insulinlike properties. Has been used to reduce glycosuria in diabetes.

myr′tle [*myrtus*]. The dried leaves of *Myrtus communis*; its volatile oil yields myrtol.

myr′tol (mur′tole, -tol, -tawl) [*myrtus*]. A constituent of the essential oil of myrtle; formerly used in bronchial and pulmonary affections as an antiseptic.

mysoline. Trade-mark for 5-phenyl-5-ethylhexahydropyrimidine-4,6-dione; $C_2H_5(C_6H_5)C(CONH)_2CH_2$; a white crystalline substance, sparingly soluble in water; effective in initial clinical trials on patients subject to attacks of epilepsy.

my″so-pho′bi-a [G. *mysos*, defilement; *phobos*, fear]. Abnormal dread of contamination or of dirt.

my′ta-cism [G. *mytakismos*, fondness for the letter

mu]. Excessive or faulty use of the letter *m*, and its substitution for other sounds. Syn., *mutacism*.

myth"o-ma'ni·a [G. *mythos*, story; *mania*, madness]. A morbid tendency to lie or to exaggerate; condition seen in certain psychiatric patients.

myth"o-pho'bi·a [*mythos*; G. *phobos*, fear]. A morbid dread of stating what is not absolutely correct.

myt"i·lo-tox'in. A poisonous principle found in mussels.

myt"i·lo-tox'ism [G. *mytilos*, mussel; *toxikon*, poison]. Mussel poisoning, with paralysis of the central and peripheral nervous system.

mytolon chloride. Trade-marked name for 2,5-*bis*(3-diethylamino p pylami) be oq i none-*bis*-benzyl chloride; $C_{34}H_{48}Cl_2N_4O_2$; curariform compound used as skeletal muscle relaxant in surgical anesthesia.

my·u'rous (migh·yoor'us) [G. *mys*, mouse; *oura*, tail]. Tapering like the tail of the mouse; said of the pulse when it is progressively growing feeble. *Obs.*

myxikone. Trade-mark for *ovalkinone*.

myx·ad"e·ni'tis [G. *myxa*, mucus; *adēn*, gland; -*itis*, inflammation]. Inflammation of mucous gland.

m. **labialis.** Inflammation of the mucous membrane of the lips; characterized by painless papules. See also *cheilitis glandularis*.

myx·ad"e·no'ma. See *myxoadenoma*.

myx"as·the'ni·a (mix"as-thee'nee-uh, mix·as-thee'nigh·uh) [*myxa*; G. *astheneia*, weakness]. Over dryness of the mucosa or impairment of the power to secrete mucus. *Rare.*

myx"e·de'ma [*myxa*; G. *oidēma*, swelling]. A constitutional disorder occurring usually in adults or older children; due to decrease or absence of thyroid hormone resulting from atrophy removal, lack of normal stimulation, inhibition of hormone formation, or prevention of hormone utilization, as with drugs. It is characterized by sallow puffy appearance, especially of the face and hands, low basal metabolic rate (−25 to −40%) increased sensitivity to cold, dryness of skin and absence of sweating, dryness and sparseness of the hair brittleness of the nails, paresthesia, apathy lethargy delayed cerebration, retarded reflexes, slow thick, coarse speech, anemia, increased glucose tolerance, change in plasma protein levels, hypercholesterolemia, cardiac dilatation, bradycardia, and low-voltage electrocardiogram. It is completely controlled by the continued administration of sufficient dose of desiccated thyroid orally or thyroxin intravenously. Also called *Gull's disease*, *athyrea*, *athyreosis*. —**myxedem'atous,** *adj.*

childhood m. That occurring before puberty.

circumscribed m. A rare condition arising in patients who have had hyperthyroidism; characterized by the appearance of small or large, raised, solid, reddish or reddish brown, sharply circumscribed areas over the shins heavily infiltrated with mucinous material. It does not respond to thyroid feeding. Also called *localized m.*, *m. circumscriptum thyrotoxicum*, *tropholedema of Basedow*. *m.* **circumscriptum thyrotoxicum.** See circumscribed m.

operative m. That arising as result of removal of large part of the thyroid gland. Syn., *cachexia strumipriva*.

pituitary m. A rare type of myxedema developing in association with, and probably resulting from, pi uitary deficiency as in pituitary adenoma.

myx·id'i·o·cy [*myxa*; G. *idiōteia*, want of education]. Cretinism.

myx"i·o'sis [*myxa*; G. -*ōsis*, condition]. A mucous discharge. *Obs.*

myx'o-, myx- [*myxa*]. A prefix meaning *relating to mucus* or *mucoid*. A combining form meaning *mucus*; denotes mucous gland or mucous tissue.

myx"o·ad"e·no'ma [*myxa*; G. *adēn*, gland; -*ōma*, tumor]. Adenoma with myxomatous component as adenoma of mucous gland.

myx"o·chon"dro·fi"bro·sar·co'ma (mick"so-kon dro-) [*myxa*; G. *chondros*, cartilage; L. *fibra*, fiber; G. *sarkōma*, fleshy excrescence]. A malignant tumor composed of mixture of myxomatous chondromatous, and fibromatous elements.

myx"o·chon·dro'ma. See *chondromyxoma*.

myx" ·chon"dro-sar·co'ma [*myxa*; *chondros*; G. *sarkōma*, fleshy excrescence]. A chondrosarcoma showing extensive myxomatous degeneration also called *chondrosarcoma myxomatodes*. Syn *chondromyxosarcoma*.

myx'o·cyte [*myxa*; G. *kytos*, cell]. A large cell polyhedral or stellate, found in mucous tissue.

myx" ·fi·bro'ma (mick"so-figh-bro'muh) [*myxa*; L. *fibra*, fiber; G. -*ōma*, tumor]. A fibroma with myxomatous component.

m. **of breast.** See *cystosarcoma phylloides*.

m. **of nerve sheath.** See *neurofibroma*.

myx" fi"bro·sar·co'ma [*myxa*; *fibra*; G. *sarkōma* fleshy excrescence]. A malignant tumor composed of myxomatous and fibrosarcomatous elements. Often mucoid degeneration in fibrosarcoma, that is, fibrosarcoma myxomatodes.

m. **of breast.** See *cystosarcoma phylloides*.

myx"o·gli·o'ma (mick"so-glye-o'muh) [*myxa*; G. *glia*, glue -*ōma*, tumor]. A gelatinous form of glioma.

myx'oid [*myxa*, G. *eidos*, form]. Like mucus.

myx"o·li·po'ma [*myxa*; G. *lipos*, fat; -*ōma*]. See *liposarcoma*.

myx"o·li·po"sar·co'ma. See *liposarcoma*.

myx·o'ma [*myxa*, -*ōma*]. A connective-tissue tumor composed of cells of stellate and spindle form with processes separated by mucoid material. Tissue of similar type is frequently seen in foci in other connective-tissue tumors. Also called *m. simplex*, *m. gelatinosum*, *m. medullare*. —**myxom'atous,** *adj.*

cystic m. One with an accumulation of mucoid so as to resemble cysts. Also called *cystoid m.*

giant mammary m. See *cystosarcoma phylloides*.

intracanalicular m. See intracanalicular *fibroadenoma*.

intracanalicular m. (of breast) See *cystosarcoma phylloides*.

malignant m. One displaying infiltrative growth, usually myxoma of the heart.

m. **cavernosum.** A cystic m.

m. **fibrosum.** See *fibromyxoma*.

m. **lipomatodes.** See *liposarcoma*.

odontogenic m. One of the jaws, considered to be of dental origin, and usually seen in young individuals.

telangiectatic m. One with rich vascular component. Also called *m. telangiectodes*, *vascular m.*

myx" ma·to'sis [*myxa*; -*ōma*, G. -*ōsis*, condition] The presence of numerous myxomas.

infectious m. An infectious disease in rabbits, transmitted by virus, with widespread lesions resembling myxomas.

Myx"o·my·ce'tes (mick so-migh-see'teez) [*myxa*, G. *mykēs*, fungus]. A class of fungi, known as the slime molds, none of which is pathogenic to man; resemble protozoa in some respects.

myx" o·neu·ro'ma [*myxa*; G. *neuron*, nerve; -*ōma*, tumor]. 1. A neuroma, or more often neurofibroma, with myxomatous component, occurring in peripheral nerves. 2. Mucoid form of meningioma. 3. A gelatinous form of glioma.

myx"o-rhe [myxa, G. *hoia*, flow]. A copious mucous discharge.

myx"-sar co ma [myxa, G. *sarkōma*, fleshy excrescence]. A sarcoma with myxomatous component.

m. of breast. See *cystosarcoma phylloides*.

myx'o-spore [myxa, G. *sporā*, seed]. A spore produced in the midst of gelatinous mass without distinct ascus or basidium.

My"zo-my'ia [G. *myzein*, to suck; *myia*, fly]. A subgenus of the genus *Anopheles*, the mosquito which transmits the malarial parasite.

N

N 1. Chemical symbol for nitrogen. 2. Abbreviation for normal.

N- *I chemistry* symbol prefixed to radical which is attached to the nitrogen atom.

n 1 A unit of neutron dosage corresponding to the roentgen. 2. Symbol for refractive index.

n. Abbreviation for nasal

n- *I chemistry* normal

N. A. Numerical aperture.

Na Chemical symbol for sodium (*natrium*)

Naboth, Martin [*German anatomist* 1675–1721]. Known eponymically for his description of the mucous follicles of the cervix uteri about the external os; called *Naboth follicle* or *glands*. He also described the small retention cyst formed by the Nabothian follicles which are called *Nabothian cysts* or *ovules*. The discharge of thin mucus from the pregnant uterus, which accumulates as the result of excessive secretion of the uterine glands is known as *Nabothian menorrhagia*.

na cre-ous (nay'kree-us, nack ree us) [A nacqarah, drum]. Resembling mother-of-pearl

N. A. D No appreciable disease

Naegele, Franz Karl [*German obstetrician*, 1778–1851]. Once named the Euclid of obstetrics for his geometric description of biparietal obliquity (*Naegele obliquity*) the lateral inclination of the fetal head at the superior pelvic strait (1819) described the obliquely contracted pelvis, the ankylosis of one sacroiliac synchondrosis, and imperfect development of the sacrum (1839) (*Naegele pelvis*) Invented an obstetric extraction instrument equipped with cephalic and pelvic curves and attached axis-traction bar called *Naegele's forceps*.

Naegeli, Otto [*Swiss physician*, 1871 1938] Devised maneuver for relief of epistaxis, in which upward traction of the patient head is made with one hand of the physician under the patient occiput and the other under the jaw called *Naegeli maneuver*

Naegeli test. See under *test*

nae paine hy"dro-chl ride. $NH_2C_6H_4COOCH_2CH_2NHCH_2(CH_3)_2CH\cdot HCl$ 2-amylaminoethyl-p-aminobenzoate hydrochloride white powder sol bl in water Its actions resemble those of cocaine hydrochloride, but the solution does not cause mydriasis Used to produce corneal anesthesia. See *amylsine hydrochloride*

nae vus (nee vus) See *nevus*

Naffziger Howard Christian [*American surgeon*, 1884–]. Distinguished neurosurgeon Described the scalenus syndrome, called *Naffziger syndrome* Described excision of the superior and lateral walls of the orbit for the relief of progressive exophthalmos; called *Naffziger operation*. See also Naffziger' *test*.

na ga na (na gah nuh) [Zul] An infectious disease of domestic animals, especially equine animals in East Africa, caused by the *Trypanosoma brucei*. It is transmitted by the bite of the tsetse fly

naganol. Trade name for *suramin*.

Naga sore (nah gah) See tropical *ulcer*

Nagel' test. See under *test*

Nageotte Jean [*French pathologist*, 1866–1948] Known for his association with Babinski in the study of the syndrome of contralateral hemiplegia. See under *Babinski*.

Nagler' reaction. See under *reaction*.

nail [AS. *naegel*]. 1. The horny structure covering the dorsal aspect of the terminal phalanx of each finger and toe. It consists of intimately united horny epithelial cells probably representing the stratum corneum of the epidermis 2. A metallic (usually stainless steel or vitallium) elongated rod with one sharp and one blunt end, used in surgery to anchor bone fragments. Syn pin.

clover leaf n. An intramedullary nail which in cross section is shaped like clover leaf used particularly for internal fixation of fractures of the *femur*

eggshell n. A nail which assumes semitransparent, bluish white hue resembling the color of the shell of an egg. The nail plate is thinned and shows tendency to curve upward at the free border Hyperhidrosis may be an associated condition.

Hippocratic n. See clubbed *finger*

ingrowing n. An overlapping of the nail by the adjacent tissues, often attended by painful ulceration and exuberant granulations. It is most common in the great toe.

intramedullary n. One inserted through the medullary canal of tubular bone to provide internal immobilization of fractures It is long enough to pass across the fracture site to obtain fixation in both fragments of the bone.

Jewett nail n. A nail, 2, for internal fixation of intertrochanteric fractures single piece of metal with three-flanged nail to be driven into the head and neck of the femur and an attached flat plate to conform to the side of the femur shaft

Küntscher n. A stainless steel rod used for intramedullary fixation of fractures of long bones, especially the femur tibia, humerus, radius, and ulna. also called *Küntscher intramedullary n.*

n. bed. A vascular tissue, corresponding to the corium and the germinative layer of the skin, on which nail rests.

n. culture. *I bacteriology* stab-culture showing growth along the needle track, and on the surface buttonlike projection, giving the appearance of nail driven into the gelatin.

n. en raquette. A dystrophy of the nail in which the nail, usually that of the thumb, appears wider than normal, its transverse curvature diminished so that the nail seems flat. The effect is that of miniature tennis racket.

n. fold. The fold of skin bounding the sides and proximal portion of nail.

n. groove. The sulcus between the nail fold and the nail bed.

n. root. The part of the body of the nail covered by the proximal nail fold.

n. wall. See *n. fold.*

Neufeld n. *In orthopedics,* a V-shaped device for internal fixation of intertrochanteric fractures; a nail inserted into the neck of the femur merges with a rounded plate which is fastened to the side of the femur with screws.

parrot-beak n. A nail curved like a parrot's beak.

Smith-Petersen n. A three-flanged nail used to fix fractures of the neck of the femur. It is inserted from laterally on the shaft just below the greater trochanter, through the neck, and into the head of the femur.

spoon n. See *koilonychia.*

Stei'mann' n. See Fritz *Steinmann.*

Thornton n. A nail, 2, for internal fixation of intertrochanteric fractures; a metallic plate is screwed on to the end of a Smith-Petersen nail and secured to the shaft of the femur with screws.

turtle-back n. A nail curved in all directions; condition seen in certain trophic disturbances.

nail bit'ing. Onychophagia, a nervous affliction or neurotic reaction in adolescents and children, manifested by the habit of biting the fingernails down to the quick. The habit is difficult to break and frequently persists into middle age.

Nairman's test. See under *test.*

Na'ja (nah'juh) [Skr. *nāga,* snake]. A genus of venomous snakes of the family Elapidae commonly known as cobras.

N. haje. The Egyptian cobra which has a markedly hemolytic venom.

N. hannah. The king cobra, an aggressive and large species of snakes. It possesses a powerful neurotoxic venom.

N. naja. The well-known Indian or Asiatic cobra which is smaller and commoner than the king cobra. The species possesses a neurotoxic venom.

Na'ller rikeslin method. See under *method.*

na'ked [AS. *nacod*]. Unclothed; nude.

nalline hydrochloride. Trade-marked name for *nalorphine hydrochloride.*

nal'or'phine hy"dro-chlo'ride. $C_{19}H_{21}NO_3 \cdot HCl$. N-allylnormorphine hydrochloride, a derivative of morphine, occurring as a white, crystalline powder soluble in water. It exerts little or no analgesic effect and antagonizes such narcotic analgesics as morphine, meperidine, and methadone. It is useful as an antidote in treating accidental overdosage or to combat alarming symptoms of extreme narcosis produced by morphine and other narcotic analgesics. See *nalline hydrochloride.*

nam'bi u vu. A disease of dogs in Brazil; marked by icterus and bleeding from the ears; caused by a blood parasite. Syn. *canine yellow fever.* Also called *bleeding ear, blood plague.*

nan'di-nine. $C_{19}H_{19}NO_4$, an alkaloid from the root bark of *Nandina domestica,* a shrub of the Berberidaceae family.

na nism (nay'niz um, nan'iz-um) [G. *nanos,* dwarf]. Abnormal smallness from arrested development; dwarfism.

na no-ceph'a-lus (nay no sef' a-lus, nan o-) [nanos; G. *kephalē,* head]. A fetus with a dwarfed head.

na no-cor'mi [nanos; G. *kormos,* trunk]. See *nanosomus.*

na no-cor'mus [nanos; *kormos*]. See *nanosomus.*

na noid (nay noyd, nan oyd) [nanos; G. *eidos,* form]. Dwarflike.

na nom'e-lus [nanos; G. *melos,* limb]. An individual characterized by undersized limbs.

nan oph-thal'mi-a, nan-oph-thal'mos, nan oph-thal'mus [nanos; G. *ophthalmos,* eye]. A type of microphthalmus in which eyeball, orbit, and palpebral fissure are all abnormally small.

na"no-so'mi-a, na"no-so'mi-a [nanos; G. *sōma,* body]. Dwarfism.

nanosomia pituitaria. Pituitary dwarfism.

na no so mus [nanos, *sōma*]. An individual with dwarfed body.

na nus (nay'nus, nan us) [L., from *nanos*]. A dwarf. —**nanous, nanus,** *adj.*

na palm. An aluminum soap, prepared from naphthenic acids and the fatty acids of coconut oil, used for producing gels of gasoline for incendiary munitions.

nape [ME.]. The back of the neck; the nucha.

na pel'line (na-pel een, -in, nap el een, -in) $C_{22}H_{33}O_3N$. An alkaloid of *Aconitum napellus,* employed as an anodyne and antineuralgic.

na'pex. That portion of the scalp just below the occipital protuberance.

naph az' oline hy"dro-chlo'ride (naf-az o-leen, -lin). $C_{14}H_{14}N_2 \cdot HCl$; 2-(1-naphthylmethyl)-2-imidazoline hydrochloride, a white, crystalline powder freely soluble in water; a vasoconstrictor which, when applied to nasal and ocular mucous membranes, causes prolonged reduction of local swelling and congestion. See *privine hydrochloride.*

naph'tha (naf'thuh) [G. *naphtha*]. 1. Formerly any strong-smelling, inflammable, volatile liquid. 2. A mixture of low-boiling hydrocarbons distilled from petroleum and bituminous shale.

coal tar n. A fraction distilled from coal tar; contains benzene, toluene, xylene, and similar hydrocarbons.

petroleum n. The more volatile part of petroleum collected during distillation and known as crude naphtha, or again separated by distillation into gasoline, benzene, and refined naphtha.

shale n. Naphtha distilled from bituminous shale.

wood n. Mainly methyl alcohol and acetone obtained by the distillation of wood.

naphthalan. Trade-mark for a substance obtained from the distillation of a variety of naphtha and used as a protective dressing.

naph'tha lene [naphtha]. $C_{10}H_8$. A hydrocarbon crystallizing in large, silvery, rhombic plates, insoluble in cold water but slightly soluble in hot water, readily soluble in methyl and ethyl alcohols, chloroform, ether, and benzene. It is antiseptic, and has been used in intestinal putrefaction and in typhoid fever, and locally in scabies and pruritus. It is the most commonly used moth repellent. See *naphthalene poisoning.*

naph"tha-lene-a-ce'tic ac'id. $C_{10}H_7CH_2COOH$. A substance found to have plant-growth-regulating properties.

naph"tha lene-sul fon'ic ac'id. 1. Any of the sulfonic acid derivatives of naphthalene. 2. Either of the two crystalline acids having the composition $C_{10}H_7SO_3H$, distinguished by the prefixes α- and β-; both are employed in various syntheses.

naph'tha-lol. See *betol.*

naph'tha mine (naf'thuh-meen, -min). Methenamine.

naph'thene. 1. Any cyclic hydrocarbon of the general formula C_nH_{2n}, sometimes called cycloparaffin. 2. The naphthalene ring system.

naph the nic ac'id. 1. $C_6H_{11}COOH$; hexahydrobenzoic acid or cyclohexanecarboxylic acid, occurring in crystals, slightly soluble in water; employed in insecticide formulations and for various industrial uses. 2. Any of a group of carboxylic acids derived from naphthenes, occurring in certain petroleums.

naph"thi-on'ic ac'id. $NH_2C_{10}H_6SO_2OH$. A compound which has been used as an antidote for

nitrit poisoning; also used in the treatment of iodism.

naph tho-, naphth- [*naphtha*] A combining form denoting *relationship to naphthalene or its ring structure*.

naph'thol. $C_{10}H_7OH$. A substance found in coal tar existing in two isomeric forms, **alphanaphthol** and **betanaphthol**. **Alphanaphthol** occurs in colorless prisms and is sparingly soluble in water; occasionally used as an intestinal antiseptic. **Betanaphthol** occurs as a crystalline powder soluble in 100 parts of water; it has been used in dyspepsia and as an intestinal antiseptic in diarrhea and typhoid fever. Locally it is used in eczema, prurigo, herpes, and favus.

naph'thol ate. A naphthol compound in which a base replaces the hydrogen atom in the hydroxyl.

α-naph"thol benz' [illegible] $(HO\ C_{10}H_6)_2C(C_6H_5)OH$. A reddish-brown powder insoluble in water, soluble in alcohol; used as an indicator for acids and bases.

naph thol yel'low S. $C_{10}H_4N_2O_8SK\cdot3H_2O$. The potassium (or sodium) salt of 2,4-dinitro-1-naphthol 7-sulfonic acid; a light yellow or orange-yellow powder soluble in water. A pure grade, when certified, is used for coloring foods, drugs, and cosmetics, and called F. D. & C. Yellow No. 2.

naph"tho-qui none. $C_{10}H_6O_2$. Either of two compounds derived from naphthalene: 1,4-naphthoquinone (α-naphthoquinone), derivatives of which have vitamin-K activity, or 1,2-naphthoquinone (β-naphthoquinone), used as a reagent.

naph'thyl. $C_{10}H_7$. The radical of naphthalene.

naph thyl a mine. $C_{10}H_9N$. Either of two compounds, α-naphthylamine or β-naphthylamine, the former being 1-aminonaphthalene, the latter 2-aminonaphthalene. Both occur as white to reddish crystals, slightly soluble in water. Inhalation of their dust or vapor may result in urinary-bladder tumors.

α-naph"thyl thi" u re a. See *ANTU*.

naphuride sodium. Trade-mark for suramin sodium.

Napier's aldehyde test. See under *test*.

na'pi form (nay'pi form, nap'i) [L. *napus*, a kind of turnip; *forma*, shape]. Turnip-shaped.

Narath, Albert [*Austrian surgeon*, 1864–1924]. Introduced an operation of omentopexy to relieve ascites in cirrhosis of the liver by establishing collateral circulation (1905). The omentum is brought forward into a subcutaneous pocket and loosely sutured in place. Called *Narath operation*.

nar'ce-ine (nahr'see-een, -in) $C_{23}H_{27}O_8N.3H_2O$. An alkaloid contained in opium. It is sparingly soluble in water and alcohol, and forms fine, silky, inodorous, bitter crystals. It has been used as a substitute for morphine.

nar'cism. See *narcissism*.

nar-cis'sine (nahr-sis'een, -in). An alkaloid obtained from the daffodil *Narcissus pseudonarcissus*.

nar'cis sism [G. *Narkissos*, a beautiful youth who fell in love with his own reflection]. 1. Self-love frequently without genitality as an object. 2. In *psychoanalysis*, fixation of the libido upon one's own body. Syn., *autoerotism*, *narcism*. —**narcissistic**, *adj.*; **narcissist**, *n.*

nar'co- [G. *narkosis*, to benumb]. A combining form signifying *narcosis*, *numbness*, or *stupor*.

nar"co an al'y-sis. The chemical induction of quickly reversible sleep during which a trained interrogator elicits memories and feelings not expressed in the patient's wakeful state because of either willful or unconscious resistance; used in the treatment of psychoneurotic and psychosomatic reactions (*narcotherapy*, *narcosynthesis*) and occasionally in the investigation of suspected criminals. Intravenous solutions of sodium amytal or thiopental (often called *truth serums*) are the commonest narcotics used.

nar"co-hyp'ni a [*narkosis*; G. *hypnos*, sleep]. Waking numbness; peculiar state in which the patient feels numb on waking.

nar"co hyp no sis [*narkosis*, *hypnos*; G. *-osis*, condition]. A state of deep sleep induced by hypnosis. Also called *hypnonarcosis*.

nar'co lep sy [*narkosis*, G. *lepsis*, seizing]. An uncontrollable tendency to attacks of deep sleep of short duration. Has been observed in epilepsy, encephalitis, and in tumors of the third ventricle and hypothalamus. Also called *Gélineau disease*, *Gélineau-Redlich syndrome*. —**narcolep'tic**, *n.*

nar co ma [*narkosis*]. Stupor from the use of a narcotic. —**narcom atous**, *adj.*

nar"co ma ni a [*narkosis*, G. *mania*, madness]. A morbid craving for narcotics (medicinal or psychologic) in order to escape painful stimuli. —**narcomaniac**, *n.*

narco umal Trade-mark for *N*-methyl alurate, hypnotic recommended as a surgical anesthetic and general nerve sedative.

nar"co pep si [*narkosis*, G. *pepsis*, digestion]. Old term for slow or torpid digestion.

nar co sis [G. ... benumbing]. A state of profound stupor, unconsciousness, or arrested activity.

nar'co-spasm [G. *narkosis*, to benumb, *spasmos*, spasm]. Spasm accompanied by stupor.

nar"co-syn'the-sis. See *narcoanalysis*.

nar"co ther'a py. See *narcoanalysis*.

nar cot'ic [G. *narkōtikos*, narcotic]. 1. A drug that produces stupor, complete insensibility, or sleep, as opium, chloral, and cannabis. There are three main groups: the opium group which produces sleep, the belladonna group which produces illusions and delirium, and the alcohol group which produces exhilaration and sleep. 2. An individual addicted to the use of narcotics. —**narcot'ic**, *adj.*

nar cot'i co- [*narkōtikos*]. A combining form meaning *narcotic*.

nar cot"i-co-ac rid. Both narcotic and irritant. Also called *narcotico-irritant*. See *acronarcotic*.

nar co tine (nahr'ko-teen, -tin) $C_{22}H_{23}NO_7$. An alkaloid occurring in opium, second in abundance to morphine. Sudorific and antipyretic, but not a narcotic. Dose, 0.06–0.2 Gm. (1–3 gr.)

nar'co-tism [G. *narkosis*, to benumb]. The condition resulting from the use of a narcotic.

nar'co-tize [*narkosis*]. Put under the influence of a narcotic; render unconscious by means of a narcotic.

nar"e-ga mi [L.]. Goanese ipecacuanha, the bark of *Naregamia alata*, having properties due to an alkaloid, naregamine; used as an emetic.

na reg' a mine (na-reg'uh-meen, -min). An alkaloid contained in *Naregamia alata*.

na-rin gin. The bitter glycoside of grapefruit rind.

na ris (pl. *nares*) [L.]. A nostril. One of a pair of openings at the anterior part (anterior nares) or at the posterior part (posterior nares) of the nasal cavities.

na sal (nay'zul) [L. *nasus*, nose]. Pertaining to the nose. Abbreviated, n.

na sal. The nasal bone. See Table of Bones in the Appendix.

na-sa'lis. A muscle of facial expression. See Table of Muscles in the Appendix.

na sal step. See *Rönne's nasal step*.

nas'cent (nass'unt, nay'sunt) [L. *nasci*, to be born]. Pertaining to gaseous substances at the moment of their liberation from chemical combination.

na si-o al ve o-lar (nay"zee-o- nay'see-o-) [L.

nasus, nose; alveolus, small hollow]. Relating to, or connecting, the nasion and the alveolar point.

na·si·on (nay'zee·on, nay'see·on) [nasus]. The craniometric point where the sagittal plane intersects the nasofrontal suture.

na·si'tis (nay·sigh'tis, ·zigh'tis) See *rhinitis*. Obs.

Nasmyth, Alexander [Scottish anatomist and dentist, d. 1848]. Described the primary enamel cuticle, called *Nasmyth membrane*.

na·so- (nay'so-) [L. *nasus*, nose]. In anatomy, combining form denoting *connection with*, or *relation to*, *the nose*.

na·so·cil'i·ar"y (nay"so·sil'ee·err ee) [nasus; L. *cilium*, eyelid]. Applied to a nerve distributed to the nose, the ethmoid sinuses, and the eyeball. See Table of Nerves in the Appendix.

na"so·fron'tal [nasus; L. *frons*, forehead]. Pertaining to the nasal and the frontal bones.

na"so·gen'i·tal [nasus; L. *genitalis*, genital]. Pertaining to a correlation that exists between functional changes in the reproductive organs and changes in the nasal mucosa.

na·so·la'bi·al [nasus; L. *labium*, lip]. Pertaining to the nose and lip.

na·so·la·bi·a'lis. A portion of the orbicularis oris muscle.

na"so·lac'ri·mal [nasus; L. *lacrima*, tear]. Pertaining to the nose and the lacrimal apparatus, as the nasolacrimal duct.

na"so·max'il·lar"y. Pertaining to the nasal and maxillary bones.

na"so·pal'a·tine (nay so·pal'uh tyne, ·tin) [nasus; L. *palatum*, palate]. Pertaining to both the nose and the palate, as the nasopalatine nerve. See Table of Nerves in the Appendix.

na"so·phar·yn·gi'tis. Inflammation of the nasal passages and pharynx.

na·so·pha·ryn'go·scope [nasus; G. *pharygx*, pharynx; *skopein*, to examine]. A electrically lighted instrument for inspecting the nasopharynx.

na·so·phar'ynx [nasus; pharynx]. The space behind the posterior nares and above a horizontal plane through the lower margin of the palate; also called *epipharynx*. —nasopharyn'geal, *adj*

na·so·spi·na'le (nay"so·spy·nah'lee). A craniometric point located in the sagittal plane where it meets a line joining the lowest points on the nasal margins. If this falls within the substance of the anterior nasal spine, a point on the left side wall of the nasal spine is used for taking measurements.

na·so·tur'bi·nal [nasus; L. *turbinatus*, cone-shaped]. The ridgelike elevation midway between the anterior extremity of the middle nasal concha and the roof of the nose in most lower mammals. In man its rudimentary homolog is the agger nasi.

Nasse, Christian Friedrich [German physician, 1778–1851]. Noted that hemophilia occurs only in males but may be transmitted by females. The phenomenon previously had been described by Otto (1803) but is known as *Nasse's law*.

na'sus [L.]. The nose.

- **n. aduncus.** Hook nose.
- **n. cartilagineus.** Cartilaginous part of the nose.
- **n. externus.** The external nose.
- **n. incurvus.** Saddle nose.
- **n. osseus.** The bony part of the nose.
- **n. simus.** Pug nose.

na'tal [L. *natalis*, natal]. Native; connected with one's birth.

na·tal'i·ty (nay·tal'i·tee) [natalis]. In medical statistics, the birth rate.

na·tal'o·in. The aloin derived from Natal aloes.

Na·tal' sore. See *oriental sore*.

na'tant [L. *natare*, to swim]. Swimming or floating on the surface of a liquid.

na'tes (nay'teez) [L. *natis*, rump]. Old term for buttocks. —na'tal, *adj*.

Na'tion·al For'mu·lar"y (for'mew·lerr ee). A formulary published by the American Pharmaceutical Association; it is officially recognized by the Federal Food, Drug, and Cosmetic Act. Abbreviated, N F

Na'tion·al Health Serv'ice. In Great Britain, government agency under the Ministry of Health, operative since 1948, charged with providing health services for the entire population. Its purpose is to supply hospitalization, preventive medicine, family medical, dental, and nursing services, medicines, appliances, and other requirements for complete, comprehensive medical services; it is financed by the national government. Free choice of a physician by a patient and the acceptance of him by the doctor have been preserved. The legal charge to the patient for services is nothing or minimal. Remuneration, also governed by law, is on a salary or capitation basis, for dentists, on a fee-for-service basis.

Na'tion·al In·sti·tutes of Health. A division of the U.S. Public Health Service that is devoted to research in public health and the diseases of man. It controls the manufacture and sale of biologic products by licensure.

na'tive [L. *nativus*, innate]. Of indigenous origin or growth, occurring in its natural state; not artificial, as *native albumins*, a class of proteins occurring ready-formed in the tissues.

na·tre'mi·a. 1. Sodium in the blood. 2. Hypernatremia: erroneous usage.

na'tri·um. See *sodium*.

na"tri·u·ret'ic. A medicinal agent which inhibits reabsorption of cations, particularly sodium, from urine. —natriuret'ic, *adj*

na'tron. Native sodium carbonate, $Na_2CO_3.10H_2O$.

na'trum. Sodium.

nat'u·ar"y (natch'oo·err ee, nay'choo·) [L. *natus*, from *nasci*, to be born]. A lying-in ward or hospital. *Obs.*

nat'u·ral [L. *naturalis*, natural]. Not abnormal or artificial.

nat'u·ral se·lec'tion. Darwin's theory of evolution, according to which organisms tend to produce progeny far above the means of subsistence; a struggle for existence ensues which results in the survival of those with favorable variations. Since the favorable variations accumulate as the generations pass, the descendants tend to diverge markedly from their ancestors, and to remain adapted to the conditions under which they live.

naturin. Trade name for thin membranous sluting disks made from animal skin.

na'tur·o·path". One who professes to heal the sick exclusively by the use of natural remedies, such as light, heat, cold, water, fruits, etc. —naturop'athy, *n.*

Naunyn, Bernard [German physician, 1839–1925]. Wrote especially on the gallbladder and pancreas, and studied metabolism in diabetes. Credited with *introducing the term acidosis*.

nau·pa·thi'a (naw·payth ee·uh, ·path ee·uh, naw" pah·thee uh) [G. *naus*, ship; *pathos*, disease]. Seasickness. *Obs.*

nau·se·a [L., from G. *nausia*, seasickness]. A feeling of discomfort in the region of the stomach, with aversion to food and a tendency to vomit. —nauseous, *adj*

cretic n. Morbid aversion to meat.

nau·se·ant [L. *nauseare*, to be seasick]. Any agent that produces nausea. —nau'seant, *adj*.

Na·val Med'i·cal Cen'ter. An installation of the United States Navy similar in character and purpose to the Army Medical Center.

na vel [AS. *nafela*]. The umbilicus.
enamel n. See under *enamel*.
na vic'u lar [L. *navicula*, small boat]. Boatshaped.
na vic'u lar A carpal or tarsal bone: the scaphoid bone of the hand or the foot. See Table of Bones in the Appendix.
navic lar fossa. 1. A depression between the vaginal aperture and the fourchette. 2. The dilated distal portion of the urethra in the glans penis.
na-vic"u lar thri'tis [*navicula*; G. *arthritis*, arthritis]. Inflammation of the distal sesamoid bone in the horse; causes chronic lameness due to incomplete extension of the joint. Also called *navicular disease*.
na vic"u l -cu'boid [*navicula*; G. *kyboeides*, like cube]. Relating to the navicular and the cuboid bones, as naviculocuboid ligament.
na vic"u l -cu ne'i form [*navicula*; L. *cuneus*, wedge; *forma*, shape]. Relating to the navicular and cuneiform bones.
navigan. Trade-mark for the hydrochloride of N-hydroxy-ethyl-piperidine-acetyl-tropic acid, remedy for seasickness.
Nb Chemical symbol for niobium, formerly known as columbium.
N. C. A. Neurocirculatory asthenia.
Nd Chemical symbol for neodymium.
NDGA Abbreviation for nordihydroguaiaretic acid.
Ne Chemical symbol for neon.
near point. The punctum proximum: the point nearest the eye at which an object can be seen distinctly.
absolute n. p. That near point for either eye alone at which no effort at accommodation is made.
convergence n. p. See relative n. p.
relative n. p. That near point for both eyes at which accommodation is brought into play.
nea -sight. See *myopia*.
ne ar thro sis [G. *neos*, new; *arthrōsis*, articulation]. A new and abnormally produced articulation in the sequence of fracture, dislocation, or disease of the bone.
ne'ben kern (nay'ben kairn") See *paranucleus*. Obs.
neb u la [L. mist, fog]. 1. A faint, grayish opacity of the cornea. 2. A spray liquid intended for use in an atomizer.
neb u lar'i neb u lar'ine. An antibiotic substance derived from the fungus *Agaricus* (*Clitocybe*) *nebularis*.
ne bu'li um [*nebula*]. A hypothetical element formerly believed to exist in nebulae; evidence for its existence is now attributed to formation of ionized oxygen and nitrogen.
neb u li za tion. Atomization.
neb u lize [*nebula*]. Convert into a spray or vapor.
neb'u li"zer Atomizer.
Ne-ca tor [L., slayer]. A genus of nematode hookworms.
N. americanus. That species widely distributed in the tropical regions of the Western Hemisphere and throughout southern United States; produces the infestation necatoriasis.
ne"ca to-ri' sis [*necator*; NL. *-iasis*, condition]. Infestation of man with the American hookworm *Necator americanus*, whose infective larvae enter the skin usually at the interdigital regions and may produce ground itch and vesicular lesions. The adult parasite is found in the small intestine and during the larval migration to the intestine damage to the lungs is commonly incurred.
neck [AS. *hnecca*]. 1. The constricted portion of the body connecting the head with the trunk. 2. The narrow portion of any structure serving to join its parts. 3. The line of junction of the crown and root of a tooth.
anatomic n. The constricted portion of the humerus, just below the articular surface, serving for the attachment of the capsular ligament.
bison n. Excess adiposity of the neck, seen in Cushing's syndrome.
n. of the bladder That portion of the urinary bladder immediately surrounding the internal urethral orifice.
n. of the gallbladder The constricted S-shaped portion of the gallbladder between the fundus and the cystic duct.
surgical n. The constricted part of the humerus just below the tuberosities.
wryneck. See *torticollis*.
nec"ro ba "il lo sis (neck ro-bas"il lo sis) [G. *nekros*, corpse; L. *bacillum*, small staff; G. *-ōsis*, condition]. A disease of animals caused by *Actinomyces necrophorus*.
Nec"ro-ba cil'lus [*nekros*; *bacillum*]. A highly pleomorphic, non-spore-forming, Gram-negative anaerobe found in feces, in abscesses of various organs, and in chronic ulcerative colitis. Also called *Bacterium necrophorum*, *Actinomyces necrophorus*.
ne ro bi-o si (neck ro-buy-o sis) [*nekros*; G. *biōsis*, way of life]. Physiologic death of cell or group of cells, in contrast to necrosis or pathologic death of cells, and to somatic death or death of the entire organism. —**necrobiot'ic,** *adj.*
n. lipoidica. A cutaneous disease, characterized by multiple yellow to red plaques generally on the extremities, occurring mostly in female diabetics. There is connective-tissue necrosis with an accumulation of macrophages containing lipids. Also called *Oppenheim-Urbach disease*, *n. lipoidica diabeticorum*.
nec ro cy t sis (neck ro-sigh-to sis) [*nekros*; G. *kytos*, cell; *-ōsis*, condition]. Death of cells.
nec ro-cy"t tox'in [*nekros*; *kytos*; G. *toxikon*, poison]. A toxin produced by the death of cells.
nec ro gen'ic, ne crog' nous (neh krodj' nus) [*nekros*; G. *gennaō*, from *gignesthai*, to be produced]. Originating from dead substances.
nec ro ma ni-a [*nekros*; G. *mania*, madness]. 1. A morbid desire for death or attraction to dead bodies. 2. See *necrophilism*.
nec ro-mi me si [*nekros*; G. *mimēsis*, imitation]. 1. A delusional state in which the patient believes himself to be dead. 2. Simulation of death by a deluded person.
ne-croph gous, ne-croph gi [*nekros*; G. *phagein*, to eat]. Pertaining to the eating of carrion, or putrid meat.
nec ro phil'i ne-croph'il y [*nekros*; G. *philos*, to love]. 1. Necrophilism. 2. A longing for death.
ne-croph'il ism [*nekros*; *philein*]. Sexual perversion in which dead bodies are violated; insane sexual desire for corpses. —**nec'rophile** n.
ne croph'i lous [*nekros*; *philein*]. Subsisting on dead matter; used in qualifying certain bacteria.
ne-croph'il y. See *necrophilia*, 2, *necrophilism*.
nec ro-pho'bi-a [*nekros*; G. *phobos*, fear]. 1. Insane dread of dead bodies. 2. Thanatophobia; extreme dread of death.
nec'rop-sy [*nekros*; G. *opsis*, sight]. The examination of a dead body; autopsy; post-mortem examination.
ne-crose (neh krohss' krohs neck rohz') [*nekros*]. To undergo necrosis or tissue death.
nec'ro sin [*nekros*]. A substance isolated from inflamed areas, said to be capable of injuring body cells.
ne-cro sis [G. mortification]. The pathologic death of a cell or group of cells in contact with living cells. —**necrot'ic,** *adj.*; **nec rotize,** v.
aseptic n. See septic n.
aseptic n. Necrosis without infection and inflam-

mation also called *anemic n.*, *avascular n.*, *bland n.*, *quiet n.*, *simple n.*, *spontaneous n.*
avascular n. See aseptic n.
bland n. See aseptic n.
caseation n. That occurring typically in tuberculosis, with formation of cheesy substance.
central n. Necrosis of the liver around the central vein of the lobule.
coagulation n. A variety characterized by cell death in situ with preservation of cell form and arrangement; most frequent in infarction.
colliquative n. See liquef ctive n.
diphtheritic n. Necrosis of the mucous membran characterized by the formation of tough, leathery membrane composed of coagulated cells and fibrin.
embolic n. Coagulation necrosis in an anemic infarct following embolism.
fat n. Necrosis in adipose tissue commonly accompanied by the production of soaps from the hydrolyzed f t, and seen most frequently in association with pancreatitis and less often in injuries to adipose tissue (traumatic f t n.)
ischemic n. Death of tissue due to occlusion of an artery supplying the region.
liquefactive n. A type resulting in liquefaction of the involved tissue.
mammary-fat n. Destruction of fatty tissue of the breast as result of certain conditions, such as stagnation of duct contents and accumulation within the ducts of irritant substances, tumors, or trauma. It is followed by regenerative process in which phagocytes, plasma cells, and foreign-body giant cells are prominent.
medial (muscle) n. The death of cells located in the muscular coat of the walls of arteries.
phosphorus n. A necrosis of bone especially of the lower jaw occurring in those exposed to the fumes of phosphorus.
postpartum pituitary n. See Sheehan's *syndrome*.
quiet n. See aseptic n.
radium n. Necrosis due to an overdose of radium in the treatment of carcinoma.
simple n. See aseptic n.
spontaneous n. See aseptic n.
subcutaneous n. of the newborn. Adiponecrosis neonatorum.
traumatic fat n. A type resulting from trauma, found most often in the breast and subcutaneous region, and involving inflammation with hemorrhage and leukocytic invasion. See mammary f t n.
Zenker' hyaline n. Coagulation necrosis of striated muscle especially rectus abdominis, occurring in typhoid fever and other infectious diseases. The muscle fibers are swollen, fragmented, homogeneous, and acidophilic nuclei are usually bsent. Also called *Zenker hyalin* or *hyaline degeneration*, *waxy degeneration*.

nec"ro-sper'mi-a [G. *nekros*, corpse; *sperma*, seed] Impotency due to loss of motility of the spermatozoa.
nec ro zo-o-sper'mi [nekros; G. *zôion*, living being; *sperma*, seed]. A condition in which spermatozoa are present but are immobile and without evidence of life.
Nec-tan'dra. See *Ocotea*.
nec tar e-ous (neck tair ee-us) [G. *nektar* nectar]. Agreeable t the tast *Rare*.
nec't -ry [nektar]. *I* *biology* that part of flower which secretes nectar
N.E.D Abbreviation for normal equivalent deviation.
Nedden, Max Wilhelm zur [*German ophthalmologist*, 1870-]. Described bacillus sometimes found in ulcer of the cornea, called *zur Nedden bacillus*.
nee dle [AS. *nǣdl*]. A sharp-pointed steel instrument, used for puncturing or for sewing tissue of various shapes, sizes, and edges, the sewing needle having an eye for carrying suture material through the parts.
aneurysm n. One fixed on handle, half curved and at right angle to the handle, with an eye t the point; used for passing ligature about vessel.
aspirating n. A hollow needle for withdrawing fluid from cavity
brain n. A biopsy needle used in neurosurgery
cataract n. One used for operating upon cataract or its capsule.
curved n. One with curve of any degree p to a full semicircle.
cutting n. One with sharp edge, either curved or straight.
discission n. One used for inserting into the capsule of the lens for breaking up cataract.
electrosurgical n. See *acusector*
exploring n. A hollow needle or trocar with grooved side, which allows the passage of fluid along it after it is plunged into part where fluid is suspected.
hypodermic n. A hollow needle, used with hypodermic syringe.
malleable n. An especially annealed stainless-steel or German-silver pliable, nonbreakable needle which assumes, through ligamental and bony pressure, the proper curves within the vertebral canal for continued or serial injections without stress used for continuous spinal, caudal, or peridural anesthesia.
radium needles. Steel or platinum-iridium-walled, needle-shaped containers filled with radium salt and used in radium therapy
round n. Any needle which is circular in cross section without cutting edg ; may be either curved or straight.
spinal n. A hollow needle equipped with obturator used for spinal or sacral anesthesia or lumbar puncture.
surgical n. Any sewing needle used in surgical operations.
Tuohy n. A needle with directional bevel for accurately inserting and positioning small catheter into the subarachnoid or peridural spaces.
Turkel and Bethell n. A instrument consisting of an outer guiding or spl tting needle and an inner trephine needle and stylet for bone-marrow biopsy or for infusion of solutions into the marrow

nee'dle car'ri-er See *needl holder*
nee dle for'ceps. See *needle holder*
nee dle hold'er A handle usually in the form of self-locking forceps, for clasping surgical needle.
nee dling [*nǣdl*]. The discission with needle, as of cataract, to afford entrance t the aqueous humor and cause absorption of the lens.
n. in aneurysm. Formerly the passage of needles into the sac of an aneurysm.
n. of the heart. The aspiration of an overdistended right atrium; cardiocentesis.
n. of the kidney Puncture of the kidney substance for locating stone.
Neelsen stain. See *carbolfuchsin solution* under *stain*, *Ziehl-Neelsen method*.
ne en-ceph a-lon [neos; G. *enkephalos*, brain]. The neopallium and the phylogenetically new acquisitions of the cerebellum and thalamus collectively also spelled *neencephalon*.
ne'frens (nee'frenz) (pl. *nefrendes*) [L., that cannot bite] Without teeth; edentate, whether sucklings or aged persons. *Rare*.

Neftel's disease. See *atremia*.

neg'a-tive [L. *negativus*, negative]. 1. Denying; contradicting; opposing. 2. Of quantities, less than nothing. 3. In *physics*, opposed to a quality termed positive. Symbol, −.

neg'a-tiv-ism. Markedly reduced activity in which the subject ignores inner stimuli or is indifferent, and even resistant, to suggestions and commands; a symptom of mental illness, usually schizophrenia.

active n. That in which the individual does the opposite of what he is asked to do.

passive n. That in which the individual does not do what he is expected to do.

neg'a-tron [L. *negare*, to deny; G. *ēlektron*, amber]. A term suggested for replacing electron; counterpart to positron.

neg'li-gence. In *medical jurisprudence*, an act of commission or omission which, without regard to circumstances, violates a statute or is obviously opposed to the dictates of accepted medical practices.

contributory n. Failure to exercise ordinary care or performance of a voluntary act, by a patient, which contributes to a resultant injury.

Negri, Adelchi [*Italian physician and pathologist*, 1876–1912]. Remembered for his discovery of the inclusion bodies noted in the Purkinje cells and cells of the hippocampus which are diagnostic of rabies; called *Negri bodies*.

Negro's sign. See cogwheel *rigidity*.

Neil Robertson stretcher. See under *stretcher*.

Neill method. See Van Slyke and Neill *method*.

Neill-Mooser test. See under *test*.

Neisser, Albert Ludwig Siegmund [*German physician*, 1855–1916]. Celebrated discoverer of the gonococcus (1879). Introduced, with August von Wassermann and Carl Bruck, the specific blood test used in the detection of syphilis (1906).

Neisser, Max [*German bacteriologist*, 1869–1938]. With R. Lubowski, noted the phenomenon of complement deviation (1901), which was described independently in the same year by Friedrich Wechsberg. When excessive amounts of antibody are introduced, the excess may combine with complement and thereby prevent part or all of the complement from reacting with the antigen-antibody complex. Called *Neisser-Wechsberg phenomenon*. See also Neisser's stain.

Neis-se'ri-a (nigh-seer'ee-uh, nigh-serr'ee-uh, nigh-seh-ree-uh) [Albert *Neisser*]. A genus of Gram-negative, anaerobic cocci of the family Neisseriaceae.

N. catarrhalis. A species found in the respiratory tract; appears to excite catarrhal inflammation and sometimes pneumonia in man.

N. discoides. An anaerobic species of unknown pathogenicity found in the intestinal and genitourinary tracts.

N. flavescens. A species found in the spinal fluid in certain cases of clinical meningitis.

N. gonorrhoeae. The type species of this genus; the causative agent of gonorrhea. See Plate 30.

N. intracellularis. Synonym for *N. meningitidis*.

N. meningitidis. Species which causes epidemic cerebrospinal meningitis; also called *Diplococcus intracellularis meningitidis*, *Neisseria intracellularis*.

N. orbiculata. An anaerobic species found in the respiratory tract of unknown pathogenicity.

N. reniformis. An anaerobic species found in the respiratory tract of unknown pathogenicity.

N. sicca. A species which apparently is the causative agent of kidney infection; found in the blood stream in cases of clinical endocarditis.

Nélaton, Auguste [*French surgeon*, 1807–73]. Introduced a soft rubber catheter called *Nélaton catheter* and a probe tipped with rough porcelain for locating bullets, called *Nélaton probe*. Described pelvic hematocele. A variable muscle band in the rectum three to four inches above the anus is called *Nélaton fibers* or *sphincter*. Subastragalar disarticulation, usually with wedging between tibia and fibula, is called *Nélaton disarticulation*. Operations for stones, ankylosed wrist, rhinoplasty, arthroplasty of elbow or hip, excision of shoulder by transverse incision, have been called *Nélaton operations*. A line drawn from the anterosuperior iliac spine to the tuberosity of the ischium is called *Nélaton line*. In dislocated hip the tip of the greater trochanter of the femur is above this line.

n electron. See under *electron*.

nem"a-thel'minth (nem"uh-thel'minth, nee"muh-) [G. *nēma*, thread; *helmins*, worm]. Any roundworm of the phylum Nemathelminthes.

Nem"a-thel-min'thes (nem"uh-thel-min'theez, nee"muh-) [*nēma*; *helmins*]. The phylum of the roundworms, which includes the true roundworms or nematodes, the hair snakes, and acanthocephalan worms.

Nem"a-to'da (nem"uh-to'duh, nee"muh-) [*nēma*; G. *eidos*, form]. A class of the phylum Nemathelminthes; the true roundworms. Members of the class are bilaterally symmetrical, unisexual, without a proboscis, and have a body cavity not lined with epithelium.

nem'a-tode (nem'uh-tode, nee'muh-) [*nēma*; *eidos*]. Any worm of the class Nematoda.

nem"a-tol'o-gy (nem"uh-tol'o-jee, nee"muh-) [*nēma*; G. *logos*, word]. That portion of the science of parasitology concerned with the study of nematode worms.

nem"a-to-sper'mi-a (nem"uh-to-spur'mee-uh, nee"muh-to-) [*nēma*; G. *sperma*, seed]. Spermatozoa with long, threadlike tails, as those found in human semen. *Rare*.

nembutal. Trade-mark for *pentobarbital sodium*.

nemural. Trade-mark for *drocarbil*, a veterinary anthelmintic.

Nencki, Marcellus von [*Polish physician*, 1847–1901]. Remembered for his introduction of a test for indole. *Nencki's test for indole* uses nitrous and nitric acids, which produce a red coloration in the solution tested.

ne-o-, **ne-** [G. *neos*, new]. 1. A combining form meaning new or recent. 2. In *biology*, a combining form signifying an *immature form*, a *recently formed part*, or an *abnormal new formation*. 3. In *chemistry*, a combining form denoting a new compound.

ne"o-ajma'line. An alkaloid from *Rauwolfia serpentina*.

neo-antergan maleate. Trade-marked name for the antihistaminic substance, pyrilamine maleate.

neoantimosan. See *fuadin*.

ne"o-ars"phen-am'ine (nee"o-ars"fen-am'een, -fen-am'een, -in) (*neoarsphenamina*). Chiefly sodium 3,3'-diamino-4,4'-dihydroxyarsenobenzene-N-methylenesulfoxylate, $(NH_2)(OH)C_6H_3As{:}AsC_6H_3(OH)(NH.CH_2O.SONa)$. An antisyphilitic. A yellow powder, very soluble in water to form a neutral solution; has the advantage over arsphenamine in not requiring neutralization before injection. Dosage requires caution. See *neosalvarsan*, *neodiarsenol*, and *neokharsivan*. Also called *neoarsenobenzol*, *arsphenamine-S*.

ne"o-ar-thro'sis [G. *neos*, new; *arthrōsis*, articulation]. A false joint.

ne"o-blas'tic [*neos*; G. *blastos*, germ]. Pertaining to, or of the nature of, new tissue.

neocaine. Trade-mark for procaine hydrochloride.

ne"o-cal'a-mine (nee"o-kal'uh-meen, -min) (*neo-calamina praeparata*). A mixture of red ferric oxide, 3; yellow ferric oxide, 4; zinc oxide, 93. It

is used for the same purposes as calamine but has a standardized, reproducible color which more nearly matches that of the average skin.

n. liniment (*linimentum neocalaminae*) Neocalamine, 15; olive oil, 50; calcium hydroxide solution, to 100.

n. lotion (*lotio neocalaminae*) Neocalamine, 15; bentonite magma, 40; water, to 100.

n. ointment (*unguentum neocalaminae*) Neocalamine, 15; wool fat, 12.5; petrolatum, 37.5; liquid petrolatum, 10; water, 25.

phenolated n. lotion (*lotio neocalaminae phenolata*) Neocalamine lotion, 99; liquefied phenol, 1.

ne"o-cer"e-bel'lum [G. *neos*, new; L. *cerebellum*, small brain.] Phylogenetically the most recent part of the cerebellum; the simple lobule, the folium and tuber vermis, and the lateral paired ansiform and paramedian lobules. It receives cerebral cortex impulses via the corticopontocerebellar tract.

neocid. Trade-mark for *chlorophenothane*.

ne"o-cin'cho-phen (nee"o-sing'ko-fen) (*neocinchophenum*) $C_{19}H_{17}O_2N$. The ethyl ester of 6-methyl-2-phenylquinoline-4-carboxylic acid. It is a white to pale-yellow powder nearly insoluble in water. Its actions and uses are the same as those of cinchophen, but it appears to be less toxic. Dose, 0.3 Gm. (5 gr.) See *tolysin*.

ne"o-cor'tex. That part of the cerebral cortex which is phylogenetically the most recent in development; it includes all of the cortex except the olfactory portions, the hippocampal regions, and the piriform areas. Syn., *isocortex*.

ne"o-cys-tos'to-my [G. *neos*, new; *kystis*, bladder; *stoma*, mouth]. A surgical procedure whereby a new opening is made into the urinary bladder.

ureteroileal n. A surgical procedure in which an isolated segment of the ileum is used for a portion of a ureter.

ne"o-den-ta'tum. The phylogenetically new ventrolateral part of the dentate nucleus.

neodiestrenol. Trade-mark for a brand of neoarsphenamine.

ne"o-di"a-ther"my. See short-wave *diathermy*.

ne"o-dym'i-um [G. *neos*, new; *didymos*, twin]. Nd = 144.27. A rare earth metal occurring in cerium and lanthanum minerals.

ne"o-en-ceph'a-lon. See *neencephalon*.

ne"o-en"do-thrix. A type division of the genus *Trichophyton*.

ne-og'a-la. Colostrum. Obs.

ne"o-gen'e-sis [*neos*; G. *genesis*, production]. Regeneration of tissues. —**neogenet'ic**, *adj.*

ne"o-ger"mi-trine. A triester alkaloid, hypotensively active, isolated from veratrum viride; on hydrolysis it yields germine, two moles of acetic acid, and one mole of 2-methylbutyric acid.

neohetramine hydrochloride. A trade-marked name for the antihistaminic substance thonzylamine hydrochloride.

neo-hombreol. A trade-mark for testosterone propionate, a male sex hormone derivative.

neo-hombreol-M. A trade-mark for methyltestosterone.

neohydrin. Trade-mark for the orally effective mercurial diuretic known by the generic name *chlormerodrin*.

neo-iopax. A trade-mark for sodium iodomethamate, a radiopaque medium. See *iodoxyl*.

ne"o-i"so-co-de-ine. Pseudocodeine.

neokharsivan. A trade-mark for neoarsphenamine.

neolin. A trade-mark for N,N'-dibenzylethylenediamine dipenicillin G. See *benzathine penicillin G*.

ne-ol'o-gism [*neos*; G. *logos*, word]. In psychiatry, meaningless, or newly coined, words uttered by the insane.

ne"o-mem'brane [*neos*; L. *membrana*, membrane]. A new or false membrane.

ne"o-mor'phism [*neos*; G. *morphē*, form]. In biology, the development of a new form.

ne"o-my'cin [*neos*; G. *mykēs*, fungus]. An antibiotic substance isolated from cultures of *Streptomyces fradiae*; a polybasic compound. It exhibits activity against a variety of Gram-positive and Gram-negative bacteria. The sulfate, administered orally, is used as an intestinal antiseptic in surgery of the large bowel and anus; the salt is used for topical application in treatment or prevention of susceptible infections of the skin and the eye. See *mycifradin sulfate*.

ne'on [*neos*]. Ne = 20.183. A chemically inert, gaseous element occurring, in small amounts, in air.

neonal. Trade-mark for 5-n-butyl-5-ethylbarbituric acid, a drug employed as a hypnotic and sedative. See *butethal*.

ne"o-na'tal. Newborn.

ne"o-na'tal mor-tal'i-ty rate. The number of deaths reported among infants under one month of age in a calendar year per 1,000 live births reported in the same year and place.

ne'o-nate. See *neonatus*.

ne"o-na-to'rum [*neos*; L. *natus*, born]. Pertaining to the newborn.

ne"o-na'tus, ne'o-nate [*neos*; *natus*]. A newly born infant. —**neona'tal**, *adj.*

neo-oestranol I. Trade-mark for a brand of diethylstilbestrol.

ne"o-ol'ive. The olive with the exception of its small medial portion which is part of the paleoolive.

ne"o-pal'li-um [*neos*; L. *pallium*, cover]. The cerebral hemisphere with the exception of the rhinencephalon. —**neopallial**, *adj.*

neo-penil. Trade-mark for penicillin G diethylaminoethylester hydroiodide, known also by the generic name *penethamate hydriodide*; a salt of benzyl penicillin of low solubility and prolonged action.

ne"o-pen'tane. $(CH_3)_4C$. 2,2-dimethylpropane or tetramethylmethane; a hydrocarbon, gaseous at room temperature, occurring in petroleum naphtha, and also prepared by synthesis.

ne"o-phil'i-ism [*neos*; G. *philein*, to love]. Morbid or undue desire for novelty.

ne"o-pho'bi-a [*neos*; G. *phobos*, fear]. Dread of new scenes or of novelties.

ne"o-phren'i-a (nee"o-fren'ee-uh, -free'nee-uh) [*neos*; G. *phrēn*, mind]. Mental deterioration in early youth.

ne"o-pine (nee'o-peen, -pin, -pyne). $C_{18}H_{21}NO_3$; an alkaloid, isomeric with codeine, occurring in opium; sometimes called *β-codeine*.

ne"o-pla'si-a (nee"o-play'zhuh, -zee-uh, -shuh, -see-uh) [*neos*; G. *plassein*, to form]. 1. Formation of new tissue. 2. Formation of tumors or neoplasms.

ne'o-plasm [*neos*; G. *plasma*, anything formed]. Any new growth; usually applied to a tumor, an aberrant new growth. —**neoplas'tic**, *adj.*

metastatic n. A metastatic tumor.

ne'o-prene. Generic name for synthetic rubber made by polymerization of 2-chloro-1,3-butadiene. Neoprene vulcanizates are markedly resistant to oils, greases, chemicals, sunlight, ozone and heat.

neoprontosil. A trade-mark for disodium 4-sulfamidophenyl-2-azo-7-acetylamino-1-hydroxynaphthalene-3,6-disulfonate, $(NaSO_3)_2C_{10}H_3(NHCOCH_3)(OH).N:N.C_6H_4.SO_2NH_2$, the red dye, moderately soluble in water, first used by Domagk in his epochal chemotherapeutic studies. The substance is still occasionally employed for the same purposes as sulfanilamide. Dose, 3–4 Gm. (45–60 gr.) initially, then 1 Gm. (15 gr.) every 4 hours.

Prontosil soluble, prontosil red, streptozon-S, streptocid rubrum and *azosulfamide* are other trade-marks for the same drug.

ne pyr'i thi mine. A struct ral nalog f thiamine i whi h the thiazole ri g is replaced by pyridine ben g, specifically 1-[(4-amino-2 methyl)-5-pyrimidylmethyl]-2 m thyl-3-(β-hydroxyethyl)pyridini m bromide hydrobromide powerful antagonist of thiamine. Originally what was believed to be this compound was called *pyrithiamine* which proved to be mixt re of compounds. T void confusion th pure substance was designated *neopyrithiamine*

ne quas sin. C $H_{42}O$ bitter principl of quassia, forming w th isoquassin the molecular complex called quassin.

ne sal va san. A name given by Ehrlich to the substance now officially designated neoarsphenamine.

ne o-sen"si bil'i ty See gnostic *sensibility*

neo-silvol. Trade-mark for compound of silver iodide with sol ble gelatin base containing 18-22% silver iodide in colloidal form drug employed as an antiseptic on m cous membranes.

neostam tibamine glucoside A brand of stibamine glucoside peat valent organic antimony compound employed in the treatment of kala-azar

neostibosan. Trade-mark for the pentavalent antimonial preparation ethylstibamine

ne o-stig'mine (nee o-stig meen -min) The di methylcarbami ester of 3-hydroxyphenyl-di-methylam ne, vailabl only in the form of ts salts. The neostigmin component has some of the properties of the related compound physostigmine the former is used to prevent tony of the intestinal and urinary-bladder musculature and for symptomatic control of myasthenia gravis

n. bromide (*neostigminae bromid m*) Br $N(CH_3)$ C_6H OOC $N(CH)$ salt which, because of its lesser hygroscopicity is suited for use in tablets. Dose 15-30 mg. (¼-½ gr) three times daily See *prostigmine bromide*

n. methylsulfate (*neostigminae methylsulfas*) The salt used for hypodermic jection. Dose, 0 5-1 0 mg. (1/120 1/60 gr) See *prostigmine methylsulfate.*

ne o-stri' tum (nee o-stry y t m) [G neos, new; L. *striare* to furnish with channels]. The caudate ucleus and putamen combined the phyl genetically new part of the corpus striatum.

neo-synephrine hydrochloride. Trade-mark for the hydrochloride of the levo isomer of synthetically prepared derivative of phenylethylamine, widely used as pressor substance See *phenylephrine hydrochloride.*

ne-ot ny [neos, G *teinein*, to stretch] *Z oology* sexual maturity in the larval stage; pedogenesis.

ne vi'ta min A. $C_{20}H_{30}O$ 5-cis-vitamin A; an isomer of vitamin A occurring to approximately 35 per cent f the total vitamin-A content of various liver oils and in about the same proportion in synthetic vitamin-A concentrates. Certain of its physical properties differ from those of vitamin A, but it ppears to have the sam biological potency

neph lism [G *nēphalismos*, soberness]. Total abstinence from lcoholic liquors

neph l m e-ter [G *nephele*, cloud *metron*, a measure] An pparatus for ascertaining the umber of bacteria in suspension, or the turbidity of fluid.

Zei n. The Pulfrich photometer mounted in a horizontal position and equipped with turbidity gage.

neph" lom try [*nephelē*, *metron*] The determination of the degree of turbidity of fluid.

nephr See *nephro-*.

n phral'gi a [G. *nephros*, kidney; *algos*, pain] Pain in kidney

ne phrec ta si a (nee freck-tay shuh, -see-uh, -shuh, -see-uh, nef reck) [*nephros*; G. *ektasis*, extension]. Dilat tion of kidney

ne phrec'to mize [*nephros*; G *ektomē*, excision] T remove kidney

ne-phrec to my [*nephros*; *ektomē*]. Excision of kidney

abdominal n. Nephrectomy performed through an abdominal incision.

lumbar n. Nephrectomy through an incision in the loi

tr n th racic n N phrect my pe f rmed through thoracic approach and an incision through the diaphragm.

neph ri [*nephros*]. Pertaining to the kidney; renal.

ne phrid'i um (pl. *nephridia*) [*nephros*]. One of the segmentally arranged, paired, coiled, excretory t bules of many invertebrates, notably the annelid worms.

ne phrit'i des. Plural of nephritis general term for the varieties thereof

ne phri'ti [G]. Inflammation of the kidney If the inflammation is primarily of the glomeruli, the disease is called glomerulonephritis Nephritis caused by infection ascending from the ureter is called pyelonephritis. —**nephrit'ic,** *adj*

acut diffuse interstitial n. Nephritis complication of bacterial, rickettsial, and virus infections; the symptoms usually occu earlier than when glomerulonephritis follows streptococcal infection

chronic parenchymatous n. Chronic glomerulonephritis with marked changes in the renal tubules, as fibrosis, trophy cloudy swelling, hydropic or f tty degeneration, and dilatation with formation of cystic spaces.

mbolic n. A rare form of acute nephritis in which the focal lesions develop in only part of the glomerulus. It usually occurs in subacute bacterial endocarditis, but sometimes in acute bacterial and acute rheumatic endocarditis, and in septicemias with no endocarditis. Hematuria with or without proteinuria is common, but renal insufficiency is not usually present. Also called *thrombotic n.*

glomerular n. See *glomerulonephritis.*

interstitial n An essentially exudative inflammation of the interstitial tissue Inflammatory cells may be present diffusely or focally

nephrotoxic n. A type produced experimentally in nimals by the injection of serum containing antibodies to th animals kidney proteins, thus simulating glomerulonephritis.

scarlatinal n. The acute catarrhal nephritis arising in the course of or during the convalescence from, scarlet fever

syphilitic n. A rare type which may occur in the later stages of syphilis, and perhaps in prenatal syphilis.

thrombotic n. See embolic n.

trench n. A type of acute glomerulonephritis which occurred in epidemic form in the front lines during World War I.

tub lar n. (a) Inflammation of renal tubules. (b) Renal disorders in which th lesions are primarily in the tubules See *nephrosis*, 1

neph"ro- nephr [G *nephros*, kidney]. A combining form meaning *kidney*

neph ro- b dom'i nal [*nephros*; L. *abdomen*, abdomen] Pertaining to the kidneys and abdomen.

neph"ro cal"ci no sis [*nephros*; L. *calx*, lime G -*osis*, condition]. Renal calcinosis, marked by the

precipitation of deposits of calcium phosphate in the kidney tubules.

neph″ro·cap·sec′to·my (nef″ro·cap·sek′to·mee) [*nephros*; L. *capsula*, little box; G. *ektomē*, excision]. Excision of the capsule of a kidney.

neph″ro·cap·sot′o·my [*nephros*; *capsula*; G. *tomē*, a cutting]. Incision of the renal capsule.

neph″ro·car′di·ac [*nephros*; G. *kardia*, heart]. Pertaining to the kidney and the heart.

neph′ro·coele (nef′ro·seel) [*nephros*; G. *koilia*, cavity]. The embryonic cavity in a nephrotome.

neph″ro·co′lo·pex″y [*nephros*; G. *kolon*, colon; *pēxis*, a fixing]. The surgical anchoring of a kidney and the colon by means of the nephrocolic ligament.

neph″ro·co″lop·to′sis [*nephros*; *kolon*; G. *ptōsis*, a falling]. Downward displacement of a kidney and the colon.

neph″ro·cys″tan·as″to·mo′sis [*nephros*; G. *kystis*, bladder; *anastomōsis*, outlet]. The surgical formation of an opening between the renal pelvis and the urinary bladder.

neph″ro·cys·ti′tis [*nephros*; *kystis*; G. *-itis*, inflammation]. Inflammation of both the urinary bladder and kidney.

neph″ro·dys′tro·phy. See *nephrosis*, 1.

neph″ro·gen′ic [*nephros*; G. *genesthai*, from *gignesthai*, to be produced]. 1. Having the ability to produce kidney tissue. 2. Of renal origin.

ne·phrog′e·nous (ni·frodj′i·nus) [*nephros*; *genesthai*]. Of renal origin.

neph′roid [*nephros*; G. *eidos*, form]. Kidney-shaped; reniform; resembling a kidney.

neph′ro·lith [*nephros*; G. *lithos*, stone]. A calculus of the kidney.

neph″ro·li·thi′a·sis [*nephros*; *lithos*; NL. *-iasis*, condition]. The formation of renal calculi, or the diseased state that leads to their formation.

neph″ro·lith′ic [*nephros*; *lithos*]. Pertaining to, or affected with, a nephrolith.

neph″ro·li·thot′o·my [*nephros*; *lithos*; G. *tomē*, a cutting]. An incision of the kidney for the removal of a calculus.

ne·phrol′y·sin, neph″ro·ly′sin [*nephros*; G. *lysis*, a loosing]. A toxic substance capable of disintegrating kidney cells.

ne·phrol′y·sis [*nephros*; *lysis*]. 1. The disintegration of the kidney by the action of a nephrolysin. 2. The operation of loosening a kidney from surrounding adhesions. —**nephrolyt′ic**, *adj.*

neph·ro′ma [*nephros*; G. *-ōma*, tumor]. The clear cell carcinoma of the renal parenchyma.
mesoblastic n. See Wilms's tumor.

neph′ro·meres. See *nephrotome*.

neph′ron (pl. *nephrons*, *nephra*) [*nephros*]. The renal unit, consisting of the glomerular capsule, its glomerulus, and the attached uriniferous tubule.

neph″ro·path′ic. Of or pertaining to any disease of the kidney.

ne·phrop′a·thy. See *nephrosis*, 1.

neph′ro·pex″y [*nephros*; G. *pēxis*, a fixing]. Surgical fixation of a floating kidney.

neph″ro·poi′e·tin (nef″ro·poy′i·tin, ·poy·ee′tin) [*nephros*; G. *poiein*, to produce]. A substance supposed to stimulate growth of renal tissue.

neph″rop·to′sis, neph″rop·to′si·a (nef″rop·to′sis, ·see·uh, ·shuh, ·see·uh) [*nephros*; G. *ptōsis*, a falling]. Prolapse of the kidney.

neph″ro·py·e·li′tis [*nephros*; G. *pyelos*, trough; *-itis*, inflammation]. Inflammation of the pelvis of the kidney; pyelonephritis.

neph″ro·py′e·lo·plas″ty [*nephros*; *pyelos*; G. *plassein*, to form]. A plastic operation on the pelvis of the kidney.

neph·ror′rha·phy [*nephros*; G. *rhaphē*, a suture]. 1. The stitching of a floating kidney to the posterior wall of the abdomen or to the loin. 2. Suturing a wound in a kidney.

neph′ros [G.]. The kidney.

neph″ro·scle·ro′sis [*nephros*; G. *sklērōsis*, hardening]. Involvement of the kidney in hypertensive vascular disease. Gives rise to disturbances in renal function and a clinical picture identical with that of chronic glomerulonephritis.
arterial n. Arteriosclerosis of the kidney causing reduction in blood supply and atrophy of the parenchyma, with resulting fibrosis of the kidney. Often accompanies arteriosclerosis in the aged. Also called *senile arteriosclerotic n.*
arteriolar n. Diffuse fibrosis of the kidney due to arteriolar disease.
malignant n. Nephrosclerosis characterized by rapidly progressive renal disease and marked interference with renal function; associated with malignant hypertension. There is sclerosis or hyaline necrosis of renal arterioles or sometimes acute exudative arteriolitis.

ne·phro′sis [*nephros*; G. *-ōsis*, condition]. 1. *In pathology*, degenerative or retrogressive renal lesions, as distinct from inflammation (*nephritis*) or vascular involvement (*nephrosclerosis*), especially as applied to tubular lesions (*tubular nephritis*); also called *nephropathy*, *nephrodystrophy*. 2. Clinically and loosely, nephrotic syndrome.
acute n. Renal tubular degeneration occurring in either the proximal or distal segments of the nephron, including the mild degeneration associated with infectious diseases as well as the chemical nephroses and other intoxications.
amyloid n. A form of chronic nephrosis due to excessive deposition of amyloid in the kidney, especially in the glomeruli, and sometimes resulting in the nephrotic syndrome.
chemical n. An acute, severe renal-tubule nephrosis caused by exogenous chemical poisons, such as mercury bichloride, ethylene glycol, bismuth, carbon tetrachloride, uranium nitrate, and others. Pathologically, the kidneys are swollen and grayish-white; clinically, the patient develops oliguria, then anuria, often dying of uremia.
cholemic n. That accompanying severe jaundice, characterized by yellowish pigment casts in the collecting tubules and mild degeneration of the convoluted tubules.
chronic n. A slowly progressing degeneration associated with metabolic diseases, such as gout or diabetes.
fat n. A clinically silent, reversible, purely tubular histologic entity characterized by lipid deposition in the epithelial cells of the proximal convoluted tubules, occurring in severe diabetes and in poisonings due to phosphorus, carbon tetrachloride, chloroform, and other halogenated organic compounds.
hemoglobinuric n. See lower nephron n.
ischemic n. See lower nephron n.
lipemic n. See lipoid n.
lipoid n. A relatively rare chronic disease of young children, characterized clinically by severe proteinuria, edema, hypoproteinemia, albumin-globulin ratio reversal, and hypercholesterolemia. When hematuria is absent, the condition is called pure lipoid n., when present, mixed lipoid n. The proteinuria is due to a glomerular lesion which is morphologically not evident; the tubules are the seat of degeneration and lipid deposition. The cause is unknown, although some believe it to be a stage of glomerulonephritis. Treatment is symptomatic; about 50 per cent of patients recover. Also called *lipemic n.*, *membranous glomerulonephritis*.

lower nephron n. A patchy nephrosis involving mainly the distal segment of the nephrons; pathologically there is cloudy swelling, segmental necrosis, and casts in the distal and collecting tubules. Clinically there is renal insufficiency, often oliguria progressing to anuria and uremia. This condition occurs following crushing injuries (*crush syndrome*), in severe transfusion reaction and burns, black water fever, toxemia of pregnancy, favism, and in sulfonamide, mushroom, and carbon tetrachloride poisoning. It is thought to be caused by partial ischemia in conjunction with injurious substances such as myoglobin, hemoglobin (*hemoglobinuric*) or exogenous poisons. Also called *ischemuric tubulorrhexis*.

mercurial n. Nephrosis due to mercury bichloride poisoning.

toxic n. Tubular lesions including cloudy swelling, fatty and hyalin degeneration, and necrosis caused by toxins and other injurious agents released into the blood stream during acute infectious or metabolic disturbances.

neph′ro-stome (neph′ro-sto-ma) [*nephros*; G. *stoma*, mouth]. The opening of a nephron or of a nephridium into the coelom in lower vertebrates and many invertebrates. —**nephrost′omal**, *adj.*

ne-phros′to-my [*nephros*; *stoma*]. The formation of a fistula leading to the pelvis of a kidney.

neph′ro-tome [*nephros*; G. *tomos*, cutting]. The narrow mass of mesoderm connecting somites and lateral mesoderm from which the pronephros, mesonephros, metanephros, and their ducts develop. Also called *intermediate cell mass*, *mesomere*, *nephromere*.

ne-phrot′o-my [*nephros*; G. *tomē*, cutting]. Incision of the kidney.

abdominal n. One through an abdominal incision.

lumbar n. One through an incision in the loin.

neph-ro-tox′ic [*nephros*; G. *toxikon*, poison]. 1. Pertaining to nephrotoxin. 2. Destructive to the kidney cells, nephrolytic.

neph″ro-tox′in [*nephros*; *toxikon*]. A cytotoxin which has a supposedly specific action on the cells of the kidney.

neph″ro-tro′pic. Referring to a medicinal agent which affects predominantly the function of the kidney. —**nephrotro′pic**,

neph-ro-tu-ber″cu-lo′sis [*nephros*; L. *tuberculum*, small swelling; G. -*ōsis*, condition]. Disease of the kidney due to the tubercle bacillus.

neph″ro-u″re-ter-ec′to-my [*nephros*; G. *ourētēr*, ureter; *ektomē*, excision]. The excision of a kidney and whole ureter at one operation.

nep′i-ol′o-gy (nep-ee-ol′-, nee-pee-) [G. *nēpios*, infant; *logos*, word]. That branch of pediatrics which treats of young infants. *Rare.*

nep-tu′ni-um [L. *Neptunus*, of Neptune]. Np = 237 ca. An element, atomic number 93, obtained by bombarding ordinary uranium with neutrons. Undergoes transformation into plutonium.

ne-re′an-thin. See *oleandrin*.

Neri's sign. A sign of sciatica. See under *sign*.

ne-ri-an′thin, ne″ri-an′thin. A crystalline glycoside obtained from the leaves of *Nerium oleander*.

ne′ri-in. A glycoside from the bark and leaves of *Nerium oleander*. It belongs to the digitalis group.

ne-ri′-o-do-re-in. A glycoside from *Nerium oleander*. See neriin.

ne′ri-um [G. *nērion*, oleander]. The leaves and bark of *Nerium oleander*. The extractive principles, in small doses, act as cardiac tonic, resembling digitalis.

Nernst, Walther Hermann [German physicist, 1864–1941]. Known for his invention of an incandescent electric lamp with metallic oxide filaments, called *Nernst lamp*. Nobel laureate (1920).

ner′ol. $C_{10}H_{17}OH$. 2,6-dimethyl-2,6-octadien-8-ol; an unsaturated alcohol found in many essential oils; the *trans* isomer of geraniol.

ner′o-li oil (nerr′o-lee, neer′ lee) [It., supposedly after an Italian princess]. Orange flower oil.

nerve [L. *nervus*, nerve]. A bundle of nerve fibers, usually outside the brain or spinal cord; the nerve fibers are held together by connective tissue called endoneurium inside the nerve bundle and perineurium, the enclosing sheath. A collected bundle of nerve fibers within the brain and spinal cord is usually called a nerve tract. For nerves listed by name, see Table of Nerves; for those not given here see alphabetical entry. See Plate 16.

accelerator n. The cardiac sympathetic nerve, stimulation of which causes acceleration of the heart action.

accessory (eleventh cranial) n. A nerve with motor and parasympathetic components, having both a bulbar origin along the lateral aspect of the medulla oblongata and a spinal origin from the upper 5 or 6 cervical segments. The bulbar part (*internal ramus*) runs with the vagus, sending motor fibers via the recurrent laryngeal nerve to the striate muscles of larynx and pharynx, and parasympathetic fibers to thoracic and abdominal viscera. The spinal portion (*external ramus*) innervates via the cervical plexus (C-2, 3, 4) parts of the trapezius and sternocleidomastoid muscles.

adrenergic nerves. Postganglionic sympathetic fibers which, upon stimulation, release an adrenergic substance at their terminations.

afferent n. One that transmits impulses from the periphery to the central nervous system; sensory nerve.

autonomic n. A nerve of the autonomic nervous system.

cerebrospinal n. Any nerve taking origin from the brain or spinal cord.

cholinergic nerves. See *cholinergic*.

cochlear n. A sensory nerve, attached on the brain stem at the lower border of the pons, which innervates the spiral organ (of Corti) of the cochlea.

cranial nerves. Nerves arising directly from the brain stem and making their exit to the periphery via openings in the skull. **I, olfactory; II, optic; III, oculomotor; IV, trochlear; V, trigeminal; VI, abducens; VII, facial** (including *nervus intermedius*); **VIII, acoustic** (cochlear and vestibular); **IX, glossopharyngeal; X, vagus; XI, accessory; XII, hypoglossal.** Usually described and numbered as 12 pairs, the first two are not true nerves but nerve-fiber tracts of the brain; the caudal 10 pairs originate from nuclei in the brain stem, except for that part of XI which has a spinal root.

depressor n. One which, upon stimulation, lowers the blood pressure either in a local part or throughout the body.

effector n. See efferent n.

efferent n. One conducting impulses from the central nervous system to the periphery, as to muscle.

excitoreflex n. A visceral nerve, excitation of which brings about a reflex action.

extrinsic n. One which conveys nervous impulses to an organ from the central nervous system or from the ganglionated chain of the sympathetic nervous system. It may synapse with a secondary neuron which lies within the organ. See *intrinsic* n.

facial (seventh cranial) n. A motor nerve, attached to the brain stem at the inferior border

of the pons, which innervates the stapedius, stylohyoid, posterior belly of the digastric, and the muscles of facial expression. It also has parasympathetic and sensory components, running by way of th nervus intermedius.
femoral n. A motor and somatic sensory nerve which is ttached t the second third, and fourth lumbar segments of the cord (lumbar plexus) The motor portion innervates the pectineus, the quadriceps femoris, and the articularis genus muscles; the sensory portion innervates the skin of the anterior aspect of the thigh, the medial aspect of the leg, and the skin of the hip and knee joints.
frontal n. A somatic sensory nerve, attached to th ophthalmic, which innervates the skin of the upper eyelid, the forehead, and the scalp.
glossopharyngeal n. The ninth cranial nerve with motor sensory (special and visceral) and parasympathetic components. Motor fibers pass from the nucleus ambiguus to the stylopharyngeus and muscles of soft palate and pharynx; sensory fibers supply the posterior third of the tongue and taste buds there, the pharynx, middle-ear and mastoid air cells; parasympathetic fibers pass from the inferior salivary nucleus via the otic ganglion to the parotid gland.
hypoglossal (twelfth cranial) n. A motor nerve, ttached to the medulla oblongata, which innervates the intrinsic and extrinsic muscles of the tongue.
inhibitory n. Any nerve which, upon stimulation, lowers the activity of center or organ.
intrinsic n. One which innervates the muscles, glands, or mucous membrane of an organ. It may be the nerve fiber either of sensory neuron or of postganglionic neuron of the sympathetic system.
mandibular n. A motor (masticator nerve) and somatic sensory nerve, ttached to the trigeminus, which innervates the tensor tympani, tensor veli palatini, mylohyoid, anterior belly of the digastric, and muscles of mastication, the lower teeth, the mucosa of the anterior two-thirds of the tongue, the floor of the mouth, the cheek and the skin of the lower portion of the face, and the meninges.
maxillary n. A somatic sensory nerve, attached to the trigeminus, which innervates the meninges, the skin of the upper portion of the face, the upper teeth, and the mucosa of the nose, palate, and cheeks.
mixed n. A nerve composed of both afferent and efferent fibers.
motor n. Any nerve composed chiefly or wholly of motor fibers.
n. avulsion. Operation of tearing nerve from its central origin by traction.
n. block. The interruption of the passage of impulses through nerve as by chemical, mechanical, or electric means
n. ending. The termination of nerve at the periphery or in the erve system.
n. gases. See under gas
n. grafting. The transplantation of portion of nerve to reestablish the continuity of severed nerve.
n. of Arnold. The uricular branch of the vagus.
n. of Bell. The long thoracic nerve.
n. of Cotunnius. The nasopalatine nerve
n. of Cruveilhier An occasional lingual branch of the seventh cranial nerve.
n. of Cyon. In the rabbit, separat branch of the vagus which carries sensory fibers concerned in cardiac depressor action.
n. of Eisler The greater coccygeal perforating nerve, only occasionally present, arising from the fourth and fifth sacral nerves.
n. of Jacobson. The tympanic branch of the ninth cranial nerve
n. of Lancisi. The medial longitudinal striae.
n. of Scarpa. The nasopalatine nerve.
n. of Vidius. The nerve of the pterygoid canal.
n. of Vieussens. The ansa subclavia.
n. of Wrisberg. 1 The intermedius branch of the ninth cranial nerve. 2. The medial cutaneous nerve of the arm.
n. tract. A bundle of nerve fibers having the same general origin and destination within the nervous system; as rule, all fibers of nerve tract serve the same or very similar function. See tract.
oculomotor n. The third cranial nerve whose motor fibers arise from nuclei in the central gray matter at the level of the superior colliculus and supply the levator palpebrae superioris and all extrinsic eye muscles except the lateral rectus and superior obliqus, and whose parasympathetic component arises from the Edinger Westphal nucleus and goes to the ciliary ganglion, from which short fibers pass to the ciliary and sphincter pupillae muscles.
olfactory (first cranial) n. A sensory nerve, attached to the olfactory bulb, which innervates the olfactory mucosa.
ophthalmic n. A somatic sensory nerve, attached to the trigeminal, which innervates the skin of the forehead, th upper eyelids, the anterior portion of the scalp, the orbit, the eyeball, the meninges, the nasal mucosa, the frontal, ethmoidal, and sphenoidal air sinuses.
optic (second cranial) n. A sensory nerve, attached at the optic tracts, which innervates the retina.
parasympathetic n. A nerve of the parasympathetic nervous system.
pelvi splanchnic n. See nervus erigens.
peripheral n. (a) Specifically one whose distribution is to the skin or to superficial structures of the body (b) Often used to denote any nerve which is branch of the central nervous system.
phrenic n. A motor nerve, arising from the third, fourth, and fifth cervical (cervical plexus) segments of the cord. It innervates th diaphragm.
pilomotor n. A nerve causing contraction of one of the arrectores pilorum muscles.
pneumogastric n. Old name for vagus nerve.
pressor n. An afferent nerve, stimulation of which excites the vasomotor center
respiratory n. One of two nerves supplying important muscles of respiration: the external is the long thoracic, the internal is the phrenic, nerve.
sacral n. Any of the motor somatic sensory parasympathetic, and visceral sensory nerves (there are five pairs) ttached t the sacral segments of the cord, which innervate the posterior divisions to the muscles and skin of the lower back and sacral region, the anterior divisions to the sacral plexus supplying the muscles and skin of the lower extremity and perineum, and branches to the hypogastric and pelvic plexuses supplying the pelvic viscera and the genitalia.
secretory n. An efferent nerve stimulation of which causes increased activity of the gland to which it is distributed.
segmental n. A nerve that supplies the structures derived from one of the original body somites, as an intercostal nerve.
sensory n. A nerve which conducts afferent impulses from the periphery to the central nervous system, as those mediating sensations of pain, touch, nd temperature.
somatic n. One of the nerves supplying somatic

structures, as voluntary muscles, skin, tendons, joints, and parietal serous membranes

sphenopalatine n. A somatic sensory nerve, attached to the maxillary which innervates the nose and palate via the sphenopalatine ganglion and the palatine nerves.

spinal n A nerve arising from the spinal cord and making its exit through an intervertebral foramen. There are 31 pairs of spinal nerves: 8 cervical, 12 thoracic, 5 lumbar 5 sacral, and 1 coccygeal.

splanchnic n. A nerve carrying nerve fibers from the lower thoracic paravertebral ganglions to the collateral ganglions. The **greater splanchnic nerve** arises from the fifth to ninth or tenth thoracic ganglions and goes to visceral nerve plexuses in the thorax and to the celiac plexus. The **lesser splanchnic nerve** arises from the ninth and tenth thoracic ganglions and goes to the celiac plexus. The **lowest or least splanchnic nerve** arises from the lowest thoracic ganglion and goes to the renal plexus.

sudomotor nerves. The nerves which excite the sweat glands to activity

sympathetic n. A nerve of the sympathetic nervous system.

vasoconstrictor n. See vasomotor nerves.

vasodilator n. See vasomotor nerve under nerve.

vasomotor nerves. Those concerned with controlling the caliber of blood vessels. They are of two types: those which cause constriction of the blood vessel or **vasoconstrictor nerves**, and those which cause dilation of the blood vessel or **vasodilator nerves.** Ordinarily vasomotor is synonymous with vasoconstrictor

visceral n. Any nerve supplying visceral structure.

nerve sup-ply' The nerves of an organ or structure distinguished as **extrinsic n. s.**, that which connects the organ or structure with the central nervous system, and as **intrinsic n. s.**, that portion of the nerve supply entirely contained within the structure or organ, as the myenteric and submucous plexuses of the intestine.

nerve trac'ing. A method used by chiropractors for locating nerves and studying their pathology It depends on the patient reports about areas of tenderness or pain when adjoining areas are pressed upon by the operator

ner'vi (nurv'eye) Plural of nervus

nerv'ine. Allaying nervous excitement.

nerv'ine. A medicament for treating nervous disorders; nerve tonic

ner vone. A cerebroside occurring in brain tissue; its characteristic fatty acid is nervonic acid.

ner von'ic ac'id. $C_{23}H_{45}COOH$ An unsaturated acid, related to lignoceric acid, believed to exist in nervone.

ner'vo-sism [L. nervus, nerve]. 1 Neurasthenia or nervousness. 2. An obsolete doctrine that all morbid phenomena are caused by alterations of nerve force.

ner vos'i ty [L. nervositas, strength, thickness]. Excessive nervousness

ner'vo ta'bes (nur vo-tay'beez) [nervus; L. tabes, wasting] A disturbance resembling tabes clinically but due to parenchymatous neuritis and not to spinal-cord changes

nerv'ous ex haus'tion. A state of fatigue and discomfort due to emotional causes. See neurasthenia.

nerv'ous ness [nervus] A popular term denoting excessive excitability of the nervous system characterized by shaken mental poise, muscle tremors or weakness, and an uncomfortable awareness of self

nerv'ous sys tem. 1 The entire nervous apparatus of the body including the brain, brain stem spinal cord, cranial and peripheral nerves, and ganglions. 2. A functional or anatomic part of the nervous apparatus of the body

autonomic n. s. The nervous system supplying, and exerting regulatory influence over involuntary muscle glands, viscera, etc.; divided into sympathetic and parasympathetic nervous systems. See Plate 15.

central n. s. The brain and spinal cord.

cerebrospinal n. s. The brain, spinal cord, and cranial and spinal nerves.

craniosacral autonomic n. s. The parasympathetic system composed of those nerves whose preganglionic fibers exit from the central nervous system by way of the third, seventh, ninth, and tenth cranial nerves, and the second, third, and fourth sacral nerves.

involuntary n. s. Old term for autonomic n. s.

parasympathetic n. s. The craniosacral division of the autonomic nervous system, consisting of preganglionic nerve fibers carried in cranial and sacral nerves, outlying ganglions, postganglionic fibers, and associated afferent nerve fibers; in general, innervating the same structures and having regulatory function opposite to that of the sympathetic nervous system.

peripheral n. s. The autonomic nervous system and the cerebrospinal nerves the peripheral portions of the nervous system conducting impulses to and from the central nervous system.

somatic n. s. That part of the nervous system exercising control over skeletal muscle and relating the organism to its environment.

sympathetic n. s. (a) The entire autonomic nervous system. (b) The thoracolumbar division of the autonomic nervous system; the gangliated sympathetic trunk, sympathetic plexuses, and the associated preganglionic, postganglionic, and afferent nerve fibers.

thoracolumbar autonomic n. s. The sympathetic nervous system composed of those nerves whose preganglionic fibers exit from the spinal cord by way of the thoracic and upper lumbar spinal nerves.

vegetative n. s. See autonomic n. s.

visceral n. s. See autonomic n. s.

ner vus (pl nervi) [L.]. Nerve

nervi nervorum. Nerve filaments going to the nerve sheaths.

nervi vasorum. Small nerves which innervate the walls of the blood vessels.

n. erigens. Sacral parasympathetic fibers which pass through the pelvic plexus to terminal ganglions in the pelvic viscera and are concerned with the emptying mechanisms of the urinary bladder, rectum, and uterus, and with erection of the genital organs. Syn pelvic splanchnic nerve

n. furcalis. The fourth lumbar nerve which forks to send fibers to both the lumbar and sacral plexus.

n. intermedius. The intermedius branch of the seventh cranial or facial nerve formerly called glossopalatine nerve, Wrisberg' Wrisberg pars intermedius.

n. ischiadicus. The sciatic nerve.

n. pelvicus. The nervus erigens.

Nesbit, Reed Miller [American urologist, 1898-]. Known for his introduction of an operation for relief of advanced bladder and urethral tuberculosis he performed double-barrel type of sigmoid colostomy after which the lower bowel was made sufficiently aseptic to eliminate the hazard of infection in subsequent ureteral transplantation according to the technic of Robert C. Coffey

ne'sis. Suture. Obs.

ness'ler i"zi g [after A. Nessler German chemist, 1827 1905]. The process of using Nessler's reagent.

Nessler's reagent. See under *reagent.*

nest [AS.]. A group, as of ova or insects.

cell n. (a) An isolated mass of epithelial cells surrounded by connective tissue, as in carcinoma. (b) A large number of chondrocytes surrounded by single primary capsule.

nes·tei·a (neh-sty'uh) [G. *fast*]. 1. Fasting. 2. The jejunum. *Rare.*

nes"ti·at'ri·a (nes tee-at'ree-uh, -sy'tree-uh, neh-sty uh-try'uh) [*nēstis*; G. *iatreia*, treatment]. Treatment by fasting; the hunger-cure.

nes"ti·os'to·my [G. *nēstis*, jejunum; *stoma*, mouth]. Jejunostomy. *Rare.*

nes·tis [G.]. 1. Fasting. 2. The jejunum.

nes"ti·ther'apy. Old term for nestiatria.

nethamine. A trade-mark for l-N-ethylephedrine.

net·ran'eu·rysm (net-ran yoo riz um) [G. *nētron*, spindle; *aneurysma*, aneurysm]. A fusiform aneurysm. *Rare.*

ne·trop·sin. $C_{18}H_{26}N_{10}O_{3}$; an antibiotic substance produced by the actinomycete *Streptomyces netropsis.*

net·tle. See *urtica.*

net'tle rash. See *urticaria.*

Nettleship, Edward [*English ophthalmologist*, 1845–1913]. Described urticaria pigmentosa (1869); also called *Nettleship's disease.*

net·work" [AS. *net*, *weorc*]. The arrangement of fibers or vessels in reticulum. See *rete.*

Neubauer, Johann Ernst [*German anatomist* 1742–77]. Described the deep thyroid artery as occasional branch of the innominate, called arteria thyreoidea ima or *Neubauer's artery.* Described the large ganglion formed by the union of the lower cervical and first thoracic ganglions, called *Neubauer's ganglion.*

Neubauer, Otto [*German physician*, 1874–]. Introduced an improvement on the platform of the blood counting chamber by means of system of engraved lines which divide the chamber into nine primary squares, each divided into many smaller squares. Called *Neubauer's ruling for counting chamber.*

Neuber, Gustav Adolf [*German surgeon*, 1850–1932]. Introduced decalcified bone drainage tubes called *Neuber's tubes.*

Neufeld, Fred [*German bacteriologist* 1869–1904]. With Willi Rimpau, described bacteriotropins (1904). With Ludwig Haendel published work on pneumococcic serum (1910). See also Neufeld quellung *test*, also called *Neufeld reaction.*

Neumann, Ernst [*German pathologist*, 1834–1918]. Remembered for his description of changes occurring in bone marrow in leukemia (1870). The first to use the term myelogenous leukemia. Described nucleated red corpuscles in the bone marrow developing into erythrocytes, called *Neumann's corpuscles.* The lining of some dentinal tubules is also called *Neumann's sheath.*

Neumann, Heinrich (1873–1939). Austrian otolaryngologist, best known for his introduction of method of opening the labyrinth, called *Neumann's operation.*

Neumann, Isidor (1832–1906). Austrian dermatologist who described porokeratosis under the name of dermatitis circumscripta herpetiformis (1876); also called *Mibelli's disease* and pemphigus vegetans (1886), which is also called *Neumann's disease.*

Neumann method for total phosphorus. See under *method.*

neu·ral [G. *neuron*, nerve]. Pertaining to nerves or nervous tissue.

neu·ral'gi·a [*neuron*; G. *algos*, pain]. Severe paroxysmal pain along the course of nerve; not associated with demonstrable structural changes in the nerve. According to their anatomic situation, the following forms of neuralgia are described: trigeminal neuralgia, tic douloureux, or prosopalgia; supraorbital neuralgia; cervico-occipital neuralgia; cervicobrachial and brachial neuralgia; intercostal neuralgia, sciatica, or ischialgia; coccygodynia; visceral neuralgia (as hepatic, gastric, intestinal, uterine, ovarian neuralgia). The pain of neuralgia is sharp, stabbing, and paroxysmal, lasting usually but short time; tenderness is often present at the points of exit of the nerve (points douloureux) and the paroxysm can be produced by contact with specific areas (trigger zones). Intercostal neuralgia is those associated with herpes zoster. —**neuralgic,** *adj.*

articular n. Neuralgia of joint.

atypical n. Facial pain, due to various causes, differing from facial neuralgia by being continuous, deep-seated, and beyond the distribution of the trigeminal nerve.

brachial plexus n. Neuralgia of the brachial plexus, manifested in the neck and shoulder and extending into the arm and hand.

ciliary n. Neuralgic pain of the eye, brow or temple.

coccygeal n. See *coccygodynia.*

crural n. See lumbosacral n.

dental n. Toothache.

facial n. Neuralgia over the region of facial distribution of the trigeminal nerve. Also called *trifacial trigeminal n.*

geniculate n. One involving the geniculate ganglion of the facial nerve, causing pain in the middle ear and auditory canal.

glossopharyngeal n. Neuralgic pai of the throat and base of the tongue, relieved by cutting the affected parts of the glossopharyngeal nerve.

lumbosacral n. Pain along the branches of the lumbosacral plexus.

obturator n. See lumbosacral n.

occipital n. Neuralgia over the region of distribution of the greater occipital nerve.

phrenic n. Pain referred to the shoulder or arm from diseased viscera, e.g., pericarditis or adrenal tumor.

pudendal plexus n. Neuralgia of the lower two or three sacral nerves, manifested in the perineum, scrotum, penis, and testes.

Seeligmueller's n. Bilateral neuralgia of the auriculotemporal nerves with pain extending over the vertex, characteristic of neurosyphilis.

sphenopalatine n. Sluder's neuralgia. Neuralgia caused by infection of the nasal sinuses, which is referred to the root of the nose, the upper teeth, the eyes, and even to the ears, the mastoid regions and the occiput.

trifacial n. Old term for trigeminal neuralgia.

trigeminal n. See facial n.

tympanic n. Neuralgia of the tympanic branch of the glossopharyngeal nerve, manifested in the ear and neck.

neu·ral'gi·form [*neuron*; *algos*; L. *forma*, form]. Resembling neuralgia.

neu·ram·e·bim'e·ter [*neuron*; G. *amoibē*, requital; *metron*, measure]. The nerve-reply measurer; an instrument devised and used in psychophysics to obtain the reaction time of nervous impressions.

neur"a·min'ic ac'id. $C_{11}H_{19}NO_9$; an acid, of unknown structure, isolated from the ganglioside fraction of brain lipid and from the mammary gland of certain experimental animals.

neur"a·min·lac'tose. A carbohydrate derivative isolated from the mammary gland of rats; on hydrolysis it yields neuraminic acid and lactose.

neu"ra·poph'y·sis [*neuron*; G. *apophysis*, process]. Either one of the two apophyses on each vertebra which blend and form the neural arch, or the dorsal wall of the spinal foramen.

neu"ra·prax'i·a [*neuron*; G. *praxis*, action]. Injury to a nerve in which the nerve fiber itself undergoes no degeneration, although there may be localized degeneration of the myelin sheath. Recovery is spontaneous, complete, and rapid.

neu"ras·the'ni·a [*neuron*; G. *asthenia*, weakness]. A group of symptoms formerly ascribed to debility or exhaustion of the nerve centers. The symptoms include fatigability, lack of energy, various aches and pains, and disinclination to activity. Some individuals have many symptoms, in others the symptoms center upon some particular organ or region. It is now classified, according to specific features, as *conversion reaction*, *psychophysiologic nervous-system reaction*, *psychophysiologic autonomic and visceral disorder*.

abdominal n. That in which gastrointestinal symptoms predominate.

professional n. That manifested in the individual's total or partial inability to use the organ or organs commonly employed in his occupation, as the inability of a writer to write due to a spasm or a painful feeling of fatigue in his arm.

neu·rax'is [*neuron*; L. *axis*, axis]. 1. The cerebrospinal axis; the neural tube. 2. An axis cylinder. *Obs.*

neu·rax·i'tis [*neuron*; *axis*; G. *-itis*, inflammation]. 1. Inflammation of an axon. 2. Encephalitis.

neu·rax'on [*neuron*; G. *axōn*, axis]. Axon of a nerve cell. *Obs.*

neu"rec·ta'si·a (new"reck·tay'shuh, -zee·uh, -shuh, -see·uh), **neu·rec'ta·sis** [*neuron*; G. *ektasis*, extension]. Nerve stretching.

neu·rec'to·my [*neuron*; G. *ektomē*, excision]. Excision of a part of a nerve.

neu"rec·to'pi·a, **neu·rec'to·py** [*neuron*; G. *ektopos*, away from a place]. Displacement, or other abnormality of the distribution of a nerve.

neu"ren·ter'ic [*neuron*; G. *enteron*, intestine]. Pertaining to the embryonic neural canal and the intestinal tube.

neu·rep"i·the'li·um [*neuron*; G. *epi*, on; *thēlē*, nipple]. See *neuroepithelium*.

neu·rer'gic (new·rur'jick) [*neuron*; G. *ergon*, work]. Pertaining to the activity of a nerve. *Rare.*

neur"ex·e·re'sis (new"reck·si·ree'sis, -serr'i·sis), **neur"ex·ai·re'sis** (new"reck·sigh·ree'sis, -sigh·ree'sis) [*neuron*; G. *exairesis*, a taking out]. The surgical extraction, or avulsion, of a nerve.

neu·ri- [*neuron*]. A combining form denoting a nerve.

neu·ri'a·sis [*neuron*; NL. *-iasis*, condition]. Hysterical hypochondriasis.

neu·ri'a·try [*neuron*; G. *iatreia*, treatment]. The study and treatment of nervous diseases.

neu'ri·dine (new'ri·deen, ·din). A base substance said to be present in brain tissue, identical with spermine.

neu·ri·lem'ma [*neuron*; G. *lemma*, sheath]. The thin cellular sheath of peripheral nerve fibers, covering the axon directly or covering the myelin sheath when this is present; also called *neurolemma*, *sheath of Schwann*.

neu·ri·lem·mi'tis [*neuron*; *lemma*; -*itis*, inflammation]. Inflammation of the neurilemma.

neu·ri·lem·mo'ma [*neuron*; *lemma*; G. *-ōma*, tumor]. A solitary encapsulated benign tumor occurring in the peripheral, cranial, and sympathetic nerves, which arises from the sheath of Schwann; also called *myoschwannoma*, *peripheral glioma*, *perineural fibroblastoma*, *perineural glioma*, *schwannoglioma*, *schwannoma*, *specific nerve-sheath tumor*.

malignant n. See malignant schwannoma.

neu·ri·lem"mo·sar·co'ma. See malignant schwannoma.

neu'rine (new'reen, -rin). $(CH_3)_3N(OH)CH{=}CH_2$. A product of bacterial decomposition of lecithin.

neu·ri·no'ma [*neuron*; G. *-ōma*, tumor]. See *acoustic-nerve tumor*.

acoustic n. An intracranial neoplasm involving the acoustic-nerve sheath. There is an associated tinnitus in one ear and deafness in the late stages.

malignant n. See malignant schwannoma.

neu·ri·no·ma·to'sis. See neurofibromatosis.

neu'rit, **neu·rit'** [*neuron*]. Old term for axon.

neu·ri'tis [*neuron*; G. *-itis*, inflammation]. Lesions of a nerve or nerves, either degenerative or inflammatory, with pain, hypersensitivity, anesthesia or paresthesia, paralysis, muscular atrophy, and lost reflexes in the part supplied. There are numerous forms, according to cause, pathology, location, and number of nerves involved, such as acute, chronic, or syphilitic. —**neurit'ic**, *adj.*

adventitial n. That affecting the nerve sheath.

alcoholic n. Neuritis of chronic alcoholism, presumably due to thiamine deficiency as a result of deficient food intake.

ascending n. That extending from the periphery of a nerve to the brain or cord.

axial n. A form affecting the central part of the nerve.

degenerative n. That involving the nerve fibers; usually multiple neuritis.

descending n. Neuritis extending from the brain or cord to the periphery of the nerve.

diabetic n. See diabetic *polyneuritis*.

diphtheritic n. Neuritis of the cranial or spinal nerves, as a sequel of diphtheria.

disseminated n. Segmental neuritis.

endemic n. Beriberi.

infectious n. An acute multiple neuritis, probably due to a virus disease.

interstitial n. See Guillain-Barré syndrome.

ischemic n. A type produced by ischemia of the nerves, seen in Buerger's disease, arteriosclerosis, and polyarteritis nodosa.

mononeuritis. Involvement of a single nerve.

multiple n. Simultaneous involvement of several nerves, usually symmetrical; due to poisons such as alcohol, arsenic, lead, or mercury or to diseases such as diphtheria, typhoid, or syphilis. Also called *polyneuritis*.

nutritional n. Neuritis caused by vitamin-B deficiency; pellagra neuritis.

optic n. See *papillitis*.

paralytic brachial n. Pain and paralysis in the arm and shoulder during recovery from an infection or disease, differentiated from poliomyelitis by objective sensory changes and the absence of marked pleocytosis.

parenchymatous n. Degenerative neuritis.

pellagra n. A nutritional neuritis.

retrobulbar n. Inflammation of the optic nerve posterior to the eyeball.

sciatic n. Due to involvement of the sciatic nerve; sciatica.

segmental, **segmentary n.** Neuritis affecting a segmental nerve.

serum n. Neuritis following injection of serum, presumably caused by perineural urticaria and edema, usually involving the middle roots of the brachial plexus.

thenar n. Atrophy of the thenar eminence with no associated pain.

toxic n. That due to some poisonous substance. See multiple n.

traumatic n. Neuritis due to trauma.

neu"ro-, neur- [neuron]. A combining form denoting *nerve, nervous tissue,* or *the nervous system.*

neu"ro-ab"i-ot're-phy Idiopathic degeneration of nerve cells.

neu"ro-a-nas"to-mo'sis [neuron, G. *anastomōsis,* an opening]. Surgical anastomosis of nerves.

neu"ro-a-nat'o-my [neuron; G. *anatomē,* dissection]. The anatomy of the nervous system.

neu"ro-ar"thri'tism [neuron, G. *arthritis,* arthritis]. A combined nervous and gouty diathesis.

neu"ro-ar-throp'a-thy [neuron, G. *arthron,* joint; *pathos,* disease]. Manifestations of disease in both joints and the nervous system.

neu"ro-as-the'ni-a. See *neurasthenia.*

neu"ro-as"tro-cy-to'ma. A rare tumor found usually on the floor of the third ventricle and in the temporal lobes, histologically exhibiting neuronal elements within predominant astrocytic elements. Also called *astrocytoma, ganglioglioma, gangliocytoma, ganglioneuroblastoma, ganglioneuroma, glioneuroblastoma, glioneuroma, spongioneuroblastoma.*

neu"ro-bi-ol'o-gy [neuron, G. *bios,* life; *logos,* word]. Biology of the nervous system.

neu"ro-bi"o-tax'is [neuron, *bios,* G. *taxis,* arrangement]. The tendency of nerve cells, during development, to be drawn toward the source of their nutrition and activity.

neu'ro-blast [neuron, G. *blastos,* germ]. A formative cell of a neuron, derived from ectoderm of the neural plate.

apolar n. A neuroblast without protoplasmic processes.

neu"ro-blas-to'ma [neuron, *blastos;* G. *-ōma,* tumor]. See *sympathicoblastoma.*

neu"ro-blas"to-ma-to'sis. See *neurofibromatosis.*

neu"ro-cal"o-rim'e-ter [neuron; L. *calor* heat; G. *metron,* measure]. An instrument for measuring the heat of a nerve.

neu"ro-ca-nal' [neuron, L. *canalis,* channel]. The central canal of the spinal cord. *O.T.*

neu'ro-cele [neuron, G. *koilia,* cavity]. The system of cavities and ventricles in the central nervous system. *O.T.*

neu"ro-cen'trum [neuron, G. *kentron,* center of circle]. Old term for the body of a vertebra. —**neurocentral,** *adj.*

neu"ro-chem'is-try [neuron, G. *chymos,* juice]. The chemistry of nervous tissue.

neu"ro-cho"ri-o-ret"i-ni'tis (-ko"ree-o-ret"i-nigh'tis) [neuron, G. *chorion,* skin; L. *rete,* net; G. *-itis,* inflammation]. Chorioretinitis combined with optic neuritis.

neu"ro-cho"roid-i'tis (new"ro-kor"oy-dye'tis) [neuron, G. *choroidēs,* choroid; *-itis*]. Combined inflammation of the choroid body and optic nerve.

neu"ro-cir'cu-la-to"ry [neuron, L. *circulare,* to encircle]. Concerned with both the nervous and the vascular systems, as neurocirculatory asthenia.

n. syndrome. See neurocirculatory *asthenia.*

neu"ro-clad'ism [neuron, G. *klados,* branch]. A theoretical, neurotropic phenomenon in which regeneration of injured neuraxons is considered to occur by the production of collateral or terminal branches, in response to the attraction of external, mechanical, or chemical stimuli.

neu"ro-cra"ni-um [neuron; G. *kranion,* skull]. The brain case, or cranial portion of the skull.

neu"ro-cu-ta'ne-ous [neuron; L. *cutis,* skin]. Pertaining to the innervation of the skin.

neu'ro-cyte [neuron, G. *kytos,* cell]. A nerve cell; neuron; the essential element of nervous structures. Neurons are cells specialized as conductors of impulses.

neu"ro-cy-to'ma. See *sympathicoblastoma.*

neu"ro-de-al'gi-a [G. *neuroeides,* like nerves; *algos,* pain]. Retinal pain.

neu"ro-de-at'ro-phy [neurodes; G. *atrophia,* want of nourishment]. Atrophy of the retina. *Obs.*

neu"ro-den'drite [G. *neuron,* nerve; *dendritēs,* of tree]. A dendrite of a neuron.

neu"ro-den'dron. See *dendrite.*

neu"ro-der"ma-ti'tis [neuron, G. *derma,* skin; *-itis,* inflammation]. A skin disorder characterized by localized, often symmetrical, patches of pruritic dermatitis with lichenification. It appears characteristically on the neck, antecubital and popliteal spaces in women of nervous temperament. N. circumscripta is also called *lichen chronicus simplex.*

n. disseminata. (a) An eczematous dermatitis precipitated by psychogenic factors. (b) Atopic dermatitis with psychogenic factors predominating.

neu"ro-der"ma-to-my"o-si'tis [neuron, *derma;* G. *mys,* muscle; *-itis*]. A disease of inflammatory or infectious nature, manifested by neuritic pain, with induration of the skin, subcutaneous tissue, and underlying muscles.

neu"ro-der"ma-to'sis [neuron, *derma;* G. *-ōsis,* condition]. A neurotic skin affection.

neu"ro-der"ma-tro'phi-a [neuron, *derma;* G. *atrophia,* want of nourishment]. Atrophy of the skin from nervous disturbance.

neu"ro-di"as-ta'sis (new"ro-dye-ass'tuh-sis) [neuron, G. *diastasis,* separation]. Stretching of nerves; neurectasia.

neu"ro-dy-nam'ic (new"ro-dye-nam'eeuh) [neuron, G. *dynamis,* strength]. Nervous strength or energy. —**neurodynamic,** *adj.*

neu"ro-dyn'i-a (new"ro-din'ee-uh, -dye'nee-uh). See *neuralgia.*

neu"ro-e-lec"tro-ther"a-peu'tics [neuron; G. *ēlektron,* amber; G. *therapeutikos,* therapeutic]. The treatment of nervous affections by means of electricity.

neu"ro-en-ceph"a-lo-my"e-lop'a-thy. See *neuromyelitis optica.*

neu"ro-en"do-crine (new"ro-en'do-kryne, -krin) [neuron, G. *endon,* within; *krinein,* to separate]. Pertaining to the nervous and endocrine systems in anatomic or functional relationship, as the hypothalamic nuclei and the pituitary gland constitute a neuroendocrine apparatus.

neu"ro-ep"i-der'mal [neuron, G. *epidermis,* outer skin]. Relating to the nerves and the skin.

neu"ro-ep"i-the"li-o'ma [neuron, G. *epi,* on, *thēlē,* nipple; *-ōma,* tumor]. A tumor derived from primitive neuroepithelium, containing cells of small cuboidal or columnar form with a tendency to form true rosettes, occurring in the retina, central nervous system, and occasionally in peripheral nerves. Also called *diktyoma, esthesioneuroblastoma, esthesioneuroepithelioma.* N. of retina is also called *glioblastoma of retina, glioma of retina, neuroblastoma of retina, retinoblastoma, retinocytoma.*

olfactory n. A rare neuroepithelioma occurring in the nasal cavity of adults, which may infiltrate the paranasal sinuses; also called *olfactory esthesioneuroepithelioma.*

neu"ro-ep"i-the'li-um [neuron; *epi, thēlē*]. The highly specialized epithelial structures constituting the terminations of the nerves of special sense, as the rod and cone cells of the retina, the olfactory cells of the nose, the hair cells of the internal ear, the gustatory cells of the taste buds. —**neuroepithelial,** *adj.*

neu"ro-fi'bril [neuron, L. *fibra,* fiber]. A fibril of a nerve cell, usually extending from the processes and traversing the cell body.

neu"ro·fi·bro·ma (new"ro·figh·bro'muh) [*neuron*, *fibra*, G. *-oma*, tumor]. A tumor characterized by diffuse proliferation of peripheral nerve elements; it may occur as a solitary and localized phenomenon but more commonly as part of the condition known as *neurofibromatosis*. Also called *perineural fibroblastoma*, *endoneural fibroma*, *fibroma of nerve sheath*, *perineural fibroma*, *fibromyxoma of nerve sheath*, *myxofibroma of nerve sheath*, *neurofibromyxoma*.

granular-cell n. See granular-cell *myoblastoma*.

malignant n. See malignant *schwannoma*.

multiple n. See *neurofibromatosis*.

n. gangliocellulare See *ganglioneuroma*.

plexiform n. See plexiform *neuroma*.

neu"ro·fi·bro·ma·to'sis (·figh·bro·muh·to'sis) [*neuron*, *fibra*, *-oma*, G. *-osis*, condition]. A condition characterized by the presence in the skin, or along the course of peripheral nerves, of neurofibromas. Usually the tumors are multiple, from a few to hundreds, gradually increasing in both number and size, and are painless. There is a hereditary tendency and, occasionally, malignancy supervenes. Also called *von Recklinghausen's disease*, *Smith-Recklinghausen disease*, *multiple neurinomatosis*, *neuroblastomatosis*, *multiple neurofibroma*, *neuroma*, *fibroma molluscum*.

neu"ro·fi·bro·myx·o'ma. See *neurofibroma*.

neu"ro·fi"bro·sar·co'ma. See malignant *schwannoma*.

neu"ro·fi"bro·si'tis [*neuron*, *fibra*, G. *-itis*, inflammation]. A fibrositis which involves fibers of nerve and also of muscle.

neu"ro·gan·gli·i'tis [*neuron*, G. *ganglion*, encysted tumor on a tendon, *-itis*]. Inflammation of a ganglion. *Obs.*

neu"ro·gas'tric [*neuron*, G. *gastēr*, belly]. Relating to the nerves and the stomach.

neu"ro·gen'e·sis [*neuron*, G. *genesis*, production]. The formation of nerves.

neu"ro·gen'ic [*neuron*, G. *gennaein*, from *gignesthai*, to be formed]. 1. Of nervous origin, as neurogenic tumors. 2. Stimulated by the nervous system, as neurogenic muscular contractions.

neu·rog'e·nous (new·rodj'i·nus) [*neuron*, *gennaein*]. Originating in the nervous system.

neu·rog'e·ny (new·rodj'i·nee). See *neurogenesis*.

neu·rog'li·a [*neuron*, G. *glia*, glue]. 1. A general term for the fibrous and cellular nonnervous, supporting elements of the nervous system, chiefly derived from ectoderm. Includes the ependyma, the epithelial lining of the choroid plexuses, neuroglia proper, microglia; also, in the peripheral nervous system, the neurilemma sheath cells of nerves and the satellite cells of ganglions. 2. Specifically, neuroglia proper comprising the astrocytes and the oligodendroglia cells of the central nervous system. —**neurog'li·al,** *adj.*

neu·rog'li·o·cyte [*neuron*, *glia*, G. *kytos*, cell]. A neuroglia cell.

neu·rog"li·o'ma [*neuron*, *glia*, G. *-oma*, tumor]. A tumor composed of neuroglial tissue; glioma.

ganglionar n. A glioma containing ganglion cells.

neu·rog"li·o'sis [*neuron*, *glia*, G. *-osis*, condition]. A condition of multiple neurogliomas developing diffusely throughout the nervous system.

neu'ro·gram [*neuron*, G. *gramma*, letter]. In psychiatry, Morton Prince's term for the record of theoretic changes imprinted on the brain by life experiences.

neu"ro·his·tol'o·gy [*neuron*, G. *histos*, web; *logos*, word]. The histology of the nervous system.

neu"ro·hu'mor [*neuron*, L. *humor*, moisture]. The chemical exciter of a neuron which, supposedly, activates a neighboring neuron or muscle. Chemical substances are liberated at the visceral endings of stimulated nerves, thus sympathin is produced by stimulation of postganglionic sympathetic fibers, whereas acetylcholine is produced at the endings of stimulated parasympathetic nerves.

neu"ro·hu'mor·al [*neuron*, *humor*]. Pertaining to certain qualities in substances which serve as agents to transmit nervous influence across synapses and myoneural junctions.

neu"ro·hyp·nol'o·gy [*neuron*, G. *hypnos*, sleep; *logos*, word]. The study of hypnotism. *Obs.*

neu"ro·hy·poph'y·sis (new"ro·high·pof'i·sis) [*neuron*, G. *hypophysis*, attachment underneath]. The neural portion of the pituitary gland, developing as a downward evagination of neural ectoderm from the floor of the diencephalon. It has three subdivisions: inferiorly the *pars nervosa* (*infundibular process*, *pars neuralis*, *pars posterior*, *posterior lobe of the hypophysis*), the *stalk* (*infundibulum*, *infundibular stem*), and uppermost the *median eminence of the tuber cinereum*.

neu'roid [*neuron*, G. *eidos*, form]. Resembling a nerve or nerve substance.

neuroid tube. Nerve cells arranged in thin columns in an intradermal nevus. The columns have the appearance of neural sheaths.

neu"ro·in·duc'tion [*neuron*, L. *inductio*, leading into]. Suggestion.

neu"ro·in'su·lar complex [*neuron*; L. *insula*, island; *complexus*, an encircling]. Small intimate aggregates of islet cells and ganglion cells in the pancreas.

neu"ro·ker'a·tin [*neuron*, G. *keras*, horn]. The insoluble protein substance found in the myelin sheath, particularly after fixation in alcohol. It is usually in the form of a network.

neu"ro·lem'ma. See *neurilemma*.

neu"ro·lep'roid. See tuberculoid *leprosy*.

neu·rol'o·gist [*neuron*, G. *logos*, word]. One versed in neurology; usually a physician who specializes in the diagnosis and treatment of disorders of the nervous system.

neu·rol'o·gy [*neuron*, *logos*]. The study of the anatomy, physiology, and pathology of the nervous system. —**neurolog'ic,** *adj.*

neu"ro·lu·es (new"ro·lew'eez). Neurosyphilis.

neu"ro·lymph [*neuron*, L. *lympha*, water]. The cerebrospinal fluid. *Obs.*

neu·rol'y·sin, neu"ro·ly'sin [*neuron*, G. *lysis*, loosing]. A cytolysin having specific action upon nerve cells.

neu·rol'y·sis [*neuron*, *lysis*]. 1. Exhaustion of a nerve by overstimulation. 2. Nerve stretching to relieve excessive tension. 3. The loosening of adhesions binding a nerve. 4. The disintegration of nerve tissue. —**neurolyt'ic,** *adj.*

neu·ro'ma [*neuron*, G. *-oma*, tumor]. Any tumor of the nervous system, as originally described by Virchow. These tumors have since been classified into special groups on the basis of histology. See also *pseudoneuroma*. —**neurom'atous,** *adj.*

acoustic n. See acoustic nerve *tumor*.

amputation n. See *pseudoneuroma*.

amyelinic n. One composed of unmyelinated fibers.

appendiceal n. A tumorlike growth of nerve fibers, and often of ganglion cells, in chronic fibrotic lesions of the vermiform process.

fibrillary n. See plexiform.

ganglion-celled n. See *astroblastoma*.

ganglionic n. See *ganglioneuroma*.

multiple n. See *neurofibromatosis*.

myelinic n. One composed of myelinated fibers.

n. cutis. A cutaneous neurofibroma.

n. gangliocellulare. See *ganglioneuroma*.

n. telangiectodes. One with rich content of blood vessels, often cavernous in type.
n. verum. See *ganglioneuroma.*
plexiform n. A tumor or tumorlike mass of whorls of myelinated and unmyelinated nerve fibers and of connective tissue. Occurs in early life and probably is congenital. There is doubt as to whether it is neoplasm, anomaly or hamartoma.

neu m l ci (w ro m l y hee-uh -see-uh) [neuron, G. malakia, softness]. A softening of nerve tissue. *Obs.*

neu"ro ma to sis [neuron; G. -oma, tumor; -osis, condition]. A tendency to form multiple neuromas. See *neurofibromatosis.*

neu"ro mech'a nism [neuron, G. mechané, machin]. The correlated structure and function of the nervous system in relation to bodily activity

neu ro mere [neuron, G. meros, part]. An embryonic segment of the brain or spinal cord.

neu rom er y [neuron, meros]. The segmentation of the central nervous system.

neu"ro mi mee sis (new ro-mi-mee sis, -migh-mee sis) [neuron; G. mimesis, imitation]. A group of hysterical phenomena resembling true organic disease. —**neuromimet'ic,** *adj.*

neu"ro-mus cu lar [neuron; L. musculus, muscle]. Pertaining jointly to nerves and muscles, as neuromuscular junction.

neu"ro my l, neu"ro my'le. Neuromuscular

neu"ro-my"e-li'tis [neuron, G. myelos, marrow; -itis, inflammation]. Inflammation of the spinal cord and of nerves.
n. optica. A morbid process, probably due to virus or an infectious toxic agent, involving the optic nerve and the white and gray matter of the cord It is closely allied to other demyelinating diseases, such as multiple sclerosis and encephalomyelitis disseminata Also called *optic neuroencephalomyelopathy, neuroopticomyelitis, Devic' disease* or *syndrome.*

neu"ro my n. A functional unit composed of muscle fiber and its nerve supply See motor unit. —**neuromy'ic,** *adj.*

neu"ro-my"o-path'ic [neuron; G mys muscle; pathos, disease]. Relating to disease of both muscles and nerves.

neu" my"o-si'tis [neuron; mys; G. -itis, inflammation]. Myositis associated with neuritis

neu'ron, neu'rone [neuron]. The complete nerve cell, including the cell body or perikaryon, axon, and dendrites; specialized as conductor of impulses. —**neuron al** *adj*
adjustor n. See internuncial n.
afferent n. One which conducts impulses to nerve center in the peripheral nervous system, that neuron hich conducts impulses to ucle in the central nervous system.
autonomic n. One which is component of the autonomic nervous system
efferent n. One conducting impulses way from nerve center in the peripheral nervous system, neuron conducting impulses way from the central nervous system.
excitor n. A postganglionic n.
intercalated n. One interposed between the sensory and motor neurons of reflex pathway
internuncial n. One interposed between the initial nd terminal neurons of nervous pathway also called *adjustor neuron.*
motor n. A efferent neuron. The lower motor neuron or final common pathway has it cell body located in the anterior gray column of the spinal cord or in brain stem nuclei, nd its axon passes by way of peripheral nerve to skeletal muscle. The upper motor neuron may be any descending efferent neuron synapsing with lower motor neuron, or more specifically an efferent neuron having its cell body in the motor cortex and essential to fine voluntary muscular activity See also under *lesion.*
n. pathway The successive neurons over which given impulse is thought to be transmitted.
n. pattern. The theoretic pathways which determine an instinct, reflex, sensation, or other nervous response.
postganglionic n. A neuron of the autonomic nervous system having its cell body in ganglion, the axon extending to an organ or tissue.
preganglionic n. One of the utonomic nervous system which has its cell body in the brain or spinal cord, its axon terminating in ganglion.
sensory n. One which conducts impulses arising in sense organ or t sensory endings.
sympathetic n. One belonging to the thoracolumbar autonomic nervous system.

neu'ron doc'trine. The doctrine (based on the work of van Gehuchten, His, Forel, and Ramón y Cajal) that the basic unit of the central nervous system is nerve cell with its processes which, having no direct anatomic continuity with other functionally related cells, acts upon an ther nerve cell solely through discontinuous interphase the synapse opposed to the theory that nerve cells in the central nervous system are united in syncytium.

neu"ro ne vus. See blue nevus.

neu ro-ni'tis [neuron, -itis]. Inflammation of neuron or nerve cell.
infective n. See Guillain-Barré syndrome

neu"ro nog'ra phy The study of neuron connections.
physiological n. The mapping of functional neuron connections by action current recording, after local stimulation of the cortical area by strychnine.

neu ro no pha gi [euron, G phagein, to eat]. The destruction of neurons by phagocytes.

neu'ro path [neuron; G pathos, disease]. One who is predisposed to disorders of the nervous system.

neu"ro path'ic [neuron, pathos]. 1. Characterized by diseased or imperfect nervous system. 2. Depending upon, or pertaining to, nervous disease.

neu"ro-path'ic es char (es'kahr) Bedsore; decubitus ulcer

neu rop' thist [neuron, pathos]. Neurologist.

neu"ro-path o-gen e-sis [neuron; pathos; G genesis, production]. The development of disease of the nervous system.

neu"ro pa thol' gy [neuron, pathos G logos, word] Pathology of diseases of the nervous system.

neu rop a thy [neuron, pathos]. Any nervous disease
hereditary sensory radicular n. A heredofamilial disease characterized by perforating ulcers of the feet, shooting pains, and deafness. There is primary degeneration of dorsal root ganglia with amyloid deposits in some.
progressive hypertrophic interstitial n. See J J. *Dejerine*

neu ro-phleg'mon [neuron, G. phlegmoné, inflammation]. Neuritis. *Obs.*

neu ro-pho 1 [neuron; G. phōné, voice] A rare bora disease of the larynx and muscles of expiration, characterized by the utterance of sharp, spasmodic cries.

neu ro-phys"i-ol'o-gy [euron, G. physis, nature; logos, word]. The physiology of the nervous system.

neu'ro pil [neuron, G pilos felt]. Nervous tissue consisting of feltwork of nonmyelinated nerve fibers gray matter with few nerve-cell bodies; usually region of synapses between axons and dendrites.

neu'ro plasm [neuron, G. plasma, anything formed]. The protoplasm filling the interstices of the fibrils of nerve cells.

neu ro-plas ty [neuron, G plassein, to form]. A plastic operation on the nerves.

neu"ro po di um [neuron, G podion, small foot]. A bulblike expansion of the terminal of an axon in one type of synapse. *Rare.* Also called *end-foot, end-bulb.*

neu"ro pore [neuron, G poros, passage]. The anterior or posterior terminal part of the embryonic neural tube before complete closure occurs (about the 20–25 somite stage).

ant rior n One at the cephalic end of the neural tube.

posterior n. One at the caudal end of the neural tube.

neu"ro psy chi'a try [neuron, G psychē soul; iatreia, treatment]. The branch of medical science dealing with both nervous and mental diseases.

neu"ro psy chol gy [neuron, psychē, G logos, word]. A system of psychology based on neurology.

neu"ro psy chop thy (new ro-sigh kop th ee) [neuron, psychē; G pathos disease]. A mental disease based upon, or manifesting itself in, nervous disorders or symptoms. —**neuropsychopath'ic,** *adj.*

neu"ro psy cho sis (new ro-sigh ko sis) Old term for psychosis. Also see *psychotic disorders.*

n u rop ti my" li ti See *myelitis optica.*

neu"ro rec'i dive (new ro rees'i-deev -di -ray-see deev') See *neurorelapse.*

neu"ro re-cur'rence. See *neurorelapse.*

neu ro re-lapse [neuron, L. relapsum, from relabi, to slip back]. Acute syphilitic meningitis, occurring usually during the treatment of early syphilis. Syn. *neurorecidive, neurorecurrence.*

neu"ro ret"i ni'ti [neuron, L ret net; G -itis, inflammation]. Inflammation of both the optic nerve and the retina.

neu ror'rha phy [neuron, G haphē, suture]. The operation of suturing a divided nerve.

neu ror rhex'i [neuron, G rhēxis, breaking]. Avulsion of a nerve, as in the treatment of persistent neuralgia. *exeresis*

neu ror rhyc'tes hy dro pho bi (w ro-rick'tees high dro-f 'bee ee) A Negri body that is, an inclusion body occasionally seen in the cytoplasm or processes of cerebral or cerebellar nerve cells in rabies.

neu ro-sar co ma [neuron, G sarkōma fleshy excrescence]. A sarcoma of the general order of neuroma.

neu"ro scle-ro sis [neuron, G sklērōsis, hardening]. Sclerosis of nervous tissue.

neu"ro se-cre'tion [neuron, L secretio dividing]. The process of elaboration and discharge of colloidlike gran les and masses by nerve cells which, during phases of such activity assume the ppearance of gland cells.

neurosine. Trade-mark for liquid preparation of bromides, with hyoscyamus, belladonna, cascara sagrada, and humulus.

neu-ro si (pl. neuroses) [neuron, G -ōsis, condition]. A disorder of the psyche or psychic functions. See *psychoneurotic disorder.* —**neurotic,** *adj.*

anxiety n. *In psychoanalysis,* psychoneurosis characterized by emotional inst bility irritability pprehension, and sense of tter fatigue caused by incomplete repression of emotional problems. It is associated with visceral phenomena such as tachycardia, palpitation, nausea, sense f suffocation, diarrhea, tremors, and perspiration. Now depending upon specific manifestations, it is more properly classified as (a) *anxiety reaction;* (b) one of the *psychophysiologic autonomic and visceral disorders.*

blast n. ( ) A nervous disorder developing after rapid and extreme changes in tmospheric pressure without producing any external evidence of inj ry (b) A disorder caused by detonation of explosives often terminated by sudden death, necropsy findings howing multiple brain hemorrhages.

combat neuroses. War neuroses.

compensation n. A neurotic reaction, motivated by the uncontrollable desire to receive monetary ward for damages or injuries, common complication in traumatic neurosis; also called *indemnity n., pension n.*

compulsi n n. See obsessive compulsive reaction.

fright n. A i tense terror reaction to an external frightful situation, as an earthquake or dangerous fire. *Rare.*

occupational n (a) One in which the occupation of the individual appears to be the precipitating cause. (b) A disorder affecting groups of muscles used in the performance of special movements. Syn. *copodyskinesia professional neurasthenia.*

sensory n. Abnormalities of sensation, neurotic in origin, e.g., neurotic pruritis.

traumatic n. One in which an injury is the precipitating cause.

vasomotor n. See *angioneurosis.*

war neuroses. Mental disorders following exhaustion or emotional stress in warfare include hysterias, neurasthenias, and psychasthenias.

neu ro sism. Neurasthenia.

neu ro skel' tal. Pertaining to nervous and skeletal muscular tissues.

neu ro somes [neuron, G sōma, body]. Old term for minut granules of variable size seen in nerve cells. Some are undoubtedly mitochondria.

neu"ro spasm [neuron, G. spasmos, spasm]. Nervous spasm or twitching of muscle.

neu"ro spon gi ma. See *medulloblastoma.*

neu"ro-spon gi um (new ro spun'jee-um, -spon jee-um) [neuron; G spoggion, dim. from spoggos, sponge]. The inner reticular layer of the retina.

Neu ros'po ra [neuron, G spora, seed]. A generic name for one of the fungi, more commonly known as the bread mold, which is used as bioassay organism in enzyme studies.

neu"ro ste-ar'ic [neuron, G. stear fat]. Pertaining to nervous tissue and fat.

neu"ro-sur'geon [neuron, G. cheirourgos, working by hand]. One who specializes in surgery of the brain and the nervous system.

neu ro-sur'ger y [euron, cheirourgos]. Surgery of the nervous system.

neu"ro su ture [neuron, L. sutura, sewing together]. The suture of nerve.

neu ro-syph'i lis [neuron, NL. syphilis]. Syphilitic infection of the nervous system.

asymptomatic n. Neurosyphilis diagnosed only on the basis of pathological findings in the cerebrospinal fluid. In the early form, within two years after primary infection, serological tests give varied results. Late forms (*latent neurosyphilis, preparetic neurosyphilis, paresis sine paresi*) detected after more than two years, show positive serological test and often Lange test of the luetic type.

latent n. Late asymptomatic n.

preparetl n. Late asymptomatic n.

neu"ro the-ci'tis [neuron, G thēkē, case -itis, inflammation]. Inflammation of nerve sheath.

neu"ro ther'a py [neuron, G therapeia, treatment]. The treatment of nervous diseases. Also called *neurotherapeutics.*

neu·rot'ic [*neuron*]. 1. Pertaining to or affected with neurosis. 2. Pertaining to the nerves.

neu·rot'ic. An emotionally unstable individual.

neu·rot'i·ca [*neuron*]. Functional nervous disorders.

neu·rot'i·cism [*neuron*]. A neurotic condition, character or trait.

neu·rot"i·za'tion [*neuron*]. 1. The regeneration of divided nerve. 2. Surgical implantation of nerve into a paralyzed muscle. 3. Providing an anatomic structure with nerve supply

neu"rot·me·sis [*neuron*, G. *tmēsis*, cutting]. Condition in which the connective-tissue structures and nerve constituents have been interrupted. In the regeneration of new nerve fibers, the new axons grow in misdirected confusion and spontaneous regeneration of the complete nerve trunk rarely occurs.

neu"ro·tol'o·gy [*neuron*, G *ous*, ear; *logos*, word]. That branch of medical science dealing with the structure and functions of the internal ear its nervous connections with the brain, and its central pathways within the brain.

neu'ro·tome [*neuron*, G *tomos*, cutting]. 1. An instrument for the division or dissection of nerve. 2. One of the segments of the embryonic neural tube. Also called *neuromere*.

neu·rot'o·my [*neuron*; G *tomē*, cutting]. The surgical division or dissection of some or all of the fibers of nerve.

opticociliary n. The surgical division of the optic nerve and the cutting of all ciliary nerves passing through the sclera in the region of the optic nerve.

neu"ro·ton'ic [*neuron*, G *tonos*, tension]. Having tonic effect upon the nerves.

neu"ro·tox'in [*neuron*, G *toxikon*, poison] A toxin capable of destroying nerve tissue. —**neurotoxic,** *adj*

neu"ro·trau'ma (new"ro-traw'muh, -trou muh) [*neuron*, G. *trauma*, wound]. Injury to nerve.

neu"ro·trip sy [*neuron*, G. *tripsis*, rubbing]. The crushing of nerve.

neu"ro·troph'ic, neu"ro·tro'phic [*neuron*; G. *trophē*, nourishment]. Relating to the influence of nerves upon the nutrition and maintenance of normal condition in tissues.

neu"ro trop'ic [*neuron*, G. *tropos*, to turn]. That which turns toward, or has an affinity for nervous tissue.

neu rot'ro·pism [*neuron*; *tropein*]. The attraction said to be exercised upon regenerating nerve fibers by substances in the peripheral portion of the severed nerve. The theory has been somewhat discredited by recent observations.

neu"ro·var"i·co·sis [*neuron*, L. *varicosus*, full of dilated veins]. A varicosity on nerve fiber or the formation of one.

neu"ro·vas'cu·lar [*neuron*; L. *vasculum*, small vessel] Pertaining to both the nervous and vascular structures.

neu'ru·la. *I* *embryology*, the stage following the gastrula stage in Amphibia. It is characterized by the development of the neural plate and axial embryonic structures and corresponds to the somite stage in human development.

Neusser Edmund von [*Austrian physician*, 1852–1917]. Described basophilic granules about the nucleus of leukocyte; called *Neusser' granules*.

neu'tral [L. *neutralis*, neuter]. 1 Inert on neither one side nor the other 2. Neither alkaline nor acid; bland and soothing, inactive. —**neutral'ity** *n.*

n. acriflavine. See *acriflavine*.

n. mixture. An 8% potassium citrate solution prepared extemporaneously by reaction of potassium bicarbonate and citric acid.

neu"tra li za'tion [*neutralis*]. 1. That process or operation that counterbalances or cancels the action of an agent. 2. *In medicine*, the process f checking the operation of any agent that produces morbid effect. 3. *I* *chemistry*, change of reaction to that which is neither alkaline nor acid.

neu'tral·ize [*neutralis*]. Render neutral; render inert; counterbalance an action or influence.

neu'tral red (C.C.) Dimethyl-diaminotoluphenazine hydrochloride, dye used as an indicator and as vital stain, suggested for use as test of gastric function also called *toluylene red*.

neu tri'no (new-tree no) [L. *neuter* neither]. A hypothetical atomic particle having the mass of the electron but without an electric charge.

neut're·clu"sion, neut're·oc·clu"sion. Occlusion in which the mesiobuccal cusp of the upper first molar interdigitates with the buccal groove of the lower first molar

neu'tro·cyte [*neuter*; G. *kytos*, cell]. A neutrophil granulocyte.

neu'tron [*neuter*]. An atomic nuclear particle with mass = 1 and charge = 0. A constituent of all atomic nuclei except H^1 (Isotopes differ from one another solely by the number of neutrons in their nuclei.) Free neutrons with various kineti energies are produced by nuclear reactions, including fission. Conversely neutrons because of their lack of charge produce nuclear reactions, including fission, most easily These two facts are the basis of the fission chain reaction. The biologic effects of neutron irradiation are higher than those predicted on the basis of ionization alone. This may be the effect of transmutation added to ionization.

neu'tron ther'apy See under *therapy*.

neu"tro·pe ni·a [*neuter*; G *penia*, poverty]. A decrease below the normal standard in the number of neutrophils in the peripheral blood.

malignant n. See *agranulocytosis*.

neu'tro·phil [*neuter*; G *philein*, to love]. Stained readily by neutral dyes.

neu'tro·phil. 1. Any histologic element readily stainable with neutral dyes. 2. The polymorphonuclear leukocyte of the blood, which contains neutrophil granules in its cytoplasm. See Plate 26.

neu"tro·phil'i [*neuter*; *philein*]. 1 An affinity for neutral dyes. 2. Great increase of neutrophil leukocytes in the blood or tissues.

ne vose [L. *naevus*, mole]. Spotted, having nevi.

ne"vo xan"tho·en do the"li·o ma. A group or groups of yellowish-brown nodules, found usually on the extremities in early childhood, histologically characterized by the presence of many histiocytes, foam cells, and foreign-body giant cells considered as juvenile form of histiocytoma or xanthogranuloma.

ne'vus (pl. *nevi*) [*naevus*]. 1. Any lesion containing nevus cells. 2. *I* *dermatology* cutaneous hamartoma; birthmark. —**ne void,** *adj*

bathing-trunk n. A pigmented nevus, localized chiefly to the lumbar and sacral portions of the body often of the hairy type, called *nevus pilosus*.

blue n. A nevus composed of great mass of spindle-shaped pigmented melanocytes in the middle and lower two-thirds of the dermis. Malignant degeneration rarely occurs.

cellblast ne n. See *n. elasticus*.

compound n. A pigmented nevus composed of the features of both the junction and intradermal nevus.

dermal epidermal n. See *junction n.*

epithelial n. A nevoid proliferation, either present t birth or developi g later in life, in which hyperplasia of epithelial cells occurs without the presence of nevus cells.

generalized keratotic n. See *systematized n.*
hairy n. A pigmented nevus covered with downy or stiff hairs; also called *hairy mole, n. pilosus.*
intradermal n. A pigmented nevus consisting of nevus cells located chiefly or entirely in the dermis, with little or no dermoepidermal junctional proliferation. The deeply placed nevus cells tend to be more fibrillar in type. This nevus is more common in adult life.
Jadassohn n. See *n. sebaceus.*
Jadassohn-Tièche n. See *blue spot.*
junctional n. A pigmented nevus exhibiting marked proliferation of nevus cells in the epidermis or at the dermoepidermal junction, usually in nests, with relatively few located in the dermis. Such nevi are found most commonly in childhood on the trunk, thighs, and arms. Decreasing in frequency with age, they are occasionally seen in adults, notably on the hands and feet, and are suspected of being predisposed to development of malignant melanomas.
linear n. A cutaneous nevus which occurs in bunches or streaks, and clinically is most often of warty appearance.
n. acneiformis unilateralis. See *n. comedonicus.*
n. arachnoideus. See *spider n.*
n. araneus. See *spider n.*
n. comedonicus. A unilateral verrucous nevus with hard follicular accretions simulating comedones of acne; also called *n. acneiformis unilateralis, n. follicularis.*
n. elasticus. A dermal nevus of connective tissue which histologically simulates scleroderma; also called *cobblestone or paving-stone n., zosteriforme n.*
n. epitheli mato-cylindromatosus. See *cylindroma.*
n. flammeus. Port-wine nevus.
n. lipomatodes. An elevated pigmented nevus with connective tissue and fat hypertrophy. Rare.
n. lipomatosus. See *lipoma.*
n. papillaris, n. papillomatosus. A papillomatous pigmented nevus.
n. pellinus. A markedly hairy nevus which has the appearance of pelt or fur.
n. pigmentosus. See *pigmented n.*
n. pilosus. See *hairy n.*
n. sebaceus. A single lesion formed by an aggregate of sebaceous glands, usually as a linear streak, most often present since birth on the scalp and face; also called *Jadassohn n.*
n. spilus. A smooth, flat, pigmented nevus devoid of hair.
n. spongiosus albus. A rare genodermatosis of the oral and anogenital mucosa, characterized by white tint and spongy appearance with numerous small clear follicular openings; also called *congenital leukokeratosis mucosae oris, white-sponge n. of mucosa.*
n. unilateralis, nevus lateralis. A linear warty growth (*verrucous n.*) in lines or bands limited to one side of the body.
n. vasculosus. A strawberry mark.
nonpigmented n. A common nevus composed of clear cells containing little or no pigment.
paving-stone n. See *n. elasticus.*
pigmented n. A pigmented mole, varying in color from light fawn to blackish, sometimes hairy, frequently papillary and hyperkeratotic, characterized by clear cells (cellules claires), nevus cells, and intermediate forms. Pigmented nevi have a variable appearance, influenced by age and anatomic location and, for practical purposes, are divided into *intradermal (resting)*, *junction (active)* and *compound (intermediary)* nevi.
port-wine n. A congenital hemangioma characterized by one or several red to purplish flat or slightly elevated patches, most often on the face. Variations in color from red to blue depend principally upon the degree of oxygenation of the blood. Syn., *n. flammeus, port-wine mark.*
spider n. A type of telangiectasis characterized by a central, elevated, tiny red dot, pinhead in size, from which blood vessels radiate like spokes of a wheel. Syn., *n. araneus, n. arachnoideus, stellar n.*
systematized n. A linear epithelial nevus which contains no nevus cells, but shows hyperkeratosis, vacuolation, and degenerative changes in the granular layer; also called *generalized keratotic n.*
verrucous n. A warty brownish growth which often shows linear distribution. Histologically there is hyperkeratosis, acanthosis, and papillomatosis. Also called *hard n., epidermal n., keratotic n., acanthotic n.*
white-sponge n. of mucosa. See *n. spongiosus albus.*
zosteriforme n. See *n. elasticus.*

new'born A term applied to infants up to two or three days of age. Syn., *neonatal.*
Newburgh test. See Lashmet and Newburgh's *test.*
Newcastle disease. See under *disease.*
Newcomer, Harry Sidney (1887–) American physician who invented a small colorimeter with colored glass standards, called the *Newcomer hemoglobinometer.*
Newcomer method for hemoglobin. See acid hematin *method.*
new growth. A circumscribed, new formation of tissue, characterized by abnormality of structure or location. Syn., *neoplasm.*
Newman, David [*Scottish surgeon,* 1854–1924]. Remembered for his operation of nephropexy in which he split the renal capsule and sutured the kidney to the overlying lumbar muscles.
Newton, Isaac [*English natural philosopher and physicist,* 1642–1727]. Celebrated for his studies in gravitation and his laws applied to pure physics. Described chromatic aberration, also called *Newtonian aberration.* See also *Newtonian constant* under *G* (1); Newton's *law* of cooling.
Newton's method. See Benedict and Newton's *method.*
Newton method for uric acid determination. See under *method.*
nex us [L., binding together]. A tying or binding together, as the grouping of several causes which bring about an infectious disease; interlinking.
N. F. National Formulary.
Ni Chemical symbol for nickel.
ni acin. Nicotinic acid.
ni"a-cin am'ide. Nicotinamide.
nib'ble [cf. LG. *nibbelen*]. To eat in small bits.
nicamide Trade-mark for nikethamide.
nic co lum (NL. *niccolum*). Nickel.
niche (nitch) [F. from L. *nidus,* nest]. A recess.
enamel n. A depression between the lateral dental lamina, the dental lamina itself, and the enamel organ. Syn., *enamel crypt.*
nick'el (Ger.). Ni = 58.69. A metal of silver-white luster resembling iron in physical properties.
n. bromide. $NiBr_2.3H_2O$. Has been used in epilepsy. Dose, 0.3–0.5 Gm. (5–8 gr.)
n. carbonyl. $Ni(CO)_4$; nickel tetracarbonyl; a yellow, volatile liquid. It may explode when heated; vapors are poisonous and may cause irritation, congestion, and edema of lungs.
n. chloride. $NiCl_2.6H_2O$. Has been used as tonic in anemia. Dose, 0.13 Gm. (2 gr.)
n. methylkinase. A soluble enzyme system

obtained from the liver of animals, which catalyzes aerobic or anaerobic transfer of methyl groups from L-methionine to nicotinamide in the presence of magnesium ion and adenosine-triphosphate.

n. salt ts. $NiSO_4.6H_2O$ Has been used as tonic. Dose, 0.032–0.065 Gm. (½–1 gr.)

nick'ing [of uncertain origin]. 1 Notching. 2. Incising of the ventral muscles of the base of horse tail, causing the tail to be carried higher

A V n. The nicking of retinal vein by pressure from the artery

Nicklès, François Joseph Jérôme [*French chemist*, 1821–69]. Demonstrated the method of distinguishing glucose from cane sugar by heating the sugar at 100° C. with carbon tetrachloride. Cane sugar is turned black in the process while glucose is not. Called *Nicklès' test.*

Nicol, William [*Scottish physicist*, 1768–1851]. Devised polished prism of Iceland-spar cut diagonally across the principal axis, the sections being joined by means of Canada balsam. *Nicol' prism* reflects the ordinary rays of light out of the field while polarized rays are transmitted.

Nicola, Toufick [*American orthopedic surgeon*, 1894–]. Known for his operation for the relief of habitual dislocation of the shoulder by transplant of the long head of the biceps Called *Nicola operation, procedure.*

Nicolaier Arthu [*German physician*, 1862–]. Credited with the discovery of the bacillus of tetanus (1884) called *Nicolaier' bacillus.* H failed to demonstrate the organism in pure culture.

Nicolas, Joseph [*French physician*, 1868–]. Known for his contributions to the knowledge of enereal lymphogranuloma (1913) called *Nicolas-Favre* and *Durand-Nicolas-Favre disease.*

Nicolle, Charles Jules Henri [*French bacteriologist*, 1866–1936]. Made important studies of kala-azar and typhus. With C. Comt and E. Conseil, demonstrated that typhus is transmitted by the body louse (1909) N bel laureate (1928) See also *NNN medium* under *New*

Nicolle carbol-crystal violet. See under *stain.*

Nicolle's carbol-thionine. See under *stain.*

Ni-co ti-a na (ni ko shee y nuh, -ah uh) [after Jean *Nicot*, French diplomat, 1530–1600]. See *tobacco.*

nic tin am'id (nick tin am'ide, -id, nick o-tin uh-mide, mid) (*nicotinamid um*) C_5H_4N CONH Nicotinic acid amide, occurring as white, crystalline powder; 1 Gm. dissolves in about 1 cc. of water It is specific for pellagra, like nicotinic acid, but voids the unpleasant flushing of the skin so often produced by the latter Dose, same as for nicotinic acid. Syn., *niacinamide.*

ni tine (nick'o-teen, -tin) [*Nicot*]. A liquid, poisonous alkaloid found in the leaves of the tobacco plant, and responsible for the effects of tobacco.

nic o-ti 'ic ac'id (*acidum nicotinicum*) C_5H_4N COOH Beta- or 3-pyridinecarboxylic acid; occurs as white, crystalline powder; 1 Gm. dissolves in 60 cc of water A specific for the treatment of pellagra. Dose, dependent on the needs of the patient the maximum is 0 5 Gm. (8 gr.) per day (in 10 doses of 50 mg. each) Also called *niacin, P P factor* See Table of Vitamins in the Appendix.

nic tl 'ic ac tion. Peripheral drug effects similar to those produced by nicotine; small doses result in stimulation of autonomic ganglia and many myoneural junctions, including skeletal muscle all turn to depression with large doses.

nic t 'tion. See *nictitation.*

nic'ti ta"ting [L. *nictare* to wink]. Winking, as nictitating membrane, vestigial fold in the human eye.

nic"ti ta ti-o (nick"ti-tay shee-o) [*nictare*] A clonic form of lid spasm.

nic ti ta'tion [*nictare*]. Abnormal frequency of winking.

ni-da tion (nigh day'shun, ni-) [L. *nidus*, nest] The implantation of the fertilized ovum in the endometrium (decidua) of the pregnant uterus.

ni dus (pl. *nidi*) [L.]. 1. A focus of infection. 2. Old term for nucleus in the central nervous system. —**nidal,** *adj*

Nielsen, Holger (contemporary) Danish Army officer who devised the Holger Nielsen resuscitation technique (1932) See under *artificial respiration.*

Niemann, Albert [*German pediatrician*, 1880–1921]. First described the disease which is now known *Niemann-Pick disease.* See under *disease*

Niewenglowski's rays. See under *ray.*

night blind ness. The condition of reduced dark adaptation, resulting temporarily from vitamin-A deficiency or permanently from retinitis pigmentosa or other peripheral retinal diseases. Syn., *nyctalopia.*

night'-bloom"ing ce're-us. See *Cactus grandiflorus*

night cry A shrill cry uttered by child during sleep; sometimes symptomatic of physical disorders, as in the early stages of hip disease sometimes of psychic origin.

Nighti gale, Florence [*English nurse*, 1820–1910]. Immortalized as the founder of modern ursing service and famous throughout the world for her devotion to the English soldiers in the Crimean War She created woman nursing service t Scutari and Balaklava (1860) From funds donated, she organized school of ursing bearing her name. She was known far and wide as The Lady with the Lamp.

Nightingale test. See Anderson-Nightingale dilu tion *test.*

night mare [AS. *niht*; *mara*]. A terrifying dream which usually wakens the sleeper characterized by great distress and sense of oppression or suffocation.

night pain. Pain, usually in the hip or knee, occurring during muscular relaxation of the limb in sleep; often symptom of disease of the joints.

night pal'sy (pawl'zee) Numbness of the xtremities occurring during the night, or on waking in the morning, affecting women bout the period of the menopause.

night shade [AS. *nihtscada*] A name applied to plants of the family Solanaceae.

deadly n. A poisonous plant, *Atropa belladonna.* See *belladonna.*

night sweat. Profuse nocturnal sweating A frequent accompaniment of any diurnal fever and, by tradition, associated especially with pulmonary tuberculosis.

night ter'rors. See *night cry*

night vi'sion. The ability to see at night. Nocturnal visual efficiency is determined by the bility t perform visual tasks at light intensities below the cone threshold, that is, at scotopic levels of illumination.

n. v tester A self-recording group testing device for determining the ability to discriminate the break in Landolt ring at eight different levels of illumination. The testing distance is 20 feet.

portable n. tester An instrument used by the School of Aviation Medicine for measuring the threshold of the dark-adapted eye at distance of 18 inches from the eyes. The test object is Landolt ring subtending visual angle of two degrees The background is disk of self-luminous paint,

the brightness of which can be varied by series of neutral density filters.

ni gran'i line (nigh-gran' -leen, lin) Anilin black, black dye obtained by the oxidation of aniline, used as histological stain. Also called *igrosine*.

nig'ri cans (nig'ri kanz, nigh gri) [L. *nigricare*, to be blackish]. Black or blackish.

ni gri'ti es (nigh-grish ee eez) [L., blackness]. Black, hairy tongue.

ni gro-sine (nigh gro-seen, -sin) Any one of several black or dark blue aniline dyes; variously used in bacteriologic and histologic technics.

NIH National Institutes of Health.

ni'hil i sm (nigh'hi lis-um, nigh) [L. *nil*, nothing]. 1. Pessimism in regard to the efficacy of drugs. 2. *In psychiatry* the content of delusions encountered in depressed or melancholic states. The patient insists that his inner organs no longer exist, and that his relatives have passed away.

ni keth amide. $C_6H_4N\cdot CON(C_2H_5)_2$. The diethylamide of nicotinic acid, occurring either as colorless to yellow oily liquid or as crystalline solid, soluble in water. Stimulates medullary centers, used as an analeptic, and for its respiratory stimulant effects. A 25% aqueous solution, for oral or parenteral use, is the principal dosage form. Dose 1–4 cc (15–60 min.) See *anacardone, coramine, corvotone, ...amide*.

Nile blue A (C C) A base oxazine dye, of value as a fat stain. See under *stain*.

nilodin. Trade-mark for lucanthone hydrochloride, drug useful in treating certain types of human schistosomiasis. See *miracil D*.

ninhydrin. Trade name of triketohydrindene hydrate. A water-soluble substance which gives color reaction with proteins and amino acids. Also used in Abderhalden test for pregnancy.

ni o'bi um (nigh- 'bee-um) Nb = 92.91 chemical element No. 41 steel-gray lustrous metal, formerly called *columbium*.

ni-o po (nigh po) A snuff used from the seeds of *Piptadenia peregrina*, said to produce an intoxication approaching frenzy.

nipagin A. Trade-mark for ethyl parahydroxybenzoate used as preservative.

nipagin M. Trade-mark for methyl parahydroxybenzoate. See *methylparaben*.

niph blep si (G *niphe*, snow *ablepsia*, blind ness). Snow blindness.

niph"e-typh lo sis [*niphe*, G *typhlosis*, blinding]. Snow blindness.

nip"i-ol o-gy. See *nepiology*.

nip'pers [ME. *nippen*]. An instrument for seizing small bodies.

bone n. An instrument for grasping small bits of bone; small bone-trimming forceps.

nip ple [perhaps dim. from AS. *neb* beak]. The conical projection in the center of the mamma, containing the outlets of the milk ducts. Also called *papilla*. See Plate 43.

cracked n. One in which the epidermis is broken.

crater n. See *retracted*.

n. line. A vertical line drawn on the surface of the chest through the nipple.

n. protector A device worn by nursing women to protect the nipple. Also called *nipple shield*.

retracted n. One below the surrounding level.

nir'va nol (nur vah-nole, nol, -nawl, nirvah) $C_{11}H_{12}O_2N_2$ Phenylethylhydantoin, sedative and soporific. Formerly used in the treatment of chorea, producing nirvanol sickness, characterized by morbilliform rash and fever.

Nisbet, William [*British physician*, 1759–1822]. Described inflammatory nodules, sometimes ulcerative, in the penis, following acute lymphangitis secondary to chancroid.

nisentil hydrochloride. Trade-marked name for the synthetic analgesic dl-alpha-1,3-dimethyl-4-phenyl-4-propionoxypiperidine hydrochloride, known by the generic names *alphaprodine hydrochloride* and *prisilidene hydrochloride*.

nis'in. An antibiotic substance derived from *Streptococcus lactis*, active, in vitro, against a number of bacterial species. It protects mice against certain experimental infections.

Nissl Franz [*German neurologist*, 1860–1919]. Remembered for his description of degeneration of ganglion cells (1892) called *Nissl' degeneration*. Described stain, *Nissl'* methylene blue and chromophilic bodies of various sizes and shapes in nerve cells, called *Nissl bodies*, substance.

nisulfadine. Trade-mark for 2-(p-nitrophenyl)-sulfonamido)-pyridine a drug for the treatment of ulcerative colitis.

nisulfazole. Trade-mark for para-nitrosulfathiazole, drug for the treatment of ulcerative colitis.

ni'sus [L., effort]. 1. Any strong effort or struggle. 2. The periodic desire for procreation manifested in the spring season by certain species of animals, called *nisus formativus*. 3. The contraction of the diaphragm and abdominal muscles for the expulsion of feces, urine, or fetus.

nit [AS. *hnitu*] The egg or larva of a louse.

Nitabuch, stria of. See under *stria*.

ni'ter [G. *nitron*, sodium carbonate]. Potassium nitrate or saltpeter. Also spelled *nitre*.

Chili n. Sodium nitrate.

cubic n. Sodium nitrate.

rough n. Magnesium chloride.

sweet spirit of n. (*spiritus aetheris nitrosi*) Ethyl nitrite spirit. An alcoholic solution of ethyl nitrite. A popular diaphoretic in mild fevers. Dose, 2–4 cc (30–60 min.)

ni'ton. Radon. Symbol, Nt.

ni'tra gin. A nitrifying bacterial ferment obtained from the root tubercles of leguminous plants.

ni'tra mine (nigh'trah-meen, -min, nigh tram'in, nigh trah meen') See *tetryl*, 2.

nitranitol. Trade-mark for mannitol hexanitrate.

ni'trate. A salt of nitric acid.

ni tra tion. The process of combining or reacting with nitric acid.

nitrazine. Trade-mark used for dye, sodium dinitrophenylazo-naphthol disulfonate, used as an indicator. Strips of paper treated with this dye are used for the determination of the pH of urine.

ni'tre. Niter.

ni tric ac'id (*acidum nitricum*) A liquid containing 67–71% HNO_3, the remainder being water; possesses characteristic, highly irritating odor and is very caustic and corrosive. Occasionally employed internally well diluted with water for the same purpose as hydrochloric acid and also as hepatic stimulant; externally employed as an escharotic, particularly for venereal and phagedenic ulcers. Dose, 0.3–0.5 cc. (5–8 min.), well diluted with water.

fuming n. a. Nitric acid containing more or less nitrogen tetroxide, gas which gives it reddish color and causes it to fume.

ni"tri fi-ca'tion [G *nitron*, sodium carbonate; L. *facere*, to make] The conversion of the nitrogen of ammonia and organic compounds into nitrites and nitrates, process constantly going on in nature under the influence of certain bacteria and other agencies.

ni'tri fi"er [*nitron, facere*]. A microorganism that participates in the process of nitrification bacteria of the genus *Nitrosomonas* oxidize ammonium to nitrite bacteria of the genus *Nitrobacter* oxidize nitrite to nitrate.

ni'trile (nigh'trile, -tril) An organic compound containing the monovalent CN group.

ni'trite [nitrous]. A salt of nitrous acid. See *amyl nitrite*, *ethyl nitrite*, *potassium nitrite*, *sodium nitrite*. The nitrites produce dilatation of the blood vessels, diminution of the blood pressure, increased rapidity of the pulse, and depression of the motor centers in the spinal cord. They are used as antispasmodics in asthma and angina pectoris, in spasmodic dysmenorrhea, tetanus, epileptic and hysterical convulsions, and in cases of arteriosclerosis with high arterial tension. Full doses in man give rise to flushing of the face, throbbing, and headache.

ni'tri toid [nitrous; G. *eidos*, form]. Like a nitrite.

ni"tri tu'ri-a [nitrous, G. *ouron*, urine]. The presence of nitrates or nitrites, or both, in the urine when voided.

nitro-, **nitr-** [nitrous]. 1. A combining form denoting *the presence of the monovalent radical NO_2*. 2. A combining form denoting *combination with nitrogen*.

ni"tro-ben'zene. $C_6H_5NO_2$. An oily sweetish liquid made by the action of strong nitric acid on benzene; it is employed as a flavoring agent under the name of artificial oil of bitter almonds or oil of mirbane. It is a powerful poison, resembling hydrocyanic acid in action.

ni"tro-ben zol. Nitrobenzene.

ni"tro-cel'lu lose. See *pyroxylin*.

ni"tro-chlo ro-form. See *chloropicrin*.

ni"tro-er'y throl. $C_4H_6(NO_3)_4$ Erythrityl tetranitrate, prepared by nitration of the alcohol erythrol (tetrahydroxybutane); it explodes on percussion. It is used in the same manner as nitroglycerin. Dose, 0 015–0.06 Gm. (¼ 1 gr.)

ni"tro fur-an'toin. $C_8H_6N_4O_5$; N-(5-nitro-2-furfurylidene)-1-aminohydantoin; yellow powder practically insoluble in water It exhibits wide spectrum of antibacterial activity against both Gram-positive and Gram-negative organisms, and is useful in treating bacterial infections of the urinary tract. See *furadantin*.

ni"tro fur' zone. $C_6H_6N_4O_4$. 5-Nitro-2-furaldehyde semicarbazone, derivative of furfural possessing bacteriostatic and bactericidal properties. It is lemon yellow crystalline powder very slightly soluble in water See *furacin*.

ni"tro-gen [nitrous; G. *gennaein*, from *gignesthai*, to be produced]. N = 14.008. A nonmetallic element existing free in the atmosphere, of which it constitutes about 77% by weight. A colorless, odorless gas, incapable of sustaining life. Chemically it is relatively inert, and combines directly with but few elements. An important constituent of all animal and vegetable tissues. See T ble of Normal Values of Blood Constituents in the Appendix.

blood urea n. N trogen in the form of urea found in whole blood or serum; normal range is 8–20 mg. per 100 ml.

n. balance. The difference between the nitrogen intake (as protein) of an individual and his total nitrogen excretion. If the nitrogen intake equals the nitrogen excretion, subject is in nitrogen equilibrium. If the nitrogen intake exceeds the nitrogen excretion, the nitrogen balance is positive. If the nitrogen excretion is greater than the nitrogen intake, the nitrogen balance is negative.

n. cycle. The fixation of tmospheric nitrogen and the nitrification of inorganic nitrogen compounds by bacteria, the synthesis of these into protein by plants and consumption by animals, with ultimate degradation to inorganic nitrogen compounds and molecular nitrogen.

n. dioxide. N_2O A toxic gas resulting from the decomposition of nitric acid.

n. fixation. Conversion of free nitrogen in the air into compounds, such as ammonia and nitric acid and salts or derivatives of the same, accomplished naturally through electrical discharges in the atmosphere, through the agency of certain soil organisms, also by various industrial synthesis methods.

n. fixers. Certain bacteria, as *Azotobacter* capable of transforming atmospheric nitrogen into nitrogenous compounds in the cell.

n.-lag. The time elapsing between the ingestion of protein and the appearance in the urine of an amount of nitrogen equal to that take in.

n. monoxide. Nitrous oxide.

n. mustard. Any of series of nitrogen analogs of dichlorodiethylsulfide of which *tris* (β-chloroethyl)amine, $N(CH_2CH_2Cl)_3$ and methyl-*bis* (β-chloroethyl)amine, $CH_3N(CH_2CH_2Cl)_2$ in the form of water-soluble hydrochloride salts, intravenously administered, have been found useful in the treatment of Hodgkin disease lymphosarcoma, and chronic leukemia. Methyl *bis* (β-chloroethyl)amine hydrochloride is officially recognized as *mechlorethamine hydrochloride* (*see* *U.S.P.*) The nitrogen mustards possess vesicant properties and are of interest as potential chemical warfare agents

n. pentoxide. The solid substance N_2O_5 reacts with water to form nitric oxide.

n. tetroxide. N_2O_4 A toxic gas resulting from oxidation of nitrogen dioxide. Also called *n. peroxide*.

non protein n. The fraction of nitrogen in the blood, tissues, urine, and excreta, not precipitated by the usual protein precipitants such as sodium tungstate. Symbol, N P N

ni trog'e-nous (nigh-trodj'i-nus) [nitrous, *gennaein*]. Containing nitrogen.

ni"tro-glyc'er I (nigh tro-glus ur-in) $C_3H_5(NO_3)_3$ Glonoin, glyceryl trinitrate; colorless, oily liquid produced by the action of sulfuric and nitric acids upon glycerin. A powerful explosive; physiologically has the actions of the nitrites, but is more persistent than amyl nitrite, which it most resembles. Dose, 0.3–1.2 mg. (1/200–1/50 gr.)

n. spirit (*spiritus glycerylis trinitratis*) A 1% alcoholic solution. Dose, 0.06–0.12 cc. (1 2 min.)

n. tablets (*tabellae glycerylis trinitratis*) Glyceryl trinitrate tablets; commonly vailable in potencies of 0.3, 0.4, 0.6, and 1.2 mg. (1/200, 1/150, 1/100 and 1/50 gr.)

ni"tro hy"dro-chlo ric ac'id (*acidum nitrohydrochloricum*) Prepared by mixing 1 volume of nitric acid and 4 volumes of hydrochloric acid; contains the component acids together with nitrosyl chloride and chlorine. Increases the flow of bile and is used in cholecystitis. Dose, 0.3–0.3 cc. (3–5 min.) well diluted. Syn., *nitromuriatic acid*.

diluted n. a. (*acidum nitrohydrochloricum dilutum*) A solution of 22 cc. of nitrohydrochloric acid diluted with water to 100 cc. Dose, 0.6–1.2 cc. (10–20 min.) well diluted.

ni"tro-man'nite. Mannitol hexanitrate

ni"tro-man'ni tol. Mannitol hexanitrate.

ni"tro mer sol (*nitromersol*) $C_7H_5O_3NHg$. The anhydride of 4-nitro-3-hydroxy-mercuri-ortho-cresol, containing bout 57% of mercury; it is brownish yellow t yellow powder or occurs in granules. It is insoluble in water but dissolves in solutions of alkalies. It is employed as germicide. See *metaphen*.

n. solution (*liquor nitromersolis*) Nitromersol 0.2 Gm., sodium hydroxide 0 04 Gm., monohydrated sodium carbonate 0.425 Gm., in water to 100 cc.

n. tincture (*tinctura nitromersolis*) Nitromersol

0.5 Gm., sodium hydroxide 0.1 Gm., acetone 10 cc., alcohol 50 cc., water to 100 cc.

ni trom e-ter (nigh-trom -tur) [itron, G metron, measure]. An pparatus for collecting and measuring n trogen evolved during chemical reaction

ni"tro-mu ri at'ic ac'id. See *nitrohydrochloric acid*

ni'tro 4,5-Dihydro-1 4-diphenyl-3,5-phenylimino-1,2,4-triazole used in Grimer trate method

ni"tro prus side. Any salt containing the anion [F (CN)$_5$NO]$^=$

ni tro so- (nigh-tro so-) [*nitrous*]. A combining form signifying *combination with* *itrosyl* the univalent NO

ni tro so ni'tric ac'id. Fuming nitri cid containing nitrous acid gas

ni tro syl (nigh-tro sil, nigh tro-seel nigh tro-sil) Th univalent radical NO

ni trous [*nitrous*]. 1 Containing nitrogen as trivalent positive element. 2 Pertaining to or derived from nitrous cid.

n. ether $C_2H_5NO_2$. Ethyl nitrite, very volatile liquid having properties similar to those of amyl nitrit

n. **ide.** N_2O A colorless gas used as general anesthetl in dentistry and in surgery Also called *hyponitrous ide, laughing gas, itrogen monoxide.*

ni trous ac'id. HNO_2. An unst ble solution prepared by passing N_2O_3 into w ter

Nitze, Max [*German urologist*, 1848–1906] Introduced an electrically lighted cystoscope (1877) Author of an important monograph on the science of cystoscopy (1889)

nizin. Trade-mark for brand of zin sulfanilate.

NK *Nomenklatur Kommission*, the committee appointed to revise the BNA. The recommendations of this committee, published in 1935, have not been widely adopted.

N.L.N.E. National League of Nursing Education.

N. N R. New and Nonofficial Remedies book describing substances that have been pproved by the Council on Pharmacy and Chemistry of the American Medical Association

No. *Numero*, umber to the number of

no"us the ni a [G nous, mind; *asthenia*, weakness] Mental feebleness.

Nobel Alfred Bernard [*Swedish manufacturer of munitions*, 1833–96]. The inventor of dynamite he provided (1895) for yearly distribution of prizes for oteworthy advances in literature, chemistry physics, and medicine, as well as in the *cause of international peace.* The recipient is known as *Nobel laureate* or *prizeman.*

Noble Charles Percy [*American gynecologist*, 1863–1935]. Introduced a posture assumed for examination of the kidney The patient stands with torso flexed and supported by the extended arms known as *Noble'* *posture.*

no'ble gas es. The nert gases, helium, neon, argon, krypton, enon, and radon, so called because they will not enter into chemical combination with any other element.

Nocard, Edme d Isidore Etie ne [*French veterinarian*, 1850–1903]. W th Pierre Paul Roux published an early study on filtrabl viruses (1898) Discovered the virus of psittacosis. Described diphtheroid bacillus producing pseudotuberculosis in cattle, sheep, and horses called *Preisz-Nocard bacillus*

No-car'di a [*Nocard*] A genus of aerobic fungi of th family Actinomycetaceae

N. asteroides. A species which is an aerobic and acid-fast actinomycete; causes pulmonary brain, and subcutaneous lesions, usually without granules.

N. madurae. A species which is one of the causes of white-grained mycetoma.

N **nd urtiei me.** A pecies which causes the chronic i fection of the stratum corneum known as erythrasma.

N. somaliensis. A species which is one of the causes of white-grained mycetoma.

N tenuis. A species which is the causative agent of trichomycosis axillaris

no-car'din. An antibiotic substance elaborated by the fungus *Nocardia coeliaca*, active, in vitro and to some extent in vivo, against some strains of *Mycobacterium tuberculosis.*

no ca di-o sis [*Nocard*; G. -*osis*, condition] Actinomycosis caused by certain species of the aerobic soil omycetes, *Nocardia* The disease is indistinguishable from that caused by *Actinomyces bovis*

granulomatous n. A granulomatous reaction to infection with th fungus *Nocardia.*

Nocht-R manovsky stain. See under *stain.*

no ci cep tive [L. *nocere* to hurt *capere*, to take] Referring t sensory nerves which mediate impulses stimulated by trauma; pain receptors.

no ci fen'sor [*nocere*; L. *defendere*, to protect] A term introd ced by Lewis t denote efferent fibers which release chemical substances at their terminals, which stimulate the pai endings.

no ci per cep'tion [*nocere*; L. *perceptio*, from *percipere*]. Perception of pain by the central nervous system.

no ci per cep tor [*nocere*; L. *percipere*, to perceive] One of the peripheral nerves concerned in the reception of pain stimuli.

noc"tal bu"mi nu'ri [L. *nox*, night *albus*, white G *ouron*, urine]. Excretion of albumin in night urine only

noc tam"bu la'tion [*nox*; L *ambulare*, to walk] Sleep walking.

noc"ti pho'bi a [*nox*; G *phobos*, fear]. Morbid fear of night.

Noc tu'i dae (nock tew'i-dee) [L. *noctua*, night owl]. A family of the Lepidoptera: owlet moths Caterpillars of this f mily have irritating hairs which cause *caterpillar dermatitis in man.*

noc-tu ri-a [L. *nox*, night; G *ouron*, urine 1 Nocturnal enuresis 2. Frequency of urination at night. Syn., *nycturia.*

noc tur'nal [L. *nocturnalis*, nocturnal]. Pertaining to night, as octurnal emission, discharge of semen without coitus during sleep.

noc"u fen sor A term suggested by Thomas Lewis to replace nocifensor

noc u ous [L. *nocuus*, hurtful] Noxious; hurtful; venomous.

node [L *nodus*, knot]. 1 A knob, or protuberance. 2 A point of constriction. 3 A small, rounded organ. —**nod'al,** *adj*

atrioventricular n. A small mass of interwoven Purkinje fibers of the conduction system in the central fibrous body of th heart Syn *Tawara*

auriculoventricular n. See atrioventricular

Bouchard's nodes. Enlargement of the proximal interphalangeal joints, seen in gout.

Cloquet's n. The highest deep inguinal lymph node situated in the femoral ring also called *Rosenmueller s n.*

Ewald s n. See signal n.

Heberden n. Nodose deformity of the fingers in multiple degenerative joint disease.

hemal n. A node of lymphatic tissue, situated in the course of blood vessels, and containing large numbers of erythrocytes. Hemal nodes are frequent in ruminants, but probably do not occur in man, although even normal lymph nodes may contain erythrocytes in the parenchyma.

hemolymph n. See *hemal n.*
Hensen's n. In the embryo, an accumulation of cells at the anterior end of the primitive streak, through which the neurenteric canal passes from the outside into the blastodermic vesicle. Also called *primitive n.*, *primitive knot*.
Janeway n. See Edward Gamaliel *Janeway*.
juxta-articular n. See under *nodule*.
lymph n. See under *lymph*.
n. of Keith and Flack. See *sinoatrial n.*
n. of Ranvier. The region, in a myelinated nerve, of a local constriction in the myelin sheath. The axis cylinder (or axon) is also slightly constricted at the node.
Osler's n. See William *Osler*.
preacher's n. See *singer's n.*
Rosenmüller's n. See *Cloquet's n.*
signal n. Metastatic tumor in supraclavicular lymph node, usually on the left side, and most frequently secondary to primary carcinoma in abdomen or thorax; also called *Ewald's n.*, *sentinel n.*, *Virchow's n.*, *Virchow's signal n.*
singer's n. An inflammatory or fibrous nodule on the free margin of the vocal cords, seen in those who use their voices professionally; also called *preacher's n.*, *singer's* or *vocal nodule*, *chorditis nodosa*, *chorditis tuberosa*.
sinoatrial n. A dense network of Purkinje fibers of the conduction system at the junction of the superior vena cava and the atrium. Syn., *n. of Keith and Flack*.
supraclavicular signal n. See *signal n.*
syphilitic n. Localized swelling on bones due to syphilitic periostitis.
Tawara n. See *atrioventricular n.*
Virchow's n. See *signal n.*
vocal nodes. See *singer's n.*
no'dose [L. *nodosus*, knotty]. Characterized by nodes; jointed or swollen at intervals.
no·dos'i·ty [*nodosus*]. 1. State of being nodose. 2. A node.
nod'u·lar sub·ep·i·der'mal fi·bro'sis. See *dermatofibroma*.
nod'ule [L. *nodulus*, little knot]. 1. A small node. 2. A small aggregation of cells. 3. Specifically, in *dermatology*, one of the primary skin lesions, a circumscribed solid elevation of varying size. Syn., *tubercle*. —**nod'ular**, *adj.*
aggregate nodules. Groups of lymph nodules massed together in the wall of an organ, as the Peyer's patches of the small intestine.
agminated nodules. See *aggregate nodules* under *nodule*.
Aschoff n. The specific lesion of rheumatic fever; a small area of necrosis surrounded by Aschoff cells and a few lymphocytes, located perivascularly in the myocardium and occasionally found elsewhere. Syn., *Aschoff body*.
Bizzozero nodules. Small nodular thickenings of the intercellular bridges of the epidermis.
Gamna nodules. See *siderotic nodules* under *nodule*.
Gandy-Gamna nodules. See *siderotic nodules* under *nodule*.
juxta-articular nodules. Subcutaneous tumors of poorly vascularized connective tissue without elastic fibers, which may contain necrotic areas, found in patients with late syphilis or yaws. The tumors are hard in consistency and are found about the joints of the upper extremity, especially the elbow, and on the legs. Nodes have been reported in patients without syphilis or yaws.
Koeppe's nodules. Nonspecific gray lumps found on the pupillary margin in a variety of inflammatory diseases of the uvea.
lymph n. A small mass of dense lymphatic tissue in which new lymphocytes are formed.
milker's nodules. Small, raised, bluish-red, firm, rarely purulent nodules found on the hands and arms of slaughterhouse workers and dairy farmers; probably vaccinia.
n. of cerebellum. The nodulus.
nodules of Arantius. Those of the semilunar valves, formerly called the bodies of Arantius, corpora Arantii.
Osler's nodules. Painful or tender cutaneous nodules, observed commonly at the tips of fingers or toes, and due to embolic phenomena, as in subacute bacterial endocarditis.
rheumatic nodules. Subcutaneous nodules occurring in both rheumatic fever and rheumatoid arthritis about the elbows, knees, ankles, and other points of pressure along tendon sheaths. The skin over the lesion may be normal in color or slightly erythematous. The nodules result from granulomatous inflammation, and are characterized by necrosis of connective tissue with peripheral fibrosis.
Schmorl's nodules. Herniation of the nucleus pulposus of the intervertebral disk into a softened spongy substance of a vertebra. When extensive, the result is kyphosis with wedge-shaped vertebras.
siderotic nodules. Small yellow to brown foci seen in some spleens, and less often in other organs. They consist of necrotic, fibrillar, and cellular material encrusted with salts of iron and calcium, and may be the result of focal hemorrhage.
singer's n. See *singer's node*.
solitary lymphatic n. An independent lymph nodule, as in some mucous membranes.
subcutaneous n. Usually a rheumatic nodule.
triticeous n. Corpus triticeum; a small, cartilaginous nodule in the thyrohyoid ligament.
typhus n. A focal collection of lymphocytes, plasmacytes, and large mononuclear cells around or near small blood vessels; a common feature of rickettsial diseases.
vocal n. See *singer's node*.
nod'u·lus [L.]. 1. Nodule. 2. The nodule of the cerebellum; one of the anterior subdivisions of the vermis of the cerebellum.
no'dus. See *node*.
no·e·gen'e·sis [G. *noēma*, thought; *genesis*, production]. In *psychology*, a term that denotes the utmost degree of creativeness attainable by the mind. Rare.
Noeggerath, Emil [*American gynecologist and obstetrician*, 1827–95]. Introduced the operation of epicystotomy (1855). Pioneer in pointing out the effects of latent gonorrhea in the production of sterility in women (1872).
no·e'mat·a·chym'e·ter (no-i-mat-uh-kim'i-tur) [G. *noēma*, thought; *tachys*, swift; *metron*, a measure]. An apparatus for estimating the time taken in recording a simple perception.
no"e·mat'ic [*noēma*]. Pertaining to thought or to any mental process.
Noguchi, Hideyo [*Japanese bacteriologist in America*, 1876–1928]. With S. Flexner made important study of snake venom. Cultivated *Treponema pallidum* (1911). Obtained pure culture of *Treponema pallidum* from a case of paralytic dementia (1913), thus establishing its connection with syphilis. Isolated *Bacillus granulosis* from trachoma (1927). Modified the Wassermann test for syphilis. See also *Noguchi's test*.
no'ma [G. *nomē*, feeding]. A stomatitis, often fatal, starting in debilitated children during convalescence from disease, usually one of the exanthemas. It begins in the mucous membrane becomes

gangrenous, and ulcerates through the cheek. Also called *cancrum oris, gangraena oris, gangrenous stomatitis, European noma.*

n. of penis. An extremely rare gangrenous ulceration of the penis, seen in young boys.

n. pudendi An ulceration similar to noma of penis, occurring about the genital region of female children. Also called *n. vulvae.*

no mad'ic [G *nomas*, roaming]. Spreading; said of ulcers.

no men cla ture. A systematic arrangement of the distinctive names employed in any science. See *BNA, BR.*

nom'o gram. See *nomograph.*

nom o graph [G *nomos*, law; *graphein*, to write]. A graph on which appear graduated lines for all variables in formula, arranged in such manner that the value of one variable can be read on the appropriate line from knowledge of the values of the other variables as the DuBois nomograph for estimation of surface area.

nom o top'ic [*nomos*, G *topos*, place]. Occurring at the usual site. *Rare*

non- [L., not] A prefix meaning *not.*

no na. See lethargic encephalitis.

non ac cess [*non*, L. *accessus*, from *accedere*, to approach]. *In legal medicine*, the absence of opportunity for sexual intercourse

non ad he rent [*non*, L. *adhaerere* to stick to]. Not connected to an adjacent organ or part

non" al ler'gic [*non*, G *allos*, other; *ergon*, work]. Unrelated to allergy

no nan [L *nonus*, ninth]. Having an exacerbation every ninth day

no nane-di oic ac'id. Azelaic acid

non a que-ous (non ay'kwee us, -ack wee-us) [L. *non*, not *aqua*, water] Not consisting of, or pertaining to, water said of organic solvents.

non com pos men tis [L.]. Of unsound mind.

non con duc tor [*non*, L. *conductor* from *conducere*, to conduct] Any substance not transmitting electricity or heat

non"dis-junc tion [*non*, L. *disjunctio*, separation] The failure of homologous maternal and paternal chromosomes to separate at meiosis; also applied to the failure of sister chromosomes to separate in ordinary mitosis.

non"e-lec'tro lyte. A substance which in solution does not dissociate into ions and is therefore unable to conduct an electric current.

non'fixed med'i cal treat'ment fa-cil'i ty *In U.S. Army medicine*, medical treatment facility capable of being moved from place to place and designed to operate tactically in the manner It includes evacuation hospitals, mobile army surgical hospitals, unit dispensaries (aid stations) collecting stations, clearing stations, holding stations, NP treatment stations, and convalescent centers.

Nonidez chloral hydrate method. See under *stain.*

no ni grav'i-da (no ni-grav -duh, non) [L. *nonus*, ninth *gravidus*, pregnant]. A woman pregnant for the ninth time.

n nip a ra [*nonus*; L *parere*, to bring forth]. A woman who has been in labor nine times.

non"lu et'ic [L. *non*, not; *lues*, pestilence]. Not due to syphilitic infection.

non"ma lig'nant [*non*, L. *malignus*, wicked]. Lacking any features of malignant disease, usually referring to tumors *Syn., benign.*

non med'ul la"ted. Having no myelin sheath; amyelinated unmyelinated.

non mo'tile (non-mo til) [*non*, L. *motum*, from *movere*, to move]. Not having the power of spontaneous motion.

non my-el'i na"ted. Amyelinated.

Nonne Max (1861) German neurologist credited with the first description of hereditary edema, now called *Milroy disease* II described a group of symptoms resulting from hereditary cerebellar disease. See hereditary cerebellar ataxia, Nonne-Apelt *test.*

non nu'cle a-ted. Without nucleus, as mature erythrocyte.

non'ose. A monosaccharide which contains nine carbon atoms in the molecule.

non par'ous. Nulliparous

non pro'te in [L. *non*, not G *proteios*, of first rank]. Not derived from protein, as nonprotein nitrogen not containing protein, as nonprotein fraction of an extract.

non pro te-in ni'tro-gen (of the blood). The total N of the blood less that of the proteins.

non"py-o-gen'ic (non pye-o-jen'ick) [*non*, G. *pyon*, pus *gennaein*, from *gennethel*, to be produced]. Not inducing the formation of pus

non re" gin'ic [*non*, L. *re-* back *agere* to act]. Referring to conditions in which reagins are not demonstrable, as nonreaginic allergy

non"re frac tive [*non*, L. *refractum*, from *refringere*, to break up] Not possessing properties permitting the refraction of light rays.

non"re-straint' [*non*, L. *restringere*, to bind back] The treatment of insanity without any forcible means of compulsion.

non sex u al. Asexual.

non spe-cif'ic [*non*; L. *species*, particular sort] Referring to relations that are not specific, but general.

non spe-cif'ic pro'te in ther' py Treatment which recognizes that stock and autogenous vaccines may owe part of their value in disease therapy to nonspecific effects, for example peptone milk, normal serum, etc., have been employed to replace bacterial products.

non sup pu ra"tive [*non*, L. *suppurare*, to form pus]. Uninfected surgically clean; not forming pus.

non-sur'gi cal [*non*, G *cheirourgos*, working by hand]. Not surgical; nonoperative

non vi'a ble [*non*, L. *vita*, life] Incapable of living.

non yl. The univalent hydrocarbon radical $CH_3(CH_2)_8$—

non yl'ic ac'id. Pelargonic acid.

no klo pi (no o-klo pee-a) See *coatrophrenia.*

no psy" he (no o-sigh kee) [G. *nous*, mind *psychē*, soul]. Mental or reasoning processes.

Noorden Carl Harko von (German physician, 1858–1944]. Known for his important investigations of diabetes (1896) Contributed to the knowledge of metabolism (1900–10). Introduced special oatmeal diet in diabetes and other conditions, called *von Noorden treatment.*

N.O.P.H.N. National Organization for Public Health Nursing.

nor [L. *norma*, rule]. A prefix indicating the parent *compound* from which another is derived.

nor" -dren a-line, nor"a-dre a-line. Norepinephrine.

nor'bi tin. A homolog of biotin containing one less CH_2 group in the side chain; it is an antagonist of biotin toward some bacteria but is capable of replacing biotin in certain of its functions toward other organisms

Nordau, Max Simon [German physician and author 1849–1923]. Author of *Degeneration* (1892–93) in which he tried to correlate genius and insanity Degeneracy has since been known as *Nordauism*

Nordhausen sulfuric acid. Fuming sulfuric acid sulfuric acid containing sulfur trioxide.

nor"di hy"dro-guai"a-ret'ic ac'id. $(OH)_2C_6H_3$

CH OH(CH₃).CH(CH₃) CH C₆H (OH) ; 4,4 (2,3-dimethyltetramethylene)dipyrocatechol substance in resinous exudates of many plants and also prepared synthetically It occurs in crystals, slightly soluble in hot water but soluble in organic liquids It is used as an antioxidant in fats and oils. Abbreviated NDGA.

nor e-phed'rine (nor eh fed'rin, nor-ef'i-dreen, -drin) The 1-phenyl-2-aminopropanol, representing ephedrine in which the methyl radical of the amino group is replaced by hydrogen. See *propadrine hydrochloride*

nor-ep"i neph rine. $(OH)_2C_6H_3$ $CHOHCH_2NH_2$ 3,4-dihydroxyphenylaminoethanol; demethylated epinephrine. The levorotatory isomer is formed at sympathetic nerve endings as mediator of functional activity; it is probably the postulated *sympathin E*. Therapeutically it is useful for maintenance of blood pressure in acute hypotensive states caused by surgical and nonsurgical trauma, central vasomotor depression, and hemorrhage the bitartrate salt is commonly employed. Syn., *arterenol*, *noradrenalin*. See *levophed*.

norisodrine sulfate. A trade-marked name for the sympathomimetic amine salt isopropylarterenol sulfate.

nor'ite fac'tor See under *factor*

nor-leu cine (nor-lew seen, -sin) $CH_3(CH_2)_3CH(NH_2)COOH$. Alpha-amino-caproic acid, component of many proteins.

nor-leu cyl. The univalent radical, $CH_3CH_2CH_2CH_2CH(NH_2)CO—$ of the amino acid norleucine.

norm [L. *norma*, rule]. A standard.

nor'ma (pl. *normae*) [L.]. *1 anatomy* view or aspect, essentially of the skull.

n. anterior Norma facialis.

n. basilaris. That directed toward the inferior aspect of the skull.

n. facialis. That directed toward the face.

n. inferior Norma ventralis.

n. lateralis. A profile view

n. occipitalis. That directed toward the back of the skull.

n. sagittalis. The skull seen in sagittal section.

n. superior Norma verticalis.

n. ventralis. The inferior aspect of the skull.

n. verticalis. The aspect viewed from above, or that directed toward the top of the skull.

nor mal [L. *normalis*, from *norma*]. 1 Conforming to some ideal norm or standard; pertaining to the central values of some homogeneous group, as that which is typical of or acceptable to majority or dominant group average, common, mean, median, standard, typical, usual, ideal, modal. 2. *In medicine and psychology*, healthy i.e., lacking observable or detectable clinical abnormalities, deficiencies, or diseases; also, pertaining to or describing value or measurement obtained in an ideal group by particular method, such as may be found in the Table of Normal Values of Blood Constituents in the Appendix; i.e. value which in itself is not significant of disease; pertaining to the **normal variability** of an individual' anatomical, physiological, and psychological pattern within the parameters of age sex, social and physical anthropological factors, population or segment thereof to which the individual belongs, and variability in time activity etc. **Normal variability** frequently is used to cover the values falling within some range, usually the 95 per cent range of some factor or factors (mental, physical, emotional, social) measured in random or selected sample of population or even an individual by standardized methods and recording systems during many observations. 3. *In chemistry*, referring to solutions containing the equivalent weight of substance, in grams, in liter Abbreviated, N 4. *In mathematics*, pertaining to right angle, i.e., to perpendicular line or plane. —**normalcy** **normality** n.

nor'mal bed ca pac'ity *In military medicine* space for patients beds measured in terms of the number of beds that can be set up in wards or rooms designed for patients beds, spacing beds 8 feet between centers (approximately 100 square feet per bed); capacity for normal peacetime use

nor'mal de vi ate *In biological assay* conversion of percentage response, e.g., cases which responded to certain dose, into the deviation on the normal frequency curve to which the percentage is equivalent, and used to obtain linear relation between log dose and percentage response also called *normal equivalent deviate*. See *probit*.

nor'mal dis"tri bu'tion. *In statistics*, frequency distribution, specified by its mathematical form and two constants: the mean and the standard deviation. This distribution is continuous and bell-shaped; 95% of the area covered by the distribution curve lies within two standard deviations below and two above the mean. This distribution describes adequately some individual biological measurements and many random sample measurements.

nor'mal prob a bil"i ty curve. The curve represented by the equation $y = \frac{1}{\sqrt{2\pi}} e^{-\frac{x^2}{2\sigma^2}}$ in which the ordinate y shows the relative frequency of differences or deviations from the mean represented by the corresponding abscissa in large group of observations represents the standard deviation of the distribution π equals 3.1416 e equals 2.7183

norm-er'gy [L. *norma*, rule; G *ergon*, work]. *In allergy*, normal degree of capacity to react. —**normer gic**, *adj*

nor'mo-blast [*norma*, G *blastos*, germ]. 1 *In hematology*, the smallest of the nucleated precursors of the erythrocyte, and of slightly larger size than the adult erythrocyte. It has almost full complement of hemoglobin, and shows small, centrally placed chromatic and pyknotic nucleus. It is usually considered that single normoblast gives rise to single erythrocyte. Also called *acidophilic erythroblast*, or *orthochromatic erythroblast*, *karyocyte*, *metarubricyte*, *acidic rubricyte* 2 In some terminologies, any nucleated cell of the erythrocytic series.

acidophilic n. See *normoblast*, 1.

basophilic n. An early erythroblast.

early n. An early erythroblast.

intermediate n. See polychromatic n.

orthochromatic n. The last of the nucleated erythrocyte precursors with totally acidophilic cytoplasm.

polychromatic n. A normoblast in which cytoplasmic polychromatophilia is well established, indicating progression of hemoglobin synthesis: also called *intermediate n.*

pyknotic n. See *normoblast*, 1

nor"mo-chro-mat'ic. Pertaining to the microscopic appearance of cells of the erythrocytic series which show normal staining characteristics, and are considered to have their full complement of hemoglobin and no residual basophilic material in their cytoplasm. —**normochromatic ia**, n.

nor"mo-chro'mi-a [*norma*; G. *chrōma*, color]. Blood with the normal hemoglobin content.

nor"mo-chro mic. Pertaining to blood picture

in which the erythrocytes have a mean corpuscular hemoglobi (MCH) or color index and mean corpuscular hemoglobin concentration (MCHC) or saturation index within (plus or min) two standard deviations of the mean normal as determined by the same method on the bloods of healthy persons of the same age and sex group. See normochromic normocytic anemia.

nor mo-cyte [*norma*, G. *kytos*, cell] An erythrocyte having both diameter and mean corpuscular vol me (MCV) within (plus or minus) two standard deviations of th mea normal determined by th same method on the bloods of healthy persons of the same age and sex group. —**normocyt'ic**, *adj*

nor"mo cy t sis (nor mo sigh t sis) [*norma*, *kytos*; G -*osis*, condition]. A normal state of the cells of the blood.

nor"mo-gly-ce mi a. Normal concentration of glucose in the blood.

nor"mo-ten sive. Referring to normal blood pressure.

nor"mo ther'mi a. A state of normal temperature.

nor"mo ton'ic [*norma*, G *tonos*, tension] Relating to normal muscular tonus.

nor"mo-t pi a. Normal location.

nor"mo vo le mi [*norma*, L *volumen*, volume G *haima*, blood]. The blood volume found in normal healthy individuals.

nor nic' tine (nor nick o-teen, -tin) A minor alkaloid occurring in tobacco It is chemically related to nicotine and has simila action, but is less toxic

Norris, Charles [*America physicia* 1867 1935] With Alwin M Pappenheimer and Thomas Flournoy reported disco ery f spirochete in an American case of relapsing fever (1906)

North, Elisha [*American physician*, 1771 1843]. Remembered for being the first to describe spotted fever or pidemic cerebrospinal meningitis, in his published work (1811)

Northrop, John Howard [*American scientist* 1891]. Known for his achievements in isolating crystallized enzymes and virus proteins in pure form N bel laureate with W M Stanley (1946)

nor val'ine. $CH_3(CH_2)_2CH(NH_2)COOH$. α-Amino-n-valeri cid An amino-acid component of casein, gl bin, and the protein of horns.

nose [AS *nasu*] The prominent organ in the center of the f ce the upper part (regio olfactoria) constitutes the organ of smell, the lower part (regio respiratoria) the beginning of the respiratory tract, in which the inspired air is warmed, moistened, and deprived f impurities. See Plate 12.

bridge of n. The prominence formed by the junction of the nasal bones.

hammer n. Rhinophyma

saddle n. One with depression in the bridge due to the loss of the septum

telescope n. Depression below the root of the nose as result of ecrosis of the septum and vomer seen in leprosy

nose'bleed" [*nosu*, AS *blēdan*] A hemorrhage from the nose. Syn *epistaxis*

nose clip. A rubberized, spring-steel device worn by swimmers and divers to prevent the passage of water into the nose

nose drops. A preparation co taining medicaments, which is administered by placing drops in the nose.

nose piece [*nosu*; OF *pece*]. A mechanical device screwed into the bject end of the tube of the microscope, for holding an objective

revolving n. A device to be screwed on to the end of the microscope tube to permit the mounting of two to four bjectives, any of which may be swung into pl ce, ready for use, by turning the nosepiece into the desired position.

nos-er es the si (nos err ess-thee zhuh, -zee-uh) [G *noseros*, unhealthy; *aisthēsis*, perception]. Perverted sensibility

nos o-, nos- [G *nosos*, disease]. A combining form signifying *disease*.

nos"o-cher" le gi-a (nos o-kor lo'jee uh). See *nosochthonography*.

nos och tho nog'ra phy (nos ock-tho nog ruh-fee) [*nosos*; G *chthōn*, earth; *graphein*, to write]. Geography of endemic diseases; medical geography

nos" -co mi-al [*nosos*; G *komein*, to attend to]. 1 Pertaining to hospital. *Obs.* 2. Applied to disease caused or aggravated by hospital life. *Obs*

nos o-co mi um [*nosos*; *komeia*]. A hospital *Obs*

no sog'e-ny (no-sodj -nee) [*nosos*; G *genesis*, from *gignesthai*, to be produced]. The development of diseases. —**nosogenet'ic**, *adj*.

nos o-ge-og ra phy See *nosochthonography*. —**nosogeograph'ic**, *adj*

no sol'o-gy [*nosos*; G. *logos*, word]. The science of the classification of diseases. —**nosolog'ic**, *adj*

nos o-ma ni a [*nosos*, G. *mania*, madness]. 1. A morbid dread of disease. 2. A delusion that one is suffering from disease

no-som try See *morbidity rate*.

nos"o-par'a sites [*nosos*; G *parasitos*, parasite]. Microorganisms found i conjunction with disease process which, while capable of modifying the course of the disease, are not its cause *Obs*.

nosophen. Trade-mark for iodophthalein.

nos" ph 'bi a [*nosos*; G *phobos*, fear]. The exaggerated fear of disease pathophobia.

nos o-phyte [*nosos*; G *phyton*, plant]. Any pathogenic vegetable microorganism.

No sop syl'lus [*nosos*; G *psylla*, flea]. A genus of fleas.

N. fasciatus. A species of rat flea which may transmit plague.

nos" ta y Classification of diseases.

nostal Trade-mark for 5-isopropyl-5-β-bromallyl barbituric acid, used as hypnotic. See *propallylonal*.

nos tal'gi-a [G *nostos*, return home *algos*, pain]. Homesickness. —**nostalgic**, *adj*

nos tal'gy [*nostos*; *algos*]. Nostalgia.

nos"to-ma'ni [*nostos*; G *mania*, madness]. Nostalgia amounting to monomania.

nos top a thy Pathogenic homecoming, as observed in veterans discharged from *military service* or others who have spent considerable length of time in institutions such as hospitals or prisons. The situational factor of returning home represents major psychological stress which precipitates illness. The stress may be fear of assuming adult responsibilities, reaction against dependency situation, guilt feelings, or difficulties in controlling instinctual rivalry

nos"to pho'bi a. A fear of returning home.

nos tras [L of our country]. Denoting disease belonging to the country in which it is described, in contradistinction to similar disease originating elsewhere, as cholera nostras as distinguished from Asiati cholera.

nos'trate [*nostras*]. Endemic.

nos'tril [AS. *nosthyrl*]. One of the external orifices of the nose. Syn., *naris*.

nos'trum [neut. sing. of L. *noster* our] A quack medicine secret medicine.

no-tal'gi [G *nōton*, back *algos*, pain] Any pain in the back. *Obs*.

n. paresthetica. A sensory disturbance of the region supplied by the posterior branches of the

lumbar nerves; occurs occasionally in vertebral lesions.

no·tan·ce·pha'li [*nōtos*; G. not *kephalē*, head]. Congenital absence of the occipital part of the cranium.

no"tan·en·ce·pha'li [*nōtos*; G. *anenkephalos*, without brain]. Congenital absence of the cerebellum.

no·ta·tin. An antibiotic from *Penicillium notatum*, sol ble in water insoluble in organic solvents. It acts in the presence of glucose on Gram-positive and Gram-negative bacteria. Also called *corylophilline, Escherichia coli factor, equorin, penatin, penicillin-B*

no·ta·tion. A system of symbols to indicate in brief form more extensive ideas or data.

dental n. One to indicat the type and location of tooth in the dentition. Commonly vertical line separates right and left sides, and horizontal line the upper from the lower teeth. Palmer numerical notation for the permanent human dentition is

right	87654321	12345678	left
	87654321	12345678	

For the deciduous dentition

righ.	V IV III II I	I II III IV V	left
	V IV III II I	I II III IV V	

For example, 2| means lower right lateral permanent incisor· |III is upper left deciduous canine.

Another system uses I I O P (or pm) P M M M for the permanent teeth and i h m m for the deciduous set (I for incisor O for canine, P for premolar M for molar)

notch [perhaps from OF osche, from oschier to notch]. A deep indentation. —**notched**, *adj*

acetabular n. A notch in the lower border of the acetabulum.

angular n. A notch in the lesser curvature of the stomach formed at the junction of its body and the pyloric portion. Also called *angular incisure*.

anterior cerebellar n. A broad, flat depression on the anterior margin of the upper surface of the cerebellum, between the two hemispheres.

cardiac n. A notch in the anterior border of the left lung, occupied by the heart within the pericardium.

clavicular n. A depression on each superior lateral aspect of the upper end of the sternum articulating with the clavicles.

costal n. One of the facets on the lateral border of the sternum for articulation with the costal cartilages.

ethmoidal n. The gap between the two orbital plates of the frontal bone filled in the articulated skull by the cribriform plate of the ethmoid.

frontal n. A notch in the superior orbital margin, medial t the supraorbital notch, which transmits the frontal artery and nerve.

gastric n. See angular n.

greater sciatic n. A notch between the spine of the ischium and the posterior inferior iliac spine; it is converted int foramen by the sacrospinous and sacrotuberous ligaments.

i frasternal n. The depression in the anterior abdominal wall, superficial t the xiphoid cartilage.

interlobar n. A fissure separating the superior and inferior lobes of the left lung

interspinous n. The notch between the posterior superior and posterior inferior iliac spines.

intertragi n. The notch between the tragus and the antitragus of the external ear

jugular n. of the occipital bone. A concavity in the inferior border posterior to the jugular process, which, in the articulated skull, forms the posterior part of the jugular foramen.

jugular n. of the sternum. The depression on the upper surface of the manubrium between the two clavicles.

jugular of the temporal bone. A small notch in the petrous portion which corresponds t the jugular notch of the occipital bone, with which it forms the jugular foramen.

lacrimal n. A notch on the inner margin of the orbital surface of the maxilla which receives the lacrimal bone.

lesser sciati n. The notch below the spine of the ischium which is converted to foramen by the sacrotuberous and sacrospinous ligaments It transmits the tendon of the obturator internus and the internal pudendal vessels and pudendal nerve.

mandibular n. The deep concavity between the condyloid and coronoid processes of the mandible.

mastoid n. See digastric *groove*.

median prostatic n. A notch in the posterior border of the base of the prostate.

nasal n. (a) The concave medial margin of the anterior surface of the maxilla the lateral margin of the pertura piriformis. (b) An uneven interval between the internal angular processes of the frontal bone which articulates with the nasal and maxillary bones

n. of Rivinus. Tympanic n.; old term.

pancreatic n. A groove in the pancreas for the superior mesenteric artery and vein, separating the uncinate process from the est of the head of the pancreas.

parietal n. The angle formed by the squamous and mastoid portions of the temporal bone.

postcondylar n. A notch in the lower surface of the occipital bone between the condyle and the foramen magnum.

posterior cerebellar n. A narrow notch separating the cerebellar hemispheres posteriorly

radial n. A depression on the lateral surface of the coronoid process of the ulna for articulation with the head of the radius.

sacrococcygeal n. The lateral notch at the point of union of the coccyx and sacrum.

scapular n. The notch in the upper border of the scapula at the base of the coracoid process for the passage of the suprascapular nerve.

semilunar n. The concavity on the proximal end of the ulna for articulation with the trochlea of the humerus.

sphenopalatine n. A deep notch separating the orbital and sphenoid processes of the palatine bone.

supraorbital n. Supraorbital foramen.

suprasternal n. The j gular notch of the ster num.

tentorial n. See *incisur* of the tentorium.

thyroid n. A deep notch in the pper margin of the thyroid cartilage between the two laminae.

trochlear n. The semilunar notch.

tympanic n. The gap in the tympanic sulcus occupied by the flaccid, highest portion of the tympanic membrane. Also called *incisure of Rivinus*.

ulnar n. A depression on the medial surface of the lower end of the radius for articulation with the head of the ulna.

umbilical n. A deep notch in the anterior border of the liver marking the ttachment of the falciform ligament.

vertebral n. One of the concavities bove and below the pedicles of the vertebrae In the articu-

lated vertebral column, the notches of contiguous pairs of bones form the intervertebral foramens.

note [L. *nota*, mark]. A sound.

amphoric n. A low-pitched, hollow sound, obtained over a large cavity of the chest, or over pneumothorax.

bell n. A clear ringing note brought out by percussing with coins over pneumothorax.

cracked-pot n. A note with a peculiar clinking quality heard on percussion over a superficial pulmonary cavity.

percussion n. The sound elicited on percussion, usually described as flat, dull, resonant, or tympanitic.

note-blind"ness. See *amusia*.

No te chis (no-tee'kiss). A genus of poisonous terrestrial snakes belonging to the family Elapidae. **N. scutatus.** That species found in Australia which possesses a very powerful neurotoxic venom, known as the tiger snake.

no"ten-ceph a l -cele [G. *nōton*, back; *enkephalos*, brain; *kēlē*, hernia]. An occipital hydrencephalocele.

no"ten ceph a lus [*nōton*; *enkephalos*]. An individual with occipital encephalocele, or more usually hydrencephalocele.

N thnagel, Carl Wilhelm Hermann (1841–1905). One of the leading clinicians of his time, especially eminent for his knowledge of gastrointestinal and chronic diseases. He described a general vasoconstricting storm, producing paroxysmal hypertension, with or without angina pectoris, sometimes called *Nothnagel's disease* or *syndrome* (also see *acroparesthesia*) and also described unilateral oculomotor paralysis with ipsilateral cerebellar ataxia, due to a lesion involving the third cranial nerve or nucleus and the brachium conjunctivum.

no ti fi"a ble [L. *notificare*, to make known]. Pertaining to a disease which must be made known to health authorities.

no to-chord (no to kord) [G. *nōton*, back; *chordē*, string]. An elongated cord of cells enclosed in a structureless sheath, which is the primitive axial skeleton of the embryo. It serves as a focal axis about which the vertebral bodies develop and persists as the nuclei pulposi of the intervertebral disks. Also called *chorda dorsalis*. —**notochord'al,** *adj.*

No"to-ed'res (no to-ed ree). A genus of mange mites whose species infest cats and rats, producing serious lesions.

no"to gen'e-sis [*nōton*; G. *genesis*, production]. The development of the notochord.

no tom'e-lus [*nōton*; G. *melos*, limb]. A monster in which supernumerary limbs are attached to the back.

novaldin. Trade-mark for sodium phenyldimethylpyrazolon-methylaminomethane sulfonate, an antipyretic and analgesic substance.

novarsan. A trade-mark for neoarsphenamine.

novarsenobenzol. Neoarsphenamine.

novaspirin. Trade-mark for a brand of salicitrin; methylene citrylsalicylic acid. The substance is used as an analgesic.

novasurol. Trade-mark for merbaphen.

novatophan. Trade-mark for methyl cinchophen.

novatrin. A trade-mark for homatropine methyl bromide.

novatropine. Trade-mark for the methylbromide of the alkaloid homatropine. The substance is used in the treatment of gastrointestinal spasm and hyperchlorhydria.

novocain. Trade-mark for a brand of procaine hydrochloride.

Novy, Frederick George [*American bacteriologist*, 1864–]. With MacNeal, devised a nutrient blood agar used especially for the cultivation of trypanosomes, called *Novy-MacNeal agar* or *medium*. Nicolle's modification of this for the cultivation of *Leishmania* is known as the *NNN medium*.

n x'ious (nock'shus) [L. *noxius*, harmful]. Harmful; poisonous or deleterious.

Noyes, Henry Drury [*American ophthalmologist*, 1832–1900]. Described and introduced a number of operations in ophthalmic surgery such as those for the relief of cataract, entropion, and staphyloma. His operation for strabismus consists of advancement of the elongated tendon.

NP *In U. S. Army medicine*, neuropsychiatric.

Np Chemical symbol for neptunium.

NPH An insulin of intermediate duration of action, the *N* referring to neutral, the *P* to protamine, and the *H* to Hagedorn, in whose laboratory the product was originally developed.

N. P. N. Nonprotein nitrogen.

n-rays. A nonluminous radiation of lower wave length than visible light. Emitted by an x-ray tube, the sun, or a Welsbach burner; passes through thin metals, and increases the luminosity of phosphorescent bodies. Discovered by Blondlot.

Nt Chemical symbol for niton.

nu'bile (new'bil) [L. *nubilis*, marriageable]. Marriageable; of an age for childbearing. —**nubil'ity,** *n.*

nu-cel'lus [L. *nucella*, little nut]. In botany, the central part or nucleus of an ovule.

nu ces (new sees). Plural of nux.

nu cha (new'kuh) [Ar. *nukha*, spinal marrow]. The nape of the neck. —**nuchal,** *adj.*

Nuck, Anton [*Dutch anatomist*, 1650–92]. Described a diverticulum, a shallow peritoneal invagination in the female homologous to the processus vaginalis in the male, called *Nuck's diverticulum*, *canal of Nuck*. The hydrocele sometimes seen in this canal is called *Nuck's hydrocele*.

nu cle-ase. See *nuclease*.

nu cle-ar [L. *nucleus*, nut]. Pertaining to, or resembling, a nucleus.

nu'cle-ar dis"in te-gra'tion. Any transformation or change involving atomic nuclei.

nu cle-ar fis'sion. *In chemistry* and *in physics*, the splitting of certain heavy nuclei into two large fragments, accompanied by the emission of neutrons and the release of large amounts of energy.

nu'cle-ar re-ac'tion. See under *reaction*.

nu'cle ar re-ac'tor An apparatus in which nuclear fission may be sustained in a self-supporting chain reaction. It includes fissionable material such as uranium or plutonium (referred to as *fuel*) and generally a moderating material such as carbon or beryllium or heavy water; also, a reflector to conserve escaping neutrons, and provision for heat removal. Syn., *pile*, *reactor*.

nu'cle ase (new'klee-ace, -aze). An enzyme capable of splitting nucleic acids to nucleotides, nucleosides, or the components of the latter. Nucleases are found in animal organs, as liver, pancreas, and thymus, and in germinating seeds. See Table of Enzymes in the Appendix.

nu'cle a"ted [L. *nucleatus*, having a kernel]. Possessing a nucleus.

nu cle a'tion. The starting of chemical or physical changes at discrete points in a system, as the formation of nuclei for condensation of vapors or for formation of crystals in a liquid.

nu'cle i (new'klee-eye). Plural of nucleus.

nu cle ic ac'id. One of a group of compounds found in nuclei and cytoplasm. See *desoxyribonucleic acid*, *ribonucleic acid*.

nu cle ide. A compound of nucleic acid with some metal, as iron, copper, silver, mercury, etc.

nu·cle·i·form″ (new-klee′i-form″) [L. *nucleus*, nut; *forma*, form]. Resembling a nucleus.

nu′cle·in. Any one of a group of ill-defined complexes of protein and nucleic acid occurring in the nuclei of cells. On hydrolysis, they yield simple proteins and nucleic acid.

n. therapy The employment of nuclein from different glands and blood serum in the treatment of disease.

nu′cle·in·ase (new′klee-in-ace, -aze) An enzyme which resolves nucleic acid into nucleotides.

nu″cle·in′ic ac′id. See *nucleic acid*.

nu′cle·o-, nucle- [*nucleus*]. A combining form signifying *relating to a nucleus*.

nu″cle·o·al·bu′min [*nucleus*; L. *albus*, white]. A compound of nucleic acid and albumin.

nu″cle·o·chy·le′ma (·kigh-lee′muh) [*nucleus*; G. *chylos*, juice]. Old term for the clear sap or juice. See *nucleohyaloplasm*.

nu″cle·o·chyme (new′klee-o-kime) [*nucleus*; G. *chymos*, juice]. Nucleochylema.

nu″cle·o·cy″to·plas′mic (·sigh″to-plaz′mick) [*nucleus*; G. *kytos*, cell; *plasma*, anything formed]. Referring to both the nucleus and cytoplasm of a cell, as nucleocytoplasmic ratio.

nu″cle·of′u·gal (new″klee-off′yoo-gul, new″klee-o-few′gul) [*nucleus*; L. *fugere*, to flee]. Moving away from a nucleus.

nu″cle·o·his′tone [*nucleus*; G. *histos*, web]. A basic protein from cell nuclei.

nu″cle·o·hy″a·lo·plas′ma (·high″uh-lo-plaz′muh, ·high-al′o-plaz-um) [*nucleus*; G. *hyalos*, glass; *plasma*, anything formed]. Old term for the viscous fluid material occupying space in the nucleus not taken by the nucleolus, linin, or chromatin. Now called *nuclear sap*, *nuclear juice*.

nu′cle·oid [*nucleus*; G. *eidos*, form]. Shaped like a nucleus.

nu′cle·oid. A finely granular or fibrillar substance in certain erythrocytes, which resembles a nucleus.

nu″cle·o·la. See *nucleolus*.

nu′cle·o·le. See *nucleolus*.

nu·cle′o·li·form [*nucleolus*, dim. from *nucleus*; L. *forma*, form]. Resembling a nucleolus.

nu·cle′o·lin [*nucleolus*]. The substance of which the nucleolus is composed.

nu·cle′o·loid [*nucleolus*; G. *eidos*, form]. Resembling a nucleolus.

nu·cle′o·lus [L.]. A small spherical body within the cell nucleus. Syn., *plasmosome*. —**nucleolar**

false n. See *karyosome*.

true n. See *plasmosome*.

nu″cle·o·mi″cro·so′mes [L. *nucleus*, nut; G. *mikros*, small; *sōma*, body]. Any one of the many minute bodies that make up each fiber of the nuclear framework.

nu′cle·on. Protons and neutrons' collective term.

nu″cle·on′ics. The study of atomic nuclei, including the application of nuclear science in all fields of specialization; nuclear technology.

nu″cle·op′e·tal (new″klee-op′i-tul, new″klee-o-pet′ul) [*nucleus*; L. *petere*, to seek]. Seeking the nucleus; said of the movement of the male pronucleus toward the female pronucleus.

Nu″cle·oph′a·ga [*nucleus*; G. *phagein*, to eat]. A parasite which destroys the nuclei of amebas.

nu′cle·o·plasm [*nucleus*; G. *plasma*, anything formed]. The protoplasm of the nucleus. Syn., *karyoplasm*.

nu″cle·o·pro′te·id. See *nucleoprotein*.

nu″cle·o·pro′te·in [*nucleus*; G. *prōteios*, of first rank]. A protein constituent of cell nuclei, consisting of nucleic acid and a basic protein. On hydrolysis, nucleoproteins yield purine bases, pyrimidine bases, phosphoric acid, and a carbohydrate. See American Classification of Proteins in the Appendix.

nu″cle·o·re·tic′u·lum [*nucleus*; L. *reticulum*, little net]. Any network contained within a nucleus.

nu″cle·o·si′dase. An enzyme that catalyzes the hydrolysis of a nucleoside into its component pentose and purine or pyrimidine base.

nu′cle·o·side. A glycoside resulting from the removal of phosphate from a nucleotide. It is a combination of a sugar (pentose) with a purine or pyrimidine base.

nu″cle·o·spin′dle [*nucleus*; AS. *spinel*]. A mitotic spindle formed from the nuclear substance, as in some forms of anastral mitosis.

nu″cle·o·ti′dase (new″klee-o-tye′dace, -daze, new″klee-ot′i-) One of a group of nucleophosphatases which split phosphoric acid from nucleotides, leaving nucleosides.

nu′cle·o·tide. The combination of a purine or pyrimidine base with a sugar and phosphoric acid. The basic structural unit of nucleic acid.

phosphopyridine nucleotides. See *phosphopyridine nucleotides*.

nu″cle·o·tox′in [*nucleus*; G. *toxikon*, poison]. A toxin derived from cell nuclei; any toxin affecting the nuclei of cells.

nu′cle·us (pl. *nuclei*) [L.]. 1. The differentiated central protoplasm of a cell; its trophic center. 2. A collection of nerve cells in the central nervous system concerned with a particular function. 3. A stable and characteristic complex of atoms to which other atoms may be attached. 4. The center around which the mass of a crystal aggregates. 5. The center of an atom consisting of protons, neutrons, and alpha particles.

abducens n. A nucleus lying under the floor of the fourth ventricle at the junction of the pons and medulla which gives origin to the abducens nerve.

accessory n. of the facial nerve. A small group of motor cells, dorsomedial to and functionally part of the facial nucleus.

ambiguous n. A column of cells lying in the lateral half of the reticular formation whose cells give origin to efferent fibers of the glossopharyngeal and vagus nerves. Also called *n. ambiguus*.

amygdaloid n. Gray matter which is continuous with the cortex of the hippocampal gyrus lying in the amygdaloid tubercle at the tip of the inferior horn of the lateral ventricle; part of olfactory pathways.

angular n. See superior vestibular n.

anterior hypothalamic n. See *hypothalamus*, *anterior area*.

anterior median n. Vertical plate of small cells, in front of and ventral to the Edinger-Westphal nucleus, which perhaps represents the rostral continuation of the latter.

anterior nuclei of the thalamus. The nuclei which occupy the anterior part of the thalamus and are separated from the rest of it by the limbs of the internal medullary lamina. They receive fibers from the mammillothalamic tract and send fibers to the gyrus cinguli.

anterior ventral n. of the thalamus. One of the nuclei of the ventral division of the lateral nuclei of the thalamus which receives fibers from the globus pallidus and sends fibers to the corpus striatum. Also called *n. ventralis anterior*.

arcuate n. (a) An irregular small flattened cellular mass located in the medulla ventral to the pyramids. (b) The posteromedial ventral nucleus of the thalamus, which receives fibers from the secondary trigeminal tract.

association nuclei of the thalamus. Nuclei which receive fibers from other thalamic nuclei or

from sensory collaterals and send their efferent fibers to the association areas of the cortex.
atrial n. See *nucleus, 5.*
basal m gracecellular n. See dorsal n. of Clarke.
basal olfactory nuclei. A collective name applied to the gray substance of the olfactory tract, olfactory trigon olfactory area, gyrus subcallosus, and parolfactory area.
branchiomot n. f the facial nerve. See facial n.
ca dat n. An elongated arched gray mass which projects to and forms part of the lateral wall of the lateral ventricle part of the corpus striatum
central magnocellular n. See n. proprius of dorsal horn.
central n. of the thalamus. See centromedian n. of the thalamus.
centrodorsal n. See proprius of dorsal horn.
cent omedian n. of the thalamus. One of the medial uclei of th thalamus, partly embedded in the internal medullary lamina also called central of the thalamus, centrum medianum
cleavage n. The ucleus of the ovum which controls or nitiates cleavage It m y be syngamic, parthenogenetic or androgenic
cochlear nuclei. Nuclear masses in which the fibers of the cochlear erv terminat These are the entral cochlear ucleus and the dorsal cochlear nucleus loca ed, respectively ventrad and dorsad to the restiform body
commissural n. The collection of nerve cells in the medulla oblongata formed by the junction of the uclei of the solitary tract at the posterior end of the fourth entricle
conjugation n. The segmentation ucleus
cornucommissural nuclei. Tw cell columns extending the length of the spinal cord and occupying the medial marg of the dorsal and ventral horn These uclei probably relay impulses across the midline
cuneate n. The collection of nerve cells lying in the dorsal aspect of the medulla blongata in which th fibers of the fasciculus cuneatus terminate and hich give origin to part of the fibers of the medial lemniscus. Formerly called *nucleus f Burdach*
Deiters n. The lateral vestibular nucleus.
dentate n. A large, irregular ovoid, flattened mass located in the medullary center of the cerebellum whose cells g rise to fibers that form the brachium conjunctivum
descending vestibular n. See spinal vestibular
disseminate n. See proprius of ventral horn.
dorsal accessory olivary n. See accessory *olive*
dorsal lateral n. This and the posterior lateral nuclei are in the dorsal division of the lateral nuclei of thalamus They are continuous with the pulvinar receiv fibers from other thalamic uclei, and connect with the cortex of the parietal lobe
dorsal motor n. of the vagus. The column of cells in the medulla oblongata t the floor of the fourth ventricle which gives origin to preganglionic parasympathetic fibers of the agus nerv
dorsal n. of Clarke. A ucleus t the base of the dorsal gra horn of the spinal cord contains the cells of origin of the dorsal spinocerebellar tract Also called Clarke *col mn*, *dorsalis, basal magnocellular n., spinocerebellar n.*
dorsal paramedian n. A band of small cells in the dorsal aspect of the reticular formation of the medulla blongata on either side of the midline just beneath the ependyma extending the entire length of the fourth entricle.
dorsal sensory n. of the vagus. A column of nerve cells in the medulla oblongata lateral to the dorsal motor cleus of the vagus in which part of the fibers of the solitary tract terminate.
d rsomedial hypothalamic n. See *hypothalamus, middle region.*
dorsomedial n. of the thalamus. One of the medial uclei of the thalamus, located between the internal medullary lamina and the wall of the third ventricle, consisting of medial part which receives fibers from the midline nuclei and sends fibers to the hypothalamus, and lateral part which receives fibers from the thalamic nuclei and sends fibers to the frontal lobe also called *n. medialis dorsalis.*
Edinger Westphal n. A ucleus in the midbrain dorsomedial to the oculomotor nucleus which gives origin to preganglionic parasympathetic fibers for the constrictor pupillae and ciliary muscle of the ciliary body also called the *pupilloconstrictor center*
emboliform n. A nucleus in the medullary portion of the cerebellum located mediad to the upper part of the dentate ucleus It receives afferent fibers from the paleocerebellum and sends efferent fibers int the brachium conjunctivum.
entopeduncular n. Cells located along the fibers of the ansa lenticularis, which pparently receive fibers from the putamen and caudate nucleus and contribute fibers to the ansa lenticularis. Syn., *n. of the ansa lenticularis*
external cuneate n. A group of cells lateral to the cuneat ucleus whose axons form the dorsal external arcuate fibers also called *magnocellular n. of dorsal column, n. of Monakow* Syn., *lateral cuneat ucleus.*
facial n. An ovoid collection of nerve cells in the lateral portion of the reticular formation of the pons, giving origin to motor fibers of the facial nerve.
fastigial n. A nucleus in the cerebellum situated dorsad to the upper end of the fourth ventricle which receives fibers from the vestibular nerve and superior vestibular nucleus and sends efferent fibers int the brain stem.
germinal n. Synonym for pronucleus.
globose n. A ucleus of the cerebellum located between the fastigial and emboliform nuclei. Receives fibers from the paleocerebellum and sends efferent fibers to the red nucleus.
glossopharyngeal nuclei. See n. *ambiguus, inferior salivatory* n. *of tractus solitarius*
gracilis n. A nucleus in the dorsal aspect of the medulla oblongata in which fibers of the fasciculus gracilis terminate and which gives origin to part of the fibers of the medial lemniscus. Formerly called *ucleus of Goll*
gustatory n. A ucleus in the medulla oblongata medial to the nucleus of the solitary tract in which terminat the gustatory fibers of the chorda tympani, glossopharyngeal and vagus nerves.
habenular n. The nucleus of the habenula which serves as an olfactory correlation center
hypoglossal n. A long and cylindrical nucleus located lateral to the midline extending throughout most of the length of the medulla oblongata whose cells give origin to the motor fibers of the hypoglossal nerve.
inferior central n. The ucleus of the raphe
inferior olivary n. A conspicuous convoluted gray band opening medially dorsal to the pyramid occupying the entire upper two-thirds of the medulla oblongata, the cells of which give rise to most of the fibers of the olivocerebellar tract: also called *olive, oliva, inferior olive, olivary body.*
inferior salivatory n. An ill-defined nucleus anterior to the ambiguous nucleus which sends

preganglionic autonomic fibers to the otic ganglion via the glossopharyngeal nerve. Concerned in the regulation of secretion of the parotid gland.

intercalated mammillary n. One in the mammillary body lateral to the medial mammillary nucleus.

intercalated n. A nucleus of the medulla oblongata in the central gray matter of the ventricular floor located between the hypoglossal nucleus and the dorsal motor nucleus of the vagus.

intermediomedial n. Diffusely organized cell group in the intermediate gray column of the spinal cord, most prominent in the upper cervical segments, which sends their axons to the lateral white funiculus of the same side.

interpeduncularis n. A nucleus of the brain stem located between the cerebral peduncles, in which terminate the fibers of the habenulopeduncular tract.

interstitial n. of Cajal. A small nucleus in the dorsomedial part of the tegmentum just anterior to the oculomotor nucleus. It receives fibers from the vestibular nuclei, globus pallidus, superior colliculi, and substantia nigra. It contributes fibers to the medial longitudinal fasciculus.

intertrigeminal n. A small group of cells located near the motor nucleus of the trigeminal nerve. This nucleus receives collaterals from the mesencephalic nucleus and its axons send collaterals to the motor nucleus of the trigeminal nerve, and go to the locus caeruleus.

intralaminar nuclei of the thalamus. Diffusely organized thalamic nuclei located in the internal medullary lamina. The lateral central nucleus, paracentral nucleus, parafascicular nucleus, and submedial nucleus, belong to this group.

lacrimatory n. One located near the superior salivatory nucleus at the junction of the pons and medulla. Its axons go to the sphenopalatine ganglion.

lateral central n. of the thalamus. One of the intralaminar nuclei of the thalamus, located dorsally in the internal medullary lamina.

lateral cuneate n. See external cuneate n.

lateral hypothalamic n. See *hypothalamus, middle region.*

lateral mammillary n. A nucleus in the mammillary body ventrolateral to the intercalated mammillary nucleus.

lateral nuclei of the thalamus. The nuclei lying between the internal medullary lamina and the internal capsule. The anterior ventral, dorsal lateral, lateral ventral, posterior lateral, posterolateral ventral, posteromedial ventral nuclei, and the reticular nucleus of the thalamus belong to this group.

lateral reticular n. A nucleus, in the lateral part of the reticular formation, which receives spinoreticular fibers from the dorsal gray columns of the spinal cord and perhaps also collaterals from the ventral spinocerebellar tract. Its axons contribute to the ventral external arcuate fibers.

lateral sympathetic n. Cells of the intermediolateral cell column of the spinal cord, extending from the eighth cervical to the second lumbar segment.

lateral ventral n. of the thalamus. One of the nuclei of the ventral division of the lateral nuclei of the thalamus which receives fibers from the superior cerebellar peduncle and sends fibers to the motor cortex and premotor cortex of the frontal lobe.

lateral vestibular n. A group of scattered large cells at the caudal border of the pons between the restiform body and the spinal tract of the trigeminal nerve. Also called *Deiters' n.*

lenticular n. The globus pallidus and putamen considered together.

lentiform n. Old term for lenticular nucleus.

magnocellular n. of the dorsal column. See external cuneate n.

main sensory n. of the trigeminal nerve. A large gray mass in the tegmentum dorsolateral to the entering fibers of the fifth nerve in which most of the afferent fibers terminate. Probably concerned with touch and pressure.

mammilloinfundibular n. The posterior and lateral hypothalamic nuclei collectively which together furnish the efferent fibers to the lower levels of the brain stem.

marginal n. See posteromarginal n.

masticator n. The motor nucleus of the trigeminal nerve.

medial accessory olivary n. See accessory *olive.*

medial mammillary n. The main nucleus of the mammillary body located on its medial aspect.

medial nuclei of the thalamus. The nuclei located between the midline nuclei of the thalamus and the internal medullary lamina, including the centromedian and dorsomedial nuclei.

medial sympathetic n. A column of cells extending from the third lumbar segment to the conus terminalis, lying along the medial border of the ventral horn in the lumbar and upper sacral segments and mingled with the inferior portion of the intermediolateral column in the lower sacral segments. Its axons go to the pelvic ganglia. Also called *n. sympatheticus.*

medial vestibular n. A nucleus of the floor of the fourth ventricle medial to the vestibular root and lateral to the ala cinerea. Also called *principal vestibular n., triangular n.,* and *n. of Schwalbe.*

mesencephalic n. of the trigeminal nerve. A flat column of large round cells ventrolateral to the aqueduct of the midbrain whose cells give origin to the mesencephalic root of the trigeminal nerve.

midline nuclei of the thalamus. Diffusely organized thalamic nuclei, located near the wall of the third ventricle and in the massa intermedia, which are connected to the hypothalamic and intralaminar nuclei.

motor n. A nucleus giving origin to a motor nerve.

motor n. of the spinal cord. A group of somatic motor cells located in the ventral horn, whose axons go to striated voluntary muscles.

motor n. of the trigeminal nerve. An ovoid column of cells in the reticular formation dorsal to the superior olivary nucleus which gives origin to motor fibers of the trigeminal nerve.

motor reticular n. Diffuse cell groups in the reticular formation. Their axons, mostly uncrossed, bifurcate into ascending and descending branches and form the reticulobulbar, reticulospinal, reticulo-olivary and reticulocerebellar tracts. They receive fibers from secondary afferent neurons, the red nucleus, tectum of the midbrain, and corpus striatum.

n. of the ansa lenticularis. See entopeduncular n.

n. of Bekhterev. See superior vestibular n.

n. centrum medianum. See centromedian n. of thalamus.

n. conterminalis. Retropyramidal nucleus.

n. of Darkshevich. A nucleus located at the edge of the central gray matter dorsomedial to the red nucleus in the upper midbrain. It sends crossed and uncrossed fibers to the medial longitudinal fasciculus. Also called *n. of the posterior commissure.*

n. dorsalis. See dorsal n. of Clarke.

n. eminentiae teretis. The lateral extension of the dorsal paramedian nucleus.

nuclei of the hypothalamus. See *hypothalamus.*
n. of the inferior colliculus. An ovoid mass of cells in the body of the inferior colliculus.
n. intercalatus. See intercalated n.
n. of the lateral lemniscus. A group of nerve cells of the upper pons in the course of the lateral lemniscus. It receives fibers from the lateral lemniscus and sends its axons medially to cross the midline.
n. magnocellularis pericornualis. See posteromarginal
nuclei of the mammillary body See *hypothalamus, caudal region.*
n. medialis dorsalis. See dorsomedial n. of thalamus.
n. of Monakow See external cuneate n.
n. myeleideticus. See medial sympathetic n.
n. of origin. A collection of nerve cells in the central nervous system giving rise to the fibers of a nerve or a nerve tract.
n. of Perlia. A medially placed cell group of the oculomotor nuclei which has been regarded as the mesencephalic center for convergence of the eyes.
n. pigmentosus pontis. See *locus caeruleus.*
n. of the posterior commissure See n. of Darkshevich.
n. prepositus. A group of large cells, extending from the oral limits of the hypoglossal nucleus to the caudal limit of the abducens nucleus, which receives fibers from the periependymal tract and medial vestibular nucleus and which sends fibers to the reticular formation and probably also to the hypoglossal, dorsal motor vagus, and secretory nuclei
n. proprius of the dorsal horn. A poorly defined cell column in the head and cervix of the dorsal horn, which gives origin to the long crossed spinothalamic and spinotectal fibers also called *central magnocellular n., centrodorsal n., spinothalamic n.*
n. proprius of the ventral horn. Small cells, scattered between the somatic motor cells in the ventral horn, which may serve for intranuclear connections. also called *disseminate*
n. pulposus. The pulpy body at the center of an intervertebral disk; remnant of the notochord.
n. of the raphe A collection of nerve cells in the midportion of the reticular formation of the medulla oblongata.
n. reuniens. One of the midline nuclei of the thalamus, located in the massa intermedia and adjacent ventricular wall.
n. of Roller A group of cells lying ventrad to the hypoglossal nucleus also called *sublingual nucleus.*
n. ruber See red n.
n. of Schwalbe. The medial or principal vestibular nucleus.
n. of the spinal tract of the trigeminal nerve. The column of cells lying medial to the entire length of the spinal tract of the trigeminal nerve in which the fibers of the tract terminate
n. sympathicus lateralis. The lateral sympathetic nucleus.
n. of the tegmental field. Cells scattered among the fibers of the tegmental field, considered continuation of the mesencephalic reticular formation.
n. of termination. A collection of nerve cells in which the axons of a nerve tract or nerve root terminate.
n. of the tractus solitarius. A column of cells in the medulla oblongata surrounding the solitary tract and in which part of the fibers of the solitary tract terminate.
n. of the trapezoid body A group of cells scattered among the fibers of the trapezoid body
n. ventralis anterior See anterior ventral n. of thalamus.
n. ventralis lateralis. See lateral ventral n. of thalamus.
ocul motor n. A wedge-shaped nucleus lying just rostrally to the trochlear nucleus little below the aqueduct near the median line. It gives origin to motor fibers for the extrinsic muscles of the eye supplied by the oculomotor nerve.
oocyte n. The nucleus of the primordial female gamete.
paraabducens n. Group of cells in the reticular formation, near the motor cells of the abducens nucleus, which send fibers to the oculomotor nucleus by way of the medial longitudinal fasciculus.
parabigeminal n. A group of cells, ventrolateral to the inferior colliculus and lateral to the lateral lemniscus which apparently send fibers to the lateral nuclei of the pons.
paracentral n. of the thalamus. One of the intralaminar nuclei of the thalamus, ventrolateral to the dorsomedial nucleus.
parafascicular n. of the thalamus. One of the intralaminar nuclei of the thalamus, ventral to the caudal portion of the dorsomedial nucleus.
parataenial n. of the thalamus. One of the midline nuclei of the thalamus, located near the stria medullaris thalami.
paraventricular n. of the hypothalamus. A thin flat plate of large cells in the anterior hypothalamus whose axons combine with those of the supraoptic nucleus to form the supraopticohypophyseal tract.
paraventricular n. of the thalamus. One of the midline nuclei of the thalamus, located in the dorsal ventricular wall.
perifornical n. Mantle of hypothalamic cells surrounding the anterior columns of the fornix
peripeduncularis n. The layer of cells covering the dorsal surface of the crus cerebri, lateral to the substantia nigra.
pontine (pontile) n. Scattered collections of nerve cells located throughout the pons.
pontobulbar n. A group of cells, which caudally are dorsolateral to, and rostrally ventral to, the inferior cerebellar peduncle.
posterior hypothalamic n. See *hypothalamus, middle region.*
posterior lateral n. See dorsal lateral n.
posterior nuclei of the thalamus. The pulvinar medial, and lateral geniculate bodies, and the suprageniculate nucleus.
posterolateral ventral n. of the thalamus. A column of cells, lying lateral to the posteromedial ventral nucleus, which receives the fibers of the ventral and lateral spinothalamic tracts and medial lemniscus.
posteromarginal n. A thin layer of cells in the zona spongiosa, most prominent in the lumbosacral segments, whose axons go to the lateral white column and bifurcate into ascending and descending fibers, probably forming intersegmental tracts also called *n. magnocellularis pericornualis, marginal n.*
posteromedial ventral n. of the thalamus. A sharply defined column of cells ventral to the central nucleus of the thalamus which receives sensory fibers from the nucleus of the spinal tract of the trigeminal nerve and from the main sensory nucleus of the trigeminal nerve. also called *semilunar nucleus.*
premammillary n. A small group of cells on the anterosuperior aspect of the medial mammillary nucleus.
preolivary nuclei. Two nuclei, the internal and

external preolivary nuclei ventral to the superior olive and intercalated in the secondary auditory pathways.
principal vestibular n. See medial vestibular n.
protamine n. See Kossel and Siegfried protamine nucleus *hypothesis*.
red n. A large oval nucleus, situated in the midbrain and thalamus ventrad to the cerebral aqueduct, which in the fresh brain has pink color. It receives fibers from the brachium conjunctivum and gives fibers to the rubrospinal tract.
reticular n. of the subthalamus. A nucleus consisting of the nucleus of the tegmental field and cells scattered along the thalamic and lenticular fasciculi.
reticular n. of the thalamus. One of the lateral nuclei of the thalamus which is located between the external medullary lamina and internal capsule, and is continuous ventrally with the zona incerta.
retropyramidal n. The lateral extension of the nucleus of the raphe. Also called *nucleus conterminalis*.
salivatory salivary nuclei. See superior and inferior salivatory n.
segmentation n. The nucleus that appears shortly after the fusion of the male and female pronuclei; the last step in the process of fertilization; it is so called because within it cleavage is first established.
semilunar proprius n. A group of cells of varied size, lying ventromedial to the substantia gelatinosa Rolandi.
semilunar n. The posteromedial ventral nucleus of the thalamus.
spinal accessory n. A small and discontinuous strand of cells having considerable length in the caudal extreme of the medulla oblongata and the first five segments of the cervical spinal cord, lying in the rostral end of the motor horn of the cord, lateral to the motor cells of the upper cervical roots.
spinal vestibular n. A nucleus dorsolateral to the tractus solitarius which is the terminal nucleus for the spinal vestibular tract. Also called *descending vestibular n.*
spinocerebellar n. See dorsal n. of Clarke.
spinothalamic n. See n. proprius of the dorsal horn.
sublingual n. See n. of Roller.
submedial n. of the thalamus. One of the intralaminar nuclei of the thalamus, ventral to the dorsomedial nucleus; also called *centromedial n.*
subthalamic n. A biconvex nucleus between the internal capsule and the cerebral peduncle receiving fibers from the globus pallidus. Formerly called *corpus Luysii*.
superior central n. A group of cells in the reticular formation in the upper pontile levels.
superior olivary n. See *superior olive*.
superior salivatory n. An ill-defined nucleus in the reticular formation caudal to the facial nucleus which sends preganglionic fibers to the submaxillary ganglion via the nervus intermedius, facial, and chorda tympani nerves and to the sphenopalatine ganglion via the greater superficial petrosal nerve. It is concerned in the regulation of secretion of the submaxillary, sublingual, and lacrimal glands.
superior vestibular n. A nucleus dorsal to the lateral vestibular nucleus at the lateral limit of the fourth ventricle. Also called *angular n., n. of Bekhterev*.
suprageniculate n. One of the posterior nuclei of the thalamus, ventral to the pulvinar and dorsomedial to the medial geniculate body.
supramammillary n. A layer of large cells on the dorsal aspect of the medial mammillary nucleus, which is continuous with the interpeduncular nucleus.
supraoptic n. of the hypothalamus. A well-defined crescent-shaped nucleus which straddles the optic tract lateral to the chiasma. Its efferent fibers combine with those of the paraventricular nucleus to form the supraopticohypophyseal tract.
supraspinal n. Somatic motor cells of the first cervical nerve, which are located in the ventral gray column of the spinal cord and extend into the medulla for a short distance.
supratrigeminal n. A nucleus near the motor nucleus of the trigeminal nerve and functionally similar to the intertrigeminal nucleus.
tectal nuclei. The fastigial, globose, and emboliform nuclei of the cerebellum.
tegmental nuclei. Groups of nerve cells located in the tegmentum of the midbrain.
thalamic nuclei. See all of the anterior, lateral, medial, midline, and posterior nuclei, and intralaminar nuclei of the thalamus.
triangularis n. See medial vestibular n.
trigeminal n. See motor n. of the trigeminal nerve.
trochlear n. A nucleus in the midbrain ventral to the central canal and dorsal to the medial longitudinal fasciculus giving rise to motor fibers of the trochlear nerve.
tuberal n. Circular cell groups, in the lateral part of the tuber cinereum, which often produce small eminences on the basal surface of the hypothalamus.
vagal nuclei. See dorsal motor n. of the vagus, dorsal sensory n. of the vagus, n. ambiguus, n. of the tractus solitarius.
ventral n. of the thalamus. A nucleus of the thalamus which may be subdivided into other groups of nuclei. It serves as a somesthetic relay system receiving fibers from the medial lemniscus, spinothalamic tracts, and secondary *trigeminal* tract.
ventromedial hypothalamic n. See *hypothalamus, middle region*.
ventromedial n. of the thalamus. See submedial n. of thalamus.

nu'clide. A species of atom characterized by the constitution of its nucleus, in particular by the number of protons and neutrons in the nucleus.

nu'dic ac'id. Either of two antibiotic substances, nudic acid A and nudic acid B, produced by the basidiomycete *Tricholoma nudum*.

nud'ism [L. *nudus*, naked]. 1 *In psychiatry,* more or less complete intolerance of clothing; morbid tendency to remove the clothing. 2. The practice of a cult, nudists, who profess to believe in the benefits of a society in which clothes are discarded.

Nuel, Jean Pierre (1847–1920) Belgian ophthalmologist who described the triangular space between the outer hair cells and the outer pillars of the organ of Corti, called *Nuel's space*. He also introduced an operation for relief of corneoscleral rupture, the conjunctiva being drawn over the opening by means of a special suture.

Nuhn, Anton [German anatomist 1814–89]. Remembered for his description of the anterior lingual gland, called *Nuhn's gland, Blandin's gland*.

nui'sance [OF, from L. *nocere*, to harm]. *In legal medicine,* that which is noxious, offensive, or troublesome; applied to persons or things.

nujol. A trade-mark for liquid petrolatum.

nul·lip'a·ra [L. *nullus*, none; *parere*, to bring forth]. A woman who has never borne a child. —**nulliparous,** *adj.*; **nullipar'ity,** *n.*

Numa Pompilius [*second legendary king of Rome*, 715–673 B. C.]. Known medically for his law ordering the operation of abdominal incision for women dying in late pregnancy or childbirth, in order to save the child; called *lex regia*. Under the Caesars the lex regia became known as *lex caesaria*.

numb [ME. *nome*, taken]. Having impaired cutaneous sensibility.

num'ber [L. *numerus*, number] 1. The total count of units. 2. A numeral, designating place in series. Abbreviated, No. Symbol, #.

acetyl n. See under *acetyl*.

acid n. See *acid* number.

atomic n. The total number of protons in an atom or the number of orbital electrons in the neutral atom. Each element has a characteristic *atomic number*.

iodine n. See under *iodine*.

mass n. See under *mass*.

Reichert Meissl n. A measure of the soluble, volatile fatty-acid content of a fat or oil: the number of cubic centimeters of 0.1 N KOH (one-tenth normal potassium hydroxide) required to neutralize the soluble, volatile fatty acids obtained from 5.0 Gm. of fat or oil. The Reichert Meissl number is important in identifying certain fats and oils and in detecting their adulteration.

saponification n. The number of milligrams of potassium hydroxide required to neutralize the free acids and saponify the esters contained in 1 Gm. of oil, fat, wax, or other substance of similar composition. Also called *saponification value*.

turnover n. The number of molecules with which an enzyme can react in a certain period of time, usually one minute.

volatile fatty-acid n. See Reichert Meissl n.

numb ness [ME. *nome*, taken]. Partial, or local, anesthesia with torpor; deficiency of sensation. Obdormition.

nu mer'i cal ap'er ture. The product of the sine of half the angular aperture of a lens, and the index of the medium through which the light passes. A mathematical relationship discovered by Abbe between the resolving power of an objective and its aperture. Microscope objectives and condensers are largely designated by the numerical aperture (generally abbreviated N. A.) value.

nu mi form [L. *nummus*, coin; *forma*, form]. Having the form of a coin.

num'mu lar [L. *nummularius*, of money]. Resembling a coin in form, as nummular sputum; resembling rouleaux or rolls of coin.

num"mu la tion [L. *nummulus*, dim. of *nummus*, coin]. The aggregation of blood cells into coinlike rolls or rouleaux.

Nuñez Andrade dis-ease. A trombidiosis seen in Mexico, caused by *Neoschongastia nunezi*, characterized by hemorrhages, pustules, and scarring umbilicated papules.

nun-na'tion [*nūn*, the Arabic letter *n*]. The frequent, or abnormal, use of the *n* sound.

nuperoaine hydrochloride. Trade-marked name for the local anesthetic substance dibucaine hydrochloride or cinchocaine hydrochloride.

nurse [L. *nutrix*, nurse] 1. To suckle an infant. 2. To care for a sick person.

nurse. 1. One who cares for an infant or young child, also called nursemaid. 2. One who cares for a sick person, often under the supervision of a physician.

Army n. A commissioned officer of the U. S. Army Nurse Corps, who provides nursing care of personnel treated or hospitalized in Army medical treatment facilities.

attending n. One who visits patients in their homes.

community n. One employed by a subdivision of the government to assist in the medical care and supervise the health in a definite locality.

district n. See community n.

dry n. One who cares for but does not suckle the baby.

general duty n. One assigned to a ward or division of a hospital and performing many different duties for all the patients.

graduate n. One who has been graduated from a recognized school of nursing.

head n. One who is in charge of a ward or division of a hospital.

hospital n. One who works for a hospital rather than for one special patient or physician.

practical n. One skilled in the care of the sick but who has not been graduated from a regular nursing school or passed an examination to qualify as a graduate nurse.

private duty n. See private n.

private n. One who works exclusively for one patient at a time and is employed by him whether in a hospital or a home.

probationer n. One who has recently entered nurses training and is still under probation. This usually lasts three months, at the successful conclusion of which the girl becomes a student nurse.

public health n. A graduate nurse working for a public health official, or a public health agency to assist in safeguarding the health of the people in her district. She gives instruction and actual care to the people in their homes and helps in the prevention of disease.

registered n. A graduate nurse who has passed the state board examination and is thus qualified to be a nurse, and is legally entitled to add R.N. to the name.

school n. A graduate nurse who visits the children in one or more schools, assisting the school physician in his duties.

scrub n. One who is part of an operating team, being scrubbed, gowned, and surgically clean to assist the operating surgeon.

special n. (a) A private nurse taking special care of one patient. (b) One well trained in a particular specialty.

student n. One in a nurses training school.

trained n. One who has trained in, and been graduated from, a nurses training school.

visiting n. See community n.

wet n. A woman who furnishes breast feeding to an infant not her own.

nurse corps. The women nurses in the Army and Navy who have ranks, titles, and status as officers, corresponding to the officer component of the Armed Services.

nurs'ing [L. *nutrix*, nurse]. 1. Obtaining milk from the breast by an infant. 2. Giving milk to an infant from the breast. 3. Caring for the sick.

foster n. Suckling of the young by an animal not the mother. Used in cancer research for suckling of young mice of one strain by females of a different strain.

n. bottle. A bottle fitted with a rubber tip or nipple for feeding infants not nursed from the breast.

nurs'ling [*nutrix*]. An infant that is nursed.

Nussbaum, Johann Nepomuk von [*German surgeon*, 1829–90]. Prolific writer who contributed more than 80 monographs on various subjects connected with surgery and surgical pathology. Inventor of an apparatus to assist the hand in writing where muscular power or coordination is lacking, called *Nussbaum's bracelet*. Introduced prolonged chloroform anesthesia, using prelim-

inary dose of morphine, procedure which was adopted extensively in surgical practice called *Nussbaum narcosis*.

Nussbaum, Moritz [*German histologist*, 1850–1915]. Described small cells in the pyloric glands, called *Nussbaum cells*.

nu ta'tion [L. *nutare*, to nod]. Nodding or oscillation, as nutation of the sacrum, partial rotation of the sacrum on its transverse axis, whereby the distance between the upper extremity or the lower extremity and the anterior pelvic wall is increased.

nut'gall" (nut gawl") [AS. *hnutu*, L. *galla*, gall-nut] (*galla*) The excrescence on young twigs of *Quercus infectoria*, caused by the deposition of eggs of the insect *Cynips tinctoria*, and the subsequent response of the plant to the stimulating action of secretion of the insect larva. Nutgall contains about 70% of gallotannic acid, an astringent.

nut'meg [ME. *notemuge*]. 1. Any plant of the genus *Myristica*. 2. The dried ripe seed of *Myristica fragrans* deprived of its covering (mace) A spice; used as condiment, corrective, and mild flavoring agent; also has slight narcotic properties.

nut meg liv'er Cirrhotic liver

nu'tri-ent [L. *nutrire*, to nourish]. Affording nutrition. —**nu'tri-ent, n.**

nu'tri lite [*nutrire*]. A substance which, in small amounts, functions in the nutrition of microorganisms.

nu'tri ment [L. *nutrimentum*, nourishment]. Anything that nourishes.

nu-tri'tion [*nutrire*]. 1 The sum of the processes concerned in the growth, maintenance, and repair of the living body as whole, or of its constituent parts. 2. Nourishment food. —**nutritional** *adj*

nu tri'tious [*nutrire*]. Nutritive.

nu'tri tive [*utrire*]. Affording nutrition.

nu'tri to ry [*utrire*]. Pertaining to the processes of nutrition.

nu'tri ture. N tritional status.

nu'tri [L., urse] A wet urse *Obs.*

Nuttall George Henry F lkner [*American biologist* 1862–1937]. Well remembered for his description, with William H. Welch, of gas bacillus infection by *Bacillus aerogenes capsulatus* (1892) now called *Clostridium perfringens*. H had previously demonstrated the bactericidal qualities of defibrinated blood (1904)

nux (pl. uces) [L., nut]. Musky nut. The nutmeg; myristica

n. vomica (ux vomica) The seed of *Strychnos nux-vomica*, an Indian tree of the Loganiaceae. Contains several alkaloids, the most important being strychnine and brucine. The official drug is required to contain not less than 1 15% strychnine Has been used in small doses as bitter tonic, but its action is principally that of strychnine Dose 0 06–0.25 Gm. (1–4 gr)

n. vomica extract (*extractum nucis vomicae*) Contains 7 0–7 75% strychnine. Dose, 15–30 mg. (¼ ½ gr)

n. vomica fluidextract (*fluidextractum nucis vomicae*) Contains 1.05–1.25% (w/v) strychnine. Dose, 0 06–0.2 cc. (1 3 min.)

n. vomica tincture (*tinctura ucis vomicae*) Contains 0 105–0 125% (w/v) strychnine. Dose, 0 6–2 0 cc. (10–30 min)

nyctal. Trade-mark for carbromal.

nyc tal'gi [G ux, night gos, pain]. Pain, which occurs chiefly during the night.

nyc ta-lope [*nyx*; G. *alaos*, blind; *ōps*, ey e]. One who cannot see at night. See *night blindness*.

nyc"ta-lo pi-a. See *night blindness*.

nyc'ter-ine (nisk tur-yne, -een, -in) [G. *nykterinos*, nightly]. 1 Occurring in the night. 2. Obscure.

nyc'to phil'i-a [G ux, night philein, to love]. Preference for night or darkness.

nyc"to pho'bi [yx; G *phobos*, fear]. A morbid fear of night and of darkness.

nyc"to pho ni [yx; G *phōnē*, voice]. The hysterical loss of the voice during the day in one who is capable of speaking during the night.

nyc to-typh l sis. Night blindness.

nyc-tu ri-a. See *nocturia*.

nydrazid. Trade-mark for brand of isoniazid; an antituberculosis drug having the composition of isonicotinic acid hydrazide.

nyg'mus [G prick]. A punctured wound. *Obs.*

Nylander reagent. See under *reagent*.

Nylander's test. See under *test*.

ny'lic stand ard. A standard of weight in accordance with height and age, as adopted by the New York Lif Insurance Company

nymph [G. ymphē, maiden]. The immature stage of an insect, during which the wing pads first appear and the reproductive organs have not developed to the functional stage.

nym pha (pl. *nymphae*) [G]. A minor lip of the vulva.

nym phec'to my [*ymphē*, G. *ektomē*, excision]. Surgical removal of one or both minor lips.

nym phi'tis [*nymphē*; G *-itis*, inflammation]. Inflammation of the minor lips.

nym pho-lep sy [*ymphē*, G *lēpsis*, seizing]. Ecstasy of an erotic type.

nym pho-ma ni-a [*ymphē*; G *mania*, madness]. Excessive sexual desire on the part of woman. —**nymphomaniac,** *adj* n.

nym phon cus [*nymphē*; G *onkos*, mass]. Tumor or swelling of the minor lip. *Rare.*

nym phot o-my [*nymphē*; G *tomē*, cutting]. Incision of one or both minor lips.

nys tag'mi [G *nystagmos*, drowsiness, from *nystazein*, to doze, to bang the head]. Pertaining to, or suffering from, ystagmus.

nys-tag'mi form [*ystagmos*; L. *forma*, form]. Resembling ystagmus.

nys tag'mo graph [*nystagmos*; G *graphein*, to write]. An pparatus for recording the movements of the eyeball in nystagmus.

nys"tag mog'ra phy [*ystagmos*; *graphein*]. The study and recording of the movements of the eyeballs in nystagmus.

nys tag'moid [*nystagmos*; G *eidos*, form]. Resembling true nystagmus in certain particulars.

nys tag'mus [*nystagmos*]. A oscillatory movement of the eyeballs. It may be congenital or dependent on intracranial disease, as meningitis or multiple sclerosis. —**nystagmic,** *adj*

labyrinthine n. That occurring when th labyrinths are irritated or diseased. Syn., *vestibular n.*

lateral n. Oscillation of the eyes in the horizontal meridian.

miner's n. Nystagmus caused by darkness.

optokinetic n. That which occurs in normal individuals when succession of moving objects traverses the field of vision, or when the individual moves past succession of stationary objects.

oscillatory n. That which occurs when vision in both eyes has long been extremely poor as an occupational disorder such as miners nystagmus, and as congenital defect. Also called *pendulous n.*

palatal n. Rhythmic contractions of the palate possibly due to lesions of the brain stem involving the inferior olivary nuclei or their connections with the tegmentum.

positional n. That which occurs only when the patient head is placed in an abnormal plane.

pseudonystagmus. That due to visual defect,

usually of the macula, as choroidal degeneration, or bilateral congenital toxoplasmosis.

rhythmic n. That form in which the eyes slowly wander few degrees in one direction and then are jerked back. Observed normally in passengers in moving vehicle who watch the landscape, and pathologically usually in lesions of the vestibular apparatus or its connections.

rotatory n. An oscillatory partial rolling of the eyeball around the visual axis.

spontaneous ocular n. Nystagmus as result of complete blindness or defective central vision.

vertical n. Oscillatory movement in the vertical meridian.

vestibular n. See labyrinthine n.

Nysten, Pierre Hubert [*French pediatrician*, 1774-1817]. Editor and compiler of Littré and Robin's *Dictionary of Medicine* (1805). Proposed law of rigor mortis. **Nysten law** states that it is first observed in the muscles of mastication, later extends to the facial and cervical muscles, and finally involves the lower extremities.

nyx'is [G pricking]. Surgical puncture or paracentesis. *Obs.*

O

O Chemical symbol for oxygen.

O. Abbreviation for *oculus* eye; *octarius*, pint opening of an electric circuit occiput.

o- *In chemistry*, ortho-.

oak [AS. *āc*]. A genus of trees, *Quercus*, of the Fagaceae. The dried inner bark of *Quercus alba*, white oak, contains characteristic tannic acid known as quercitannic acid. It is employed in the tanning industry and has been used medicinally as an astringent.

oa'kum ('kum) [AS. *ācumba*]. The loose fiber made by picking old hemp rope to pieces. Oakum was formerly used as dressing for wounds, and (in the form of pads) to absorb the lochial discharges.

o-ri-al gi [G *ōarion*, small egg; *algos*, pain]. Ovarian neuralgia ovarialgia. *Rare.*

o-ar'i-o- (o-air'ee o-) For words beginning with *oario-* see *ovario-* or *oophor*.

o sis [G *oasis*, name of fertile areas in the Libyan desert]. *In surgery*, an isolated spot of normal tissue situated in pathologic area.

ob- [L.] A prefix signifying *on*, *against*, *in front of* or *toward*.

ob ce-ca'tion (ob si-kay shun) [L. *occaecatio*, hiding]. Partial blindness.

ob dor mi'tion (b dor mish un) [L. *obdormire*, to fall asleep]. Numbness of part due to interference with nervous function the state of part when it is said to be asleep.

ob-duc'tion [L. *obductio* covering]. A post-mortem examination an autopsy necropsy *Obs*

o-be'li on [dim. from G *obelos*, spit]. The point where the line which joins the parietal foramens crosses the sagittal suture.

Ober Frank Roberts [*American orthopedic surgeon*, 1881]. Devised number of operative procedures in orthopedic surgery which bear his name. Described test for contraction of the fascia lata in sciatica or low back pain, called *Ober' sign*. Introduced an operation for relief of paralysis of the gastrocnemius muscle, in which he isolated and divided the tendons of the peroneus longus and tibialis posterior exposed the tendo achillis and drilled hole in the calcaneus. The freed tendons were drawn behind the tendo achillis and passed through the hole described, their ends being sutured to the tendo achillis. Introduced an operation in paralysis of the quadriceps femoris muscle, in which he transplanted the tendons of the tensor of the fascia lata and the sartorius muscles into the patellar tendon by means of tunneling. Each operation is called *Ober operation*.

Obermayer' reagent. See under *reagent*.

Obermayer' test. See under *test*.

Obermeier Otto Hugo Franz [*German physician*, 1843–73]. Discovered *Borrelia recurrentis*, the cause of European relapsing fever (1868) also called *Spirochaeta obermeieri*.

Oberst, Max [*German surgeon*, 1849-1925]. Introduced form of block anesthesia using dilute solution of cocaine over the course of nerve trunk (1889)

o-bese [L. *obesus*, from *obedere*, to eat oneself fat] Extremely fat; corpulent. —**obesely** *adv*; **obeseness**, *n.*

o-be si ty (o-bee si-tee, o-bess'i-tee) [L. *obesitas*, fatness]. Generalized weight excess, due to accumulation of fat, beyond 10 to 20 per cent of the normal range for the particular age, sex, and height. It is generally due to excess food intake, often because of psychogenic factors, rarely to endocrine disturbances and heredofamilial factors.

buffalo o. The type of obesity usually seen in Cushing syndrome, confined chiefly to the trunk, face, and neck also called *adrenocortical o.*

endocrine o. That due to dysfunction of the endocrine glands.

hypothalamic o. That resulting from disturbance of function of the appetite-regulating centers of the hypothalamus.

o'bex [L., bolt, barrier] Thin triangular lamina formed by the meeting of the taeniae choroideae of the fourth ventricle over the caudal limit of the cavity

ob fus-ca tion [L. *offuscatio*, darkening] Mental confusion.

ob-jec tive [L. *objectum*, from *obicere*, to cast before]. 1. Pertaining to an object or to that which is contemplated or perceived, as distinguished from that which contemplates or perceives. 2. Pertaining to those relations and conditions of the body perceived by another as objective signs of disease.

ob jec'tive. The lens of microscope nearest the object.

fluorite o. The optical properties of fluorite make possible the attainment of high order of correction All apochromats contain at least one fluorite element, and the high powers may contain three such elements. Lenses which are classed as fluorite objective are achromatic objectives of high power Also called *semiapochromatic o.*

monochromatic o. An objective corrected for use with monochromatic light, as, for example, the quartz objective corrected for the 2750 A. line.

oil-immersion o. *In microscopy*, an objective designed for use when oil with refractive index close to that of glass replaces air between the objective and the object.

semiapochromatic o. An objective containing fluorite, intermediate in quality between an achromat and an apochromat. Also called *fluorite o.*, *semiapochromat o.*

ob'li gate [L. *obligatus*, from *obligare*, to bind around]. Constrained; bound; not facultative, as an obligate anaerobe, one that can live only as an anaerobe

ob-lique' (o-bleek o-blike') [L. *obliquus*, sidelong]. 1. Not direct; aslant; slanting. 2. *I botany* unequal-sided.

ob-lique' *I anatomy* an oblique muscle, as the external or internal oblique of the abdomen, or the superior or inferior oblique of the eye.

ob-liq'ui ty [L. *obliquitas*, sidelong direction]. The state of being oblique. Particularly *in obstetrics*, term used for theory of the mechanism of labor

biparietal o. Anterior asynclitism.

Litzmann s o. See posterior *asynclitism*.

Naegele's o. See anterior *asynclitism*.

ob-li'quus (b lye'kwus, lick wus) [L.]. Designation of various muscles, as obliquus abdominis externus. See Table of Muscles in the Appendix.

b-lit"er- 'tion [L. *obliteratio*, from *obliterare*, to blot out]. 1 The complete removal of part by disease or surgical operation, extirpation. 2. Complete closure of lumen. 3. The complete loss of memory or consciousness of certain events.

ob"mu tes cence [L. *obmutescere*, to lose one speech] Aphonia; loss of voice. *Rare.*

ob nu"bi la'tion [L. *obnubilare* to cover with clouds]. A form of mental haze preceding loss of consciousness.

ob-ses'sion [L. *obsessio*, besieging]. An idea or emotion that persists in an individual mind in spite of any conscious ttempts to remove it an imperative idea, as in psychoneurosis. —**obsessive**, *adj*.

ob-ses'sive com-pul'sive re-ac'tion. See under *reaction*.

ob-ses sive ru'mi na"tive state. A form of psychoneurotic disorder (perhaps part of depressive reaction) very similar to obsessive compulsive reaction, characterized by continuous morbid preoccupation with certain ideas, usually trivial or inconsequential, to the exclusion of other interests, but without compulsive acts.

ob so-les'cence [L. *obsolescere*, to grow old]. The stat of becoming old or obsolete.

ob ste-tri' cian (ob stek-trish un) [L. *obstetrix*, midwife]. One who practices bstetrics.

ob- tet'rics [*obstetrix*]. The branch of medicine that cares for women during pregnancy labor and the puerperium. —**obstetric, obstetrical** *adj*.

ob sti pa'tion [L. *obstipatio*, close pressure]. Intractable constipation. *Obs.*

ob struc'tion [L. *obstructio*, building before]. 1 The state of being occluded or stenosed, applied especially to hollow viscera, ducts, and vessels. 2. The act of occluding or blocking. 3. An obstacle —**obstructive** *adj*

intestinal o. Any hindrance to the passage of the fecal stream.

mitral o. See mitral *stenosis*.

partial o. Incomplete obstruction.

pyloric o. A spasm or failure to relax of the pylorus sphincter.

ureteral o. Any hindrance to the flow of urine through the ureter to the bladder

urinary o. Any hindrance t the passage of urine through the urinary system, specifically t the evacuation of urine from the bladder

ob-struc'tive at e-lec'ta-sis. See under *atelectasis*.

ob stru-ent [L. *obstruere* t build before]. Obstructive tending to obstruct. —**ob truent**, *n*.

ob tund' [L. *obtundere*, to strike against, to dull]. Blunt or dull; lessen, as to obtund sensibility

ob tund'ent [*obtundere*]. Soothing, quieting remedy that relieves or overcomes irritation or pain. *Obs*

ob"tu-ra'tion [L. *obturare*, to stop up]. 1. The closing of an opening or passage. 2. A form of intestinal obstruction in which the lumen of the intestine is occupied by its normal contents or by foreign bodies. *Rare.*

ob'tu ra"tor [*obturare*]. 1 Closing an opening. 2. Pertaining to the obturator membrane, muscles, etc. See Tables of Muscles, Nerves, and Arteries in the Appendix.

b'tu ra"tor 1 Any obturator muscle. 2. A solid wire or rod contained within hollow needle or cannula. Obturators may be bayonet-pointed for piercing tissues, or obliquely faced at the end for fitting exactly large aspirating needles. The term includes the metal carriers within urethroscopes and cystoscopes, etc. 3. An appliance which closes cleft or fissure of the palate.

o. externus. The outer obturator muscle.

o. internus. The inner obturator muscle.

ob tuse [L. *obtusus*, from *obtundere*, to strike against, to dull]. 1 Blunt. 2. *Of angles*, greater than 90°

ob-tu sin. An antibiotic derived from species of Basidiomycetes, active principally against Gram-positive bacteria.

ob tu sion (ob-tew zhun) [L. *obtusio*, from *obtundere*]. The blunting or weakening of normal sensation, symptom of certain diseases.

oc cip'i tal (ock sip'i tul) [L. *occiput*, back part of the head]. Pertaining to, or in relation with, the occiput.

oc-cip'i-tal. The occipital bone. See T ble of Bones in the Appendix.

oc-cip"i ta'lis (ock-sip i-tah'lis, -tay'lis) [*occiput*]. The posterior sheet of the epicranius muscle.

o. minor A variant of the posterior sheet of the epicranius muscle.

oc-cip'i tal ize [*occiput*]. Incorporate with the occipital bone; fuse the atlas with the occipital bone.

oc-cip'i to- (ock-sip'i to-) [*occiput*]. *I anatomy* combining form denoting *occipital*.

oc-cip"i to-a te ri-or [*occiput*; L. *anterior* foremost]. Having the occiput directed toward the front, as the occipitoanterior position of the fetus in the uterus.

oc-cip"i to-ax'i al [*occiput*; L. *axis*, axis]. Pertaining to the occipital bone and the axis.

oc-cip"i to-fron'tal [*occiput*; L. *frons*, forehead]. Pertaining to the occiput and forehead, or to the occipitofrontal muscle (epicranius)

oc ip"i to fron ta'lis (ock-sip"i-to-fron-tah'lis, tay'lis) The epicranius muscle.

oc-cip"i to-pos te ri or [*occiput*; L. *posterior* posterior]. Having the occiput directed backward, as the occipitoposterior position of the fetus in the uterus.

oc-cip"i to-scap u-lar'is. A variant of the rhomboideus major muscle extending to the occipital bone.

oc'ci put (ock si-put) [L.]. The back part of the head.

oc-clu'si-o [L. *occlusus*, from *occludere*, to close up]. Closure.

o. pupillae. Obliteration of the pupil.

o. pupillae lymphatica. Obliteration of the pupil by false membrane

oc-clu'sion (o-clue zhun) [*occludere*]. 1 A closing or shutting up. 2. The state of being closed or shut. 3. The absorption, by metal, of gas in large quantities, as of hydrogen by platinum. 4. The full meeting or contact in position of rest of the masticating surfaces of the upper and lower

teeth erroneously called articulation of teeth. 5. *In neurophysiology* the deficit in muscular tension when two afferent nerves which share certain motoneurons in the central nervous system are stimulated simultaneously as compared to the sum of tensions when the two nerves are stimulated separately. —**occlude**

functional o. Congenital ... occlusion.

balanced o. *In prosthetic dentistry* one designed to assure stability of artificial dentures during excursive movements of the jaw. *In periodontics*, one in which the forces of occlusion are conducive to maximum periodontal health.

buccal o. Occlusion, 4, occurring when a premolar or a molar tooth is situated lateral to the line of occlusion.

centric o. The relation of the incisal edges and the inclined planes of the teeth when the jaws are closed in the position of rest.

coronary o. Occlusion of a branch of the arterial system that supplies blood to the heart muscle.

distal o. Occlusion, 4, occurring when a tooth is situated posterior to its normal position.

eccentric o. The relation of the inclined planes of the teeth when the jaws are closed in any of the excursive movements of the mandible.

labial o. Occlusion, 4, occurring when an incisor or canine tooth is situated external to the line of occlusion.

lingual o. Occlusion, 4, occurring when a tooth is situated internal to the line of occlusion.

mesial o. That occurring when a tooth is more anterior than normal (especially the cheek teeth). Opposite of distal occlusion.

puerperal tubal o. The agglutination of mucosal folds of the uterine tube occurring about one week after labor presumably from a mild gonococcus infection and producing one-child sterility.

traumatic o. An abnormal occlusal stress leading to injury of the periodontium.

tubal o. Loss of patency of the oviduct.

oc·clu'sive [*occludere*]. Closing or shutting up, as an occlusive surgical dressing.

oc·clu·som·e·ter. Gnathodynamometer.

oc·cult, oc'cult [L. *occultus*, from *occulere*, to cover]. Hidden; concealed; not evident, as occult blood, the blood in excrement or secretion not clearly evident to the naked eye, or occult disease, any disease the nature of which is not readily determined.

oc"cu·pa'tion·al dis·ease. One caused by the occupation of the patient. It may be organic, as lead poisoning, or functional. See occupational *neurosis*.

oc"cu·pa'tion·al ther'a·py. The teaching of trades and arts as a means for the rehabilitation of patients handicapped physically or mentally.

oc·cu·pied beds. *In military medicine*, number of operating beds in a medical treatment facility currently assigned to patients, excluding beds for patients on leave or absent without leave.

o·cel'lus [L., little eye]. 1. One of the simple eyes or pigmented spots of invertebrate animals. 2. One of the colored eyelike spots on feathers, flowers, etc.

ocenol. Trade-mark for *oleyl alcohol*.

och·e·us (ock'ee·us) [Gr.]. The scrotum. *Obs.*

och·le·sis (ock·lee'sis) [Gr. *ochlos*, crowd]. A morbid condition produced by crowding many people together in a small space with a lack of ventilation.

och"lo·pho'bi·a (ock"lo·fo'bee·uh) [*ochlos*; G. *phobos*, fear]. Morbid fear of crowds.

o·chrom·e·ter [G. *ōchros*, paleness; *metron*, measure]. An instrument for measuring the capillary blood pressure.

o·chro·no·sis, o·chro·no'sis [*ōchros*; G. *-ōsis*, condition]. A blue or brownish blue pigmentation of cartilage and connective tissue, especially around joints, by a melanotic pigment. The condition is frequently accompanied by alkaptonuria and occurs in those who have had phenol, in large quantities, applied to skin or mucous membrane for a long time. A disturbed metabolism of aromatic compounds is associated with this condition. —**ochronot'ic,** *adj.*

Ochsner, Albert John [*American surgeon*, 1858-1925]. Renowned surgeon, diagnostician, and educator. Author of an important paper on the cause and prevention of diffuse peritonitis complicating appendicitis (1901).

Ochsner, Alton (1896–). American surgeon, known for his studies on the thoracic sympathetic nervous system and the peripheral vascular system. With Harold Neuhof he introduced an operation for subphrenic abscess, and with Michael E. DeBakey a special technique of esophagogastrostomy.

oc'i·mene. $C_{10}H_{16}$, 2,6-dimethyl-1,5,7-octatriene; terpene constituent of many plants.

O·co·te·a (o·ko·tee'uh, o·ko'tee·uh, ...) [NL., from the Indian]. A large genus of tropical trees of the family Lauraceae.

O. rodiaei. A tropical South American tree, greenheart ocotea. Its bark contains tannic acid, resin, sugar, albumin, various salts, and two alkaloids, bebeerine and sepeerine. It is reputedly tonic, astringent, and has been used in malarial fevers.

oc·ta-, oct- [L. *octo*, eight]. A combining form meaning *eight*.

oc'ta·caine. β-Octyl-3-amino-β,β-dimethylethyl p-aminobenzoate hydrochloride. A local anesthetic.

oc'tad [*octo*]. An octavalent element or radical.

oc·tad. Having a valence of eight.

oc"ta·dec"a·di"e·no'ic acid. 9,12-Octadecadienoic acid or linoleic acid.

oc·ta·dec·a·tri"e·no'ic acid. 9,12,15-Octadecatrienoic acid or linolenic acid.

oc·ta·meth·yl·py·ro·phos·phor·am'ide. $[(CH_3)_2N]_2(O)P·O·P(O)[N(CH_3)_2]_2$; bis[bis(dimethylamino)phosphonous] anhydride, a colorless, viscous liquid, soluble in water; a systemic insecticide and also a potent anticholinesterase agent, with selective action on peripheral cholinesterase; employed in treating myasthenia gravis. Abbreviated OMPA.

oc'tan [*octo*]. Returning every eighth day, as an octan fever.

oc·tane. C_8H_{18}. The eighth member of the paraffin or marsh gas series.

oc"ta·no'ic ac'id. Caprylic acid.

oc·ta·ri·us [*octo*]. An eighth part of a gallon; a pint. Abbreviated, O.

oc"ta·va'lent, oc·tav'a·lent [*octo*; L. *valere*, to be strong]. Having a valence of eight.

oc·tene. See *octylene*.

oc"ti·grav'i·da [*octo*; L. *gravidus*, pregnant]. A woman pregnant for the eighth time.

octin. Trade-mark for 6-methylamino-2-methylheptene, $C_8H_{15}NHCH_3$, a colorless, oily liquid which causes relaxation of smooth muscle. The substance is available commercially in preparations containing the hydrochloride or mucate salt.

oc·tip·a·ra [*octo*; L. *parere*, to bring forth]. A woman who has been in labor eight times.

oc·to-, oct- [*octo*]. A combining form meaning *eight*.

octofollin. Trade-mark for a brand of benzestrol.

oc'to·pine. A compound, found in the muscles of scallops and other marine invertebrates, representing a molecule of arginine and one of alanine joined in such a way as to share a nitrogen atom.

oc"to·roon [*octo*; quadroon, from Sp. *cuarterón*]. The offspring of a white person and a quadroon. A person who has one-eighth part of Negro blood.

oc'to-ses. A group of the monosaccharides with the formula $C_8H_{16}O_8$.

octrite. Trade-mark for octyl nitrite, used by inhalation as vasodilator

oc'tyl. The radical C_8H_{17}—

o. ni'trite. $C_8H_{17}NO_2$; liquid used like amyl nitrite, by inhalation, as vasodilator. It is less likely to cause methemoglobinemia than is amyl nitrite. See *nitrite*.

oc'tyl-ene. One of group of liquid unsaturated hydrocarbons of the formula C_8H_{16}.

oc u la [L. *ocularis*, of the eyes]. Pertaining to or in relation with the eye.

oc u lar The lens assembly of microscope, telescope, or other optical instrument that is nearest the eye; an eyepiece.

compensating o. A lens that compensates for axial aberration of the objective.

Huygenian o. A lens consisting of two planoconvex lenses, the convexities being directed toward the objective; the lower lens is the field lens, the upper the eye lens.

Ramsden o. A positive ocular with two planoconvex lenses, the convex sides facing each other; used in micrometry

telangle oculars. Oculars with an extremely high exit pupil, so that spectacles can be worn with comfort.

wide-field oculars. Oculars with wide field of view now used especially in biobjective dissecting microscopes.

oc"u-len tum [L. *oculus*, eye]. An ointment for use in the eye.

oc'u list. See *ophthalmologist*.

oc'u lo- ocul- [*oculus*]. A combining form denoting *the eye* or *ocular*

oc"u lo-gy-ra tion (ock yoo-lo-jye-ray shun) [*oculus*; L. *gyrare*, to turn around in circle]. Movement of the eyeballs.

oc"u lo-gy'ric [*oculus*; G. *gyros*, circle]. Referring to movements of the eyes.

oc"u lo-mo'tor [*oculus*; L. *motor* from *movere*, t move]. Pertaining to the movement of the eye, or to the oculomotor nerve.

oc"u lo my-co si (ock yoo lo migh-ko sis) [*oculus*; G. *mykēs*, fungus -*ōsis*, condition] Any disease of the eye or its ppendages, due to the presence of fungus.

oc"u lo phren"i co-re-cur'rent [*oculus*; G *phrēn* mind; L. *recurrere*, to run back]. Referring to the recurrent laryngeal and phrenic nerves associated with Horner' syndrome, as in oculophrenicorecurrent paralysis.

oc"u lo-zy"go mat'ic [*oculus*; G *zygōma*, bolt, bar]. Pertaining to the eye and the zygoma.

oc u lus (pl. *oculi*) [L.]. An eye. Abbreviated, O **oculi marmarygodes.** See *scotomorphopsia*.

o. caesius. Glaucoma.

o. dexter The right eye. Abbreviated, O. D.

o. duplex. A bandage covering both eyes.

o. lacrimans. Epiphora.

o. leporinus. Lagophthalmos.

o. purulentus. Hypopyon.

o. simplex. See *monoculus*.

o. sinister The left eye. Abbreviated, O. S.

o. uterque. Each eye. Abbreviated, O U Also called *o. unitas*

oxy-o din"i (o see o-din ick, igh-o-) [G *okys*, swift *ōdis*, pangs of childbirth]. Oxytocic hastening the delivery of the fetus

O D *Oculus dexter* right eye.

od (od, ode) [G. *hodos*, way]. The force supposed to produce the phenomena of mesmerism. *Obs.* —**od'ic,** *adj.*

o dax-es mus (dacks es mus) [G. *odaxēsmos*, biting]. The biting of the tongue, lip, or cheek, during an epileptic seizure.

Oddi, Ruggero [*Italian physician*, *nineteenth century*]. Described the opening of the common bile duct at the ampulla of Vater See *sphincter* of Oddi.

don tag'ra, o"don ta gra [G from *odous*, tooth; *agra*, seizing]. Toothache. *Obs.*

don-tal'gi [G toothache]. Toothache —**odontal gic,** *adj*

phantom o. Pain felt in the space from which tooth has been removed.

don tal'gi [*odontalgia*]. A remedy for toothache

don tec to-my [G *odous*, tooth; *ektomē*, excision]. Surgical removal of tooth.

o-don"ter ism [*odous*] Chattering of the teeth. *Obs.*

don tex-e sis, [*odous*; G. *exesis*, removal]. Removal of deposits such as salivary calculus from the teeth.

don thar pa-ga. See *dentagra*, 1

o-dont"he-mo di-a (o-dont"hi-mo dee-ah, o-don thi) [*odous*; G. *haimōdia*, sensation of having the teeth set on edge]. Hemodia; excessive sensibility of the teeth. *Obs.*

don thy' lus (don-thigh uh lus, dont high') Enamel. *Obs.*

-don'ti-a [*odous*]. Any abnormality of the teeth.

o. deformis. Deformity of the teeth, arising either from error of shape or position, or from malformation of the jaws or alveolar border

o. incrustans. Calculus of the teeth.

o"don ti' -sis [G., teething]. Dentition the cutting of teeth.

dom ti' try o-don"ti at'ri (o-don tee at' ree-uh, o-don tee-uh tree uh) [*odous*; G *iatreia*, medicine]. Dentistry *Obs.* —**odontiatrist,** *n.*

o-don'ti [*odous*] Relating to teeth.

o-don'tin oid [*odous*; G *eidos*, form]. Resembling, or having the nature of teeth.

don ti'tis [*odous*; G -*itis*, inflammation]. Inflammation of the teeth.

-don'to- odont [*odous*]. A combining form meaning *tooth*.

o-don"to amel"o-sar-co ma. See *ameloblastosarcoma*

-don"to-at lan'tal [*odous*; G. *atlas*, axis]. Old term for tlantoaxial.

-don'to blast [*odous*; G. *blastos*, germ]. One of the cells covering the dental papilla or dental pulp, concerned with the formatio of the dentin

don"to blas to ma [*odous*; *blastos*; G -*ōma*, tumor]. A tumor developing from the mesenchymal portion of the tooth germ.

o-don"to-bo-thri'tis [*odous*; G. *bothrion*, small trench; -*itis*, inflammation]. Inflammation of tooth socket. *Obs.*

o-don"to-both ri-um [*odous*; *bothrion*]. The alveolus of tooth. *Obs.*

-don'to-cele [*odous*; G *kēlē*, tumor]. A dentoalveolar cyst.

-d to-ce-ram'ic [*odous*; G *keramos*, potter' clay]. Pertaining to porcelain teeth.

don to-cha li (don tock uh-lis) [*odous*; G. *chalix*, gravel, rubble]. Dental cement. *Obs*

o-don"t -chi rur'gi-cal (-kigh rur'ji kul) [*odous*; G *cheirourgos*, working with the hands]. Pertaining to dental surgery

donto-cla sis [*odous*; G. *klasis*, breaking]. The process of resorption of the dentin of tooth.

-don'to-clast [*odous*; G. *klastos*, broken in pieces] A multinuclear cell, morphologically identical t an osteoclast, which is associated with resorption of tooth roots.

o-don"toc ne si [*odous*; G *knēsis*, itching]. A painful itching sensation in the gums, as that preceding cutting of the teeth. *Obs.*

o·don″to·dyn′i·a (o·don″to·din′ee·uh, ·dy′nee·uh) [*odous*; G. *odynē*, pain]. Toothache. *Obs.*

o·don″to·gen′e·sis [*odous*; G. *genesthai*, to become]. 1. Development of a tooth. 2. Dentinogenesis.

o·don·tog′e·ny (o″don·todj′i·nee) [*odous*; *genesthai*]. The origin and development of teeth. —**odontogen′ic**, *adj.*

o·don′to·glyph [*odous*; G. *glyphein*, to carve]. An instrument for scraping teeth.

o·don′to·gram [*odous*; G. *gramma*, letter]. A record made by an odontograph.

o·don′to·graph [*odous*; G. *graphein*, to write]. An instrument for recording the inequalities of the surface of teeth and the thickness of the enamel.

o·don·tog′ra·phy [*odous*; *graphein*]. The descriptive anatomy of the teeth. —**odontograph′ic**, *adj.*

o·don″to·hy″per·es·the′si·a (·high″pur·es·thee′zhuh, ·zee·uh) [*odous*; G. *hyper*, beyond; *aisthēsis*, perception]. Hypersensitiveness of dentin or nerves of the teeth.

o·don′toid [*odous*; G. *eidos*, form]. Resembling a tooth; toothlike, or pertaining to the dens of the axis, as odontoid ligament.

o·don′to·lith. Dental calculus.

o·don·tol′o·gist [*odous*; G. *logos*, word]. A dental surgeon.

o″don·tol′o·gy [*odous*; *logos*]. The branch of science dealing with the anatomy and diseases of the teeth.

o·don″to·lox′i·a, **o·don·tol′ox·y** (o·don·tol′ock·see, o·don″to·lock′see) [*odous*; G. *loxos*, slanting]. Irregularity or obliquity of the teeth.

o·don·tol′y·sis [*odous*; G. *lysis*, dissolution]. The loss of calcified tooth substance by dissolution.

o·don·to′ma [*odous*; G. *-ōma*, tumor]. A tumor or tumorlike hyperplasia which develops from one or more parts of a tooth germ. Resulting tissue may be soft, calcified, or a mixture of both.

composite o. A tumor composed of various histologic elements of the tooth germ.

simple o. A tumor composed of only one histologic element of the tooth germ.

o·don·tome. See *odontoma*.

o·don″to·ne·cro′sis [*odous*; G. *nekrōsis*, mortification]. Necrosis or decay of the tissues of the teeth; dental caries.

o·don″to·neu·ral′gi·a [*odous*; G. *neuron*, nerve; *algos*, pain]. Neuralgia due to diseased teeth.

o·don″to·par·al·lax′is [*odous*; G. *parallaxis*, alternation]. Irregularity of the teeth; deviation of one or more of the teeth from the natural position.

o″don·top′a·thy [*odous*; G. *pathos*, disease]. Any disease of the teeth.

o·don″to·per″i·os′ti·tis. See *periodontitis*.

o·don″to·pho′bi·a [*odous*; G. *phobos*, fear]. Morbid fear of teeth (usually animals' teeth).

o·don′to·plast. Odontoblast.

o·don″to·ple·ro′sis [*odous*; G. *plērōsis*, filling]. The filling of teeth. *Obs.*

o·don″to·pri′sis (o·don″to·pry′sis, o″don·top′ri·sis) [*odous*; G. *prisis*, a sawing]. Grinding of the teeth.

o·don″top·to′si·a (o·don″top·to′shuh, ·see·uh) [*odous*; G. *ptōsis*, a falling]. Falling out of teeth. *Obs.*

o·don″to·ra′di·o·graph [*odous*; L. *radius*, ray; G. *graphein*, to write]. A radiograph of the teeth.

o·don″tor·rha′gi·a [*odous*; G. *rhēgnynai*, to burst forth]. Hemorrhage from the socket of a tooth.

o·don·tos′chi·sis (o″don·tos′ki·sis) [*odous*; G. *schisis*, cleavage]. Splitting of a tooth.

o·don″to·schism (o·don′to·skiz·um, ·siz·um) [*odous*; G. *schisma*, cleft]. A fissure in a tooth.

o·don′to·scope [*odous*; G. *skopein*, to examine]. 1. A dental mirror used for inspecting the teeth. 2. A magnifying device for inspection of tooth surfaces.

o·don·tos′co·py [*odous*; *skopein*]. The recording of the occlusion or bite of the teeth for purposes of identification.

o·don″to·sei′sis (o·don″to·sigh′sis) [*odous*; G. *seisis*, a shaking]. Looseness of the teeth from partial or total destruction of the alveolar processes caused most frequently by gum disease. *Obs.*

o·don·to′sis, **od″on·to′sis** [*odous*; G. *-ōsis*, condition]. The formation and development of the teeth.

o·don″to·ste·re′sis [*odous*; G. *sterēsis*, deprivation]. Loss of the teeth. *Obs.*

o·don″to·syn·er·is′mus (o·don″to·sin·ur·iz′mus) [*odous*; G. *synerizein*, to contend together]. Chattering of the teeth. *Obs.*

o·don″to·the′ca [*odous*; G. *thēkē*, case]. The follicle of a tooth; the dental sac. *Obs.*

o·don″to·ther′a·py [*odous*; G. *therapeia*, treatment]. The treatment of diseases of the teeth. *Obs.*

o·don·tot′o·my [*odous*; G. *tomē*, a cutting]. Cutting into a tooth.

prophylactic o. Opening and filling structural imperfections of the enamel to prevent dental caries.

o·don″to·trip′si·s [*odous*; G. *tripsis*, a rubbing]. The natural abrasion or wearing away of the teeth.

o·don·tot′ry·py [*odous*; G. *trypa*, hole]. Perforation of a tooth to remove pus.

o′dor [L.]. A scent, smell, or perfume; fragrance.

o·dor·if′er·ous [*odor*; L. *ferre*, to bear]. Emitting an odor.

o·dor·im′e·try [*odor*; G. *metron*, a measure]. The measuring of the effect of odors upon the smell sensory organs.

O'Dwyer, Joseph P. [American otolaryngologist, 1841–98]. Introduced the first satisfactory method of laryngeal intubation for diphtheria, and was the inventor of the metal tube and intubator (1884) known as *O'Dwyer's tube*. These tubes are made in several sizes and, after introduction, are left in the larynx for several days before removal or replacement. Devised a method for artificial respiration; see *Fell-O'Dwyer method* under *artificial respiration*.

od′yl, **od′yle** (od′il, o′dil). See *od*.

o·dyn″a·cou′sis (o·din″uh·koo′sis), **o·dyn·a·cu′sis** (o·din″uh·cue′sis, ·koo′sis), **o·dyn″a·cu′si·a** (·din″uh·kew′zhuh) [G. *odynē*, pain; *akousis*, hearing]. Pain caused by noises.

-o·dyn′i·a, **-o·dyn′i·a** [*odynē*]. A combining form meaning *state of pain*.

o·dyn″o·pha′gi·a (o·din″o·fay′juh, ·jee·uh; o·dy″no-, o·din″o-). Old term for dysphagia.

o·dyn″o·pho′bi·a [*odynē*; G. *phobos*, fear]. Morbid dread of pain; algophobia.

o·dy·nu′ri·a [*odynē*; G. *ouron*, urine]. The painful passage of urine. *Obs.*

oe-. For words beginning with *oe-* not found here, see words beginning *e-*.

oe·de′ma (i·dee′muh). See *edema*.

oed′i·pal. Pertaining to the Oedipus complex; also spelled *edipal*.

oed′i·pism. See *edipism*.

Oed′i·pus com′plex. See under *complex*.

Oehl, Eusebio [Italian anatomist, 1827–1903]. Author of a monograph on the histology of the skin (1857). Described the stratum lucidum of the epidermis, which is also called *Oehl's layer*.

oe·lec′tron. See under *electron*.

oe·nan″the·tox′in (i·nan″thi·tock′sin, ee·nanth·o-) [G. *oinanthē*, vine; *toxikon*, poison]. A toxic resinous principle from *Oenanthe crocata*, a poisonous plant (water hemlock) of Europe.

oenethyl. Trade-mark for 2-methylaminoheptane.

$C_9H_{15}N$ used intramuscularly or intravenously as vasopressor in spinal anesthesia.

Oertel Max Joseph [*German physician*, 1835–97]. Remembered for his description of circulatory disturbances due to cardiac disease. For these and for obesity he advised diet, reduction of body fluids by low intake of fluid, muscular exercises, including systematic mountain climbing and gymnastics called *Oertel's method* or *treatment*.

oe-soph'a-go- (i-sof"ah-go-) See *esophago-*.

oe-soph"a-go-sto-mi'a-sis [G. *oisophagos*, gullet; *stoma*, mouth; NL. *-iasis*, condition]. A condition due to the presence of parasitic worms of the genus *Oesophagostomum*.

Oe-soph-a-gos'to-mum (ee-sof-ah-gos'to-mum, i-sof"ah-) [*oesophagos*; *stoma*]. A genus of nematodes parasitic in the intestines, particularly the cecum, of gorillas, monkeys, and pes; rarely infests man.

oe-soph -gus (i-sof"ah-gus) See *esophagus*.

oes tra di-ol (es-tray dee-ole, -ol, -awl, es-trad'ee-ee trah-dye) Estradiol.

oes tri sis, oe tri'a-sis [G *oistros*, gadfly; NL. *-iasis*, condition]. Myiasis due to the larva of the *Oestrus*.

Oes'tri-dae (es'tri-dee) [*oistros*]. A family of botflies (warble flies) some species of which produce larvae which live under the skin of cattle, causing characteristic swelling called the warble. Also see *warbles*.

oes'trin (es'trin) [*oistros*]. Estrin.

oes'tri-ol (es tree-ole, -ol, -awl) [*oistros*]. Estriol.

oes"tro-gen'ic (es tro jen'ick) [*oistros*; G *gennaein*, from *gignesthai*, to be produced]. Estrogenic.

oes'trone (es'trone) [*oistros*]. Estrone.

oes'trum (es'trum) [*oistros*]. Estrum.

Oes'trus (*es'trus*) [*oistros*]. A genus of botflies.

O ovis. Species which infests the nose of sheep and sometimes attacks the conjunctiva, the outer nares, and buccal regions of man.

oes'trus [*oistros*] Estrus.

of'fal [E. *off fall*]. Refuse of any kind.

of fi'cial [L. *officialis*, of duty]. Referring t medicines recognized by and conforming to the standards of, the United States Pharmacopeia or the National Formulary

of-fic"i nal [L. *officina*, workshop]. On sale without prescription.

Ogata and Ogata s method. See under *stain*.

Ogston, Alexander [*Scottish surgeon*, 1844–1929]. Described operations for flatfoot and knock-knee. Also described an operation for opening the frontal sinus by trephining; called *Ogston operation*, *Ogston-Luc operation*.

Oguchi, Chuta [*J panese ophthalmologist*, 1875–1945]. Described congenital night blindness in Japan, called *Oguchi's disease*.

Ohara, Hachiro [*Japanese physician*, contemporary]. Described disease similar to, or identical with, tularemia (yato byo) in Japan (1930) also called *Ohara disease*.

Ohlmacher's fixing fluid. See under *fixing fluid*.

Ohm, Georg Simon [*German physicist*, 1787 1854]. Postulated law stating that the strength of an electric current varies directly as the electromotive force, and inversely as the resistance; called *Ohm law*.

ohm [*Ohm*]. The unit of electric resistance, equal to one thousand million units of resistance of the centimeter-gram-second system of electromagnetic units. The International ohm, adopted 1893, is the resistance of column of mercury 106.3 centimeters long and weighing 14 4521 grams at 0°C. Its cross section is 1 mm.

ohm -am me"ter A combined ohmmeter and ammeter

ohm me"ter [*Ohm*, G. *metron*, measure]. Apparatus for measuring electric resistances in ohms.

-oid [G *eidos*, form]. A suffix signifying *like* or *resembling*

o-id"i-o my'cin [G. *ōion*, egg; *mykēs*, fungus]. A vaccine prepared from the fungus *Candida albicans*.

o-id"i-o-my-co sis (-sigh ko sis) See *moniliasis*.

O id'i um [dim. of *ōion*]. A genus of fungi with characteristics intermediate between those of the yeasts and those of the molds.

O. albicans. Synonym for *Candida albicans*.

O. dermatitidis. Synonym for *Blastomyces dermatitidis*.

oi kol'o-gy [G. *oikos*, house *logos*, word]. 1 The science of the home. 2. Old term for ecology

oi"ko ma ni-a, oi"ki-o ma ni a. See *ecomania*.

oi"ko-pho'bi-a [*oikos*; G. *phobos*, fear]. Morbid fear of home, or of house.

oi"ko-site [*oikos*; G *sitos*, old term for food]. Parasite fixed to its host; an ectoparasite.

oil [L. *oleum*, from G. *elaion*]. A liquid, immiscible with water

ajowan o. That from the fruit of *Trachyspermum ammi*, contains up to 50% of thymol. Syn., *ptychotis*

allspice o. See pimenta *o*.

almond o. (*oleum amygdalae expressum*) The fixed oil from the kernels of varieties of *Prunus amygdalus* (*Amygdalus communis*) Used as an emollient. Syn., *sweet almond o.*

amber o. (*oleum succini*) A product of the dry distillation of amber formerly used as rubefacient and, internally in amenorrhea, hysteria, and whooping cough.

aniseed o. See anise *o*.

anise o. (*oleum anisi*) The volatile oil containing 80–90% of anethol obtained from the fruit of *Pimpinella anisum* or *Illicium verum*. Syn., *aniseed o.*

arachis o. Peanut oil.

arbor vitae o. See cedar leaf *o*.

balsam o. See melissa.

banana o. Amyl acetate.

basil o. That from the Indian plant, *Ocimum basilicum*; consists principally of *l*-linalool and methyl cinnamate.

bay o. The volatile oil from leaves of *Pimenta racemosa*. It yields from 50–65% of phenols. A perfume oil. *Syn., myrcia*

behen o. A fixed oil from seeds of *Moringa aptera* and *M oleifera*. A flavoring oil. Also called ben o.

benne o. Sesame oil.

bergamot o. (*oleum bergamottae*) A volatile oil obtained by expression from the rind of the fresh fruit of *Citrus aurantium* var. *bergamia*, yielding not less than 36% of esters calculated as linalyl acetate. A perfume oil.

betel o. The volatile oil from betel leaves; used as local stimulant.

betula o. The volatile oil from *Betula lenta*; *methyl salicylate*.

bitter almond o. (*oleum amygdalae amarae*) The volatile oil from the dried ripe kernels of *Amygdalus communis*. It contains over 80% of benzaldehyde and from 2–4% of hydrogen cyanide. Dose, 0.016–0 06 cc. (¼ 1 min.) The British Pharmacopoeia recognizes under the title *purified volatile oil of bitter almond* an oil obtained by distillation from the seeds of bitter almonds, peach kernels, or apricot kernels from which the fixed oil has been previously expressed. Contains not less than 95% of benzaldehyde and no hydrogen cyanide. Used as flavor

bitter orange o. (*oleum aurantii amari*). A

volatile oil from the fresh peel of the fruit of *Citrus aurantium*. A flavor.

bone o. An oil obtained by destructive distillation of bone or deer horn; formerly used as antispasmodic. Syn. *Dippel's o.*

bouchi o. Oil of bouchi (*Psoralea corylifolia*) used in leukoderma or vitiligo and the skin lesions of pinta. It may accelerate repigmentation.

cade o. The empyreumatic volatile oil from the wood of *Juniperus oxycedrus*; used in skin diseases. It contains cadinene, guaiacol, and cresol. Also called *juniper tar*.

cajeput o. (*oleum cajuputi*) Obtained by distillation from leaves and twigs of species of *Melaleuca*. Contains 50–65% of cineol. A stimulating expectorant, anthelmintic, and, externally, rubefacient and antiparasitic.

camphorated o. Camphor liniment (*linimentum camphorae*). A solution of camphor (20 Gm.) in cottonseed oil (80 Gm.); a popular liniment.

camphor o. A volatile oil obtained from the camphor tree, *Cinnamomum camphora*, used as a solvent, occasionally as a rubefacient.

caraway o. (*oleum cari*) A volatile oil distilled from the fruit of *Carum carvi*, yielding 50–60% of carvone, $C_{10}H_{14}O$. A flavor.

carbolized o. Phenolated oil.

cardamom o. (*oleum cardamomi*) A volatile oil distilled from the seeds of *Elettaria cardamomum*. A flavor.

carron o. Lime liniment, a mixture consisting of equal parts of linseed oil and lime water. Used in the treatment of burns.

cassia o. See cinnamon o.

castor o. (*oleum ricini*) The fixed oil obtained from the seed of *Ricinus communis*; the oil contains glycerides of ricinoleic acid which confer on it its cathartic property.

cedar leaf o. (*oleum cedri folii*) A volatile oil from the leaves of *Thuja occidentalis*, containing not less than 60% of ketones, chiefly thujone and fenchone. Formerly used in menstrual disorders, occasionally as a counterirritant. Syn., *arbor vitae o.*, *thuja o.*

chamomile o. A volatile oil from chamomile flowers which has been used as an aromatic bitter.

champaca o. A volatile perfume oil from the flowers of *Michelia champaca*.

chaulmoogra o. (*oleum chaulmoograe*) The fixed oil expressed from the seed of various species of *Hydnocarpus*, containing principally glycerides of chaulmoogric and hydnocarpic acids. Long used in treatment of leprosy. Dose, 0.3–0.6 cc. (5–10 min.) increased gradually to 4 cc. (1 fluidrachm). Used externally in local treatment and as a counterirritant. Syn., *hydnocarpus o.*

chenopodium o. (*oleum chenopodii*) A volatile oil from the overground portion of the flowering and fruiting plant of *Chenopodium ambrosioides* var. *anthelminticum*. Contains over 65% of ascaridol, $C_{10}H_{16}O_2$. An anthelmintic. Dose, 0.2–0.3 cc. (3–5 min.) for well-nourished adults.

cinnamon o. (*oleum cinnamomi*) The volatile oil distilled with steam from leaves and twigs of *Cinnamomum cassia* and rectified by distillation. Contains 80–90% of cinnamic aldehyde. A carminative and local stimulant. Also germicidal and fungicidal. Dose, 0.06–0.2 cc. (1–3 min.) Syn., *cassia o.*

citronella o. A volatile oil from *Cymbopogon nardus*. Contains up to 93% of geraniol and citronellal. Its value as an insect repellent is said to be due to methyl heptenone.

clove o. (*oleum caryophylli*) The volatile oil distilled with steam from the dried flower buds of *Syzygium aromaticum*. Contains over 82% of eugenol. A local anesthetic, especially for toothache; a carminative. Dose 0.12–0.4 cc. (2–6 min.)

coconut o. That present in the fruit of the coconut palm, *Cocos nucifera*, to the extent of 30–40%. Liquefies at about 23° C. Used chiefly in soap manufacture for its high lathering quality.

cod-liver o. See *cod-liver oil*.

colza o. See *rape oil*.

copaiba o. A volatile oil consisting chiefly of caryophyllene.

coriander o. (*oleum coriandri*) The volatile oil from the fruit of *Coriandrum sativum*. Contains 45–65% of coriandrol, $C_{10}H_{18}O$. A flavoring oil.

corn o. (*oleum maydis*) The fixed oil from the seed of *Zea mays*. A food and a solvent for injectable medicaments, especially hormones.

cottonseed o. (*oleum gossypii seminis*) The fixed oil from the seed of cultivated species of *Gossypium*.

croton o. (*oleum tiglii*) A fixed oil from the seed of *Croton tiglium*. A drastic purgative. Dose, 0.03–0.12 cc. (½–2 min.) Causes pustular eruptions when applied to the skin. Well diluted with a suitable vehicle, it is rubefacient.

cypress o. A volatile oil from the leaves and twigs of *Cupressus sempervirens*. Its vapors were once used in whooping cough.

dill o. (*oleum anethi*) The volatile oil from *Anethum graveolens*. Contains 40–65% of carvone, $C_{10}H_{14}O$. A carminative. Dose, 0.06–0.2 cc. (1–3 min.)

dwarf pine needle o. (*oleum pini pumilionis*) The volatile oil steam-distilled from the leaves of *Pinus mugo*. It contains bornyl acetate, levopinene, sylvestrene, and other principles. As an inhalant in bronchitis it has been used as an expectorant and antirheumatic. Syn., *pine needle o.*

erigeron o. A volatile oil consisting chiefly of *d*-limonene with some terpineol obtained from species of *Erigeron*. It has been used in diarrhea and internal hemorrhage.

essential o. Volatile oil.

ethereal o. (*oleum aethereum*) A volatile liquid consisting of equal volumes of ether and so-called heavy oil of wine made up of ethyl esters of sulfuric acid.

eucalyptus o. (*oleum eucalypti*) The volatile oil from the leaves of *Eucalyptus globulus* or other species. It contains over 70% of eucalyptol. A local antiseptic and stimulating expectorant. Dose, 0.3–0.6 cc. (3–10 min.)

expressed nutmeg o. Mace oil or nutmeg butter; a solid oil obtained by hot expression of bruised nutmegs.

fennel o. (*oleum foeniculi*) The volatile oil steam-distilled from the fruit of *Foeniculum vulgare*. Contains about 60% of anethol. A carminative and flavoring oil. Dose, 0.2–0.3 cc. (3–5 min.).

fern o. Aspidium oleoresin; a vermifuge.

fir o. See Siberian fir.

fixed o. Oil obtained from a vegetable or animal source, consisting chiefly of glyceryl esters of various fatty acids, and containing a higher proportion of esters of unsaturated acids than do fats.

flaxseed o. Linseed oil.

fusel o. A by-product, formed from protein materials, in the production of ethyl alcohol by fermentation. It consists chiefly of isoamyl alcohol with varying quantities of other alcohols. Syn., *commercial amyl alcohol*.

garlic o. The volatile oil present in garlic to the extent of about 0.1%. Chiefly allyl disulfide and allyl-propyl disulfide.

gaultheria o. (a) Methyl salicylate. (b) Volatile

oil consisting principally of methyl salicylate from *Gaultheria procumbens*.
gray o. Mercurial liquid used in syphilis.
gurjun o. See gurjun balsam.
haarlem o. A proprietary mixture of turpentine oil and sulfur balsam.
halibut-liver o. See *halibut-liver oil*.
haliver o. A refined halibut-liver oil, rich in vitamins A and D
hydnocarpus o. Chaulmoogra oil.
iodized o. (*oleum iodatum*) An iodine addition product of vegetable oils, containing 38–42% of organically combined iodine. Used for the therapeutic effect of iodine and as an x-ray contrast medium.
jasmine o. A volatile oil from the flowers of *Jasminum odoratissimum*, *J. sambac*, *J. officinale* var *grandiflorum*. A perfume oil.
juniper o. See cade
lavender o. (*oleum lavandulae*) The volatile oil steam-distilled from the fresh flowering tops of *Lavandula officinalis*, containing not less than 30% of esters calculated as linalyl acetate ($C_{10}H_{17}.C_2H_3O_2$) A perfume oil; carminative. Dose, 0 06–0 3 cc. (1–5 min.)
lemon o. (*oleum limonis*) The volatile oil expressed from the fresh peel of the fruit of *Citrus limon*. Contains chiefly *d*-limonene and phellandrene with 7–8% of citral and some citronellal.
linaloe o. A volatile oil obtained from species of *Bursera*, used in perfumery as source of linalyl acetate.
linseed o. (*oleum lini*) A fixed oil obtained from the dried ripe seeds of *Linum usitatissimum*.
mace o. Expressed nutmeg oil.
maize o. Corn oil.
melissa o. A volatile oil from the leaves and tops of *Melissa officinalis*; has been used as diaphoretic. Syn., *balm o.*
mineral o. Any mixture of liquid hydrocarbons obtained from liquid petrolatum. When refined to meet U.S P standards for liquid petrolatum, it is sometimes known as *white mineral oil*.
mirbane o. Nitrobenzene.
mustard o. A volatile oil, essentially allyl isothiocyanate, obtained from the dried ripe seed of *Brassica nigra* or *B juncea*. A powerful rubefacient and blister
myrcia o. Bay oil.
myristica o. (*oleum myristicae*) The volatile oil distilled with steam from the dried kernels of the ripe seed of *Myristica fragrans*. It contains chiefly *d*-pinene, *d*-camphene and dipentene, and some myristicin. Syn., *nutmeg o.*
neroli o. Orange flower oil.
nutmeg o. Myristica oil.
o. of vitriol. Sulfuric acid.
olive o. (*oleum olivae*) The fixed oil from the ripe fruit of *Olea europaea*, composed chiefly of glyceryl esters of oleic and palmitic acids. It is used as nutrient, laxative emollient, and an ingredient of liniments, ointments, and plasters.
orange flower o. (*oleum aurantii floris*) A complex volatile oil distilled from the fresh flowers of *Citrus aurantium* and used for its odor Syn., *neroli o.*
orange o. (*oleum aurantii*) A volatile oil obtained by expression from the fresh peel of *Citrus sinensis*. It consists chiefly of *d*-limonene. A flavor
origanum o. The volatile oil distilled from the leaves of species of *Origanum* or marjoram.
palm o. Fixed oil from the fruit and seed of *Elaeis guineensis*. It contains chiefly palmitin, also some stearin and laurin used mainly in the manufacture of soap and candles.
parsley seed o. The oleoresin of parsley seed containing piol, apiolin, and myristicin. Also called *apiol*, *liquid apiol*.
patchouli o. An oil distilled from the leaves of *Pogostemon cablin* and *P heyneanus*. Used as fixative in perfumery
peanut o. (*oleum arachidis*) Refined fixed oil obtained from seed kernels of one or more cultivated varieties of *Arachis hypogaea*, containing large proportion of glycerides of oleic acid and smaller amounts of glycerides of linoleic, hypogeic, arachidic, and lignoceric acids used as vehicle for injections. Syn., *arachis oil*.
peppermint o. (*oleum menthae piperitae*) The volatile oil steam-distilled from the overground parts of the flowering plant of *Mentha piperita* containing not less than 5% of esters calculated as menthyl acetate, and not less than 50% of total menthol, free and combined. Colorless liquid of strong, characteristic odor Carminative and flavor Dose, 0.1 cc. (1½ min.)
persic o. (*oleum persicae*) The oil expressed from the kernels of varieties of *Prunus armeniaca* (apricot kernel oil) or from the kernels of varieties of *Prunus persica* (peach kernel oil); occurs as clear pale straw-colored or colorless oily liquid and is composed chiefly of the glycerides of the higher fatty acids. Possesses the emollient properties of other fixed oils and has been used as substitute for expressed almond oil.
phenolated o. (*oleum phenolatum*) Consists of 5% of phenol in olive oil. An emollient, mild antiseptic, and anesthetic.
pimenta o. (*oleum pimentae*) A volatile oil distilled from the fruit of *Pimenta officinalis*; yields not less than 65% of phenols, chiefly eugenol. Carminative and flavor Syn., *allspice o.*
pine needle o. Dwarf pine needle oil.
pine o. Siberian fir oil.
pine tar o. See rectified tar oil.
poppyseed o. The fixed oil expressed from the seeds of *Papaver somniferum*. It contains none of the alkaloids of opium. British Pharmacopoeia requires that it be used in preparing the official iodized oil, obtained by treating the oil with hydriodic acid.
ptychotis o. See ajowan
rectified birch tar o. (*oleum betulae empyreumaticum rectificatum*) The pyroligneous oil obtained by dry distillation of the wood and bark of *Betula pendula* and related species.
rectified turpentine o. (*oleum terebinthinae rectificatum*) May be prepared by redistilling turpentine oil after mixing with solution of sodium hydroxide. A carminative in flatulent colic, stimulant expectorant, and rubefacient. As an enema with soapy water it is used as strong cathartic. Dose, 0.3–0.6 cc. (5–10 min.)
rock o. Petroleum.
rose geranium o. An odorous volatile oil from *Pelargonium graveolens*, *P odoratissimum*, and other species.
rosemary o. The volatile oil distilled with steam from the fresh flowering tops of rosemary Contains at least 1.5% of esters calculated as bornyl acetate and 10% of total borneol, free and as esters. Used as carminative and in rubefacient liniments. Dose, 0 2–0.4 cc. (3–6 min.)
rose o. (*oleum rosae*) The volatile oil distilled with steam from the fresh flowers of *Rosa gallica*, *R. damascena*, *R. alba*, and *R. centifolia*, and varieties of these species; perfume and flavoring agent also called *otto of rose*, *attar of rose*
Russian o. A liquid petrolatum obtained originally from Russia and consisting chiefly of naphthenes of the general formula C_nH_{2n}. These derivatives of cyclopentane and cyclohexane are said

to emulsify more readily and thus cause less leakage than product composed of members of the paraffin series. Certain American wells yield similar product.

sandalwood o. (*oleum santali*) The volatile oil from the heart wood of *Santalum album*. Contains chiefly santalol and santalyl acetate. Used in gonorrheal urethritis as mild antiseptic. **Australian sandalwood oil** is obtained from *Eucarya spicata* (*Santalum spicatum*) Syn., *santal o.*

sapucainha o. A fixed oil derived from *Carpotroche brasiliensis*, containing hydnocarpic, chaulmoogric, gorlic (dehydro-chaulmoogric) palmitic, and oleic acids. It is used in leprosy

sassafras o. (*oleum sassafras*) The volatile oil from the roots of *Sassafras albidum*. Contains about 80% of safrol. A carminative and antiseptic. Toxic in overdose. Dose, 0.12–0.4 cc. (2–6 min.)

savin o. A strongly irritant volatile oil from *Juniperus sabina* which has been used as an emmenagogue. Its action is said to arise from systemic poisoning and not from specific effect.

sesame o. (*oleum sesami*) A fixed oil obtained from the seed of one or more cultivated varieties of *Sesamum indicum*, occurs as pale yellow oily liquid. It is semidrying oil. Contains about 75% of olein with smaller amounts of the glycerides of linoleic, palmitic, stearic, and myristic acids. Used for pharmaceutical purposes, especially as solvent for certain hormones. Syn., *teel benne o.*

Siberian fir o. (*oleum abietis*) A volatile oil from the leaves of *Abies sibirica*, containing about 40% of bornyl acetate. An expectorant in chronic bronchitis.

soy o. The fixed oil obtained from the soybean pale-yellow to brownish-yellow liquid consisting of glycerides of oleic, linoleic, linolenic, palmitic, and stearic acids, used in the manufacture of paints and soaps, also as food. Also written *soya soybean o.*

spearmint o. (*oleum menthae viridis*) The volatile oil from the overground parts of the flowering plant of *Mentha spicata*, yielding at least 50% of carvone. A flavor

spike o. The volatile oil from the European lavender *Lavandula latifolia*. Also called *spike lavender*

spruce o. A volatile oil from the hemlock spruce, *Tsuga canadensis*. Has been used in veterinary liniments.

star anise o. The volatile oil from *Illicium verum*. See anise o.

stone o. Petroleum.

sweet birch o. The volatile oil from the bark of *Betula lenta*, consisting principally of methyl salicylate.

sweet o. Olive oil

tar o. See rectified *tar* oil.

teaberry o. The volatile oil from the leaves of *Gaultheria procumbens*, consisting essentially of methyl salicylate. Syn *wintergreen*

teel o. Sesame oil.

theobroma o. (*oleum theobromatis*) A yellowish white solid consisting chiefly of the glycerides of stearic, palmitic, oleic, and lauric acids, obtained from the roasted seeds of *Theobroma cacao*. It melts between 30° and 35° C. and is used in the preparation of suppositories, in ointments, and as an emollient. Also called *cacao butter*

thuja o. Cedar leaf oil

thyme o. A volatile oil from the flowering plant of *Thymus vulgaris*; it yields not less than 20% of phenols, chiefly thymol.

tung o. The fixed oil obtained from seeds of *Aleurites cordata*; pale yellow liquid used in paints and varnishes and for other industrial uses.

turpentine o. (*oleum terebinthinae*) The volatile oil distilled from the oleoresin obtained from *Pinus palustris* and other species of *Pinus* which yield exclusively terpene oils. Also called *turpentine spirits*.

volatile o. Oil characterized by volatility variously obtained from tissues of certain plants, particularly odoriferous ones. The oil may exist as such in the plant or may be formed during the process of obtaining it, as by hydrolytic or pyrolytic action. Volatile oils may contain variety of chemical compounds, e.g. hydrocarbons, alcohols, ethers, aldehydes, ketones, acids, phenols, esters, and sulfur and nitrogen compounds. Syn., *essential oil*.

wheat germ o. An oil obtained from the embryo of choice *Triticum vulgare*. A group of chemically related substances have been separated from this oil, to which were given the name tocopherols; they possess the activity of vitamin E. One of these, α-tocopherol, is especially active biologically It is suggested that wheat germ oil has field of application in habitual and in threatened abortion.

white mineral o. Liquid petrolatum.

wintergreen o. Teaberry oil.

wood o. Dipterocarpus oleoresin; gurjun balsam.

ylang ylang o. A volatile perfume oil obtained from the flowers of the southern Asiatic tree, *Cananga odorata*.

oil red O An acid monoazo dye; fat stain; it stains more intensely and more quickly than Sudan III.

oil sac'are (*oleosacchara*) Preparations made by triturating 100 Gm. of sucrose with 2 cc. of the prescribed oil.

oi no ma'ni a [G *oinos*, wine; *mania*, madness] 1 A form of mental disorder characterized by an irresistible craving for and consequent indulgence in, drink. 2. Delirium tremens.

oint'ment [L. *unguentum*, ointment] A semisolid preparation used for protective and emollient effect or as vehicle for the local or endermic administration of medicaments. Ointment bases are composed of various mixtures of fats, waxes, animal and vegetable oils, and solid and liquid hydrocarbons, or in the so-called washable or water-soluble bases, there may be from 50 to 75% of water incorporated into an emulsified product. For ointments not listed here, see under qualifying word or most important ingredient

ammoniated mercury o. Contains 5% ammoniated mercury in base of liquid petrolatum and white ointment. Syn., *white precipitate o.*

basilicon o. Rosin cerate.

benzoic and salicylic acid o. (*unguentum acidi benzoici et salicylici*) The U.S.P. XV preparation contains 6% of benzoic acid and 3% of salicylic acid. An antiparasitic. Syn., *Whitfield compound benzoic acid o.*

calomel o. Mild mercurous chloride ointment.

citrine o. Mercuric nitrate ointment.

compound benzoic acid o. See benzoic and salicylic acid o.

diachylon o. Lead oleate ointment.

Hebra's itch o. Compound sulfur ointment.

hydrophilic o. An official oil-in-water type of ointment base, containing stearyl alcohol, white petrolatum, propylene glycol, polyoxyethylene stearate, and water preserved with methylparaben and propylparaben.

lead oleate o. Contains 50% lead oleate plaster 49% white petrolatum, 1% lavender oil. Syn., *diachylon*

mercurial o. Two forms are official: **mild m. o.** contains 10% mercury and is applied in pediculosis pubis. **strong m. o.** contains 50% mercury and has been used as an antisyphilitic inunction.
mercuric nitrate o. Represents approximately 11% of mercuric nitrate in lard base. Syn., *citrine o.*
mild mercurous chloride o. Contains 30% mild mercurous chloride in base of hydrous wool fat and white petrolatum; used as an antiseptic. Syn., *calomel o.*
protective o. *In military medicine,* substance used by service personnel for protection against blister-gas burns and for limited decontamination of the person and, in emergency, of equipment.
simple o. White ointment.
stainless iodized o. (*unguentum iodatum denigrescens*) Prepared from iodine, oleic acid, paraffin, and petrolatum. No free iodine is present. Its value for any purpose is questionable. Also called *stainless iodine ointment.*
white o. (*unguentum album*) An official ointment base containing 5% of white wax and 95% of white petrolatum; also called *simple o.*
white precipitate o. Ammoniated mercury ointment.
Whitfield's o. Benzoic and salicylic acid ointment.
Wilkinson's o. Compound sulfur ointment.
yellow o. (*unguentum flavum*) An official ointment base containing 5% of yellow wax and 95% of petrolatum.
zinc o. Zinc oxide ointment.

Oken, Lorenz [German naturalist and physiologist, 1779–1851]. Remembered for his description of the Wolffian body; also called *Oken body.*

-ol. *In organic chemistry,* suffix denoting an alcohol or phenol, both characterized by the presence of the —OH group.

O. L. A. *Occipitolaevoanterior:* left occipitoanterior position of the head of fetus in labor.

o'le-a. Plural of *oleum.*

o"le-ag'i-nous (o"lee-adj'i-nus) [L. *oleaginus,* of the olive-tree]. Oily.

o"le-an'der. See *nerium.*

o"le-an'drin. See *folinerin.*

o"le-an"o-lic ac'id. $C_{30}H_{48}O_3$; pentacyclic carboxylic acid occurring both free and as esters or glycosides in many plants. Identical with caryophyllin.

o'le-ate [L. *olea,* olive-tree]. 1. A salt of oleic acid. 2. A pharmaceutical preparation made by solution of medicinal ingredients in oleic acid.

o"le-cra"non-ar"thri'tis (o"li-kray"non-ahr-thry'tis, o-leck"ra-nahr-thry'tis) [*olekranon;* G. *arthritis,* arthritis]. Inflammation of the elbow joint.

o"le-cra-non-arthrac'-ce (o"li-kray"nahr-throck'ah-see, o-leck"ra-nahr-) [*olekranon;* G. *arthron,* joint; *kakē,* badness]. Inflammation of the elbow joint.

o"le-cra-non-arthrop'athy (o"li-kray"nahr-throp'uth-ee, o-leck"ra-nahr-) [*olekranon; arthron;* G. *pathos,* disease]. A disease of the elbow joint.

o-lec"ra-noid [*olekranon;* G *eidos* form]. Resembling or pertaining to the olecranon, as the olecranoid fossa, the fossa at the dorsal side of the distal end of the humerus for the reception of the olecranon.

o-lec'ra-non, o"le-cra'non [*olekranon*]. The large process at the upper extremity of the ulna. —**olec'ranal,** *adj.*

o-lef'i-ant gas (o-lef'ee-unt, o"lee-fee-unt, o"li-fish'un). Old term for ethylene.

o'le-fine (o'li-feen) **o'le-fin** (o'li-fin). Any member of the ethylene series of hydrocarbons: unsaturated compounds of the general formula C_nH_{2n}.

o-le'ic ac'id (o-lee'ick, o'lee-ick) (*acidum oleicum*) An unsaturated acid, $CH_3(CH_2)_7CH{:}CH(CH_2)_7COOH$, obtained from fats and fixed oils. Brownish yellow oily liquid insoluble in water; miscible with alcohol. Used in the preparation of oleates and ointments.
o. a. series. Unsaturated fatty acids having one double bond and corresponding to the general formula, $C_nH_{2n-1}COOH$.

o'le-in. Glyceryl oleate, $(C_{17}H_{33}COO)_3C_3H_5$; the chief constituent of olive oil and occurring in varying amounts in most other fixed oils. A colorless or yellowish, tasteless, and odorless oil; insoluble in water. Solidifies at −4 to −5° C. Syn., *triolein.*

o'le-o- [L. *oleum,* oil]. 1. A combining form meaning *oil.* 2. *In chemistry,* combining form signifying *olein, oleic.*

ole-o-bi. Trade-mark for suspension of bismuth oleate in olive oil representing 5% of Bi. The substance is used as an antisyphilitic.

o"le-o-mar'ga-rine [*oleum,* F. from G. *margaron,* pearl]. A butter substitute made by hydrogenation of mixture of vegetable oils.

o"le-om'e-ter 1. A hydrometer used to determine the specific gravity of oils, or calibrated in the range of specific gravity of oils. 2. An apparatus for determining the content of oil in a material.

o"le-op'tene. See *elaeoptene.*

o"le-o-res'in (o"lee-o-rez'in) [*oleum,* L. *resina,* resin]. A substance consisting chiefly of mixture of an oil, either fixed or volatile, and resin, sometimes with other active constituents, extracted from plants by means of volatile solvent.

o"le-o-sac'cha-rum (o"lee-o-sack'uh-rum) [*oleum,* G. *sakchar,* sugar]. Oil sugars. Prepared by triturating 100 Gm. of sugar with 2 cc. of the prescribed oil.

o"le-o-ther'apy [*oleum,* G. *therapeia,* treatment]. The treatment of disease by the administration of oils. Also called *elaeotherapy.*

o"le-o-tho'rax [*oleum;* G. *thōrax,* thorax]. A condition in which the lung is compressed in tuberculosis by using injections of sterile oil.

o"le-o-vi'ta-min [*oleum,* vitamin]. A solution of vitamin in oil.
o. A (*oleovitamina A*) Fish-liver oil or an oil solution containing not less than 50,000 U.S.P. units (15 milligrams) of vitamin A and not more than 500 U.S.P. units (12.5 micrograms) of vitamin D per gram.
o. A and D (*oleovitamina A et D*) A fish-liver oil or edible vegetable-oil solution of vitamins A and D.
synthetic o. D (*oleovitamina D synthetica*) A solution of activated ergosterol (vitamin D_2, calciferol, viosterol) or activated 7-dehydrocholesterol (vitamin D_3) in an edible vegetable oil. It contains not less than 10,000 U.S.P. units (250 micrograms) of vitamin D per gram.

o'le-um (pl. *olea*) [L.]. 1. Oil. 2. Fuming sulfuric acid: solution of sulfur trioxide in concentrated sulfuric acid.

o'le-yl al'co-hol. $CH_3(CH_2)_7CH{:}CH(CH_2)_7CH_2OH$. The commercial product is mixture of aliphatic alcohols consisting chiefly of oleyl alcohol, *cis*-9-octadecen-1-ol, an oily liquid, insoluble in water but soluble in various organic liquids. It is used as an emulsifying aid in formulation of dermatologic and cosmetic preparations. See *ocenol.*

ol-fac'tion [L. *olfacere,* to smell]. The function of smelling. —**olfactory,** *adj.*

ol"fac-tom'e-ter [*olfacere;* G. *metron,* measure]. An instrument for determining the power of smell.

ol-fac'to-ry es-the"si-o-neu"ro-ep-i-the"li-o'ma. See olfactory *neuroepithelioma.*

ol-fac'to-ry nerve. See under *nerve.*

ol·ib′a·num [Ar. *al-lubān*]. A gum resin produced by various species of *Boswellia*. Has been used as substitute for Peruvian and tolu balsams, as an inhalation in laryngeal and bronchial inflammations, for fumigation, and in plasters. Syn., *frankincense*.

ol″i·ge·mi·a (ol″i-ghee′mee-uh) [G. *oligos*, little; *haima*, blood]. A state in which the total quantity of the blood is diminished. See *hydremia*.

ol″i·ger·ga·si·a (ol″i-ghur-gay′shuh, -see-uh, -zhuh, -zee-uh) [*oligos*; G. *ergasia*, work]. *In psychiatry*, Adolf Meyer's term for all types of feeblemindedness and mental deficiency.

ol″ig·hid′ri·a (ol″ig-hid′ree-uh, -high-dree-uh, ol″i-ghid′ree-uh), **ol″i·gid′ri·a** (ol″i-ghid′ree-uh, -jid′ree-uh) [*oligos*; G. *hidrōs*, perspiration]. Deficiency of perspiration.

ol″ig·hy′dri·a (ol″ig-high′dree-uh, -hid′ree-uh, ol″i-ghid′ree-uh) [*oligos*; G. *hydōr*, water]. Deficiency of the fluids of the body.

ol′i·go-, olig- [*oligos*]. A combining form meaning *few, scant*; used in medicine to denote *deficiency*.

ol″i·go·am·ni·os. Oligohydramnios.

ol″i·go·blen′ni·a [*oligos*; G. *blenna*, mucus]. A deficient secretion of mucus.

ol″i·go·cho′li·a (ol″i-go-ko′lee-uh) [*oligos*; G. *cholē*, bile]. A deficiency of bile.

ol″i·go·chro·me′mi·a (ol″i-go-kro-mee′mee-uh) [*oligos*; G. *chrōma*, color; *haima*, blood]. A decreased amount of hemoglobin in the red cells, which present a pale appearance.

ol″i·go·chro·me′mi·a [*oligos*; *chrōma*; G. *haima*, blood]. Deficiency of hemoglobin in the blood.

ol″i·go·chy′li·a (ol″i-go-kigh′lee-uh) [*oligos*; G. *chylos*, juice]. Deficiency of chyle.

ol″i·go·cy·the′mi·a (ol″i-go-sigh-thee′mee-uh) [*oligos*; G. *kytos*, cell; *haima*, blood]. A reduction in the total quantity of erythrocytes in the body.

ol″i·go·cy·the′mic nor″mo·vo·le′mia (ol″i-go-sigh-thee′mick, -them′ick). A normal blood volume with a decrease in red cells.

ol″i·go·dac′ry·a [*oligos*; G. *dakryon*, tear]. Deficiency of the tears.

ol″i·go·dac·tyl′i·a [*oligos*; G. *daktylos*, finger]. A condition characterized by a deficiency of fingers or toes.

ol″i·go·den·dro·blas·to′ma [*oligos*; G. *dendron*, tree; *blastos*, germ; *-ōma*, tumor]. A glial tumor similar to the oligodendroglioma, but composed of somewhat larger cells showing more cytoplasm, larger nuclei with less dense chromatin, and mitotic figures.

ol″i·go·den′dro·cyte [*oligos*; *dendron*; G. *kytos*, cell]. See *oligodendroglia*.

ol″i·go·den·drog′li·a [*oligos*; *dendron*; G. *glia*, glue]. Small supporting cells of the nervous system, located about the nerve cells, between nerve fibers (perineural satellites) and along blood vessels (perivascular satellites) and characterized by spheroidal or ovoid nuclei and fine cytoplasmic processes with secondary divisions. Syn., *oligodendrocyte*, *oliglia*.

ol″i·go·den·dro·gli·o′ma (ol″i-go-den-dro-glye-o′muh, -den-drog″lee-o′muh) [*oligos*; *dendron*, *glia*, G. *-ōma*, tumor]. A slowly growing glioma of cerebrum, rarely of septum lucidum, fairly large and well defined, with a tendency to focal calcification. Microscopically most of the cells are small, with richly chromatic nuclei and scanty poorly staining cytoplasm without processes or neuroglia. Astrocytes in various stages of differentiation are often present. Also called *oligodendrocytoma*, *oligodendroma*.

ol″i·go·den·dro·gli″o·ma·to′sis [*oligos*; *dendron*; *glia*, *-oma*, G. *-ōsis*, condition]. Diffuse dissemination of oligodendroglioma tumor tissue through the leptomeninges and, sometimes, also into the ependymal lining of the cerebral ventricles.

ol″i·go·den·dro′ma. See *oligodendroglioma*.

ol″i·go·don′ti·a [*oligos*; G. *odous*, tooth]. The condition of having few teeth.

ol″i·go·dy·nam′ic (ol″i-go-dye-nam′ick, -di-nam′ick) [*oligos*; G. *dynamis*, power]. 1. Active in small quantities. 2. Pertaining to toxic effects produced by direct contact of cells with minimal quantities of metals.

ol″i·go·el′e·ment. An element which, though present in low concentration, possesses a relatively high degree of activity.

ol″i·go·ga·lac′ti·a (ol″i-go-ga-lack′tee-uh, -shee-uh) [*oligos*; G. *gala*, milk]. Deficiency in the secretion of milk.

ol″i·go·gen′ic [*oligos*; G. *gennaein*, from *gignesthai*, to be produced]. Referring to hereditary characters which are determined by one or a few genes.

ol″i·go·gen′ics [*oligos*; *gennaein*]. Old term for birth control.

ol″i·gog′li·a. See *oligodendrocyte*.

ol″i·go·hy·dram′ni·os (ol″i-go-high-dram′nee-os) [*oligos*; G. *hydōr*, water; *amnion*, membrane around the fetus]. Deficiency of the amniotic fluid.

ol″i·go·hy′dri·a (ol″i-go-high′dree-uh, -hid′ree-uh). See *olighydria*.

ol″i·go·hy·dru′ri·a (ol″i-go-high-droor′ee-uh) [*oligos*; *hydōr*; G. *ouron*, urine]. Urine with relative diminution of water; highly concentrated urine.

ol″i·go·lec′i·thal (ol″i-go-les′i-thul) [*oligos*; G. *lekithos*, yolk]. Having little yolk. Syn., *meiolecithal*.

ol″i·go·ma′ni·a [*oligos*; G. *mania*, madness]. Mental disorder on only a few subjects. *Obs.*

ol″i·go·me′li·a [*oligos*, G. *melos*, limb]. Excessive congenital thinness of the limbs, or a deficiency in their number.

ol″i·go·men·or·rhe′a [*oligos*; G. *mēn*, month; *rhoia*, flow]. Abnormally infrequent menstruation distinguished from *hypomenorrhea*.

ol″i·go·nu′cle·o·tide. A depolymerization product of nucleic acid, characterized by a lower degree of aggregation of nucleotide units.

ol″i·go·phos″pha·tu′ri·a [*oligos*; G. *phōsphoros*, lightbringer; *ouron*, urine]. A decrease in the amount of phosphates in the urine.

ol″i·go·phre′ni·a [*oligos*; G. *phrēn*, mind]. Feeblemindedness; mental deficiency. —**oligophren′ic**, *adj.*

phenylpyruvic o. A mental deficiency associated with a metabolic disturbance wherein phenylalanine is not completely oxidized and phenylpyruvic acid accumulates. Syn., *phenylpyruvic amentia*. Also called *imbecillitas phenylpyruvica*.

ol″i·gop·ne′a (ol″i-gop-nee′uh, ol″i-gop-nee′uh) [*oligos*; G. *pnoē*, breath]. Respiration diminished in depth or frequency.

ol″i·go·psy′chi·a (ol″i-go-sigh′kee-uh, ol″i-gop-) [*oligos*; G. *psychē*, soul]. Mental deficiency. *Obs.*

ol″i·gop·ty′a·lism (ol″i-gop-ty′uh-liz-um, ol″i-go-) [*oligos*; G. *ptyalon*, saliva]. Deficient secretion of saliva.

ol″i·go·py′rene [*oligos*; G. *pyrēn*, stone of a fruit]. A term descriptive of abnormal sperm cells which contain only a part of the full complement of chromosomes. See *apyrene*, *eupyrene*.

ol″i·go′ri·a [G. *oligōria*, an esteeming lightly]. An abnormal apathy or indifference to persons or to environment, as in melancholia.

ol″i·go·sac′cha·ride. Any carbohydrate of a class comprising disaccharides, trisaccharides, tetrasaccharides, and, according to some authorities, pentasaccharides; so named because they yield on hydrolysis a small number of monosaccharides.

ol"i go si 'li (ol"i-go-sigh-ay'lee-uh, -al'ee-uh, -see-ay'lee-uh, -al'ee-uh) [G. *oligos*, little; *sialon*, saliva]. Deficiency of saliva.

ol"i go sper mi [*oligos*; G. *sperma*, seed]. Scarcity of spermatozoa in the semen.

ol"i go trich 'i (ol"i-go-trick ee-uh) [*oligos*; G *thrix*, hair]. Scantiness or thinness of hair

ol"i go zo o sper'mi [*oligos*; G *zōon*, animal; *sperma*, seed]. Deficiency of the spermatozoa in the spermatic fluid.

ol"i gu-re sis. See *oliguria*.

ol"i gu'ri [*oligos*; G. *ouron*, urine]. A diminution in the quantity of urine excreted.

ol"i gyd'ri a. See *oligohydria*.

o-lis"thet o-chro mo tin. The material found in the constricted portion of chromosome.

lis ther-o-zone [*olisthēros*; G. *zōnē*, belt]. An area of constriction of chromosome, important in identification of chromosomes.

ol'ive [L. *oliva*, from G. *elaia*]. 1. The oil tree, *Olea europaea*, of the Oleaceae. The value of the olive lies chiefly in its fruit, from which fixed oil (live oil) is expressed. Olive oil consists chiefly of olein and palmitin, and is used as utritive food; in medicine as laxative; as an emollient external application to wounds or burns, and as an ingredient of liniments, ointments, and plasters. Formerly used in the treatment of gallstones and as an anthelmintic. 2. The inferior olivary nucleus. 3 An oval eminence on the anterior ventrolateral surface of the medulla oblongata; it marks the location of th inferior olivary nucleus, which lies just beneath the surface. —**olivary** *adj*

accessory o. One of two small masses of gray matter: ( ) the medial cessory olivary nucleus, lying medial to the inferior olive, and (b) the dorsal accessory olivary nucleus, lying dorsal to the inferior olive.

inferior o. See inferior olivary *nucleus*.

superior o. A small mass of gray matter situated on the dorsal surface of the lateral part of the trapezoid body of the pons immediately bove the inferior olive.

Oliver George [*English physician*, 1841 1915]. Discovered, with Sharpey-Schafer the existence of an adrenal pressor substance (1894) later named epinephrine by Abel. Devised test for albumin in urine; called *Oliver' test*.

Oliver William Silver [*English physician*, 1836–1908]. Described palpation of the larynx elicited by grasping it between the thumb and index finger while the patient is erect it is indicative of aneurysm of the aortic arch or certain mediastinal tumors; called *Oliver sign*, *Oliver-Cardarelli' symptom*.

ol"i vif'u gal [L. *oliva*, from G. *elaia*; *fugere*, to flee]. In direction way from the inferior olivary nucleus.

ol"i vip tal [*oliva*; L. *petere* to seek]. Toward the inferior olivary nucleus.

ol"i vo-pon"to-cer-e-bel'lar Pertaining to the inferior olivary ucleus, pons, and cerebellum.

Ollier Léopold Louis Xavier Edouard [*French surgeon*, 1830–1900] Described dyschondroplasia (1889); also called *Ollier' disease* Introduced intermediate-thickness kin grafts (1872) called *Ollier' grafts, method*. Later the method was modified by Carl Thiersch and called *Ollier-Thiersch method*. The method of skin grafting per fected by Ollier and Thiersch consisted of sheets of epidermis only or of all skin elements removed from the donor area with razor knife, or in later years by mechanically operated contrivance or dermatome and held or sutured in place upon the skin defect. Ollier devised operations for excision of the elbow for excision of the knee, for excision of the scapula, and for excision of the shoulder each of hich was once called *Ollier' operation*.

-ol' gy [G *logos*, word]. A combining form signifying *science*, or *special line of study*.

ol"o-pho ni a [G. *oloos*, destructive *phōnē*, voice]. Abnormal speech due to malformation of the vocal organs.

O. L. P Abbreviation for *occipitolaeroposterior* the left occipitoposterior position of the head of the fetus in labor

Olshausen, Robert von [*German gynecologist*, 1835–1915] Said to have been the first to perform the operation of suturing the round ligaments and portion of the broad ligaments to the abdominal wall for the relief of retrodisplacement of the uterus (1886); called *Olshausen operation*. Described operation of vaginectomy or extirpation of the vagina (1895)

lym pi fore'head. The bnormally high and vaulted forehead seen in children with congenital syphilis.

-o ma [G tumor]. A suffix signifying morbid *faction*, usually tumorlike nodule or swelling

ma-ceph lus [G *ōmos*, shoulder; a- not; *kephalē*, head]. A placental parasitic twin in which there is imperfect development of the head and absence of pper extremities

ma gra (may gruh, o-mag'ruh, mag-ruh) [*ōmos*; G *agra*, seizing]. Gout in the shoulder

mar thral'gi a [*ōmos*; G *arthron*, joint; *algos*, pain]. Pain in the shoulder joint.

mar thri'tis [*ōmos*; G *arthritis*, arthritis]. Inflammation of the shoulder joint.

o mar thro c'a-ce (mahr-throck uh-see) [*ōmos*; G *arthron*, joint; *kakē*, badness]. Disease of the shoulder joint. *Obs.*

ma sum [L., bullock' tripe]. The third compart ment of the stomach of ruminant. Also called *manyplies*, *psalterium*.

m"bro-pho'bi-a [G *ombros*, rain; *phobos*, fear]. A morbid fear of rain.

men tec'to my [L. *omentum*, membrane which encloses the bowels G. *ektomē*, excision] Excision of portion of the omentum; omentumectomy

o-men"to-fix 'tion. See *omentopexy*

men to pex y [*omentum*; G *pēxis*, fixing]. The surgical operation of suspending the great omentum, by suturing it to the abdominal wall.

men tor' ha phy [*omentum*; G *rhaphē*, suture]. Suture of an omentum.

o-men'tum [L.] Apron; fold of the peritoneum connecting the bdominal viscera with the stomach. —**omental**, *adj*

gastrocolic o. See great *o*.

gastrohepatic o. See lesser *o*.

gastrosplenic o. The gastrosplenic ligament.

great o. A fold of peritoneum attached to the greater curvature of the stomach bove and, after dipping down over the intestine returning t fuse with the transverse mesocolon. Between the ascending and descending folds is the cavity of the great omentum. Also called *gastrocolic* See Plate 8.

lesser o. A fold of peritoneum passing from the lesser curvature of the stomach to the transverse fissure of the liver On the right its edge is free and encloses all the structures issuing from or entering the transverse fissure of the liver portal vein, hepatic artery bile duct, nerves and lymphatics. Behind the free edge is the epiploic foramen. Also called *gastrohepatic o*.

omen"tum-ec't my (o-men tuh-meck'to-mee) [*omentum*, *ektomē*]. The surgical excision of any portion of the great omentum; omentectomy

mi'tis [G *ōmos*, shoulder; *-itis*, inflammation]. Inflammation of the shoulder *Obs.*

om ma tid'i um (pl. *ommatidia*) [L., from G. *ommatidion* dim. of *omma*, eye]. One of the functional prismatic units of compound eye, as in most arthropods.

omnadin. Trade-mark for brand of prolipin, sterile solution of protein obtained from nonpathogenic bacteria, various animal fats, and lipoids derived from bile. The substance is used for nonspecific lipoprotein therapy.

omni-beta. Trade-mark for vitamin B complex preparation in elixir and capsule form.

om niv o rous [L. *omnivorus*, all-devouring]. Subsisting on all kinds of food.

o mo-, **om-** [G. *ômos*, shoulder]. A combining form meaning *the shoulder*.

o mo-cer vi ca'lis. The levator claviculae muscle.

o mo hy'oid [*ômos*; G. *hyoeidēs*, shaped like the letter upsilon]. Pertaining conjointly to the scapula and the hyoid bone, as the omohyoid muscle, which is attached to these bones. See Table of Muscles in the Appendix.

o mo-ver te bral. Pertaining to the scapula and vertebrae.

OMPA. Abbreviation for octamethyl pyrophosphoramide.

om"pha lec to-my [G. *omphalos*, navel; *ektomē*, excision]. Excision of the navel.

om phal'ic [*omphalos*]. Pertaining to the umbilicus, as the omphalomesenteric duct or vitelline duct that which connects the yolk sac with the fetal intestine during the first three months of intrauterine life.

om pha li'tis [*omphalos*; G. *-itis*, inflammation]. Inflammation of the navel.

om pha lo-, **omphal-** [*omphalos*]. A combining form meaning *the navel, umbilicus*.

om"pha lo an"gi op a gus [*omphalos*, G. *aggeion*, vessel; *pagos*, that which is fixed]. See *omphalosite*. —**omphaloangiopagous**, *adj.*

om phal'o-cele (om fal o-seel, om fuh lo-). See under umbilical *hernia*.

om"pha lo-cho ri-on (om fuh lo-kor ee on) [*omphalos*; G. *chorion*, chorion]. A chorion, or that part of one supplied by the omphalomesenteric blood vessels of the yolk sac. Also called *chorion omphaloideum*, *yolk sac placenta*.

om pha lo-cra"ni-o did'y mus [*omphalos*; G. *kranion*, skull; *didymos*, twin]. A double monster in which the parasite is attached to the cranium of the autosite by an umbilical cord.

om"pha lo did'y mus. Gastrodidymus.

om"pha lo-gen' sis [*omphalos*; G. *genesis*, production]. The development of the yolk sac.

om"pha lo mes"en ter'ic [*omphalos*; G. *mesenterion*, membrane to which the intestines are attached]. Pertaining conjointly to the umbilicus and mesentery, as the omphalomesenteric artery.

om"pha lo-mon"o-did'y mus [*omphalos*; G. *monos*, alone; *didymos*, twin]. A twin monster in which the fetuses are joined at the umbilicus.

om pha lop -gus [*omphalos*, G. *pagos*, that which is fixed]. A double monster united at the umbilicus. Syn., *gastrodidymus*.

om"pha lo-prop t sis [*omphalos*; G. *proptōsis*, a fall forward]. Abnormal protrusion of the navel.

om'pha los [G.]. The umbilicus.

om phal'o-site, om pha lo-site [*omphalos*; G. *sitos*, food]. The parasitic member of asymmetric uniovular twins. The parasite has no heart, or only al one, deriving its blood supply from th f the more or less normal t in (autosit ... ocental *parasite*, *acardius*, *omphaloang* ... *rioangiopagus*, *allantoidoangiopa*... gou ... *eole*.

m p ... [*omphalos*; G. *sōtēr*, preserver]. An instrument for replacing prolapsed umbilical cord.

om pha lo tax'is [*omphalos*; G. *taxis*, arrangement]. Reposition of the prolapsed umbilical cord.

om phal' tome [*omphalos*, G. *tomos*, cutting]. An instrument for dividing the umbilical cord.

om pha lot'o-my [*omphalos*; G. *tomē*, cutting]. The cutting of the umbilical cord.

om pha lo trip sy [*omphalos*; G. *tripsis*, rubbing]. Separation of the umbilical cord by crushing instrument.

o nan ism [*Onan*, son of Judah]. 1. Incomplete coitus; coitus interruptus. 2. Masturbation. —**o nan ist**, *n.*

Onanoff's reflex. See under *reflex*.

on cho- (ong'ko-). See *onco-*.

On cho-cer'ca [G. *ogkos*, mass; *kerkos*, tail]. A genus of filarial worms.

O. caecutiens. Synonym for *O. volvulus*.

O. volvulus. A species which infests man, forming fibrous nodular tumors with encapsulation of the adult worms in the subcutaneous connective tissue and often causing severe ocular disease when microfilariae invade the tissues of the eye.

on" ho-cer-ci'a si (ong"ko sur-sigh uh-sis, -kigh uh-sis) [*ogkos*; *kerkos*; NL. *-iasis*, condition]. Infestation with the filarial worm *Onchocerca volvulus*; produces tumors of the skin, papular dermatitis, and ocular complications in man. Syn., *blinding filaria*.

on cho-cer-co ma. The fibrous nodular lesion of onchocerciasis which contains the adult worms (*Onchocerca*) usually located at sites at which bone is close to the surface.

on cho-cer-co sis. Onchocerciasis.

on cho der ma ti'tis. Onchocerciasis; specifically the cutaneous manifestations of it.

on co-, **oncho-** [*ogkos*]. A combining form meaning *bulk*; used in medicine to denote *tumor*.

on co cyt [*ogkos*; G. *kytos*, cell]. Columnar-shaped cells with granular eosinophilic cytoplasm, found in salivary and certain endocrine glands, nasal mucosa, and other locations; they represent dedifferentiation of parenchymal cells and may occur singly or in aggregates (oncocytomas).

on co-cy t ma, **on ko-cy to-ma.** Rare tumor occurring primarily in the parotid gland but also in the submaxillary, hypophysis, thyroid, and other locations, composed of oncocytes, which may be in lymphoid stroma.

on gen -sis [*ogkos*; G. *genesthai*, from *gignesthai*, to be produced]. The process of tumor formation. —**oncogenic**, *adj.*

on'co graph [*ogkos*; G. *graphein*, to write]. An instrument that records the changes of volume of an organ in an oncometer.

on cog'ra phy [*ogkos*; *graphein*]. The recording of measurements by an oncometer.

on-col'o-gy [*ogkos*; G. *logos*, word]. The study or science of neoplastic growth.

On"co-me-la ni-a. A genus of amphibious snails.

O. hupensis. A species found in the Yangtze basin; one of the intermediate hosts of *Schistosoma japonicum*.

O. hydrobiopsis. A species found in Leyte and other of the Philippine Islands; an intermediate host of *Schistosoma japonicum*.

on com ter [*ogkos*; G. *metron*, measure]. An instrument for measuring variations in the volume of an organ, as of the kidney or spleen, or of an extremity.

on com try [*ogkos*; *metron*]. Measurement by means of an oncometer. —**oncomet'ric**, *adj.*

on co sis. Any condition marked by the development of tumors. —**oncot'ic**, *adj.*

on'co-sphere [onkos; G. sphaira, sphere]. The hexacanth embryo of tapeworms.

-one [G. -onē, indicating female descendant]. A suffix in organic chemistry meaning ketone.

o-nei"rism (o-nigh'ris um) [G. oneiros, dream]. A cerebral automatism analogous to the dream state, as a dream prolonged to the waking period. —**oneir'ic**, adj.

o-nei"ro-dyn'i a (o-nigh ro din ee-uh) [oneiros; G. odynē, pain]. Disquietude of the mind during sleep; painful dreaming; nightmare. Obs.

o"nei-rog'mus (nigh-rog'mus) [G. effusion during sleep]. Seminal emission during sleep. Obs.

o"nei-rol'o gy [G. oneiros, dream; logos, word]. The science, or scientific view of dreams.

nei ron'o-sus [oneiros; G. nosos, disease]. Disorder manifesting itself in dreams; morbid dreaming.

o"nei ros co-py [oneiros; G skopein, to examine]. Diagnosis of mental conditions by the analysis of dreams.

one-min'ute de-na"tur tion val'ue. The percentage of fetal type of hemoglobin present in total hemoglobin of blood, obtained by the following method 0.1 cc of an approximately 10% stroma-free hemoglobin solution is exposed to 1 0 cc of 0.12 N NaOH solution for exactly 1 minute, after which 3 4 cc of reagent to precipitate the chromogens and to stop the denaturation process is added. This reagent consists of 1 cc 10 N HCl added to 400 cc of half-saturated $(NH_4)_2SO_4$ solution. After filtration the undenatured hemoglobin (type F) is determined by photoelectric colorimetry t 540 mμ, and its concentration is expressed as the percentage of the initial amount of hemoglobin.

o i oma ni [G onios, to be bought mania, madness] A mania for buying.

on'ion [L. unio kind of single onion]. The Allium cepa and its bulb. The latter contains volatile oil resembling garli oil and consisting principally of allyl sulfide, $(C_3H_5)_2S$. The onion has been used as diuretic and expectorant; locally it has been applied as rubefacient poultice.

on'ion-peel" der'ma tomes. The rrangement of the zones or segments of pain and thermal sensibility on the face; the zones have concentric arrangement centering about the mouth and nose and represent the primitive lamination of the spinal nucleus of the trigeminal nerve.

on-kin o-sis [G. onkos, mass; is, fiber; kēlē, tumor]. Inflammation of the tendon sheaths, attended by swelling. Rare.

on"ko-cy t sma. See oncocytoma.

on"o-mat"o-ma ni a [G onoma, name; mania, madness]. An irresistible impulse to repeat certain words

on"o-mat pho'bi [onoma; G. phobos, fear]. Morbid fear of hearing certain name

on" mat"o-poi-e sis [onoma; G poiesis, production] 1 The formation of words in imitation of sound 2 I psychiatry, the extemporaneous formation of words on the basis of sound association; frequent symptom of schizophrenia.

O no'nis [G] A genus of leguminous plants. The diuretic root of O. spinosa, restharrow shrub of Europe, is used in dropsy and gout. It contains saponaceous principles.

on-tog' ny on"to-gen e-sis (on todj'I nee) [G. on, pres part. of einai, to be genesthai, from gignesthai, to be produced]. The origin and development of the individual organism from fertilized egg to adult, as distinguished from phylogenesis, the evolutionary history of the race or group to which the individual belongs. —**ontogenet'ic**, adj.

on"y al'ai (on ee-al y nee-al' y-ee) An African disease of obscure origin Characterized by distended vesicles of mucous membranes of the cheeks and hard palate. The tongue is often swollen. The kin and mucous membranes show hemorrhages; there is anemia nd thrombocytopenia with prolonged bleeding but not prolonged clotting time hematuria may occur. Syn., tropical thrombocytopenia.

on"y-chal'gi-a ner vo'sa (on"I-kal"jah, -jee-uh, 'ah) Extreme sensitivity of apparently normal nails. Also called hyperesthesia unguium.

on"y-cha tro phi a (on"I kah-tro fee-uh, ni-kah) **on y-chat're-phy** [G onyx nail; atrophia, want of nourishment]. 1 Atrophy of nails. 2. Failure of development of the nail.

on y-chaux'is (on"I kawk'sis, ni) [onyx; G. auxein, to increase]. Hypertrophy of the nail.

on"y-chec'to my (on I keck'to-mee, ni) [onyx; G. ektomē excision]. Excision of fingernail or toenail.

on"y-chex"al lax'is (on"I-keck"sah lack'sis) [onyx; G exallaxis, alteration]. Degeneration of nails.

-nych'i a (o-nick'ee uh) [onyx]. Inflammation of the nail matrix.

o. craquelé. Fragility and fracture of the nail.

o. maligna. A form occurring in debilitated persons characterized by an ulcer in the matrix of the nail, which becomes discolored and is thrown off.

o. punctata. A nail characterized by umerous small, punctiform depressions.

o. simplex. Onychia without much ulceration, with loss of the nail and its replacement by new one.

o. superficialis undulata. A rare type seen in secondary syphilis, characterized by superficial waves and ripples across the nail.

on'y-chin (on' -kin) [onyx]. A hard substance found in nails; probably type of keratin.

on'y-cho- (on I-ko-) **onych-** [onyx]. A combining form meaning nail or claw.

on"y-cho-cla'sis (on I nock'lah-sis) [onyx; G. klasis, breaking]. Breaking of nail.

on"y-cho-cryp-to'sis [onyx; G kryptos, hidden; -osis, condition]. Ingrowing of nail. Syn., unguis incarnatus.

on"y cho-dys'tro-phy [onyx; G. dys- bad; trophē, nourishment]. Any distortion of nail; a symptom seen in several diseases.

on"y-cho-gen'ic [onyx; G gennaein, from gignesthai, to be produced]. Relating to the formation of the nails.

on"y-cho-gry phe sis (on"I-ko-grye fo'sis, -gi-fo' sis) Incorrect term for onychogryposis.

on"y cho-gry po sis (on -ko-grye-po sis, -gri-po' sis) [onyx; G. grypōsis crooking]. A thickened, ridged, and curved condition of nail.

on"y-cho-hel-co sis [onyx; G. helkōsis, ulceration] Ulceration of the nail.

on"y-cho-het er-o-to pi-a [onyx; G heteros, other; topos, place]. An anomaly consisting of the presence of abnormally situated nails, as on the lateral aspect of the terminal phalanges. Most often occurs on the little finger

on'y-choid (on'I-koyd) [onyx; G. eidos, form]. Resembling fingernail in form or texture.

on y-chol'y-sis (on"I-kol'I-sis) [onyx; G. lysis, loosing]. A slow process of loosening of nail from its bed, beginning at the free edge and progressing gradually toward the root.

on"y-cho'ma (on"I-ko'muh) [onyx; G. -ōma, tumor]. A tumor of the nail bed.

on"y-cho-ma-de sis [onyx; G. madēsis, loss of hair]. Spontaneous separation of nail from its bed beginning at the proximal end and progressing

rapidly toward the free edge until the nail plat falls off. Syn. *defluvium unguium.*

on y cho m la'ci a (on ko-ma lay shee-uh, -see-uh) [onyx; G. *malakia*, softness]. Abnormally soft nails.

on"y-cho my co sis (on i ko-migh-ko sis) [onyx; G. *mykēs*, fungus; *-ōsis*, condition]. A disease f the nails due to fungi.

on"y cho pac'i ty (on"i ko pas -tee) [onyx; L. *opacus*, shaded]. White spots within the nail. Syn. *leukonychia.*

on"y chop thy (on"i-cop uth-ee) [onyx; G. *pathos*, disease]. Any disease of the nails. —**onychopath'ic,** *adj.*

on y cho-pha gi a [onyx; G. *phagein*, to eat]. The habit of biting the nails t the free edge.

on"y-choph a gist (on"i kof'uh jist) [onyx; *phagein*]. One addicted to biting the fingernails.

on"y-cho phy ma [onyx; G. *phyma*, growth]. Disease of the nails.

on"y-chop-to sis (on -cop-to sis) [onyx; G. *ptōsis*, falling]. Downward displacement of the nails.

on"y-chor rhex'is (on i ko-reck sis) [onyx; G. *rhēxis*, bursting]. Longitudinal striation of the nail plate, with or without the formation of fissures.

on"y her rhi za [onyx; G. *rhiza*, root]. The root of the nail.

on"y-cho-schiz'i (on ko-skis ee-uh, -shis ee-uh) [onyx; G. *schizein*, to split]. An ungual dystrophy consisting of lamination of the nail in two or more superimposed layers.

on"y-cho-stro ma [onyx; G. *strōma*, m ttress]. The m trix or bed of the nail.

on y ch t"il l ma ni a (i eot i-l m y nee uh) [onyx; G. *tillein*, t pl ck; *mania*, madness]. The neurotic picking at nail until t is permanently altered.

on y chot o-my (on -cot' mee) [onyx; G. *tomē*, cutting]. Surgical incision into fingernail or toenail.

on yx (on'icks, nicks) [G.]. 1. A nail of the fingers or toes. 2. A collection of pus between the corneal lamellae at the most dependent part.

nyx i'tis, on yx i'ti [onyx; G. *-itis*, inflammation]. Onychia.

o o- (o-) [G. *ōion*, egg]. A combining form meaning an egg.

o"o-ceph a lus (o-sef'uh-lus). See *trigonocephalus.*

o-cyst [*ōion*, G. *kystis*, bladder]. The encysted zygote in the life history of some sporozoa. See *ookinete.*

-cyte [*ōion*, G. *kytos*, cell]. An egg cell before the completion of the maturation process. Its full history includes its origin from an oogonium, growth period, and the final meiotic divisions.

primary o. One in the growth phase preceding the first maturation division.

secondary o. One preceding the second maturation division.

o o-gen' sis [*ōion*, G. *genesis*, production]. The process of the origin, growth, and formation of the ovum in its preparation for fertilization. —**oogenet'ic,** *adj.*

o"o-go'ni um (pl. *oogonia*) [*ōion*, G. *gonos*, offspring]. 1. A cell which, by continued division, gives rise to oocytes. 2. An ovum in primary follicle immediately before the beginning of maturation.

ki-ne sis (o ki-nee sis, kigh-nee sis) [*ōion*, G. *kinēsis*, movement]. The mitotic phenomena in the egg cell during maturation and fertilization.

ki nete' (ki neet' kigh neet kin eet o-kin eet) [*ōion*, G. *kinetos*, to be moved]. The elongated, motile zygote in the lif history of some sporozoan parasites; as that of the malaria parasite as it bores through the epithelial lining of the mosquito intestine, in the wall of which it becomes an oocyst. —**ookinet'ic,** *adj.*

o-lem ma. See *zona pellucida.*

o-pho rec't my (o-fo-reck'to-mee, o-of'o-) [G. *ōiophoros*, bearing eggs; *ektomē*, excision]. Excision of an ovary.

bilateral partial o. Any partial removal of ovarian tissue from both varies.

o-pho-ri'tis [*ōiophoros*; G. *-itis*, inflammation]. Inflammation of an ovary.

o oph o-ro-, oophor- [*ōiophoros*]. A combining form denoting an ovary or ovarian.

-oph"o ro-cys tec'to my [*ōiophoros*; G. *kystis*, bladder; *ektomē*, excision]. Removal of an ovarian cyst.

o-oph"o-ro-cys to sis [*ōiophoros*; *kystis*; G. *-ōsis*, condition]. The formation of ovarian cysts.

o-oph o ro-hys"ter ec'to my [*ōiophoros*; G. *hystera*, womb; *ektomē*, excision]. Removal of the uterus and ovaries.

o oph o ro ma fol lic"u la're. See Brenner tumor.

o-oph"o-ro-ma la ci-a (o-off ro-ma lay shee uh, -see-uh) [*ōiophoros*; G. *malakia*, softness]. Softening of the ovary. *Rare.*

o-oph o ro-ma ni [*ōiophoros*; G. *mania*, madness]. Insanity due to ovarian disorder. *Obs.*

o-oph' ron [*ōiophoros*]. The vary.

o-oph ro-path'i [*ōiophoros*; G. *pathos*, disease]. Any disease of the ovary.

-oph'o-ro pex"y [*ōiophoros*; G. *pēxis*, fixed]. Surgical fixation of an ovary.

o-oph o-ro-plas"ty [*ōiophoros*; G. *plassein*, to form]. Plastic surgery on the ovary.

-oph"o-ro-sal"pin gec'to my [*ōiophoros*; G. *salpigx*, t be; *ektomē*, excision]. Excision of an ovary and oviduct.

o-oph" -ro-sal"pin gi'tis [*ōiophoros*; *salpigx*; G. *-itis*, inflammation]. Inflammation of an ovary and oviduct.

pho-ros't my [*ōiophoros*, G. *stoma*, mouth]. The establishment of an opening int an ovarian cyst for drainage. Also called *oophorocystostomy.*

o pher rha-phy [*ōiophoros*; G. *rhaphē*, suture]. Operation of suturing an ovary to the pelvic wall.

o o plasm [G. *ōion*, egg; *plasma*, anything formed]. The cytoplasm of the egg; it includes the yolk or deutoplasm, as well as the more active cytoplasm.

o o por'phy rin [*ōion*, G. *porphyra*, purple]. A porphyrin occurring in the pigment from the egg shells of certain birds.

o sperm [*ōion*, G. *sperma*, seed]. A fertilized egg; zygote.

O os'po ra [*ōion*, G. *spora*, seed]. A genus of fungi which reprod ce by mycelial fragmentation.

O madurae. Synonym for *Nocardia madurae.*

O minutissima. Synonym for *Nocardia minutissima.*

the oo-. For words beginning with *oothec-* see words beginning *ovario-* or *oophor-*

o-tid [*ōion*] The vum after the completion of the maturation divisions, by which one ootid and three polar bodies are found.

type [*ōion*, G. *typos*, impression]. A muscular dilatation of th oviduct of certain trematode worms, in which secretory cells furnish shell substance to the va.

o pac"i fi ca'tion (o-pas"i-fi kay shun) [L. *opacus*, shaded *facere*, to make]. 1. The process of becoming opaque. 2. The formation of an opacity.

o pac'i ty (o-pas'i tee) [*opacus*]. 1. The condition of being impervious to light. 2. An opaque spot, as opacity of the cornea or lens.

o"pal-es'cent [G. *opallios*, opal]. Showing play of colors; reflecting light iridescent.

o″pa·les′cin, o-pal′i·sin [opalize]. A protein found in milk; it forms opalescent solutions.

o-paque′ [L. opacus, shaded]. Dark; obscure; not transparent; impervious to light.

o-pel′lo-scope (·p· do-scope) [G. ops, voice; eidos, form; skopein, to examine]. An instrument for studying the vibrations of the voice.

open [AS.]. 1. Exposed to the air, as an open wound. 2. Interrupted, as an open circuit, one through which an electric current cannot pass.

o′pen·ing [open]. An orifice; hole or gap.
primary anal o. The orifice of the endodermal anal canal of the embryo.
saphenous o. An opening in the fascia lata at the upper part of the thigh through which passes the great saphenous vein; also called *fossa ovalis*.
secondary anal o. The definitive anal orifice formed by the growth of the external or ectodermal anal part of the cloaca.

op″er·a·bil′i·ty [L. operari, to work]. The qualities or state which permit surgical operation without the expectation of a fatal result.

op′er·a·ble [operari]. Admitting of an operation; referring to a condition where operation is not contraindicated.

op″er·a′tion [L. operatio, a working, from operari]. 1. Anything done or performed, especially with instruments; a surgical procedure by a surgeon in which the method follows a definite routine. 2. The mode of action of anything; the specific action of a drug. For operations not listed below, see under the qualifying word.
ablative o. One in which a part is removed.
anastomotic o. One where two hollow organs, vessels, or ducts are joined by suture so that their contents may flow from one to the other.
Blalock-Taussig o. See Alfred *Blalock*.
bloodless o. One performed with little or no loss of blood.
Brock o. Valvulotomy of a stenosed pulmonary valve.
capital o. One which may threaten life; a grave or serious operation.
compensating o. In *ophthalmology*, tenotomy of the associated antagonist in cases of diplopia from paresis of one of the ocular muscles.
cosmetic o. A surgical operation to improve the appearance of a defective or unsightly part.
crescent o. For lacerated perineum, involving the vaginal entrance only; a crescent-shaped denudation is made from the vulvovaginal entrance, the angles of which extend into the vulvovaginal sulci.
elective o. One in which the time for operation may be set in advance, as a tonsillectomy.
emergency o. One which must be done at once to save the patient from an extension of the disease or from death.
endaural o. A fenestration operation, called *Lempert*. See Julius *Lempert*.
exploratory o. One performed for the purpose of diagnosis, often an abdominal operation.
fenestration o. In *otology*, the establishment of a window in the horizontal semicircular canal, for the treatment of otosclerosis.
finger fracture o. of the mitral valve. One for the relief of mitral stenosis in which the finger of the operator is used to increase the size of the stenosed opening.
high o. The application of forceps to the fetal head at the superior strait.
interposition o. An operation occasionally performed in aged women for relief of cystocele and prolapse of the uterus, performed through vaginal incision. The body of the uterus is fastened below the urinary bladder and the pelvic floor is repaired.
interval o. One done between acute attacks of disease, as an interval appendectomy.
Judet′ o. Replacement of the head of the femur by an acrylic prosthesis to relieve arthritic deformans, congenital dislocation in the adult, pseudarthrosis of the femoral neck.
Keller o. Arthroplasty of the first metatarsophalangeal joint to correct hallux valgus or hallux rigidus.
major o. A capital operation.
minor o. An operation which does not threaten life; one in which there is little or no danger.
palliative o. One designed to make the patient more comfortable when the condition cannot be cured.
plastic o. A reconstructive operation.
Potts′ o. Side-to-side anastomosis of pulmonary artery and aorta in cases of tetralogy of Fallot.
prophylactic forceps o. The routine delivery by forceps in head presentations as soon as the head has come to rest on the pelvic floor.
radical o. One which seeks to extirpate or remove the causative factor of the disease or condition.
reconstructive o. One done to repair a defect, either congenital or acquired.
Semiramidian o. Castration. *Historical.*
shelf o. An arthroplastic procedure in the open reduction of a congenitally displaced hip, in which a bony shelf is inserted, by bone grafting, into the upper portion of the acetabulum so as to hold the femoral head and prevent its slipping out of the shallow joint cup.
Taarnhøj o. Surgical decompression of the semilunar ganglion and preganglionic roots for relief of trigeminal neuralgia.
Z-plastic relaxing o. An operation for the relaxation of scar contractures, effected by a Z incision, with transposition of the flaps. Syn., *Z-plasty*.

op′er·a″tor [L., a worker, from operari]. 1. A surgeon. 2. One who gives treatments, especially those involving mechanotherapy. 3. An expert technician, as in roentgenology.

o-per′cu·lum [L., lid]. 1. A lid or cover, as operculum ilei, the ileocecal valve. 2. The convolutions covering the insula. —opercular, *adj.*
frontoparietal o. The portion of the cerebral gyri overlying the upper part of the insula; also called *o. proper, parietal o.*
o. proper. The frontoparietal operculum.
orbital o. The portion of the orbital gyri of the cerebrum overlying the insula.
parietal o. The frontoparietal operculum.
temporal o. The portion of the temporal lobe overlying the insula.
trophoblastic o. The operculum, formed from the trophoblast, closing the wound in the endometrium made by the implanting ovum.

o-phi′a·sis [G., bald place on the head]. Alopecia areata in which the baldness progresses in a serpentine form about the hair margin. Usually seen in children.

o-phid″i·o·pho′bi·a [G. ophis, serpent; phobos, fear]. Morbid fear of snakes.

o-phid′ism [ophis]. Poisoning from snake venom.

oph′i·o·phobe″, o-phi′o·phobe″ [ophis; phobos]. A person who has an unusual dread of snakes.

oph″i·o′sis [ophis; G. -osis, condition]. Circumscribed baldness with scaliness.

oph·ry·i′tis [G. ophrys, brow; -itis, inflammation]. Inflammation of the eyebrow.

oph′ry·on (off′ree-on, ·ree-on) [ophrys]. In craniometry, the point where the sagittal plane intersects an arc drawn horizontally from the frontotemporalia across the frontal bone.

oph·ry·o′sis [ophrys; G. -osis, condition]. Spasm of the muscles of the eyebrow.

oph ryph thei ri a sis (off rif-thigh-rye uh-sis) [ophrys; G. phtheiriasis, morbus pedicularis]. Pediculosis of the eyebrows and eyelashes.

oph rys [ophrys]. The eyebrow. —**ophryt'ic**, *adj.*

oph thal"ma cra sis [G. phthalmos, eye; makros, large; -iasis, condition]. Enlargement of the eyeball.

oph"thal ma gra (off thal-may grub, -mag rub) [ophthalmos; G. agra, seizing]. Painful ophthalmic symptoms attributable to an attack of gout.

oph thal mal'gi [ophthalmos; G. algos, pain]. Neuralgia of the eye.

oph thal mec chy mo sis (off thal-meck"i-mo sis) [phthalmos; G. ekchymōsis, ecchymosis]. An effusion of blood into the conjunctiva.

oph thal mec to my [ophthalmos; G. ektomē, excision]. Excision or enucleation, of the eye.

oph"thal men ceph a lon [ophthalmos; G. enkephalos brain]. The visual nervous mechanism; the *retina, optic nerves, optic chiasm, optic tract, and* visual centers.

oph thal'mi [G.]. Inflammation of the eye, especially one in which the conjunctiva is involved.

catarrhal o. Simple conjunctivitis hyperemia of the conjunctiva with a mucopurulent secretion.

caterpillar hair o. Inflammation of the conjunctiva or of the cornea, the result of penetration of the tissues by caterpillar hairs. Syn., *o. nodosa.*

Egyptian o. Obsolete term for trachoma.

gonorrheal o. An acute and severe form of purulent conjunctivitis, caused by infection by the *Neisseria gonorrhoeae*. Syn *gonorrheal conjunctivitis.*

granular o. See *trachoma.*

jequirity o. That due to poisoning by jequirity.

neuroparalytic o. Disease of the eye from lesion of the semilunar ganglion or branches of the fifth nerve supplying the eyeball.

o. electrica. Conjunctivitis due to intense electric light.

o. neonatorum. A gonorrheal or purulent ophthalmia of the newborn. Also called *acute infectious conjunctivitis.*

o. nivalis. Snow blindness.

o. nodosa. See caterpillar hair.

phlyctenular o. See phlyctenular *conjunctivitis.*

purulent o. Conjunctivitis with purulent discharge.

scrofulous o. See phlyctenular *conjunctivitis.*

spring o. A form common in the spring, usually an allergy to tree pollen.

strumous o. Old term for phlyctenular *conjunctivitis.*

sympathetic o. A severe destructive inflammation, form of iridocyclitis secondary to injury or disease of the fellow eye.

varicose o. That associated with varicose state of the veins of the conjunctiva.

oph thal'mi-a ter (off-thal"mee-ay"tur off thal mee-ay tur) [G. ophthalmos, eye; iatros, physician] An oculist or ophthalmologist.

oph-thal"mi at'rics [ophthalmos; G. iatrikos, skilled in the medical art]. The treatment of eye diseases. *Obs.*

oph thal'mic [ophthalmos]. Pertaining to the eye.

oph thal mi nerve. See under *nerve.*

oph"thal mi'tis [ophthalmos, G. -itis, inflammation]. Inflammation of the eye. —**ophthalmit'ic**, *adj.*

sympathetic o. That following injury of the fellow eye.

oph thal'mo- ophthalm- [ophthalmos] A combining form meaning *eye.*

oph thal"mo-blen"nor rhe [ophthalmos; G. blennos, mucus; rhoia, flow]. Blennorrhea of the conjunctiva.

oph"thal moc a ce (off thal-mock uh see) [ophthalmos; G. kakē, badness]. Disease of the eye. *Obs.*

oph thal mo-cele. See *ex ophthalmos.*

oph thal"mo-cen-te si [ophthalmos; G. kentēsis, a pricking]. Surgical puncture of the eye.

oph thal"mo-co'pi a [ophthalmos; G. kopos, fatigue]. Fatigue of visual power; asthenopia.

oph thal mo-di"ag n si [ophthalmos; G. diagnōsis, deciding]. Diagnosis by means of the ophthalmo-reaction.

oph thal"mo-di" phan' -scope [ophthalmos; G. diaphainein, to show through; skopein, to examine]. An instrument for examining the fundus of the eye by transillumination through the mouth.

oph thal"mo-di stim ter [ophthalmos; G. diastasis, separation; metron, measure] An instrument used for determining the proper adjustment of lenses to the axes of the eyes.

oph thal"mo-do-ne sis [ophthalmos; G. donein, to shake]. A tremulous or oscillatory movement of the eye.

oph thal"mo-dy na mom e ter (off-thal"mo-dye nuh mom'i-tur -din uh-mom tur) [ophthalmos; G. dynamis, power; metron, measure]. 1. An instrument for measuring the power of convergence of the eyes. 2. An instrument which measures the pressure necessary to collapse the retinal blood vessels.

oph th l"mo dyn'i (off-thal mo-din ee-uh, -dye nee-uh) [ophthalmos; G. odynē, pain] Neuralgic pain referred to the eye.

oph thal"mo fun do scope [ophthalmos; L. fundus, bottom; G. skopein, to examine]. An apparatus for examining the fundus of the eye.

oph"thal mog'ra-phy [ophthalmos; G. graphein, to write]. Descriptive anatomy of the eye.

oph thal"mo gy'ri [ophthalmos; G. gyros, circle]. Pertaining to, or causing, movements of the eye.

oph thal mo-i co n m ter [ophthalmos; G. eikōn, image; metron, measure]. An apparatus for measuring the retinal image.

oph thal"mo-ko pi a. See *ophthalmocopia.*

oph thal"mo leu'ko-scope [ophthalmos; G. leukos, white; skopein, to examine]. An instrument for testing color sense by means of polarized light.

oph thal mo-lith [ophthalmos; G. lithos, stone]. A calculus of the eye or lacrimal duct.

oph"thal mol'o-gist [ophthalmos; G. logos, word]. One skilled or specializing in ophthalmology.

oph"thal mol'o-gy [ophthalmos; logos]. The science of the anatomy physiology and diseases of the eye. —**ophthalmolog'ic**, *adj.*

oph thal"mo-ly sis [ophthalmos; G. lysis, solution]. Destruction of the eye.

oph thal"mo-ma cro sis [ophthalmos; G. makros, large; -iasis, condition]. Enlargement of the eye.

oph thal"m ma la ci (off-thal mo-ma lay shee uh, -see uh) [ophthalmos; G. malakia, softness]. Abnormal softness or subnormal tension of the eye.

oph thal"mo mel" no ma [ophthalmos; G. melas, black; -ōma, tumor]. A melanotic tumor usually sarcoma, of the eye.

oph thal"mo mel" no sis [ophthalmos; melas; G. -ōsis, condition]. 1. The formation of an ophthalmomelanoma. 2. The growth itself.

oph thal mom ter [ophthalmos; G. metron, measure]. 1. An instrument for measuring refractive errors, especially astigmatism. 2. An instrument for measuring the capacity of the chambers of the eye. 3. An instrument for measuring the eye as whole.

oph"thal mom try [ophthalmos; metron]. Most commonly the determination of refractive errors of the eye, mainly by measuring the astigmatism of the cornea.

oph·thal″mo·my·co′sis (off-thal″mo-migh-ko′sis) [*ophthalmos*; G. *mykēs*, fungus; -*ōsis*, condition]. Any disease of the eye or its appendages due to the presence of a fungus.

oph·thal″mo·my″i·a′sis (-migh-yah′sis, -migh-eye′uh-sis) [*ophthalmos*; G. *myia*, fly; NL. -*iasis*, condition]. Infestation of wounds about the eye by eggs of flies from which larvae develop.

habronemic o. A granulomatous disease of the eyelids of the horse, caused by any of three species of the nematode *Habronema*. It has been suggested that the "blue eye" or "bung eye" of Australian bushmen may be due to this parasite.

oph·thal″mo·my·i′tis (-migh-eye′tis) [*ophthalmos*; G. *mys*, muscle; -*itis*, inflammation]. Inflammation of the ocular muscles.

oph·thal″mo·my″o·si′tis. See *ophthalmomyitis*.

oph·thal″mo·my·ot′o·my (off-thal″mo-migh-ot′o-mee) [*ophthalmos*; *mys*; G. *tomē*, cutting]. Division of a muscle or muscles of the eye.

oph·thal″mo·neu·ri′tis [*ophthalmos*; G. *neuron*, nerve; -*itis*, inflammation]. Inflammation of the ophthalmic nerve.

oph″thal·mop′a·thy [*ophthalmos*; G. *pathos*, disease]. Any disease of the eye.

external o. An affection of the eyelids, cornea, conjunctiva, or muscles of the eye.

internal o. Any disease affecting the eyeball.

oph·thal″mo·pha·com′e·ter, oph·thal″mo·pha·kom′e·ter [*ophthalmos*; G. *phakos*, lentil; *metron*, a measure]. An instrument for measuring the radius of curvature of the crystalline lens.

oph·thal″mo·phan′tom [*ophthalmos*; G. *phantasma*, apparition]. A model or mask for practicing operations on the eye.

oph·thal″mo·phas″ma·tos′co·py (off-thal″mo-faz-muh-tos′ko-pee) [*ophthalmos*; G. *phasma*, apparition; *skopein*, to examine]. Ophthalmoscopic and spectroscopic examination of the interior of an eye.

oph·thal″mo·pho′bi·a [*ophthalmos*; G. *phobos*, fear]. Morbid dislike of being stared at.

oph″thal·moph·thi′sis (off″thal-mof′thi-sis, off-thal″mo-tye′sis, off-thal″mof-thigh′sis) [*ophthalmos*; G. *phthisis*, a wasting away]. Phthisis bulbi; shrinking of the eyeball.

oph·thal″mo·phy′ma [*ophthalmos*; G. *phyma*, growth]. Swelling of the eyeball.

oph·thal″mo·plas″ty [*ophthalmos*; G. *plassein*, to form]. Plastic surgery of the eye or accessory parts. —**ophthalmoplas′tic,** *adj.*

oph·thal″mo·ple′gi·a [*ophthalmos*; G. *plēgē*, stroke]. Paralysis of the ocular muscles. —**ophthalmopleg′ic,** *adj.*

nuclear o. A form due to a lesion of the nuclei of origin of the motor nerves of the eyeball.

o. externa. Paralysis of the extrinsic ocular muscles.

o. interna. Paralysis of the intrinsic muscles of the eye—those of the iris and ciliary body.

partial o. A form in which only some of the muscles are paralyzed.

progressive o. A form in which all of the muscles of both eyes gradually become paralyzed.

total o. That form involving the intrinsic muscles, as well as the extrinsic muscles, of the eyeball.

oph·thal″mop·to′sis [*ophthalmos*; G. *ptōsis*, a falling]. Protrusion of the eyeball; exophthalmos.

oph·thal″mo·re·ac′tion. A temporary inflammation of the conjunctiva due to the instillation of one drop of a 1% solution of tuberculin into the eye of a tuberculous subject.

oph·thal″mor·rha′gi·a [*ophthalmos*; G. *rhēgnynai*, to burst forth]. Hemorrhage from the eye.

oph·thal″mor·rhe′a [*ophthalmos*; G. *rhoia*, flow]. A watery or sanguineous discharge from the eye.

oph·thal″mor·rhex′is [*ophthalmos*; G. *rhēxis*, breaking]. Rupture of the eyeball.

oph·thal′mos [G.]. The eye.

oph·thal′mo·scope [*ophthalmos*; G. *skopein*, to examine]. An instrument for examining the interior of the eye. It consists essentially of a mirror with a hole in it, through which the observer looks, the concavity of the eye being illuminated by light reflected from the mirror into the eye and seen by means of the rays reflected from the eye ground back through the hole in the mirror. The ophthalmoscope is fitted with lenses of different powers that may be revolved in front of the observing eye, and these neutralize the ametropia of either the patient or the observer eye, thus rendering clear the details of the fundus oculi. Many opthalmoscopes now in use are of the portable type and are fitted with a battery in the handle so that bedside examinations may be made. —**ophthalmoscop′ic,** *adj.*

stereo o. An ophthalmoscope with two eyepieces.

oph·thal·mos′co·pist [*ophthalmos*; *skopein*]. One versed in ophthalmoscopy.

oph″thal·mos′co·py [*ophthalmos*; *skopein*]. The examination of the interior of the eye by means of an ophthalmoscope.

direct o. The method of the erect or upright image, the observer's eye and the ophthalmoscope being brought close to the eye of the patient.

indirect o. The method of the inverted image; the observer's eye is placed about 16 inches from that of the patient, and a 20 D biconvex lens is held about two inches in front of the observed eye, thereby forming an aerial inverted image of the fundus.

medical o. Ophthalmoscopy as an aid to internal medicine in the diagnosis of such diseases as manifest themselves in changes in the fundus of the eye.

metric o. That for measuring refraction.

oph·thal″mo·spasm [*ophthalmos*; G. *spasmos*, spasm]. Ocular spasm.

oph·thal″mo·spin″ther·ism [*ophthalmos*; G. *spinthēr*, spark]. A condition of the eye in which there is a visual impression of luminous sparks.

oph″thal·mos′ta·sis [*ophthalmos*; G. *stasis*, standing]. Fixation of the eye during an operation upon it.

oph·thal′mo·stat [*ophthalmos*; G. *statos*, standing]. An instrument used in fixing the eye in any position during an ophthalmic operation.

oph·thal″mo·sta·tom′e·ter [*ophthalmos*; *statos*; G. *metron*, a measure]. An instrument for determining the position of the eyes.

oph·thal″mo·sta·tom′e·try [*ophthalmos*; *statos*; *metron*]. The measurement of the position of the eyes.

oph·thal″mo·ste·re′sis [*ophthalmos*; G. *sterēsis*, deprivation]. Loss or absence of one or both eyes.

oph·thal″mo·syn·chy′sis (off-thal″mo-sin-kigh′sis) [*ophthalmos*; G. *synchysis*, mixture]. Effusion into the interior chambers of the eye.

oph·thal″mo·ther·mom′e·ter [*ophthalmos*; G. *thermē*, heat; *metron*, a measure]. A device for recording local temperature in eye diseases.

oph″thal·mot′o·my [*ophthalmos*; G. *tomē*, cutting]. The dissection or incision of the eye.

oph·thal″mo·to·nom′e·ter [*ophthalmos*; G. *tonos*, tension; *metron*, a measure]. An instrument for measuring intraocular tension.

oph·thal″mo·to·nom′e·try [*ophthalmos*; *tonos*; *metron*]. Measurement of intraocular tension.

oph·thal′mo·trope [*ophthalmos*; G. *tropein*, to turn]. An instrument used for the demonstration of the direction and the position that the eye takes under the influence of each of its muscles, and

position of the false image in the case of paralysis of a given muscle.

oph·thal″mo·tro·pom′e·ter [*ophthalmos; tropein;* G. *metron,* measure]. An instrument for measuring the movement of the eyeballs.

oph·thal″mo·tro·pom′e·try [*ophthalmos; tropein; metron*]. The measurement of the movement of the eyeballs.

oph·thal″mo·vas′cu·lar [*ophthalmos;* L. *vasculum,* small vessel]. Pertaining to the blood vessels of the eye.

oph·thal″mo·xe·ro′sis (off·thal″mo·zi·ro′sis). See *xerophthalmia.*

oph·thal″mo·xy′sis (off·thal″mo·zye′sis, mock·sye′sis) [*ophthalmos;* G. *xysis,* scraping]. Treatment by scraping or scarification of the conjunctiva. *Rare.*

oph·thal″mox·ys′ter (off·thal″mock·sis′tur, ·mo·zis′tur), **oph·thal″mox·ys′trum** [*ophthalmos;* G. *xystēr,* scraper]. An instrument for scraping or scarifying the conjunctiva.

oph·thal′mu·la [*ophthalmos*]. A scar of the eye.

oph·thal′mus [*ophthalmos*]. The eye.

-o·pi·a, -o·py [G. *ōps,* eye]. A combining form denoting a *defect of the eye.*

o·pi·an′ic ac′id. An acid, $C_{10}H_{10}O_5$, obtained from narcotine.

o·pi·an′ine. Old term for narcotine.

o′pi·ate [G. *opion,* poppy juice]. A preparation of opium; a substance that brings on rest or inaction; that which quiets uneasiness or dulls the feelings.

Opie, Eugene Lindsay [American pathologist, 1873–]. Known for his researches in the histology and pathology of the pancreas and its relation to diabetes mellitus.

o·pi′in. Porphyroxine.

o″pi·o·ma′ni·a [G. *opion,* poppy juice; *mania,* madness]. A morbid desire for opium; opium habit. —**opiomaniac,** *n.*

o·pi″o·pha′gi·a, o·pi·oph′a·gism, o·pi·oph′a·gy [*opion;* G. *phagein,* to eat]. The eating of opium.

o·pi′o·phile [*opion;* G. *philein,* to love]. An addict of opium; an opium smoker or eater.

o·pis′then [G., behind]. In *zoology,* the hind part of the body of an animal.

o·pis′the·nar [*opisthen;* G. *thenar,* palm of the hand]. The back of the hand. Also see *thenar.*

o·pis′thi·on [G. *opisthios,* hinder]. In *craniometry,* the point where the sagittal plane cuts the posterior margin of the foramen magnum.

o·pis′tho-, opisth- [G. *opisthen,* behind]. Combining form meaning *behind* or *backward.*

o·pis″tho·cra′ni·on [G. *opisthen,* behind; *kranion,* skull]. Not a set craniometric point, but that point, wherever it may lie in the sagittal plane on the occipital bone, which marks the posterior extremity of the longest diameter of the skull measured from the glabella. Also called *maximum occipital point.*

o·pis″tho·gnath′ism (op″is·thog′nuh·thiz·um, ·thohn′uh·thiz·um, o·pis″·) [*opisthen;* G. *gnathos,* jaw]. Recession of the lower jaw.

o·pis″tho·neph′ros [*opisthen;* G. *nephros,* kidney]. The mesonephros of certain Anamniota, in which the functional kidney arises from all nephrotomes caudal to the pronephros; proposed term.

o·pis″tho·po·re′i·a (·po·rye′uh) [*opisthen;* G. *poreia,* mode of walking]. Involuntary walking backward in an attempt to go forward; occurs in parkinsonism.

o·pis″thor·chi·a′sis (o·pis″thor·kigh′uh·sis, op″·) [*opisthen;* G. *orchis,* testis; NL. *-iasis,* condition]. Infestation of the liver with the fluke *Opisthorchis felineus.*

Op″is·thor′chis (op″is·thor′kis, o·pis·) [*opisthen; orchis*]. A genus of trematodes or flukes.

O. felineus. A species naturally parasitic to cats, dogs, foxes, and hogs, and accidentally to man. Produces hepatic lesions and adenomatous hyperplasia of the biliary ducts.

O. noverca. A species parasitic to dogs and occasionally found in man.

O. viverrini. A natural parasite of civet cat and an important human infestation in the Lao country of northern Siam.

op″is·thot′o·nos, op″is·thot′o·nus (op″is·thot′o·nus, o·pis·) [*opisthen;* G. *tonos,* tension]. A condition in which, from a tetanic spasm of the muscles of the back, the head and lower limbs are bent backward and the trunk is arched forward. —**opisthoton′ic, opisthotonoid,** *adj.*

o′pi·um [G. *opion,* poppy juice]. The air-dried juice from unripe capsules of *Papaver somniferum,* or its variety *album.* It contains a number of alkaloids, of which morphine is the most important, since it represents the chief properties of the drug. Crude opium contains 5–15% morphine, 2–8% narcotine, 0.1–2.5% codeine, 0.5–2.0% papaverine, 0.15–0.5% thebaine, 0.1–0.4% narceine, and lesser amounts of cryptopine, laudanine, and other alkaloids. These bases occur in opium combined with meconic and lactic acids. Opium acts as a narcotic, dulls pain and discomfort, and produces deep sleep, which may be preceded by a stage of mental excitement and exhilaration; on awakening there may be headache, nausea, or vomiting. Small doses do not depress the respiration, but large doses do so in a marked degree. It causes gastric spasm and constipation, and lessens all secretions except that of the skin. It produces contraction of the pupil. When taken in poisonous doses it causes unconquerable drowsiness, passing into deep sleep, with slow full respiration, slow pulse, and contracted pupils; later cyanosis develops, the respiration becomes exceedingly slow, and the pulse rapid and feeble; death takes place from failure of the respiration. The habitual use of opium or morphine leads to stubborn addiction. The drug is used for the relief of pain of all forms except that due to cerebral inflammation; in inflammation of serous membranes; in spasmodic conditions, in acute colds; for cough, vomiting, diarrhea, and certain forms of dyspnea, particularly that from heart disease.

camphorated o. tincture (*tinctura opii camphorata*). Contains opium, anise oil, benzoic acid, and camphor. It is used as an anodyne and in diarrhea. Dose, for an infant, 0.3–1.2 cc. (5–20 min.); for an adult, 4–15 cc. (1–4 fluidrachms). Syn., *paregoric.*

compound o. and glycyrrhiza mixture (*mistura opii et glycyrrhizae composita*). Contains camphorated opium tincture, glycyrrhiza fluidextract, antimony potassium tartrate, ethyl nitrite spirit, glycerin, and water. A nauseating expectorant. Dose, 4–15 cc. (1–4 fluidrachms). Also called *brown mixture, compound glycyrrhiza mixture.*

denarcotized o. Opium freed of certain nauseating constituents by extraction with petroleum benzin. Also called *deodorized o.*

granulated o. (*opium granulatum*). A coarse powder containing from 10–10.5% of anhydrous morphine. Dose, 0.03–0.2 Gm. (½–3 gr.).

ipecac and o. powder (*pulvis ipecacuanhae et opii*). Contains 10% each of ipecac and opium. A diaphoretic and sedative. Dose, 0.3–0.6 Gm. (5–10 gr.). Syn., *Dover's powder.*

o. extract (*extractum opii*). Prepared by maceration or percolation with hot water; contains 20% of anhydrous morphine. Dose, 0.01–0.06 Gm. (⅙–1 gr.).

o. tincture (*tinctura opii*) Contains 1% of anhydrous morphine. Dose, 0.3-0.6 cc. (5-10 min.) Also called *laudanum, deodorized opium tincture*.
powdered o. (*opium pulveratum*) Contains 10-10.5% of anhydrous morphine. Dose, 0.03-0.2 Gm. (½-3 gr.).

op'o- [G. *opos*, juice]. In *pharmacology*, combining form meaning *juice*.

op'o-bal'sam (op'o-bawl'sum), **op'o-bal-sa'mum** (op"o-bal'suh-mum, -bawl-sam'um). See Gilead balsam.

op'o-ceph'a-lus [G. *ōps*, eye; *kephalē*, head]. A monster characterized by fusion of the ears, one orbit, and absence of mouth and nose.

op'o-del'doc. A soap liniment.
liquid o. Camphor and soap liniment.
solid o. Solid soap liniment. Also called *camphorated soap liniment*.

op"o-did'y-mus, o-ped'y-mus [*ōps*; G. *didymos*, twin]. A monster with a single body and skull but with two distinct faces. Syn. *diprosopus*.

Oppenheim, Hermann [German neurologist, 1858-1919]. Known for his description of amyotonia congenita (1900); also called *Oppenheim's disease*. Described torsion spasm or dystonia musculorum deformans, which is also called *Ziehen-Oppenheim disease* (1911). See also Oppenheim reflex.

Oppenheim, Maurice (1876-1949). American dermatologist who described necrobiosis lipoidica, which is also called *Oppenheim-Urbach disease, Oppenheim disease*. See also Müller-Oppenheim reaction under Rudolf Müller.

op"pi-la'tion [L. *oppilatio*, an obstructing]. 1. Obstruction; closing of the pores. 2. A constipating agent or remedy. Obs. —**op'pilative,** *adj.*, *n.*

op-po'nens (o-po'nenz) [L. *opponere*, to oppose]. Opposing: applied to certain muscles that bring one part opposite another, as opponens pollicis, a muscle placing the thumb opposite the little finger. See Table of Muscles in the Appendix.
o. digiti minimi. BR term for the opponens digiti quinti muscle.

op-por"tu-nist. In *bacteriology*, an organism incapable of inducing disease in a healthy host, but producing severe to fatal infections in a less resistant or injured host; e.g., certain types of *Escherichia coli* and the fusospirochetal group of synergistic organisms.

-ops [G. *ōps*, eye]. In *botany and zoology*, a combining form meaning *-eyed*.

-op'si-a, -op-sy [G. *opsis*, vision]. A combining form denoting a *condition of vision*.

op-sig'e-nes (op-sij'i-neez) [G. *opse*, late; *gennaein*, from *gignesthai*, to be produced]. Born late, referring to certain body tissues which come into use long after birth, as the wisdom teeth.

op-si'o-gen, op-so'gen [G. *opsōnein*, to buy victuals; *genesthai*]. A substance producing an opsonin.

op"si-no'gen-ous (op"si-nodj'i-nus) [*opsōnein*; *genesthai*]. Capable of producing an opsonin.

op"si-om'e-ter. See *optometer*.

op-si"o-no'sis (op-see-o-no'sis, op-see-on'o-sis) [G. *opsis*, vision; *-osis*, condition]. A disease of the eye or of vision.

op"si-u'ri-a [G. *opse*, late; *ouron*, urine]. Condition in which more urine is excreted during fasting than after a meal. Obs.

op'so-gen. Opsinogen.

op"so-ma'ni-a [G. *opson*, cooked food; *mania*, madness]. Intense craving for dainties or some special food. —**opsomaniac,** *n.*

op'so-nin, op-so'nin [*opsōnein*]. A substance occurring in blood serum which is necessary to prepare bacteria for phagocytosis. It occurs normally and may be increased by immunization. —**opson'ic,** *adj.*
immune o. An opsonin in the serum resulting from infection or inoculation with dead bacteria of the same species, and active only against the microorganism that created it. See *bacteriotropin*.

op-son"i-za'tion [*opsōnein*]. The process by which bacteria are rendered susceptible to phagocytosis.

op'so-nize [*opsōnein*]. Prepare microorganisms for phagocytosis.

op"so-no-cy"to-pha'gic (op"so-no-sigh"to-fay'jick, -sigh"to-faj'ick) [*opsōnein*; G. *kytos*, cell; *phagein*, to eat]. Pertaining to the phagocytic activity of blood containing serum opsonins and homologous leukocytes.

op"so-nom'e-try [*opsōnein*; G. *metron*, a measure]. The estimation of the opsonic index.

op-so"no-ther'a-py [*opsōnein*; G. *therapeia*, treatment]. The treatment of disease by increasing the opsonic power of the blood.

optalidon. A proprietary tablet containing isobutylallylbarbituric acid, aminopyrine and caffeine.

op"tes-the'si-a (op"tess-thee'zhuh, -zee-uh) [G. *optikos*, of sight; *aisthēsis*, perception]. Visual sensibility.

op'tic [*optikos*]. Pertaining to the eye.

op'ti-cal [*optikos*]. 1. A synonym for optic. 2. Pertaining to light and the science of optics.

op'ti-cal an'ti-pode. See *enantiomorph*.

op'ti-cal den'si-ty. See *absorbance*.

op'ti-cal flat. A glass or quartz plate or disk, ground flat until any remaining waveyness can be measured only by interferometric methods, the maximum departure from flatness usually being less than 1/10 of a wavelength of sodium light.

op'ti-cal glass. An especially fine glass made under the most carefully controlled conditions. There are many kinds, some with low index and high dispersion values and some with high index and low dispersion.

op'ti-cal path dif'fer-ence. The product of the thickness of a specimen times its index of refraction.

op-ti'cian [*optikos*]. A maker of optical instruments or lenses.
dispensing o. One who retails spectacles and ophthalmic lenses.

op-ti'cian-ry. The application of the art and science of optics to the compounding, filling, and adapting of ophthalmic prescriptions.

op'tic nerve. See under *nerve*.

op"ti-co-chi"as-mat'ic (op"ti-ko-kigh"az-mat'ick), **op"ti-co-chi-as'mic** (-kigh-az'mick) [*optikos*; G. *chiasma*, a placing crosswise]. Pertaining to the optic nerve and optic chiasma.

op"ti-co-cil'i-ar-y [*optikos*; L. *cilium*, eyelid]. Pertaining to the optic and ciliary nerves.

op'ti-co-ele (op'ti-seel). The cavity of the optic vesicle.

op"ti-co-pu'pil-lar"y [*optikos*; L. *pupilla*, pupil]. Pertaining to the optic nerve and the pupil.

op'tics [*optikos*]. That branch of physics treating of the laws of light, its refraction and reflection, and of its relation to vision.
electron o. Science of the emission and propagation of electrons and of the factors controlling and modifying their flow, especially when applied to electron microscopy.
physiological o. That branch of optics dealing with the eye.

op-tim'e-ter [*optikos*; G. *metron*, a measure]. Optometer.

op'ti-mum [L. *optimus*, best]. The temperature or other condition at which vital processes are carried on with the greatest activity. Between the mini

mum and maximum temperatures or other conditions. —**optimal**, *adj.*

op'to- [G. *optikos*, of sight]. A combining form denoting *vision* or *optic*.

optochin. Trade-mark for ethylhydrocupreine, potent pneumococcide employed as the base and also in the form of the hydrochloride.

op'to-gram [*optikos*; G. *gramma*, letter]. A image made on the retina by the sensitiveness to light of pigment in the eye.

op-tom'e-ter [*optikos*; G. *metron*, measure]. A instrument for determining the strength of vision, especially the degree of refractive error that is to be corrected.

prism o. An instrument for prismatic testing of the refraction of the eye.

skiascope One designed for the determination of the refraction of the eye by retinoscopy

op-tom'e-trist [*optikos*, *metron*] One who measures the degrees of visual powers, without the aid of cycloplegic or mydriatic; refractionist

op-tom'e-try [*optikos*; *metron*]. Measurement of the visual powers.

op"to-my-om'e-ter (op-to-migh-om'i-tur) [*optikos*; G. *mys*, muscle; *metron*]. An instrument for measuring the strength of the extrinsic muscles of the eye.

op'to-type [*optikos*, G. *typos*, impression]. A test type used in testing the acuity of vision.

O-pun'ti-a (o-pun-shee-uh, -tee-uh) [G. *Opous*, city in Locris]. Prickly pear genus of the Cactaceae, represented by numerous species, many of which, as **O. retiexlata** and **O. tuna**, have slight medicinal properties.

o'ra [L., edge, margin]. Margin.

o. serrata. The serrated margin of the sensory portion of the retina, behind the ciliary body

o'ra. Plural of os (meaning mouth")

o'rad [L. *os*, mouth, *ad*, toward]. Toward the mouth, or the oral region.

oradiol. Trade-mark for *ethynyl estradiol*.

o'ral [*os*]. Pertaining to the mouth

oral character A Freudian term applied to persons who, during the developmental period, have undergone an unusual degree of oral stimulation through poor feeding habits and otherwise and who thereby have laid the basis for particular type of character usually characterized by general attitude of carefree indifference and by dependence on mother or mother substitute to provide for their needs throughout lif with little or no effort of their own.

o-ra'le (o-rah'lee, o-ray'lee) [*os*]. I *craniometry*, the point on the anterior portion of the hard palat where the line, drawn tangent to the lingual mar gins f the alveoli of the medial incisor teeth, and projected upon the hard palate, crosses the sagittal plane.

or'ange G (C.C.) An acid monoazo dye; used as counterstain with nuclear stains.

or'ange I (C.C.) NaSO C₆H N:N C H OH; sodium azo-α-naphtholsulfanilate reddish-brown powder soluble in water When certified, pure form, used to color foods, drugs, and cosmetics, is known as F D & C. Orange N 1 Syn., *tropaeolin 000*

or'ange II (C.C.) An acid monoazo dye; used in histologic staining.

orasol ors. Trade-mark for *mephenesin*.

oravax. Trade-mark for polyvalent catarrhal vaccine in enteric coated tablets containing killed bacteria of species common to the upper respiratory tract. The tablets are used for prophylaxis against the common cold.

Orbeli, Leon Abgarovich [*Russian scientist* 1882–]. Noted that fatigue in muscle stimulated by its motor nerve is reduced by concurrent stimulation of its sympathetic nerve supply· called *Orbeli effect*.

or-bic'u-lar [L. *orbicularis*, circular]. Circular pplied to circular muscles, as the orbicular muscle of the eye (orbicularis oculi) or of the mouth (orbicularis oris)

or-bic-u-la're (or-bick"yoo-lah ree) [*orbicularis*] The orbicular bone, t bercle at the end of the long process of the incus; it is separate in early fetal life.

or-bic"u-lar'is [L.]. The ring muscle of the eye (orbicularis oculi) or mouth (orbicularis oris). See Table of Muscles in the Appendix.

o. palpebrarum. Orbicularis oculi muscle: old term.

or'bit [L. *orbita*, track, course]. The bony cavity containing the eye, which is formed by the frontal, sphenoid, ethmoid, nasal, lacrimal, maxillary and palatal bones. See Plate 19. —**orbital**, *adj*

or'bi-tal. Any of certain fibers of smooth muscle bridging the inferior orbital fissure. —**or'bital**, *adj.*

or"bi-ta'le (or"bi-tah'lee, -tay'lee) [*orbita*] I *craniometry*, the lowest point on the inferior margin of the orbit. It is not measuring point it is used in conjunction with the poris to orient the skull on the Frankfort horizontal plane.

or'bi-tal height. I *craniometry*, the greatest vertical width of the external opening of the orbit.

or"bi-ta'li-a. Plural of orbitale.

or"bi-to-na-sal (or"bi-to-nay'sul) [*orbita*, L. *nasus*, nose] Relating to the orbit of the skull and the nasal cavity

or"bi-to-nom'e-ter A device used to measure the repressibility of the eye into the orbit in cases of exophthalmic goiter

or"bi-to-nom'e-try The measurement of the resistance of the globe of the eye to retrodisplacement.

or"bi-to-sphe'noid bone. The orbital portion of the sphenoid bone, separate in certain lower vertebrates and in embryos, represented by the small wing of the sphenoid bon in mammals.

or"bi-tot'o-my [*orbita*, G *tomē*, cutting]. Incision into the orbit.

or'ce-in, or-ce'in (O.C.) $C_{28}H_{24}N_2O_7$. Brownish red, crystalline powder synthesized from orcin insoluble in water soluble in alcohol. Used in microscopy as stain.

or"ch i'ti (or"kee-eye'tus) See *orchitis*.

or-ches"tro-ma-ni-a (or-kes tro-may'nee-uh) [G. *orchēstra*, space in the Greek theater in which the chorus danced *mania*, madness]. Dancing mania, chorea, or St. Vitus dance.

or'chi- (or'ki-) See *orchio-*.

or'chic (or'kick) [G *orchis*, testis]. Pertaining to the testis.

or"chi-dec'to-my See *orchiectomy*.

or"chi-di'tis. See *orchitis*.

or"chi-dop'a-thy [*orchis*; G *pathos*, disease]. Disease of testis.

or-chid"o-pex"y See *orchiopexy*.

or-chid'o-plas"ty [*orchis*; G. *plassein*, to form]. Orchioplasty; plastic surgery of testis.

or"chi-dor'rha-phy See *orchiopexy*

or"chi-dot'o-my [*orchis*; G *tomē*, cutting] Incision into the testis.

or"chi-ec'to-my [*orchis*; G. *ektomē*, excision] Surgical removal of one or both testes; castration.

or"chi-en-ceph"a-lo'ma [*orchis*; G *enkephalos*, brain -*ōma*, tumor]. An encephaloid carcinoma of the testis.

or"chi-ep"i-did"y-mi'tis [*orchis*; G *epididymis*, epididymis; -*itis*, inflammation] Inflammation of both testis and epididymis.

or'chi-o- (or'kee-o-), **or'chi-** [orchis]. A combining form meaning testis.

or"chi-o-ca-tab'-sis [orchis; G. katabasis, descent]. The normal descent of the testis into the scrotum.

or'chi-o-cele [orchis; G. kēlē, hernia]. In surgery, complete scrotal hernia.

or-chi-op'a-thy [orchis; G. pathos, disease]. Any disease of the testis.

or-chi-o-pex"y (or'kee-o-peck-see, or"kee-o-peck'see) [orchis; G. pēxis, fixing]. Surgical fixation of a testis, as in a plastic operation for relief of an undescended testis.

or'chi-o-plas"ty [orchis; G. plassein, to form]. Any plastic operation on the testis.

or"chi-ot'o-my. See orchidotomy.

or'chis (or'kiss) [G.]. Testis.

or-chi'tis (or-kigh'tis) [orchis; G. -itis, inflammation]. Inflammation of the testis. —**orchit'ic,** adj.

mumps o. Orchitis due to the mumps virus. It may occur without the usual parotitis associated with mumps.

or-chit'o-my (or-kit'o-mee). See orchidotomy.

or-chot'o-my (or-kot'o-mee). See orchidotomy.

or'cin (or'sin), **or'cin-ol** [L. Orcus]. 3,5-Dihydroxytoluene. $C_6H_3(CH_3)(OH)_2 \cdot H_2O$. White crystals, reddened by exposure to air; freely soluble in water, ether, or alcohol. Prepared from many species of lichens. A reagent for pentoses and certain other substances.

or'der [L. ordo, order]. 1. Systematic arrangement. 2. In biology, the taxonomic group below a class and above a family.

or'der-ly [ordo]. A male hospital attendant.

or'di-nate [L. ordinare, to regulate]. The vertical line of the two coordinates used in plotting the interrelationship of two sets of data. The horizontal line is called the abscissa.

or"e-go-nen'sin. An antibiotic substance produced by Ganoderma oregonense.

orestralyn. Trade-mark for ethynyl estradiol.

oreton. Trade-mark for a brand of testosterone propionate in ampuls for intramuscular injection.

oreton F. Trade-mark for testosterone in pellets for subcutaneous implantation.

oreton M. Trade-mark for methyl testosterone in tablets for oral use.

o-rex'is, **o-rex'l** [G. orexis, longing for]. Appetite.

orf [AS]. A virus disease of sheep and goats transmitted to man (in whom it is called contagious pustular dermatitis), characterized by red papules with depressed centers containing a clear or sometimes purulent serum. Syn., sheep pox, sheep thrush.

or'gan [G. organon, instrument, tool]. A differentiated part of an organism adapted for a definite function.

accessory organs of the eye. The fasciae, ocular muscles, eyebrows, eyelids, conjunctiva, and lacrimal apparatus.

adipose organs. The fat lobules; regarded as distinct organs rather than simple tissue. Also called fat organs.

enamel o. The epithelial ingrowth from the dental lamina which covers the dental papilla, furnishes a mold for the shape of a developing tooth, and forms the dental enamel.

gustatory o. A taste bud.

o. of Corti. The end organ of hearing; the sensory part of the cochlear duct; also called papilla of Huschke. See Plate 20.

o. of Golgi. A sensory nerve end organ resembling a neuromuscular spindle at the surface of a muscle next to its tendon. Also called neurotendinal spindle, Golgi's corpuscle, tendon organ of Golgi.

o. of Jacobson. See vomeronasal o.

organs of generation. Those that are functional in reproduction.

organs of Zuckerkandl. Paraganglions.

sense o. A receptor.

sex organs. Those pertaining entirely to the sex of the individual; in the male, the external generative organs, the penis and testes, and the internal, the prostate, deferential ducts, and seminal vesicles; in the female, the external generative organs, the vulva, vagina, and clitoris, and the internal, the uterus, uterine tubes, and ovaries. In woman the breasts are considered as secondary sex organs.

shock o. The organ or tissue which exhibits the most marked response to the antigen-antibody interaction in hypersensitivity, as the lungs in allergic asthma, or the skin in atopic or contact dermatitis.

tendon o. of Golgi. See o. of Golgi.

vomeronasal o. A slender tubule ending in a blind sac; situated in the anteroinferior part of the nasal septum; vestigial in man.

or"gan-elle, **or'gan-ell** [dim. from organon]. A specialized structure or part of a cell having a definite function to perform, as the contractile vacuole of many Protozoa.

or-gan'ic [organon]. 1. Having, pertaining to, or characterized by organs; pertaining to living substances; affecting the structure of organs. 2. In chemistry, of or pertaining to compounds of carbon.

or-gan'ic brain dis-or'der. In psychiatry, a basic mental condition characteristic of diffuse impairment of brain-tissue function from any cause, characterized by impairment of orientation, judgment, memory, the intellectual functions, e.g., calculation, learning, and knowledge, and by lability and shallowness of affect. The degree of severity is generally commensurate with the severity of the precipitating basic organic lesion upon which the diagnosis is based, but may be associated with psychotic, neurotic, or behavioral reactions.

acute o. b. d. One resulting from temporary, reversible, diffuse impairment of brain-tissue function, with a basic disturbance of the sensorium. It may be due to acute intracranial or systemic infections, drug, poison, or alcohol intoxication, trauma, circulatory or metabolic disturbances, convulsive disorders, or diseases of obscure etiology.

chronic o. b. d. One resulting from relatively permanent and irreversible, diffuse impairment of brain-tissue function, or the sequel of a pathological process involving the brain which has responded to specific therapy, often ushered in by the acute form. It may be associated with syphilis of the central nervous system, various forms of intoxication or poisoning, brain trauma, cerebral arteriosclerosis and other cerebral circulatory disturbances, convulsive disorders, senile brain disease, disturbances of metabolism, growth, or nutrition, intracranial neoplasms, or diseases whose causes are obscure. Included in this classification are also those mental disorders, formerly called secondary mental deficiency, associated with congenital brain-tissue anomalies, mongolism, prenatal maternal infectious diseases, or birth trauma, and characterized primarily by defective ability to learn. See also mental deficiency.

or-gan'l clam. See holism.

organidin. Trade-mark for a preparation of an iodine compound with an organic base.

or'gan-ism [organon]. Any living thing, plant or animal, having regard especially to the fact that it consists of differentiated parts with specialized functions, so related to one another as to form

unified whole. For list of organisms pathogenic to man, see Table in the Appendix.

coprozoic organisms. Organisms living in feces and other excreta.

L. organisms. Abbreviation for pleuropneumonialike organisms.

pleuropneumonialike organisms. See *pleuropneumonialike organisms.*

pus o. See pyogenic *microorganism.*

or"gan·i·za'tion [*organon*]. 1 The systematic interrelationships of the structurally and functionally differentiated parts to form an integrated whole 2 A part of the repair process occurring in an injury that has destroyed tissue the ingrowth of capillaries and fibroblasts into thrombi or blood clots.

or'gan·i"zer [*organon*]. Spemann term for the region of the dorsal lip of the blastopore, comprising chordamesoderm, that is self-differentiating and capable of inducing the formation of medullary plate in the adjacent ectoderm the primary organizer A second-grade (or higher) organizer coming into play after the laying down of the main axis of the body induced by the primary organizer is completed, is any part of the embryo which exerts morphogenetic stimulus on an adjacent part or parts, as in the induction of the lens by the optic vesicle. Also called *organisator organization center*

or'ga·no- [*organon*]. 1 A combining form meaning *organ.* 2. *In chemistry* combining form signifying *organic.*

or gan·o·gel. A hydrogel in which the dispersion medium is an organic liquid instead of water

or"ga·no·gen·e·sis [*organon*, G *genesis*, production] The formation of the various organs of the plant or animal body —**organogenet'ic,** *adj*

or"ga·nog'e·ny Organogenesis.

or'gan·oid [*organon*, G. *eidos*, form]. Resembling an organ

or"ga·nol' gy [*organon*, G *logos*, word] The science that treats of the organs of plants and animals

or"ga·no·me·tal'lic. Pertaining to compounds having carbon to metal linkage.

or"ga·nos·co·py [*organon*, G *skopein*, to examine]. The examination of an organ with special lens system, such as cystoscope, esophagoscope, or laryngoscope.

or gan' ·sol. A colloidal solution in which the continuous phase or dispersion medium is an organic liquid, as alcohol, benzene, ether etc.

or"ga·no·ther' py [*organon*, G *therapeia*, treatment] The treatment of disease by means of animal organs their extracts

or"ga·no·troph'ic (or guh·no·trof'ick, -tro·fick) [*organon*, G. *trophē*, nourishment] Relating to the nutrition of living organs.

or"ga·no·trop'ic [*organon*, G *trepein*, to turn]. 1 Pertaining to substances which act on the organs of the body 2 Having affinity for the tissues. —**organot'ropism, organot ropy** *n.*

or"gan·ot'ro·pism [*organon*, *trepein*]. Ehrlich theory that certain poisons manifest definite chemical affinity for certain components of cells

or'ga·num. See *organ*

or'gasm (or gaz·um) [G *orgasmos*, organon]. Intense excitement, especially that occurring during sexual intercourse the culmination or climax of the sexual act, followed by ejaculation of the seminal fluid or in the female, by relaxation and detumescence. —**orgas'tic,** *adj*

or gas'mo·lep sy (or gaz'mo lep see) [*orgasmos*, G *lēpsis*, seizing]. A sudden loss of muscl tone during sexual orgasm, accompanied by transitory loss of consciousness.

or'i dine. C_5H NO substance, isomeric with betaine, obtained from rice hulls, occurring as white crystals, soluble in water

oridine. Trade-mark for the calcium salt of the iodized fatty acids of cottonseed oil, used in iodine therapy

o ri·en tal sore. A form of cutaneous leishmaniasis caused by infection with *Leishmania tropica* and transmitted by some species of *Phlebotomus* It is characterized by ulcerated granulomatous lesions of the skin which lead to hypertrophy of the stratum corneum and hypertrophy and proliferation of the papillae. Necrosis and ulceration occur as well as secondary infections with bacteria. Syn. *Delhi boil, Aleppo boil, tropical sore, Biskra button, Bagdad boil, Kandahar sore, Delhi sore, Delhi sore, oriental button, Tashkend ulcer*

o"ri·en ta tion [L. *oriens*, from *oriri*, to rise]. 1 The act of determining one relation to time (temporal orientation) or to space (spatial orientation) or to other individuals (personal orientation) 2. The relative position of the substitution elements or radicals in the benzene ring.

or'i fice [L. *orificium*, opening]. An opening or entrance to cavity or tube —**orifi'cial,** *adj.*

or"i fi'ci um (or i·fish ee um) [L.]. Orifice.

rig'a num. See *marjoram.*

or'i gin [L. *origo*, origin]. The beginning or starting point of anything.

o. of muscle. The end of attachment of muscle which remains relatively fixed during contraction of the muscle.

Or"i za'ba jal'ap. See *ipomea.*

o·riz' bin. See *jalapin.*

ormalcet. Trade-mark for aluminum formate.

or'mo·sine (or mo·seen, -sin) A crystalline alkaloid from the seeds of *Ormosia dasycarpa*, of South America. Has been used as narcotic.

Ormsby's method. See under *method.*

or'ni thine (or ni theen, -thin) NH (CH₂) CHNH COOH. α δ-Diamino-valeric acid An amino acid derived from the excrement of birds, but not found in native proteins. It is postulated as an intermediate in cyclic process of urea formation in the body (Krebs-Henseleit cycle).

Or ni thod o·ros (ni·thod o·ros, or nith o·dor us) [G *ornis*, bird *doros*, leathern bag] A genus of soft ticks of the family Argasidae containing many species parasitic to man, some of which produce painful bites and inflammatory lesions. Several species are vectors of relapsing fever spirochetes, e g O moubata in Africa, O. talaje in tropical America, O rudis in subtropical regions of the United States.

or"ni tho sis [*ornis*; G -*osis*, condition] A psittacosislike disease found in birds other than parrots and parakeets, particularly pigeons and domestic fowl. The virus causing ornithosis differs from that of psittacosis similar strains have been isolated in cases of atypical pneumonia in man.

or'ni thyl. The univalent radical, $H_2NCH_2CH_2CH_2CH(NH_2)CO$— of the amino acid ornithine.

or'o- See *orrho-*

o ro- [L. *os*, mouth]. A combining form meaning *mouth* or *oral.*

o·ron o·sus. See *mountain sickness.*

o ro phar'ynx [L. *os*, mouth G *pharynx* pharynx]. The oral pharynx, situated below the level of the lower border of the soft palate and above the larynx, as distinguished from the nasopharynx and laryngeal pharynx. —**oropharyn geal,** *adj*

or' ·sin [G *oros*, serum]. Old term for the total coagulable protein of serum.

or' ·sin hy poth ·sis. A concept of the interaction of certain soluble proteins with each other and the nonprotein constituents of the tissue used

t denote an interrelationship among various proteins found in plasma or serum by physical and chemical means.

o·rot'ic ac'id. $C_5H_4N_2O_4$. 1,2,3,6-tetrahydro-2,6-dioxo-4-pyrimidinecarboxylic acid or uracil-4-carboxylic acid; a pyrimidine precursor in animal tissues.

O·ro·ya fe'ver (o·ro·yuh, o·roy'uh). See under *fever*.

or·phol. Bismuth betanaphthol.

or'pi·ment. N tive arsenic trisulfide.

Orr, Hiram Winnett (1877–). American surgeon celebrated for his method (1923) of treating severe wounds complicated by infections and compound fractures. See Orr Trueta method.

or·rhag'o·gue. See *hydragogue*.

or'rho-, or'o- [G. *orros*, whey]. A combining form meaning *serum*.

or"rho·men"in·gi'tis [G. *orros*, whey; *meninx*, membrane; *-itis*, inflammation]. Inflammation of serous membrane. Obs.

or'rhus [*orros*]. Serum; whey.

or'ris [perhaps from G. *iris*, iris]. The peeled and dried rhizome of *Iris germanica florentina* or *Iris pallida*. Valued chiefly for its pleasant odor.

o. root. A powder from certain varieties of iris used in various cosmetics, toothpastes, etc. It is common sensitizer both by contact or by inhalation.

orsanine. Trade-mark for sodium-4-acetyl-amino-2-hydroxyphenylarsonate, drug related to acetarsone. Has been used in the treatment of trypanosomiasis.

ortal sodium. Trade-marked ame for hexethal sodium, barbiturate having short duration of action.

or"thi·auch'e·nus (orth"ee·awk'i·nus) [G. *orthios*, steep; *auchen*, neck]. A skull in which the angle formed between the radius fixus and the line joining the basion and the inion is between 33° and 49°.

or"thi·o·chor·dus (orth"ee·o·kor'dus) [*orthios*; G. *chorde*, chord]. A skull in which the angle formed between the radius fixus and the line joining the hormion and the basion is between 31.2° and 33°.

or"thi·o·cor'y·phus [*orthios*; G. *koryphe*, head]. A skull in which the angle formed between the radius fixus and the line joining the bregma and the lambda is between 29° and 41.

or"thi·o·don'tus [*orthios*; G. *odous*, tooth]. A skull in which the angle between the radius fixus and the line joining the alveolar and subnasal points is between 83° and 131.

or"thi·o·me·to'pus [*orthios*; G. *metopon*, forehead]. A skull in which the angle between the radius fixus and the line joining the bregma and the nasal point is between 47° and 60°.

or"thi·o·pi"sthi·us [*orthios*; G. *opisthen*, behind]. A skull in which the angle between the radius fixus and the line joining the lambda and the inion is between 84° and 93°.

or"thi·o·pis·tho·cra·ni·us [*orthios*; *opisthen*; G. *kranion*, skull]. A skull in which the angle formed between the radius fixus and the line joining the lambda and the opisthion is 107°–119°.

or"thi·o·pro·so'pus [*orthios*; G. *prosopon*, face]. A skull in which the angle formed between the radius fixus and the line joining the nasion and the alveolar point is between 93.4° and 100°.

or"thi·op'y·lus [*orthios*; G. *pyle*, gate]. A skull in which the angle formed between the radius fixus and the line joining the middle point of the anterior margin of the foramen magnum and the middle point of the posterior margin of the foramen magnum is between 15.5 and 24.

or"thi·o·rhi'nus [*orthios*; G. *rhis*, nose]. A skull in which the angle formed between the radius fixus and the line joining the nasion and the subnasal point is between 87.5° and 95°.

or"thi·o·ur·a·nis'cus [*orthios*; G. *ouraniskos*, vaulted ceiling, roof of the mouth]. A skull in which the angle formed between the radius fixus and line joining the posterior border of the incisive fossa and the alveolar point is between 40° and 60°.

or'tho-, orth- [G. *orthos*, straight]. 1. A combining form denoting *straight*, *normal*, or *true*. 2. In chemistry, prefix indicating the neighboring or 1,2 positions on the benzene ring. Symbol, *o-*.

or"tho·bo'ric ac'id. Boric acid.

or·tho·caine (*orthocaina*). British Pharmacopoeia title for the methyl ester of *m*-amino-*p*-hydroxybenzoic acid, $HO.C_6H_3(NH_2)COOCH_3$, local anesthetic used in ointment form, as dusting powder, or in alcoholic solution. It has been used as gastric anesthetic. See *orthoform*.

or"tho·ceph'a·ly [*orthos*; G. *kephale*, head]. The condition of having skull with vertical index of from 70.1 to 75°.

or"tho·chlo·ro·phe'nol. $C_6H_4Cl.OH$. A compound of high germicidal activity and high toxicity.

or"tho·cho·re·a (orth"o·ko·ree'uh) [*orthos*; G. *choreia*, dance]. Choreic movements in the erect posture.

or"tho·chro·mat'ic [*orthos*; G. *chroma*, color]. A term originally used in photography to denote correctness in the rendering of colors; orthochromatic emulsions are not sensitive to red, and may be developed under red safe light.

or"tho·cra'si·a (orth"o·kray'see·uh, ·see·uh) [*orthos*; G. *krasis*, mixing]. A condition in which there is no idiosyncrasy. Rare.

ortho-creme. Trade-mark for contraceptive vaginal cream.

or"tho·cre'sol. $CH_3.C_6H_4.OH$. One of the isomers of cresol. It has the weakest germicidal activity of the three isomers.

or"tho·dac'ty·lous [*orthos*; G. *daktylos*, finger]. Having straight digits.

or"tho·den'tin. The mammalian type of dentin; it contains processes, but not cell bodies, of odontoblasts.

or"tho·di'a·gram [*orthos*; G. *diagramma*, figure marked out by lines]. A tracing of the outer contours and exact size of an organ, usually the heart; made by illuminating the edge of the organ with parallel x-rays through small, movable aperture and marking the outer edge of the shadow cast upon fluoroscopic screen.

or"tho·di'a·graph [*orthos*; G. *diagraphein*, to mark out by lines]. A fluoroscopic apparatus for making orthodiagrams.

or"tho·di·ag'ra·phy [*orthos*; *diagraphein*]. Determining by the aid of roentgen rays the exact dimensions of an internal organ, especially the heart, by the shadow which it throws upon the fluorescent screen.

or"tho·dol"i·cho·ceph'a·lous (orth"o·dol"i·ko·sef'uh·lus, ·do"li·ko·sef'uh·lus) [*orthos*; G. *dolichos*, long; *kephale*, head]. Having long and straight head; having vertical index between 70.1 and 75° and transverso-vertical index between 70° and 74.9°.

or"tho·don'ti·a. Old term for orthodontics.

or"tho·don'tics [*orthos*; G. *odous*, tooth]. The branch of dentistry concerned with the treatment of malocclusion.

or"tho·don'tist [*orthos*; *odous*]. A practitioner of orthodontics.

orthoform. A trade-mark for methyl *m*-amino-*p*-hydroxybenzoic acid. See *orthocaine*.

or"tho·gen'e·sis [*orthos*; G. *genesis*, production]. The doctrine that phylogenetic evolution takes place according to system in certain well-defined

and limited directions, and not by accident in many directions. —**orthogenet'ic, orthogenic,** *adj.*

or"thog nath'ic [*orthos*; G. *gnathos*, jaw]. *In craniometry*, designating a condition of the upper jaw in which it is in an approximately vertical relationship to the profile of the facial skeleton, when the skull is oriented on the Frankfort horizontal plane having a gnathic index of 97.9 or less.

or'tho grade [*orthos*; L. *gradus*, step]. Walking or standing in the upright position.

ortho-gynol. Trade-mark for a contraceptive vaginal jelly.

or"tho hy drox"y ben zo ic ac'id (orth o-high-drock see). Salicylic acid.

or"tho ki net'ic. See Brownian movement.

or"tho-mes o-ceph'a lous (orth o-mes"o-sef'uh-lus) [G. *orthos*, straight; *mesos*, middle; *kephalē*, head]. *In craniometry*, designating a skull with a transverso-vertical index between 78.1 and 79.9° and a vertical index between 70.1 and 75°.

or thom'e ter [*orthos*; G. *metron*, a measure]. An instrument for measuring the relative degree of protrusion of the eyes. Also called *exophthalmometer*.

or"tho pe dic [*orthos*; G. *pais*, child]. Pertaining to orthopedics, as orthopedic surgery.

or"tho-pe dics [*orthos*; *pais*]. That branch of surgery concerned with corrective treatment of deformities, diseases, and ailments of the locomotor apparatus, especially those affecting limbs, bones, muscles, joints, and fasciae, whether by apparatus, manipulation, or open operation; formerly devoted to the correction and treatment of deformities in children.

or"tho-pe dist [*orthos*; *pais*]. One who practices orthopedic surgery; a specialist in orthopedics.

or"tho-per cus'si on [*orthos*; L. *percussio* from *percutere*, to strike]. Percussion in which the distal phalanx of the percussing finger is held at right angles to the surface.

or"tho-phe-nan'thro-line (-fi-nan'thro leen, -lin). $C_{12}H_8N_2 \cdot H_2O$. A white, crystalline powder which forms a complex with ferrous ions and is used as an indicator in oxidation-reduction systems in volumetric analysis.

or"tho-pho ri [*orthos*; G. *phoros*, bearing]. 1. A tending of the visual lines to parallelism. 2. Normal balance of eye muscles.

or"tho phos-phor'ic ac'id. Phosphoric acid.

or"thop-ne [*orthos*; G. *pnoē*, breath]. A condition in which there is need to *sit up* to breathe more easily; usually associated with cardiac asthma. —**orthopneic,** *adj.*

or"tho-prax'is [*orthos*; G. *praxis*, doing]. Correction of the deformities of the body.

or"tho-psy-chi'a try (orth o-sigh kigh uh-tree) [*orthos*; G. *psychē*, soul; *iatreia*, treatment]. A subdivision of psychiatry primarily concerned with the prevention and treatment of behavior disorders. Mental hygiene and preventive methods are the main interests of orthopsychiatry.

O thop'ter-a [*orthos*; G. *pteron*, wing]. An order of insects including the grasshoppers, crickets, cockroaches, etc.

or thop'tic [*orthos*; G. *optikos*, optic]. Pertaining to normal binocular vision.

or thop tics [*orthos*; *optikos*]. The science of rendering visual reactions and responses right and efficient, usually by some form of exercise or training. These measures include the treatment of amblyopia, the education of stereopsis, and the treatment of muscle imbalances and strabismus.

or thop'to-scope [*orthos*; *optikos*; G. *skopein*, to examine]. An instrument used in orthoptic training.

or"tho-roent"gen-og'ra phy (orth o-rent ghin og ruh-fee) [*orthos*; *Röntgen*; G. *graphein*, to write]. Orthodiagraphy.

or'tho-scope [*orthos*; G. *skopein*, to examine]. 1. An instrument for examination of the eye through a layer of water whereby the curvature, and hence the refraction, of the cornea is neutralized, and the cornea acts as a plane medium. 2. An instrument for use in drawing the projections of skulls.

or"tho-scop'ic [*orthos*; *skopein*]. 1. Pertaining to an orthoscope or to orthoscopy. 2. Pertaining to lenses cut from near the periphery of a large lens. 3. Having normal vision.

or thos co-py [*orthos*; *skopein*]. The examination of the *eye* with the *orthoscope*.

or tho'sis [G. *orthōsis*, a making straight]. The straightening of a deformity. —**orthot'ic,** *adj.*

or"tho-stat'ic [G. *orthos*, straight; *statikos*, causing to stand]. Pertaining to, or caused by, standing upright, as orthostatic albuminuria, which occurs when the patient stands on his feet or exercises for long periods of time, but which disappears after a period of rest in bed.

orthosympathetic system. See thoracolumbar *system*.

or'tho tast [*orthos*; G. *tassein*, to arrange]. A device for straightening curvatures of long bones. It has also been used as a tourniquet.

or"tho-ter'i on (orth o-teer ee-on) [*orthos*]. An apparatus for straightening curved limbs.

or thot' nus [*orthos*; G. *tonos*, tension]. Tetanic cramp in which the body lies rigid and straight. —**orthoton'ic,** *adj.*

or thot'ro pism [*orthos*; G. *trepein*, to turn]. Vertical, upward, or downward growth. —**orthotrop'ic,** *adj.*

orthoxine. Trade-mark for beta-(ortho-methoxyphenyl)isopropylmethylamine, a sympathomimetic amine available as the hydrochloride salt. See *methoxyphenamine*.

o. hydrochloride. Trade-marked name for the sympathomimetic compound, methoxyphenamine hydrochloride.

Orth's fix'ing flu'id. See under *fixing fluid*.

ryz' min. Thiamine hydrochloride.

or"y zen'in. A glutelin from rice.

O S. *Oculus sinister*, left eye.

Os Chemical symbol for osmium.

os (pl. *ora*) [L.]. The mouth.

o. uteri externum. The external opening of the cervix of the uterus; also called *o. uteri*. See *Plate 41*.

o. uteri internum. The opening of the junction of the cervix and body of the uterus.

pinhole o. An extreme degree of stenosis of the os uteri, seen in young and undeveloped women.

os (pl. *ossa*) [L.]. A bone.

o. acetabuli. An osseous center in the triradiate cartilage; also called *cotyloid bone*. There is an anterior one between the iliac and pubic portions of the acetabulum and a posterior one between the iliac and ischial portions.

o. acromiale. The acromion when not united to the scapula.

o. articulare. See *articular*.

o. basioticum. A separate center of ossification between the basal part of the occipital bone and the sphenoid; the os prebasioccipitale.

o. bregmaticum. An occasional sutural bone, caused by the presence of a separate center of ossification in the anterior fontanel.

o. breve. A short bone.

o. calcis. Old term for calcaneus, the bone of the heel.

o. centrale. An occasional ossicle found on the dorsal aspect of the carpus between any pair of

the navicular, capitate, and lesser multangular bones, in many mammals.

o. clitoridis. A bone in the septum of the clitoris, in some mammals.

o. cordis. A bone in the fibrous triangle of the heart, between the atrioventricular and aortic orifices, in some mammals.

o. coxae. Hipbone.

o. entomion. A supernumerary bone situated at the entomion.

o. epiptericum. A supernumerary bone situated near the pterion.

o. falciforme. A sickle-shaped ossicle at the lower end of the radius in moles.

o. ilium. The ilium.

o. incisivum. The incisive bone; premaxilla.

ossa intercalaria. Wormian bones; old term.

o. interfrontale. An occasional accessory ossicle in the anterior part of the metopic suture.

o. intermetatarseum. An occasional wedge-shaped bone on the dorsal aspect of the foot between the medial cuneiform and first and second metatarsal bones.

o. interparietale. A supernumerary bone in the sagittal suture.

o. ischii. The ischium.

o. japonicum. The divided zygomatic bone, racial characteristic of the Japanese.

o. lenticulare. The lenticular process; incorrect usage.

o. magnum. Old term for the capitate, the third bone of the second row of the carpus.

o. novum. Bone prepared for grafting by implanting on person in another site until soft tissues have become associated with it.

o. odontoideum. The dens of the epistropheus when it persists as a separate ossicle.

o. orbiculare. The lenticular process of the incus.

o. orbitale. The upper of two portions into which the zygomatic bone is sometimes divided by a horizontal suture.

o. pedis. The distal phalanx of a horse's foot. Syn., coffin bone.

o. penis. A bone in the septum of the penis in some mammals, as the dog; seen rarely as a pathological condition, in man.

o. prebasioccipitale. The os basiotieum.

o. pubis. The pubic bone.

o. purum. Bone for grafting, processed to remove soft tissue and proteins. It is kept dry and boiled before use.

o. styloideum. The styloid process of the third metacarpal when it occurs as a separate ossicle.

o. suprasternale. A suprasternal bone.

o. trigonum. An ossicle due to the separation of the lateral tubercle of the posterior surface of the talus and ossification from a distinct center.

o. Vesalii. 1. An occasional accessory ossicle between the hamate and fifth metacarpal. 2. An occasional accessory ossicle at the base of the fifth metatarsal.

o. zygomaticum. The cheekbone.

os'azone. Compound formed by reaction of a sugar with phenylhydrazine in the presence of acetic acid; used in the identification of sugars.

os'che·al (os'kee-uhl). Scrotum. —**oscheal,** *adj.*

os·che·o- (os'kee-o-), **os'che-** [G. *oscheon*]. A combining form meaning *the scrotum*.

Os"cil·la·ri·a ma·la·ri·ae (os"i-lay'ree-uh ma-lair'ee-ee). Old term for the malarial plasmodia, *Plasmodium falciparum, P. malariae* and *P. vivax*.

os·cil·la'tion [L. *oscillatio*, from *oscillare*, to swing]. A swinging or vibration; also any tremulous motion.

os'cil·la"tor [oscillare]. An apparatus used in mechanical therapeutics.

os·cil'lo·graph" [L. *oscillum*, swing; *graphein*, to write]. An apparatus for recording oscillations. —**oscillograph'ic,** *adj.*

cathode-ray o. An instrument in which a pencil of electrons, striking a fluorescent screen, will trace a graph of any two variables that have been converted into electric equivalents. Its virtue is absence of mechanical inertia, and hence the ability to record changes of extreme rapidity with absolute accuracy.

os"cil·lom'e·ter [oscillum; G. *metron*, a measure]. An instrument for measuring oscillations, as those seen in taking blood pressures. —**oscillomet'ric,** *adj.*

os"cil·lom'e·try [oscillum; metron]. Measurement or detection of oscillations of any type, especially circulatory, usually by means of a string galvanometer.

os"cil·lop'si·a [oscillum; G. *opsis*, vision]. Oscillating nystagmus of disseminated sclerosis, usually occurring only during walking.

os·cil'lo·scope [oscillum; G. *skopein*, to examine]. A cathode-ray vacuum tube so constructed as to portray visually the deflections or oscillations of electromotive forces as a function of time; also called cathode-ray. See cathode-ray *oscillograph*.

os'cine. Scopoline.

Os·cin'i·dae (os-in'i-dee) [L. *oscen*, singing bird]. A family of the Diptera, which contains many species of small active flies known as eye gnats; contains the medically important genera *Hippelates, Siphunculina,* and *Oscinis*. Syn., *Chloropidae*.

Os'ci·nis [oscen]. A genus of flies of the family Oscinidae.

O. pallipes. A species which feeds on conjunctival exudates.

os'ci·tan·cy [L. *oscitare*, to yawn]. The disposition to yawn; drowsiness. *Obs.*

os"ci·ta'tion [L. *oscitatio*, from *oscitare*]. Yawning.

os"cu·la'tion [L. *osculatio*, from *osculari*, to kiss]. 1. Anastomosis of vessels. 2. Kissing.

os'cu·lum [L., little mouth]. A small aperture.

-ose [F. *glucose*]. 1. A suffix denoting *carbohydrate*. 2. A suffix denoting a *substance derived by hydrolysis of a protein*.

Oser method. See Roehberg-Melnick-Oser method for ascorbic acid.

Osgood-Haskins test. See under *test*.

Osgood, Robert Bayley [*American orthopedic surgeon*, 1873–]. Known for his description of tibial tuberosity lesions occurring in adolescents (1903), called *osteochondrosis of tuberosity of tibia, Osgood-Schlatter disease*. Introduced his operation for the relief of so-called tennis elbow, in which he incised from the epicondyle downward, and exposed and excised the involved bursa.

Osgood-Haskins test. See under *test*.

O'Shaughnessy's operation. See *cardio-omentopexy*.

-o'sis [G.]. Suffix signifying 1. That process, or condition, as psychosis, neurosis, osmosis. 2. *In pathology*, diseased condition, as nephrosis; specifically, disease caused by a fungus; mycosis. 3. Increase or formation, as leukocytosis.

Osler, William [*English physician of Canadian birth*, 1849–1919]. For years his *Principles and Practice of Medicine* has been a standard textbook. He described (1901) hereditary hemorrhagic telangiectasia, called *Osler-Rendu-Parkes-Weber disease*. Independently of Vaquez, described primary polycythemia, called *Osler's disease, Osler-Vaquez disease*. Described acute bacterial endocarditis. Small, painful swellings on hands and feet, especially on the tips of toes and fingers, associated with this disease, are called *Osler's nodes*. Compiled a bibliography of his own library

of 7500 titles, now at McGill University. See Osler Libman-Sacks *syndrome*.

os mate (os mate os mate). A salt of osmic acid.

os mat'ic (os-mat ick, os-mat'ick) [G. *osmē*, smell]. Characterized by sense of smell.

os mes is (os-mee'sis, os-mee sis) [G. smell]. The act of smelling. *Obs.*

os"mes the si a (os mess thee zhuh, -zee uh, os mess-) [G. *osmē*, smell *aisthēsis*, perception]. Olfactory sensibility.

os'mic ac'id (os mick, os mick) OsO. A crystalline substance employed as histologic stain and reagent; has been used internally in the form of the potassium salt, in rheumatic affections and in epilepsy.

os'mics (os'micks) [*osmē*]. The science of smell.

os"mi dro sis (os mi-dro sis, os mi) [*osmē*, G. *hidrōsis*, sweat]. The secretion of malodorous perspiration; bromhidrosis.

os'mi um (os'mee-um, os') [*osmē*]. Os = 190.2. A heavy metallic element belonging to the platinum group. —**os'mic**, *adj.*

os'mo- [*osmē*]. A combining form meaning *smell*, *odor*.

os mo- (os mo- os mo-) [G. *ōsmos* impulse]. A combining form denoting *osmosis*.

os"mo dys pho ri [G. *osmē*, smell *dys-* bad; *phoros* bearing]. Intolerance of certain odors.

os'mol. One thousand milliosmols.

os mo-la 'l ty The osmotic effectiveness of an ion present in biological fluid. In plasma, sodium makes up about 92% of the osmotically effective bases. Also see *milliosmol*.

os mol'o-gy (os-mol' jee, os) [*osmē*; G. *logos*, word]. The science of odors and the sense of smell.

os mol'o-gy [G. *ōsmos*, impulse *logos*] That part of physical science treating of osmosis.

os mom e ter (os-mom -tur os-) [G. *osmē*, smell *metron*, measure] An instrument for testing the sense of smell an olfactometer.

os mom ter [G. *ōsmos*, impulse; *metron*]. An apparatus for measuring osmosis.

os"mo-pho'bi-a [G. *osmē*, smell *phobos*, fear]. A morbid fear of odors.

os mo phore A group or radical that imparts odor to compound.

os mo-re-cep'tors. The (postulated) nerve endings in the hypothalamus which respond to changes in osmotic pressure of the blood by regulating the secretion of the neurohypophyseal antidiuretic hormone (ADH).

os mo-reg"u lar'i ty [G. *ōsmos*, impulse L. *regula*, rule]. Affecting or regulating the extent and rate of osmosis.

os mo sis (os-mo sis, os-) [*ōsmos*]. The passage of solvent through membrane from dilute solution into more concentrated one.

os mot'ic (os-mot'ick, os) [*ōsmos*]. Pertaining to osmosis, particularly to osmotic pressure.

os phre si ol' gy (os free zee ol o-jee) [G. *osphrēsis*, sense of smell *logos*, word]. The science of the sense of smell and its organs, and of odors. *Obs.*

os phre si-om ter (os-free zee-om'i tur) Osmometer: olfactometer.

os phre si [G]. The sense of smell olfaction. *Obs.*

os"phy al'gi [G. *osphys*, loins *algos*, pain]. Any pain in the hip or loins sciatica. *Obs.*

os"phy i'tis [*osphys*; G. -*itis*, inflammation]. Lumbar inflammation coxitis. *Obs.*

os"phy o-my" li'tis [*osphys*; G. *myelos*, marrow; -*itis*]. Myelitis of the lumbar portion of the spinal cord. *Obs.*

os sa. Plural of os (meaning bone").

os se in, os'se ine (oss ee in) [L. *osseus*, of bone]. 1 Collagen. 2. The organic framework of osseous tissue.

os'se-let [dim. from L. *os*, bone]. A hard nodule on the inner aspect of the horse knee.

os"se al bu'mi oid. A tough, elastic, and fibrous protein in bone, believed to be constituent of the lining of the H versian canals.

os se-o-car"ti lag'i nous (oss ee-o-kahr ti ladj'i-nus) [L. *osseus*, of bone *cartilago* cartilage] Pertaining to or composed of both bone and cartilage.

os se fi'brous. Pertaining to or composed of both bon and fibrous tissue.

os se mu'coid [*osseus*; L. *mucus*, mucus; G. *eidos*, form]. A mucin or glycoprotein obtained from bone.

os'se-ous [*osseus*]. Bony; composed of or resembling bone.

os'si-cle [L. *ossiculum*, dim. of *os*, bone]. A small bone: particularly one of three small bones in the tympanic cavity: the malleus, incus, and stapes.
Kerckring' **o.** See Theodor *Kerckring*.
o. of Bertin. See concha sphenoidalis.

os"si-cu lec'to my [*ossiculum*, G. *ektomē*, excision] The removal of one or more of the ossicles of the middle ear.

os"si-cu lot my [*ossiculum*, G. *tomē*, cutting] Surgical incision involving the tissues about the ossicles of the ear.

os sif'er-ous [L. *os*, bone *ferre*, to bear]. Containing or producing bone tissue.

os-sif'ic [*os*; L. *facere* to make]. Producing bone.

os"si fi-ca'tion [*os*; *facere*]. The formation of bone the conversion of tissue into bone. See Plate 24.
pathologic o. Bone development in unusual sites or abnormal bone formation. Metaplastic or heteroplastic bone may be observed in soft tissues.

os-sif'lu-ence [*os*; L. *fluere*, to flow] Osteolysis.

os sif'lu-ent [*os*; *fluere*]. Breaking down and softening bony tissue, as an ossifluent abscess.

os'si form [*os*; L. *forma*, form]. Bonelike.

os si fy (oss'i-figh) [*os*; L. *facere*, to make]. T turn into bone.

os tal'gi [G. *osteon*, bone; *algos*, pain]. Pain in bone also spelled *ostalgia*. —**ostalgic**, *adj.*

os"tal gi'ti [*osteon*, *algos*, G. -*itis*, inflammation]. Inflammation of bone attended by pain.

os'te-al [*osteon*]. Osseous, bony: pertaining to bone.

os"te- l"le- sis [*osteon*, G. *alloiōsis*, alteration]. A metamorphosis of the substance of bone, as exemplified in osteosarcoma.

os"te-an gen e-sis [*osteon*; G. *anagennēsis*, regeneration]. Regeneration of bone.

os"te a naph y si [*osteon*; G. *anaphysis*, growing again]. The reproduction of bone tissue. Syn. *osteoanagenesis*.

os"te-ar throt o-my See *osteoarthrotomy*.

os tec to-my os"te-ec'to-my [*osteon*; G. *ektomē*, excision]. Excision of bone or portion of bone.

os-tec'to-py [*osteon*, G. *ektopos*, away from place] Displacement of bone also spelled *ostectopia*.

os'te in, os'te ine (os'tee in, os-tee'in) See *ossein*.

os"te i'tis [*osteon*, G. -*itis*, inflammation]. Inflammation of bone. —**osteit'i** *adj.*
co densi g o. A form usually involving both marrow and periosteum and resulting in the filling of the medullary cavity ith dense bony mass new bone usually forms on the surface, so that th bone becomes heavier and denser than normal.
dentoalveolar o. See alveolar *pyorrhea*.
gummatous o. A chronic form due to syphilis and characterized by the formation of gummas in the cancellous tiss of the epiphysis, in the shaft of bone, or in the periosteum.
o. carnosa. Inflammation of bone with an excess of fungous granulations.
o. condensans ilii. A condition in which the normal bony structure of the portion of the ilium

along the sacroiliac joint is altered, probably as a result of mechanical strain on the joint.

o. cystica of Jüngling. Osseous lesions of sarcoidosis. The phalanges of fingers and toes appear on roentgenograms to have cysts. They represent replacement of bone and marrow by sarcoid nodules. Syn., *osteitis tuberculosa multiplex cystoides*.

o. deformans. See Paget's disease (a).

o. fibrosa cystica. Hyperparathyroidism; disease due to hyperplasia or adenoma of the parathyroid gland resulting in an abnormal calcium and phosphorus metabolism. It is characterized clinically by thinning of the bony skeleton, often in the form of cysts. Also called *von Recklinghausen* or *Engel-Recklinghausen disease*. Syn., *osteitis fibrosa generalisata*.

o. fibrosa disseminata. See fibrous dysplasia.

o. fibrosa generalisata. See o. fibrosa cystica.

o. fungosa. A simple, inflammatory hyperplasia of the medulla and of the compact substance of bone characterized by fungoid granulations and leading to new ossification or destructive chronic inflammation.

o. interna. Osteomyelitis of the alveolar process resulting from infection of a tooth.

o. pubis. Inflammation of the periosteum over the pubic symphysis and sometimes of the ischii, as a complication of surgical operation on the urinary bladder or prostate; more frequent in males.

o. tuberculosa multiplex cystoides. See cystica of Jüngling.

rarefying o. See *osteoporosis*.

renal o. A disorder of calcium metabolism, with secondary hyperparathyroidism, resulting from phosphorus retention, caused by tubular or glomerular disease of the kidney which produces acidosis and renal insufficiency. The disease is not affected by the administration of the parathyroid hormone, but only by measures for the acidosis. Therapy includes an alkaline salt, vitamin D and a calcium salt. Also called *renal rickets*.

sclerotic o. See *osteopetrosis*.

os·tem'bry·on [osteon, G. *embryon*, embryo]. An ossified fetus.

os"tem·py·e'sis (os"tem·pye·ee'sis, ·pee·ee'sis) [osteon, G. *empyesis*, suppuration]. Suppuration of bone.

os'te·o-, oste- [osteon]. A combining form meaning *bone*.

os"te·o·an"a·gen'e·sis [osteon, G. *anagennesis*, regeneration]. Osteanagenesis.

os"te·o·an'eu·rysm. Aneurysm of the blood vessels of a bone; pulsating tumor of a bone. See also osteogenic sarcoma.

os"te·o·ar·threc'to·my. Surgical excision or partial excision of the bony portion of a joint.

os"te·o·ar·thri'tis. Degenerative joint disease.

ochronotic o. A rare degenerative arthropathy associated with the diseased cartilage of ochronosis, usually accompanied by alkaptonuria; also called *alkaptonuric o.*

os"te·o·ar·throp'a·thy [osteon; G. *arthron*, joint; *pathos*, disease]. Any disease of bony articulations.

hypertrophic pulmonary o. Clubbing of the fingers and toes associated with enlargement of the ends of the long bones, encountered in chronic pulmonary disease; also called *osteopulmonary arthropathy*.

os"te·o·ar·thro'sis [osteon; G. *arthrosis*, articulation]. Old term for degenerative joint disease.

os"te·o·ar·throt'o·my [osteon; G. *arthron*, joint; *tomē*, a cutting]. Surgical excision or partial excision of the bony portion of a joint.

os'te·o·blast" [osteon; G. *blastos*, germ]. Any one of the cells of mesenchymal origin concerned in the formation of bony tissue. —**osteoblast'ic**, *adj.*

os"te·o·blas·to'ma [osteon; *blastos*; G. *-ōma*, tumor]. See osteogenic sarcoma.

os"te·o·camp'si·a [osteon; G. *kampsis*, bending]. Curvature of a bone without fracture, as in osteomalacia. *Obs.*

os"te·o·car"ci·no'ma [osteon; *karkinōma*]. An ossifying carcinoma; carcinoma of a bone.

os"te·o·car"ti·lag'i·nous (os"tee·o·kahr"ti·ladj'i·nus) [osteon; L. *cartilago*, cartilage]. Pertaining to or composed of both bone and cartilage.

os"te·o·chon'dral, os"te·o·chon'drous. Composed of both bone and cartilage.

os"te·o·chon·dri'tis (·kon·dry'tis) [osteon; G. *chondros*, cartilage; *-itis*, inflammation]. Inflammation of both bone and cartilage. The term is sometimes used for *osteochondrosis*.

o. deformans juvenilis. Formerly osteochondrosis of the head of the femur seen especially in children; also called *arthritis deformans juvenilis*, *caput deformatum*, *coxa plana*, *osteochondritis deformans coxae juvenilis*, and associated with the names of J. Calvé, A. J. Legg, G. C. Perthes, and J. H. Waldenström. Syn., *osteochondrosis deformans juvenilis*.

o. dissecans. A joint affection, first described by F. König, characterized by partial or complete detachment of a fragment of articular cartilage and underlying bone; also called *osteochondritis dissecans*.

syphilitic o. Syphilitic involvement of the epiphyseal cartilage during infancy, characterized by irregular calcification of the epiphyses and thickening of the distal ends of long bones. The extremities are usually symmetrically involved.

vertebral o. See *osteochondrosis*.

os"te·o·chon"dro·dys·pla'si·a [osteon; *chondros*; G. *dys-*, prefix meaning hard, bad, unlucky; *plassein*, to form]. Abnormal development of bony and cartilaginous structures.

os"te·o·chon"dro·dys·tro'phi·a de·for'mans (os·tee·o·kon·d dis·tro fee·uh di·for·mans). Chondro-osteodystrophy.

os"te·o·chon·dro'ma (·kon·dro'muh) [osteon; *chondros*; G. *-ōma*, tumor]. 1. A tumor originating in bone or cartilage, occasionally from other structure, which histologically contains both bone and cartilage. It is not malignant but is marked by predilection for local recurrence after surgery. 2. The solitary form of exostosis.

os"te·o·chon·dro·ma·to'sis [osteon; *chondros*; *-ōma*; G. *-ōsis*, condition]. 1. The presence of several osteochondromas. 2. Chondromatosis in which some ossification is present.

os"te·o·chon"dro·myx·o'ma. An osteochondroma with a myxoid component.

os"te·o·chon"dro·myx"o·sar·co'ma. An osteosarcoma.

os"te·o·chon"dro·sar·co'ma [osteon; *chondros*; G. *sarkōma*, fleshy excrescence]. An osteosarcoma.

os"te·o·chon·dro'sis. A process involving ossification centers chiefly during periods of rapid growth, characterized by avascular necrosis followed by slow regeneration. Osteochondrosis of the lunate bone was described by A. Kienböck; of the tarsal navicular bone by A. Köhler; of the primary and secondary growth centers of vertebral bodies by J. Calvé and H. W. Scheuermann, respectively; of a metatarsal head, usually the second, by A. H. Freiberg and A. Köhler; of the tibial tuberosity by R. B. Osgood and C. Schlatter; of an accessory center of ossification in the patella by Johansson and Sinding-Larsen. It is seen most frequently in the head of the femur

where it has been called *osteochondritis deformans juvenilis*; formerly often called *osteochondritis*.

o. deformans juvenilis. See *osteochondritis deformans juvenilis*.

o. deformans tibiae. Nonrachitic bowing of the legs seen in very young, and less frequently in older children, which usually improves spontaneously; also called *Blount-Barber syndrome*.

o. dissecans. See *osteochondritis dissecans*.

os″te-o-chon′drous. Osteochondral.

os″te-oc′la-sis [*osteon*; G. *klasis*, breaking]. 1. The fracture of a long bone without resort to open operation, for the purpose of correcting deformity. 2. The destruction of bony tissue; the resorption of bone.

os′te-o-clast″ [*osteon*; G. *klastos*, broken in pieces]. 1. A powerful surgical apparatus or instrument through which leverage can be brought to bear at the point desired to effect osteoclasis or the forcible fracture of a long bone. 2. One of the large multinuclear cells found in association with the resorption of bone. —**osteoclas′tic**, *adj.*

os″te-o-clas-to′ma [*osteon*; G. *klastos*; -*ōma*, tumor]. Giant-cell tumor 1, of bone.

os′te-o-cope. See *osteocopic pain*.

os″te-o-cra′ni-um [*osteon*; G. *kranion*, skull]. The ossified cranium as distinguished from the chondrocranium.

os″te-o-cys-to′ma [*osteon*; G. *kystis*, bladder; -*ōma*, tumor]. A cystic bone tumor.

os′te-o-cyte [*osteon*; G. *kytos*, cell]. A bone cell.

os″te-o-den′tin (os″tee-o-den′teen, -tin) [*osteon*; L. *dens*, tooth]. A tissue intermediate in structure between bone and dentin.

os″te-o-der″ma-to-plas′tic [*osteon*; G. *derma*, skin; *plassein*, to form]. Pertaining to the formation of osseous tissue in dermal structures.

os′te-o-der′mi [*osteon*; *derma*]. Bony formations in the skin.

os″te-o-di-as′ta-sis (-dye-ass′tuh-sis) [*osteon*; G. *diastasis*, separation]. Separation of bone (as an epiphysis) without true fracture. *Obs.*

os″te-o-dyn′i-a [*osteon*; G. *odynē*, pain]. A pain in bone.

os″te-o-dys-tro′phi-a. Osteodystrophy.

o. deformans. See Paget's *disease*.

o. fibrosa. See fibrous *dysplasia*.

os″te-o-dys′tro-phy. Any defective bone formation, such as the bone defects seen in rickets, dwarfism, etc.; also spelled *osteodystrophia*. See also *dystrophy*.

renal o. See renal *rickets*.

os″te-o-e-piph′y-sis. Old term for epiphysis.

os″te-o-fi″bro-chon-dro′ma. An osteochondroma.

os″te-o-fi″bro-li-po′ma [*osteon*; L. *fibra*, fiber; G. *lipos*, fat; -*ōma*, tumor]. A tumor of bony, fibrous, and fatty components.

os″te-o-fi-bro′ma (os″tee-o-figh-bro′muh) [*osteon*; *fibra*; -*ōma*]. An osteoma with a rich fibrous component; a fibroma with osseous metaplasia.

os″te-o-fi″bro-sar-co′ma. An osteosarcoma.

os″te-o-fi-bro′sis (-figh-bro′sis) [*osteon*; *fibra*; G. -*osis*, condition]. Fibrosis of bone; changes involving mainly the red bone marrow.

os′te-o-gen [*osteon*; G. *genesthai*, from *gignesthai*, to be produced]. The substance from which osteogenic fibers are formed.

os″te-o-gen′e-sis [*osteon*; G. *genesis*, production]. The development of bony tissue; ossification; the histogenesis of bone.

o. imperfecta. A defect of bone formation and calcification, of unknown cause but often hereditary or familial, characterized by bone fragility and blue sclerae. The first of many fractures may occur at or before birth (prenatal type) in infancy (postnatal type), or later in childhood (**o. imperfecta tarda**). Many severe cases are dwarfed. In the survivors, otosclerosis and deafness may develop (Van der Hoeve syndrome) and hyperplastic callus formation may accompany the disease. On the basis of the radiographic appearance, the disease is divided into thick-bone type, usually severe prenatal cases; thin-bone type, a few prenatal and all postnatal cases; and **o. imperfecta cystica**, the rare type in which cystic changes of bone are also seen. Also called *fragilitas ossium*, *osteopsathyrosis*, *periosteal dysplasia*, *Lobstein's disease*, *Eddowes' disease*.

os″te-o-ge-net′ic, os″te-o-ge-net′ic [*osteon*; G. *genesthai*, from *gignesthai*, to be produced]. Pertaining to osteogenesis, as osteogenic layer, the deep layer of periosteum from which bone is formed.

os″te-og′e-nous (os-tee-odj′i-nus). Osteogenic.

os″te-og′e-ny (os-tee-odj′i-nee). See *osteogenesis*.

os″te-o-ha-lis″ter-e′sis [*osteon*; G. *hals*, salt; *sterēsis*, deprivation]. A loss of the mineral constituents of bone, frequently resulting in softening and deformity of the bone. *Obs.*

os″te-o-hy″per-troph′ic [*osteon*; G. *hyper*, beyond; *trophē*, nourishment]. Pertaining to overgrowth of bone.

os′te-oid [*osteon*; G. *eidos*, form]. The young hyaline matrix of true bone in which the calcium salts are deposited.

os′te-oid. Resembling bone.

os″te-o-li″po-chon-dro′ma (os″tee-o-lip″o-kon-dro′muh, -lye″po-kon-dro′muh) [*osteon*; G. *lipos*, fat; *chondros*, cartilage; -*ōma*, tumor]. A chondroma with osseous and fatty elements.

os′te-o-lith [*osteon*; G. *lithos*, stone]. A petrified or fossil bone.

os″te-ol′o-gy [*osteon*; G. *logos*, word]. The science of anatomy and structure of bones.

os″te-ol′y-sis [*osteon*; G. *lysis*, loosing]. 1. Resorption of bone. 2. Degeneration of bone.

os″te-o′ma [*osteon*; G. -*ōma*, tumor]. 1. A benign bony tumor seen particularly in the membrane bones of the skull and exhibiting a tendency to extend into the orbit or paranasal sinuses. Histologically it is composed of osteoblasts, forming osteoid and osseous tissue, and may become compact. Classified according to location, it may be central, endosteal, cortical, or periosteal. 2. Loosely, a nonneoplastic or neoplastic lesion, such as hyperostosis, fibrous dysplasia, or an exostosis (osteochondroma). —**osteom′atoid**, *adj.*

cavalryman's o. An exostosis at the attachment of the adductor longus or adductor magnus muscle.

fibrous o. Ossifying fibroma.

osteoid o. A small benign tumor of bone, composed of a nidus of well-vascularized connective tissue and osteoid matrix surrounded by atypical trabeculae of dense new bone, occurring almost exclusively in younger age groups and characteristically accompanied by severe pain.

o. cutis. Bony deposits in the skin and subcutaneous tissue, usually secondary to some other skin lesion; also called *osteosis cutis*.

o. durum. Hard, dense osteoma with little marrow. Also called *o. eburneum*.

o. eburneum. An ivorylike osteoma.

o. medullare. An osteoma with conspicuous marrow spaces.

o. spongiosum. One which is spongy because of coarse bands of cancellous bone.

os″te-o-ma-la′ci-a [*osteon*; G. *malakia*, softness]. A disorder of bone characterized by failure of calcium salts to be deposited in newly formed osteoid, leading to weakened bones. The product of total serum inorganic calcium and total serum inorganic

phosphorus is below the normal adult level (see *law of Howland and Kramer*). Its causes include lack of vitamin D or resistance to it, failure to absorb it, as in steatorrhea, renal acidosis, hypercalciuria and others. Syn. adult rickets. —**osteomala'cial**, **osteomalac'ic**, *adj.*

juvenile o. Rickets.

os"te·om'e·try [*osteon*; G. *metron*, a measure]. The study of the proportions and measurements of the skeleton. —**osteomet'ric**, *adj.*

os"te·o·mu'coid. See *ossemucoid*.

os"te·o·my"e·li'tis [*osteon*; G. *myelos*, marrow; -*itis*, inflammation]. Inflammation of the marrow of bone. —**osteomyelit'ic**, *adj.*

chronic hemorrhagic o. See giant-cell tumor 1.

chronic sclerosing o. A low-grade chronic osteomyelitis, described by Carl Garré, which stimulates bone-marrow formation, characterized by marked increase in bone density without pus. The marrow may be replaced by granulation or fibrous tissue. Also called *sclerotic nonsuppurative o.*

hematogenous o. An infection of the bone, transmitted through the blood stream and localized on the diaphyseal side of the epiphyses, usually caused by *Micrococcus pyogenes*.

suppurative o. A complication or late sequel of enteric fevers, e.g., typhoid or *Salmonella* infections.

os"te·o·my"e·log'ra·phy [*osteon*; *myelos*; G. *graphein*, to write]. Roentgenography of bone marrow and marrow spaces.

os"te·o·myx"o·chon·dro'ma. An osteochondroma with a myxoid component.

os"te·on, os"te·one'. A concentric lamellar (Haversian) system in compact bone.

os"te·o·ne·cro'sis [*osteon*; G. *nekrōsis*, mortification]. Necrosis of bone in mass.

os"te·o·neph·rop'a·thy. Any of a variety of syndromes, involving bone changes, accompanying renal disease, e.g., renal rickets, nephrocalcinosis, amino-diabetes, and idiopathic hypercalciuria.

os"te·o·neu·ral'gia [*osteon*; G. *neuron*, nerve; *algos*, pain]. Neuralgia of bone. Obs.

os"te·o·pae·di'on (os"tee-o-pee'dee-on). See *lithopedion*.

os'te·o·path, os"te·op'a·thist [*osteon*; G. *pathos*, disease]. One who practices osteopathy.

os"te·o·path'i·a. Any bone disease or defect.

o. condensans disseminata. Osteopoikilosis.

o. hyperostotica (scleroticans) multiplex infantilis. See Engelmann's disease.

o. striata. An unusual congenital osseous defect characterized by the roentgenographic finding of striation of the skeleton and particularly of the metaphyses of long bones. It may be related to dyschondroplasia and osteopoikilosis.

os"te·op'a·thy [*osteon*; *pathos*]. A school of healing which teaches that the body is a vital mechanical organism whose structural and functional integrity are coordinate and interdependent, the perversion of either constituting disease. Its major effort is treatment is in manipulation, but surgery and the specialties are also included. —**osteopath'ic**, *adj.*

os"te·o·pe·cil'i·a. See *osteopoikilosis*.

os"te·o·pe·di'on [*osteon*; G. *paidion*, little child]. A calcified fetus. Syn., *lithopedion*.

os"te·o·per"i·os·ti'tis [*osteon*; G. *periosteon*, around the bones; -*itis*, inflammation]. Combined inflammation of bone and its periosteum.

os"te·o·pe·tro'sis [*osteon*; G. *petros*, stone; -*ōsis*, condition]. A rare developmental error of unknown cause but of familial tendency characterized chiefly by excessive radiographic density of most or all of the bones. Clinically there may be tendency toward bone fracture, anemia, and optic atrophy. The extent to which the bones are involved varies. Pathologically, bones show sclerotic changes with fibrosis of the marrow. Also called *o. generalisata*, *Albers-Schönberg disease*, *ivory bones*, *marble bones*, *osteosclerosis* (*fragilis generalisata*), *chalkstone*.

Léri type of o. See *melorheostosis*.

os'te·o·phage [*osteon*; G. *phagein*, to eat]. An osteoclast 2.

os"te·oph'o·ny [*osteon*; G. *phōnē*, sound]. The transmission of sound through bone.

os"te·o·phthi'sis [*osteon*; G. *phthisis*, a wasting away]. Wasting of the bones. Obs.

os'te·o·phyte" [*osteon*; G. *phyton*, plant]. A bony outgrowth.

os'te·o·plaque" (os'tee-o-plack") [*osteon*; G. *plax*, anything flat and broad]. A layer of bone; a flat osteoma.

os'te·o·plast". See *osteoblast*.

os"te·o·plas'tic [*osteon*; G. *plassein*, to form]. 1. Pertaining to the formation of bone tissue. 2. Pertaining to reparative operations upon bone.

os'te·o·plas"ty [*osteon*; *plassein*]. Plastic operations on bone.

os"te·o·poi"ki·lo'sis [*osteon*; G. *poikillein*, to work in various colors; -*ōsis*, condition]. A bone affection of unknown cause, giving rise to no symptoms and discovered by chance on roentgenographic examination when ellipsoidal dense foci are seen in all bones; also called *osteopathia condensans disseminata*.

os"te·o·po·ro'sis [*osteon*; G. *poros*, passage; -*ōsis*]. Enlargement of the marrow and Haversian spaces of the bone at the expense of the solid parts. Trabeculae become fewer and thinner; compact bone tends to resemble cancellous, with resulting fragility. —**osteoporot'ic**, *adj.*

disuse o. Demineralization with loss of matrix, involving the bones of all or a part of an extremity in which function has been impaired, or the entire skeleton when total physical activity is limited. Senility, menopause, and systemic disease are predisposing conditions.

malnutrition o. That resulting from negative mineral and nitrogen balances and deficiencies of vitamins essential for maintenance of proper calcium and phosphorus distribution in the body and for ossification.

postmenopausal o. A diffuse osteoporosis, often severe, chiefly involving the spine and pelvis, which may follow artificial or physiological menopause, and is caused by the hormonal deficiency and concomitant inadequate bone formation.

senile o. Osteoporosis in the aged, due to deficient osteoid formation. Blood calcium, phosphorus, and phosphatase levels are all normal or low.

os"te·o·psath"y·ro'sis (os"tee-op-sath"i-ro'sis, os"tee-o-sath"...) [*osteon*; G. *psathyros*, crumbling; -*ōsis*]. Old term for osteogenesis imperfecta.

os"te·o·ra"di·o·ne·cro'sis [*osteon*; L. *radius*, ray; G. *nekrōsis*, mortification]. Bone necrosis due to irradiation by roentgen or radium rays.

os"te·or·rha'gi·a [*osteon*; G. *rhēgnynai*, to burst forth]. Hemorrhage from a bone. Rare.

os"te·or'rha·phy [*osteon*; G. *rhaphē*, suture]. The suturing or joining of bones.

os"te·o·sar·co'ma. Osteogenic sarcoma. —**osteosarcom'atous**, *adj.*

os"te·o·scle·ro'sis. See *osteopetrosis*.

os"te·o'sis [*osteon*; G. -*ōsis*, condition]. Bone formation.

ivory o. Osteoma eburneum.

o. cutis. See *osteoma cutis*.

os"te·o·spon"gi·o'ma (os"tee-o-spon"jee-o'muh, -spon"jee-o-muh) [*osteon*; G. *spongia*, sponge;

-*ôma*, tumor]. A tumor consisting of cancellous bone.

os"te-o-sti 'is [*osteon*, G *stixis*, pricking]. Surgical puncturing of bone.

os"te o-su ture [*osteon*, L. *sutura*, suture]. Suture of bone.

os"te o-syn o-vi'tis (os tee-o-sin o-vy'tis, -sigh no-vy tis) [*osteon*, G. *syn*, with; *ôon*, egg; -*itis*, inflammation]. Synovitis complicated with osteitis of adjacent bones.

os te syn'the sis [*osteon*, G *synthesis*, putting together]. Fastening the ends of fractured bone together by mechanical means, such as plate

os"te o-ta'bes (os tee-o-tay'beez) [*osteon*, L. *tabes*, wasting way]. Bone degeneration beginning with the destruction of the cells of the bone marrow which disappears in parts and is replaced by soft gelatinous tissue; later the spongy bone diminishes, and lastly the compact bone.

os"te-o-throm-bo si [*osteon*, G *thrombôsis*, blocked vein]. Thrombosis of the veins of bone.

os"te-o-tome [*osteon*, G *tomos*, cutting] An instrument for cutting bone. Specifically an instrument somewhat similar to chisel but without the beveled edge, used for cutting long bones, generally with the aid of surgical mall t.

os"te-o to mo cla si (os tee o-to m clay zhuh, -zee-uh, -shuh, -see-uh, os-tee-ot mo-) **os"te-o-to-moc'la is** (os tee-o-to-mock'luh-sis, os tee-ot o-) [*osteon*, *tomos*; G *klasis*, to break] The correction of pathologically curved bone by forcible bending following partial division by osteotome.

os"te-ot o-my [*osteon*, G *tomê*, cutting]. 1. The division of bone. 2. Making section of bone for the purpose of correcting deformity

cuneiform o. An ostectomy in which wedge of bone is removed.

linear o. A simple division of bone.

subcutaneous o. Osteotomy usually by Macewen technic, in which small incision is made in the skin over the bony area to be divided, the bone itself being unexposed, and the operation completed by the sense of touch

os"te o-tribe [*osteon*, G *tribein*, to rub]. A bone rasp. Formerly called *osteotrite*

os"te-ot'ro-phy [*osteon*, G *trophê*, nourishment] Nutrition of bony tissue.

Osterberg method. See Sanford, Sheard, and Osterberg *method*.

os-ti'tis. See *osteitis*.

os'ti um (pl *ostiums*, *ostia*) [L., door mouth, entrance]. A mouth or aperture. —**ostial**, *adj*

o. abdominale. The orifice of the oviduct communicating with the peritoneal cavity

o. atrioventriculare. Either the right or left atrioventricular opening

o. internum. The uterine opening of the oviduct.

o. maxillare. The opening of the maxillary air sinus.

o. pharyngeum. The pharyngeal opening of the auditory tube. See Plate 12.

o. tympanicum. The tympanic opening of the auditory tube.

o. vaginae. The external orifice of the vagina.

os-to sis. Osteosis.

os"tre-o-tox is'mus (os"tree o-tock-siz'mus) [G *ostreon*, oyster; *toxikon*, poison]. Poisoning due to eating diseased or deteriorated oysters.

Ostwald-Folin pipet. See under *pipet*.

o-syr'i tin. See *rutin*.

OT O T 1 *I* *anatomy*, old term, in opposition to BNA term. 2. Original, or old, tuberculin. Also abbreviated T O

o-tal'gi [G *ous*, ear; *algos*, pain] Earache —**otalgic**, *adj*

o"tan tri'tis [*ous*; L. *antrum*, cave; G -*itis*, inflammation]. Inflammation of the mastoid antrum.

o thel-co sis (thel ko sis, oat"hel ko sis) [*ous*; G. *helkôsis*, ulceration]. Ulceration of the ear Obs

o the ma to ma [*ous*; G *haima*, blood; -*ôma*, tumor]. Hematoma of the external ear usually the pinna.

ot"hem-or rha gi a (oath em-o-ray'juh, -jee uh, -radj h, -radj ee-uh, oat"hem-o-) [*ous*; *haima*; G. *rhêgnynai*, to burst]. Hemorrhage from the ear

t"hem-or-rhe a (oat"hem-o-ree uh, oath em) [*ous*; *haima*; G *rhoia*, flow]. A sanguineous discharge from the ear

o ti [G *ôtikos*, of the ear]. Pertaining to the ear

o"ti-co-din'i a [*ôtikos*; G *dinê*, whirling]. Vertigo from ear disease.

Otis Fessenden Nott [*American urologist*, 1838-1900]. Used local anesthesia in urology (1884). Introduced his operation for internal urethrotomy in which he divided the stricture from within, using specially constructed urethrotome.

ti'tis [G *ous*, ear; -*itis*, inflammation] Inflammation of the ear —**otit'ic**, *adj*

acute suppurative o. Acute inflammation of the middle ear with formation of pus, caused by such organisms as hemolytic streptococci, pneumococci, and/or nonhemolytic streptococci.

furuncular o. The formation of furuncles in the external auditory meatus.

mycotic o., externa. Infection of the external auditory canal due to f ngi; as otomycosis.

o. externa. Inflammation of the external ear

o. interna. Inflammation of the internal ear

o. labyrinthica. Inflammation of the labyrinth.

o. mastoidea. Inflammation confined to the mastoid cells mastoid disease.

o. media. Inflammation of the middle ear A tuberculous type is associated with active pulmonary tuberculosis, but runs an independent course.

o. parasitica. Inflammation caused by parasite.

o. sclerotica. Inflammation of the inner ear with hardening of the tissues. See *otosclerosis*.

o'to- ot [*ous*]. A combining form meaning *the ear*

"t blen"or rhe [*ous*; G *blenna*, mucus; *rhoia*, flow]. Any discharge of mucus from the ear

o"to-ca tarrh [*ous*; G *katarroos*, running down] Catarrh of the ear *Rare*.

o"to-ceph' lus [*ous*; G *kephalê*, head] A monster characterized by union or close approach of the ears, by absence of the lower jaw and an ill-developed mouth. See *synotus*, *synotine*.

o"to clei'sis (to-kly'sis) [*ous*; G *kleisis*, closing] Occlusion of the ear

o"to-co ni um (pl. *otoconia*) [*ous*; G *konis*, dust]. Otolith soft substance over the two maculae acusticae containing many crystals of calcium carbonate 1 15μ long (large ear stones of fishes are called otoliths) —**otoconial**, *adj*

to-cyst [*ous*; G *kystis*, bladder]. 1 I invertebrates, an auditory vesicle, otocell, or otidium. 2. I vertebrates, the embryonic auditory vesicle.

o"to-dyn'i [*ous*; G *odynê*, pain] Pain in the ear

o"to gen'ic, o-tog'e-nous (todj'i-nus) [*ous*; G. *gennethai*, from *gignesthai*, to be produced]. Originating or arising within the ear

"to-hem"i neur"as the'ni-a [*ous*; G *hêmi-* half *neuron*, nerve; *asthenia*, weakness] A condition in which hearing is limited exclusively to one ear without the evidence of any material lesion of the oditory pparatus.

"to lar"yn gol'o-gist [*ous*; G *larynx*, larynx; *logos*, word]. One skilled in the practice of otology hinology and laryngology

"to-lar"yn gol'o-gy [*ous*; *larynx*; *logos*] A method

specialty including otology rhinology laryngology and, usually peroral endoscopy

o'to-lith [*ous*; G *lithos*, stone]. One of the calcareous concretions within the membranous labyrinth of the ear especially the large ear stones of fishes.

o-tol'o-gist [*ous*; G *logos*, word]. One versed in otology

o-tol'o-gy [*ous*; *logos*]. The science of the ear its anatomy functions, and diseases. —**otolog'ic, otolog'ical,** *adj*

tomide. A proprietary solution of sulfanilamide, urea, and chlorobutanol in glycerin; intended for the treatment of infections of the middle and external ear

o"to-my"as-the'ni-a [*ous*; G *mys*, muscle *asthenia*, weakness]. 1 Weakness of the muscles of the ear 2. Defective hearing due to paretic condition of the tensor tympani or stapedius muscle.

O"to-my'ces (o"to-migh'sees, o-tom' seez) [*ous*; G *mykēs*, fungus]. Fungous growth within the ear
O Hageni. A fungus with green conidia, sometimes found in the external canal of the ear
O purpureus. A dark red fungous growth in the ear

o"to-my-co'sis (to-migh-ko'sis) [*ous*; *mykēs*; G -*ōsis*, condition]. The growth of fungi within the ear or the diseased condition caused thereby

o"t neu ral'gi a. See *otalgia*.

"to neur"as-the'ni a [*ous*; G *neuron*, nerve *asthenia*, weakness]. A condition of deficient sensitivity of the auditory apparatus.

"to pha ryn ge al (to-fa rin jul, -jee-ul, -far"injee'ul) [*ous*; G *pharynx*, pharynx]. Pertaining to the ear and the pharynx.

o'to plas"ty [*ous*; G *plassein*, to form]. Plastic surgery of the external ear

"to-pol'y pus [*ous*; G *polypous*, many-footed]. A polyp occurring in the ear

"to-py"or rhe [*ous*; G *pyorroia*, discharge of matter]. A purulent discharge from the ear

"to-py-o sis (o"to-pye sis) [*ous*; G. *pyōsis*, suppuration]. Suppuration within the ear

to-rhi nol' gy (o to-rye-nol' jee) [*ous*; G *rhis*, nose *logos*, word]. Literally the study of diseases of the ears and the nose only The terms most frequently employed for the study of the diseases of the ear nose, and throat are *otolaryngology* and *otorhinolaryngology*.

o"tor rha gi [*ous*; G. *rhēgnynai*, to burst forth]. A discharge of blood from the external auditory meatus

o"tor rhe' [*ous*; G *rhoia*, flow]. A discharge from the external auditory meatus.
cerebrospinal o. Drainage of cerebrospinal fluid from the ear usually the result of posterior fossa basilar skull fracture, rarely from erosion of the petrous portion of the temporal bone caused by neor

"t sal"pinx [*ous*; G *salpinx* trumpet]. Old term for the auditory tube

"to-scle-ren'ct my See *auriculectomy*.

o"to-scle ro sis [*ous*; G *sklērōsis*, hardening]. A clinical entity the symptom being progressive impairment of hearing. The end result of the pathologic process is the laying down of new bone around the oval window the cochlea, or both. Erroneously thought to be new bone growth around any of the ossicles. —**otosclerot'ic,** *adj*

o'to-scope [*ous*, G *skopein*, to examine]. An apparatus designed for examination of the ear and for rendering the tympanic membrane visible.

o tos co-py [*ous*; *skopein*] Visualization of the auditory canal and tympanic membrane by means of the otoscope —**otoscop'ic,** *adj*

otosmosan. Trade-mark for solution of sulfathiazole and urea in glycerin used in infections of the middle and external ear

o-tot o-my [*ous*; G *tomē*, cutting]. Dissection of the ear; incision of any of the tissues f the external auditory meatus or the ear proper

ot'ri vin. 2-Anilinomethyl-2-imidazoline ; drug which inhibits cholinesterase destruction, thus intensifying and prolonging the action of acetylcholine and leading to increased activity of the parasympathetic system used as vasoconstrictor

Otto Adolph Wilhelm [German surgeon, 1786–1845] Described osteoarthritic protrusion of the acetabulum into the pelvis, called *Otto disease* The resulting pelvic deformity is called *Otto pelvis*.

Otto, John Conrad [American physician, 1774–1844]. The first to describe hemophilia fully and to note that it does not occur in women but may be transmitted by them (1803) This phenomenon was also noted by Nasse (1820) and is known as *Nasse' law*.

O U. *Oculus uterque*, each eye.

oua"ba gen'in (wah"bah-jeen'in) $C_{23}H_{34}O_{8}$; the aglycone of *ouabain*; steroid, slightly sol ble in water

oua ba'in (wah bah'in, bay'in, wah bah-in, bay-in) $C_{29}H_{44}O_{12}.8H_2O$ crystalline glycoside obtained from the seeds of *Strophanthus gratus* and the wood of *Acokanthera schimperi*, sparingly soluble in water On hydrolysis it yields molecule each of ouabagenin and rhamnose. It has digitalislike action.

Oudin current. See under *current*.

ou'la (oo'luh) [G *oulon*, gum]. Ula; the gingiva. *Obs.*

ou'loid (oo'loyd) [G *oulē*, scar *eidos*, form]. Resembling scar.

ou"lor rha gi-a (oo"lo-ray'juh, -jee-uh) [G. *oulon*, gum; *rhēgnynai*, to burst forth]. Hemorrhage from the gums.

ounce [L. *uncia*, twelfth part of pound]. A unit of measure or weight. See T bles of Weights and Measures in the Appendix. See also *fluidounce*.
avoirdupois o. The sixteenth part of the avoirdupois pound, or 437.5 gr (28.35 Gm.) Abbreviated, oz.
troy o. The twelfth part of the troy pound, or 480 gr (31 10 Gm) Symbol, ℥

ou ra ri (oo-rah ree) See *curare*.

ou'ro- (oor o-) See *uro-*.

-ous (-us) [L. -*osus*]. 1. A suffix meaning *full of* or *having*. 2. *I chemistry*, suffix denoting the *lower* of two valences assumed by an element.

out'flow [ME. *out*; AS. *flōwan*]. *I neurology*, the transmission of efferent impulses, particularly of the autonomic nervous system; these are divided into thoracolumbar and craniosacral outflows.

out'let [*out*, ME. *leten*]. The lower aperture of the pelvic canal.

out'pa"tient [*out*; L. *patiens*, from *pati*, to suffer]. A hospital patient ho does not occupy bed in the institution.
o. service Medical and dental care furnished t medical-treatment facility when hospitalization is not required.

out-spo'ken [Ger *ausgesprochen*, pronounced]. *Of symptoms*, pronounced, strongly marked.

va [L.]. Plural of *ovum*, an egg.

o'val [L. *ovum*, egg]. 1. Egg-shaped. 2. Pertaining to an ovum.

val bu'min [*ovum*, L. *albus*, white]. The albumin of egg white.

-val o-cyte [*ovum*; G. *kytos*, cell]. An elliptical erythrocyte; incorrectly spelled *ovalcyte*.

o"va lo-cy t sis (vah-lo-sigh-to sis, o-val o-) Elliptocytosis; incorrectly spelled *ovalcytosis*.

o va ri a. Plural of ovarium.

o va ri al'gi a [NL. ovarium, from ovum, G. algos pain]. Neuralgic pain in the ovary; also spelled ovaralgia.

o-va ri an [ovarium]. Pertaining to the ovaries.

o-va ri an pseu do myx o ma. See pseudomucinous cystadenoma.

o va ri-ec to-my [ovarium, G. ektomē, excision]. Excision of an ovary; oophorectomy.

o-va ri o- ovari- [ovarium]. A combining form denoting an ovary or ovaries.

o-va ri-o-cele" [ovarium, G. kēlē, tumor]. Tumor of the ovary; hernia of an ovary.

vaginal o. Invasion of the vaginal wall by one or both ovaries.

o-va ri-o-cen te'sis [ovarium, G. kentēsis, pricking]. Puncture of an ovary or of an ovarian cyst.

o-va"ri-o-cy-e sis (o-vair ee-o-sigh-ee sis) [ovarium; G. kyēsis, pregnancy]. Ovarian pregnancy.

o-va ri o dys-neu'ri a [ovarium, G. dys-, bad, neuron, nerve]. Ovarian neuralgia.

o-va"ri-o-gen'ic [ovarium, G. gennasthai, from gignesthai, to be produced]. Arising in the ovary.

o-va ri o hys"ter ec'to my [ovarium, G. hystera, womb, ektomē, excision]. Surgical removal of one or both ovaries and the uterus.

o-va ri-o lyt'ic [ovarium, G. lysein, to loose]. Producing disorganization of ovarian tissue.

o va ri on cus [ovarium, G. onkos, mass]. An ovarian tumor. Rare.

o-va ri or rhex'i [ovarium; G. rhēxis, breaking]. Rupture of an ovary.

o-va"ri-o sal"pin gec'to-my. See oophorosalpingectomy.

o-va ri o-ste re sis [ovarium, G. sterēsis, deprivation]. Extirpation of an ovary. Rare.

o-va ri-os'to-my. See oophorostomy.

o-va ri-ot' o my [ovarium, G. tomē, cutting]. Literally incision of an ovary. As generally used, removal of an ovary; oophorectomy.

o-va"ri o-tu'bal [ovarium, L. tubus, tube]. Pertaining to an ovary and oviduct.

o"va-ri'tis. See oophoritis.

o-va'ri-um (pl. ovaria) [NL.]. An ovary or oophoron.

o va ry [ovarium]. 1. One of a pair of glandular organs giving rise to ova. It consists of a fibrous framework or stroma, in which are embedded the ovarian follicles, and is surrounded by a serous covering derived from the peritoneum. See Plates 41, 45. 2. The dried, undefatted, and powdered ovary of cattle, sheep, or swine; one part represents approximately six parts by weight of fresh glands. Has been used as a therapeutic agent but probably is devoid of physiologic action. Syn., desiccated ovarian substance.

bilateral polycystic ovaries. Multiple cysts of both ovaries, generally associated with enlargement of these organs, and often with amenorrhea and/or abnormal uterine bleeding, infertility, and frequently hirsutism. See Stein-Leventhal syndrome.

undescended ovaries. A rare congenital anomaly in which the ovaries fail to descend to a normal position, accompanied by amenorrhea, poorly developed secondary sexual characters, and limitation of growth. The other genitalia may be developed normally and the body configuration is female.

o"va tes'tis. Ovotestis.

o ver-bite". The extent to which the upper anterior teeth overlap the lower when the dentition is in the position of rest.

o"ver-cor rec'tion. In optics, an aberration of a lens causing the light rays passing the central zones to focus at a point nearer to the lens than rays passing the outer zones.

o ver-de pen den cy. See passive-dependent personality under passive-aggressive personality.

o ver de ter"mi na'tion [AS. ofer; L. determinare, to limit, determine]. In psychoanalysis, the state of having more than one etiologic factor.

o ver ex ten sion [ofer; L. extensio, from extendere, to stretch out]. Excessive extension; extension beyond the normal point or line.

o ver flow" [ofer; AS. flowan]. The escape of liquid from a filled vessel or viscus when more liquid is added.

o ver growth" [ofer; AS. growan]. Hypertrophy or hyperplasia.

o ver jet". The extent to which the upper incisors project in front of the lower incisors when the dentition is in the position of rest.

o ver-ly'ing [ofer; AS. licgan]. A cause of death in infants sleeping with adults; suffocation occurs when one of the adults lies upon the child.

o ver max'i mal [ofer; L. maximus, greatest]. Beyond the normal maximum, as the overmaximal contraction of a muscle.

o ver pro-duc'tion the o-ry. Loss of elements or parts may be followed by overproduction of such parts during repair. Formerly called Weigert's law.

o ver reach' [ofer; AS. rǣcan]. Strike the toe of the hindfoot against the heel or shoe of the forefoot; said of a horse.

o ver rid'ing [ofer; AS. rīdan]. The slipping of an end of a fragment of a fractured bone over the other fragment. Said also of toes which overlap.

o ver strain [ofer; OF. estraindre, from L. stringere, to draw tight]. To strain to excess.

o ver strain". A condition resulting from exhausting effort.

Overton theory. See Meyer-Overton theory.

o ver tone [ofer; G. tonos, tone]. A harmonic tone heard above the fundamental tone.

psychic o. An associated impression contributing to a mental image.

o ver weight [ofer; AS. wiht]. Exceeding normal weight, usually meaning an excess of more than 10%.

o vi- [L. ovum, egg]. A combining form meaning egg; used to denote ovum.

o vi cap'sule [ovum, L. capsula, small box]. Old term for an egg case, or for an ovarian follicle.

o'vi duct [ovum, L. ductus, from ducere, to conduct]. The duct serving to transport the ovum from the ovary to the exterior, or to an organ such as the uterus. In mammals, the oviduct is also called the uterine or fallopian tube. See Plate 41. —ovidu'cal, oviduc tal, adj.

o-vif'er-ous [ovum, L. ferre, to bear]. Producing or bearing ova.

o vi fi ca tion [ovum; L. facere, to make]. The production of ova.

o vi form [ovum, L. forma, form]. Egg-shaped; oval.

o vi gen e sis [ovum, G. genesis, production]. Oogenesis.

o vi ge-net'ic. See ovigenous.

o-vig'e-nous (o-vidj'i-nus) [ovum; G. gennasthai, from gignesthai, to be produced]. Producing ova, as the ovigenous layer, the outer layer of the ovary in which the follicles containing the ova are situated.

o vi germ [ovum, L. germen, sprout]. A cell producing or developing into an ovum.

o-vig'er-ous (o-vidj'ur-us) [ovum; L. gerere, to bear]. Producing or carrying ova.

o vine [LL. ovinus, from ovis, sheep]. 1. Relating to or derived from sheep. 2. Sheeplike.

o-vip a rous [ovum; L. parere, to bring forth]. Laying eggs; bringing forth young in the egg stage of development. —ovipara, n.

o"vi po-si'tion (o vi-po sish un) [ovum, L. positio, placing]. The act of laying or depositing eggs by the females of oviparous animals. —ovipos'it, v.

o"vi·pos'i·tor (vi·pos'i·tur) [ovum; L. positor from ponere, to place]. An organ, common among insects, composed of several modified rings of somites, forming the end of the abdomen, and employed in depositing the eggs.

o·vi·sac [ovum; L. saccus, sack]. Old term for an ovarian follicle.

o·vi·tel'lus (vye vye tel'us, vee) Yolk of egg; the substance is sometimes used in pharmacy as an emulsifying agent.

o·vo-. See ovi-.

o·vo·cen'ter o"vo·sen'ter [ovum; G. kentron, center]. The centrosome of the ovum during fertilization.

ovocylin. Trade-mark for a brand of estradiol.

ovocylin dipropionate. Trade-marked name for estradiol dipropionate; formerly called di-ovocylin.

o·vo·cyte. See oocyte.

o"vo·fla'vin (o vo·flay vin, ·flav'in) [ovum; L. flavus, yellow]. A flavin separated from eggs. It is identical with riboflavin.

o"vo·gen·e·sis. See oogenesis.

o"vo·glob·u·lin [ovum; L. globulus, little ball]. The globulin of white of egg.

o"vo·go·ni·um. See oogonium.

o·void [ovum; G. eidos, form]. Egg-shaped.

o"vo·mu·cin. A glycoprotein from egg white.

o vo·mu'coid [ovum; L. mucus, mucus; eidos]. A glycoprotein obtained from white of egg.

o·vo·plasm [ovum; G. plasma, anything formed]. The cytoplasm of the unimpregnated ovum.

o"vo·tes'tis, o vo tes'tis [ovum; L. testis, testis]. A rare form of hermaphroditism in which an ovary and testis are combined.

o·vo·tid. See ootid.

o·vo·vi·tel'lin (vo·vye·tel'in, ·vi·tel'in) [ovum; L. vitellus, yolk of an egg]. A protein contained in egg yolk; a white, granular substance, soluble in dilute acids and in alkalies.

o·vo·vi·vip'a·rous (vo·vye·vip uh·rus) [ovum; L. viviparus, that brings forth its young alive]. Reproducing by means of eggs hatched within the body. —ovoviviparism, n.

ov'u·lar [ovum]. Relating to an ovule or ovum.

ov"u·la'tion [ovum]. The maturation and escape of the ovum.

ov'ule [ovum]. 1. A small egg; one in an early stage of development. 2. The egg before its escape from the ovarian follicle.

ov"u·lig'e·nous (vew·lidj'i nus) [ovum; G. gennethai, from gignesthai, to be produced]. Producing ovules.

o·vum (pl. ova) [L.]. 1. A female germ cell; an egg cell; a cell which is capable of developing into a new member of the same species, in animals usually only after maturation and fertilization. The human ovum (see Plate 41) is a large, spheroidal cell containing a large mass of cytoplasm and a large nucleus (germinal vesicle) within which is a nucleolus (germinal spot). 2. The early human embryo from the time of fertilization until the bilaminar blastodisk is formed.

alecithal o. One having little or no yolk.

centrolecithal o. One having a central yolk surrounded by cytoplasm, as in insects.

dropsical o. One in which the embryo has entirely disappeared or is represented by only a nodule of degenerated tissue. The amniotic vesicle is distended by an amount of fluid far out of proportion to the duration of pregnancy.

holoblastic o. One having total or complete cleavage.

isolecithal o. One having little yolk evenly distributed in the cytoplasm.

meroblastic o. One having partial cleavage, limited to the cytoplasmic region.

o. tuberculosum. See tuberous mole.

primordial o. An ovum present in the germinal epithelium of the embryonic ovary, frequently considered to serve as a parent cell for the oogonia.

telolecithal o. One having the yolk concentrated at one pole or in one hemisphere.

Owen, Richard [English anatomist, 1804–92]. Celebrated paleontologist. Described Trichinella spiralis (1835). Described incremental lines of the dentin; called Owen's lines, Salter's lines.

ox [ ] chemistry. 1. Short for oxal. 2. Combining form denoting presence of oxygen.

ox a- [ ] chemistry. Combining form denoting the presence of oxygen in place of carbon.

ox'al-, ox'al·o- [ ] chemistry. Combining form denoting oxalic.

ox"al a·ce'tic ac'id. Oxaloacetic acid.

ox a·late. Any salt or ester of oxalic acid.

ox"a le mi·a [oxalic; G. haima, blood]. Excess of oxalates in the blood.

ox al'ic [oxalis]. [ ] chemistry, pertaining to an oxalic acid.

ox·al'ic ac'id. HOOC.COOH.2H_2O. A poisonous dibasic or dicarboxylic acid occurring in many plants. Used as a reagent and in many industries and the arts, chiefly for its bleaching properties.

ox'a·lism [oxalis]. Poisoning by oxalic acid or potassium binoxalate. It is characterized by gastroenteritis with nephritis, collapse, cyanosis, mydriasis, labored breathing, and dyspnea.

ox"al·o·a·ce tic ac'id. HOOC.CH CO.COOH. A metabolic product in carbohydrate metabolism; it may be produced by oxidation of malic acid or by addition of a molecule of carbon dioxide to one of pyruvic acid. Also called oxalacetic acid.

ox"al sis. A condition in which there is widespread deposition of calcium oxalate crystals in tissues, especially the kidneys and bone marrow, associated with recurrent calcium oxalate urinary calculi and renal insufficiency; possibly due to an inborn error of metabolism.

ox al"o·suc·cin'ic ac'id. COOH.CO.HC(COOH).CH COOH; an intermediate substance in the Krebs or tricarboxylic acid oxidation cycle, formed by addition of carbon dioxide to α-ketoglutaric acid or by dehydrogenation of isocitric acid.

ox" lu ri a [oxalic; G. ouron, urine]. The presence of oxalic acid or oxalates in the urine.

ox"a lu ric ac'id. NH CO.NH CO COOH. An acid occasionally found in traces in normal human urine.

ox am'i·dine (oks·am'i·deen, ·din). See amidoxime.

oxamycin. A name assigned to cycloserine.

ox' tyl. Carboxyl.

ox'a·zine. One of 13 isomeric heterocyclic compounds of the general formula C_4H_5NO, each containing four carbon atoms, one oxygen atom, and one nitrogen atom in the ring; two double bonds are present in each ring.

ox"a z l'i dine. The heterocyclic compound

$$\overline{\mathrm{O.CH_2.NH.CH_2.CH_2}}$$

from which medicinal derivatives have been prepared. See trimethadione.

ox bile (fel bovis). The fresh bile of the ox, Bos taurus. See bile.

o. b. extract (extractum fellis bovis). Contains sodium salts of ox bile acids standardized to be equivalent to not less than 45% of cholic acid. Used in deficiencies of bile secretion.

ox gall (gawl). Ox bile.

ox'i·dant [G. oxys, sharp; L. acidus, sour]. An oxidizing agent.

ox'i·dase (ock si·dace, ·daze). Any enzyme which promotes an oxidation reaction. See Table of Enzymes in the Appendix.

in water. It represents tetracycline in which a hydrogen atom is replaced by a hydroxyl group, and is active against a number of Gram-positive and Gram-negative bacteria, rickettsias, and several viruses. See also *chlortetracycline*.

ox"y thi'a mine. A compound differing from thiamine in having an OH group in place of the NH_2 group of thiamine; a powerful antagonist of thiamine.

ox"y to'ci a (ock"si-to'shee-uh, -see-uh) [*oxys*; G. *tokos*, childbirth]. Rapid childbirth.

ox"y to'cic [*oxys*, *tokos*]. A drug that hastens parturition. —**oxyto'cic,** *adj.*

ox"y to'cin. The hormone extracted from the neurohypophysis which increases contraction of the uterine muscles in late pregnancy or during parturition. It has been isolated in pure form and synthesized. Syn., *alpha-hypophamine*. See *pitocin*.

ox"y u ri'a sis. See *enterobiasis*.

ox"y u'rid [*oxys*; G. *oura*, tail]. The human pinworm or seatworm. See *Enterobius vermicularis*.

Ox"y u'ris ver mic"u la'ris. Synonym for *Enterobius vermicularis*.

-o yl. Suffix indicating a radical formed from an organic acid when OH is removed from the latter, as the radical RCO— from RCOOH.

oz. Ounce (avoirdupois).

o ze'na [G. *ozē*, bad smell]. A chronic disease of the nose accompanied by a fetid discharge. It is due to atrophic rhinitis, syphilitic ulceration, or caries. Also called *rhinitis sicca*.

o ze ce'rite, **o zo'ke-rite.** Ceresin.

o"zo chro ti'a (o"zo-kro-shuh, -see-uh) [G. *ozein*, to smell; *chrōs*, skin]. An offensive odor of the skin. —**ozochro'tous,** *adj.*

o zo'ke-rite. Ceresin.

o'zone [*ozein*]. O_3. An allotropic form of oxygen, the molecule of which consists of three atoms; a common constituent of the atmosphere. It is a powerful oxidizing agent and is used as a disinfectant for swimming pools, etc.

o'zo-nide. A compound of ozone with certain unsaturated organic substances. Such derivatives of fixed oils have been applied locally to infected areas for the bactericidal effect of the nascent oxygen released by the oils.

o"zo sto mi'a [*ozein*; G. *stoma*, mouth]. A foul odor of the breath of oral origin.

P

P Chemical symbol for phosphorus; premolar.

P Pharmacopeia; position; *pugillus*, handful; *punctum proximum*, near point.

p- In *chemistry*, para-.

Pa Chemical symbol for protactinium.

PABA Para-aminobenzoic acid.

pab u lum [L.]. Food; any nutrient.

Pacchioni, Antonio [*Italian anatomist*, 1665–1726]. Well-known pupil of Malpighi. Described arachnoidal granulations, called *Pacchionian bodies*. Noted for studies of the cerebrum and dura.

pace mak"er [L. *passus*, step; ME. *maken*]. That portion of the right atrium of the heart, normally the sinoatrial node, where the stimulus for the heart beat originates.

ectopic p. A source of impulse initiation outside of the sinoatrial node.

idioventricular p. A focus of impulse initiation in the ventricle.

wandering p. A phenomenon in which the pacemaker shifts away from the sinoatrial node but remains within the atrium or atrioventricular node; recognized only by the electrocardiogram.

pach'y- (pack'ee-) [G. *pachys*, thick]. A combining form meaning *thick*.

pach"y ac ri'a [*pachys*; G. *akra*, extremity]. A condition marked by clubbing of the fingers and toes, and thickening of the skin of the extremities. Formerly called *acropachyderma*, *pseudoacromegaly*. See hypertrophic pulmonary *osteoarthropathy*.

pach"y-bleph'a ron [*pachys*; G. *blepharon*, eyelid]. Thickening of the eyelids.

pach y bleph a ro'sis [*pachys*; *blepharon*; G. *-ōsis*, condition]. Chronic thickening and induration of the eyelids.

pach y ceph'a ly, pach"y-ce-pha'li a [*pachys*; G. *kephalē*, head]. Unusual thickness of the walls of the skull. —**pachycephal'ic, pachyceph'alous,** *adj.*

pach"y chil'i-a, pach y chei'li a (pack"i-kigh'lee-uh, -kil'ee-uh) [*pachys*; G. *cheilos*, lip]. Increased thickness of one or both lips.

pach y-chro mat'ic [*pachys*; G. *chrōma*, color]. Having a coarse chromatin network.

pach y dac tyl'i a, pach y-dac'ty-ly [*pachys*; G. *daktylos*, finger]. A condition characterized by great thickness of the fingers.

pach"y der'ma tous [*pachys*; G. *derma*, skin]. Abnormally thick-skinned.

pach"y-der'mi a, pach y-der'ma [*pachys*; *derma*]. 1. Abnormal thickening of the skin. 2. Elephantiasis. —**pachydermial,** *adj.*

occipital p. A rare disease of the scalp characterized by thickened skin thrown into folds; limited to the occipital region of the scalp.

p. laryngis. Extensive thickening of the mucous membrane of the larynx.

p. lymphangiectatica. A diffuse form of lymphangioma. Consists of lymph-filled sacs and at times produces extreme deformities.

pach"y glos'si a [*pachys*; G. *glōssa*, tongue]. Abnormal thickness of the tongue.

pach"y gy'ri-a [*pachys*; G. *gyros*, circle]. Flattening and broadening of the gyri of the cerebrum.

pach"y hem a tous [*pachys*; G. *haima*, blood]. Referring to thickening of the blood.

pach y hy m n'ic (pack"i-high-men'ick). See *pachydermatous*.

pach"y lep to men"in gi'tis [*pachys*; G. *leptos*, thin; *mēninx*, membrane; *-itis*, inflammation]. Combined inflammation of the pia and dura.

pach"y lo'sis [G. *pachylos*, thickish; *-ōsis*, condition]. A thick, dry, harsh and scaly skin, especially of the legs.

pach"y men"in gi'tis (pack"i-men"in-jy'tis) [G. *pachys*, thick; *mēninx*, membrane; *-itis*, inflammation]. Inflammation of the dura. —**pachymeningit'ic,** *adj.*

epidural p. Inflammation of the epidural space and the external aspect of the dura, usually resulting from tuberculosis of the spine.

hemorrhagic p. See chronic subdural *hematoma*.

hypertrophic cervical p. Most common form of hypertrophic spinal pachymeningitis.

hypertrophic spinal p. A localized or diffuse hypertrophy of the dura mater resulting from syphilis or unknown causes, giving rise to symp-

toms of irritation of spinal roots and compression of the spinal cord. It attacks any level of the spinal cord or brain but most often the lower cervical region.

p. cervicalis hypertrophica. See hypertrophic cervical *p.*

p. externa. See epidural abscess.

p. interna hemorrhagica. See chronic subdural *hematoma.*

pyogenic p. Infection of the dura with pyogenic organisms, usually secondary to cranial osteitis.

spinal p. Inflammation of the spinal dura.

syphilitic p. Inflammation of the dura due to syphilis.

pach″y·men″in·gop′a·thy [*pachys*; *meninx*; G. *pathos*, disease]. Disease of the dura mater or pachymeninx.

pach″y·me′ninx [*pachys*; *meninx*]. The dura mater.

pa·chyn′sis (pa·kin′sis) [G., thickening]. A thickening, as of a membrane. —**pachyntic**, *adj.*

pach″y·o·nych′i·a (pack″ee-o-nick′ee-uh) [G. *pachys*, thick; *onyx*, nail]. Thickening of the nails.

p. congenita. A rare congenital anomaly characterized by dystrophic changes of the nails, palmar and plantar hyperkeratosis, anomalies of the hair follicles, keratosis of the knees and elbows, and dyskeratosis of the cornea. Probably a type of ectodermal defect.

pach″y·o′ti·a (pack″ee-o′shuh, -shee·uh) [*pachys*; G. *ous*, ear]. Abnormal thickness of the ears.

pach″y·pel″vi·per″i·to·ni′tis [*pachys*; L. *pelvis*, basin; G. *peritonaion*, membrane which contains the lower viscera; *-itis*, inflammation]. Pelvic peritonitis with fibrous deposit over the uterus.

pach″y·per″i·os·to′sis [*pachys*; G. *periosteos*, around the bones; *-osis*, condition]. Pathologic alteration of the long bones in which the periosteum is greatly thickened.

pach″y·per″i·to·ni′tis [*pachys*; G. *peritonaion*, membrane which contains the lower viscera; *-itis*, inflammation]. Thickening of the peritoneum by inflammation.

pa·chyp′o·dous (pa·kip′o·dus) [*pachys*; G. *pous*, foot]. Having thick feet.

pach″y·rhi′nic, pach″y·rhine (pack′i·rye·nick) [*pachys*; G. *rhis*, nose]. Having a thick or unusually broad and flat nose.

pach″y·sal·pin″go-o″o·the·ci′tis. See *pachysalpingo-ovaritis.*

pach″y·sal·pin″go-o″va·ri′tis. Inflammation of the ovary and oviduct with thickening of the parts.

pach′y·tene [G. *pachytes*, thickness]. Applied to a stage in meiosis or mitosis, following synapsis, in which the homologous chromosome threads shorten and thicken and coil about each other.

pach′y·tes (pack′i·teez). Pachyblepharon.

pa·chyt′ic (pa·kit′ick) [G. *pachys*, thick]. Thick.

pach″y·vag″i·ni′tis (pack″i·vaj″i·nigh′tis) [*pachys*; L. *vagina*, sheath; G. *-itis*, inflammation]. Vaginitis accompanied by thickening of the vaginal walls.

pac′i·fi″er [L. *pacificare*, to pacify]. Any article, such as a rubber nipple, placed in the mouths of irritable or teething children to quiet or pacify them.

Pacini, Filippo [*Italian anatomist*, 1812–83]. Described the lamellar corpuscle (1835); called *Pacini's corpuscle, Pacinian corpuscle, corpuscle of Vater-Pacini.* See *Pacinian corpuscle.*

pack [M.E. *pakke*]. A dressing or blanket, either dry or soaked, hot or cold, that is laid upon or wrapped about the body or part.

cold p. A blanket wrung out of cold water and wrapped about the body.

hot p. A blanket wrung out of hot water and wrapped about the body.

mud p. A dressing soaked in hot muds or moors.

periodontal p. A dressing placed between and about the teeth in treatment of periodontal disease.

surgical p. A pack used in an operative wound to secure hemostasis.

wet p. A blanket wrung out of warm or cold water.

Packard, Francis Randolph (1870–1950). American otolaryngologist and medical historian; author of *History of Medicine in the United States*, the standard textbook of American medical history.

pack′er [M.E. *pakker*]. A tapered surgical instrument equipped with a point ending in a shoulder for inserting gauze or other dressings into a cavity; used generally in conjunction with an aural, vaginal, or other speculum.

pack′ing frac′tion. The difference between the actual mass of an isotope and the nearest whole number divided by this whole number, usually expressed as parts in 10,000; it is related to the loss of energy and therefore loss of mass involved in the formation of atomic nuclei from protons and neutrons.

Pacquelin. See *Paquelin.*

pad [of uncertain origin]. 1. A small cushion stuffed with cotton, hair, etc., for supporting any part of the body. 2. Compress.

dinner p. A removable pad of felt, cotton, or other material placed over the abdomen prior to the application of a plaster jacket, to allow for normal distention after eating.

fat p. In anatomy, any mass of fatty tissue.

foot p. Cushionlike mass of connective tissue covered by a heavily keratinized hairless epidermis, found on the flexor surface of the carpus and digits of certain animals.

hard p. A disease of dogs, paradistemper, characterized by an encephalitis and paralysis as well as a hardening of the foot pads.

incisive p. See incisive papilla.

p. of corpus callosum. The splenium of the callosum.

sucking p. A fatty mass situated between the masseter and the buccinator muscles, well developed in infancy; the buccal fat pad. Also called *corpus adiposum buccae.*

Padgett, Earl Calvin (*American surgeon*, 1893–1946). Made many contributions to plastic surgery. Devised an operation for reconstruction of the lip using transplanted tubular grafts from the scalp and neck; called *Padgett's operation.* Especially known for his invention of an instrument for cutting even thickness of skin of any given calibration, for grafting, called *Padgett's dermatome.*

pae- For words beginning with *pae-* see words beginning *pe-*.

Pagenstecher, Alexander (*German ophthalmologist*, 1828–79). Introduced an ophthalmic ointment of yellow oxide of mercury and petrolatum, called *Pagenstecher's ointment.* Inventor of a special type of suture made of flax or linen thread coated with celluloid; called *Pagenstecher's suture.* Assisted by his brother Hermann, devised several operations. An operation for cataract in which the lens is removed in a closed capsule using pressure on the cornea is called *Pagenstecher's operation.*

Paget, James (1814–1899). English surgeon who described osteitis deformans and mammary carcinoma. See *Paget's disease.*

pagitane hydrochloride. Trade-marked name for 1-phenyl-1-cyclopentyl-3-piperidino-1-propanol hydrochloride, a drug used in the symptomatic treatment of Parkinson's disease. See *cycrimine hydrochloride.*

pa go plex'i a [G *pagos*, frost; *plēxis*, stroke]. Numbness from cold; frostbite.

-pa gus [G *pagos*, that which is fixed]. A suffix used by I. Geoffroy Saint-Hilaire to express superior and inferior duplicity in conjoined twins.

PAH PAHA Para-aminohippuric acid.

pai dol gy (pay dol jee, pye-dol') Pedology

pain [L. *poena*, penalty]. 1 A disturbed sensation causing suffering or distress. 2 A rhythmic contraction of the uterus during labor; labor pain. —**pain'ful, pain'less,** *adj*

bearing-down p. A feeling of distress with sensation of dragging of the pelvic organs; occurs in labor and in pelvic inflammatory disease

boring p. A severe feeling of distress simulating the action of a drill or other piercing instrument

dilating p. That accompanying the stretching of the cervix in the first stage of labor

eccentric p. Radiating pain symptomatic of spinal disease due to irritation of the posterior nerve roots; it is felt to be in peripheral areas, thus accounting for the name

expulsive p. A bearing-down sensation accompanying the last two stages of labor

false p. Mild, recurring lower abdominal cramps, occurring late in pregnancy but not followed by labor

fulgurant p. The intense darting pain affecting principally the limbs of patients suffering from locomotor ataxia Also called *lancinating p.*, *lightning p*, *shooting p.*

girdle p. A painful sensation as if a cord tied about the waist it is a symptom of organic disease of the spinal cord.

growing pains. Soreness of variable degree, duration, and kind in muscles and occasionally in joints in children and adolescents, sometimes during systemic infections, and often as a minor manifestation of rheumatic fever

heterotopic p. See referred p

homotropic p. Soreness felt at the site of trauma.

intermenstrual p. Lower abdominal pain occurring between menstrual periods, apparently associated with ovulation. Also called *Mittelschmerz*.

labor p. The pains of childbirth associated with the first stage of labor

lancinating p. See fulgurant p

osteocopic p. The boneache that characterizes syphilis.

p. joy Hysterical enjoyment of suffering [illegible]

phantom limb p. Pain which [illegible] individual to be located in [illegible] which the pa-

referred p. Pain whose [illegible] area in which it is felt for example [illegible] under the right scapula due to gallbladder [illegible].

starting p. Pain caused by spasmodic contraction of the muscles just before the onset of sleep. It occurs in inflammatory joint diseases.

terebrating p. See boring p.

paint'er's col'ic. Lead colic. See under *colic*, 2.

pair pro-duc'tion. The formation of a positron and a negatron when an γ-ray loses its energy in passing close to the nucleus of an atom, occurring only when γ-rays have energy of 1 million electronvolts or above.

Pajot, Charles [*French obstetrician*, 1816–96] Described a hook which he introduced for decapitation of the fetal head in difficult labor; called *Pajot's hook*. *Pajot's maneuver* or method in labor was a strong, downward pull with one hand over the lock of the obstetric forceps, while the other was used for horizontal traction. Said to have been used by other obstetricians many years earlier Also called *Saxtorph's maneuver*

pal' dang" A pintalike condition seen in Guam.

pa'lae-o- See *paleo-*.

pal'a ta. Plural of palatum.

pal'ate [L. *palatum*, palate]. The roof of the mouth. It is composed of the **hard palate**, formed by the palatal process of the maxillary bones and the palatine bones with their covering mucous membranes, and the **soft palate**, or velum palati, consisting of an aggregation of muscles, the tensor palati, levator veli palatini, azygos uvulae, palatoglossus, and palatopharyngeus, and their covering mucous membrane. See Plates 12, 20. —**palatine** (pal'uh-tyne, tin) **palatal**, *adj*.

artificial p. A plate of hard material used as an obturator to close a fissure in the palate.

cleft p. A congenital deformity characterized by incomplete closure of the lateral halves of the palate. The soft palate and the uvula, the hard palate or all together may be involved. It may or may not be associated with cleft lip or cleft alveolar process.

gothic p. An enormously high palatal arch.

premaxillary p. See primary p.

primary p. The embryonic palate corresponding approximately to the premaxillary region.

primitive p. In *embryology* that part of the median nasal process that forms the median part of the upper lip and the primary palate.

secondary p. The embryonic palate formed by the union of the palatine processes of the maxillary processes the definitive palate

pal'ate-hook A surgical instrument for retracting the uvula.

pal'ate-myo'e-graph. An instrument for taking tracing of the movements of the soft palate

pa-lat'ic [*palatum*] Palatal palatine. *Rare*.

pa lat'i form [*palatum*, L. *forma*, form]. Resembling the palate.

pal'a tine [*palatum*]. The palatine bone. See Table of Bones in the Appendix.

pal" ti'tis [*palatum*, G -*itis*, inflammation]. Inflammation of the palate.

pal'a to- [*palatum*]. A combining form denoting *the palate*.

pal" to-glos sal [*palatum*, G *glōssa*, tongue]. Pertaining to the palate and the tongue, as the palatoglossal muscle.

pal" to-glos sus [*palatum*, *glōssa*]. The muscle within the anterior pillar of the fauces; it connects the soft palate with the tongue; the glossopalatinus. See Table of Muscles in the Appendix.

pal" to-graph" [*palatum*, G *graphein*, to write] An instrument for the recording of palatal movements.

pal" to-max'il lar"y (mack si lerr ee) [*palatum*; L. *maxilla*, jaw]. Pertaining to the palate and the maxilla.

pal" to-my'o-graph. See *palate-myograph*.

pal"a to na'sal (pal uh-to-nay zul) [*palatum*; L. *nasus*, nose]. Pertaining to the palate and the nose.

pal" top'a-gus par sit'i-cus. See *epipalatum*.

pal" to-pha ryn ge-al (f rin'jul, fee ul, -far in-jee ul) [*palatum*, G *pharynx* pharynx]. Pertaining conjointly to the palate and the pharynx, as the pharyngopalatine muscle or arch.

pal" t ph ryn ge u (pal h-to-f rin jee us, -far in-jee us) [*palatum*, *pharynx*] The muscle in the posterior pillar of the fauces, connecting the soft palate with the lateral wall of the pharynx below the pharyngopalatinus. See Table of Muscles in the Appendix.

pal" to-plas"ty [*palatum*, G *plassein*, to form]. Plastic surgery of the palate.

pal" to ple'gi-a [*palatum*, G *plēgē*, stroke]. Paralysis of the soft palate.

pal″a to pter′y goid (pal″uh-to-terr′i-goyd) [*palatum*, G. *pterygoeidēs*, like wing]. Relating to the palate bone and pterygoid processes of the sphenoid bone; pterygopalatine.

pal″ tor′rha phy [*palatum*, G. *rhaphē*, suture]. Suture of cleft palate.

pal″a to sal pin′ge us [*palatum*, G. *salpigx*, trumpet]. A portion of the levator veli palatini.

pal″a tos′chi sis (pal″uh-tos′ki-sis) [*palatum*, G. *schisis*, cleavage]. Cleft palate.

pal′ tum (pl. *palata*) [L.]. The palate.

p. durum. Hard palate.

p. fissum. Cleft palate.

p. mobile. The soft palate. Also called *p. molle*.

pa″le-en-ceph′a lon. The brain with the exception of the neencephalon; the phylogenetically old part of the brain. Also spelled *palaeencephalon*.

pa′le-o-, pa′lae-o- [G. *palaios*, old, ancient]. A combining form meaning *old*, *ancient*, used to denote *early*, *primitive*, *long ago*.

pa″le-o-cer″e-bel′lum [*palaios*; L. *cerebellum*, small brain]. Phylogenetically old parts of the cerebellum: the anterior lobe, composed of lingula, central lobule, and culmen, and the posterior part of the posterior lobe, composed of pyramis, uvula, and paraflocculus; may include the flocculonodular lobe.

pa″le-o-en-ceph′a-lon. See *palaeencephalon*.

pa″le-o-gen′ -sis. See *palingenesis*.

pa″le-o-ki net′ic (pay″lee-o-ki-net′ick, -kigh-net′ick) [*palaios*; G. *kinētikos*, of motion]. Referring to motor nervous mechanisms of submammals, represented in mammals by the extrapyramidal systems, which are the pathways concerned with postural and automatic associated movements.

pa″le-on tol′o-gy [*palaios*; G. *ōn*, pres. part. of *einai*, to be; *logos*, word]. The science and study of fossil remains.

pa″le-o-ol′ive. The accessory nuclei and the most medial portion of the main nucleus which form, phylogenetically, the oldest part of the olive.

pa″le-o-pal′li um [*palaios*; L. *pallium*, mantle]. The lateral olfactory lobe, or pyriform lobe of lower forms; in the higher mammals, especially in man, it forms the uncus and adjacent anterior part of the hippocampal gyrus.

pa″le-o-pa thol′o-gy [*palaios*; G. *pathos*, disease; *logos*, word]. A branch of pathology dealing with diseases of ancient times demonstrated in human and animal remains.

pa″le-o-stri a′tum (pay″lee-o-strye-ay′tum) [*palaios*; L. *striare*, to furnish with channels]. The globus pallidus: the phylogenetically old part of the corpus striatum.

pa″le-o-thal′ -mus [*palaios*; G. *thalamos*, chamber]. The nuclei of the midline of the thalamus, which are nucleus parataenialis, nucleus paraventricularis anterior, nucleus paraventricularis posterior, nucleus centralis medialis, and nucleus griseus centralis; definite function unknown.

pal″i ki ne′si (pal″i-ki-nee′shuh, -nee′zhuh, -kigh-nee′zee-uh, pal″i-kigh-), **pal″i ki ne′sis** (pal″i-ki-nee′sis, -kigh-nee′sis) [G. *palin*, backward, again; *kinēsis*, motion]. Constant and involuntary repetition of movements. Also spelled *palicinesis*.

pal″i la′li [*palin*; G. *lalia*, talk]. Pathologic repetition of words or phrases.

pal″in-dro mi [*palin*, G. *dromos*, course]. Recurrence or growing worse of disease; relapse. —**palindrom′ic**, *adj*.

pal″in gen′ -sis [*palin*, G. *genesis*, production]. The development of characteristics during ontogeny which are regarded as inherited from ancestral species, opposed to *cenogenesis*. See recapitulation theory.

pal″i-op si [*palin*; G. *opsis*, vision]. Visual perseveration in time; recurrence of a visual impression after the stimulus has ceased.

pal″i phra si a (pal″i-fray′zhuh, -zee-uh) [*palin*, G. *phrasis*, speech]. Pathologic repetition of words or phrases.

pal″i rrhe′a, pal″ir rhoe′a [*palin*, G. *rhoia*, flow]. 1. The recurrence of a mucous discharge. 2. Regurgitation.

pal la′di-um [G. *Pallas*, epithet of Athena] (*palladium*). Pd = 106.7. Silver-white, fairly ductile, hard metal, somewhat softer than platinum, belonging to the platinum group of metals; also available as a black powder and as spongy masses; soluble in nitric acid, hot sulfuric acid, and aqua regia. It has many uses in gold, silver and copper alloys and as a catalyst in many manufacturing processes.

p. chloride. $PdCl_2.2H_2O$; red or brown-red crystals, soluble in water and alcohol. Has been suggested as a local antiseptic and internally in tuberculosis.

pal″an-es-the′si-a (pal″an-es-theez′zhuh, -zee-uh) [G. *pallein*, to shake; *anaisthēsia*, lack of sensation]. Absence of pallesthesia.

pal″les the′si-a (pal″es-theez′zhuh, -zee-uh) [*pallein*, G. *aisthēsis*, perception]. Sensation similar to that felt when a vibrating tuning fork is touched; the sense of vibration.

pal″li a′tion [L. *palliatus*, cloaked]. Alleviation; the act of soothing or moderating, without really curing. —**pal′liate**, *v.*, **pal′liative**, *adj*.

pal′li a″tive [*palliatus*]. A drug relieving or soothing the symptoms of a disease without curing it.

pal″li-ci-di-o′sis. See *Treponema cuniculi*.

pal′li-dum [L. *pallidus*, pale]. The globus pallidus, medial pale portion of the lenticular nucleus of the brain. —**pallidal**, *adj*.

pal′li um [L., cloak]. Old term for the cerebral cortex and superficial white matter of a cerebral hemisphere.

pal′lor [L., paleness]. Paleness, especially of the skin and mucous membranes.

palm [L. *palma*, palm]. 1. The inner or flexor surface of the hand, the hollow of the hand. 2. A palm tree. —**pal′mar**, *adj*.

p. oil. See under *oil*.

pal ma′ris [L.]. One of two muscles, palmaris longus and palmaris brevis, inserted into the fascia of the palm. See Table of Muscles in the Appendix.

pal′ma tine. $C_{21}H_{22}NO_5$; an alkaloid first isolated from calumba (*Jateorhiza palmata*) but widely distributed in species of Berberis.

pal′ma ture [L. *palma*, palm]. Union of the fingers; may be congenital or due to burns, wounds, or other trauma.

pal mel′lin [NL. *palmella*, from G. *palmos*, vibration]. A red coloring-principle of a fresh-water alga, the *Palmella cruenta*, resembling hemoglobin.

Palmer method. See Van Slyke and Palmer method.

Palmer method for hemoglobin. See under *method*.

pal′mie. Palmitin.

pal′mi-ped [L. *palma*, palm; *pes*, foot]. Having webbed feet.

pal′mi-tate. A salt or ester of palmitic acid.

pal mit′ic [*palma*]. 1. Relating to or derived from palm oil. 2. Relating to palmitin.

pal mit′ic ac′id. $CH_3(CH_2)_{14}COOH$. A saturated acid occurring in the glycerides of many fats and oils. Syn., cetic acid, *hexadecanoic acid*.

pal′mi tin. $C_3H_5(C_{16}H_{31}O_2)_3$; glyceryl tripalmitate or glyceryl palmitate; an ester of glycerin with palmitic acid; a crystallizable and saponifiable solid found in vegetable and animal fats and oils;

insoluble in water sparingly soluble in alcohol, and freely soluble in the organic solvents.

pal'mi tyl. The univalent hydrocarbo radical $CH_3(CH_2)_{14}$— Syn. *cetyl, hexadecyl.*

pal mod'ic [G *palmōdēs* palpitating]. Pertaining to resembl g, or affected with, palmus.

pal"ma-plan tar [L. *palma*, palm; *planta*, sole of the foot]. Pertaining to both the palms of the hands and the soles of the feet.

pal'mus [G *palmos*, palpitation] 1 A convulsive tic, with echolalia and abulia frequently manifestation of hysteria or schizophrenia 2 Palpitation, throbbing, pulsation, twitching, jerkiness. 3. The heartbeat.

pal'pa ble [L. *palpare*, to touch softly]. 1. Capable of being touched or palpated. 2. Evident.

pal pa'tion [L. *palpatio*, stroking, from *palpare*]. *In physical diagnosis*, the laying of the hand on part of the body or the manipulation of part for the purpose of ascertaining its condition or that of underlying organs. —**pal'pat**

bimanual p. The use of the two hands i examining an organ.

pal"pa to-per-cus'sion [*palpare*; L. *percussio* striking] Combined palpation and percussion.

pal'pe-bra (pal'pi bruh, bruh, pal-pee'bruh) (pl. *palpebrae*) [L., eyelid]. The eyelid. —**palpebral,** *adj*

p. inferior The lower eyelid.

p. superior The upper yelid.

pal'pe brate [L. *palpebrare*, to wink frequently]. Furnished with eyelids.

pal pe brate. T wink.

pal"pe-bra tion [L. *palpebratio* blinking] The act of winking; nictitation.

pal"pe-bri tis. See *blepharitis*

pal pi tate [L. *palpitare*, to palpitate]. Flutter tremble, or beat bnormally fast applied especially to the heart.

pal"pi ta tion [L *palpitatio*, from *palpitare*]. A fluttering or throbbing, especially of the heart; any heart action of which the patient is conscious.

Pal' myelin stain. See under *stain.*

pal'sy (pawl'zee) [G *paralysis*, paralysis] A synonym for paralysis, used to designate special types. For terms t found here, see under *paralysis.*

Bell's p. Peripheral paralysis of the facial nerve.

birth p. A paralysis due to injury sustained during parturition the common form is the Erb-Duchenne syndrome or betetr paralysis with deltoid involvement from injury to the brachial plexus Also used as synonym for spastic diplegia.

brachial birth p. Paralysis f the arm due t injury of the brachial plexus during birth It may involve the entire arm, th upper arm (Erb-Duchenne type) or the forearm (Klumpk type)

bulbar p. Progressive degeneration of motor conduction pathways i the bulbar region of th brain. See progressive bulbar *paralysis.*

cerebral p. Paralysis due to lesion of the brain. Also used as synonym for spastic diplegia.

congenital cerebral p. Spastic diplegia

cranial nerve p. Paralysis of those areas of the body controlled by the cranial nerves, usually caused by and accompanying, some other disorder

crutch p. Paralysis of the arm due t pressure of the crutch in the axilla.

diver's p. Caisson disease

drummer's p. Paralysis of the extensor of the distal phalanx of the thumb occurring in drummers.

Erb' p. See Erb-Duchenne *paralysis.*

hod-carrier's p. Paralysis of the long thoracic nerve, from continuous muscular effort with the arms above the shoulder or from carrying heavy objects on the shoulder characterized by unilateral winging of the scapula.

infantil cerebral p. Cerebral spastic infantile paralysis See spastic *diplegia.*

Klumpke' p. Weakness of the hand and forearm due to injury of the lower roots of the brachial plexus.

lead p. Weakness of the hand grasp and paralysis of the extensors of the wrist and fingers resulting from degenerative changes in the posterior interosseous branch of the radial nerve produced by lead poisoning.

painter's p. Lead palsy

pressure p. Paralysis due to pressure on nerve

printer' p. A rare form of paralysis due to polyneuritis in chronic antimony poisoning occurring in printers.

progressive bulbar p. See progressive bulbar *paralysis.*

pseudobulbar p. See pseudobulbar *paralysis.*

scriveners p. Writers cramp.

shaking p. See idiopathic *parkinsonism.*

wasting p. Progressive muscular atrophy

Paltauf Arnold [*Austrian physician*, 1860-93]. Described form of dwarfism associated with lymphatism called *Paltauf* *nanism.*

Paltauf Richard [*Austrian pathologist*, 1858-1924]. Described lymphogranulomatosis (1897), also called *Hodgkin disease, Paltauf-Sternberg disease.*

pal'u dal (pal'yoo-dul, pa-lew dul) [L. *palus*, swamp]. Malarial. *Obs.*

pal'u dide [*palus*]. A cutaneous eruption supposed to be due to malaria. *Obs.*

pal'u dism. See *malaria*

paludrine hydrochloride. A trade-mark for chloroguanide hydrochloride.

pa lus tral [L. *paluster* swampy]. Malarial. *Obs.*

P l Weigert method. See *Weigert* method under *stain.*

pal"y ster'ol. $C_{28}H_{46}O$; sterol containing one double bond in the 5,6-position, occurring in certain marine invertebrates of the phylum Coelenterata.

pam quine naph'tho-ate (pam uh kween, -kwin) (*pamaquine naphthoate*) $C_{42}H_{45}N_3O_7$. The methylene-bis-β-hydroxynaphthoate of 6-methoxy-8-(1-methyl-4-diethylamino)butylaminoquinoline; yellow to orange-yellow odorless powder insoluble in water but soluble in alcohol. Used as an antimalarial. Rapidly destroys gametocytes of all forms of malaria, including estivo-autumnal. Also as gametocide for prophylaxis. Also called *aminoquin naphthoate.* See *plasmochin.* Dose, 0.01–0.02 Gm. (⅙–⅓ gr.); total daily dose, 0.06 Gm. (1 gr)

pam pin'i form [L. *pampinus*, tendril; *forma*, form]. Having the form of tendril, used particularly for the pampiniform plexus of veins in the spermatic cord.

pan [AS. *panne*]. A low flat-bottomed vessel.

bed p. A large, flat, oval pan, usually of agate or enameled ware or stainless steel, serving as receptacle for the fecal discharges and urine of patients confined to bed.

brain p. The skull.

pan- [G *pan*, the whole, all]. A combining form meaning *all, every;* used in medicine to signify *general* or *affecting all or many parts.*

pan" -ce' [G *panakeia*, universal remedy]. A cure-all quack remedy

pan ag glu'ti nin. An agglutinin lacking specificity which aggl tinates erythrocytes of various types.

Pan" ma bark. Quillaj bark.

Pan A mer'i can San'i ta y Bu reau. A tech-

nical international organization of the Americas responsible to the member states through technical representatives of these states whose concerns include prevention of epidemics, the collection and dissemination of epidemiological data, consultation services, improvement of health administration in the member states, and promotion of liaison between them regional office of the World Health Organization since 1949

pan'a-ris, pa na ris. See *paronychia*.

analgesic p. Painless lesions of the phalanges in syringomyelia.

pan"a-ri'ti-um. See *paronychia*.

pan"ar-te-ri'tis [G. *pas*, whole, all; *artēria*, artery; *-itis* inflammation]. 1. Inflammation of all the coats of an artery 2. Inflammation of several arteries at the same time

pan ar thri'tis [pan; G. *arthritis*, arthritis]. Inflammation of many joints.

Panas, Photinos [*Greek ophthalmologist*, 1832–1903]. Noted clinician in Paris and author of well-known textbook (1894). Introduced an operation for relief of ptosis, in which he raised the tarsal portion of the lid by sutures which allowed the occipitofrontalis muscle to assume the function of the levator palpebrae superioris called *Panas' operation*.

pan at'ro phy [G. *pas*, whole, all; *atrophia*, want of food]. 1. Atrophy affecting every part of a structure. 2. General atrophy

Pa nax [G. universal remedy]. A genus of plants of the Araliaceae. See *ginseng*.

pan"car-di'tis [G. *pas*, whole, all; *kardia*, heart; *-itis*, inflammation]. General inflammation of the heart.

pa ca"or ne-i'tis. See *scoreitis*.

Pancoast, Henry Khunrath [*American roentgenologist*, 1875–1939]. Known for his description of an apical pulmonary tumor accompanied by Horner' syndrome, pain, bone destruction, and atrophy of hand muscles; called *Pancoast syndrome*.

Pancoast, Joseph [*American surgeon*, 1805–82]. Operated successfully for extrophy of the urinary bladder with epispadias (1859). Introduced an operation for the relief of facial neuralgia in which he divided the mandibular branch of the trigeminal nerve as it emerged from the foramen ovale; called *Pancoast' operation*.

pan co lec'to my [pan; G. *kolon*, colon; *ektomē*, excision]. Surgical removal of the entire colon.

pa -col"pe-hys"ter-ec'to-my See *panhystero-colpectomy*

pan cre-as (pan'kree-us, pang'kree-us) (pl. *pancreata*, *pancreases*) [G *pagkreas*]. A compound racemose gland, from six to eight inches in length, lying transversely across the posterior wall of the abdomen. Its right extremity the head, lies in contact with the duodenum; its left extremity the tail, is in close proximity to the spleen. It secretes limpid, colorless fluid that digests proteins, fats, and carbohydrates. The secretion is conveyed to the duodenum by the pancreatic duct. It furnishes an important internal secretion, insulin, from the islet of Langerhans. See Plates 10, 13, 45. —**pancreat'ic**, *adj*

accessory p. A small mass of glandular structure similar to the pancreas and adjacent to it.

annular p. An anomalous form of the pancreas encircling the duodenum.

dorsal p. The embryonic pancreas arising as diverticulum of the dorsal duodenal wall; it forms most of the adult organ.

lesser p. A small, partially detached portion of the gland, lying posteriorly to its head, and occasionally having separat duct that opens into the pancreatic duct proper

p. extract. See *insulin*, *l pecris*, *pancreatin*.

p. of Aselli. Lymph nodes near the pancreas.

tail of p. The splenic end of the pancreas.

ventral p. The embryonic pancreas arising as diverticulum of the common bile duct; it forms part of the adult organ.

pan"cre-a-ta. A plural of pancreas.

pan"cre a tec'to-my [*pagkreas*; G. *ektomē*, excision] Excision of the pancreas.

pan"cre-at"i-co-du"o-de'nal (pan"kree-at"i-ko-dew"o-dee nul, -dew-od'i-nul, pang"kree) [*pagkreas*; L. *duodeni*, twelve]. Pertaining to the pancreas and the duodenum, as the pancreaticoduodenal arteries. See Table of Arteries in the Appendix.

pan" re-at"i-co-du"o-de-nec'to-my See *pancreatoduodenectomy*

pan"cre-at"i-co-en"ter-os'to my [*pagkreas*; G *enteron*, intestine; *stoma*, mouth]. The surgical anastomosis of the pancreatic duct or pancreatic fistulous tract with the small intestine.

pan cre at"i-co-gas tros'to-my [*pagkreas*; G *gastēr* belly; *stoma*]. The surgical anastomosis of pancreatic fistulous tract with the pyloric portion of the stomach.

pan"cre-at"i-co-je"ju nos'to-my (-jee jew-nos to mee, -jed oo-nos to-mee) [*pagkreas*; L. *jejunum*, empty; *stoma*]. Anastomosing the pancreatic duct with th jejunum.

pan"cre-at"i-co li thot o-my [*pagkreas*; G *lithos*, stone; *tomē*, cutting]. The surgical removal of stone in the pancreatic duct.

pan"cre-at"i-co splen'ic (-splen'ick, -splee nick) [*pagkreas*; G *splēnikos*, of th spleen]. Pertaining to the pancreas and the spleen.

pan cre-a-tin (*pancreatinum*) A substance containing enzymes, principally pancreatic amylase (amylopsin) trypsin, and pancreati lipase (steapsin) obtained from the fresh pancreas of the hog, *Sus scrofa* var *domesticus*, or of the ox, *Bos taurus*; it is cream-colored amorphous powder with faint odor Used for its enzymatic action in various forms of digestive failure but of doubtful activity

pan"cre a-ti'tis [*pagkreas*; G *-itis*, inflammation]. Inflammation of the pancreas. The acute form may be hemorrhagic, suppurative or gangrenous. The onset of acute pancreatitis is usually sudden, with severe abdominal pain, vomiting, tympanites, and tenderness of the abdomen. Chronic pancreatitis may be interlobular with an increase of interlobular connective tissue, or interacinar in which the interacinar spaces are invaded and the islets of Langerhans involved. —**pancreatit'ic**, *adj*

pan"cre to du" -d nec t my (-dew"o-di-neck to mee, -dew-od neck'to-mee). See *duodenopancreatectomy*.

pan cre-a-to-du o-de-nos'to-my [*pagkreas*; L. *duodeni*, twelve; G *stoma*, mouth] The anastomosis of portion of the pancreas, especially fistulous tract into the duodenum.

pa cre-a to-en"ter os'to-my [*pagkreas*; G *enteron*, intestine *stoma*]. Anastomosing the pancreatic duct with some part of the small intestine.

pa cre-a-tog'e-nous. Arising in the pancreas.

pan cre-a-to-li'pase. Lipase found in the pancreatic juice

pan cre-at o-lith [*pagkreas*; G *lithos*, stone]. A calculus of the pancreas. Syn., *pancreolith*.

pan cre- to-li thec'to-my [*pagkreas*; *lithos*; G *ektomē*, excision]. Surgical removal of pancreatic calculus.

pan cre-a to-li thot' my [*pagkreas*; *lithos*; G *tomē*, cutting]. Operative removal of calculus from the pancreas. Also called *pancreolithotomy*.

pan cr -a tol'y-sis, pan cre-ol'y sis [*pagkreas*; G *lysis* loosing]. Destruction of the pancreas. —**pancreatolyt ic,** *adj*

pan"cre a tot o my [*pagkreas*; G *tomē*, cutting]. Incision of the pancreas.

pan cre-ec'to-my See *pancreatectomy*

pan cre-o lith. See *pancreatolith*.

pan"cre lithot omy See *pancreatolithotomy*.

pan cre-ol'y sis. See *pancreatolysis*.

pan cre op thy pan cre-o-path'y [*pagkreas*; G *pathos*, disease]. Disease of the pancreas.

pan cre-o-zyme [*pagkreas*; G *zymē*, leaven] A ferment similar to but not identical with secretin.

pan cre-o-zy'min. A crude extract of the intestinal mucosa which stimulates the secretion of pancreatic enzymes.

pancrobilin. Trade-mark for preparation containing desiccated pancreas and extract of ox bile.

pan"cy to-pe ni a. Reduction of all three formed elements of the blood erythrocytes, leukocytes, and platelets panhematopenia.

pan de mi a, pan de my [G *pandēmia*, the whole people]. An epidemic that attacks all persons.

pan-dem'ic [*pandēmia*] Epidemic over wide geographic area.

Pander Heinrich Christi n von [*German embryologist*, 1794–1865]. With Karl E. Baer described the splanchnopleural layer f th mesoderm. Described embryonic cellular masses from which blood vessels develop, called *Pander' islands*. A lenticular mass of gray matter below the thalamus is called *Pander nucleus*.

pan di u la tion [L. *pandiculari*, to stretch one self] Th act of stretching the limbs, especially on waking from sleep, accompanied by yawning.

Pandy's reagent. See under *reagent*.

Pandy test. See under *test*.

pan" lec'tro-scope [G *pas* whole, all *ēlektron*, amber *skopein*, to examine] An inspection apparatus for use in proctoscopy esophagoscopy urethroscopy etc. It throws concentrated light through the whole tube thus illuminating the spot that is to be inspected.

pan en'do scope. A modification of the cystoscope, utilizing forobliquе lens system, permitting adequate visualization of both the urinary bladder and the urethr

pan"es the'si a (pan ess-thee zhuh, -zee-uh) [G *panaisthēsia*, full vigor of the senses] General or total sensation cenesthesia. —**panesthet'ic,** *adj*.

Paneth, Josef [*German physician* 1857–90]. Described the coarsely granular cells found in the crypts of Lieberkühn in the small intestine; called *cell of Paneth*.

pang [ME. *prange*]. A momentary sharp pain.

breast p. Angina pectoris.

brow p. See *migraine*, *hemicrania*, 2.

Pangborn test. A flocculation test for syphilis.

pan gene, pan'gen. See hypothetical units.

pan gen sis [G *pas*, whole, all; *genesis* production] Darw comprehensive theory of heredity and development, according t which all parts of the body give off gemmules which aggregate in the germ cells During development they are sorted out from one another and give rise to parts similar to those of thei origin

pan glos si [G *pagglōssia*, garrulity] Excessive or psychotic garrulity

pan-hem"at o-pe ni a. See *pancytopenia*

pan"hi-dro sis [G *pas*, whole, all; *hidrōsis*, sweating]. Generalized perspiration.

pan hy'grous [G *panygros*, quite damp]. Damp as t the entire surface.

pan-hy"po pi tu'i ta rism. See *hypopituitarism*.

pan"hys ter-ec'to-my [G *pas*, whole, all *hystera*, womb; *ektomē*, excision]. Total extirpation of the uterus.

pan hys"ter-o-col pec to-my [*pas*; *hystera*; G *kolpos*, vagina *ektomē*]. Complete removal of the uterus and vagina.

pan hys"ter-o-o"o ph rec'to-my Excision of the entire terus and one or both ovaries.

pan hys"ter o-sal"pin gec'to-my (-sal pin jek'to-mee) [*pas*; *hystera*, G *salpigx*, trumpet *ektomē*]. Excision of the entire uterus and the oviducts.

pan hys"ter o sal pin"go-o o-pho-rec'to-my. Excision of the uterus, oviducts, and ovaries.

pan'ic [G *panikos*, from *Pan*, Pan]. An extreme anxiety attack in which the anxious person becomes incapacitated temporarily

pa nic"u la tine. $C_{22}H_{33}NO_7$ an alkaloid from *Aconitum paniculatum*.

pan"im-mu ni ty [*pas*; G *immunitas* freedom from public services]. General immunity to disease

pa niv o-rous [L. *panis* bread; *vorare* to devour]. Subsisting on bread bread-eating.

Panizza Bartolomeo [*Italian anatomist*, 1785–1867]. Remembered for having located the visual function in the posterior portion of the occipital lobes of the brain (1855) reported also year later by Joseph Swann. Described two lymphatic plexuses in the lateral fossae of the preputial frenum, called *Panizza plexuses*.

pan"me-tri'tis. Widespread inflammation of the entire uterus, often accompanied by cellulitis of the broad ligaments.

pan mne si (pan-nee zhuh, -zee-uh) [G. *pas*, whole, all; *mnēsis*, of memory]. A potential remembrance of all impressions.

panmycin. Trade-mark for the antibiotic substance tetracycline, commonly supplied as the hydrochloride

pan my loph thi si (pan migh-l-lof'thi sis, pan migh l lof-thigh sis) [*pas*; G. *myelos*, marrow *phthisis*, wasting way] A general wasting of the bone marrow O T

pan my-e-lo sis (pan migh-l-lo sis) [*pas*; *myelos*; G. *-ōsis*, increase]. See *myeloproliferative disorder*

pan my"e-lo tox"i-co sis [*pas*; *myelos*; G. *toxikon*, poison *-ōsis*, condition]. A condition in which all elements of the bone marrow are affected

pan nic"u li'tis [L. *panniculus*, small piece of cloth G *-itis* inflammation]. Inflammation of the bdominal panniculus adiposus.

nodular nonsuppurative p. That form characterized by the formation of painful nodules in the subcutis relapses occur frequently Also called *Christian-Weber disease*.

pan nic'u lus [L.]. A membrane or layer

p. adiposus. The layer of subcutaneous fat.

p. carnosus. The layer of muscles contained in the superficial fascia. It is well developed in some lower animals, but in man is represented mainly by the platysma.

pan nus [L., cloth]. 1 Vascularization and connective-tissue deposition beneath th epithelium of the cornea. 2. Chloasma. 3. Connective tissue overgrowing the articular surface of diarthrodial joint.

allergic eczematous p. That associated with phlyctenular keratitis

p. carateus. Pinta.

p. crassus. One that has acquired considerable thickness Also called *p. crassus*.

p. degenerativus. That occurring in blind degenerated eyes following diseases such as syphilis glaucoma, or retinal detachment.

p. hepaticus. Chloasma.

p. siccus. An old pannus composed of connective tissue and poor in vessels. Also called *p. degenerativus*

p. tenuis. Slight pannus.

p. trachomatosus. That occurring with trachoma.

pan"oph·thal·mi'tis [G. *pan*, whole, all; *ophthalmos*, eye; *-itis*, inflammation]. Inflammation of all the tissues of the eyeball. Also called *panophthalmia*.

p. purulenta. A severe form, with great protrusion of the eyeball and formation of pus, usually resulting in blindness.

pan·os·te·i'tis [*pan*; G. *osteon*, bone; *-itis*]. An inflammation of all parts of a bone.

pan"o·ti'tis [*pan*; G. *ous*, ear; *-itis*]. A diffuse inflammation of all parts of the ear, usually beginning in the internal ear.

panparnit. Trade-mark for the β-diethylaminoethyl ester of 1-phenylcyclopentanecarboxylic acid, a muscle relaxant.

pan·phar'ma·con [*pan*; G. *pharmakon*, drug]. A panacea. *Obs.*

pan"phle·bi'tis. Inflammation of all the coats of a vein.

pa pho'bi a. See *pantophobia*.

panrone. Trade-mark for a ... ketone.

Pansch, Adolf [German anatomist, 1841–87]. Described a cerebral fissure extending from the lower end of the central fissure to the occipital lobe, called *Pansch's fissure*.

pa scle·ro'sis [G. *pas*, whole, all; *sklērōsis*, hardening]. Complete hardening of a part.

pan·si"nus·i'tis (pan sigh sub-sigh tis, -sin yoo-sigh tis, sigh new-sigh'tis) [*pan*; L. *sinus*, bent surface; G. *-itis*, inflammation]. Inflammation of all the paranasal sinuses.

Pan strон'gy lus (pan-stron ji lus) [*pan*; G. *strongylos*, round]. A genus of bugs of the family Reduviidae, the assassin or cone-nosed bugs.

P. **megistus.** A species which transmits *Trypanosoma cruzi* in South America.

pant [OF *pantaisier*, to be breathless]. Breathe hard or quickly.

pan"ta·mor'phi [G. *pas*, whole, all; *amorphia*, formlessness]. General deformity. —**pantamorphic**, *adj*.

pan"ta·n·e·ce·pha'li [*pan*; G. *anenkephalos*, without brain]. Total congenital absence of the brain. —**pantanencephal'ic**, *adj*.

pan"tan·en·ceph'a lus [*pan*; *anenkephalos*]. A monster showing complete absence of the brain.

pa tan"ky lo·bleph'a ron (pan tang"ki lo blef'uh-ron) [*pan*; G. *ankylos*, crooked, bent; *blepharon*, eyelid]. Complete ankyloblepharon.

pa "ta·pho'bi [*pan*; G. *a-*, not; *phobos*, fear]. Total absence of fear.

pa "ta·so'ma tous (pan tuh-soam uh tus, -so mah-tus) [*pan*; G. *sōma*, body]. Involving the entire body.

pan"ta·tro'phi·a, pan·tat'ro·phy [*pan*; G. *atrophia*, want of nourishment]. Complete or general atrophy.

pan"te·the'ine. The β-aminoethanethiol ester of pantothenic acid, occurring naturally; a growth factor for *Lactobacillus bulgaricus*.

pa "te·thine. The disulfide of pantetheine, occurring naturally. Some lactic acid bacteria show preference for pantethine over pantothenic acid as a growth factor.

panthenol. Trade-mark for pantothenyl alcohol.

pa ther' pist [*pan*; G. *therapeia*, treatment]. One who treats upon the basis of any available remedial agent.

panthesine. Trade-mark for the N-diethylleucinol ester of para-aminobenzoic acid. The substance is used for both infiltration anesthesia in 0.5% solution and for surface anesthesia in strengths of from 5–10% in solution or in ointment form.

pan'to- See *pan-*.

pan'to caine. A term occasionally applied to tetracaine hydrochloride.

pan'to·graph" [*pan*; G. *graphein*, to write]. An instrument for the mechanical copying of diagrams, etc., upon the same scale or upon an enlarged or a reduced scale.

pan to'ic ac'id. $CH_2OH.C(CH_3)_2.CHOH.COOH$; the fragment of pantothenic acid remaining after cleavage of β-alanine; it replaces pantothenic acid as a growth factor for certain organisms.

pantopaque. A proprietary compound, ethyl iodophenylundecylate, used in roentgenographic visualization of the spinal subarachnoid space.

pan to·pho'bi [*pan*; G. *phobos*, fear]. Morbid fear of everything; a symptom present in some cases of psychasthenia.

pantopon. Trade-mark for a preparation containing all the alkaloids of opium in the form of hydrochlorides, and in the relative proportion in which they occur in the whole gum. Used in place of opium and morphine.

pan"top·to'sis [*pan*; G. *ptōsis*, a falling]. A condition in which several viscera are prolapsed.

pan"to·scop'ic. See *bifocal*.

pan"to·so'ma tous (pan to-som uh-tus, -so mah-tus) [*pan*; G. *sōma*, body]. Characterizing a monstrosity in which the whole or nearly the whole body is affected.

pan"to·then'ate. Any salt or ester of pantothenic acid.

pan"t then'ic ac'id. $CH_2OH.C(CH_3)_2.CHOH.CONH.CH_2.CH_2.COOH$. α,γ-Dihydroxy-β,β-dimethylbutyryl-β-alanide; a substance widely distributed in nature and believed to be present in animal tissues essentially as a component of coenzyme A. Absence of this factor of the vitamin-B complex gives rise to dermatitis in chicks. It also appears to be essential for nutrition of rats, but its importance in human nutrition has not been established. It is employed chiefly in the form of calcium pantothenate. See Table of Vitamins in the Appendix. Syn., *chick antidermatitis factor*, *filtrate factor*, *pantoyl-β-alanine*.

pa t then yl al co hol. $CH_2OH.C(CH_3)_2.CHOH.CONH.CH_2.CH_2.CH_2OH$; α,γ-dihydroxy-N-(3-hydroxypropyl)-β,β-dimethylbutyramide, a viscous liquid, freely soluble in water. In the body it is converted to pantothenic acid, and because of the greater stability of the alcohol, is sometimes used in place of the acid. See *panthenol*.

pan"to·yl-β-al'a·nine. Pantothenic acid.

pan"t yl tau'rine. $HOCH_2C(CH_3)_2CHOH.CONH.CH_2.CH_2.SO_3H$. A substance antagonistic to pantothenic acid for a variety of microorganisms but not to those which can synthesize pantothenic acid. Also called *thiopanic acid*.

pan trop'ic [*pan*; G. *trepein*, to turn]. Polytropic; having affinity for or affecting many tissues; applied to viruses.

Panum, Peter Ludwig [Danish physiologist, 1820–85]. Made important contributions to knowledge of putrefactive processes (1856). Described embolism (1864). In his early years made an important study and report of an epidemic of measles in the Faroe Islands (1846) which has become famous in the history of epidemiology. His serum globulin was once known as *Panum's casein*.

pa nus [L., swelling]. 1. An inflamed, nonsuppurating lymph node. 2. Venereal lymphogranuloma; old term.

p. faucium. An inflamed lymph node in the throat.

p. inguinalis. A bubo.

pan zo·ot'ic [G. *pas*, whole, all; *zōion*, living being].

In veterinary medicine, affecting many species of animals.

pap [perhaps from L. *papa*, the word with which infants call for food] A soft, semiliquid food.

pa pa'in (pa-pay'in, pay puh in) An enzyme obtained from the juice of the fruit and leaves of *Carica papaya*, occurs as white, or grayish-white, slightly hygroscopic powder; incompletely sol bl in water and glycerin; contains enzymes similar to pepsin, but acting in acid, neutral, or alkaline medium. Used t aid digestion in chroni dyspepsia and gastri fermentation; externally as solvent of false membranes and on warts, etc.; also used to treat erythrocytes in testing for Rh antibodies. Dose, 0.1–0 3 Gm. (2–5 gr) Also called *papayotin*.

Papanicolaou, George Ni holas (1883–) American anatomist who popularized the study of exfoliated cells, primarily as means for detection of cancer See *cytological cancer technique*.

P pa ver [L.]. A genus of herbs of the Papaveraceae the poppy See *plum*.

pa pav"er al'dine. $C_{20}H$ NO_5; 6,7-dimethyl-1 veratroylisoquinoline; an alkaloid occurring in, or formed during extraction of opium.

pa pav er-a"mine. C $H_{23}NO$ an alkaloid from opium.

pa pav'er-ine (pa pav'ur een, -in, pa-pay'vur-) $C_{20}H_{21}O_4N$ An alkaloid obtained from opium, belonging to the benzyl isoquinoline group (it is not morphin derivative); occurs as white, crystalline powder

p. hydrochloride (*papaverinae hydrochloridum*) $C_{20}H_{21}O_4N\ HCl$, the hydrochloride of alkaloid obtained from opium; occurs as white crystals, or as white, crystalline powder 1 Gm is sol ble in about 40 cc. of water; it is soluble in alcohol and chloroform. Papaverine relaxes smooth muscle in general, although different organs are affected in varying degree. It is also rather feeble central analgesic and local anesthetic. It is used in all kinds of gastric and intestinal spasms, in biliary colic, and in bronchial spasm. Dose, 0 06–0 2 Gm. (1–3 gr)

pa paw' [Sp. *papaya* papaw tree] 1 The seed of *Asimina triloba*, has been used as an emetic. 2. See *papaya*

pa pa'ya (pa-pah yah, pa-pay'uh) [Sp., fruit of the papaw]. Melon tree papaw *Carica papaya*, tree of the Passifloraceae. The unripe fruit yields milky juice containing papain.

pap ya tin (pap uh-yo tin, pa-pah yo-tin, pa-pay tin) See *papain*.

pa per [G *papyros*, papyrus]. A processed m terial pressed into thin sheets made from wood pulp, cloth, or other substances.

articulating p. See *articulating paper*

blisteri g p. Paper saturated with cantharides used for producing vesication

filter p. An unglazed paper used for filtration.

i dicator p. Strong white filter paper saturated with the proper strength indicator solution or other particular substance, and dried. These papers are used for testing acidity or alkalinity pH, or for the presence or absence of particular substance. Also called *test p*

mustard p. A mixture of powdered black mustard and an adhesive spread on paper or thin cloth. When applied to the skin, it acts as rubefacient. Syn., *charta sinapis*.

pa pes'cent. Having the consistence of pap.

pa pil'la (pl. *papillae*) [L., nipple] 1 A small, nipplelike eminence. 2. A pustul or pustule —**pap'illary** *adj*

alpine p. A narrow and elongated papilla of the corium; seen in several skin diseases.

anal p. Any of the small elevations occasionally present on the free margins of the anal valves or t th bases of the rectal columns. also called *papilla of Morgagni*.

basila p. The organ of Corti.

bile p. See duodenal *p.*

circumv llate p. See vallate *p.*

conical p. A variant form of filiform *p.*

dental p. The mass of connective tissue over which fits the enamel organ of developing tooth. It forms the dentin and dental pulp.

dermal p. An elevation of the corium into corresponding depression in the overlying epidermis.

duodenal p. The eminence on the duodenal mucosa at the opening of the common bile duct. Also called *papilla of Vater*

engorged p. Choked disk. See *papillitis*

filiform p. Any one of the papilla occurring on the dorsum and margins of the oral part of the tongue, consisting of an elevation of connective tissue covered by layer of epithelium. Variously divided to ppear shredded.

foliat p. One of the papillae similar in structure to the vallate papillae, found on the posterolateral margin of the tongue of many mammals, but vestigial or absent in man.

fu giform p. One of the low broad papillae scattered over the dorsum and margins of the tongue.

genital p. The primitive penis or clitoris.

gustatory p. A papilla of the tongue which is furnished with taste buds.

Huschk s p. Formerly the organ of Corti.

i cisive p. The oval or pear-shaped thickening of the palatine mucous membrane overlying the incisive fossa ( ) and containing vestiges of the nasopalatine ducts also called *palatine p.*, *incisive pad*.

interdental p. That portion of the gingiva between two contiguous teeth also called *interproximal gingiva*.

lacrimal p. A small, conical eminence on the yelid at the inner canthus pierced by the lacrimal punctum. See Plate 19.

lenticular p. One of the irregularly distributed low folds of mucous membrane in the anterior part of the dorsum of the base of the tongue.

lingual p. Any one of the papillae on the tongue.

mammary p. The nipple of the breast. See Plate 43.

optic p. See optic *disk*.

palatine p. See incisive *p.*

renal p. The summit of any one of the renal pyramids projecting into the renal pelvis.

tactile p. A little eminence of the corium containing tactile corpuscle.

vallate p. One of the large, flat papillae, each surrounded by trench, in group anterior to the sulcus terminalis of the tongue. Syn., *circumvallate p.*

vascular p. A dermal papilla containing capillary loops.

pap'il late [L. *papillatus*, shaped like bud]. Having small papillary or nipplelike projections.

pap"il lec'to-my [L. *papilla*, nipple; G. *ektomē*, excision]. Surgical removal of papilla or papillae.

pa pil"le-de'ma [*papilla*; G *oidēma*, swelling]. Edema of the optic nerve. If severe, it may result in choked disk or papillitis.

pap"il lif'er-ous [*papilla*, L. *ferre*, to bear]. Bearing or containing papillae, as papilliferous cyst.

pa pil'li form [*papilla*, L. *forma*, form]. Shaped like papilla.

pap"il li'tis [*papilla*, G *-itis*, inflammation]. 1. Inflammation of papilla. 2. Inflammation of the optic disk; also called *optic neuritis*.

necrotizing p. Necrosis and inflammation of renal papillae, probably resulting from ischemia, and usually associated with acute pyelonephritis, especially in patients with diabetes mellitus.

pap"il·lo·cys·to'ma. See serous cystadenoma.

pap"il·lo'ma [*papilla*; G. *-ōma*, tumor]. A neoplastic growth of surface epithelium, supported on cores or papillae of vascularized connective tissue. May arise from skin, mucous membranes, or glandular ducts, such as those of mammary glands, glandular acini, and acinar spaces of adenomas and adenocarcinomas. Similar growths may arise from serous surfaces and are covered with mesothelial cells. The epithelial papillomas are benign, but tend to recur unless completely eradicated. They may be caused by a virus, as those of the skin. Others, as those of the urinary bladder, may be due to chemical factors such as the products of anilines. —**papillom'atous,** *adj.*

cylindrical-cell p. One covered by simple or stratified columnar epithelium. Also called *soft p.*

ductal p. A tumor of the breast limited to the mammary duct system, characterized by typical papillary structures; also called *intraductal p.*

p. choroideum. That derived from choroid plexus and covered with ependymal cells.

pseudomucinous p. See serous cystadenoma.

pseudomucinous p. See pseudomucinous cystadenoma.

squamous-cell p. A papilloma covered by stratified squamous epithelium. Also called *hard p.*

pap"il·lo·ma·to'sis [*papilla*; *-ōma*; G. *-ōsis*, condition]. The widespread formation of papillomas; also the state of being affected with multiple papillomas.

infectious oral p. of dogs. A viral disease of young dogs, characterized by the formation of multiple pedunculated growths on the oral mucosa. The growths disappear spontaneously and leave the animal with a high degree of immunity.

infectious p. of cattle. A viral disease of cattle, characterized by the formation of warts on various parts of the body.

papular p. See juvenile *acanthosis*.

verrucose p. of mouth. Warty vegetations in the mouth that are very difficult to cure. Growths appear similar to the condyloma acuminatum seen on the genitalia.

pa·pil"lo·ret"i·ni'tis [*papilla*; L. *rete*, net; G. *-itis*, inflammation]. Inflammation of the optic disk and retina.

Papin, Denis [*French physicist*, 1647–1714]. Introduced an apparatus for boiling organic material under pressure in a closed vessel; called *Papin's digester*.

papoid. Trade name for a papain preparation.

pa·poose' root. *Caulophyllum thalictroides*, the blue cohosh.

Pappenheim, Artur [*German pathologist*, 1870–1916]. Leading hematologist. Devised numerous stains and laboratory methods. See Pappenheim-Saathoff methyl green-pyronin stain, also *Pappenheim's method* and *Pappenheim's solution*, under *stain*.

Pappenheimer, Alwin Max [*American pathologist*, 1877–]. With Charles Norris and Thomas Flournoy reported discovery of a spirochete in an American case of relapsing fever (1906).

pap'pose [G. *pappos*, down]. Covered with fine downy hair.

pap'pus [*pappos*]. The fine downy hair first appearing on the cheeks and chin.

pa·pri'ka (pa·pree'kuh, pap'ri·kuh) [Hung. *paprika*, Turkish pepper]. The dried pulverized capsules of *Capsicum annuum*. Contains vitamin C. Also called *Spanish pepper*, *Turkish pepper*.

pap"u·la'tion [L. *papula*, pimple]. The stage, in certain eruptions, marked by papule formation.

pap'ule, pap'u·la [*papula*]. A small, circumscribed, solid elevation of the skin, varying in size from that of a pin point to that of a split pea. —**pap'ular,** *adj.*

moist p. The syphilitic condyloma.

pap"u·lif'er·ous [*papula*; L. *ferre*, to bear]. Covered with papules.

pap"u·lo·er"y·the·ma'tous (pap"yoo·lo·err"ith·em'uh·tus, ·eem'uh·tus) [*papula*; G. *erythēma*, redness]. Having a papular eruption superimposed on a generalized erythema.

pap"u·lo·pus'tu·lar [*papula*; L. *pustula*, blister]. Characterized by both papules and pustules.

pap"u·lo·squa'mous [*papula*; L. *squama*, scale]. Characterized by both papules and scales.

pap"u·lo·squa'mous re·ac'tion. See under *reaction*.

pap"u·lo·ve·sic'u·lar [*papula*; L. *vesicula*, little blister]. Characterized by both papules and vesicles.

pap"y·ra'ce·ous (pap"i·ray'shus, ·see·us) [G. *papyros*, papyrus]. Resembling paper, as the papyraceous plate of the ethmoid bone.

p. fetus. See *fetus papyraceus*.

Paquelin, Claude André [*French surgeon*, 1836–1905]. Introduced a thermocautery, a hollow platinum point kept at a uniform temperature by a current of hot vapor (1877); called *Paquelin's cautery*.

par'a-, **par-** [G. *para*, beside, near, beyond]. 1. A prefix signifying *beyond*, *beside*, *near*. 2. *In chemistry*, a prefix (to a derivative of the benzene ring) indicating the substitution of two atoms of hydrogen situated opposite each other in the 1,4-position. Symbol, *p-*. 3. *In medicine*, a prefix denoting a *faulty or abnormal condition*, *associated in an accessory capacity*, *remotely or indirectly related to*, or *almost*, *closely resembling*.

par"a·ac"et·phe·net'i·dine (par"uh·ass"et·fi·net'i·deen, par"uh·a·set"...). See *acetophenetidin*.

par"a·am"e·bi'a·sis. Amebid.

par"a·a·mi"no·ben"zene·ar·son'ic ac'id. Arsanilic acid.

par"a·a·mi"no·ben·zo'ic ac'id (par"uh·a·mee"no·ben·zo'ick, par"uh·am"i·no-). $C_6H_4NH_2COOH$. A yellowish-red, crystalline substance considered a member of the B complex group of vitamins. Under some experimental conditions it corrects premature graying of hair. It inhibits the action of sulfonamides, and is essential for the metabolism of certain bacteria; it is used in the biosynthesis of folic acid and related substances. It is of clinical value in the treatment of rickettsial diseases. Syn. *PABA*. Also called *vitamin H'*, *vitamin B_x*, *vitamin P*. See Table of Vitamins in the Appendix.

par"a·a·mi"no·hip·pu'ric ac'id. $NH_2C_6H_4CONHCH_2COOH$; *p*-aminobenzoylaminoacetic acid, used to test renal function by its excretion in the urine after intravenous injection; also to test liver function by measuring the extent of its synthesis from orally administered para-aminobenzoic acid as determined from para-aminohippuric acid blood levels. Abbreviated, PAH, PAHA.

par"a·a·mi"no·sal"i·cyl'ic ac'id. $C_6H_3(NH_2)(OH)(COOH)$. 4-Aminosalicylic acid or 4-amino-2-hydroxybenzoic acid, a white, crystalline substance soluble in water. It is bacteriostatic against tubercle bacilli and is used clinically in the treatment of tuberculosis. Also called *aminosalicylic acid* and abbreviated PAS, PASA.

par"a·am"y·loi·do'sis. See primary *amyloidosis*.

par″a-an al ge si a (par uh-an al jee see-uh, -zee-uh) Analgesia limited to the lower half of the body

par″a-an″es the si a (-an ess thee zhuh, -zee-uh) Anesthesia of the body below the waist.

par″a-ap pen″di ci′tis. Inflammation of the connective tissue adjacent to that part of the appendix not covered with peritoneum.

par″a bi o sis (par uh bay-o sis) [G para, beside biōsis, way of life]. The experimental fusing together of two individuals or embryos so that the effects of one partner upon the other may be studied. —**parabiot′ic,** *adj.*

par″a blep sis [G looking askance]. False or perverted vision.

par a bo loid dark′-field con den ser A lens of paraboloid shape, the vertex end being ground back so that its focus can be brought into coincidence with the specimen on the slide. A central stop is provided to block the central rays. It is used chiefly for medium-power work.

par″a bu′li a [G para, beyond boulē, will]. Abnormality of volitional action.

par″a bux′ine. $C_{24}H_{48}NO$ an alkaloid from *Buxus sempervirens*, the common box shrub.

par a can tho ma [G para, near akantha, prickle -ōma, tumor]. A new growth affecting the prickle-cell layer of the skin.

par ac an tho sis [para, akantha, G -ōsis, condition]. A process characterized by some anomaly of the prickle-cell layer of the epidermis.

par″a ca ri′nal [para, L carina, keel] Beside carina, especially the urethral carina.

par″a-car′mine (par uh-kahr min, -myne) A staining solution containing calcium chloride and carminic acid in 75% alcohol.

par″a ca se-in. A digestion product of casein, formed through the action of rennin.

par′a coele [G para, beside koilia, cavity]. Old term for the lateral ventricle of the brain.

Paracelsus (Aureolus Philippus Theophrastus) (Bombastus ab Hohenheim) [*Swiss physician, chemist, and reformer* 1493–1541]. Regarded by many as the pioneer of modern chemists. Suggested the hereditary transmission of syphilis (1529). Recommended mercury in the treatment of syphilis, or as he called it, French gonorrhea. Noted association of cretinism and exophthalmic goiter. The use of chemical agents alone in treating disease is known as the *Paracelsian method.*

par″a cen te sis [G parakentēsis, tapping]. Puncture; especially the puncture or tapping of the wall of a cavity by means of a hollow needle or trochar to draw off the contained fluid.

abdominal p. Puncture of the abdominal wall with an abdominal trochar and cannula, usually for the relief of ascites.

p. bulbi. Surgical puncture of the eye.

p. oculi. Surgical puncture of the eye.

p. of the bladder The puncture of the urinary bladder wall with a vesical trochar for the relief of obstruction or to provide constant drainage.

p. of the chest. The insertion of a needle or trochar into the pleural cavity for the relief of pleural effusion.

p. of the pericardium. The insertion of a hollow needle into the pericardium in pericarditis with effusion.

p. of the tympanum. The insertion of a paracentesis needle or knife through the tympanic membrane, for the relief of otitis media.

par″a cen tral [G. para, near kentron, center of circle]. Situated near the center as paracentral lobule.

par″a ceph′a lus [G. para, beside kephalē, head]. A placental parasitic twin (omphalosite) characterized by a rudimentary misshapen head and defective trunk and limbs.

par″a ker″a to sis. Parakeratosis.

par a-cet-al′de-hyde. See *paraldehyde.*

par″a chlor phe nol. $C_6H_4(Cl)OH$. A substitution product of phenol. It is antiseptic, disinfectant, and is employed in a 2% to 3% ointment in erysipelas. Also spelled *parachlorophenol.*

p. paste. A paste of equal parts of lanolin, petrolatum, starch, and parachlorphenol It is used in lupus.

par″a chol′er a (par uh kol′ur-uh) [G. para, near cholera, cholera]. A disease resembling Asiatic cholera but caused by a different organism.

par″a-cho′li a (par uh-ko′lee-uh) [G. para, beyond; cholē, bile]. 1 Any abnormality in the secretion of bile. 2. The prodrome of disturbed liver-cell activity in consequence of which bile is present in the blood and lymph.

par″a chor′dal (par uh-kor′dul) [G. para, beside; chordē, string]. 1 Adjoining the cephalic notochord; situated at the side of the cranial part of the notochord of the embryo. 2. Pertaining to the cartilaginous base of the cranium in the embryo.

par″a chor′dal. One of two bars of cartilage extending alongside the cephalic notochord in the human fetus. Also called *parachordalia.*

par″a chro ma [G. para, beyond chrōma, color] Change in color as of the skin.

par″a-chro ma tism [para; chrōma]. False, or incorrect, perception of color not true colorblindness, which it may approach more or less completely

par a chro ma to-blep si a. See *parachromatism.*

par″a chro ma top si-a [para, chrōma, G. opsis, vision]. Colorblindness.

par″a-chro ma-to sis. See *parachroma.*

par a-chro mo phore [para, chrōma; G. phoros, bearing]. Pigment excreted or retained either within cells or in the capsule surrounding the cell. It is not an integral part of the cytoplasm of the cell. The term is applied to bacteria and fungi. —**parachromophor′ic, parachromophor ous,** *adj.*

par ac me (par ack′mee) [para, G. akmē, highest point]. 1. The degeneration or decadence of a group of organisms after they have reached their acme of development. 2. The period of decline of a disease.

Par″a coc cid″i oi des (par uh-cock sid ee oy deez) [G para, near kokkos, berry; eidos, form] See *Blastomyces.*

P brasiliensis. See *Blastomyces brasiliensis.*

par″a-coc cid″i oi″do-my-co sis (par uh-cock sid ee-oy d migh ko sis) [para, kokkos; eidos; G mykēs, fungus -ōsis, condition]. South American blastomycosis.

par′a coele (par uh-seel) See *paracele.*

par″a co-li tis [G para, beside kolon, colon, -itis, inflammation]. Inflammation of the tissue adjacent to the colon, not covered by peritoneum.

par″a co′lon [para, kolon]. A group of bacteria intermediate between the *Escherichia-Aerobacter* genera and the *Salmonella-Shigella* group. Culturally these organisms may be confused with the nonlactose-fermenting pathogenic bacteria found in the intestinal tract. Some of the paracolon bacilli probably produce disease.

par″a col pi tis [para, G kolpos, vagina; -itis, inflammation]. Inflammation of the connective tissue about the vagina.

par″a col′pi um [para, kolpos]. The connective tissue about the vagina.

par a-con dy-lar [para, G. kondylos, knuckle]. Situated alongside a condyle or condylar region.

par'a-cone [*para-*; G. *kōnos*, cone]. The mesiobuccal cusp of an upper molar tooth.

par"a-co-nid' (par"a-co-nid') [*para-*; *kōnos*]. The mesiolingual cusp of a lower molar tooth.

par"a-co'to [*para*, Pg. *said-coto*]. A South American tree, *Ocotea pseudocoto* of the Lauraceae, the bark of which contains a neutral substance, paracotoin.

par"a-co-to'in (par"uh-koh-toh'in, -ko-toe'in). $C_{12}H_8O_4$. A crystalline substance obtained from paracoto bark; closely resembles cotoin in physiologic action.

par"a-cre'sol. C_7H_8O. One of the three isomeric forms of cresol.

par"a-cu'sis (par"uh-cue'shuh, -see-uh), **par-a-cu'sis** (par"a-cue'sis) [G. *parakousis*, defect of hearing]. Any perversion of the sense of hearing.

p. acris. Excessively acute hearing, rendering the person intolerant of sounds.

p. duplicata. A condition in which all or only certain sounds are heard double.

p. imaginaria. Tinnitus.

p. localis. Difficulty in estimating the direction of sounds, met with in unilateral deafness, or when the two ears hear unequally.

p. obtusa. Difficulty in hearing.

p. Willisii. A condition of deafness in which the hearing is better in a noisy place, as in a train or factory.

par"a-cy-e'sis (par"uh-sigh-ee'sis) [G. *para*, beyond; *kyēsis*, pregnancy]. Extrauterine pregnancy.

par"a-cys'tic [G. *para*, beside; *kystis*, bladder]. Situated near or alongside the urinary bladder.

par"a-cys-ti'tis [*para*; *kystis*; G. *-itis*, inflammation]. Inflammation of the connective tissue surrounding the urinary bladder.

par"a-cy'tic (par"uh-sigh'tick) [*para*, G. *kytos*, cell]. Lying among cells.

par"a-de-ni'tis [*para*; G. *adēn*, gland; *-itis*, inflammation]. Inflammation of the areolar tissue about a gland.

par"a-den'tal [*para*; L. *dens*, tooth]. Near or beside a tooth.

par"a-den-to'sis. See *periodontosis*.

par"a-di"ag-no'sis [G. *para*, near; *diagnōsis*, distinguishing]. A diagnosis that is almost correct.

par"a-di-chlo"ro-ben'zene. $C_6H_4Cl_2$; colorless or white crystals, insoluble in water, soluble in various organic liquids; used to kill moths and their larvae, also certain other insects.

par"a-did'y-mis [*para*; G. *didymos*, testis]. The atrophic remains of the paragenital tubules of the mesonephros, which separate from the mesonephric duct and lie near the convolutions of the epididymal duct. Also called *organ of Giraldès*.

paradione. Trade-marked name for *paramethadione*.

par"a-diph-the'ri-al, **par"a-diph"the-rit'ic** [*para*; G. *diphthera*, leather]. Remotely or indirectly related to diphtheria.

par"a-di"tem'per. See hard pad.

par"a-dox'i-a sex"u-a'lis. Sexual excitement occurring independently of the period of the physiologic processes in the generative organs; the abnormal exhibition of sexual instincts in childhood, prior to puberty, or in the senile years.

par"a-du"o-de'nal (par"uh-dew-o-dee'nul, -dew-od'i-nul) [G. *para*, beside; L. *duodeni*, twelve]. On either side of the duodenum, as the paraduodenal mesenteric recess.

par"a-dys"en-ter'y [G. *para*, near; *dysenteria*, dysentery]. A mild form of dysentery.

par"a-ep'i-lep"sy [*para*; G. *epilēpsia*, epileptic fit]. An abortive epileptic attack, consisting only of the aura.

par"a-e-ryth'ro-blast. An erythroblast with indented rather than spheroidal nuclei.

par'af-fin. 1. Any saturated hydrocarbon having the formula C_nH_{2n+2}. These compounds constitute the paraffin series. Also called *alkane*. 2. (*paraffinum*) A purified mixture of solid hydrocarbons obtained from petroleum; occurs as a white, more or less translucent, mass, showing crystalline structure. It is insoluble in water and alcohol, but freely soluble in ether. *In pharmacy*, it is used chiefly to give stiffness to ointments.

chlorinated p. (*paraffinum chlorinatum*) A liquid paraffin which has been treated with chlorine; occurs as a light yellow to light amber, clear, thick, oily liquid; immiscible with water, slightly miscible with alcohol. It is used solely as a solvent for dichloramine-T. Solutions up to 8% may be prepared. The chlorine contained in the preparation is therapeutically without action. See *chlorcosane*. Also see *parresine*.

light liquid p. See light liquid *petrolatum*.

liquid p. See liquid *petrolatum*.

par"af-fi-no'ma [L. *parum*, too little; *affinis*, akin; G. *-ōma*, tumor]. A nodular mass of inflammatory, granulation, or scar tissue, due to injection of paraffin into the tissues.

par"a-floc'cu-lus [G. *para*, beside; dim. from L. *floccus*, flock of wool]. A small lobule of the cerebellum found in mammals other than man.

par"a-form. See *paraformaldehyde*.

par"a-form-al'de-hyde. $(CH_2O)_n$. A polymer of formaldehyde, or more properly a mixture of polyoxymethylenes, as there are many formaldehyde groups involved in the polymerization. It is formed when solutions of formaldehyde are allowed to evaporate; occurs as a white, friable mass or a white powder with a slight odor of formaldehyde, slowly soluble in cold water, insoluble in alcohol. It is employed as a convenient form for generating small quantities of formaldehyde gas for disinfecting purposes. Also called *paraform*, *trioxymethylene*.

Par"a-fos-sar'u-lus. A genus of snails, species of which are known to transmit the trematode parasite *Clonorchis sinensis*.

par"a-fuch'sin (par"uh-fŏŏk'sin, -fŏŏk'sin). See *pararosaniline*.

par"a-gam-ma-cism, **par"a-gam"ma-cis'mus** [G. *para*, beyond; *gamma*, third letter of the Greek alphabet]. Inability to pronounce the hard *g* and *k*, other consonants being substituted.

par"a-gan"gli-o'ma [G. *para*, beside; *ganglion*, encysted tumor on a tendon; *-ōma*, tumor]. A nonfunctioning tumor derived from the paraganglionic cells of the sympathetic and parasympathetic nervous systems, having the same structure as pheochromocytoma, but composed of cells of less bizarre appearance and without chromaffin granules in the cytoplasm. The tumors are encapsulated and highly vascular. They may be located in the adrenal medulla, retroperitoneal and mediastinal ganglia, in the carotid body in connection with the glossopharyngeal nerve and its branches in the middle ear, ganglion nodosum in the vagus nerve, tumors of the ciliary ganglion, and, doubtfully, in Zuckerkandl' bodies. Also see *pheochromocytoma*.

functioning p. See *pheochromocytoma*.

nonchromaffin p. See carotid body *tumor*.

nonchromaffin p. of the middle ear. See glomus jugulare *tumor*.

par"a-gan"gli-on ca-rot'i-cum. See carotid body *tumor*.

par"a-gan"gli-o-neu-ro'ma. See *paraganglioma*.

par"a-gan'gli-ons [*para*; *ganglion*]. Groups of paraganglionic or chromaffin cells scattered along the ventral surface of the aorta, especially in the fetus. Also called *abdominal paraganglions of Zuckerkandl*.

par"a gan gli-on tyme pari'l eum. See glomus jugulare tumor

par"a gen"i tal'is [para, L. genitalis, genital]. The functional part of the mesonephros caudal t the genital part in lower vertebrates, or in the embryo of higher vertebrates. In higher forms, it persists as the vestigial paradidymis or paroophoron.

par"a geu'si a (par ug yōō see-uh, par uh jew see-uh) **par"a geu'sis** (par ug-yōō'sis, par uh-jew'sis) [G. para, beyond; G geusis, sense of taste]. Perversion of the sense of taste. —**parageusic,** *adj*

par"ag glu"ti n tion [G para, beside; L. agglutinare, to glue]. Aggl tination of colon bacilli and cocci with the serum of patients infected with or recovering from infection with dysentery bacilli. The property of paragglutination disappears when the bacteria are subcultured.

par"a glos'sa [para, G. glōssa, tongue]. Swelling of the tongue; hypertrophy of the tongue usually congenital.

par"a glos'si a [para, glōssa]. Inflammation of th muscles and connect tissues under the tongue.

par" gnath ous [para, G gnathos, j w]. 1 Having upper and lower jaws of equal length, their tips falling together as in certain birds. 2. Pertaining to paragnathus.

par" gnath us [para, gnathos]. 1. An individual having supernumerary j w 2. A parasiti fetus or part attached to the j w laterally See *epignathus.*

par" gom pho sis [para, G gomphōsis, bolting together]. Impaction of the fetal head in the pelvic canal.

par"a go ni mi' -sis [para; G gonimos, generative; NL. -iasis, condition]. The condition of being infested by species of the genus *Paragonimus*, especially *P westermani.*

Par" gon'i mus [para, gonimos]. A genus of trematode worms.

P westermani. Species of lung flukes which in the adult stage cause tissue destruction, inflammation, and hemorrhage.

par"a gram ma tism [G. paragrammatizein, to alter by changing letter] Aphasia marked by inability to speak grammatically or by the use of improper words.

par" gran u lo ma. A term used only as *Hodgkin paragranuloma.* See Hodgkin disease.

par" graph'i (par"uh graf'ee-uh, gray'fee-uh) [G para, beyond; graphein, to write]. 1 Perverted writing form of phasia in which letters or words are misplaced or improperly used. 2. A loss of ability to express ideas in writing, usually the result of brain lesion. —**paragraphic,** *adj*

par" he mo-phil'i a. A hemorrhagic disorder characterized by deficiency of proaccelerin Syn. *Owren disease.*

par" he-pat'ic [G. para, near hēpar liver]. About or near the liver

par"a hep ti'tis [para, hēpar; G -itis, inflammation]. Inflammation of structures about or near the liver

par" hex'yl. Synhexyl.

par" hor'mone [para, G hormaein, to excite]. A waste product which exerts secondary stimulating action.

par" hy drox"y-ben zo'ic ac'id (par uh-high-drock"see-) $C_6H_4OHCOOH$. An isomer of salicyli acid; its esters are powerful antiseptics used to preserve various medicinal prod cts.

par" hyp-no'sis [G. para, beyond; hypnos, sleep; -osis condition]. Abnormal sleep, as that of hypnotism or of narcosis.

par" in"flu-en za [G. para, near; It. influenza, influenza]. 1 Similar to influenza conditions due to influenza. 2. *I bacteriology*, organisms having all but few of the growth characteristics of *Hemophilus influenzae.* —**parainfluenzal,** *adj.*

par"a ker"a to'sis [para; G. keras, horn; -osis]. The retention of uclei in the stratum corneum of the epidermis. Usually associated with some inflammation in the prickle-cell layer resulting in disturbance in the process of keratinization. Occurs normally in the stratified squamous epithelium of true mucous membranes.

p. gonorrheica. See *keratosis* blennorrhagica.

p. scutularis. A condition believed to be very rare and unusual form of psoriasis.

p. variegata. A retiform type of parapsoriasis that is an intermediate between lichen planus and psoriasis chronic disease with hyperemia in patchy network.

par" lac'tic ac'id. Sarcolactic acid.

par" la'li-a [G. para, beyond; lalia, talk]. Disturbance of the faculty of speech, characterized by distortion of sounds.

par"al bu'min [para, L. albus, white]. A protein substance found in ovarian cysts.

par al de hyde (paraldehydum) $(CH_3COH)_3$. A polymer of acetaldehyde, occurring as colorless, transparent liquid, with strong characteristic odor and disagreeable taste; 1 cc. dissolves in 8 cc. of water; miscible with alcohol, ether and chloroform. Used as somnifacient where rapid action is desired. A disadvantage is the unpleasant odor it imparts to the breath. Dose, 2–8 cc. (30–120 minims) Syn., *paracetaldehyde.*

par"a lep-ro sis [G para, near; leprōsis, leprosy]. Attenuated or modified form of leprosy

par' lep sy [para; G lēpsis, seizing]. Psycholepsy.

par" le-re'ma [para; G. lērēma, silly talk]. Mild delirium or delirious utterance.

par" le re sis [G., delirium]. Mild delirium, or moderate mental disturbance.

par"a lex'i a [G. para, beyond; G lexis, speech]. Disturbance in reading, marked by the substitution or transposition of words or syllables. —**paralexic,** *adj*

par al-ge si a (par al-jee zee uh, -see-uh) [para; G. algos, pain]. An abnormal, painful sensation; painful paresthesia. —**paralgesic,** *adj*

par-al gi a [para, algos]. Any perverted and disagreeable cutaneous sensation, as of formication, cold, or burning.

par'al lax [G in turn]. Th apparent displacement of an bject, caused by change in the position of the bserver or by looking t the object alternately first with on eye and then with the other. —**parallac'tic,** *adj*

binocular p. The angle of convergence of the visual axes.

crossed p. That in which the object moves away from the uncovered eye. Also called *heteronymous p.*

homonymous p. That in which the object moves toward the uncovered eye.

mental p. A slight personal equation in observation, due to one standpoint.

stereoscopic p. See binocular *p.*

vertical p. That in which the bject moves upward or downward.

par'al lel ism [G. para, beside; allēlōn, of one another]. 1 The state or condition of being parallel; the quality of being similar or of corresponding. 2. See *isopathy*

p. of disease. The tendency of some diseases to simulate others.

par" l lel-om ter [para; allēlōn, G. metron, measure]. *I dentistry* an instrument used for paralleling attachments and abutments for bridges.

pa·ral′ler·gy [para, G allos, other; ergon, work]. Sensitivity to nonspecific proteins, induced by specific sensitization.

par″·a·lo·gi·a [G, false form]. Difficulty in thinking logically.

thematic p. A condition in which the thought is unduly concentrated on one subject.

pa·ral′o·gism [G para, beyond; logos, word]. I logia, the error of considering effects or unrelated phenomena as the cause of a condition. —**paralogis′tic**, *adj.*

par″a·lu·te·in cells. The epithelioid cells of the corpus luteum, derived from the theca interna of the ovarian follicle. Also called *theca lutein cells.*

par′·ly″sant (par uh-lye zunt). See *paralyzant.*

pa·ral′y·sis [G]. Loss of muscle function or of sensation, caused by injury to nerves or by destruction of neurons. A slight loss of function is called *palsy*. Paralyses may be classified according to etiology, as *alcoholic* or *lead*, according to part involved, as *facial* or *hypoglossal*, according to function, as *flaccid* or *spastic*, or according to some characteristic, as *ascending* or *crossed.*

abducens p. Paralysis of the abducens nerve.

abductor p. Paralysis of the posterior cricoarytenoid muscle. Also called *posticus p.*

accommodation p. Paralysis of the ciliary muscles of the eye.

acute ascending p. A syndrome of varied etiology characterized by flaccid paralysis beginning in the muscles of the legs and spreading upward to involve the muscles of the arms and other parts of the body. It may occur in anterior poliomyelitis, postvaccinal or postexanthematous myelitis. Also called *Landry's p.*

alcoholic p. That due to alcoholic neuropathy.

alternating p. Paralysis due to injury of various cranial nerves or their nuclei on one side, with contralateral hemiplegia.

ambiguospinothalamic p. A unilateral paralysis of the soft palate and larynx with contralateral loss of deep sensibility and of pain and temperature sense; also called *Avellis' syndrome.*

amyotrophic p. That seen in muscular atrophy.

anapeiratic p. A neurosis in which the subject believes he is paralyzed from excessive use of his limbs.

anterior spinal p. Anterior poliomyelitis.

arsenical p. Paresthesia and peripheral neuritis developing in the later stages of arsenic poisoning.

ascending p. Paralysis progressing upward, due to involvement of spinal nerves or the spinal cord.

associated p. A common paralysis or spasm of associated muscles.

axillary p. Paralysis of the axillary nerve resulting in the loss of function of the deltoid muscle usually due to fracture or dislocation of the humerus, or to pressure from a crutch.

basal ganglionic p. One due to destruction of cells in the basal ganglions.

Bell's p. Peripheral paralysis of the facial nerve.

birth p. Paralysis caused by injury of the brain or brachial plexus during birth.

brachial p. Paralysis of an arm.

brachiofacial p. Paralysis involving the face and arm.

Brown-Séquard's p. Ipsilateral motor paralysis and contralateral loss of sensation for pain and temperature, due to a unilateral lesion of the spinal cord such as compression by a tumor or traumatic hemisection.

bulbar p. See progressive bulbar p.

capsular p. That due to an injury of the internal capsule.

central p. Paralysis due to a lesion of the brain or spinal cord.

cerebral p. That due to a lesion of the brain.

cerebral spastic infantile p. See spastic *diplegia.*

cervical sympathetic p. See Horner's *syndrome.*

circumflex p. See axillary p.

compression p. That caused by pressure on a nerve.

conjugate p. Lack of coordinate movements of the eyes, such as inability of both eyes to track concomitantly a moving object across the field of vision.

crossed p. Paralysis of the arm and leg of one side, associated with contralateral paralysis of the face or oculomotor nerve.

cruciate p. Crossed p.

crural p. Paralysis involving chiefly the thigh.

crutch p. Paralysis of the muscles of the upper extremity due to traumatic neuritis of the brachial plexus and especially of the radial nerve from pressure of the crutch head.

diphtheritic p. That due to the effect of diphtheria toxin upon some part of the nervous system, usually the motor components of the cranial nerves or the motor nerves to the extremities.

diver's p. See caisson *disease.*

epidural ascending spinal p. A low-grade inflammation of the dura associated with thrombophlebitis of the meningorachidian veins; characterized by pain in the back, chest, or legs, followed by paralysis, loss of sensibility and incontinence. Also called *Spiller's syndrome.*

Erb-Duchenne p. Paralysis of the fifth and sixth cervical nerve roots, involving chiefly the functions of the biceps, deltoid, brachialis, and brachioradialis muscles.

Erb's syphilitic p. See Wilhelm Heinrich *Erb.*

essential p. Paralysis without characteristic anatomic lesions.

extraocular p. That involving the extrinsic muscles of the eye.

facial p. Paralysis of the muscles of expression of the face. There are two types, the central or supranuclear type, and the peripheral or infranuclear type.

familial periodic p. A hereditary disease of unknown etiology; characterized by periodic attacks of flaccid muscular paralysis, which develop abruptly and last from a few hours to several days.

flaccid p. A condition in which a muscle manifests loss of muscular tone, diminished or absent tendon reflexes, and, eventually atrophy and the electric reaction of degeneration.

functional motor p. See hysterical p.

functional p. See hysterical p.

general p. See general *paresis.*

general p. of the insane. See general *paresis.*

ginger p. A polyneuritis or axoneuropathy caused by the adulteration of liquor with triorthocresylphosphate. The neural involvement is almost purely motor in distribution, involving the distal portions of the legs and arms.

glossolabial p. Paralysis of the tongue and lips in bulbar paralysis.

glossolabiopharyngeal p. One involving the tongue, lips, and pharynx, occurring in bulbar palsy. Also called *labioglossopharyngeal p.*

hysterical p. Muscle weakness or paralysis without loss of reflex activity in which no organic nerve lesion can be demonstrated.

infantile p. Poliomyelitis; especially acute anterior poliomyelitis.

infantile spastic p. See spastic *diplegia.*

infectious bulbar p. A acute virus disease of cattle characterized by a short incubation period, intense itching, paralysis of the larynx and eyes, and a rapid course. It may also occur in

pigs, dogs, cats, horses, and rats. Syn., *pseudorabies*, *A jesky disease*, *mad itch*.

infranuclear p. Paralysis of the motor function of cranial nerve, due to lesion of the nerve peripheral to its nucleus.

ischemic p. That of part due to stoppage of the circulation, as in certain cases of embolism or thrombosis, or in Volkmann paralysis.

jake p. Paralysis due to peripheral neuritis, caused by the ingestion of Jamaica ginger.

Jamaica ginger p. See jake p.

juvenile p. General paralysis in young persons.

Landry's p. See acute ascending p.

lead p. One due to peripheral neuritis from lead poisoning.

mimetic p. Paralysis of the facial muscles.

mixed p. Associated motor and sensory paralysis.

motor p. The loss of voluntary control of skeletal muscle, due to functional or organic interruption at any point in the motor pathway from the cerebral cortex to, and including, the muscle fiber.

myopathic p. That in which the interruption of voluntary control is in the muscle.

nuclear p. Paralysis from lesions of the nuclei of origin of the nerves.

obstetric p. One due to injury of some part of the nervous system at birth.

occupational p. Muscular weakness and atrophy due to nerve compression or overexertion in certain occupations.

ocular p. Paralysis of the extraocular muscles, of the optic nerve, or of the ciliary muscle.

oculomotor p. Paralysis of the oculomotor nerve, due to lesions.

oculophrenicorecurrent p. That of the recurrent laryngeal and phrenic nerves with associated Horner syndrome, such as may occur in cancer of the lung with mediastinal extension.

p. agitans. See idiopathic *parkinsonism*.

periodic p. A recurrent paralysis. Also see familial periodic p.

peripheral p. Paralysis due to any disease of peripheral nerves.

phonetic p. Paralysis of the vocal folds.

postdiphtheritic p. Paralysis which may occur when the other symptoms of diphtheria are diminishing, usually during the two months following the acute phase of the disease. It may affect the ciliary muscles, the palate, the respiratory muscles, or the extremities. Respiratory failure is the most serious consequence.

postdormital p. Transient paralysis at the end of sleep, with spontaneous recovery; often associated with narcolepsy.

predormital p. Transient paralysis at the beginning of sleep, with spontaneous recovery; often associated with narcolepsy.

pressure p. That due to pressure on a nerve trunk.

progressive bulbar p. Progressive and symmetrical paralysis of the muscles of the tongue, throat, face, and sometimes of the larynx, due to degenerative changes in the motor nuclei of the medulla oblongata.

pseudobulbar p. Symmetrical disease of both cerebral hemispheres, involving the centers or paths of the tracts to cranial nerves in the brain stem; resembles disease of the medulla oblongata and causes voluntary paralysis of swallowing, articulation, and chewing movements, with retention of bulbar reflexes.

pseudohypertrophic muscular p. Loss or diminution of the power of motion, accompanied by enlarged, and apparently hypertrophied, muscles. The most important type is progressive muscular dystrophy; also called *Landouzy-Dejerine p.*

Saturday night p. Paralysis due to compression of the radial nerve against the humerus during sleep, or when the arm is hung over the edge of a chair or bench during alcoholic stupor.

sensory p. Loss of sensation due to disease of sensory nerves, pathways, or centers in the nervous system.

spastic p. A condition in which a group of muscles manifest increased tone, exaggerated tendon reflexes, depressed or absent superficial reflexes, and sometimes clonus.

spinal p. A central paralysis caused by injury to the spinal cord.

supranuclear p. That of the motor function of a nerve, due to lesion in pathways or centers above its nucleus or cells of origin.

tegmental mesencephalic p. See Benedikt *syndrome*.

tick-bite p. A flaccid type of paralysis occurring in animals, and occasionally in man, during the attachment of a tick. The paralysis will disappear a few hours after removal of the tick. The cause is unknown, but it is thought to be a toxin generated in the tick. Syn., *tick p.*

Todd's p. A temporary paralysis which sometimes follows a focal Jacksonian convulsive seizure.

tourniquet p. Pressure paralysis caused by too long application of a tourniquet to a limb while checking hemorrhage. It is most common in the nerves of the arm.

vagoaccessory-hypoglossal p. See under John H. *Jackson*.

vasomotor p. Paralysis of the vasomotor mechanism with resultant atony and dilatation of the blood vessels.

vestibular p. Loss of vestibular function, often caused by streptomycin therapy, manifested by vertigo, aural noises, headache, nausea, and vomiting, followed by disturbances of gait, posture, and vision.

Volkmann's p. Paralysis of a hand due to constriction of the blood supply when tight splints or casts are applied to the forearm. See *ischemic p.*

Weber's crossed p. See Hermann David Weber.

writers' p. Writers' cramp, a form of occupational neurosis.

par"a·lyt'ic [G. *paralytikos*, paralytic]. Pertaining to, or affected with, paralysis.

par"a·lyt'ic. A person affected with paralysis.

par'a·ly"zant, par"a·ly'zant (par'uh-lye"zunt) [G. *paralysis*, paralysis]. Causing paralysis. —**par'alyzant, par"alyzant, n.**

par'a·ly"zer [*paralysis*]. 1. Anything that will produce paralysis. 2. Any agent which will inhibit a chemical reaction.

par"a·mag·net'ic [G. *para*, beyond; *Magnētis lithos*, magnet]. Having a magnetic permeability greater than unity. —**paramag'netism, n.**

paramammary roots of Gerota. See Dumitru *Gerota*.

par"a·mas·ti'tis [G. *para*, beside; *mastos*, breast; *-itis*, inflammation]. Inflammation of the connective tissue about the mammary gland.

par"a·mas·toid·i'tis [*para*; G. *mastoeidēs*, like a breast; *-itis*]. Inflammation of the squamous portion of the temporal bone, from extension following mastoiditis.

Par"a·me'ci·um (par"uh-mee'shee-um, -see-um) [G. *paramēkēs*, oblong]. A genus of ciliate Protozoa, various species of which are used as test and experimental unicellular animals, because of their large size and ease of culture. Commonly called the slipper animalcule.

par"a·me'di·an [G. *para*, near; L. *medianus*, middle]. Situated near the median line, as para-

median sulcus, old term for fissure present in the cervical portion of the spinal cord, not far from the posterior median fissure, and separating the fasciculus gracilis from the fasciculus cuneatus.

par″a·me′ni·a [G. *para*, beyond; *mēn*, month]. Difficult or disordered menstruation.

pa·ram′e·ter [G. *para*, beside; *metron*, measure]. An arbitrary constant which characterizes mathematical expression by its values.

par″a·meth′a·di′one. Generic name for 3,5-dimethyl-5-ethyloxazolidine-2,4-dione $C_7H_{11}NO_3$; colorless liquid sparingly soluble in water used in the treatment of petit mal epilepsy. See *paradione*.

par″a·met′ric (par″uh-met′rick, -mee′trick) [*para*; G. *mētra*, womb]. Pertaining to the tissues about the uterus.

par″a·met′rism [*para*; *mētra*]. Painful spasm of the smooth muscular fibers of the broad ligaments.

par″a·me·tri′tis [*para*; *mētra*; G. -*itis*, inflammation]. Inflammation of the connective tissue about the uterus; pelvic cellulitis. —**parametrit′ic,** *adj.*

p. anterior. That in which the inflammation is limited to the loose, vesicouterine connective tissue, or to that between the symphysis and the bladder. The swelling is anterior, and the pus generally tracks into the bladder, vagina, or inguinal region.

p. chronica atrophicans. Inflammatory hypertrophy of the connective tissue of the pelvis, progressing to cicatricial atrophy.

p. chronica posterior. Chronic, inflammatory processes in the rectouterine ligaments, causing fixation of the uterus at the level of the internal os, anteflexion by shortening of the folds, and torsion of the uterus when only one fold is shortened.

remote p. Parametritis marked by formation of abscesses in places more or less remote from the focus of the disease.

par″a·me′tri·um [*para*, *mētra*]. The connective tissue surrounding the uterus. —**parametrial,** *adj.*

par″a·me·trop′a·thy [*para*; *mētra*; G. *pathos*, disease]. Disease of the parametrium.

par″a·mim′i·a [G. *paramimeisthai*, to imitate]. A form of aphasia characterized by the faulty use of gestures.

par″a·mi′to·me [G. *para*, beside; *mitos*, thread]. The fluid portion of the cell substance contained in the meshes of the mitome.

par″am·ne′si·a (par″am-nee′zhuh, -zee-uh) [G. *para*, beyond; *amnēsia*, forgetfulness]. Perversion of memory in which experiences and phantasies are confused.

par″a·mo′lar [*para*; L. *molaris*, from *mola*, mill]. A usually peg-shaped, occasionally molariform, supernumerary tooth occurring next to the mesiobuccal aspect of second or third molar.

p. tubercle. An accessory lobe or cusp on the mesiobuccal side of second or third molar tooth, believed to represent rudimentary paramolar.

par″a·mon″o·chlor·o·phe′nol. See *parachlorophenol*.

par″a·mor′phine (par″ah-mor′feen, -fin, par″uh-mor-feen′). See *thebaine*.

par″a·mor′phism. In *chemistry*, change of molecular structure without alteration of chemical constitution, as when mineral changes from one modification to another. —**paramorphic,** *adj.*

par″a·mu′cin. A colloid isolated from ovarian cysts; it differs from mucin and pseudomucin by reducing Fehling's solution before boiling with acid.

par″a·mu′si·a (par″uh-mew′zhuh, -zee-uh) [G. *paramousos*, discordant with]. A form of aphasia in which there is perversion of the musical sense, resulting in the production of improper notes and intervals.

par″a·my″e·lo·blast′. A myeloblast with an indented rather than spheroidal nucleus, present in some acute leukemias.

par″a·my′loid. Atypical amyloid.

par″a·my″o·clo′nus mul′ti·plex (par″uh-migh-ock′lo-nus, -migh-o-klo′nus). A rare degenerative disease occurring in adult life manifested by irregular rapid muscular twitching (myoclonic shocks). The seat of the disease is in the basal ganglions.

par″a·my′o·sin·o·gen [G. *para*, near; *mys*, muscle; *gennaō*, from *gignesthai*, to be produced]. One of the proteins of muscle plasma, coagulating at 47° C.

par″a·my″o·to′ni·a con·gen′i·ta. A rare, heredofamilial condition characterized by persistent contraction of the muscles of the neck, face, and extremities when the body is exposed to cold. Also called *Eulenburg's disease*.

par″a·na′sal (par″uh-nay′zul) [*para*; L. *nasus*, nose]. Located next to, or near, the nasal cavities.

par″a·ne·phri′tis [G. *para*, beside; *nephros*, kidney; -*itis*, inflammation]. 1. Inflammation of the adrenal gland. 2. Inflammation of the connective tissue adjacent to the kidney.

par″a·neph′ros [*para*; *nephros*]. Old term for adrenal gland.

par″a·neu′ral [*para*; G. *neuron*, nerve]. Beside or near a nerve, as paraneural analgesia, analgesia resulting from injection of an analgesic solution into the immediate vicinity of a nerve trunk.

pa·ran′gi (pa-ran′jee, pa-rang′ghee). See *yaws*.

par″a·ni″tro·sul″fa·thi′a·zole. $C_9H_7N_3O_4S_2$; yellow powder very slightly soluble in water used intrarectally as an antibacterial agent in treatment of ulcerative colitis. See *nisulfazole*.

par″a·noi′a [G. derangement]. A rare form of paranoid reaction characterized by the slow development of a complex paranoid system, often built upon a delusion, and particularly isolated from much of the normal stream of consciousness, the remaining personality being intact despite a chronic course. The patient generally considers himself superior and possessing unique or even divine gifts. Compare paranoid type of *schizophrenic reaction*. —**paranoid,** *adj.*; **paranoiac,** *adj.*, *n.*

litigious p. That in which the main symptom is desire to initiate lawsuits which have no rational basis.

par′a·noid·ism [*paranoia*]. The condition of a person affected with paranoia.

par′a·noid per″son·al′i·ty. See under *personality*.

par′a·noid re·ac′tions. See under *reaction*.

par′a·noid state. A form of paranoid reaction characterized by delusions of persecution and sometimes of grandeur but without the systematization and manifestations of bizarre fragmentation and deterioration of the schizophrenic reaction. Its duration is variable, though usually short.

par″a·no′mi·a. See *aphasia*.

par″an·tral [*para*; L. *antrum*]. Situated near an air sinus, as an accessory air cell of a paranasal or mastoid sinus.

par″a·nu′cle·in. A compound of nucleic acid and protein, derived either by partial degradation of nucleoproteins or by direct combination. Syn., *nucleoalbumin*, *paranucleoprotein*, *pseudonuclein*.

par″a·nu″cle·o·pro′te·in. See *paranuclein*.

par″a·nu′cle·us [G. *para*, beside; L. *nucleus*, kernel]. 1. A small spherical body lying in the cytoplasm of a cell near the nucleus, and perhaps extruded by the latter. 2. A mitochondrial aggregation of spermatid, which becomes drawn

out to form the envelope of the axial filament. Also called *nebenkern*. —**paranuclear**, **paranucleate**, *adj.*

par″a·ox″y·eth·yl·ac″e·tan′i·lid (-ass tan′i·lid) See *acetophenetidin*.

par″a·pan·cre·at′ic (par h pan kree-at ick, ·pang kree at ik) [*para*; G *pagkreas*, pancreas]. Situated beside or near the pancreas, as parapancreatic abscess.

par″ pa·re·sis (par uh·pa·ree sis, ·par′i·sis) [*para*; G *paresis*, paralysis]. Partial paralysis of the lower extremities. *Obs.* —**paraparet′ic**, *adj.*

par″a·path′i a. See *psychoneurosis*.

par″a·pep tone. See *peptone*.

par″ per tus sis. An acute infection of the respiratory tract resembling pertussis, but caused by such bacteria as *Brucella bronchiseptica*, *B. abortus*, or *Hemophilus influenzae*, distinguished from pertussis only by bacteriological examination.

par″ pha si a (par uh·f y′zhuh, -zee·uh) [*para*; G. *aphasia*, speechlessness]. A form of phasia in which words are spoken freely but are inappropriate in translating ideas. Syn., *agrammatism*, *jargon aphasia*. —**paraphasic**, *adj.*

pa phe mi a [G *para*, beyond; *phēmē*, speech]. Aphasia marked by employment of wro g words. *Rare.*

par″ phe no tol car bam′ide (kahr·bam′ide, ·id, kahr′buh mide, mid) See *dulcin*.

par a phen yl ene di·am′ine. $C_6H_4(NH_2)_2$. A crystalline substance used in the manufacture of certain hair dyes, and giving rise to eczema of the scalp nd eyelids, or to poisoning marked by vomiting and diarrhea.

pa ra phi (pa·ray fee·uh, pa·raf′ee·uh) [*para*; G *haphē*, touch]. Abnormality of the sense of touch. *Rare.*

par″ phil′i a. Sexual perversion. —**paraphil iac**, *adj.*, *n.*

par″a phi mo sis (par uh figh·m sis, ·fi mo sis) [G *para*, beside; *phimōsis*, stopping up of an orifice]. Retraction and constriction, especially of the prepuce behind the glans penis; also called *Spanish collar*.

p. oculi. Retraction of the yelid behind the eyeball.

par pho′bi a [G *para*, near; *phobos*, fear]. A slight degree of phobia; phobia which the person can control by effort.

pa pho ni [G *para*, beyond; *phōnē*, voice]. Any abnormal condition of the voice.

p. puberum. The harsh, deep, irregular voice noticed in boys at puberty.

pa raph′o·ra [G. *paraphora*, going aside]. 1. Slight mental derangement or distraction. 2. Unsteadiness due to intoxication.

par″a·phra si a (par uh fray′zhuh, -zee·uh) [G *paraphrasis*, paraphrase]. A form of aphasia characterized by incoherence of speech.

p. vesana. Jumbling of words and ideas.

par″ phre·ne sis [G *para*, beyond; *phrēn*, mind]. Amentia; delirium. *Obs.*

par″ phre′ni [*para*; *phrēn*]. 1. Old term for paranoia. 2. Dementia precox or schizophrenia.

par″a phre·ni′tis [*para*; *phrēn*, G *-itis*, inflammation]. Inflammation of the tissues adjacent to the diaphragm.

pa raph′y sis [G., attachment]. 1. *In biology*, one of sterile filaments among reproductive bodies of various kinds in certain cryptogams. 2. A median outgrowth from the roof of the brain in front of the epiphysis in certain lower vertebrates.

pa a·pla si a. See *paraplasm*, 2.

par′ plasm [G. *paraplasma*, from *para*, beyond; *plasma*, anything formed]. 1. Hyaloplasm. 2. Malformed substance.

par″a plas′tic [G *paraplassein*, to transform]. 1. Of the nature of paraplasm. 2. Having morbid formative powers. 3. Misshapen.

par″a plas tin [*paraplastin*]. A linin-like substance in the nucleus.

par″ plec′tic [G *paraplēktikos*, suffering with hemiplegia]. Pertaining to, or affected with, paraplegia.

par″ ple gi·a [G. *paraplēgiē*, hemiplegia]. Paralysis of the lower limbs. —**paraplec′tic**, **parapleg′ic**, **paraplegiform**, *adj.*

alcoholic p. Paralysis of the legs resulting from alcoholic neuritis.

ataxic p. A slowly progressive degeneration of the posterior and lateral columns of the spinal cord, characterized clinically by spasticity weakness, and incoordination of the legs.

cerebral p. Paralysis of both legs due to bilateral cerebral lesion, as in meningioma of the falx, thrombosis of the superior sagittal sinus, or congenital cerebral lesions.

congenital spastic p. Spastic paralysis of the legs i infants, due to congenital lesion of the brain also called *infantile spastic p.*, *cerebral diplegia*, *Little disease*.

flaccid p. Paralysis of both legs with muscular hypotonia and diminished, or bsent, tendon reflexes.

hysterical p. A psychogenic form, due to an emotional upset.

infantile spasmodic p. See double *athetosis*.

p. in extension. Paraplegia with extension of the legs; seen following incomplete transection of the spinal cord.

p. in flexion. Paraplegia with flexion of the legs; seen following complet transection of the spinal cord.

peripheral p. That due to disease of the peripheral nerves.

progressive spasti p. A progressive heredofamilial condition characterized by spastic paralysis of the legs and weakness, due to spinal-cord lesions of the crossed pyramidal tracts.

senile p. Spasti paralysis of the legs due to arteriosclerosis of the arteries supplying the spinal cord.

spastic p. Paralysis of the legs with increased muscular tone and hyperactive tendon reflexes; commonly seen in multiple sclerosis and other diseases involving the pyramidal tracts of the spinal cord, and after birth injury.

pa pneu mo ni a [G *para*, near; *pneumonia*]. A disease presenting the symptoms of lobar pneumonia, but not due to the pneumococcus.

pa·rap o·plex″y [*para*, G *apoplexia*, madness]. A masked or slight form of apoplexy.

par″ prax′i·a [*para*; G. *praxis*, doing]. A condition in which certain intentional acts are imperfectly accomplished, as slip of the tongue.

par″ proc ti′tis [G *para*, beside; *prōktos*, anus; *-itis*, inflammation]. Inflammation of the connective tissue bout the rectum.

par″ proc′ti·um (par″uh·prock shee um, ·prock tee·um) [*para*; *prōktos*]. The connective tissue that surrounds the rectum.

par″ pros″ta ti′tis [*para*; G *prostatēs*, one who stands before; *-itis*, inflammation]. Inflammation of tissues surrounding the prostate gland.

par″ pso·ri sis (par″uh·so·rye uh·sis) [G. *para*, near; *psōriasis*, itch]. A grou of rare skin diseases characterized by red, scaly lesions resembling lichen planus or psoriasis. All types are resistant to treatment and usually present no subjective symptoms.

par″ psy·chol′o·gy [G *para*, beyond; *psychē*, soul; *logos*, word]. The study of psi phenomena

(extrasensory perception and psychokinesis) i.e. of phenomena of personality that do not submit to physical explanation.

par″a-pyk″no-mor′phous [G. *para*, near; *pyknos*, close-packed; *morphē*, form]. Nissl term for nerve cells in which the arrangement of the stainable portion of the cell body is intermediate between that of pyknomorphous and apyknomorphous cells. *Obs.*

par″a·rec′tal [G. *para*, beside; L. *rectus*, straight]. Beside, or near the rectum.

par″a·rhe·ta·cism. See *rhotacism*.

par″a·ros·an′i·line (par″uh-ros-an′i-leen, lin) A basic dyestuff of the triphenylmethane group.

par″a·sa′cral [*para*; L. *os sacrum*, lowest bone of the spine]. Beside, or near the sacrum.

par″a·sag′it·tal (par″uh-sadj′i-tul) [*para*, L. *sagitta*, arrow]. Referring to any plane parallel and lateral to the sagittal plane.

par″a·sal″pin·gi′tis [*para*; G. *salpigx*, trumpet; *-itis*, inflammation]. Inflammation of the tissues around an oviduct.

par″a·se·cre′tion [G. *para*, beyond; L. *secretio*, from *secernere*, to separate]. Any abnormality of secretion; any substance abnormally secreted.

par″a·sex·u·al′i·ty Any sexual perversion.

par′a·site [G. *parasitos*, parasite]. 1. An organism that lives on or in another organism known as the host, from which it obtains nourishment during all or part of its existence. 2. *In teratology*, fetus or fetal parts attached to or included in another fetus. —**parasit′ic**, *adj.*

ectoparasite. See *ectoparasite*.

endoparasite. See *endoparasite*.

facultative p. One capable of being free-living as well as parasitic.

incidental p. One that establishes itself in a host in which it does not ordinarily live.

obligate p. One incapable of living without a host.

occasional p. One which seeks its host periodically to obtain nourishment. Also called *periodic p.*

permanent p. One which remains in or on the body of the host until maturity and sometimes for its entire life.

placental p. See *omphalosite*.

specific p. One which always lives on its present host.

temporary p. One which is free-living during part of its life.

par″a·sit′ic cap′ture. *In nuclear physics*, any absorption of a neutron which does not result either in fission or formation of another element.

par″a·sit′i·cide [*parasite*; L. *caedere*, to kill]. Destructive to parasites.

par″a·sit′i·cide. An agent capable of destroying parasites, especially the parasites living upon or in the skin.

par″a·sit′i·cin. See *flavicin*.

par′a·sit·ism (par′uh-sigh-tiz-um) [*parasite*]. Relation a parasite bears to its host; state of being infested or infected with parasites.

par′a·si·tize (par′uh-sigh-tize, par′uh-si-tize) [*parasite*]. Infest; invade as a parasite.

par″a·si′to- [*parasite*]. A combining form signifying *parasite*.

par″a·si″to·gen′ic (par″uh-sigh″to-jen′ick) [*parasite*; G. *genethai*, from *gignesthai*, to be produced]. 1. Produced by parasites. 2. Favoring parasitism.

par″a·si·tol′o·gy (par″uh-sigh-tol′o-jee) [*parasite*; *logos*]. The science and study of organisms that obtain nourishment at the expense of the hosts on or in which they live. —**parasitol′ogist**, *n.*

par″a·si″to·pho′bi·a [*parasite*; G. *phobos*, fear]. Morbid dread of parasites.

par″a·si·to′sis (par″uh-sigh-to′sis, -si-to′sis) [*parasite*; G. *-osis*, condition]. Any disease dependent upon the presence of parasites.

par″a·si″to·trop′ic [*parasite*; G. *tropein*, to turn]. Having a special affinity for parasites.

par″a·si″to·trop′ic. A substance, such as a drug or chemical agent, with an affinity for parasites. —**parasitot′ropy**, *adj.*, *n.*; **parasitot′ropy**, *n.*; **parasitot′ropism**, *n.*

par″a·small′pox [G. *para*, near; AS. *smael*, *pocc*]. A mild form of smallpox.

par′a·some, par″a·so′ma [*para*; G. *sōma*, body]. An irregular body found in the cytoplasm near the nucleus. See *paranucleus*, 1.

par″a·spa·di′as [G. *paraspasis*, to draw aside]. An acquired condition in which the urethra opens on one side of the penis.

par″a·spasm [G. *paraspasmos*, drawing sideways]. Spasm involving the lower extremities, as in spastic paraplegia.

par″a·sprue A dietary disease characterized by chronic watery diarrhea, weight loss, sore red tongue, and macrocytic anemia. It differs from true sprue in that it shows less emaciation, no swollen lower abdomen, no dry skin, no dysphagia, and in having pale, frothy stools with the fat content above 40 per cent.

par″a·ste·a·to′sis [G. *para*, beyond; *stear*, fat; *-osis*, condition]. An altered condition of the sebaceous secretion.

par″a·ster′nal [G. *para*, beside; *sternon*, chest]. Beside or near the sternum, as parasternal line.

par″a·sym″pa·thet′ic [*para*; G. *sympathikos*, sympathetic]. Pertaining to the craniosacral portion of the autonomic nervous system.

par″a·sym″pa·thet′ic sys′tem. See craniosacral *system*.

par″a·sym·path″i·co·to′ni·a. See *vagotonia*.

par″a·sym″pa·tho·lyt′ic [*para*; *sympathikos*; G. *lysis*, to loose]. Blocking the action of parasympathetic nerve fibers.

par″a·sym″pa·tho·mi·met′ic [*para*; *sympathikos*; G. *mimesis*, imitation]. Referring to drugs having an effect similar to that produced when the parasympathetic nerves are stimulated.

par″a·syn′ap·sis [*para*; G. *synapsis*, contact]. The side-by-side union of homologous chromosomes in preparation for the reduction division of meiosis.

par″a·syph′i·lis [*para*; NL. *syphilis*]. A series of morbid manifestations not having the anatomicopathologic characteristics of syphilis, but apparently of syphilitic origin; e.g., tabes, general paresis. *Obs.*

par″a·sys′to·le (par″uh-sis′to-lee) See parasystolic *rhythm*.

par″a·te·re·si·o·ma′ni·a [G. *paratērēsis*, observation; *mania*, madness]. A mania for observing, or seeing new sights; peeping mania.

par″a·ter′mi·nal [G. *para*, near; L. *terminus*, end]. Near a terminal.

par″a·thel″i·o·ma. See stromal *endometriosis*.

parathesin. A brand of ethyl aminobenzoate.

parathion. Trade name for *O,O*-diethyl-*O*-*p*-nitrophenyl thiophosphate, liquid insecticide having pronounced cholinesterase-inhibiting action.

par″a·thor′mone A hormone from the parathyroids. See *parathyrin*.

par″a·thy′mi·a [G. *para*, beyond; *thymos*, mind]. Perversion of mood in which the emotions are out of harmony with the real situation.

par″a·thy′rin. A hormone produced in the parathyroid glands, which regulates phosphorus and calcium metabolism. Also called *parathormone*, *parathyroid hormone*.

par″a·thy′roid. [G. *para*, near; *thyreoidēs*, shield-

shaped]. One of several (usually four) small endocrine glands which lie posterior to the capsule of the thyroid gland, or imbedded in the gland, and near the superior and inferior thyroid arteries. Their hormone has powerful effect on the rate of renal phosphorus excretion and the level of blood calcium. Their complete removal causes tetany and death. See Plate 45. —**parathy'roid** *adj.*

p. in jec tion. A sterile solution in water of the water-soluble principle or principles of the parathyroid glands, which have th property of relieving the symptoms of parathyroid tetany and of increasing the calcium content of the blood serum in man and ther animals. It is btained from the fresh parathyroid glands of healthy domesticated animals which are used for food by man. The continuation and regulation of the dose must be controlled by determinations of the serum calcium. Also called *solution of parathyroid, parathyroid extract.*

par" thy"roid ec to my [*para; thyreoidēs;* G. *ektomē,* excision]. Excision of parathyroid gland.

par" thy"ro pri'val [*para, thyreoidēs;* L. *privus,* deprived of]. Pertaining to the condition due to loss of function, or removal, of the parathyroid glands.

par a thy"ro-tro pi hor'mone principle. The hypothetical adenohypophyseal hormone regulating the activity of the parathyroid glands.

par" thy ro-tro pin. See *parathyrotropic hormone.*

par" ton sil lar [*para;* L. *tonsillae,* tonsils]. Near or around, the tonsil, as paratonsillar abscess.

par"a tra cho ma. See inclusion *conjunctivitis.*

par"a tri-cho sis (par"uh-tri ko sis, -try ko sis) [G *para,* beyond *trichōsis,* hairy growth]. A condition in which the hair is either imperfect in growth or develops in abnormal places.

par"a trip sis [G friction] 1 A rubbing or chafing. 2. A retardation of catabolic processes.

par"a-troph'ic [G. *paratrophos,* reared in the same house]. Parasiti btaining nourishme t from living organic matter.

pa-rat'ro phy [G *para,* beyond *trophē,* ourishment]. Perverted or bnormal utrition.

par"a tu ber'cu lin. See *johnin.*

par"a typh li'ti [G *para,* near *typhlos,* cecum -*itis,* inflammation]. Inflammation of the connective tissue ear the cecum.

par"a ty'phoid [*para;* G *typhōdēs,* delirious]. An acute generalized disease of man caused by the paratyphoid bacteria, *Salmonella schottmuelleri* and *S. choleraesuis.* The disease resembles typhoid fever both clinically and pathologically but tends to be less severe.

par"a u re'thral [G *para,* beside *ourēthra,* urethra]. Beside the urethra.

par" u'ter ine. Besid or adjacent to the uterus.

par"a vac-cin'i (par"uh-vack-sin ee-uh) [G *para,* near L *vaccinus,* of cows] An eruption consisting of small vesicles outside the vaccinated area, which are not vaccinal.

par" vag'i nal. Beside th vagina.

par" vag"i ni'tis (par uh vadj"i nigh tis) [*para, vagina;* G -*itis,* inflammation] Inflammation of the connective tissue surrounding the vagina.

par" ver'te-bral [*para;* L. *vertebra,* joint]. Occurring or situated near the spinal column, as paravertebral analgesia.

par"a ves'i-cal [*para;* L. *vesica,* bladder]. Situated near the urinary bladder.

par"a vi"ta min-o sis. A disease associated indirectly with vitamin deficiency.

par"a-xan'thine (par uh-zan theen, -thin) $C_7H_8N_4O_2$ 1 7 Dimethylxanthine. A crystalline substance found in ormal urine and isomeric with theobromine, which it resembles in its action upon the organism, causing muscular rigidity dyspnea, and less reflex excitability.

par ax'i al [G *para,* near L. *axis,* axis]. 1. Lying near the axis of the body 2. Referring to the space or rays closely surrounding the principal axis of lens system.

par ax'on [G *para,* beside *axōn,* axis]. Old term for a collateral of an axon.

par"a-zo on [*para,* G *zōon,* living being]. An animal parasite.

parch'ment crack'ling. The peculiar sound elicited by pressure on the cranial bones in rachitic and syphilitic hildren. It is due to localized thinning of the bones.

parch ment skin. An atrophic type of epidermis seen in xeroderma pigmentosum, senile skin, and in some skins exposed to the wind and sun.

Pardee, Harold Ensign Bennett [*American cardiologist,* 1886–]. The first to describe the constant changes in electrocardiograms in coronary disease (1920). Described the slight elevation of R T or S-T waves in curve with sharply negative T observed in the electrocardiogram of subject with healing or healed myocardial infarction; called *Pardee' sign.* The coronary T wave is also called the *Pardee T wave.*

Paré, Ambroise [*French surgeon,* 1510–90]. Probably the greatest surgeon of his age. Author of treatise on gunshot wounds (1545). Advocated the mild treatment of wounds in contrast to the popular methods of cauterization by fire and boiling oil. Introduced the ligature in vascular surgery in place of cautery. His *Works of Ambroise Paré* (1575) was leading authority of the times.

par ec'ta-sis, par"ec ta si-a (par eck tay sis, -see-uh, -shuh, -see-uh) [G *parektasis,* stretching out]. Excessive stretching or dilatation.

paredrine. $OHC_6H_4CH_2CHNHCH_3$. Trade-mark for substance related to benzedrine but differing from it in the presence of hydroxyl group in the benzene ring used as the hydrobromide, as mydriatic. The dilation of the pupil is not accompanied by loss of accommodation or increase of intraocular pressure.

par"e-gor'ic (par"i-gorr'ick, -gor'ick). See camphorated *opium* tincture.

pa rei'ra (pa-ray ruh, pa-rair uh) [Pg. *parreira brava,* wild vine]. The root of *Chondodendron tomentosum,* formerly called pareira brava. Contains the alkaloid bebeerine (pelosine). It was formerly employed as bitter tonic and in chronic inflammations of the urinary passages. The plant has been identified as the source of tube curare, which contains the paralyzant alkaloids *d*-tubocurarine and curine.

par" le'i-din. See *keratin.*

parenamine. Trade-mark for certain preparations of protein hydrolysate prepared from casein.

pa ren'chy ma (pa reng'ki-muh) [G *parenchyma,* anything poured in beside]. The essential or specialized part of an organ as distinguished from the supporting connective tissue. —**parenchymal, parenchym atous,** *adj.*

par"en chym"a ti'tis (par eng-kim uh tye'tis, par en-) [*parenchyma,* G -*itis,* inflammation]. Inflammation of parenchyma.

par'e-nol (par'i-nole, -nol, -nawl). A stable, bland, absorbabl ointment base composed of 65% white or yellow petrolatum, 15% wool fat, and 20% distilled water.

par'ent [L. *parens,* parent]. 1 A father or mother. 2. *I radiochemistry* radioactive nuclide the disintegration of which gives rise either to radioactive or stabl nuclide, called the *daughter.*

p. image. Primordial parent.

primordial p. *I psychoanalysis*, the primitive or original parent; the source of all life; the stage prior to the differentiation of mother and father. Also called *parental image*.

par·en·ter·al [G. *para*, beside; *enteron*, intestine]. Outside of the intestine; not via the alimentary tract.

par·en'ter·al. A subcutaneous, intravenous, intramuscular, or intrasternal injection.

par"ep·i·thym'i·a (par·ep·i·thim'ee·uh, -thigh·mee·uh) [G. *para*, beyond; *epithymia*, yearning]. A morbid desire or craving.

par"·ere·this'i·sis [*para*; G. *erethizein*, to excite]. Abnormal or perverted excitement. *Obs.*

par"er·ga·si·a (par·ur·gay'shuh, -see·uh, -zhuh, -zee·uh) [*para*; G. *ergasia*, working]. *I psychiatry*, Meyer's term for psychoses manifesting withdrawal, deep regression, delusions, and hallucinations, as schizophrenia and paranoia.

pa·re·sis, par·e·sis [G., letting go, paralysis]. A slight paralysis; incomplete loss of muscular power; weakness of a limb. —**paret'ic**, *adj.*

agitated p. A type of general paresis characterized by sudden violent and destructive excitement.

general p. A late form of neurosyphilis involving chiefly the cortex of the frontal and temporal lobes, characterized clinically by mental changes, tremors, disturbances of speech, apoplectiform and epileptiform seizures, and pupillary changes. Also called *dementia paralytica*, *general paralysis (of the insane)*.

p. sine paresi. Lat. asymptomatic neurosyphilis.

parturient p. A disease of cows, occurring shortly after calving, characterized by motor and sensory nervous paralysis, not accompanied by fever, but always by hypocalcemia. Syn., *milk fever*.

par"es·the·si·a (par·ess·thee'zhuh, -zee·uh) [*para*, G. *aisthēsis*, perception]. A perverted sensation of tingling, crawling, or burning of the skin, which occurs in peripheral neuritis and spinal-cord lesions. —**paresthet'ic**, *adj.*

Bernhardt's p. Abnormal sensations, especially of numbness, with hyperesthesia and pain on exertion, in the region supplied by the lateral cutaneous nerve of the thigh. Also called *Bernhardt's disease*.

pa·reu'ni·a (pa·roo'nee·uh) [G. *pareunos*, lying beside]. Coitus.

par·f·o·cal [L. *par*, equal; *focus*, hearth]. Pertaining to microscopical oculars and objectives which are so constructed or so mounted that, in changing from one to another, the image remains in focus.

Parham, Frederick William [*American surgeon*, 1856–1927]. With E. D. Martin, introduced metal band of aluminum or steel which was placed about the ends of fractured long bones for immobilization until union had taken place; called *Parham-Martin band*.

par"hi·dro·sis (par"hi·dro'sis, ·high·dro'sis) **par"i·dro·sis** [G. *para*, beyond; *hidrōsis*, sweating]. Any abnormal secretion of sweat.

par'i·cine (par'i·seen, -sin). An amorphous alkaloid obtained from the bark of *Cinchona succirubra*.

pa'ri·es (pair'ee·eez) (pl. *parietes*) [L.]. An enveloping or investing structure or wall.

p. anterior. Anterior wall.

p. caroticus tympani. Carotid or anterior wall of the tympanic cavity.

p. inferior. Inferior wall.

p. jugularis tympani. The jugular wall or floor of the tympanic cavity.

p. labyrinthicus tympani. Labyrinthic or inner wall of the tympanic cavity.

p. lateralis. Lateral wall.

p. mastoideus tympani. The mastoid or posterior wall of the tympanic cavity.

p. medialis. The medial wall.

p. membranaceus tracheae. The posterior wall of the trachea into which the tracheal cartilages do not extend.

p. membranaceus tympani. The membranous or outer wall of the tympanic cavity.

p. posterior. Posterior wall.

p. superior. Superior wall.

p. tegmentalis tympani. The tegmental wall of the tympanic cavity.

pa·ri'e·tal [*paries*]. 1. Forming or situated on a wall, as the parietal layer of the peritoneum. 2. Pertaining to, or in relation with, the parietal bone of the skull, as the parietal foramen.

pa·ri'e·tal. The parietal bone. See Table of Bones in the Appendix.

pa·ri'e·to- [*paries*]. *I anatomy*, combining form signifying *parietal*.

pa·ri"e·to·fron'tal [*paries*; L. *frons*, forehead]. Pertaining to both the parietal and frontal bones or lobes; frontoparietal.

pa·ri"e·to·mas'toid [*paries*, G. *mastoeidēs*, like breast]. Pertaining to the parietal bone and the mastoid portion of the temporal bone; mastoparietal.

pa·ri"e·to·oc·cip'i·tal (pa·rye"i·to·ock·sip'i·tul) [*paries*; L. *occiput*, back part of the head]. Pertaining to the parietal and occipital bones or lobes.

pa·ri"e·to·squa·mo'sal [*paries*; L. *squamosus*, scaly]. Pertaining to the parietal bone and the squamous portion of the temporal bone.

pa·rig'e·nin (pa·ridg'i·nin, par"i·jee'nin). $C_{27}H_{44}O_3$; the steroidal aglycone of parillin, a glycoside of sarsaparilla, identical with sarsasapogenin.

pa·ril'lin. A glycoside from sarsaparilla; on hydrolysis, it yields the aglycone parigenin.

Parinaud, Henri [*French ophthalmologist*, 1844–1905]. Known for his description with Galezowski of an infectious conjunctivitis which is transferred from animals to man (1889); called *Parinaud's conjunctivitis*, *leptotrichosis of the conjunctiva*. Described a syndrome characterized by paralysis of upward gaze. *Parinaud's syndrome* is indicative of a lesion in the midbrain.

Par'is green. C $(C_2H_3O_2)_2 \cdot 3Cu(AsO_2)_2$. Copper acetoarsenite; occurs as an emerald green powder; insoluble in water. It is used extensively for dusting on potato vines to destroy the so-called potato bug or Colorado beetle. Also used as a pigment. Care must be taken in its use, as it is extremely poisonous. Also called *imperial*, *Schweinfurth*, *Vienna*, or *parrot green*.

par·isth·mi·on (pa·riss'mee·on, pa·risth'mee·on) [G., tonsil]. A tonsil. *Obs.*

par'i·ty [L. *parere*, to bring forth]. Condition of woman with regard to the number of children she has borne.

par'i·ty [L. *paritas*, equality]. Similarity approaching equality; equivalence.

Park, Henry [*English surgeon*, 1744–1831]. Described arteriovenous aneurysm in which the dilatation communicates with two vessels, also called *Park's aneurysm*.

Park, William Halleck [*American bacteriologist*, 1863–1939]. Widely known as head of the New York City Health Department. With Jacobi and Anna Williams, was responsible for the rapid acceptance of diphtheria antitoxin by American physicians. Described, with Anna Williams, a strain of diphtheria bacillus from which antitoxin was made; called *Park-Williams bacillus*.

Parker, George Howard [*American zoologist*, 1864–]. Known for his important studies of the nervous system of lower animals and vertebrates

(1919) Introduced hardening and preserving fluid consisting of 1% formaldehyde sol tion in 70% alcohol, called *Parker fluid.*

Parker, Ralph Robinson (1888–1949) American entomologist who developed, with R. R. Spencer Rocky Mountain spotted-f er vaccine.

P rker Willard (1800–1884) American surgeon, first in America to operate by abdominal incision for ppendicitis (1864) In this he was preceded in England by Henry Hancock (1848) An incision for appendectomy made over the area of dullness is called *Parker' incision.* He performed cystotomy for inflammation or rupture of the urinary bladder (1851)

Parker's method. See Ashenstedt *method.*

P rkinson J mes (1755–1824) English physician remembered for his classical treatise (1817) on widespread neurological symptom complex which he described as Involuntary tremulous motion with lessened muscular power with propensity to bend the trunk forward and to pass from walking to running pace, the senses and intellects being uninjured. The affliction is now best known as *parkinsonism*, classified as idiopathic or symptomatic of variety of associated conditions.

par'ki son ism, Par'kin-son ism [after James *Parkinson*]. A neurological symptom complex, occurring in association with several distinct factors and idiopathically characterized by four major symptoms rigidity tremor akinesia, and loss of spontaneous and utomatic movement. As consequence of rigidity there may be fixed facial express n, abnormal posture, poor balance festinating and propulsive gait, weakness and fatigue, and difficulties in speaki g, chewing, and swallowing. There is marked relationship between the intensity of the symptoms to emotional stress and their disappearance in sleep. Syn., *Parkinson disease or syndrome.*

arteriosclerotic p. That ppearing in individuals with cerebral arteriosclerosis, clinically differ entiated by commencing most frequently in or after the sixth decade, and in an evanescent manner Involvement is always bilateral, with rigidity the chief feature, tremor usually delayed, less marked, and not characteristic and rapid progression of existing symptoms. Pathologically the changes are bilateral, most ften in the globus pallidus, and commonly include capillary occlusion and foci of softening

hemi-parkinsonism. Disease of the extrapyramidal system of the brain, manifested by tremor and rigidity of th extremities on on side.

idiopathic p. The classical form, coming on in the fifth and sixth decade of lif more often in males, and showing distinct hereditary tendency It is clinically characterized by sudden onset in previously well individual, with tremor in one extremity slight rigidity of arm and leg, and some asymmetry of th face of th same side Tremor and rigidity are progressive and spread to the other side The pathogenesis is most often ascribed to degenerat ve changes in, or centering about, the gl bus pallidus, putamen, caudate nucleus, and substantia nigra. There is promi nent accumulation of lipid material in the erve cells of the globus pallidus and other scattered areas of the extrapyramidal system, suggesting metabolic defect, an aging process, or combination of these Syn., *paralysis agitans, shaking palsy.*

intoxication p. That developing within months or few years in survivors of acute poisoning from carbon monoxide, less commonly from nitrous oxide, manganese, carbon disulfide, or phosphorus. In carbon monoxide intoxication, characteristic bilateral necrosis of the anterior portion of the globus pallidus has been established

postencephalitic p. That occurring as sequel to lethargic encephalitis (epidemic von Economo s disease) within variable period, from days to many years, after the acute process. Clinically distinct, it is characterized by commencing almost exclusively before the age of forty by history of varying degrees of lethargy and very slow but steady evolution of the classical symptom complex. Patients frequently exhibit oculogyric and other ocular disorders. Pathologically changes in the substantia nigra are most ften demonstrable, but the essential process is unknown

symptomatic p. That associated with known factors, as lethargic encephalitis, arteriosclerosis, trauma, syphilis, and intoxications.

syphilitic p. That associated, usually at autopsy with neurosyphilis but most likely coincidental.

traumatic p. Th t following tra ma to head or the brain, occurring very rarely and most likely due to the emotional stress of the trauma which unmasks the previously controlled or latent symptoms.

parlodion. Trade-mark for a shredded form of pure concentrated collodion (cellulose nitrate) used for imbedding microscope specimens and preparing membranes.

Parnum test. See under *test.*

pa o-don ti'tis [G *para*, beside; *odous*, tooth; *-itis*, inflammation]. Inflammation of the tissues near or surrounding tooth.

par"o d n ti um (par -don hee-um) [para; *odous*]. The alveolar process, periodontal membrane, and gingival tissue in the region of tooth socket.

par dyn'i a [L. *parere*, to bring forth G *odyné*, pai]. Difficult parturition. *Obs.*

paroidin. Trade-mark for brand of parathyroid injection.

paroleine. Trade-mark for brand of liquid petrolatum.

par-ol'i var"y (par-ol'i-verr ee) [G. *para*, near L. *olivarius*, of olives]. Situated ear the olivary body

par" ni'ri (par" nigh ree uh, -nirr ee-uh) [G. *para*, beyond; *oneiros*, dream] Morbid dreaming

p. ambulans. Sleepwalking. *Obs.*

par"o-nych'i (par nick'ee-uh) [G *para*, beside, *onyx*, nail]. A suppurative inflammation about the margin of nail. —**paronychial**, *adj.*

mycoti p. An inflammatory process t the base of the nails usually associated with *Candida albicans* infection.

p. diphtheritica. That due to *Corynebacterium diphtheriae.*

p. tendinosa. Old term for tenosynovitis with involvement of the flexor tendons in the hand

par" nych"o-my-co sis (par o-nick o-migh ko sis) [*para*; *onyx*; G. *mykés*, fungus; *-osis*, condition]. A fungous infection around the nails.

par" ny cho sis (par o-ni ko sis) [*para*, *onyx*; *-osis*]. 1 A diseased condition of the structures bout the nails. 2. Growth of nail in unusual places.

par" oph"o ri'tis [*para*; G *oophoros*, bearing eggs; G *-itis*, inflammation]. 1 Inflammation of the paroophoron. 2. Inflammation of the tissues about the ovary

par" -oph' ron [*para*; *oophoros*] A vestigial, caudal group of mesonephri t bules located in or bout the broad ligament of the uterus, homologous with the male paradidymis. They usually disappear in the adult.

par"oph thal'mi [*para*, G. *ophthalmos*, eye]. Inflammation bout the eye

par″oph·thal·mon′cus [para; ophthalmos; G. onkos, mass]. A tumor near the eye.

pa·ro′pi·a [para; G. ōps, eye]. The angle of the eyelid toward the temple.

pa·ro·pi·on [para; ōps]. An eye screen.

par·op′si·a, par·op·sis [para; G. opsis, vision]. Disordered or false vision.

par·op′tic [para; G. optikos, of sight]. Pertaining to colors produced by the diffraction of light rays.

par″o·ra′sis [G. para, beyond; horama, seeing]. Any perversion of vision or of color perception; hallucination.

par″o·rex′i·a [para; G. orexis, yearning]. A perverted appetite.

par·os·mi·a (par-os·mee-uh, par-oz-) [para; G. osmē, smell]. A perversion of the sense of smell. May be present in organic brain disease, in schizophrenia (olfactory hallucinations) or in psychoneurotic conditions. See also *cacosmia*.

par″os·phre·sis. See *parosmia*.

par″os·ti′tis [G. para, beside; osteon, bone; -itis, inflammation]. Inflammation of the tissues adjacent to the periosteum; also spelled *parostitis*.

par″os·to·si [para; osteon; G. -ōsis, condition]. The abnormal formation of bone outside of the periosteum, or in the connective tissue surrounding the periosteum; also spelled *parosteosis*.

pa·rot·ic (pa-ro′tick, ·rot′ick) [para; G. ous, ear]. Situated near or about the ear.

pa·rot′id [G. parōtis, from para, ous]. 1. Situated near the ear, as the parotid gland. 2. Pertaining to, or affecting, the parotid gland.

pa·rot″id·ec′to·my [para; ous; G. ektomē, excision]. Excision of the parotid gland.

pa·rot″id·i′tis. See *parotitis*.

pa·rot″id·o·scle·ro·sis [para; ous; G. sklērōsis, hardening]. Fibrous induration of the parotid gland.

par·o·ti′tis [para; ous; G. -itis, inflammation]. Inflammation of the parotid gland, as in mumps; inflammation of the lymph node overlying the parotid (parotid bubo). —**parotit′ic,** *adj.*

epidemic p. Mumps.

infectious p. Any infection of the parotid gland, including the mumps virus and bacterial agents complicating systemic disease, as well as an infection complicating obstruction of the parotid duct.

metastatic p. That secondary to disease elsewhere; it occurs in infectious fevers, as typhoid fever, and usually goes on to suppuration.

phlegmonous p. One which is the seat of pus formation. Also called *suppurative p.*

par′ous [L. parere, to bring forth]. Having borne one or more children.

par″o·var′i·an (par·o·vair′ee·un) [G. para, beside; L. ovarium, egg-keeper]. 1. Situated near the ovary. 2. Pertaining to the parovarium.

par″o·var″i·ot′o·my [para; ovarium; G. tomē, cutting]. Excision of a parovarian cyst.

par″o·var·i′tis [para; ovarium; G. -itis, inflammation]. Inflammation of the parovarium.

par″o·var′i·um (par·o·vair′ee·um) [para; ovarium]. The remnant of the Wolffian body of the female; the homolog of the caput epididymidis in the male. Also called *epoophoron*, *organ of Rosenmueller*.

par·ox·ysm [G. paroxysmos, irritation]. 1. The periodic increase or crisis in the progress of a disease; a sudden attack, a sudden reappearance of symptoms, or a sudden increase in the intensity of existing symptoms. 2. A spasm or fit; convulsion.

parpanit. See *paraparit*.

Parr turbidimeter. A turbidimeter designed for the determination of sulfur by observation of the light dispersed by a suspension of barium sulfate, into which the sulfur has been converted. The source of light is a filament lamp in the base of the instrument.

parresine. Trade-mark for a protective dressing composed of paraffin, gum elemi, japan wax, asphalt, and eucalyptol.

Parrot, Joseph [French physician, 1829–83]. With Pasteur gave what was probably the first description of the pneumococcus. Primary infantile atrophy or marasmus is called *Parrot's atrophy of the newborn*. Syphilitic pseudoparalysis due to epiphyseal separation is known as *Parrot's disease*. Nodes on the frontal and parietal bones found in hereditary syphilis are called *Parrot's nodes*.

par′rot fever. See *psittacosis*.

Parry, Caleb Hillier [English physician, 1755–1822]. Confirmed work of Heberden on angina pectoris (1799) and considered it due to coronary arterial disease. He reported a series of toxic goiter cases with careful description (1825), usually called *Graves' disease*, also called *Parry's disease*. He also described facial hemiatrophy (1825).

pars (pl. *partes*) [L.]. A part.

p. alveolaris. The alveolar process of maxilla or mandible.

p. anterior. (a) The anterior part of the adenohypophysis. See *p. distalis*. (b) The anterior lobe of hypophysis (b).

p. basilaris. Basilar process of the occipital bone.

p. buccalis. Term formerly used for *adenohypophysis*.

p. cavernosa urethrae. The cavernous or spongy portion of the male urethra.

p. ciliaris retinae. The part of the retina in front of the ora serrata.

p. convoluta. The convoluted part or labyrinth of the kidney.

p. distalis. (a) The anterior part of the adenohypophysis, consisting of clumps and cords of cells (acidophil, basophil, chromophobe primarily) and a diffuse vascular bed. (b) The anterior lobe of the hypophysis (b).

p. flaccida. Shrapnell's membrane.

p. glandularis. Term formerly used for *adenohypophysis*.

p. horizontalis ossis palatini. The horizontal plate of the palatine bone.

p. intercartilaginea. The portion of the rima glottidis between the arytenoid cartilages.

p. intermedia. (a) The intermediate part of the adenohypophysis, consisting chiefly of an irregular row of follicles of pale cells and containing pale-staining colloidal material, and some rows of basophilic cells extending into the neurohypophysis. Its function in man is not known. In some species, it produces the hormone intermedin, causing the pigment-containing cells of the animal to expand. (b) The intermediate lobe of the hypophysis (b). (c) Term formerly used for *nervus intermedius*.

p. intermembranacea. The portion of the rima glottidis between the vocal folds.

p. iridica retinae. The uveal tract.

p. laryngea pharyngis. The laryngopharynx.

p. mastoidea. The mastoid portion of the temporal bone.

p. membranacea septi. The membranaceous part of the interventricular septum situated near the root of the aorta.

p. membranacea urethrae. The membranous portion of the male urethra.

p. nasalis pharyngis. The nasopharynx.

p. nervosa. (a) The inferior part of the neurohypophysis, exhibiting neurosecretory granules and Herring bodies when properly stained. Syn., *infundibular process*. (b) The posterior lobe of the hypophysis (b); also called *p. neuralis*.

p. neuralis. See *p. nervosa*, (b)
p. olfactoria. See olfactory region.
p. oralis pharyngis. The oropharynx.
p. perpendicularis ossis palatini. The vertical plate of the palatine bone.
p. petrosa ossis temporalis. The petrous portion of the temporal bone.
p. posterior (a) The pars nervosa of the neurohypophysis. (b) The posterior lobe of the hypophysis (b)
p. prostatica urethrae. The prostatic portion of the male urethra.
p. pylorica. The pyloric portion of the stomach.
p. spongiosa urethrae. See *p. cavernosa*.
p. tensa. All of the tympanic membrane except the pars flaccida or Shrapnell's membrane.
p. tuberalis. The upward extension of the anterior part of the adenohypophysis, containing predominantly agranular chromophobe cells. Its function is as yet unknown.
p. tympanica ossis temporalis. The tympanic portion of the temporal bone.

parsidol hydrochloride. A trade-marked name for 10-(2-diethylamino-1-propyl)phenothiazine hydrochloride, official in the International Pharmacopoeia as *profenamine hydrochloride*; used in the treatment of parkinsonism.

pars'ley [ME. *persely*, G *petroselinon*, rock parsley]. *Petroselinum crispum*, a plant of the Umbelliferae, containing a volatile oil. From the seed an oily liquid, termed *apiol*, is obtained. The root has been used as a diuretic in renal diseases and dropsy; the juice of the fresh herbs and the fruit were formerly employed as antiperiodics; apiol has been used as an emmenagogue.
p. camphor Apiol.
p. oleoresin Liquid apiol.

par'the-nine (pahr'thi-neen, -nin) An alkaloid from *Parthenium hysterophorus*; has been used as an antipyretic and antineuralgic.

Par-the'ni-um [G *parthenion*, from *parthenos*, virgin] A genus of herbs of the Compositae. *P. hysterophorus* contains several alkaloids, one of which (parthenine) seems to be the active principle.

par"the-no-gen'e-sis [*parthenos*; G *genesis*, production]. A modification of sexual reproduction, in which the organism develops from an unfertilized egg. It occurs chiefly in certain insects, crustaceans, and worms. —**parthenogenet'ic,** *adj.*

par'tial [L. *pars*, part]. Incomplete; finished in part only.

par-tic"i-pa'tion. See *law* of participation.

par'ti-cle [L. *particula*, little bit]. A small portion or piece of a substance.
alpha p. A particle, carrying two positive charges, ejected from the nucleus of a radioactive atom. When ejected in a stream, these particles are known as alpha rays. Each alpha particle is equivalent to the nucleus of a helium atom.
beta p. One of the radiations emitted by certain radioactive materials, identical with the electrons found in the outer structure of all atoms. It has a unit negative charge equal and opposite to the positive charge of the proton and is nearly weightless, having less than 1/1800 the mass of a proton.
colloid p. One, smaller than particles visible under the optical microscope, which forms colloid solutions.
p. accelerator Any device for accelerating atomic particles.

par-tic'u-late [*particula*]. Composed of particles.

par-ti'tion [L. *partitio*, dividing] The distribution of a substance or ions between two immiscible liquids, or between a liquid and a gas.
p. of urinary nitrogen and sulfur The percentage of the total nitrogen and total sulfur of the urine which appears in the form of any particular nitrogen constituent or in any particular form of sulfur is regulated directly by the extent of the total nitrogen and sulfur elimination.

par'tridge-ber"ry [ME. *partriche*; AS. *berie*]. A trailing plant, *Mitchella repens*, which has been used as a diuretic, tonic, and emmenagogue.

par-tu'ri-en-cy [L. *parturire*, to bring forth] The state of being in labor.

par-tu'ri-ent [*parturire*]. 1. Being in labor; giving birth. 2. Traversed during birth, as the parturient canal.

par-tu"ri-fa'cient (pahr-tew"ri-fay'shunt) [*parturire*; L. *facere*, to make]. Promoting labor.

par-tu"ri-fa'cient. An agent that induces labor.

par-tu"ri-om'e-ter [*parturire*; G *metron*, a measure]. An instrument to determine the progress of labor by measuring the expulsive force of the uterus.

par"tu-ri'tion (pahr"tew-rish'un, pahr"chew-) [L. *parturitio*, from *parturire*]. The act of giving birth to young. See Plate 42.

par'tus [L., a bringing forth]. The bringing forth of offspring; labor.
p. agrippinus. Labor with breech presentation.
p. caesareus. Cesarean section.
p. difficilis. Dystocia.
p. immaturus. Premature labor.
p. maturus. Labor at term.
p. precipitatus. Precipitate labor.
p. serotinus. Labor unduly prolonged.
p. siccus. Dry labor.

par"u-lis [G *paroulis*, gumboil] 1. Abscess of the gum. 2. Incorrectly, a gumboil.

par"um-bil'i-cal [G *para*, beside; L. *umbilicus*, navel]. In the region of the navel.

par"um-bil'i-cal. The paraumbilical vein. See Table of Veins in the Appendix.

par'vi- [L. *parvus*, small, little]. A combining form meaning *small*, *little*; sometimes used instead of the more common *micro-*.

par"vi-cel'lu-lar [L. *parvus*, small; *cellula*, small storeroom]. Pertaining to, or composed of, small cells.

par"vi-loc'u-lar Pertaining to small loculi.

par'vule [L. *parvulus*, very small]. A small pill or pellet; a granule.

PAS, PASA Para-aminosalicylic acid.

Pascal, Blaise [French scientist and philosopher, 1623–62]. Proponent of a law of physics that pressure exerted anywhere on a mass of fluid is transmitted equally in all directions, called *Pascal's law*.

pas"cha-chur'da (pas"kuh-koor'duh) See *oriental sore*.

Paschen, Enrique [German bacteriologist, 1860–1936]. Described elementary bodies found in the inclusion (Guarnieri) bodies of smallpox and vaccinia. They are thought to represent virus particles. Called *Paschen bodies*.

Pasutin, Victor Vasilyevich [Russian physician, 1845–1901]. Remembered for his investigations in diabetes mellitus (1871); described degeneration peculiar to the disease, called *Pasutin's degeneration*.

pas'sage [*passus*]. 1. A channel or lumen. 2. The act of passing from one place to another. 3. The introduction of an instrument into a cavity or channel. 4. An evacuation of the bowels.
air passages. The nares, nasal cavities, pharynx, mouth, larynx, trachea, and bronchial tubes.
cloacal p. See cloacal *duct*.
false p. A false channel, especially one made by the unskillful introduction of an instrument into the urethra.

Passavant's bar cushion. See under *cushion*.

pas"si flo'ra [L. *passio* passion, suffering; *flos*, flower]. The rhizome of *Passiflora incarnata* (passionflower); has been used as a sedative and anodyne. Dose of the fluidextract, 0.3–0.6 cc. (5–10 min.).

pas'sion [*passio*]. 1. Pain; suffering. *Obs.* 2. An intense emotion of the mind; fervid desire over-powering emotion. 3. A specific intense excitement, as rage or ardent affection. —**passional**, *adj.*

iliac p. A disorder marked by severe pain, fecal vomiting, and spasm of the abdominal muscles. *Obs.*

sexual p. See *erotic*.

pas'sive [L. *passivus*, passive]. Not active; not performed or produced by active efforts, but by causes coming from without.

pas siv ism [*passivus*]. A form of sexual perversion in which one person submits to the will of another in unnatural erotic acts. —**passivist**, *n.*

pas'ta [L., paste; from G. *pasta*, barley porridge]. A paste.

paste [*pasta*]. An ointmentlike preparation of one or more medicinal substances, such as zinc oxide, coal tar, starch, or sulfur in a hydrogel or fatty base. They are generally intended for dermatologic use and are less greasy and more absorptive than ointments.

paste boot. See *Unna paste boot*.

pas'tern [L. *pastorius*, pertaining to shepherds]. That part of a horse lying between the fetlock joint and the coronet of the hoof.

Pasteur, Louis [*French scientist and bacteriologist*, 1822–95]. Generally regarded as the founder of modern bacteriology. His study of wine fermentations disclosed causative organisms, and disposed finally of the theory of spontaneous generation. With Joubert, discovered *vibrion septique*, the first pathogenic anaerobe to be identified. This led to Pasteur's distinction between aerobic and anaerobic bacteria. Experimented with attenuated virus in chicken cholera. Confirmed Koch's work on anthrax, and, with Chamberland and Roux, developed the first attenuated bacterial culture to be used therapeutically. With the same workers discovered the rabies virus in the blood (1884) and first used attenuated vaccine as a prophylactic (1885). See also *rabies*. With Parrot, made probably the first observation of a pneumococcus. Cultivated the streptococcus of puerperal sepsis. The Pasteur Institute in Paris was established for his investigations.

Pasteur-Chamberland filter. See under *filter*.

Pasteur effect. The inhibition of fermentation when anaerobic conditions are replaced by abundant O_2 supply.

Pas"teur-el'l (pas tur-el'ah) [*Pasteur*]. A genus of bacteria of the tribe Pasteurelleae and of the family Parvobacteriaceae. Species are small, Gram-negative, bipolar staining, often ovoid, and are parasites of man, birds, and other higher animals.

Past. avicida. A species pathogenic for birds and mammals known as the fowl cholera bacillus; it is the type species of this genus.

Past. aviseptica. Synonym for *Past. avicida*.

Past. boviseptica. Synonym for *Past. boviseptica*.

Past. boviseptica. A species which produces hemorrhagic septicemia of cattle known as shipping fever.

Past. pestis. Species known as the plague bacillus; is pathogenic to man and produces bubonic or glandular plague and plague pneumonia.

Past. pseudotuberculosis. A species which is similar to *Past. pestis*; causes an infection of rodents and occasionally of man.

Past. suilla. Synonym for *Past. suiseptica*.

Past. suiseptica. Species which is the etiologic agent of swine plague.

Past. tularensis. The causative organism of tularemia, disease of rodents, and of rabbits in particular which is transmitted to man; also called *Brucella tularensis*.

pas"teur i za tion (pas turi-say shun, -eye zay' shun, pas shoor-) [*Pasteur*]. Arresting the process of fermentation in milk, wine, and other organic fluids by heating them at 60° or 70° C. for about 40 minutes. Destroys the common pathogens found in milk.

pas'teur i"zer [*Pasteur*]. An instrument employed in pasteurization.

pas til (pas til) **pas tille** (pas-teel' -til') [L. *pastillus*, little roll]. 1. A small mass composed of aromatic substances and employed in fumigation. 2. A troche. 3. A paper disk, chemically coated, which changes color on exposure to x-rays; used to determine the dosage.

past point'ing. A test in which the patient is asked to point at a fixed object alternately with the eyes open and closed. A constant error with the eyes closed indicates a cerebellar lesion. Also called *Bárány pointing test*.

pa-ta gi-um. See *pterygium*, 2.

patch [ME. *pacche*]. An irregular spot or area.

butterfly p. A patch of lupus erythematosus on the cheeks and nose. A similar patch is often the site of erysipelas.

MacCallum's p. Roughened, tawny area of inflammation of the left atrium, on the posterior wall above the mitral valve ring, rheumatic in origin, and often associated with mitral stenosis.

moth p. Chloasma.

mucous p. A characteristic lesion of secondary syphilis, occurring as a whitish papule or superficial ulcer on mucous membranes and at mucocutaneous junctions. Syn., *condyloma latum*, *moist papule*.

Peyer's patches. See Johann Conrad Peyer.

soldier's patches. Opaque white spots on the epicardium, of unknown origin, probably due to friction. Also called *soldiers' plaques*.

patch ou li, patch'ou-ly (patch oo lee, pa choo' lee) [Tamil *paccilai*, green leaf]. The herb, *Pogostemon heyneanus*, or other species of *Pogostemon*, the source of patchouli oil; used as a fixative in perfumes.

pate [ME.]. The crown or top of the head.

pa tel'la [L., small dish]. A sesamoid bone in front of the knee, developed in the tendon of the quadriceps femoris muscle; the kneecap. See Table of Bones in the Appendix. See Plates 1, 2. —**patellar**, *adj.*

p. biparta. A developmental variation of the patella, in which a portion (usually the upper lateral part) develops from a distinct center of ossification and remains as a separate ossicle in the adult.

p. cubiti. An anomalous sesamoid bone lying proximal to the olecranon within the tendon of the triceps brachii muscle.

pa-tel'la pex y [*patella*; G. *pêxis*, fixing]. The operation of fixing the patella to the lower end of the femur to stiffen or stabilize the knee joint in flail joint cases of infantile paralysis, by the production of a partial arthrodesis. *Obs.*

pat"el lec t -my [*patella*; G. *ektomē*, excision]. The surgical removal or excision of a patella.

pa'ten-cy [L. *patere*, to be open]. The state of being open.

pa'tent, pat ent [*patens*]. Open; exposed.

Paterson, Robert [*Scottish physician*, 1814–89]. Described round or oval microscopic bodies found in

molluscum contagiosum; called *Paterson bodies* or *corpuscles*.

Paterson syndrome. See Plummer Vinson syndrome.

path, path way *I neurology* a neuron pathway. **final common p.** Th anterior horn cell (motoneuron) Sherringto term.

pa the ma [G suffering]. Any disease or morbid condition. *Obs.*

path"er ga si a (path ur-gay shuh, -see uh, -shuh, -see uh) [G *pathos*, disease *ergasia*, working]. *I psychiatry* term applied by Adolf Meyer t personality maladjustments associated with or ganic or structural changes in the body or with gross functional disturbances.

path'er gy path-er gi a [*pathos*; G. *ergon*, work]. *1* An unusually intense response to an allergen, in which th individual becomes sensitive not only to the specific substance but to others hyperergy. **2.** A subnormal response to an allergen; hypoergy.

pa thet'ic [G *pathētos*, subject to suffering]. 1. Pertaining to or causing feelings. 2. Denoting the fourth cranial nerve old term.

path tism [G *pathētos*, subject to suffering]. Hypnotism, mesmerism, animal magnetism. *Obs.*

path'e tist [*pathētos*]. A mesmeriser hypnotist. *Obs.*

path o-, path- [G *pathos*, disease]. A combining form denoting *disease*, *pathologic*.

path o-don'ti a [*pathos*, G *odous*, tooth]. The branch of dental science which treats of the diseases of the teeth.

path'o-gen [*pathos*; G. *gennathai*, from *gignesthai*, to be produced]. Any agent which is capable of producing disease. The term is usually estricted to living agents.

path o-gen -sis [*pathos*; G *genesis*, production]. The course of development of disease, including the sequence of processes or events from inception to the characteristic lesion or disease.

path o-gen'ic [*pathos*; *genesthai*]. Pertaining to the capacity to produce disease, as pathogenic microorganism.

path o-ge-nic'i ty (path o-ji-nis -tee) [*pathos*; *genesthai*]. The capacity to produce disease.

pa thog"no-mon'ic [*pathos*; G *gnōmonikos*, skilled in thing]. Characteristic of disease, distinguishing it from other diseases.

path og nos tic. See *pathognomonic*

path"o-lo si (path o-lee shuh, -see-uh) [*pathos*; G. *thelo*, willing]. Any impairment or weakness of the will. *Rare.*

path" log'ic men-dac'i ty Pathologic lying: persistent habitual lying without external need or actual advantage, involving both falsifications of real events and development of phantasies The individual may have complete insight, or the condition may be part of psychoneurotic or psychotic reaction

pa-thol'o-gist [*pathos*; G *logos* word]. A person trained and experienced in the study and practice of pathology

pa thol gy [*pathos*; *logos*]. That branch of biological science which deals with the nature of disease, through study of its causes, its process, and its effects, together with the associated alterations of structure and function. —**patholog'ic, patholog'ical,** adj.

cellular p. The study of changes in cells as the basis of disease.

hemical p. The study of diseased structures and processes by the application of chemical methods.

comparative p. That which compares disease various animals, including man, to arrive t resemblances and differences which may clarify disease as phenomenon of nature.

dermal p. The pathology of diseases of the skin.

experimental p. That which utilizes experimental methods for the study of disease in animals and in man.

general p A study of disturbances which are common to various tissues and organs of the body as degenerations, hypertrophy atrophy neoplasms, etc.

geographic p. A study of the distribution of diseases and their manifestations in various parts of the world.

gynecologic p. The pathology of the female sexual organs and associated structures.

humoral p. Historical, but invalid, theory that disease is caused by alterations in constitution of the blood and various secretions. The term is now occasionally applied t effects of immune bodies in blood, tissue fluids, exudates, and secretions.

medical p. The study of diseases not of surgical importance.

phthalmic p. The pathology of the eye and associated structures.

physiologic p. Utilization of physiology in the study of disease.

special p. Application of the laws of general pathology to individual organs or systems.

surgical p. Th study of disease in the realm of surgery

veterinary p. Pathology of animals, principally domestic.

path"o-ma'ni-a [*pathos*; G *mania*, madness] Moral insanity *Obs.*

pa thom'e try [*pathos*; G *metron*, a measure]. Estimation of the number of people suffering from disease and the conditions which increase or decrease this number —**pathomet'ric,** adj.

path" mi me sis (path o-mi-mee sis, -migh-mee sis) [*pathos*; G. *mimēsis*, imitation]. Imitation of the symptoms and signs of disease occurs in hysteria and in malingering. Syn., *pathomimicry*

path"o-mim'ic ry [*pathos*; G *mimikos*, of mime] Pathomimesis.

path"o-pho'bi-a [*pathos*; G *phobos*, fear]. Exaggerated dread of disease. *Obs.*

path"o-phor'ic [*pathos*; G *pherein*, to bear] Carrying or transmitting disease, said of certain insects.

path-oph'o-rous. See *pathophoric*

path"o psy chol'o gy [*pathos*; G *psychē*, soul; *logos*, word]. That branch of science dealing with the mental processes during disease, from the viewpoint of general, rather than medical, psychology See *psychopathology*.

pa the'sis [*pathos*; G -*ōsis*, condition]. A diseased condition, bnormality or patholog finding.

pa'tient [L. *pati*, to suffer]. A person under the care of physician; sick person.

ambulant p. An ambulatory patient.

bed p. A patient who is confined to bed or who, by nature of his disability must take exercises in bed.

convalescent p. One in the stage of recovery from disease or injury

litter p. *I military medicine*, patient unable to walk and requiring medical care.

mental p. (a) In common usage, any patient who requires psychiatric care and treatment (b) *I military medicine* when used in connection with the evacuation of patients, those psychiatric cases requiring security accommodations aboard ship, train, or other vehicle.

nontransportable p. *I military medicine*, casualty whose physical condition is so poor that xtended evacuation without proper medical treatment would seriously endanger life or limb.

troop-class p. *I military medicine*, an ambulant

patient who requires little medical care while en route during evacuation.

Patrick, Hugh Talbot [*American neurologist*, 1860–1938]. Described dolorogenic areas of the skin, mucous membrane of the cheeks, sides of the tongue, upper and lower lips, within the area of distribution of the fifth cranial nerve, stimulation of which initiates paroxysmal attack of trigeminal neuralgia; called *Patrick trigger areas*.

pat″ri·lin′e·al [L. *pater* father; *linea*, line]. Pertaining to descent through the male line.

pat′ten [OF *patin*]. A metal support serving as high sole and attached to the shoe on the sound leg, to prevent weight bearing in hip disease and to permit the employment of traction apparatus on the affected leg.

pat′tern [ME. *patron*]. Example, model, design.

action p. Crile term for the brain impulses which induce certain actions peculiar to the individual. Such impulses may be wholly or partly congenital, or acquired.

juvenile T p. Persistence of inverted or diphasic T waves (ST T complexes) found in precordial electrocardiograms of normal children.

mixed QT p. of electrocardiogram. That showing the initial ventricular deflections of one of the previous groups and the final ventricular deflections of the other as Q_1T or Q_3T

Q_1T p. of electrocardiogram (atypical) A pattern similar to that of the typical form, but with high amplitude of the QRS group in lead I and a Q wave which is not prominent or is missing.

Q_1T p. of electrocardiogram (typical) A pattern in recent, healing, and healed anterior infarction, low amplitude of QRS in lead I, prominent Q wave in lead I, deep S wave in leads II and III, progressive changes in the final ventricular deflections. At first, the latter consist of elevation of the S-T segment and fusion with the T wave in lead I and depression and fusion of this segment with the T wave in lead III. After variable period of time, the displacement of S-T disappears, and T becomes sharply inverted in lead I, and sharply upright in lead III.

Q_3T p. of electrocardiogram (atypical) A pattern similar to that of the typical form, but which does not show all of the details described for it.

Q_3T p. of electrocardiogram (typical) A pattern in recent, healing, and healed posterior infarction, low amplitude of QRS in lead II, prominent Q wave in leads II and III, no Q wave in lead I, progressive changes in the final ventricular deflection. At first the latter consists of elevation of the S-T segment and fusion with T in leads II and III and depression and fusion of the segment with T in lead I. After variable period of time, the displacement of the S-T segment disappears, and the T wave becomes sharply upright in lead I and sharply inverted in leads II and III.

pat′u·lin. An antibacterial substance originally prepared from *Penicillium patulum*. See *clavacin*.

pat′u·lous [L. *patulus*, standing open]. Expanded; open.

pau′cine. $C_{27}H_{39}N_5O_5$, an alkaloid from the seed of the owala tree *Pentaclethra macrophylla*.

Paul, Constantin Charles Théodore [*French physician*, 1833–96]. Widely known as cardiologist. Described feeble apex beat with forcible impulse over the rest of the heart as indicative of adherent pericardium; called *Paul' sign*.

P ul, Frank Thomas [*English surgeon*, 1851 1941]. Introduced, coincidently with Samuel J Mixter glass drainage t be with flanged edges for temporary use in intestinal operations; called *Paul' tube*, *Paul-Mixter' tube*. This was later modified and, in its present form, is regarded as right-angled glass drainage tube with flange to allow the placing of purse-string bowel suture about it. Paul devised an operation for obstructed colon similar to the Mikulicz operation called *Paul Mikulicz operation*, *enterostomy en stages*.

Paul of Aegina (Paulus) Greek physician of the late 7th century famous in Alexandria, author of an early compilation on medicine and surgery He wrote the first recorded description of lead poisoning.

Paul's test. See under *test*.

Paul-Bu nell test. See under *test*.

Pauli g, Linus Carl (1901–) American chemist who received the Nobel prize in chemistry (1954) for research in the structure of proteins and immunochemistry widely known for his determinations of the structure of crystals and molecules and of the nature of chemical bonds.

Paul lin′i [after Christian Franz *Paullini*, German botanist, 1643–1712]. A genus of woody vines. The seeds of P cupana are the source of guarana.

pau″si·car′di·a [G *pausis*, pause; *kardia*, heart]. A subjective sensation of intermission or momentary stoppage of the heartbeat.

paunch [L. *pantex*, paunch]. 1. Colloquial term for the bdominal cavity and its contents. 2. *I ruminant*, the rumen.

pause [G *pausis*, stopping]. A temporary stop or rest.

compensatory p. Any pause which, immediately succeeding a premature beat, compensates by its length for the prematurity of the beat. Also called *returning cycle*.

pau″si·me·ni′a (paw si-mee nee-uh, paw si) See *menopause*.

Pauzat, Jean Eugène [*French physician*, contemporary]. Described osteoplastic periostitis of the metatarsal bones, called *Pauzat' disease*.

pa vex (pay vex) See *pavex*.

pavatrine. Trade-mark for β-diethylaminoethyl fluorene-9-carboxylate hydrochloride; $C_{13}H_9$-$COOC_2H_4N(C_2H_5)_2.HCl$. The substance is an antispasmodic, inducing muscular relaxation through its effects upon the autonomic nervous system, as well as upon involuntary muscle. Used in the alleviation of dysmenorrhea and in the management of gastrointestinal disturbances.

pave ment-ep″i·the′li·um. Epithelium consisting of flattened, scalelike cells fitted together by their edges like the tiles of a pavement. *Obs.*

pave′ment ing [L. *pavimentum*, pavement]. A stage in the process of tissue inflammation in which the blood stream in the capillaries becomes slowed, the leukocytes gravitating out of the central current to become adherent to the vessel walls.

paveril. Trade-mark for *dioxyline*. The drug is supplied as phosphate salt.

paveril phosphate. Trade-marked name for the antispasmodic and peripheral vasodilator substance dioxyline phosphate.

pa′vex, pa vaex [*passive vascular exercise*]. A positive-negative pressure apparatus for passive vascular exercise in the treatment of thromboangiitis obliterans.

Pavlov Iva Petrovich (1849–1936) Russian physiologist known for his contributions to our knowledge of cardiac and digestive physiology of the central nervous system, and psychophysiology H discovered, independently of W H. Gaskell, the special innervation of the heart, and also the secretory innervation of the pancreas (1888); developed an experimental technique of

sham feeding, and by establishing salivary, pancreatic, and biliary fistulas in dogs, studied the secretion of the digestive glands (1889–1904). He investigated gastric secretion by means of a small portion of stomach completely separated from the main stomach but retaining its vagal nerve branches, which communicated with the exterior (*Pavlov's pouch*). Applying these procedures to the long-term study of secretion in healthy animals, he discovered the conditioned reflex (first English publication, 1928) and then concentrated on the activity of higher nervous centers as determined by the conditioned reflex. Nobel laureate in physiology and medicine (1904).

pa'vor [L.]. Fright; fear.

p. nocturnus. Night cry; nightmare.

Pavy, Frederick William [*English physician*, 1829–1911]. Known for his studies in metabolism. Made important investigations in diabetes mellitus (1862). Described recurrent or cyclic albuminuria (1885) called *Pavy's disease*. Described a type of arthritis seen in some cases of typhoid fever which is known as *Pavy's joint*. Introduced a modification of Fehling's solution; *Pavy's solution* is used in testing for sugar.

Pawlik, Karel J. [*Czechoslovakian surgeon*, 1849–1914]. Described the triangle on the anterior wall of the vagina which corresponds to the trigonum vesicae and is called *Pawlik's triangle*. Described the anterior columns of the vagina which form the lateral boundaries of Pawlik's triangle and serve as landmarks in locating the opening of the ureters; known as *Pawlik's folds*.

paw'paw [Sp. *papaya*, papaw tree]. Papaw. See *papaya*.

Payr, Erwin [*German surgeon*, 1871–1947]. Introduced an operation for draining hydrocephaly by means of transplanted blood vessels lying in the ventricles. Developed a crushing forceps used before cutting, in gastrointestinal resection, called *Payr's clamp*. Described colonic stasis due to kinking at the splenic or hepatic flexures; called *Payr's disease*.

paytine. $C_{21}H_{24}N_2O \cdot H_2O$; an alkaloid from white cinchona bark, *Payta alba*.

P. B. *Pharmacopoeia Britannica*, British Pharmacopoeia.

Pb Chemical symbol for lead (*plumbum*).

P. B. E. A tuberculin prepared from bovine tubercle bacilli, similar to Koch's new tuberculin.

PBI Protein-bound iodine in the blood.

P. D. Doctor of Pharmacy.

Pd Chemical symbol for palladium.

Peacock, Thomas Bevill (1812–1882). English physician who noted the congenital anomaly of the heart, later called the *tetralogy of Fallot*.

Péan, Jules Émile [*French surgeon*, 1830–98]. Resected the pylorus and extirpated fibroids through the vaginal approach. Devised a position used for operating, with the patient lying on a low table and the surgeon seated on a high chair placed between the patient's legs, called *Péan's position*. Inventor of the simple hemostat called *Péan's forceps*.

Pearl, Raymond [*American biologist and statistician*, 1879–1940]. Widely known as a vital statistician. Contributed studies in genetics (1915) and the growth of population in the United States since 1790 (completed in 1920).

pearl [ML. *perla*]. A rounded aggregation of squamous epithelial cells, concentrically arranged, seen in certain carcinomas and also in sites of epithelial union of embryonically open hiatuses, e.g. palatine raphe; also called *epithelial p.*

Pearson, George [*English physician*, 1751–1828]. Introduced an aqueous solution of sodium arsenate, one-tenth the strength of the liquor sodii arsenatis; called *Pearson's solution*.

peat [ME. *pete*]. The product of the spontaneous decomposition of plants, especially swamp plants, in many cases mixed with sand, loam, clay, lime, iron pyrites, or ocher.

Pecquet, Jean [*French anatomist*, 1622–74]. Discovered the thoracic duct, in dogs, the most important channel through which lymph and chyle are carried to the blood; called *Pecquet's duct*. The dilated abdominal portion in which it begins is called the receptaculum *chyli*, *Pecquet's cistern* or *reservoir*.

pec'tase. An enzyme, found associated with pectose in fruits, which converts the pectose into pectin.

pec'ten [L., comb]. 1. Old term for os pubis. 2. The middle third of the anal canal.

p. ossis pubis. The pectineal line of the pubis, continuation of the iliopectineal line.

pec"te·no'sis [L. *pecten*, comb; G. *-ōsis*, condition]. Induration of the pecten, or middle third of the anal canal.

pec'tic ac'id. A complex acid, partially demethylated, obtained from the pectin of fruits.

pec'tin [G. *pēktos*, congealed] (*pectinum*). Pectin is a purified carbohydrate product obtained from the dilute acid extract of the inner portion of the rind of citrus fruits, or from apple pomace. It consists chiefly of partially methoxylated polygalacturonic acids; a coarse or fine powder, yellowish white in color, almost odorless, and with a mucilaginous taste; it is almost completely soluble in 20 parts of water forming a viscous, opalescent colloidal solution which flows readily and is acid to litmus paper; it is insoluble in alcohol.

p. insulin. A slowly absorbed preparation of insulin in a viscous medium containing 4 to 5 per cent pectin and adjusted to pH 4.0 to 4.4. See *decurvon*.

p. paste (*pasta pectini*). Contains 7.5% of pectin in a vehicle of glycerin and isotonic solution of three chlorides. Used as an application for the treatment of bed sores and ulcers.

thin p. paste (*pasta pectini tenuis*). Contains 3.5% of pectin. Because of its lesser viscosity it is preferred in extensive excoriations and ulcerated conditions of the skin.

pec'tin·ase. The enzyme capable of transforming pectin into sugars and galacturonic acid.

pec'ti·nate [L. *pecten*, comb]. Arranged like the teeth of a comb.

pec·tin'e·al [*pecten*]. 1. Comb-shaped. 2. Pertaining to the pecten or os pubis.

pec·tin'e·us, pec·ti·ne'us [*pecten*]. A muscle arising from the pubis and inserted on the femur. See Table of Muscles in the Appendix.

pec'tin·ose. See *arabinose*.

pec"ti·za'tion. In colloid chemistry, the transformation of sols into gels. Obs. See *coagulation*, *flocculation*.

pec'to·ral [L. *pectoralis*, of the breast]. Pertaining to the chest, as the pectoral muscles, which connect the arm and the chest.

pec"to·ra'lis (peck to·rah'lis, ·ray'lis) [L.]. One of two muscles, major and minor, on the anterior aspect of the chest. See Table of Muscles in the Appendix.

p. major. The larger muscle of the anterior thoracic wall.

p. minimus. A variant of the pectoralis minor muscle, extending from the cartilage of the first rib to the coracoid process.

p. minor. The smaller and deeper muscle of the anterior thoracic wall.

pec"to·ril'o·quy [L. *pectus*, breast; *loqui*, to speak]. Exaggerated bronchophony in which there is

distinct transmission of articulate speech in addition to increased intensity of the voice sounds. Heard over consolidations which are either large in extent or located in proximity to major air passage.

whispered p. The transmission of whispered voice sounds having the same characteristics and the same significance as above.

pec'tose [G. *pēktos*, congealed]. The water-insoluble pectin substance occurring in various unripe fruits. It is converted into the water-soluble pectin by the combined action of weak acid and heat, or in the fruit, by the enzyme pectase, as the fruit ripens. Also called *pectinogen, protopectin.*

pec'tous [*pēktos*]. Relating to pectin or pectose.

pec'tus [L.]. The chest or breast.

p. carinatum. See pigeon *breast.*

p. excavatum. See funnel *breast.*

pe"dar throc ce (pee dahr threck uh-see, ped ahr) [G. *pais*, child; *arthron*, joint; *kakē*, evil]. A necrotic ulceration or caries of the joints of children.

pe-dat ro-phy pe da tro phi [*pais*; G. *atrophia*, want of food]. 1. Any wasting disease of childhood. 2. Tabes mesenterica.

ped'er-as"ty [G. *paiderastia*, love of boys]. Sexual intercourse through the anus; practiced on boys. See also *sodomy.* —**pederast,** *n.*

pe-de sis [G. *pēdēsis*, leaping]. The dancing, oscillating motion of the particles of any substance sufficiently powdered and suspended in suitable liquid.

ped"i-al'gi-a (ped ee-al'juh, -jee-uh, pee dee-) [L. *pes*, foot; G. *algos*, pain]. Pain in the foot.

pe"di-at'rics (pee dee-at'ricks, ped ee-) [G. *pais* child; *iatrikos*, of physician]. The branch of medicine dealing with children's diseases. —**pediatric,** *adj.*

pe di-at'rist, pe"di-a tri'cian. A specialist in children diseases.

ped'i-at"ry (ped'ee-at"ree, pi-dye'uh tree) [*pais*; G. *iatreia*, medical treatment]. Pediatrics.

ped'i-cel late [L. *pedicellus*, little foot]. Pedunculated.

ped'i-cle [*pediculus*]. A slender process acting as foot or stem, as the pedicle of tumor.

vertebral p. The portion of bone projecting backward from each side of the body of vertebra, and connecting the lamina with the body.

pe-dic'te-rus [G. *pais*, child; *ikteros*, jaundice]. Jaundice of the newborn; icterus neonatorum.

pe-dic u lar [L. *pediculus*, louse]. Lousy; pertaining to lice.

pe-dic"u-la'tion [L. *pediculus*, little foot]. The process of developing pedicle.

pe-dic u-la'tion [L. *pediculus*, louse]. The state of one suffering from pediculosis.

pe-dic'u li cide [*pediculus*; L. *caedere*, to kill]. An agent which destroys lice.

Pe-dic"u loi'des (pi dick"yoo-loy dees) [*pediculus*; G. *eidos*, form]. A genus of mites.

***P.* ventricosus.** A microscopically small mite which infests straw, stored grain, and cotton. Among laborers handling cereals and cotton it causes outbreaks of dermatitis (*acarodermatitis urticarioides*) which may be marked in severe cases by fever and nausea.

pe di u lo-pho'bi-a [*pediculus*; G. *phobos*, fear]. Morbid dread of infestation with lice.

pe-dic"u l sis [*pediculus*; G. *-ōsis*, condition]. A skin disease due to infestation by lice, characterized by intense pruritus and cutaneous lesions.

p. capitis. Infestation of the scalp with the species *Pediculus humanus* var. *capitis* occurring chiefly in women and girls with long hair.

p. corporis. Infestation of the skin of the body with the species *Pediculus humanus* var. *corporis*. In cases of long standing the chronic scratching gives rise to pigmentation and lichenification of the skin, the so-called *vagabond's disease.*

p. palpebrarum. That of the eyebrows and the eyelashes. See also *p. pubis.*

p. pubis. An infestation of the pubic hair with the *Phthirius pubis*, the crab louse; may spread over the body and involve the axillae, eyebrows, and eyelashes.

pe-dic'u-lous [*pediculus*]. Infested with lice.

Pe-dic u lus [L., louse]. A genus of small parasitic insects known as lice, whose species produce dermatitis and transmit diseases, such as typhus fever, trench fever, and relapsing fever.

***P.* humanus var. capitis.** The head louse; important as vector of disease and produces pediculosis capitis.

***P.* humanus var. corporis.** The body louse; important as vector of disease and causes pediculosis corporis.

ped'i cure [L. *pes*, foot; *cura*, care]. Care of the feet.

ped'i palp [NL. *pedi*, from G. *pedion*, sole instep; NL. *palpus*, feeler]. One of the pincer appendages of *Arachnida* for attaching the animal to its host while sucking.

pe di'tis [*pes*; G. *-itis*, inflammation]. An inflammation of the pedal bone of horse.

Pedley's method. See Shohl and Pedley's method.

pe do-bar"o-ma crom e-ter (pee do- ped o-) [G. *pais*, child; *baros*, weight; *makros*, large; *metron*, measure]. An instrument for weighing and measuring infants. *Obs.*

pe"do ba rom'e-ter [*pais*; *baros*; *metron*]. An instrument for weighing child. *Obs.*

pe"do-don'tics [*pais*; *odous*]. The branch of dentistry which treats abnormal oral and dental conditions occurring in childhood; also called *pedodontia, pedodontology.*

pe do don'tist [*pais*; *odous*]. One who specializes in pedodontics.

pe do-don tol'o-gy. See *pedodontics.*

ped"o-dy"na mom e ter [L. *pes*, foot; G. *dynamis*, power; *metron*, measure]. An instrument for measuring the muscular strength of the leg.

pe do-gen'e-sis. See *neoteny.*

pe-dol'o-gist [G. *pais*, child; *logos*, word]. A specialist in pediatrics.

pe-dol'o-gy [*pais*; *logos*]. The science, or sum of knowledge, regarding childhood, its diseases, hygiene, etc.

pe-dom'e-ter [*pais*; G. *metron*, measure]. An instrument for weighing and measuring newborn child. —**pedometry** *n.*

pe-dom'e-ter [L. *pes*, foot; *metron*]. An instrument which registers the number of footsteps in walking. —**pedometry** *n.*

pe do mo-tol o-gy. See *pedology.*

pe-dop a-thy [*pes*; G. *pathos*, disease]. Disease of the foot.

pe do-phil'i-a [G. *pais*, child; *philein*, to love]. Fondness for children; usually love of children by adults for sexual purposes.

pe do-pho'bi-a [*pais*; G. *phobos*, fear]. Morbid dislike or fear of children.

pe-dun cle (pi-dung'kul, ped'ung-kul, pee dung-kul) [L. *pedunculus*, little foot]. A narrow part acting as support. —**peduncular, pedunculate, pedunculated,** *adj.*

cerebral p. One of two large bands of white matter containing descending axons of upper motor neurons which emerge from the underside of the cerebral hemispheres to approach each other as they enter the rostral border of the pons. Between the peduncles, which form the ventral part of the mesencephalon, lies the interpeduncular fossa. Syn., *crus of the cerebrum.*

inferior cerebellar p. A large bundle of nerve fibers running from the medulla oblongata to the cerebellum. It contains the dorsal spinocerebellar tract from the nucleus dorsalis of the spinal cord, olivocerebellar fibers from the inferior olivary nuclei, dorsal external arcuate fibers from the lateral cuneate nucleus, and ventral external arcuate fibers from the arcuate and lateral reticular nuclei. Syn. *restiform body*.

middle cerebellar p. One of the bands of white matter joining the pons and the cerebellum; also called *pontocerebellar tract*. Syn., *brachium pontis*.

p. of the pineal body A delicate white band passing forward from each side of the pineal body along the edge of the third ventricle.

superior cerebellar p. A large band of nerve fibers which arise in the dentate and emboliform nuclei of the cerebellum, form the dorsolateral part of the rostral portion of the fourth ventricle, decussate in the region of the inferior colliculi, and end in the red nucleus and thalamus. Syn., *brachium conjunctivum*.

peel'ing [ME. *pelen* from L. *pilare*, to deprive of the hair]. A term applied to the process of desquamation, as after any inflammation of the skin. It is result of disturbed keratinization of epidermis.

Peet, Max Minor [*American surgeon*, 1885–1949]. Known for his operation for the relief of hypertension, in which he removed subdiaphragmatically the greater and lesser splanchnic nerves and the ninth, tenth, eleventh, and twelfth thoracic ganglions.

peg [ME. *pegge*]. 1. A pointed pin of wood, metal, or other material. 2. A wooden leg.

bone p. A peg or screw fashioned of beef bone, used in bone operations to secure immobility.

peg'a nine (peg'uh neen, -nin) *l* Peganine. An alkaloid, $C_{11}H_{12}N_2O$, from the leaves of *Adhatoda vasica* and *Peganum harmala*. A bronchial dilator. Syn. *vasicine*.

pei"no ther a py (pye"no-therr'uh-pee) [G. *peina*, hunger; *therapeia*, treatment]. The cure of disease by deprivation of food. *Rare*.

Pekelharing, Cornelis Adrianus [*Dutch physiologist*, 1848–1922]. Known for his theory of blood coagulation. According to *Pekelharing's theory*, thrombin supplies calcium which unites with fibrinogen to form fibrin.

Pel, Pieter Klazes [*Dutch physician*, 1852–1919]. Described the ocular crises in tabes (1898), called *Pel's crises*. Described pseudoleukemia or lymphadenoma with periodic pyrexia (1885), which was investigated by Wilhelm Ebstein at about the same time. Called *Pel-Ebstein disease*. See also Pel-Ebstein *fever*.

Pel, von. See Alexander von *Poehl*.

pe la da, pe lade (pi-lahd', pi lad') [F.]. Alopecia areata of the scalp.

pel'age [F. from L. *pilus*, hair]. The hairy covering of the body.

pel"ar gon'ic ac'id. The fatty acid, $CH_3.(CH_2)_7COOH$, formed artificially by oxidation of oleic acid; occurs naturally in the glycerides of certain oils.

pel"ar go nin. $C_{27}H_{30}O_{15}$. A glycoside in flowers of certain pelargonium species and of several other plants.

p electron. See under *electron*.

Pelger, Karel [*Dutch physician*, 1885–1931]. Described an anomalous appearance of the nuclei of leukocytes consisting of coarse nuclear structure, division of neutrophils into not more than two segments, and pear-shaped nuclear outline of segmented cells observed in constitutional disease of bone marrow; called *Pelger's nuclear anomaly*.

pel"i om e ter. Pelvimeter.

pel"i di'si (pel"i-dee'see, -dee'zee) [L. *pondus decies linearis divisio sedentis altitudo*]. According to Pirquet, the cube of the sitting height of a person expressed in centimeters is approximately the weight in grams of a normal person. The ratio, as expressed in the following formulas, is called the pelidisi:

$$\frac{10 \text{ times the weight}}{\text{sitting height}} = 100\%$$

or

$$\frac{\sqrt[3]{10 \text{ times the weight}}}{\text{sitting height}} = 100\%$$

pel"i-o sis (pel"ee-o'sis, pee"lee-) [G. extravasation of the blood]. Purpura.

p. rheumatica. See Schönlein's *purpura*.

Pelizaeus, Friedrich [*German neurologist*, b. 1850]. Described aplasia axialis extracorticalis congenita, also called *Merzbacher-Pelizaeus disease*. See under *aplasia*.

pel lag'ra (pi-lag'ruh, pi lay'gruh) [It., from L. *pellis*, skin; G. *agra*, seizing]. A syndrome resulting from nicotinic acid deficiency, characterized by dermatitis of sun-exposed surfaces, glossitis and stomatitis, diarrhea, and in severe cases by disturbances of the central nervous system. It may be due to faulty diet, or it may occur secondarily to various diseases, especially of the digestive system. Other vitamin deficiencies often coexist. —**pellag'rous,** *adj.*

p. sine pellagra. Pellagra without the erythematous rash.

pel la grin [*pellagra*]. One afflicted with pellagra.

Pellegrini, Augusto [*Italian surgeon*, contemporary]. Described posttraumatic calcification of the medial collateral ligament of the knee; called *Pellegrini-Stieda disease*.

pel'let [L. *pila*, ball]. A small pill.

Pelletier, Pierre Joseph [*French chemist*, 1788–1842]. Made important discoveries of active principles of drugs. Isolated emetine (1817), strychnine (1819), and quinine (1820).

pel"le tier'ine (pel"i teer'een, -in, pel"et-yair', pi let'i reen, -rin, pel"i-tee eh-reen') [*Pelletier*]. A liquid alkaloid obtained together with an isomeric body, isopelletierine, also a liquid alkaloid, from pomegranate bark. These are also called *punicine* and *isopunicine*. It is used as a taeniafuge, chiefly in the form of the tannate.

p. tannate (*pelletierinae tannas*). A mixture in varying proportions of the tannates of several alkaloids obtained from pomegranate, *Punica granatum* Linné. A light yellow amorphous powder; 1 Gm. dissolves in about 250 cc. of water. Insoluble in chloroform. Most important of the several alkaloids present are pelletierine (punicine) and isopelletierine. Used as an anthelmintic and taeniafuge. The tannate is the least dangerous form of the drug since its slight solubility prevents rapid absorption. Dose, 0.1–0.3 Gm. (2–5 gr.) followed by an active cathartic.

pel'li-cle [L. *pellicula*, small skin]. 1. A thin membrane, or cuticle. 2. A film on the surface of liquid. —**pellic'ular, pellic'ulous, pellic'ulate,** *adj.*

pel li' u la [L.]. Epidermis.

pel'li to ry. See *pyrethrum*.

pel'lo tine (pel'o teen, -tin). $C_{13}H_{19}NO_3$. An alkaloid from the Mexican cactus, *Lophophora williamsii*. Produces central nervous system depression.

pel lu'cid [L. *pellucere*, to shine through]. Transparent; translucent; not opaque.

pel o- [G. *pēlos*, mud]. A combining form meaning mud.

pe'loid. Generic term for muds and moors used in physical therapy; they may be purely mineral as fango, volcanic residue, mainly mineral, as sea mud or liman, or mainly vegetable, as moors or peats.

pel·ol'o·gy (pel·ol'o·jee). The study of mud and similar substances.

pe·lop'si·a [G. *pelas*, near; *opsis*, vision]. A defect of vision characterized by illusions of abnormal nearness of objects.

pel'o·sine (pel'o·seen, pi lo·seen). An alkaloid derived from *Cissampelos pareira*. Syn., *beberine*.

pel''o·ther'a·py. Treatment with mud.

pel'ta·tin. Either of two related constituents identified as α-peltatin and β-peltatin, obtained from the rhizome and roots of *Podophyllum peltatum*. β-Peltatin contains a methoxyl (OCH_3) group in place of a hydroxyl (OH) group in α-peltatin; both are related to podophyllotoxin. Both are active, when applied topically, against certain wartlike neoplasms.

pel'vic ham'mock. A canvas sling, generally attached to an overhead bed frame, used to suspend the lower part of the trunk and pelvis in pelvic fractures.

pel''vi·en·ceph''a·lom'e·try [L. *pelvis*, basin; G. *enkephalos*, brain; *metron*, a measure]. Measurement of the maternal pelvis and fetal skull by means of radiographic examination.

pel·vim'e·ter [*pelvis*; *metron*]. An instrument for measuring the pelvic dimensions.

pel·vim'e·try [*pelvis*, *metron*]. The measurement of the dimensions of the pelvis.

AVERAGE MEASUREMENTS OF THE ADULT FEMALE PELVIS COVERED BY THE SOFT PARTS

Between iliac spines	26	cm.
Between iliac crests	29	
External conjugate diameter	20½	
Internal conjugate diagonal	12½	
True conjugate, estimated	11	
Right diagonal	22	
Left diagonal	22	
Between trochanters	31	
Circumference of pelvis	90	

combined p. A combination of external and internal pelvimetry.

digital p. Measurement of the pelvis by means of the hand.

external p. Measurement of external diameters of the pelvis, to estimate the dimensions of the internal parts.

internal p. Measurement of the internal dimensions of the pelvis by hand or by pelvimeter.

manual p. See digital p.

pel''vi·o·li·thot'o·my [*pelvis*; G. *lithos*, stone; *tomē*, a cutting]. Removal of a kidney stone from the renal pelvis.

pel''vi·o·ne''o·cys·tos'to·my. A surgical procedure in which the renal pelvis is anastomosed to the urinary bladder in cases of hydronephrotic ectopic kidneys; rarely used.

pel''vi·o·ra''di·og'ra·phy. Measurement of the pelvis and fetal head by radiography. A number of methods are utilized, all of which are concerned with correcting the distortion that occurs in roentgenograms.

pel''vi·ot'o·my [*pelvis*; *tomē*]. 1. Incision of the renal pelvis. 2. Pelvisection.

pel'vis (pl. *pelves*) [L.]. 1. A basin or basin-shaped cavity, as the pelvis of the kidney. 2. The bony ring formed by the two innominate bones and the sacrum and coccyx. 3. The cavity bounded by the bony pelvis. The cavity consists of two parts, the true pelvis and the false pelvis, which are separated by the iliopectineal line. The entrance of the true pelvis, corresponding to this line, is known as the inlet or superior strait; the outlet or inferior strait is bounded by the symphysis pubis, the tip of the coccyx, and the two ischia. See Plates 1, 14, 44. —**pelvic**, *adj.*

android p. A female pelvis with a deeper cavity and more conical shape, similar to the normal male pelvis.

anthropoid p. The type of female pelvis resembling that of the great apes; a long, narrow, oval pelvis with the anteroposterior diameter greater than the transverse.

assimilation p. An anomaly of the pelvis, in which the transverse processes of the last lumbar vertebra may be transformed and fused with the sacral vertebrae.

asymmetrical p. One in which the two lateral halves are markedly dissimilar in contour.

beaked p. One in which the pubic bones are compressed laterally so as to approach each other and are pushed forward; a condition seen in osteomalacia.

bifid p. A congenital anomaly of the renal pelvis in which there are two major calyces.

brachypellic p. Oval type of pelvis having a transverse diameter more than one and less than three centimeters greater than the anteroposterior diameter.

brim of the p. The pelvic inlet.

contracted p. One having one or more major diameters reduced in size, interfering with parturition.

cordate p. One with a heart-shaped inlet.

coxalgic p. An obliquely contracted pelvis, due to unequal pressure of the femora in unilateral disease of the hip in early life.

coxarthrolisthetic p. A unilateral or bilateral transversely contracted pelvis, resulting from softening about the acetabulum with projection of the head of the femur into the pelvic cavity.

dolichopellic p. See anthropoid p.

dwarf p. Deformity of the pelvis seen in true hypoplastic, chondrodystrophic, cretin, and rachitic dwarfs.

false p. That part above the iliopectineal line.

fetal p. See infantile p.

flat p. Deformity of the pelvis in which all anteroposterior diameters are shortened but the transverse diameters are practically normal.

funnel p. A deformity in which the usual external measurements are normal while the outlet is contracted, the transverse diameter of the latter being eight centimeters or less.

generally contracted p. One having all diameters symmetrically shortened; a small normally shaped pelvis.

generally enlarged p. One having all diameters symmetrically enlarged; a large normally shaped pelvis.

greater p. The false pelvis.

gynecoid p. A female pelvis in which the inlet is round instead of oval or blunt heart-shaped.

infantile p. An adult pelvis retaining the infantile shape.

justo major p. A generally enlarged pelvis.

justo minor p. A generally contracted pelvis.

kyphorachitic p. A deformity of the pelvis associated with rickets in which changes are slight because the effect of kyphosis tends to counterbalance that of rickets.

kyphoscoliorachitic p. A deformity of the pelvis resembling the kyphorachitic type because the kyphotic and rachitic effects counterbalance each

other However considerable degree of oblique deformity of the superior strait is usually present.

kyphoscoliotic p. A deformity of the pelvis varying in character with the predominance of the kyphosis or scoliosis of the vertebral column.

kyphotic p. One characterized by increase of the conjugata vera, but decrease of the transverse diameter of the outlet, through approximation of the ischial spines and tuberosities. Associated with kyphosis of the vertebral column.

lesser p. The true pelvis.

masculine p. A female pelvis resembling the normal male pelvis an android pelvis.

mesatipellic p. See gynecoid p.

Naegele p. An obliquely contracted pelvis with ankylosis of one sacroilia synchondrosis, under development of the associated sacral ala, and other distorting defects producing an obliquely directed conjugata vera.

obliquely contracted p. A deformed pelvis with unequal oblique diameters.

osteomalacic p. A distorted pelvis characterized by lessening of the transverse and oblique diameters, with great increase of the anteroposterior diameter

p. aequabiliter justo major A generally enlarged pelvis.

p. aequabiliter justo minor A generally contracted pelvis.

p. fissa. Congenital cleft of the pubic symphysis. Syn., *split p.*

p. major The false pelvis.

p. minor The true pelvis.

p. nana. A generally contracted pelvis tending toward the infantile type with persistence of cartilage at all the epiphyses; dwarf pelvis.

p. spinosa. One deformed by sharp bony outgrowths which may injure maternal soft parts, but rarely present an obstacle to labor

platypelloid p. Flat pelvis. Also spelled *platypel he p.*

pseudospider p. A congenitally small, long, thin renal pelvis which resembles the pyelogram of certain renal tumors

rachitic p. One characterized by sinking in and forward of the sacrovertebral angle, with flaring outward of the iliac crests and increased separation of the iliac spines.

renal p. The expansion of the proximal end of the ureter which receives the major and minor calyces within the renal sinus

Robert p. A transversely contracted pelvis having a rudimentary sacrum, undeveloped sacral alae, and much narrowed oblique and transverse diameters.

scoliotic p. A pelvis with slight asymmetry depending upon the situation and degree of scoliosis of the vertebral column.

simple flat p. One in which the only deformity consists in shortening of the anteroposterior diameter

split p. A form in which there is congenital separation of the pubic bones at the symphysis, often associated with exstrophy of the urinary bladder; pelvis fissa.

spondylolisthetic p. A deformity resulting from forward displacement of the centrum of the last lumbar vertebra.

transversely contracted p. One having reduced transverse diameter

true p. That part of the pelvic cavity situated below the iliopectineal line.

pel vi scope. An endoscope for examination of the pelvic organs of the female.

pel"vi-sec'tion [*pelvis*; L. *sectio* cutting] A cutting through of one or more of the bones of the pelvis. *Obs.*

pem'mi-can [Cree *pemikkân*]. A concentrated food consisting of powdered dried buffalo meat or venison mixed with melted fat also similar preparation, as of dried beef suet, raisins, and sugar; used by explorers, etc.

pem phi goid [G *pemphix*, pustule]. A bullous disease like pemphigus vulgaris but more benign and self-limited, perhaps bullous variant of dermatitis herpetiformis. Oral involvement may be absent and is usually mild. Upon rupture of the bullae, the eroded areas do not increase much in size and tend to heal.

pem phi gus (pem fi-gus) [G *pemphix*, pustule] An acute or chronic disease of the skin characterized by the appearance of bullae which develop in crops or continuous succession. —**pemphigoid,** *adj*

familial benign p. A vesicular and bullous dermatitis localized to the sides of the neck, the axillary spaces, and other flexor surfaces. It is distinctly familial, and is possibly variant of keratosis follicularis. Also called *Hailey-Hailey disease*

p. acutus. A type once thought to be associated with septic wounds and vaccination, and now considered to be an acute micrococcal infection with septicemia.

p. chronicus. See *p. vulgaris.*

p. erythematosus. A relatively benign form of chronic pemphigus combining features of lupus erythematosus, characterized by small bullae on the forehead, sternal skin, and upper back: also called *Senear-Usher syndrome.*

p. foliaceus. A rare type characterized by crops of flaccid blebs which recur and rupture, producing marked scaliness and generalized exfoliation.

p. neonatorum. An acute form of micrococcal or streptococcal infection of the skin occurring in infants, probably more properly called *impetigo contagiosa.* It may be form of bullous impetigo

p. tropicus. A pyoderma in tropical climates.

p. vegetans. A form characterized by oral lesions followed by skin eruptions which rupture, leaving raw surface on which vegetative or papillary growths develop.

p. vulgaris. A form that is usually chronic, characterized by successive crops of blebs which leave pigmented spots when they are healed.

pen al ge'si-a (pen al jee zee uh, -see-uh) [G. *penia*, poverty; *algesis*, sense of pain] Reduction in the number of pain and touch spots in trigeminal neuralgia.

pen a tin. An antibiotic from *Penicillium notatum*; it is identical with corylophilline, *Escherichia coli* factor, myocin, notatin, and penicillin-B.

pen dul lous [L. *pendere*, to hang]. Hanging down loosely

pen e-tham ate hy"dro-i'o-dide. Generic name for penicillin G diethylaminoethylester hydroiodide salt of benzyl penicillin characterized by low solubility and prolonged action, no longer available because of its toxicity See *neopenil.*

pen e-trance [L. *penetrare*, to penetrate]. The percentage of organisms having given genetic constitution which show the corresponding hereditary character Also see *expressivity.*

pen e-tra"ting [*penetrare*]. Entering beyond the surface, as penetrating wound, one that pierces the wall of cavity or enters an organ.

pen e-tra'tion [L. *penetratio*, from *penetrare*] 1. The act of penetrating or piercing into. 2. Of microscope, the focal depth. 3. The entrance of the penis into the vagina.

pen" trom e-ter [*penetrare*; G *metron*, measure]. An instrument for estimating the penetrating power or hardness of roentgen-ray beam.

Penfield, Wilder Graves (1891–) Canadian neurosurgeon who, with Foerster described an operation for the relief of traumatic epilepsy in which he excised the cortical scar; called *Foerster Penfield operation*. See also *Penfield's method* under *stain*.

pe·nic'i·din (peh-nis'i-din, pen"i-sigh'din) An antibiotic from species of *Penicillium*, soluble in ether, alcohol, and chloroform insoluble in petroleum ether It is active against Gram-negative and Gram-positive bacteria.

pen"i·cil'la·mine. $(CH_3)_2C(SH)CH(NH_2)COOH$. An amino acid obtained from all penicillins upon treatment with hot dilute mineral acid.

pen"i·cil'lase. See *penicillinase*.

pen"i·cil'late [L. *penicillum*, painter's brush]. Ending in tuft of hairs.

pen"i·cil'lic ac'id. An antibiotic from species of *Penicillium*, particularly *P puberulum*, soluble in water It is rather weak antibiotic, active largely against Gram-positive bacteria, but is more active against Gram-negative bacteria than is penicillin.

pen"i·cil'li form [penicillum; L. *forma*, form]. Penicillate; ending in tuft of hairs.

pen"i cil'li [*penicillum*]. An antibacterial produced from strains of *Penicillium notatum*. Several penicillins are known, having the formula $C_9H_{11}O_4SN_2R$. In penicillin F (known in the United Kingdom as penicillin I) R is the Δ^2-pentenyl $(—CH_2CH{:}CHCH_2CH_3)$ group in penicillin G (penicillin II) R is benzyl $(C_6H_5CH_2—)$; in penicillin X (penicillin III) R is p-hydroxybenzyl $(C_6H_4OHCH_2—)$; in penicillin K, R is n-heptyl $(CH_3CH_2CH_2CH_2CH_2CH_2CH_2—)$; in penicillin O, a biosynthetic derivative useful in patients sensitive to penicillin G R is allylmercaptomethyl $(CH_2{:}CHCH_2SCH_2—)$ Crystalline sodium or potassium salts, especially of penicillin G, are most commonly employed; other derivatives are described below Aqueous solutions are most stable at pH between 5 and 7; any deviation inactivates the drug, the rate depending on the temperature and pH. The action of penicillin upon bacteria is chiefly bacteriostatic and not bactericidal. It is potent inhibitor of the growth of nearly all Gram-positive bacteria, certain Gram-negative cocci, and spirochetes; it has high degree of specificity Its bacterial activity is not interfered with by bacterial extracts, p-amino-benzoic acid, peptones, pus, blood, or body fluids, and it may be used either locally or systemically Penicillin is not believed to cause organic injury; but it has considerable power of sensitization, and may produce serious toxic reactions. Sensitivity reactions vary from mild erythema to severe serum sickness and even death from anaphylactic shock. Penicillin is rapidly excreted by the kidneys effective blood levels are maintained by administering poorly soluble salts which release the antibiotic slowly or by giving simultaneously substance lik probenecid, which decreases the rate of excretion of penicillin.

benzathine p. G. Generic name for N N'-dibenzylethylenediamine dipenicillin G an oral dosage form which yields higher blood levels of penicillin than are obtainable with equivalent amounts of other dosage forms of the antibiotic. See *bicillin*, *neolin*.

chloroprocaine p. O A crystalline salt of 2-chloroprocaine and penicillin O, similar to procaine penicillin G, especially useful for patients who are allergic to penicillin G. See *depo-cer-o-cillin*.

-ephenamine p. G. A salt of penicillin G with l-ephenamine (N-methyl-1,2-diphenyl-2-hydroxyethylamine) base which has antiallergic activity: the salt has low solubility in aqueous or oily dispersion media and thus has long duration of action. See *compenamine*.

p. B. An antibiotic identical with corylophilline, *Escherichia coli* factor mycoin, notatin, and penatin.

p. G diethylaminoethylester hydroiodide. A salt of benzyl penicillin characterized by low solubility and prolonged action It produces relatively high concentrations of penicillin in lung tissue, sputum, and cerebrospinal fluid. Because of severe anaphylactoid and fatal reactions it has been withdrawn from the market. Syn., *penethamate hydroiodide*. See *neo-penil*.

p. G procaine. The procaine salt of benzyl penicillin, sparingly soluble salt of the penicillin which releases the antibiotic slowly to give prolonged effective blood levels. The procaine component minimizes pain of injection. Penicillin G procaine is commonly administered in suspension in aqueous or oily medium. Also written *procaine penicillin G*

p. V Phenoxymethyl penicillin, biosynthetic form poorly soluble in acid media and resistant to destruction by gastric juice.

pen"i·cil'li·nase. Any enzyme, found in many bacteria, which antagonizes the antibacterial action of penicillin.

pen"i·cil"li·o'sis. Lesions of ear skin, and occasionally lungs, caused by certain species of *Penicillium*.

Pen"i·cil'li·um [*penicillum*]. A genus of fungi of the Ascomycetes in which the fruiting organs have brushlike form. The species **Penicilli um chrysogenum, P citrinum, P claviforme P notatum, P patulum, P puberulum P spinulosum** are used in the production of antibiotics. Species are also common allergens.

pen"i·cil lo'ic ac'id. Any one of the dicarboxylic acids formed when the lactam ring in penicillin is opened by the action of alkalies or penicillinase.

pen"i·cil'lus (pl. *penicilli*) [L., painter brush] One of the tufts of fine twigs into which the arteries of the spleen subdivide. —**penicil'lar** *adj*.

pe·nil'lic ac'id. Any one of the dicarboxylic acids resulting when penicillin is subjected to mild acid treatment; the penillic acids are isomeric with the corresponding penicillins.

pe nis [L.]. The male organ of copulation. Its essential parts consist of the corpus cavernosum urethrae enclosing the urethra and forming the glans, and the two corpora cavernosa, all covered by fascia and skin. See Plate 44. —**pe' ile** *adj*.

chordel p. See *chordee*.

concealed p. A congenital anomaly in which the penis, in this condition usually only rudimentary is hidden within the scrotum or perineal skin.

p. captivus. One held in the vagina during copulation by spasm of the perineal muscles of the female.

p. clamp. A clamp which is fitted upon the shaft of the penis to retain anesthetic or antiseptic solutions in the urethra, for control of incontinence, or training an enuretic.

p. envy *I* psychoanalysis, the envy of the young female child for the penis which she does not possess, or which she thinks she has lost (thus forming part of the castration complex) The wish for the penis is replaced normally by the wish for child, or by denial of its absence and the compulsion to behave like man.

webbed p. A marked chordee associated with penoscrotal hypospadias, in which the penis is integral with the scrotum.

pen nat [L. *penna*, feather]. Like feather

pen' i form [*penna*; L. *forma*, form]. Shaped like feather; said of certain muscles.

pen ny roy'al. *Mentha pulegium.* See *hedeoma.*

pen ny weight [AS. *penig; wiht*]. A weight of 24 grains. Abbreviated, dwt, dwt.

pe nol o-gist [G *poinē*, penalty; *logos*, word]. One who makes study of crime, its cause and prevention.

pe-nol'o-gy [*poinē; logos*]. The science treating of crime, its punishment and prevention the study of the management of prisons. —**penolog'ic,** *adj*

pe no-scro'tal [L. *penis*, penis; *scrotum*, scrotum]. Pertaining to the penis and th scrotum

Penrose drain. A latex nasogastric tube. See *cigarette drain.*

pen'ta- pent [G *pente*, five] A combining form meaning *five.*

pen"ta-ba'sic [*pente;* G *basis*, base] Having five replaceable hydrogen atoms.

pen"ta hl phe nol C_6Cl_5OH; eedlelike crystals, almost insoluble in water but forming water-soluble sodium salt used as preservative of wood, glue, and other substances and for control of slime and algae

pen'tad [*pente*]. An element or radical having valence of five.

pen"ta-dac'tyl [*pente;* G *daktylos*, finger]. Having five fingers or toes upon each hand or foot.

3-pen"ta-dec yl-cat hol. $C_{21}H_{36}O_2$ constituent of the irritant oil of *Rhus toxicodendron* and other species of *Rhus* used as standard allergen in patch tests to determine sensitivity to poison ivy

pen"ta-e-ryth ri tol tet"ra ni'trate. Pentaerythrityl tetranitrate.

pen t ryth ri tyl t t" ni t t $(CH_2NO_3)_4C$ vasodilator similar to erythrityl tetranitrate, claimed by some to be superior to the latter useful in preventing ttacks of angina pectoris in some cases and in treating intermittent claudication. Syn., *pentaerythritol tetranitrate* See *peritrat tetranitrate*

pen"ta-gen'ic [*pente;* G *gennaein*, from *gignesthai*, to be produced]. Referring to genotypes of polysomic or polyploid organisms which contain five different alleles for any given locus.

pen"ta hy drox"y hex-o'ic ac'id. Galactonic acid.

pen'tal. C_5H_{10}. See *amylene hydrate.*

pentalogy of the Cuban School. Congenital heart lesion consisting of tetralogy of Fallot associated with an interatrial septal defect.

pen"ta-me'th ni um. On of homologous series of polymethylene bis(trimethylammonium) ions, of the general formula $(CH_3)_3N^+(CH_2)_nN^+(CH_3)_3$ in which n is 5. It possesses ganglion-blocking action, effecting reduction in blood pressure It is used clinically in the form of one of its salts, commonly the bromide or iodide. Also designated *C5*

pen"ta meth"yl-ene tet ra zol. See *metrazol.*

pen"ta-meth yl-ros an'i line. See *methylrosaniline chloride*

pen-tam'i dine (pen-tam'i deen, -din) A diamidine, 4 4'-diamidino-1 5 diphenoxypentane or 4,4'-(pentamethylenedioxy)dibenzamidine, useful in treatment of African trypanosomiasis and kala-azar It has also been shown to inhibit strongly the growth of bacteria in wounds and to be of value in the treatment of multiple myeloma.

pen'tane. Chemical name for one of the three isomeric hydrocar bons of the paraffin series, having the formula C_5H_{12}. All are liquids.

pen"tane di 'ic ac'id. Glutaric acid.

pen ta quine (pen'tuh kween, kwin) 6-Methoxy 8-(5 -isopropy laminopentylamino)-quinoline, an effective remedial agent in malaria, especially when given with quinine. It appears to be too toxic for prophylactic use. Introduced as SN 13,276. The phosphate is the usual dosage form.

Pen tas to-ma Pen"ta-sto'ma [G. *pente*, five *stoma*, mouth]. A genus of blood-sucking arthropods which are endoparasites of vertebrates. One species, P naias, has been reported to infest the upper respiratory tract of man.

pen'tas tomes [*pente; stoma*] A group of endoparasites known as tongue worms which infest man, includes the genera *Linguatula, Armillifer* and *Pentastoma.*

pen ta tom'ic [*pente;* G. *atomos*, uncut]. 1. Containing five atoms. 2. Having five replaceable hydrogen atoms in the molecule.

Pen"ta trich o-mo nas [*pente;* G. *thrix*, hair *monas*, unit]. A generic name improperly applied to the five-flagellated variety of *Trichomonas hominis.*

pen"ta vac cine [*pente;* L. *vaccinus*, of cow] A vaccine composed of five different kinds of organisms.

pen"ta va'lent, pen tav' lent [*pente;* L. *valere*, to be strong]. Having valence of five.

pent dy' pent. The red pigment, containing two pyrrole rings, btained when propentdyopent is reduced with sodium dithionite.

pen'tene 1. Chemical name for one of the isomeric hydrocarbons of the olefin series, having the formula C_5H_{10}, of which five are possible. 2. See *amylene hydrate.*

pen te"no-lac'tone A cyclic group.

—C.CH.CO O.CH₂ (ring closed between C and CH₂)

commonly found in the structure of cardioactive steroidal aglycones, being attached to the number 17 carbon tom.

pen tet ra zol. International Pharmacopoeia name for pentylenetetrazol, more exactly designated pentamethylenetetrazol.

pentnucleotide. Trade-mark for the sodium salts of the pentose nucleotides from the ribonucleic acid of yeast. The preparation is used in infectious conditions accompanied by leukopenia or neutropenia.

pen"to-bar'bi tal so di um (pen to-bahr'bi tawl, -tal, -tol) (*pentobarbitalum sodicum*). $C_{11}H_{17}O_3N_2Na$. Sodium ethyl-(1-methyl-butyl) barbiturate A white, odorless, slightly bitter crystalline powder Freely solubl in water and alcohol. One of the more rapidly acting hypnotics, extensively used as preanesthetic sedative. Also used as an anticonvulsant in strychnine or cocaine poisoning by slow intravenous injection. Dose, as hypnotic, 0.1 Gm. (1½ gr.) as preanesthetic sedative, 0.2 Gm. (3 gr.); as an anticonvulsant, 0.3–0.5 Gm. (5–8 gr) Also called *soluble pentobarbital.* See *nembutal.*

pen"to-li'ni um bi tar'trate. Generic name for pe t m thyl e-1:5-bis(1-m thylpyrrolidinium bitartrate) $C_{15}H_{32}N_2^{++}.2C_4H_5O_6^-$ ganglionic blocking agent used in the management of hypertension. See *ansolysen.*

pen to-san. A complex carbohydrate capable of forming pentose by hydrolysis.

pen-to sa-zone (pen-to suh sone, pen"to say'zone) A reaction product of pentose and phenylhydrazine, used t identify and distinguish pentoses from other monosaccharides.

pen'tose. Any one of class of carbohydrates containing five atoms of carbon. The pentoses are not fermentable, and, on boiling with dilute hydrochlori acid, yield furfural.

p. nucleic acid. Ribose nucleic acid.

p. nucleotide. See *pentnucleotide.*

pen'to-side (pen'to-side, -sid) A glycoside in which the sugar component is pentose; nucleosides are pentosides.

pentostam. Trade-mark for preparation of sodium stibogluconate.

pen"to-su'ri-a [G. *pente*, five; *ouron*, urine]. The presence of pentose in the urine.

pentothal sodium. Trade-mark for the monosodium salt of 5-ethyl-5-(1-methylbutyl) thiobarbituric acid, known also as *thiopental sodium* and *thiopentone soluble*. The solution is used as general anesthetic by intravenous injection.

pent ox'ide. An oxide containing five atoms of oxygen.

pen'tyl. Chemical name for the univalent radical of five carbon atoms. The name amyl is used interchangeably

pen"tyl-ene-tet'ra-zol. See *metrazol*.

Penzoldt, Franz [*German physician*, 1849–1927]. Introduced solution for testing for the presence of acetone and another for the presence of glucose in the urine. Each method is called *Penzoldt' method*.

pe o-til"lo-ma ni-a [G. *peos*, penis; *tillein*, to pluck; *mania*, madness]. The nervous habit of constantly pulling the penis; not masturbating

pe po [G. *pepon*, ripe]. Seed of the pumpkin, *Cucurbita pepo* It is taeniafuge.

Pepper William (Senior) [*American physician and clinician*, 1843–98]. Celebrated figure in American medicine. Recorded bone marrow changes in progressive pernicious anemia (1875)

Pepper William (Junior) [*American physician*, 1874–1947]. Widely known clinician and educator Described congenital sarcoma of the liver and adrenals; called *Pepper type of adrenal medullary tumor* (1901) Described syndrome connected with tumor of the right adrenal, in which he noted that metastasis is limited largely to the liver substance; called *Pepper' syndrome*.

pep'per [G *peperi*, pepper]. The dried, unripe fruit of various species of *Piper* Due to the widespread cultivation of pepper large number of varieties exist. The important constituents of pepper are chavicine, piperine, piperidine, volatile oil, and resin. A small quantity of volatile alkaloid has also been found. Pepper is used as condiment and in medicine. Its chief use in medicine is to excite the languid stomach and correct flatulence. Also see *capsicum*.

pep per-mint [*pepper*; G *mintha*, mint]. Consists of the dried leaf and flowering top of *Mentha piperita*. Peppermint contains about 1.0%–1.25% of volatile oil together with tannin, resin, and gum. Used as an aromatic stimulant to allay nausea, relieve spasmodic pains of the stomach and bowels, expel flatus, or cover the taste or qualify the nauseating or griping effects of other medicines. Also see peppermint *oil*.

p. spirit (*spiritus menthae piperitae*) Peppermint essence; 10% solution of the oil in alcohol, rendered green by maceration of the coarsely ground leaves in the alcohol.

pep'si gogue [G *pepsis*, digestion; *agogos*, leading]. Referring to the secretagogue effect of substances which stimulate the discharge of pepsin in the gastric secretion; contrasted with the effect of histamine, which stimulates the secretion of hydrochloric acid but not of pepsin.

pep sin (*pepsinum*) A substance containing proteolytic enzyme obtained from the glandular layer of the fresh stomach of the hog, *Sus scrofa* var *domesticus*; occurs as transparent or translucent scales, granular or spongy masses, yellow to light brown in color; freely soluble in water; nearly insoluble in alcohol. Pepsin is useful to secure the digestion of protein food in the stomach. It is seldom indicated, because the gastric juice usually contains sufficient pepsin to perform gastric digestion. May be given with hydrochloric acid in those cases in which there is an absence of free hydrochloric acid in the stomach contents. Dose, 0.6–4.0 Gm. (10–60 gr.) Pepsin is contained in the following preparations **compound pepsin elixir** (*elixir pepsini compositum*) also called lactated pepsin elixir and compound digestive elixir dose, 8 cc. (2 fluidrachms) **pepsin and rennin elixir** (*elixir pepsini et rennini*) also called pepsin essence, dose, 8 cc. (2 fluidrachms) **pepsin elixir** (*elixir pepsini*) dose, 8 cc. (2 fluidrachms); **saccharated pepsin** (*pepsinum saccharatum*) dose, 4–8 Gm. (1 2 dr.)

pep-sin gen [G *pepsis*, cooking; *gennathei*, from *gignesthai*, to be produced]. The antecedent substance or zymogen of pepsin, present in the cells of the gastric glands, which during digestion is converted into pepsin.

pep si-no-ther' py [*pepsin*; G *therapeia*, treatment]. The employment of pepsin as digestant in the treatment of dyspepsia.

pep'tic [G *peptikos*, promoting digestion] 1. Pertaining to pepsin. 2. Pertaining to digestion, as peptic ulcer See peptic *ulcer*

pep ti-dase. An enzyme which splits peptides to amino acids. See Table of Enzymes in the Appendix.

pep'tide. A compound of two or more amino acids containing one or more peptide groups, —CO NH— An intermediate between the amino acids and peptones in the synthesis of proteins. See American Classification of Proteins in the Appendix.

pep"ti-do lyt'ic [G *peptos* cooked; *lysis*, loosing]. Causing the digestion or splitting p of peptides into amino acids.

pep"ti za'tion. 1. The liquefaction of gel to sol. 2. The bringing of solid material into colloidal suspension.

pep"to-gen'ic, pep tog'e-nous (pep todj' -nus) [*peptos*; G *gennathei*, from *gignesthai*, to be produced]. Producing pepsin or peptones.

pep tol'y sis. See *peptonolysis*.

pep'tone. A derived protein produced by the hydrolysis of natural protein either by an enzyme or by an acid. Complete hydrolysis of protein yields amino acids. Peptones, as well as proteoses, which are similar to peptones, are intermediate compounds between proteins and amino acids. Dried peptone occurs as reddish yellow to brown powder with characteristic odor; it is soluble in water but insoluble in alcohol peptone is not coagulated by heat or precipitated on the addition of ammonium or zinc sulfate. It is used for the preparation of culture mediums in certain bacteriologic tests, and is occasionally given as a nutrient. Also called *meat peptone*, *beef peptone*. See American Classification of Proteins in the Appendix. —**pepton'ic**, *adj*

venom p. A peptone found in the venom of certain serpents.

pep"to-ne mi a [*peptone*; G *haima*, blood]. The presence of peptone in the blood.

pep'to-nize [*peptone*]. 1 Convert into peptones; predigest. 2. Digest with pepsin.

pep"to-nol'y-sis [*peptone*; G *lysis*, loosing]. The hydrolysis or digestion of peptones; peptolysis.

pep"to-nu'ri-a [*peptone*; G. *ouron*, urine]. The presence of peptones in the urine.

enterogenous p. Peptonuria due to disease of the intestine.

hepatogenous p. That accompanying certain liver affections.

nephrogenous p. Peptonuria of renal origin.
puerperal p. That of the puerperal state
pyogenic p. That produced by suppuration in the body

per [L., through, very]. 1 A prefix signifying *throughout, completely thoroughly, over* or *very extremely* 2. *I chemistry* prefix denoting the highest valence of series.

per″ ceph′a lus (pur sef′uh-lus, perr) [L. *per* through G. *akephalos*, headless]. A placental parasitic twin which lacks head and arms and has defective or bsent thorax, the body being reduced t little more than the pelvis and legs.

per″ac′id. That acid, of series of acids formed by particular element, which contains the highest proportion of oxygen.

per″ -cid′i ty (pur″ -sid′i-tee) [L. *per-* very; *acidus*, sour]. Excessive acidity

per″ -cute (pur″ -cute′) [per L. *acutus*, sharp]. Very acute unusually sharp said of pain.

perandren. Trade-mark for the propionl acid ester of synthetic testosterone in oil.

per a′num [L.]. By the anus, said of the administration of certain drugs or nutrient substances.

per″ t dyn′i a [G *peras*, boundary *odynē*, pain]. Pain t the cardiac extremity of the stomach.

perazil hydrochloride A trade-marked name for chlorcyclizine hydrochloride, an antihistaminic compound.

per″ben zo′ic ac′id. $C_6H_5COO_2H$ peroxybenzoic acid, occurring as crystalline leaflets of very acrid odor very volatile, almost sol ble in water and freely soluble in most organic liquids used in chemical synthesis and analysis.

per bo rate (pur-bor ate) A salt of perboric acid.

per bo ri ac′id. The hypothetical acid, HBO_3, from which perborates are derived.

per ca′ine (pur-kay een, -in, pur′kay-een, -in) See *percaine hydrochloride*.

per cent [L. *per centum*, by the hundred]. Indicating milligrams of substance per 100 cc. of fluid; more properly *milligrams per cent*.

per-cen′tile (pur-sen tile, til) [*per centum*] Any of the values of variable which separate the entire distribution into 100 groups of equal frequency

per cep tion [L. *perceptio* from *percipere* t perceive] Recognition in response to sensory stimuli the act or process by which the memory of certain qualities of an object is associated with other qualities impressing the senses, thereby making possible recognition of the object. —**perceptive** *adj*

depth p. The ability to estimate depth or distance between points in the field of vision.
extrasensory p. (**ESP**) Direct wareness without the use of the senses telepathy clairvoyance, or precognition See psi *phenomena*.
space p. Knowledge, through the senses, of the area, dimensions, or position occupied, of any space.
stereognostic p. The recognition of bjects by touch.

per″cep tiv′i ty [*percipere*]. The faculty or capability of receiving impressions.

per″cep to ri um See *sensorium*.

per-chlo rate. A salt of perchlori acid.

per chlor hy dri a. See *hyperchlorhydria*.

per-chlo ric ac′id. HClO A powerful oxidizing acid used in chemical analysis.

per-chl ro-eth yl ene. Tetrachloroethylene.

per clu′sion [L. *percludere*, for *praecludere*, to close] Inability to execute any movement.

per″co-la′tion [L. *percolatio*, from *percolare*]. The process of extracting the soluble constituents of substance by allowing suitable solvent to pass through column of the powdered substance placed in long, conical vessel, the percolator —**per′colate**, *v., n.*

per co la″tor [*percolare*]. A long, conical essel with delivery t be t the lower extremity used in extracting the soluble constituents of substance, packed in the percolator by means of suitable solvent passing through it.

per′co morph [L. *perca*, perch; G *morphē*, form] A fish of the order Acanthopteri (Percomorphi), which includes the genera *Thunnus*, *Xiphias*, *Stereolepis*, *Scomber* and others.
p.-liver oil. A mixture containing the fixed oils from the fresh livers of the percomorph fishes and not more than 50% of other fish-li er oil. It has potency of not less than 60,000 U S P units of vitamin A and ot less than 8500 U.S.P units of vitamin D per gram. It is marketed under the trade-mark oleum percomorphum.

percorten. A trade-mark for desoxycorticosterone acetate.

per-cus sion [L. *percussio*, striking]. The act of firmly tapping the surface of the body with finger or small hammer to licit sounds, or vibratory sensations, of diagnostic value.
auditory p. That in which attention is concentrated upon the character of the sounds produced
auscultatory p. That in which the sound is received through stethoscope, the bell of which is placed on the skin, while the examiner either scratches the skin surface or percusses lightly in the near vicinity
definitive p. Percussion whose purpose is to outline the borders of viscus.
direct p. Striking the skin directly with the pads of one or two fingers without the interposition of pleximeter Also called *immediate p.*
indirect p. That effected by placing pleximeter against the skin surface to receive the tap. Also called *mediate p.*
orthopercussion. The use of cylindrical pleximeter placed with its long axis perpendicular to the surface of the body for the purpose of sharply demarcati g the border of an internal organ, especially the heart. The two distal phalanges of finger flexed at right angle, or glass rod or other mechanical object, may be used as pleximeter
palpatory p. Direct percussion, in which attention is concentrated upon the sensation of resistance detected by the one or two fingers used as plexor
qualitative p. That used to determine the physical state of the underlying tissues.
threshold p. The determination of the border of viscus by the transition from no sound to the least audible sound, when percussion strokes of minimum force are used.

per cu sor [L., from *percutere*, to strike]. A person who performs percussion.

per″cu ta ne-ous [L. *per* through; *cutis*, skin]. Performed through the skin.

Perdrau's method. See under *stain*.

pe rei rine (peh-ray reen, -rin, peh-rye) $C_{20}H_{26}ON_2(?)$ An amorphous alkaloid found in the bark of *Geissospermum laeve*. Formerly used as an antiperiodic.

Perez, Fernand [Argentinian bacteriologist, 18 -1935]. Isolated and named *Coccobacillus foetidus ozaenae*, the supposed cause of ozena (1899); also called *Perez' bacillus*, now called *Salmonella foetida*.

per′for ans (pur for-anz) [L. *perforare*, to pierce through]. Penetrating or perforating: term pplied to muscle, artery or nerve perforating part.

per'for-ate [*perforare*]. In biology, pierced with small holes.

per'fo-ra"ted [*perforare*]. Pierced through.

per"fo-ra'tion [*perforare*]. 1. The act or occurrence of piercing or boring into a part, especially into the wall of a hollow organ or viscus. 2. A hole made through a part or wall of a cavity produced by a variety of means.

per'fo-ra"tor [*perforare*]. An instrument for perforating, especially one for performing craniotomy on the fetus.

per"fo-ra-to"ri-um [*perforare*]. The pointed tip differentiated from the acrosome in the spermatozoa of some animals.

per"fri-ca'tion [L. *perfricare*, to rub all over]. Inunction.

per-fu'sion [L. *perfusio*, from *perfundere*, to pour over]. 1. A pouring of fluid. 2. The passage of fluid through spaces. 3. The introduction of fluids into tissues by their injection into arteries.

perhydrol. Trade-mark for a 30 per cent solution of hydrogen peroxide.

per'i- [G., about, around]. A prefix signifying *about, beyond, around, near*; especially *enclosing a part* or *affecting the tissues around a part*.

per"i-ad"e-ni'tis [*peri*; G. *adēn*, gland; *-itis*, inflammation]. Inflammation of the tissues that surround a gland or lymph node.

p. mucosa necrotica recurrens. A disorder characterized by recurring necrotic or ulcerative lesions occurring on the buccal and pharyngeal mucosa. Begins as a small, smooth, hard nodule that sloughs, leaving a deep crateriform depression. May occur on the tongue or genitalia as well. Described by R. L. Sutton, Sr. (1911).

per"i-a"li-en-i'tis (perr"ee-ayl"yen-eye'tis, -ay"lee-en-eye'tis) [*peri*; L. *alienus*, foreign; *-itis*]. Noninfectious inflammation due to a foreign body. Also called *foreign-body reaction, perixenitis*.

per"i-a'nal [*peri*; L. *anus*, anus]. Situated or occurring around the anus.

per"i-an"gi-i'tis [*peri*; G. *angeion*, vessel; *-itis*, inflammation]. Inflammation of the outer coat of, or the tissues surrounding, an artery, vein, or lymphatic vessel.

per"i-an"gi-o-cho-li'tis (perr"ee-an"jee-o-ko-lye'tis) [*peri*; *angeion*; G. *cholē*, bile; *-itis*]. Inflammation of the tissues surrounding the biliary ducts.

per"i-a"or-ti'tis [*peri*; G. *aortē*, aorta; *-itis*]. Inflammation of the tissues surrounding the aorta.

per"i-ap'i-cal. Around an apex.

per"i-ap-pen"di-ci'tis [*peri*; L. *appendix*, appendage; G. *-itis*, inflammation]. Inflammation of the tissue around the vermiform process, or of the serosal region of the appendix.

per"i-ap-pen-dic'u-lar [*peri*; *appendix*]. Surrounding the vermiform, or any other appendix.

per"i-ar-te'ri-al [*peri*; G. *artēria*, artery]. Surrounding an artery.

per"i-ar"te-ri'tis [*peri*; *artēria*; G. *-itis*, inflammation]. Inflammation of the adventitia of an artery and the periarterial tissues.

disseminated necrotizing p. See *polyarteritis nodosa*.

p. nodosa. See *polyarteritis nodosa*.

per"i-ar-thri'tis [*peri*; G. *arthron*, joint; *-itis*]. Inflammation of the tissues about a joint.

p. calcarea. Calcification of the musculotendinous cuff of the shoulder joint.

p. of the shoulder. See *frozen shoulder*.

scapulohumeral p. See *frozen shoulder*.

per"i-ar-tic'u-lar [*peri*; L. *articulus*, joint]. About a joint.

per"i-a'tri-al [*peri*; L. *atrium*, atrium]. Situated around the atria of the heart.

per"i-au-ric'u-lar [*peri*; L. *auricula*, external ear]. *Around the external ear.*

per"i-ax'i-al [*peri*; L. *axis*, axle]. Surrounding an axis.

per"i-blep'sis [G. *periblepsis*, gazing around]. The wild look of a patient in delirium. Also called *periblepsia*.

per"i-bron'chi-al (perr"i-brong'kee-ul) [G. *peri*, about, around; *bronchos*, windpipe]. Surrounding or occurring about a bronchus.

per"i-bron-chi'o-lar (perr"i-brong"kee-o'lur, brong-kigh'o-lur) [*peri*; G. *bronchia*, bronchial tubes]. Surrounding the bronchioles.

per"i-bron"chi-o-li'tis (-brong"kee-o-lye'tis) [*peri*; *bronchia*; G. *-itis*, inflammation]. Inflammation of the tissues around the bronchioles.

per"i-bron-chi'tis [*peri*; G. *bronchos*, windpipe; *-itis*]. Inflammation of the tissues around bronchi.

per"i-bro'sis [G. *perībrōsis*, ulceration]. Ulceration at the canthus of the eyelid.

per"i-cap'il-lar"y (perr"i-kap'i-lerr"ee) [G. *peri*, about, around; L. *capillus*, hair]. Surrounding a capillary.

per"i-car"di-ec'to-my [G. *perikardios*, around the heart; *ektomē*, excision]. Excision of a part of the pericardium.

per"i-car"di-o-cen-te'sis [*perikardios*; G. *kentēsis*, pricking]. Puncture of the pericardium.

per"i-car"di-ol'y-sis [*perikardios*; G. *lysis*, loosing]. Cardiolysis.

per"i-car"di-o-pleu'ral (perr"i-kahr"dee-o-ploor'ul) [*perikardios*; G. *pleura*, rib]. Relating to the pericardium and to the pleura.

per"i-car"di-or'rha-phy [*perikardios*; G. *rhaphē*, suture]. The suturing of a wound in the pericardium.

per"i-car"di-os'to-my [*perikardios*; G. *stoma*, mouth]. The establishing by surgical means of an opening into the pericardium, for repair of wounds of the heart or for drainage of the pericardial sac.

per"i-car"di-ot'o-my [*perikardios*; G. *tomē*, cutting]. Incision of the pericardium.

per"i-car-di'tis [*perikardios*; G. *-itis*, inflammation]. Inflammation of the pericardium. The symptoms are slight fever, precordial pain and tenderness, cough, dyspnea, and rapid pulse. In the early stage, there is a distinct friction sound on auscultation, and sometimes a fremitus on palpation. In the stage of effusion, there are bulging of the precordia and a triangular area of dullness, the base of which is downward; the heart sounds are muffled. In chronic pericarditis with adhesions, there is often systolic retraction of the precordia. The causes of pericarditis are rheumatic fever, tuberculosis, septicemia (as in pneumonia), nephritis, or extension of infection from neighboring parts. —**pericardit'ic**, *adj.*

acute p. An acute inflammation of the pericardium, characterized by serous, fibrinous, purulent, or hemorrhagic exudate.

adhesive p. That in which the two layers of pericardium tend to adhere by means of fibrous adhesions, usually the result of the organization of acute exudate; also called *concretio cordis*.

carcinomatous p. That due to metastatic carcinoma of the pericardium.

constrictive p. A chronic pericarditis in which dense scar tissue in the pericardium interferes either with venous return to the atria or diastolic filling of the ventricles, with consequent reduction in cardiac output; also called *Pick's disease* (for *Friedel Pick*), *chronic cardiac compression*. See *Beck's triads* under Claude S. Beck.

dry p. A form without effusion.

external p. That affecting the outer layer of the parietal pericardium.

fibrinous p. A form in which the pericardium is covered with fibrinous exudate, first soft and buttery in consistence, but later organizing.
fibrinopurulent p. A form in which there is an exudate containing an abundance of neutrophil granulocytes as well as fibrin.
hemorrhagic p. A form in which the fluid contains blood, found most often in tuberculous pericarditis.
localized p. A form giving rise to white areas, the so-called milk spots.
moist p. That attended by an effusion.
p. obliterans. A form leading to obliteration of the cavity by the adhesions of the layers.
purulent p. A variety in which the effused fluid becomes purulent. Syn., *suppurative p.*
rheumatic p. An inflammation of the pericardium due to rheumatic fever.
serofibrinous p. A form in which there is but little fibrin, but a considerable quantity of serous fluid.
suppurative p. See purulent p.
tuberculous p. Acute or chronic pericarditis, usually secondary to tuberculosis of the lungs, pleura, mediastinum, or peribronchial lymph nodes.
uremic p. A fibrinous form occurring in uremia, and probably of chemical origin.

per″i-car′di-um [*perikardion*]. The closed membranous sac enveloping the heart. Its base is attached to the central tendon of the diaphragm; its apex surrounds, for a short distance, the great vessels arising from the base of the heart. It consists of an outer fibrous coat, derived from the cervical fascia, and an inner serous coat. The sac normally contains from 5–20 Gm. of clear serous liquid. The part in contact with the heart (visceral pericardium) is termed the epicardium; the other is the parietal pericardium. See Plate 5. —**pericardiac, pericardial,** *adj.*
bread-and-butter p. A peculiar appearance produced in fibrinous pericarditis by the rubbing of the two surfaces of the membrane over each other.
shaggy p. A pericardium upon which, as the result of fibrinous pericarditis, thick, loose shaggy layers of fibrin are deposited.

per′i-carp [G. *perikarpion*, case of fruit]. *In botany*, the mature ovary wall.

per″i-ce-cal [G. *peri*, around; L. *caecum*, cecum]. Surrounding the cecum.

per″i-ce-ci′tis [*peri*; *caecum*; G. *-itis*, inflammation]. Inflammation of the serosa of the cecum. Syn., *perityphlitis*.

per″i-cel′lu-lar [*peri*; L. *cellula*, small storeroom]. Surrounding a cell.

per″i-ce″men-ti′tis (perr″i-see-men-tye′tis, -sem-en-ty′tis) [*peri*; L. *caementum*, quarrystone; G. *-itis*, inflammation]. Inflammation of the periodontal membrane; periodontitis.

per″i-ce-men″to-cla′si-a (-si-men-to-clay′zhuh, -zee-uh, -shuh, -see-uh) [*peri*; *caementum*; G. *klasis*, breaking]. Breaking down of the periodontium with absorption of the alveolar bone.

per″i-ce-men′tum [*peri*; *caementum*]. Periodontal membrane. —**pericemental,** *adj.*

per″i-cha-rei′a (perr″i-kah-rye′uh) [G. excessive joy]. Sudden vehement or abnormal rejoicing; symptom in certain psychoses, such as mania or general paresis.

per″i-chol″an-gi′tis (perr″i-kol-an-jy′tis, -ko″lan-jy′tis) [G. *peri*, about, around; *cholē*, bile; *angeion*, vessel; *-itis*, inflammation]. Inflammation in the tissues around the bile ducts. Syn., *pericholangiolitis*.

per″i-chol″e-cys′tic (-kol-i-sis′tick, -ko″li-) [*peri*; *cholē*; G. *kystis*, bladder]. Around the gallbladder.

per″i-chol″e-cys-ti′tis (-kol-i-sis-tye′tis, -ko″li-) [*peri*; *cholē*; *kystis*; G. *-itis*, inflammation]. Inflammation of the serosa or tissues around the gallbladder.

per″i-chon-dri′tis (perr″i-kon-dry′tis) [*peri*; G. *chondros*, cartilage; *-itis*]. Inflammation of perichondrium. —**perichondritic,** *adj.*

per″i-chon′dri-um (perr″i-kon′dree-um) [*peri*; *chondros*]. The fibrous connective tissue covering cartilage, except articular surfaces. —**perichondral,** *adj.*

per″i-chon-dro′ma [*peri*; *chondros*; G. *-ōma*, tumor]. A tumor of the perichondrium.

per′i-chord [*peri*; G. *chordē*, string]. The sheath of the notochord. —**perichor′dal,** *adj.*

per″i-cho′roid (perr″i-kor′oyd) **per″i-cho-roi′dal** (perr″i-ko-roy′dul) [*peri*; G. *choroeidēs*, choroid]. Surrounding the choroid.

per″i-cla′si-a (perr″i-clay′zhuh, -see-uh, -shuh, -see-uh). See *periodontoclasia*.

per″i-col′ic [*peri*; G. *kolon*, colon]. Surrounding or about the colon.

per″i-co-li′tis [*peri*; *kolon*; G. *-itis*, inflammation]. Inflammation of the peritoneum or tissues around the colon. Also called *pericolonitis*.

per″i-col-pi′tis. See *paracolpitis*.

per″i-con′chal (perr″i-kong′kul) [*peri*; G. *konchē*, mussel]. Surrounding the concha of the ear.

per″i-con-chi′tis (perr″i-kong-kigh′tis) [*peri*; *konchē*; G. *-itis*, inflammation]. Inflammation of the periosteum or lining membrane of the orbit. *Obs.*

per″i-cor′ne-al [*peri*; L. *corneus*, horny]. Surrounding the cornea.

per″i-cor″o-ni′tis [*peri*; L. *corona*, crown; G. *-itis*, inflammation]. Inflammation of the tissue surrounding the coronal portion of the tooth, usually a partially erupted third molar.

per″i-cow″per-i′tis [*peri*; after William Cowper, English surgeon; *-itis*]. Inflammation of the tissues about Cowper's glands. *Obs.*

per″i-cra′ni-um [G. *perikranion*, around the skull]. The periosteum on the outer surface of the cranial bones. —**pericranial,** *adj.*

per″i-cys′tic [G. *peri*, about, around; *kystis*, bladder]. 1. Surrounding a cyst. 2. Surrounding bladder, either the gallbladder or the urinary bladder.

per″i-cys-ti′tis [*peri*; *kystis*; G. *-itis*, inflammation]. 1. Inflammation surrounding a cyst. 2. Inflammation of the peritoneum or other tissue surrounding the urinary bladder.

per″i-cys′ti-um [*peri*; *kystis*]. 1. The vascular wall of a cyst. 2. The tissues surrounding a bladder.

per′i-cyte. 1. A histiocyte occurring outside the wall of a vessel. 2. A special cell, according to some authorities, sometimes seen around a capillary or capillary arteriole, with dendritic processes about the vessel and exhibiting contractile properties, and thus similar to Rouget cells; also called *p. of Zimmermann*.

per″i-cy′ti-al (perr″i-sish′ee-ul, -sish′ul, -sit′ee-ul) [*peri*; G. *kytos*, cell]. Surrounding a cell.

per″i-den′tist-ry. See *periodontics*.

per″i-den-drit′ic [*peri*; G. *dendritēs*, of a tree]. Surrounding a dendrite.

per″i-den′tal [*peri*; L. *dens*, tooth]. Surrounding a tooth or its root; periodontal.

per″i-den-ti′tis [*peri*; *dens*; G. *-itis*, inflammation]. Inflammation around a tooth; periodontitis.

per′i-derm [*peri*; G. *derma*, skin]. The superficial transient layer of epithelial cells of the embryonic epidermis. Syn., *epitrichium*.

per″i-di″ver-tic″u-li′tis [*peri*; L. *diverticulum*, bypath; G. *-itis*, inflammation]. Inflammation of the structures surrounding a diverticulum.

per"i·du"o·de·ni'tis [*peri*; L. *duodeni*, twelve; *-itis*]. Inflammation, acute, chronic, or with fibrous adhesions, in the tissues surrounding the duodenum.

per"i·du'ral. Situated about the dura mater especially outside that of the spinal cord.

per"i·en·ceph"a·li'tis [*peri*; G. *enkephalos*, brain; *-itis*]. Inflammation of the pia mater and the cortex of the brain.

per"i·en·ceph"a·lo·men"in·gi'tis [*peri*; *enkephalos*; G. *mēninx*, membrane; *-itis*]. See *periencephalitis*.

per"i·en·ter'ic [*peri*; G. *enteron*, intestine]. Situated around the enteron; perivisceral.

per"i·en"ter·i'tis [*peri*; *enteron*; G. *-itis*, inflammation]. Inflammation of the intestinal peritoneum.

per"i·ep·en'dy·mal [*peri*; G. *ependyma*, upper garment]. Surrounding the ependyma.

per"i·e·soph"a·ge'al (perr"ee-ee-so-fadj'ee-ul, -fadj'ul) [*peri*; G. *oisophagos*, esophagus]. Situated, or occurring just outside of, or around, the esophagus.

per"i·e·soph"a·gi'tis [*peri*; *oisophagos*; G. *-itis*, inflammation]. Inflammation of the tissues that surround the esophagus.

per"i·fis'tu·lar [*peri*; L. *fistula*, tube]. Around or about a fistula.

per"i·fol·lic'u·lar. Surrounding a follicle.

per"i·fol·lic"u·li'tis [*peri*; L. *folliculus*, small bag; G. *-itis*, inflammation]. Inflammation around the hair follicles.

p. capitis abscedens et suffodiens. A rare form of suppurating and cicatrizing disease of the scalp. Nodules and abscesses occur that terminate with scars. A chronic recurring disease that is resistant to treatment.

superficial pustular p. Impetigo follicularis.

per"i·gan"gli·i'tis [*peri*; G. *ganglion*, encysted tumor on a tendon; *-itis*]. Inflammation of the tissues surrounding a ganglion.

per"i·gan"gli·on'ic [*peri*; *ganglion*]. Situated, or occurring, around a ganglion.

per"i·gas'tric [*peri*; G. *gastēr*, belly]. Surrounding, or in the neighborhood of, the stomach.

per"i·gas·tri'tis [*peri*; *gastēr*; G. *-itis*, inflammation]. Inflammation of the serosa of the stomach.

per"i·glan'du·lar [*peri*; L. *glandulae*, glands of the throat]. Pertaining to the tissue surrounding a gland.

per"i·glot'tic [*peri*; G. *glōttis*, glottis]. Situated around the base of the tongue and the epiglottis.

per"i·glot'tis [G. covering of the tongue]. The mucous membrane of the tongue. O.T.

per"i·gnath'ic (perr"i-nath'ick, -nay'thick) [G. *peri*, about, around; *gnathos*, jaw]. Situated about the jaws.

per"i·he·pat'ic [*peri*; G. *hēpar*, liver]. Surrounding, or occurring around, the liver.

per"i·hep"a·ti'tis [*peri*; *hēpar*; G. *-itis*, inflammation]. Inflammation of the peritoneum surrounding the liver.

chronic hyperplastic p. See *polyserositis*.

per"i·her'ni·al [*peri*; L. *hernia*, hernia]. Around or surrounding a hernia.

per"i·hi'lar. Around a hilus.

per"i·hys·ter'ic [*peri*; G. *hystera*, womb]. Around the uterus; periuterine.

per"i·je·ju·ni'tis (perr"i-jee"jew-nigh'tis, -jedj"oo-nigh'tis) [*peri*; L. *jejunus*, empty; G. *-itis*, inflammation]. Inflammation of the peritoneal coat or tissues around the jejunum.

per"i·kar'y·on [*peri*; G. *karyon*, nut]. 1. The cell body of a neuron, containing the nucleus and well-defined nucleolus. 2. A circumnuclear cytoplasmic mass.

per"i·ker·at'ic [*peri*; G. *keras*, horn]. Surrounding the cornea.

per"i·lab·y·rin·thi'tis [*peri*; G. *labyrinthos*, labyrinth; *-itis*, inflammation]. Inflammation in the osseous labyrinth of the internal ear.

per"i·la·ryn'ge·al (perr"i-la-rin'jul, -jee-ul, -lar"in-jee'ul) [*peri*; G. *larynx*, larynx]. Situated, or occurring, around the larynx.

per"i·lar"yn·gi'tis [*peri*; *larynx*; G. *-itis*, inflammation]. Inflammation of the areolar tissue surrounding the larynx.

per"i·lymph [*peri*; L. *lympha*, water]. The fluid separating the membranous from the osseous labyrinth of the internal ear.

per"i·lym·phan'ge·al [*peri*; *lympha*; G. *angeion*, vessel]. Situated, or occurring, around a lymphatic vessel.

per"i·lym"phan·gi'tis [*peri*; *lympha*; *angeion*; G. *-itis*, inflammation]. Inflammation of the tissues surrounding a lymphatic vessel.

per"i·lym·phat'ic [*peri*; L. *lymphaticus*, from *lympha*]. 1. Pertaining to the perilymph. 2. Situated or occurring about a lymphatic vessel.

per"i·mas·ti'tis [*peri*; G. *mastos*, breast; *-itis*, inflammation]. Inflammation of the fibrofatty tissues around the mammary gland.

per"i·men"in·gi'tis. See *pachymeningitis*.

per·im'e·ter [G. *perimetros*, circumference]. 1. Circumference or border. 2. An instrument for measuring the extent of the field of vision. It consists ordinarily of a flat, narrow metal plate bent in a semicircle, graduated in degrees, and fixed to an upright at its center by a pivot, on which it is movable. Variously colored disks are moved along the metal plate, and the point noted at which the person, looking directly in front of him, distinguishes the color.

per"i·met'ric [G. *peri*, about, around; *mētra*, womb]. Situated around the uterus.

per"i·met'ric [G. *perimetros*, circumference]. Pertaining to perimetry.

per"i·me·tri'tis [G. *peri*, about, around; *mētra*, womb; *-itis*, inflammation]. Inflammation of the tissues about the uterus. —**perimetrit'ic**, *adj.*

per"i·me'tri·um [*peri*; *mētra*]. The serous covering of the uterus.

per"i·met"ro·sal"pin·gi'tis [*peri*; *mētra*; G. *salpinx*, tube; *-itis*, inflammation]. A collective name for periuterine inflammations.

per·im'e·try [G. *perimetros*, perimeter]. The measuring of the field of vision.

per·im'e·trist. One who performs perimetry.

per·it'o·my. 1. The removal of a strip of conjunctival and subconjunctival tissue from about the cornea for the relief of pannus. 2. The cutting of the conjunctiva at the limbus prior to enucleation. Formerly called *peridectomy*, *periktomy*.

per"i·my"e·li'tis [G. *peri*, around, about; *myelos*, marrow; *-itis*, inflammation]. 1. Inflammation of the pia mater of the spinal cord. 2. Inflammation of the endosteum.

per"i·my"o·si'tis [*peri*; G. *mys*, muscle; *-itis*]. Inflammation of the connective tissues around muscle.

per"i·mys'i·um (perr"i-mish'ee-um, -mis'ee-um, -miz'ee-um) [*peri*; *mys*]. The connective tissue enveloping bundles of muscle fibers. —**perimysial**, *adj.*

p. externum. The epimysium.

p. internum. The endomysium.

per"i·ne·o- [G. *perinaios*, space between the anus and the scrotum]. A combining form denoting *relating to the perineum*.

per"i·ne'o·cele [*perinaios*; G. *kēlē*, hernia]. Perineal hernia.

per"i·ne"o·col"po·rec"to·my"o·mec'to·my

[*perineo*; G. *kelpos*, vagina; L. *rectus*, straight; G. *mys*, muscle; *ektomē*, excision]. Excision of myoma by incision of the perineum, vagina, and rectum. *Obs.*

per"i·ne·om'e·ter Instrument used to measure the strength of voluntary muscle contractions about the vagina and urethra.

per"i·ne·o·plas"ty [*perineo*; G. *plassein*, to form]. Plastic operation upon the perineum.

per"i·ne·or'rha·phy [*perineo*; G. *rhaphē*, suture]. Suture of the perineum, usually for the repair of laceration occurring during labor.

per"i·ne·o·scro'tal [*perineo*; L. *scrotum*, scrotum]. Relating to the perineum and scrotum.

per"i·ne"o·syn'the·sis [*perineo*; G. *synthesis*, putting together]. A plastic operation upon the perineum in which a graft of vaginal mucosa is made to cover the wound; a variety of perineorrhaphy. *Obs.*

per"i·ne·ot'o·my [*perineo*; G. *tomē*, a cutting]. Incision through the perineum in gynecologic surgery; an incision into and repair of the perineum for the purpose of enlarging the introitus.

per"i·ne"o·vag'i·nal (perr"i-nee"o-vadj'i-nul, -va-jy'nul) [*perineo*; L. *vagina*, vagina]. Relating to the perineum and vagina.

per"i·ne·o·va·gi"no·rec'tal [*perineo*; *vagina*; L. *rectus*, straight]. Relating to the perineum, vagina, and rectum.

per"i·neph'ric [G. *peri*, around; *nephros*, kidney]. Situated or occurring around the kidney, as perinephric abscess.

per"i·ne·phri'tis [*peri*; G. *nephros*, kidney; -*itis*, inflammation]. Inflammation of the tissues surrounding the kidney. —**perinephrit'ic**, *adj.*

per"i·neph'ri·um [*peri*; *nephros*]. The connective and adipose tissue surrounding the kidney. —**perinephrial**, *adj.*

per"i·neph'ros. See *perinephrium*.

per"i·ne'um [G. *perinaios*, space between the anus and scrotum]. 1. That portion of the body included in the outlet of the pelvis, bounded in front by the pubic arch, behind by the coccyx and sacrotuberous ligaments, and at the sides by the tuberosities of the ischium. In the male it is occupied by the anal canal, membranous urethra, and root of the penis, in the female by the anal canal, urethra, root of the clitoris, and vaginal orifice; in both sexes by the muscles, fasciae, vessels, and nerves of these structures. 2. The region between the anus and the scrotum in the male; between the anus and the posterior commissure of the vulva in the female. —**perineal**, *adj.*

primary p. A temporary perineum, present in the embryo after rupture of the cloacal membrane, formed by the caudal end of the urorectal septum with its endodermal covering. Also called *primitive perineal body*.

per"i·neu·ral an·al·ge'si·a (an·al·jee'see·uh, -see·uh) Analgesia resulting from injection of an analgesic solution into the immediate vicinity of a nerve trunk to the area.

per"i·neu"ral·fi"bro·blas·to'ma. See *neurogenic sarcoma*.

per"i·neu·ri'tis [G. *peri*, around; *neuron*, nerve; -*itis*, inflammation]. Inflammation of the perineurium.

retrobulbar p. Inflammation of the sheath of the orbital part of the optic nerve.

per"i·neu'ri·um [*peri*; *neuron*]. The connective-tissue sheath investing a fasciculus or primary bundle of nerve fibers. —**perineurial**, *adj.*

per"i·nu'cle·ar [*peri*; L. *nucleus*, kernel]. Surrounding a nucleus.

per"i·oc'u·lar [*peri*; L. *oculus*, eye]. Surrounding the eye, as the periocular space, the space between the globe of the eye and the orbital walls.

pe'ri·od [G. *periodos*, going around, cycle]. Duration; measure of time. The space of time during which anything is in progress or an event occurs.

childbearing p. The time of life, from puberty to the menopause, during which a woman is capable of reproduction.

gestation p. The period of pregnancy. The average length of human gestation is taken as ten lunar months (280 days) from the onset of the last menstrual period with a variation between 250 and 310 days. See Table of the Duration of Pregnancy in the Appendix.

incubation p. The time required for an infective agent to produce symptoms.

isoelectric p. A period of the heart's cycle in which the galvanometric string stands at zero.

lag p. A period of delayed growth observed following the transfer of an old bacterial culture to a new medium.

last menstrual p. Abbreviated, L.M.P. See gestation p., menstrual p.

latent p. (a) Incubation period. (b) In physiology, the time intervening between the application of a stimulus and the appearance of the resulting phenomenon. (c) In radiology, the elapsed time between the exposure to radiation and the appearance of morphologic or physiologic effects.

menstrual p. The menses. Also called *monthly p.*

patent p. The time in parasitic disease during which parasites are demonstrable in the body.

postsphygmic p. Period of isometric relaxation of the heart muscle at the beginning of diastole.

presphygmic p. Period of isometric contraction of the heart muscle at the beginning of ventricular systole.

reaction p. The time required for the body to respond to some form of stimulation or injury.

refractory p. The period following adequate stimulation of an irritable tissue, divided into the brief **absolute refractory p.**, in which no stimulus, however strong, can excite a response, and the **relative refractory p.** of decreased excitability. It occurs only in tissues subject to the all-or-nothing law (e.g., nerve, striated muscle, heart).

respiratory p. The interval between two successive inspirations.

safe p. The nonovulatory phase of the menstrual cycle, when conception cannot occur. Since the time of ovulation is variable in different women, the safe period is also variable.

per i'o·date (pur·eye'o·date) A salt of periodic acid.

pe"ri·od'ic [G. *periodikos*, periodical]. Recurring at more or less regular intervals.

per"i·od'ic ac'id (pur"eye·od'ick). $HIO_4 \cdot 2H_2O$. A colorless, crystalline acid used as an oxidizing agent.

pe"ri·o·dic'i·ty [*periodikos*]. Recurrence at regular intervals.

pe"ri·od'ic ta'ble. A table of chemical elements arranged according to the law that chemical and physical properties of elements are periodic functions of their atomic numbers.

per"i·o·don'tal, per"i·o·don'tic [G. *peri*, around; *odous*, tooth]. 1. Surrounding a tooth, as the periodontal membrane, which covers the cement of a tooth. 2. Pertaining to the periodontium or to periodontia.

per"i·o·don'tics, per"i·o·don'ti·a [*peri*; *odous*]. That branch of dentistry dealing with the science and treatment of periodontal disease.

per"i·o·don'tist [*peri*; *odous*]. One who is versed in and practices periodontia.

per″i-o-don-ti′tis [peri; odous; G. -itis, inflammation]. Inflammation of the periodontal membrane. Also called *pericementitis simplex*.
chronic periapical p. Localized nodule of organizing and calcifying inflammation at or near the apex of a tooth. Syn., dental granuloma.
complex p. Periodontitis secondary to periodontosis; sometimes used as a synonym for *periodontosis*.
periapical p. Inflammation at the apex of a tooth.
Vincent's p. See necrotizing ulcerative gingivitis.

per″i-o-don′ti-um (perr″ee-o-don′shee-um) [peri; odous]. The investing and supporting tissues surrounding a tooth, namely, the periodontal membrane, the gingiva, and the alveolar bone.

per″i-o-don″to-cla′si-a (perr″ee-o-don″to-clay′zhuh, -zee-uh, -shuh, -see-uh) [peri; odous; G. *klasis*, a breaking]. General term for periodontal diseases that result in the destruction of the periodontium.

per″i-o-don-tol′o-gy The science and study of the periodontium and periodontal diseases.

per″i-o-don-to′sis [peri; odous; G. -osis, condition]. A degenerative disturbance of the periodontium, characterized by degeneration of connective-tissue elements of the periodontal membrane and by bone resorption. Also called *cementopathia*, *diffuse alveolar atrophy*.

pe-ri-od′o-scope [G. *periodos*, cycle; *skopein*, to examine]. A calendar in the form of a movable dial, used in determining the probable date of confinement.

per″i-o-dyn′i-a [periodos; G. *odynē*, pain]. Severe general pain throughout the body.

per″i-om-phal′ic [G. *peri*, around; *omphalos*, navel]. Around, or near, the umbilicus.

per″i-o-nych′i-a (perr″ee-o-nick′ee-uh) [peri; G. *onyx*, nail]. Inflammation around the nails.

per″i-o-nych′i-um (perr″ee-o-nick′ee-um) [peri; onyx]. The border of epidermis surrounding an entire nail.

per″i-o-oph-o-ri′tis [peri; G. *ōophoros*, bearing eggs; -itis, inflammation]. Inflammation of the peritoneum, ovary, and the adjacent connective tissue.

per″i-o-oph″or-o-sal″pin-gi′tis [peri; ōophoros; G. *salpinx*, trumpet; -itis]. Inflammation of the tissues surrounding an ovary and oviduct.

per″i-o-o-the-ci′tis. Perioophoritis. *Obs.*

per″i-o-o-the″co-sal″pin-gi′tis. Old term for perioophorosalpingitis.

per″i-o-ple [peri; G. *hoplē*, hoof]. The outer layer of horny tissue of the hoof secreted by the perioplic ring. It extends downward over the wall of the hoof, acting as an impervious protective covering.

per″i-op-tom′e-try [peri; G. *optos*, visible; *metron*, measure]. The measurement of the limits of the visual field.

per″i-or′al [peri; L. *os*, mouth]. Surrounding the mouth; circumoral.

per″i-or′bit, per″i-or′bi-ta [peri; L. *orbita*, path]. The periosteum within the orbit. —**periorbital,** *adj.*

per″i-or″bi-ti′tis [peri; *orbita*; G. -itis, inflammation]. Inflammation of the periorbit.

per″i-os″te-i′tis. See *periostitis*.

per″i-os′te-o-phyte″ [G. *periosteos*, around the bones; *phyton*, plant]. A morbid osseous formation upon or proceeding from the periosteum.

per″i-os″te-ot′o-my [periosteum; G. *tomē*, a cutting]. An incision into periosteum.

per″i-os′te-um [periosteos]. A fibrous membrane investing the surfaces of bones, except at the points of tendinous and ligamentous attachment and on the articular surfaces, where cartilage is substituted. —**periosteal,** *adj.*

per″i-os-ti′tis [periosteum; G. -itis, inflammation]. Inflammation of periosteum. It may be acute or chronic, the latter being the more frequent form. It is caused by trauma or infection. The exudative forms show serous, fibrinous, leukocytic, or purulent exudate. The proliferative forms are characterized by local or diffuse formation of collagenous fibrous tissue or bone. —**periostit′ic,** *adj.*

per″i-os-to′ma [periosteum; G. -ōma, tumor]. Any morbid osseous growth occurring on or surrounding a bone.

per″i-os-to′sis [periosteum; G. -osis, condition]. An osseous formation on the exterior of a bone.

per″i-o′tic (perr″ee-o′tick, -ot′ick) [G. *peri*, around; *ous*, ear]. 1. Situated about the ear. 2. Of or pertaining to the parts immediately about the internal ear.

per″i-o″va-ri′tis. See *perioophoritis*.

per″i-o′vu-lar [peri; L. *ovum*, egg]. Surrounding the ovum.

per″i-pach″y-men″in-gi′tis (perr″i-pack″i-men″in-jy′tis) [peri; G. *pachys*, thick; *mēninx*, membrane; -itis, inflammation]. Inflammation of the connective tissue outside the dura mater.

per″i-pan″cre-a-ti′tis [peri; G. *pankreas*, pancreas; -itis]. Inflammation of the tissues around the pancreas.

per″i-pap′il-lar″y (perr″i-pap′il-err″ee) [peri; L. *papilla*, nipple]. Occurring or situated around the circumference of a papilla, and especially of the optic disk.

per″i-phak′um (perr″i-fack′um, -fay′kum) [peri; G. *phakos*, lentil]. The capsule surrounding the crystalline lens.

per″i-pha-ryn′ge-al (perr″i-fa-rin′jee-ul, -far″in-jee′ul) [peri; G. *pharynx*, pharynx]. Surrounding the pharynx.

pe-riph′er-al ref′er-ence. That condition in which, from 10 to 14 weeks following section of a peripheral sensory nerve, tactile and painful stimuli and stimuli of cold, applied within the originally anesthetic area, elicit mixed sensations at the edge of the area of sensory change. This gradually disappears as the true stimulated point becomes perceptible.

pe-riph″er-o-phose″ (peh-rif″ur-o-fohz″, perr″i-ferr″oh-fohz) [G. *periphereia*, circumference; *phōs*, light]. An aphose originating in the peripheral organs of vision (the optic nerve or the eyeball).

pe-riph″er-o-phose″ (peh-rif″ur-o-fohz″) [periphereia; *phōs*]. A phose originating in the peripheral organs of vision (the optic nerve or the eyeball).

pe-riph′er-y [periphereia]. Circumference; the external surface. —**peripheral,** *adj.*

per″i-phle-bi′tis [G. *peri*, around; *phleps*, vein; -itis, inflammation]. Inflammation of the tissues about a vein. —**periphlebit′ic,** *adj.*

Per″i-pla-ne′ta (perr″i-pla-nee′tuh) [peri; G. *planētēs*, wanderer]. A genus of cockroaches; the species *P. americana* and *P. orientalis* have served as alimentary hosts for the tapeworm *Hymenolepis diminuta* and may transmit pyogenic bacteria, helminthic ova, and protozoan cysts mechanically.

per″i-pleu-ri′tis (perr″i-ploo-rye′tis) [peri; G. *pleura*, rib; -itis, inflammation]. Inflammation of the tissues outside the parietal pleura.

pe-rip″lo-bi′ose. $C_{13}H_{24}O_{10}$, the disaccharide obtained on hydrolysis of periplocin. Hydrolysis of periplobiose yields the monosaccharides cymarose ($C_7H_{14}O_4$) and *d*-glucose.

pe-rip′lo-cin, per″i-plo′cin. $C_{36}H_{56}O_{13}$. A cardioactive steroidal glycoside from *Periploca graeca* and hydrolysis yields periplogenin and the sugar

periplobiose. Syn., *glucoperiplocymarin, periplocoside.*

pe·rip"lo·cy·mar'in. $C_{30}H_{46}O_8$; a cardioactive steroidal glycoside from *Periploca graeca*, acid hydrolysis yields periplogenin and the sugar cymarose ($C_7H_{14}O_4$).

pe·rip"lo·gen'in. $C_{23}H_{34}O_5$; the steroidal aglycone of periplocin and periplocymarin; desoxostrophanthidin.

per"i·por·i'tis. Miliaria pustulosa.

per"i·por'tal [*peri*; L. *porta*, gate]. Surrounding the portal vein and its branches.

per"i·proc'tal, per"i·proc'tic [*peri*; G. *prōktos*, anus]. Surrounding the anus or rectum.

per"i·proc·ti'tis [*peri*; *prōktos*; G. *-itis*, inflammation]. Inflammation of the connective tissue about the rectum or anus.

per"i·pro·stat'ic [*peri*; G. *prostatēs*, one who stands before]. Situated or occurring around the prostate.

per"i·pros"ta·ti'tis [*peri*; *prostatēs*; G. *-itis*, inflammation]. Inflammation of the tissue situated around the prostate.

per"i·py"e·li'tis. Inflammation about the renal pelvis.

per"i·py·e'ma (perr"i-pye ee'muh) [G., suppuration around, about]. Suppuration about an organ or tissue. *Rare.*

per"i·py"le·phle·bi'tis [G. *peri*, around; *pylē*, gate; *phleps*, vein; *-itis*, inflammation]. Inflammation of the tissues surrounding the portal vein.

per"i·py·lor'ic (perr"i-pye·lor'ick, ·pi·lor'ick) [*peri*; G. *pylōros*, gate-keeper]. Surrounding the pylorus.

per"i·rec'tal [*peri*; L. *rectus*, straight]. About the rectum.

per"i·rec·ti'tis. See *periproctitis*.

per"i·re'nal [*peri*; L. *renes*, kidneys]. Around a kidney.

per"i·rhi'nal [*peri*; G. *rhis*, nose]. Situated about the nose or nasal cavities.

per"i·sal"pin·gi'tis [*peri*; G. *salpigx*, trumpet; *-itis*, inflammation]. Inflammation of the peritoneal covering of a uterine tube.

per"i·sal·pin"go·o·va·ri'tis. See *perioophorosalpingitis*.

per"i·sal'pinx [*peri*; *salpigx*]. The peritoneum covering the upper border of a uterine tube.

per"i·sig"moid·i'tis [*peri*; G. *sigmoeidēs*, in the shape of sigma, semicircular; *-itis*, inflammation]. Inflammation of the tissues, especially the peritoneum, covering the sigmoid flexure of the colon.

per"i·sin'u·ous (perr"i·sin'yoo·us) [*peri*; L. *sinus*, hollow]. Surrounding a sinus.

per"i·si"nu·si'tis (·sigh"nuh·sigh'tis, ·sin"yoo·sigh'tis) [*peri*; *sinus*; G. *-itis*, inflammation]. Inflammation of the tissues around a sinus, especially a sinus of the dura mater.

per"i·sper"ma·ti'tis [*peri*; G. *sperma*, seed; *-itis*]. Inflammation around the spermatic cord, with an effusion of fluid; funicular hydrocele.

per"i·splen'ic, per"i·sple'nic [*peri*; G. *splēn*, spleen]. Situated near the spleen.

per"i·sple·ni'tis [*peri*; *splēn*; G. *-itis*, inflammation]. Inflammation of the peritoneum covering the spleen.

p. cartilaginea. Hard, inflammatory overgrowth of the capsule of the spleen. Also called *hyalin capsulitis*.

per"i·spon·dyl'ic [*peri*; G. *spondylos*, for *sphondylos*, vertebra]. Around a vertebra.

per"i·spon"dy·li'tis [*peri*; *spondylos*; G. *-itis*, inflammation]. Inflammation of the tissues around the vertebrae.

per"i·stal'sis [G. *peristaltikos*, clasping and compressing]. A progressive wave of contraction seen in tubes provided with longitudinal and transverse muscular fibers. It consists in a narrowing and shortening of a portion of the tube, which then relaxes, while a distal portion becomes shortened and narrowed. By means of this movement the contents of this tube are forced toward the opening. —**peristal'tic,** *adj.*

reversed p. Peristaltic movement opposite to the normal direction.

per"i·stal'tic rush. An exaggerated peristaltic wave that sweeps extensively over the intestine.

per"i·staph"y·line (perr"i·staf"i·lyne, ·lin, ·leen) [G. *peri*, around; *staphylē*, uvula]. Situated near the uvula.

per"i·staph"y·li'tis [*peri*; *staphylē*; G. *-itis*, inflammation]. Inflammation of the tissues surrounding the uvula.

per"i·sta'sis [G., standing round]. According to Ricker's hypothesis, the early stage of the vascular changes in inflammation. The inactivity of vasoconstrictors leads to hyperemia in arterioles, venules, and capillaries. Subsequently vasoconstriction in the distal segments of the arterioles leads to increased slowing of the blood current, the stage of prestasis. As more proximal segments of arterioles become constricted, the current is further slowed or stopped, the stage of rubrostasis. As arteriolar constriction is subsequently reduced, circulation is resumed, the stage of poststasis or postrubrostasis. This theory supposes a neurogenic basis for these vascular changes. Syn., *peristatic hyperemia*.

pe·ris"ta·le. Peristalsis.

per"i·ste·ro'ma, pe·ris"te·ro·ma. See *peristome*.

per"i·stome [G. *peri*, around; *stoma*, mouth]. 1. *In biology*, the parietal region surrounding the mouth, as the oral disk of a polyp. 2. A fringe of hygroscopic teeth, which lines the opening of the capsule in mosses.

per"i·ston. A preparation of polyvinylpyrrolidone, employed as a substitute for whole blood or plasma.

per"i·syn·o"vi·al [G. *peri*, around; NL. *synovia*]. Situated or occurring around a synovial membrane.

per"i·tec'to·my [*peri*; G. *ektomē*, excision]. Excision of a ring of conjunctiva around, and near to, the cornea.

per"i·ten·din'e·um [*peri*; L. *tendere*, to stretch]. The white, fibrous sheath covering the fiber bundles of tendons.

per"i·ten"di·ni'tis [*peri*; *tendere*; G. *-itis*, inflammation]. Inflammation of the sheath and tissues around a tendon. Syn., *peritenonitis*.

p. calcarea. Calcific deposits in tendons and regional tissues which cause pain and limit motion of the parts.

per"i·ten"on [*peri*; G. *tenōn*, tendon]. Sheath of a tendon.

per"i·ten"o·ni'tis. See *peritendinitis*.

per"i·the"li·o'ma [*peri*; G. *thēlē*, nipple; *-ōma*, tumor]. See *hemangiopericytoma*.

per"i·the'li·um [*peri*; *thēlē*]. The connective tissue accompanying the capillaries and smaller vessels. —**perithelial,** *adj.*

per"i·thy"roid·i'tis [*peri*; G. *thyreoeidēs*, shield-shaped; *-itis*, inflammation]. Inflammation of the capsule of the thyroid gland.

pe·rit'o·my [*peri*; G. *tomē*, cutting]. 1. Excision of a strip of conjunctiva around the cornea, for the treatment of pannus. 2. Obsolete term for circumcision.

per"i·to·ne"al areas. The areas of the peritoneum supplied with sensory fibers from a single spinal nerve.

per"i·to·ne"o·cen·te'sis [G. *peritonaion*, membrane which contains the lower viscera; *kentēsis*, pricking]. Puncture of the peritoneal cavity as for the removal of ascitic fluid.

per″i·to·ne·op′a·thy [*peritonaion*; G. *pathos*, disease]. Any disease or abnormality of the peritoneum.

per″i·to·ne″o·per″i·car′di·al [*peritonaion*; G. *perikardios*, around the heart]. Pertaining to the peritoneum and the pericardium.

per″i·to·ne·o·pex′y [*peritonaion*; G. *pēxis*, a fixing]. Fixation of the uterus by the vaginal route in the treatment of retroflexion of this organ.

per″i·to·ne·o·scope [*peritonaion*; G. *skopein*, to examine]. A long, slender telescope, equipped with sheath, obturator, biopsy forceps, sphygmomanometer bulb and tubing, scissors, syringe, for the visualization of the gas-inflated peritoneal cavity. It is introduced into the peritoneal cavity through a small incision in the abdominal wall and permits diagnosis of abdominal and pelvic tumors, biliary disease, and other intra-abdominal diseases. —**peritoneos′copy**, *n.*

per″i·to·ne·ot′o·my [*peritonaion*; G. *tomē*, a cutting]. Incision into the peritoneum.

per″i·to·ne·um [*peritonaion*]. The serous membrane lining the interior of the abdominal cavity and surrounding the contained viscera. See Plate 13. —**peritoneal**, *adj.*

per″i·to·ni′tis [*peritonaion*; G. *-itis*, inflammation]. Inflammation of the peritoneum.

acute p. That with an abrupt onset and rapid course, characterized by abdominal pain, tenderness, vomiting, constipation, and fever. May be due to irritation or bacterial infection, the latter being the more serious.

adhesive p. That characterized by the formation of fibrous bands between peritoneal surfaces.

aseptic p. A type due to irritation of the peritoneum by chemicals, either occurring naturally as from bile, or introduced from without, as by antiseptic solutions, by x-ray or radium, or by mechanical means, as during the course of an operation.

chronic p. That due to infection of the peritoneum by tuberculosis or actinomycosis, or occurring as a residual peritonitis from an acute attack.

diffuse p. A type in which the inflammation is widespread over all, or almost all, of the peritoneum. Also called *generalized p.*

gelatinous p. See *pseudomyxoma peritonei.*

localized p. That in which only a part of the peritoneum is involved, as a local area of inflammation associated with appendicitis.

pelvic p. That which involves only the pelvic peritoneum, frequently associated with infection of the uterine tubes in women.

pneumococcal p. That caused by pneumococci.

primary p. One in which the infection is carried to the peritoneum by the blood or lymph stream.

puerperal p. One following childbirth; associated with infection of the uterus and adnexa.

purulent p. That characterized by the formation of pus.

secondary p. The most usual type of peritonitis, due to extension of infection from neighboring parts, the rupture of a viscus or an abscess, trauma, or as a result of irritation.

streptococcal p. That caused by streptococci.

tuberculous p. Invasion of the peritoneal cavity by *Mycobacterium tuberculosis*, occurring most often in adolescents and young adults, and characterized by abdominal distention, anemia, anorexia, weakness, and loss of weight.

per″i·to·nize [*peritonaion*]. Cover with peritoneum by operative procedures.

per″i·ton′sil·lar [G. *peri*, around; L. *tonsilla*, tonsil]. About a tonsil.

per″i·ton·sil·li′tis [*peri*; *tonsilla*; G. *-itis*, inflammation]. Inflammation of the tissues surrounding a tonsil.

per″i·tra·che·al (perr″i-tray′kee-ul, -tra-kee′ul) [*peri*; G. *tracheia*, jagged]. Surrounding the trachea.

per″i·tra·che·i′tis (-tray″kee-eye′tis) [*peri*; *tracheia*; G. *-itis*, inflammation]. Inflammation of the connective tissue about the trachea.

peritrate tetranitrate. A trade-marked name for the vasodilator substance pentaerythrityl tetranitrate.

per″i·trich′i·al (perr″i-trick′ee-ul) [*peri*; G. *thrix*, hair]. Surrounding a hair follicle.

pe·rit·ri·chous (peh-rit′ri-kus), **pe·rit′ri·chal** (peh-rit′ri-kal) [*peri*; *thrix*]. Pertaining to flagella projecting from the whole body of a bacterial cell.

per″i·trun′cal [*peri*; L. *truncus*, trunk]. Perivascular and peribronchial conjointly, as peritruncal carcinoma of the lung.

per″i·typh′lic [*peri*; G. *typhlon*, cecum]. Surrounding the cecum.

per″i·typh·li′tis [*peri*; *typhlon*; G. *-itis*, inflammation]. Inflammation of the peritoneum surrounding the cecum and vermiform process. —**perityphlit′ic**, *adj.*

per″i·um·bil′i·cal [*peri*; L. *umbilicus*, navel]. Surrounding the umbilicus.

per″i·un′gual [*peri*; L. *unguis*, nail]. Around a nail.

per″i·u·re·ter′al [*peri*; G. *ourētēr*, ureter]. Surrounding one or both ureters.

per″i·u·re″ter·i′tis [*peri*; *ourētēr*; G. *-itis*, inflammation]. Inflammation of the tissues around a ureter.

per″i·u·re′thral [*peri*; G. *ourēthra*, urethra]. Surrounding the urethra.

per″i·u″re·thri′tis [*peri*; *ourēthra*; G. *-itis*, inflammation]. Inflammation of the connective tissue about the urethra.

per″i·u′ter·ine (perr″i-yoo′tur-in, -yoo′tuh-ryne) [*peri*; L. *uterus*, womb]. About the uterus.

per″i·u′vu·lar [*peri*; ML. *uvula*, uvula]. Situated near the uvula.

per″i·vag′i·nal (perr″i-vadj′i-nul, -va-jy′nul) [*peri*; L. *vagina*, vagina]. About the vagina.

per″i·vag″i·ni′tis (-vadj″i-nigh′tis). See *paracolpitis.*

per″i·vas′cu·lar [*peri*; L. *vasculum*, vessel]. About a vessel.

per″i·vas″cu·li′tis [*peri*; *vasculum*; G. *-itis*, inflammation]. Inflammation of the perivascular sheaths, including the adventitia.

per″i·ve′nous [*peri*; L. *vena*, vein]. Investing a vein; occurring around a vein.

per″i·ves′i·cal [*peri*; L. *vesica*, bladder]. Situated about, or surrounding, the urinary bladder.

per″i·ve·sic″u·li′tis [*peri*; *vesica*; G. *-itis*, inflammation]. Inflammation around a seminal vesicle.

per″i·vis′cer·al (perr″i-vis′ur-ul) [*peri*; L. *viscera*, inner parts]. Surrounding a viscus or viscera.

per″i·vis″cer·i′tis [*peri*; *viscera*; G. *-itis*, inflammation]. Inflammation around a viscus or viscera.

per″i·vi·tel′line (perr″i-vi-tel′yne, -in, perr″i-vit′i-lin, -vy′ti-lyne) [*peri*; L. *vitellus*, yolk]. Surrounding the vitellus or yolk, as perivitelline space, the space between the zona pellucida and vitellus.

per″i·xe·ni′tis (perr″i-ze-nigh′tis) [*peri*; G. *xenos*, stranger; *-itis*, inflammation]. Inflammation around a foreign body embedded in the tissues.

Perkins, Elisha [American physician, 1741–99]. Inventor of the famous metallic tractors. By drawing them across the skin he proposed to draw out from the part affected any inflammation or painful disorder. He was exposed as a charlatan and the method soon fell into disuse. The rods were called *Perkins' tractors*, the belief in their efficacy being known as *Perkinism.*

perle (purl) [F.]. A capsule for administration of medicine.

per lèche (pur-lesh perr-lesh *See* Notes § 35) [F.]. A superficial, inflammatory condition occurring at the angles of the mouth with resultant fissuring. It is more prevalent in children, but is also seen in adults. Although it has been regarded as an infection, it is often symptom of riboflavin deficiency

Perlia's nucleus. See *nucleus* of Perlia.

per'ma nent [L. *permanere*, to stay to the end] Lasting fixed; enduring, as permanent teeth, the teeth of the second dentition.

per'ma nent par'tial dis"a bil'i ty *I military medicine*, complete loss of any part of the body or permanent impairment of any bodily function, other than that producing permanent total disability which results from injury (occupational or other)

per man'ga nate. A salt of permanganic acid.

per man gan'ic ac'id. HM O A monobasic acid known chiefly in the form of its salts.

permapen. Trade-mark for *benzathine penicillin G*

per"me a bil'i ty [L. *permeabilis*, that can be passed through]. *I physiology* the property of membranes which permits transit of molecules and ions by solution in, or adsorption to, membranes, and by mechanical passage through fine pores

capillary p. The permeability of the capillary wall to proteins of high molecular weight.

per'me- ble [*permeabilis*]. Affording passage pervious.

per"me a tion [L. *permeare*, to pass through]. The act of passing through specifically the extension of malignant tumor especially carcinoma, by continuous growth through lymphatics.

permutit. Trade-mark for certain synthetic solid substances used for the purpose of exchanging component ion, such as sodium, for other ions, such as calcium and magnesium, present in water or an aqueous solution in contact with the solid An important use of such substances is for softening water The trade-mark is also applied to equipment used with the ion-exchanging substances

per ni'cious [L. *perniciosus*, destructive]. Highly destructive of intense severity; fatal.

per l-o. See *chilblain*.

per"ni-o sis [L *pernio* chilblain; G *-osis*, condition] Any dermatitis resulting from chilblain.

per"noc ta tion [L. *pernoctare*, to pass the night] Wakefulness insomnia. *Obs.*

pernoston. Trade-mark for 5-sec.-butyl-5-β-bromallyl barbituric acid. The substance is used as hypnotic and sedative. See *butallylonal*.

p. sodium. The sodium salt of pernoston. Used as hypnotic by intravenous or intramuscular injection.

pe ro-bra chi us (peer bray'kee-us) [G *pêros*, maimed *brachion*, arm]. A developmental defect in which the forearms and hands are malformed or wanting.

pe"ro-ceph' lus [*pêros*; G. *kephalē*, head]. An animal with anomalies of the head and face.

pe ro-chi'rus, pe"ro-chei'rus (peer o-kigh rus) [*pêros*; G *cheir* hand] Congenital absence or stunted growth of the hand.

pe"ro-cor'mus [*pêros*; G *kormos* trunk]. Congenital defect of the trunk.

pe ro dac tyl'i [*pêros*; G *daktylos*, finger] Defective development of the fingers or toes

pe"ro-dac'ty lus [*pêros*; *daktylos*]. An individual having congenitally defective and partially absent fingers and/or toes

pe"ro-me'li-a [*pêros*; G *melos*, limb]. Teratic malformation of the limbs.

pe-rom lus [*pêros*; *melos*]. An individual with congenitally deficient, stunted, or misshapen limbs.

pe-rom e ly [*pêros*; *melos*]. Congenital deficiency or malformation of the limbs.

per"o-ne al [G. *peronē*, fibula]. Pertaining to the fibular side of the leg, as peroneal nerve. See Table of Nerves in the Appendix.

per"e-n o- (perr o-nee o-) [*peronē*]. A combining form denoting *connection with* or *relation to the fibula*.

per"o ne"o-cal-ca ne-us. An occasional extra slip of the tibialis posterior muscle.

p. externus. A variable slip of insertion of the peroneus brevis muscle into the calcaneus.

p. internus. The fibulocalcaneus medialis muscle.

per"o-ne" -cu boi'de us. An occasional slip of insertion of the peroneus brevis muscle into the cuboid.

per" ne"o-tib"i a'lis. The fibulotibialis muscle.

per"o-ne us ac"ces so ri us. An occasional extra slip of the peroneus longus or brevis muscle.

p. a. digiti quinti. A variant of the peroneus brevis muscle.

p. a. quartus. The peroneocalcaneus externus muscle.

p. a. tertius. The third peroneal muscle.

per"o-ne us bre'vis. The shorter of the peroneal muscles.

per"o ne us lon'gus. The longer peroneal muscle.

pe ro ni a [G. *pêroun*, to maim]. Mutilation; malformation.

pe ro-pla si a (peer"o-play zhuh, -zee-uh, -shuh, -see-uh) [G. *pêros*, maimed *plassein*, to form]. A malformation due to abnormal development.

pe'ro pus [*pêros*; G. *pous*, foot]. An individual with congenitally malformed feet.

per 'ral (pur-or ul) [L. *per* through *os*, mouth]. Passed or performed through the mouth.

per os [L.]. By way of, or through, the mouth, as in the administration of medicines.

per-os-cillin. Trade-mark for penicillin calcium tablet.

pe ro sis [G *pêrōsis*, maiming]. The condition of abnormal or defective formation.

pe ro-so mus [G. *pêros*, maimed *sōma*, body]. A monster presenting malformation of the body

pe ro splanch ni ca (peer o-splangk ni kuh) [*pêros*; G *splanchnon*, inner parts]. Malformation of the viscera.

per os se-ous [L. *per* through; *os*, bone]. Through bone.

per-ox'i-dase (per-ock si-dace, -daze). A conjugated, nonporphyrin enzyme, found largely in plant tissues and to lesser extent in animal tissues, which catalyses reactions in which hydrogen peroxide is an electron acceptor i.e., of the type $AH_2 + H_2O_2 \rightarrow A + 2H_2O$.

per ox'ide. That oxide of any base which contains the most oxygen.

per ox'i dize. Oxidize completely

per"pen-dic'u lar [L. *perpendicularis*, from *perpendiculum*, plumb line]. At right angles to any given line or plane; at right angles to the horizontal.

per pri'mam [L.]. By first intention, said of wound healing.

per rec tum [L.]. By way of the rectum.

Perrin, Maurice [French surgeon, 1826–89]. Described snapping hip, called *Perrin-Ferraton's disease*. Sometimes confused with dislocation. It is due to movement of band of the fascia lata over the greater trochanter of the femur

Perrin' law See under *law*.

per'salt" A salt which contains the maximum amount of the acid radical.

per·seu'lose. A ketoheptose obtained from the juice of the avocado following oxidation by *Bacterium xylinum*.

per·sev"er·a'tion [L. *perseverare*, to persist]. Persistent repetition of words or some activity.

per·sim'mon [*Algonquian in origin*]. The tree, *Diospyros virginiana*. Its fruit, edible when fully ripe but otherwise highly astringent, and its bark have been used in diarrhea.

per'son·al [L. *personalis*, of a person]. Pertaining to a person, as personal equation, the peculiar difference of individuals in their relation to various orders of stimuli.

per"son·al'i·ty [*personalis*]. 1. The totality of traits and the habitual modes of behavior of the individual as they impress others; the physical and mental qualities peculiar to the individual, and which have social connotations. Regarded by psychoanalysts as the resultant of the interaction of the instincts and the environment. 2. *In psychiatry*, an individual with a certain basic personality pattern which resists efforts at change by either the person himself or others.

aggressive p. See passive-aggressive p.

alternating p. One which allows the individual to live alternatingly as two different persons.

Bernreuter p. Inventory. See under *test*.

Brown p. Inventory. See under *test*.

compulsive p. *In psychiatry*, one characterized by chronic, excessive, or obsessive concern with adherence to standards of conscience or of conformity resulting in inhibited, rigid, overly conscientious behavior.

cycloid p. One which is characterized by recurring states of increased mental and motor activity alternating with periods of reduced animation bordering on depression.

dissociated p. See split p.

dual p. See alternating p.

emotionally unstable p. *In psychiatry*, one characterized by undependable judgment and behavior under minor stress.

extroverted p. One in which instinctual energy or libido is directed from the individual and toward the environment.

feeling-type p. One in which the total attitude or reaction is dictated by feeling or emotional tone; one of Jung's functional types of personality.

inadequate p. One showing no obvious mental or physical defect, but characterized by inappropriate or inadequate response to intellectual, social, emotional, and physical demands. The behavioral pattern shows inadaptability, ineptitude, poor judgment, lack of physical and emotional stamina, and social incompatibility.

introverted p. One in which instinctual energy is weak and such inadequate libido is directed inwardly upon the individual himself.

intuitional-type p. One directed by unconscious indications or by vaguely conscious stimuli; one of Jung's functional types of personality.

Minnesota multiphasic p. Inventory. See under *test*.

multiple p. One which is capable of *dissociation* into several or many other personalities at the same time, whereby the delusion is entertained that the one person is many separate persons; symptom in schizophrenic patients.

neurotic p. One which exhibits symptoms or manifestations intermediate between normal character traits and true neurotic features.

paranoid p. One characterized by the tendency to project hostile feelings so that he always is or easily becomes suspicious of others and is quick to feel persecuted and jealous. Often there are related features of schizoid personality.

passive-aggressive p. A general term for one exhibiting one of three types of behavior: (1) *passive-dependent*, characterized by helplessness, indecisiveness, and a tendency to cling to and seek support from others; (2) *passive-aggressive*, in which aggressiveness and hostility are expressed quietly by such reactions as stubbornness, pouting, procrastination, inefficiency, doing nothing, or passive obstructionism; (3) *aggressive*, in which irritability, temper tantrums, and destructive behavior are the dominant manifestations of frustration.

p. disorders. *In psychiatry*, a group of disorders characterized by pathological trends in personality structure, with minimal subjective anxiety manifested, in most instances, by a lifelong pattern of abnormal action or behavior rather than mental or emotional symptoms. These disorders comprise three main groups: *personality pattern disturbances*, *personality trait disturbances*, and *sociopathic personality disturbances*.

p. formation. *In psychoanalysis*, the arrangement of the basic constituents of personality.

p. pattern disturbance. *In psychiatry*, a term for an abnormal personality development which can rarely if ever be altered therapeutically in its inherent structure; said of more or less cardinal or arch personality types.

p. trait disturbance. *In psychiatry*, an inability to maintain emotional equilibrium and independence under more or less severely stressful situations because of the disturbances in emotional development. Psychoneurotic features are relatively insignificant. Sometimes individuals exhibiting these disturbances are called immature, but physical immaturity need not be present.

psychopathic p. One characterized by emotional immaturity with marked defects of judgment, prone to impulsive behavior without consideration of others and without evidence of learning by experience.

schizoid p. One given to seclusiveness, emotional rigidity, introversion, and unsocial behavior. See schizophrenic *reaction*.

sensational-type p. One in which sensation, rather than reflective thinking or feeling, dictates action or attitude; Jung's fourth functional type of personality.

sociopathic p. disturbance. *In psychiatry*, a personality disorder characterized primarily in terms of the pathologic relationship between the individual and the society and the moral and cultural environment in which he lives, as well as personal discomfort and poor relationships with others. Sociopathic reactions may be symptomatic of severe personality disorders, psychoneurotic or psychotic reactions, or organic brain injury or disease, the recognition of which then forms the basic diagnosis. See antisocial *reaction*, dyssocial *reaction*, *sexual deviation*.

split p. One in which there is a separation of various components of the normal personality unit, and each segregation functions as an entity apart from the remaining personality structure; observed in hysteria and the schizophrenic reactions.

syntonic p. One in which there is harmony and appropriateness of thinking, feeling, and action; one which is in harmony with the environment.

thinking-type p. One in which actions and attitudes are ruled predominantly by deliberation and reflective thought rather than by feeling, intuition, or sensation; the first of the four functional types of personality according to Jung.

per"spi·ra'tion [L. *perspirare*, to breathe everywhere]. 1. The secretion of sweat. 2. The sweat.

fetid p. See *bromhidrosis*, *bromohyperhidrosis*.
insensible p. That which takes place constantly, the fluid being evaporated as fast as excreted.
sensible p. Visible drops or beads of sweat.

per-spire' [*perspirare*]. To sweat.

per sul'fate. A salt of persulfuric acid, $H_2S_2O_8$, an acid obtained by electrolytic oxidation of sulfuric acid. It represents the highest valence of sulfur.

per sul'fide. A sulfide that contains more atoms of sulfur than are required by the normal valence of sulfur, as, for example, in Na_2S_2.

Perthes, Georg Clemens [*German surgeon*, 1869–1927]. Described osteochondritis deformans juvenilis, called *Legg-Calvé-Perthes disease*. Introduced a test for the patency of the deep veins of the leg, called *Perthes' test*.

Pertik, Ottó [*Hungarian pathologist*, 1852–1913]. Described a diverticulum of the nasopharyngeal space amounting to an abnormally deep lateral pharyngeal fossa, called *Pertik's diverticulum*.

per"tur ba'tion [L. *perturbatio*, disturbance]. Restlessness or disquietude; great uneasiness.

per tus'sal [L. *per*, very; *tussis*, cough]. Like whooping cough. Also called *pertussoid*.

per tus'sis. See *whooping cough*.

Pe ru'vi an bark. Old term for cinchona.

per vap o-ra'tion [*per*; L. *vaporatio*, steaming]. A method of concentration of colloidal and crystalloidal solutions by means of a dialytic membrane either without raising the temperature or by heating without boiling.

per ver'sion (pur-vur'shun, -zhun) [L. *perversio*, from *pervertere*, to turn about]. 1. The state of being turned away from the normal or correct. 2. *In psychopathology*, deviation from the normal or average in sexual practices, as homogenitality or fellatio. —**per'vert,** *n.*

per"vi gil'i-um (pur"vi-jill'ee-um) [L., a watching all night]. 1. Insomnia; wakefulness. *Obs.* 2. See coma vigil.

pervitin hydrochloride. Trade-mark for methamphetamine.

per'y-lene. $C_{20}H_{12}$, peri-dinaphthalene; a pentacyclic hydrocarbon found in coal tar, occurring as crystals, insoluble in water and sparingly to freely soluble in various organic liquids.

pes (pl. *pedes*) (payss, peez, *pl.* pee'deez) [L.]. A foot or footlike structure. For other terms concerning pes, see under *talipes*.
p. anserinus. (a) The radiate branching of the facial nerve after its exit from the facial canal. (b) The junction of the tendons of the sartorius, gracilis, and semitendinosus muscles. *O.T.*
p. cavus. Permanently elevated heel associated with an exaggerated curve of the foot resulting from contracture of the plantar fascia.
p. contortus. Clubfoot; talipes.
p. gigas. Macropodia. An abnormally large foot.
p. pedunculi. See *basis pedunculi*.
p. planovalgus. See *flatfoot*.
p. planus. Flatfoot.

pes'sa ry [L. *pessarium*, pessary]. 1. An appliance of varied form placed in the vagina. 2. Any suppository or other form of medication placed in the vagina for therapeutic purposes. *Obs.*
cradle p. A cradle-shaped pessary once commonly used in the correction of uterine displacements.
cup p. A type of pessary for uterine prolapse in which the cervix rests in a cup held in by a belt and straps.
diaphragm p. The occlusive diaphragm for contraception.
doughnut p. A ring pessary for uterine prolapse.
prolapse p. Any of several types of rings or cups inserted into the vagina for the purpose of holding up the uterus.
retroversion p. Any type of pessary, such as the Smith-Hodge, used to correct a retroverted uterus.
ring p. A round or ring-shaped pessary.
stem p. A device for insertion into the cervical canal, to prevent conception or to stimulate an infantile uterus.

pes'su lus, pes sum [L. *pessulus*, bolt; *pessum*, pessary]. A pessary.

pest [L. *pestis*, pest]. 1. An annoying, destructive, or infectious organism; often, large numbers of such organisms, as a cockroach or rat pest. 2. A plague; pestilence. In the old medical literature, any major epidemic. 3. Bubonic plague.

pes te lo'ca. See Venezuelan equine *encephalitis*.

pest'house [*pestis*; AS. *hūs*]. A hospital for persons sick with pestilential diseases.

pes ti cide. A substance destructive to pests, especially to insects.

pes tis [L.]. Pest or plague.
p. ambulans. Plague with first-degree cutaneous manifestations in which the patient is ambulatory.
p. minor. Plague with few systemic manifestations.

pes'tle (pess'ul) [L. *pistillum*, pestle]. The device for rubbing substances in a mortar.

pe te chi a (pi-tee'kee-uh, pi-teck'ee-uh) (pl. *petechiae*) [It. *petecchia*]. A minute, rounded spot of hemorrhage on a surface such as skin, mucous membrane, serous membrane, or on a cross-sectional surface of an organ. —**petechial,** *adj.*

pe te-chi om'e-ter. An instrument for the detection of increased capillary fragility by the application of suction to the skin.

Peters, Rudolph Albert [*English biochemist*, 1889–]. With C. W. Carter and H. W. Kinnersley discovered vitamin B (1930). With Kinnersley devised a thiamine test in which diazo-benzene-sulfuric acid in carbonate containing sodium hydroxide solution gives a red color with thiamine and formaldehyde; called *Peters-Kinnersley test*.

Peters embryo. An early human embryo discovered by H. Peters and described by him in 1899.

Peters method. See under *method*.

Peters reaction. See Wilkinson and Peters benzidine peroxidase reaction.

Petersen, Ferdinand [*German surgeon*, 1845–1908]. Introduced a type of suprapubic lithotomy called *Petersen's operation*. Designed a rubber bag to be inserted into the rectum and inflated for the purpose of pushing the bladder forward so that it could be opened more easily in cystotomy; called *Petersen's bag*.

peth'i dine (peth'i-deen, -din). Meperidine hydrochloride.

pe-ti'o-lus [L. *petiolus*, little leg]. A stem, stalk, or petiole, as the petiolus of the epiglottis.

Petit, François Pourfour du [*French physician and physiologist*, 1664–1741]. Discovered the vasomotor nerves (1727). Described spaces in the ciliary zonule of the eye, called *canals of Petit*, *zonular spaces*.

Petit, Jean Louis [*French surgeon*, 1674–1750]. One of the founders of the French school of surgery. Described bone softening (1723). Developed several variations on the tourniquet. Adapted the technic of trephining to opening the mastoid bone in cases of mastoiditis, which became standard procedure. Best known for his description of the petit lumbar triangle, the space bounded by the posterior border of the external oblique muscle in front, the anterior border of the latissimus dorsi posteriorly, its base being formed by the crest of the ilium; called *Petit's triangle*.

pe-tit mal' (puh-tee mal'). See petit mal *epilepsy*.

PETN Pentaerythritol tetranitrate.

Petragnani, Giovanni (1893–). Italian bac-

teriologist who introduced a culture medium containing malachite green, for isolation of *Mycobacterium tuberculosis*, called *Petragnani's medium*.

Petri, Julius [*German bacteriologist*, 1852–1921]. Known for his introduction of the shallow cylindrical, covered glass vessels for bacterial cultures in which colonies may be observed without removing the cover; the *Petri dish* is in use the world over. Described a test for proteins called *Petri's test*.

pet″ri·fac′tion [G. *petra*, rock; L. *facere*, to make]. The process of changing to stone, as petrifaction of the fetus. See *lithopedion*.

pé″tris·sage′ (pay″tri·sahzh′) [F.]. Kneading massage; the muscles are picked up or lifted from the bones and rolled, squeezed, or wrung.

pet″ro·bas′i·lar (pet″ro·bas′i·lur, ·ba·sil′ur) [G. *petros*, stone; *basis*, base]. Pertaining to the petrous part of the temporal bone and the basilar part of the occipital bone.

pet″ro·chem′i·cal. A chemical obtained from petroleum.

Petroff, Strashimir Alburtus [*American bacteriologist*, 1882–]. Introduced an egg and gentian violet culture medium (1915) *Petroff's egg medium* is used for cultivation of *Mycobacterium tuberculosis*.

petrogalar. Trade-mark for an emulsion of liquid petrolatum; also with other supporting agents—magnesia magma, acabitter fluidextract cascara sagrada, and phenolphthalein.

pet″ro·la′tum (*petrolatum*). A purified, semisolid mixture of hydrocarbons obtained from petroleum. Occurs as an unctuous mass, varying in color from yellowish to light amber; insoluble in water, freely soluble in benzene and chloroform. Used as a bland, protective dressing and as a base for ointments. Also called *petroleum jelly*, *yellow petrolatum*.

hydrophilic p. An ointment base, capable of absorbing aqueous solutions, containing 3% cholesterol, 3% stearyl alcohol, 8% white wax and 86% petrolatum.

light liquid p. (*petrolatum liquidum leve*) A mixture of liquid hydrocarbons obtained from petroleum; used in sprays for the nose and throat though with risk of injury to lungs. Also called *light liquid paraffin*, *light white mineral oil*.

liquid p. (*petrolatum liquidum*) A mixture of liquid hydrocarbons obtained from petroleum; colorless, transparent, oily liquid, insoluble in water and alcohol. Miscible with fixed oils but not with castor oil. Used as a vehicle for medicinal agents to be applied externally or to the mucous membranes of the nose and throat. Also used internally for its mechanical action in constipation. Also called *liquid paraffin*, *white mineral oil*.

liquid p. emulsion (*emulsum petrolati liquidi*) Contains 50% of liquid petrolatum. Used in constipation. Dose 30 cc. (1 fluidounce). Also called *mineral oil emulsion*.

liquid p. emulsion with phenolphthalein. Contains 50% (v/v) of liquid petrolatum and 0.4% (w/v) of phenolphthalein.

p. gauze. Absorbent gauze saturated with white petrolatum to the extent of not less than 4 times the weight of the gauze; used as an emollient dressing, packing, or drain.

white p. (*petrolatum album*) Petrolatum wholly or nearly decolorized. Used the same as petrolatum.

pe·tro′le·um [G. *petros*, stone; L. *oleum*, oil]. A complex mixture of hydrocarbons consisting chiefly of the paraffins and cycloparaffins or of cyclic aromatic hydrocarbons, with small amounts of benzene hydrocarbons, sulfur and oxygenated compounds. Occurs as a dark-yellow to brown or greenish-gray, oily liquid; insoluble in water and only partially soluble in alcohol. It has been used as an expectorant and vermifuge, and externally in skin diseases. Industrially it is a source of a great number of compounds.

p. benzin. See *benzin*.

p. ether. See *benzin*.

p. jelly. See *petrolatum*.

p. naphtha. See *benzin*.

pet″ro·mas′toid [*petros*; G. *mastoeides*, shaped like a breast]. Pertaining to the petrous and mastoid portions of the temporal bone.

pet″ro·oc·cip′i·tal (pet″ro·ock·sip′i·tul). Pertaining to the petrous portion of the temporal bone and to the occipital bone.

pet″ro·pha·ryn′ge·us (pet″ro·fa·rin′jee·us, ·far″in·jee′us) [*petros*; G. *pharynx*, pharynx]. A small muscle arising from the lower surface of the petrous portion of the temporal bone and blending with the constrictors of the pharynx; part of the salpingopharyngeus.

pe·tro′sa [L. *petrosus*, rocky]. The petrous portion of the temporal bone; also called *petrous pyramid*.—**petrosal**, *adj.*

pe·tro′sal nerve. Any of several small nerves passing through the petrous part of the temporal bone and usually attached to the geniculate ganglion. See Table of Nerves in the Appendix.

pet″ro·si′tis [*petrosus*; G. *-itis*, inflammation]. Inflammation of the petrous portion of the temporal bone, usually from extension of a mastoiditis or from middle-ear disease.

pet″ro·sphe′noid [G. *petros*, stone; *sphenoeides*, wedge-shaped]. Pertaining to the petrous portion of the temporal bone and the sphenoid bone.

pet″ro·squa′mous [*petros*; L. *squama*, scale]. Pertaining to the petrous and squamous portions of the temporal bone.

pet′rous (pet′rus, pee′trus) [*petros*]. Stony; of the hardness of stone.

pet′rox (pet′rocks, pee′trocks). See *petroxolin*.

pe·trox′o·lin. A liquid or solid preparation made with a vehicle or base composed of light liquid petrolatum with soft ammonia soap and alcohol and containing medicinal substances. Petroxolins were used by external application.

solid p. (*petroxolinum spissum*) Solid petrox, yellowish-brown solid preparation containing yellow wax, light liquid petrolatum, oleic acid, strong solution of ammonia, lavender oil, and alcohol; formerly used as a base for the application of various medicinal substances, especially Peruvian balsam.

Pettenkofer, Max Josef von [*German chemist and hygienist*, 1818–1901]. Studied the etiology of cholera, including conditions necessary for its spread. Founded the first laboratory of experimental hygiene (1865). His system of sewage disposal in Munich resulted in the elimination of typhoid fever from the city; a landmark in the history of sanitation. Made important investigations in respiration. With Voit, studied the metabolism of proteins, carbohydrates, and fats. Introduced a test for bile. See *Pettenkofer's test*.

Petruzzi theory. See under *theory*.

Peu′mus (pew′mus) [Sp. *peumo*]. A genus of evergreen shrubs native to Chile, having one species, *P. boldus*, the boldutree, source of boldo.

pex′is [G. *pexis*, fixing]. Fixation. *Obs.*

-pexy, -pex′i- [*pexis*]. In *surgery*, a combining form denoting *fixation*.

Peyer, Johann Conrad [*Swiss naturalist and anatomist*, 1653–1712]. Known for his description of the aggregations of lymph nodules in the mucous membrane of the ileum opposite the mesenteric attachment (1677), called *aggregate* or *agminated*

nodules Peyer' patches, nodules, nodes, glands; aggregate follicles.

Peyronie, François de la (1678–1747) French surgeon who described penile disease, called *Peyronie disease.*

Peyrot, Jean Joseph [*French surgeon*, 1843–1918]. Described the obliquely oval thorax seen in large pleural effusions called *Peyrot' thorax.*

Pfannenstiel Hermann Johann (1862–1909) German gynecologist who described an incision for entering the abdominal cavity he employed long, horizontally placed incision curving over the mons pubis so that the pubic hair rendered the scar practically unnoticeable (1900) called *Pfannenstiel' incision.*

Pfaundler Meinhard von [*German physician*, 1872 1939]. Described filamentation, also called *Pfaundler reaction.*

Pfeiffer Emil [*German physician*, 1846–1921]. Described infectious mononucleosis (1889) also called *Pfeiffer' disease.* This had been described by Nil F Filatov (1885) under the name of idiopathic adenitis.

Pfeiffer' bacillus. *Hemophilus influenzae.*

Pfeif"fer-el'la (pfigh fur-el'uh, figh fur-) [after Richard F J *Pfeiffer* German bacteriologist, 1858 1945]. Old term for genus of bacteria now called *Malleomyces.*

P whitmori. A motile, Gram-negative rod which is the causative organism of melioidosis. Syn., *Malleomyces pseudomallei.*

Pflüger Eduard Friedrich Wilhelm [*German physiologist*, 1829–1910]. Formulated laws f polar excitation and muscle contraction, called *Pflüger' laws.* See also Pflüger tube.

P G *Pharmacopoeia Germanica*, German Pharmacopoeia.

pH Symbol introduced by *Sörensen*; used in expressing hydrogen-ion concentration. It signifies the logarithm, on the base ten, of the reciprocal of the hydrogen-ion concentration. A pH above seven represents alkalinity in an aqueous medium below seven, acidity

pha cen'to cele [G *phakos*, lentil, lens *entos*, within; *kēlē*, hernia]. Displacement of the crystalline lens into the anterior chamber of the eye.

pha ci'tis (fa-sigh tis) [*phakos*; G. *-itis*, inflammation]. Inflammation of the lens of the eye.

phac'o- (fack o- fay'ko-) **phac-** [*phakos*]. A combining form denoting *lens or the lens of the eye.*

phac o-an"a phy lax'is. Anaphylaxis to the crystalline lens. If extracapsular cataract extraction has been performed on one eye, the patient may become sensitized to the lens protein, so that breakage of the other lens capsule, with release of lens protein, allows anaphylactic reaction, due to th previous sensitization.

phac o-cele See *phacocentocele.*

phac'o-cyst [*phakos*; G *kystis*, bladder]. The capsule of the crystalline lens.

phac" -cys-tec'to-my [*phakos*; *kystis*; G *ektomē*, excision]. Excision of part of the capsule of the crystalline lens.

phac o-er'i-si [*phakos*; G *erysis*, drawing]. An operation for cataract employing suction.

phac"o-hy"men i'tis [*phakos*; G. *hymēn*, membrane *-itis*, inflammation] Inflammation of the capsule of the crystalline lens.

pha'coid (fay'koyd, fack'oyd) [*phakos*; G *eidos*, form]. Lens-shaped.

pha col'y sis [*phakos*; G. *lysis*, loosing]. 1. Dissolution or disintegration of the crystalline lens. 2. An operation for the relief of high myopia, consisting in discission of the crystalline lens followed by extraction. —**phacolyt'ic,** *adj*

phac"o-ma to sis [*phakos*; G. *-ōma*, tumor *-ōsis*, condition]. One of a group of diseases, hereditary and developmental in origin, which produce host of symptoms but which are all characterized by the presence of spots, tumefactions, and cysts joined to other congenital malformations in various parts of the body especially in the central nervous system. Three distinct syndromes can be recognized T berous sclerosis (phacomatosis of Bourneville) von Hippel-Lindau's disease (angiophacomatosis retinae et cerebelli) and von Recklinghausen disease (neurofibromatosis, neurofibrophacomatosis)

phac met"a-cho-re'si (fack"o-met uh kor-ee sis, fay"ko-) [*phakos*; G. *metachōrēsis*, withdrawal] Dislocation of the crystalline lens.

phac o met" -se sis [*phakos*; G. *metastasis*, migration]. Displacement of the crystalline lens into the anterior chamber of the eye.

pha-com e-ter [*phakos*; G *metron*, measure]. An instrument for determining the refractive power of lenses. Usually called *lensometer*

phac o pla ne si [*phakos*; G. *planēsis*, making to wander]. Displacement of the crystalline lens of the eye from the posterior to the anterior chamber and back again.

phac" -scle ro sis [*phakos*; G. *sklērōsis*, hardening]. Hardening of the crystalline lens.

phac'o-scope [*phakos*; G *skopein*, to examine]. An instrument for observing the accommodative changes of the lens. —**phacos'copy** *n.*

phac" -sco tas mus [*phakos*; G. *skotasmos*, becoming dark]. Clouding of the crystalline lens.

phae o-chrome (f y krome) Chromaffin. *Obs*

Phae o-phy ce-ae. A class of brown algae.

phae o-ret'in (fee o-ret in) $C_{14}H_8O_7$ extract from rhubarb root, various species of the genus *Rheum*, occurring as yellowish-brown powder soluble in alcohol and alkalies.

phage (f ydj) See *bacteriophage.*

-phage (-f ydj) **-phag** [G *phagein*, to eat] A combining form denoting *an eater* used especially to denote *a phagocyte* See also *bacteriophage.*

phag" -de'na phag" -dae na (fad]"i dee nah) [G. *phagedaina*, cancerous sore]. A rapidly spreading destructive ulceration of soft parts. —**phagedon'ic,** *adj*

p. geometrica. Pyoderma gangrenosum with chronic burrowing ulcers.

p. tropica. Tropical ulcer

sloughing p. Gangrene.

phag"o-car'y sis. Phagokaryosis.

phag' -cyte [G. *phagein*, to eat *kytos*, cell] A cell having the property of engulfing and digesting foreign or other particles or cells harmful to the body **Fixed phagocytes** include the cells of the reticuloendothelial system and fixed macrophages (histiocytes) **Free phagocytes** include the leukocytes and free macrophages. —**phagocy'tal, phagocyt'ic,** *adj*

phag"o-cy'to blast [*phagein*, *kytos*; G. *blastos*, germ]. A cell giving rise to phagocytes. *Obs.*

phag" -cy tol'y-sis (fag sigh tol' sis) [*phagein*; *kytos*; G. *lysis*, loosing]. Destruction or dissolution of phagocytes. —**phagocytolyt'ic,** *adj.*

phag"o-cy to sis (fag sigh-to' sis) [*phagein*, *kytos*; G *-ōsis*, condition]. Ingestion of foreign or other particles, principally bacteria, by certain cells —**phagocy'tize, phagocy'tose,** *v.*

phag"o-dy"na mom ter [*phagein*, G *dynamis*, power; *metron*, measure]. A apparatus for estimati g the force exerted in chewing

phag"o-kar"y-o sis (fag o-kar ee sis) [*phagein*, G *karyon*, kernel; *-ōsis*, condition]. Supposed phagocytic action by the cell nucleus

pha gol'y si [*phagein*, G *lysis*, loosing]. Destruction or dissolution of phagocytes phagocytolysis.

phag"o·ma'ni·a [phagein, G. mania, madness]. An insatiable craving for food.
phag"o·ther'a·py [phagein, G. therapeia, treatment]. Treatment by superalimentation; over feeding.
phak'o-. See phaco-.
phal"a·cro'sis [G. phalakrōsis, baldness]. Baldness; alopecia. Rare. —phalacrot'ic, phalac rous, adj.
phal"lo·my'cin. An antibiotic substance produced by a variant of Streptomyces noursei. It inhibits a variety of Gram-positive bacteria.
phal"an·gec'to·my (fal"an-jeck'to-mee) [G. phalanx, bone between two joints of the fingers or toes; ektomē, excision]. Surgical excision of a phalanx of a finger or toe.
pha·lan'ges (fay·lan'jeez, fa-lan'jeez). Plural of phalanx.
phal"an·gi'tis [phalanx; G. -itis, inflammation]. Inflammation of a phalanx.
p. syphilitica. See dactylitis syphilitica.
pha·lan"gi·za'tion [phalanx]. A plastic operation in which a metacarpal bone is separated from its fellows and surrounded with skin, thus forming a substitute for a finger or thumb.
pha·lan"go·pha·lan'ge·al (fa-lang"go-fa-lan'jul, -jee-ul) [phalanx; phalanx]. Pertaining to the successive phalanges of the digits, as in phalangophalangeal amputation, removal of a finger or toe at the first or second phalangeal joints.
pha'lanx (fay'lanks, fal'anks) (pl. phalanges) [phalanx]. 1. One of the bones of the fingers or toes. See Table of Bones in the Appendix. See Plate 1. 2. One of the delicate processes of the headplate of the outer rod of Corti projecting beyond the inner rod. —phalan'geal, adj.
ungual p. The terminal phalanx.
phal'lic [G. phallos, phallus]. Pertaining to the penis. See phallus.
phal'li·cism [phallos]. Phallic worship.
phal'lin. A toxalbumin obtained from the death cup fungus, Amanita phalloides.
phal·loi'dine. A peptide from the poisonous mushroom Amanita phalloides; on hydrolysis it yields cystine, alanine, and allohydroxy-L-proline.
phal'lo·plas"ty. Plastic construction or repair of the penis.
phal'lus [phallos]. 1. The penis. 2. The indifferent embryonic structure derived from the genital tubercle that, in the male, differentiates into the penis, and, in the female, into the clitoris. —phallic, phalliform, phalloid, adj.
phan'er·o·gam [G. phaneros, manifest; gamos, marriage]. A plant which bears seeds. —phanerogam'ic, adj.
phan"er·o·gen'ic [phaneros; G. genethai, from gignesthai, to be produced]. Having a known cause; the opposite of cryptogenic.
phan"er·o·ma'ni·a [phaneros; G. mania, madness]. A neurotic condition in which a person pays undue attention to or cannot resist the impulse to touch some external part or growth, such as a pimple, hair, or hangnail; a compulsion reaction.
phan"er·o'sis [phaneros; G. -ōsis, condition]. The act of passing from a transparent to a visible state.
phanodorn. Trade-mark for a rapidly eliminated hypnotic and sedative, cyclohexenylethylbarbituric acid or cyclobarbital.
phan'tasm [G. phantasma, apparition]. An illusive perception of an object that does not exist; an illusion or hallucination. —phantas mal, adj.
phan·tas"ma·to·mo'ri·a (fan-tas"muh-to-mor'ee·uh) [phantasma; G. mōria, folly]. Childishness, or dementia, with absurd fancies or delusions.
phan·tas"ma·sco·pi'a [phantasma; G. skopein, to examine]. The seeing of phantasms; hallucinations involving ghosts.
phan'ta·sy [G. phantasia, appearance]. 1. Visionary imagination; the faculty of reproducing unreal, phantasmic notions or sensuous impressions. 2. An image. 3. Fantasy.
phan'tom. In radiology, an object, made of beeswax or pressed-wood composition and sometimes consisting of water, which simulates tissue in its behavior toward radiation and permits determination of the dose of radiation delivered to the surface of and within the simulated tissue through measurements with ionization chambers placed within the phantom material.
phan'tom limb. A psychological phenomenon frequently occurring in amputees; the patient feels sensations, and sometimes pain, in the missing limb.
phar'el·dous [G. pharkis, wrinkle]. Wrinkled; rugose; full of wrinkles. Obs.
Phar. D. Pharmaciae Doctor. Doctor of Pharmacy.
phar'ma·cal [G. pharmakon, drug]. Pertaining to pharmacy.
phar"ma·ceu'tic (fahr"muh-sue'tick), phar"ma·ceu'ti·cal [G. pharmakeutikos, of drugs]. Pertaining to pharmacy.
phar"ma·ceu'tist. See pharmacist.
phar'ma·cist [G. pharmakon, drug]. An apothecary; druggist.
phar'ma·co- [pharmakon]. A combining form denoting drug.
phar"ma·co·dy·nam'ics (fahr"muh-ko-dye-nam'icks, -di-nam'icks) [pharmakon; G. dynamis, power]. The science of the action of drugs. —pharmacodynamic, adj.
phar"ma·cog'no·sist [pharmakon; G. gnōsis, knowledge]. One versed in pharmacognosy.
phar"ma·cog'no·sy [pharmakon, gnōsis]. The science of crude drugs.
phar"ma·cog'ra·phy. See pharmacognosy.
phar"ma·col'o·gist [pharmakon; G. logos, word]. A specialist in pharmacology.
phar"ma·col'o·gy [pharmakon, logos]. The science of the nature and properties of drugs, particularly their actions. —pharmacolog'ic, pharmacolog'ical, adj.
phar"ma·co·ma'ni·a [pharmakon, G. mania, madness]. A morbid craving for medicines, or for self-medication.
phar"ma·co·pe·di'cs. The scientific study of drugs and medicinal substances.
phar"ma·co·pe'ia, phar"ma·co·poe'ia (fahr"muh-ko-pee'uh) [G. pharmakopoiia, preparation of drugs]. A collection of formulas and methods for the preparation of drugs, especially a book of such formulas recognized as a standard, as the United States Pharmacopeia, the British Pharmacopoeia. The former is issued every five years under the supervision of a national committee. Abbreviated, P. —pharmacope'ial, adj.
phar"ma·co·pho'bi·a [pharmakon; G. phobos, fear]. Morbid dislike or fear of medicine.
phar'ma·co·phore. A particular grouping of atoms within a molecule which is considered to confer pharmacological activity to a substance.
phar"ma·co·psy·cho'sis (fahr"muh-ko-sigh-ko'sis) [G. pharmakon, drug; psychōsis, from psychē, soul, -ōsis, condition]. Psychosis associated with drugs or alcohol.
phar"ma·co·ther'a·py [pharmakon; G. therapeia, treatment]. The treatment of disease by means of drugs.
phar'ma·cy [pharmakon]. 1. The art of preparing, compounding, and dispensing medicines. 2. A drug store.
pharmagel. Trade-mark for a brand of gelatin particularly designed for the preparation of emulsions and available in two types based upon the method of manufacture.

p. A. A gelatin prepared from acid-treated precursors, used without other emulsifying agents at pH of about 3.2.

p. B. A gelatin prepared from alkali-treated precursors, used at pH of about 8.0. Pharmagel B may be used alone or in combination with other emulsifying agents.

phar yn g l'gi a [G pharynx, pharynx; algos, pain]. Pain in the pharynx.

phar"yn gec to-my (far"in jeck'to-mee) [pharynx; G ektomē, excision]. Excision of part of the pharynx.

ph r"yn g m phrax'is (f in j m frack sis) [pharynx; G emphraxis, stoppage]. Obstruction of the pharynx.

phar"yn gis'mus [pharynx]. Spasm of the pharynx.

phar"yn gi'tis [pharynx; G -itis inflammation]. Inflammation of the pharynx —pharyngit'ic, adj

acute p. A form due to exposure to cold, to the action of irritant substances, or to certain infectious causes, and characterized by pain on swallowing, by dryness, later by moisture, and by congestion of the mucous membrane. Also called catarrhal p.

atrophic p. A form attended by atrophy of the mucous membrane.

beta-hemolytic streptococcal p. A type caused by beta-hemolytic streptococci of Lancefield group A.

chro ic p. A form that is generally the result of repeated acute attacks, and is associated either with hypertrophy of the mucous membrane (hypertrophic pharyngitis) or with trophy (atrophic pharyngitis)

diphtheritic p. That characterized by the presence of false membrane, the product of the action of the Corynebacterium diphtheriae: also called croupous p

follicular p. See granular p.

granular p. A form of chronic pharyngitis in which the mucous membrane has granular ppearance. Also called clergyman sore throat.

nonstreptococcal exudative p. A disease of unknown etiology suspected of being viral, which closely resembles streptococcal pharyngitis, but in which group A streptococci are ot found.

p. sicca. The atrophic form characterized by very dry state of the mucous membrane.

pha ryn go- (f ring go-) **pharyng-** [pharynx]. A combining form meaning pharynx.

pha ryn g cele [pharynx; G kēlē, hernia]. A hernia or pouch of the pharyngeal mucosa projecting through the pharyngeal wall

pha ryn"go-dyn'i a [pharynx; G odynē, pain]. Pain referred to the pharynx.

pha ryn go-ep"i glot'tic [pharynx; G epiglōttis, epiglottis]. Pertaining to the pharynx and the epiglottis.

pha-ryn"go-ep"i glot ti cus [pharynx; epiglottis]. Muscular fibers derived from the stylopharyngeus and inserted into the side of the epiglottis and the pharyngoepiglottic ligament.

pha ryn g se phag' al (f -ring"go ee sofadj'ul, -fadj -ee ul, -ee so-fuh jee ul) [pharynx; G oisophagos, gullet]. Pertaining to the pharynx and esophagus.

pha ryn"go-e-soph a gus [pharynx; esophagus]. The pharynx and esophagus considered as one organ.

pha ryn go-glos'sal [pharynx; G glōssa, tongue]. Pertaining conjointly to the pharynx and th tongue.

pha ryn"go-glos'sus [pharynx; glōssa]. Muscular fibers extending from the superior constrictor of the pharynx to the base of the tongue.

pha-ryn go-ker"a-to sis [pharynx; G keras, horn; -ōsis, condition]. Thickening of the mucous lining of the pharynx with formation of tough and adherent exudate.

pha ryn g la ryn g al (fa-ring-go la-rin jal, jee-ul, lar in-jee ul) [pharynx; G larynx, larynx]. Pertaining both to the pharynx and to the larynx.

pha-ryn go lar"yn gi'tis [pharynx; larynx; G -itis, inflammation]. Simultaneous inflammation of the pharynx and larynx.

pha ryn go-lith [pharynx; G lithos, stone]. A calcareous concretion in the walls of the pharynx.

phar yn gol'o-gy [pharynx; G logos, word]. The science of the pharyngeal mechanism, functions, and diseases.

phar"yn gol y sis [pharynx; G lysis, loosing]. Paralysis of the pharyngeal muscles.

pha ryn"go max'il lar"y (mack si lerr ee) [pharynx; L. maxilla, jaw]. Relating to the pharynx and the maxilla.

pha ryn go my co si (fa-ring"go migh ko sis) [pharynx; G mykēs, fungus -ōsis, condition] Disease of the pharynx due to the action of fungi.

pha ryn go-na'sal [pharynx; L. nasus, nose]. Pertaining to the pharynx and the nose, as pharyngonasal cavity

pha ryn go pal' tine (f -ring go-pal uh-tyne, -tin) [pharynx; L. palatum, palate]. Relating to the pharynx and the palate.

pha-ryn go-pal"a ti'nus. See palatopharyngeus

pha ryn go-pa ral'y-sis. See pharyngoplegia.

phar"yn gop a thy [pharynx; G pathos, disease]. Any disease of the pharynx.

pha ryn go pe-ris'to-le (-peh-ris'to-lee). See pharyngostenosis.

pha ryn go-plas"ty [pharynx; G plassein, to form]. Plastic surgery of the pharynx.

pha ryn go ple gi (fa-ring go-plee juh, -jee-uh, far"ing-go-) [pharynx; G plēgē, stroke]. Paralysis of the muscles of the pharynx.

pha ryn go rhi ni'ti (f ring go-rye-nigh'tis) [pharynx; G. rhis, nose -itis, inflammation] Pharyngitis with rhinitis inflammation of the pharyngeal and nasal mucosa.

pha ryn"go rhi nos co-py (-rye-nos'ko pee). See posterior rhinoscopy under rhinoscopy

pha ryn gor rha gi-a (fa-ring go ray'juh, -jee uh, far ing go-) [pharynx; G rhēgnynai, to burst forth] Hemorrhage from the pharynx.

pha ryn gor rhe'a [pharynx; G. rhoia, flow]. A mucous discharge from the pharynx.

pha ryn go-scle-ro ma [pharynx; G sklērōma, induration]. Pharyngeal scleroma.

pha-ryn go-scope [pharynx; G. skopein, to examine]. An instrument for use in examining the pharynx. —pharyngos'copy n.

pha ryn go-spasm [pharynx; G spasmos, spasm] Spasmodic contraction of the pharynx —pharyngospasmod'ic, adj

pha ryn"go-ste no a [pharynx; G stenos, narrow] Narrowing or stricture of the pharynx —pharyngos'tenous, adj

pha ryn go-ther'a py [pharynx; G. therapeia, treatment]. The treatment of diseases of the pharynx by direct pplications or irrigations.

pha ryn go-tome [pharynx; G. tomos, cutting]. An instrument for incising the pharynx.

phar"yn got'o-my [pharynx; G tomē, cutting]. Incision into the pharynx.

anterior p. An approach t the oral pharynx by an incision above the hyoid bone and separation of the suprahyoid structures.

lateral p. I cision into one side of the pharynx.

pha ryn g ton sil li'tis [pharynx; L. tonsilla, tonsil G -itis, inflammation]. Inflammation of the pharynx and the tonsils.

pha-ryn"go-ze-ro'sis (fa-ring"go-zi-ro sis) [pharynx; G. xēros, dry; -ōsis, condition]. Dryness of the pharynx.

phar'ynx [pharynx]. The musculomembranous tube situated back of the nose, mouth, and larynx, and extending from the base of the skull to a point opposite the sixth cervical vertebra, where it becomes continuous with the esophagus. It is lined by mucous membrane, covered in its upper part with pseudostratified ciliated epithelium, in its lower part with stratified squamous epithelium. On the outside of this is a layer of fibrous tissue, the **pharyngeal aponeurosis.** This in turn is surrounded by the muscular coat. The upper portion of the pharynx, communicating with the nose through the posterior nares, is known as the nasopharynx, and functionally belongs to the respiratory tract; the lower portion, divided into the **oropharynx** and **laryngopharynx,** is common to the respiratory and digestive tracts. The pharynx communicates with the middle ear by means of the auditory tube. See Plate 12. —**pharyn'geal,** *adj.*

primitive p. The embryonic pharynx with its characteristic visceral arches, grooves, and pouches.

phase (faze) [G. phasis, appearance]. 1. The condition or stage of a disease or of biologic, chemical, and physiologic functions at a given time. 2. A solid, liquid, or gas which is homogeneous throughout and physically separated from another phase by a distinct boundary.

ejection p. The phase of ventricular systole during which blood is pumped into the aorta.

group p. In *immunology,* that characterized by antigens shared by only a few other species or types.

lag p. The early period of slow growth of bacteria when first inoculated in a culture medium.

maximal ejection p. The period of early systole during which the largest volume of blood per unit time is discharged by the ventricles.

meiotic p. The stage of the reduction division in meiosis.

negative p. The temporary lessening of the amount of antibody in the serum immediately following a second inoculation of antigen. See opsonic index.

p. variation. See bacterial variation.

positive p. The increase in opsonic index which follows the negative phase.

reduced ejection p. The period of late systole during which diminishing volumes of blood per unit of time are discharged by the ventricles.

specific p. In *immunology* that characterized by the presence of specific flagellar antigens.

pha-se'o-lin (fa-see'o-lin). A simple protein of the globulin type which occurs in kidney beans.

pha"sic ir-reg"u-lar'i-ty (fay'sick). A disorder consisting of a periodic slowing of the heart for a few seconds, unrelated to the respiratory cycle; occurs in convalescence from acute fevers, and sometimes during the administration of digitalis. It is a vagal effect, as it is abolished by atropine, but the manner of its production is unknown.

pha'sin. A poisonous agglutinin, said to be an alkaloid, obtained from soybean and other beans, occurring as a white, amorphous powder and inactivated by boiling. A 1 per cent solution agglutinates red cells of all animals.

phat'ne (fat'nee). See *alveolus,* 1.

phat"nor-rha'gi-a [G. phatnē, socket; *rhēgnynai,* to burst forth]. Hemorrhage occurring from a tooth socket.

pheas'ant's eye. Adonis; an extract from *Adonis vernalis.*

phel-lan'drene. $C_{10}H_{16}$; either of two isomeric substances: *α-phellandrene,* 5-isopropyl-2-methyl-1,3-cyclohexadiene, or *β-phellandrene,* 3-isopropyl-6-methylene-1-cyclohexene; both occur in dextrorotatory and levorotatory forms in various volatile oils.

Phelps, Abel Mix [*American surgeon,* 1851–1902]. Introduced his operation for the relief of clubfoot, in which he divided all soft parts on the inner side of the foot; called *Phelps' operation.*

phemerol chloride. Trade-mark for *p-tert*-octylphenoxyethoxyethyldimethylbenzylammonium chloride, a quaternary ammonium compound, sometimes referred to as a cationic detergent. The substance occurs as colorless crystals, very soluble in water; used as an antiseptic and fungicide. The combination of detergent and antiseptic properties suggests its use for cleansing wounds. See *benzethonium chloride.*

phem'i-tone. Former British Pharmacopoeia title for *methylphenobarbitone* or *mephobarbital.*

phen-, phe'no- (feen-, fen-o-) [G. phainein, to bring to light]. A combining form denoting *derivation from benzene.*

-phene [phainein]. A combining form for *phene.*

phen'a-caine hy"dro-chlo'ride (fen'uh cane, fee'nuh cane) (*phenacainae hydrochloridum*) $CH_3CN(NC_6H_4OC_2H_5)(NHC_6H_4OC_2H_5)\cdot HCl\cdot H_2O$. Ethenyl-*p*-diethoxydiphenylamidin hydrochloride; white, odorless crystals or crystalline powder; 1 Gm. dissolves in 50 cc. of water; freely soluble in alcohol. Used as a local anesthetic, especially for anesthesia in the eye. See *holocaine hydrochloride.*

phe-nac'e-mide. Generic name for the synthetic anticonvulsant drug phenylacetylurea.

phe-nac'e-tin (fi-nass'i-tin). Acetophenetidin.

phe-nac"e-tu'ric ac'id. $C_6H_5CH_2CO.NH.CH_2COOH$. Glycine conjugate of phenylacetic acid, one form in which the latter is excreted following ingestion by animals.

phen"a-dox'one. British generic name for the analgesic substance 6-morpholino-4,4-diphenylheptan-3-one, supplied under the names *heptalgin* and *heptazone.*

phe"na-kis'to-scope, phe-na-kis'to-scope (fee"nuh-kis'to-scope, fen"uh-) [G. phenakistēs, impostor; *skopein,* to examine]. That form of stroboscope in which the figures and slits revolve in the same direction. Also called *direct stroboscope.*

phe-nam'i-dine (fi-nam'i-deen, -din). A diamidine, 4,4'-diamidinodiphenyl ether reported to have therapeutic merit against pathogenic trypanosomes. It also inhibits growth of bacteria in wounds.

phe-nan'threne. $C_{14}H_{10}$. A hydrocarbon isomeric with anthracene, and found with it in coal tar.

phenarsone. A trade-mark for dichlorophenarsine hydrochloride.

phenarsenamine. A Canadian brand of arsphenamine.

phe-nar'sone sulf-ox'y-late. $NH_2OH.C_6H_3As.C_6H_3OH.NH.CH_2OSONa$. Sodium 3-amino-4-hydroxyphenylarsonate-N-methanal sulfoxylate. A pentavalent arsenical which may be used in the treatment of *Trichomonas vaginalis* vaginitis and central nervous system syphilis. The drug must be used with caution. See *aldarsone.*

phe'nate, phen'ate. A compound of phenol and a base; carbolate.

phen'a-zone. Antipyrine.

phene (feen) [G. phainein, to bring to light]. In *chemistry,* benzene.

phenergan hydrochloride. Trade-marked name for *promethazine hydrochloride.*

phen-eth'yl. The monovalent radical $C_6H_5CH_2CH_2$—.

phen-eth'yl al'co-hol. $C_6H_5CH_2CH_2OH$; 2-phen-

ylethanol or β-phenylethyl alcohol. liquid with floral odor occurring in some essential oils and also prepared by synthesis used in perfume and flavor formulations, and recommended as an antibacterial agent for ophthalmic preparations. Also called *phenylethyl alcohol*.

phe-net'i-din. $NH_2C_6H_4OC_2H_5$ Aminoethyoxybenzene, of which three isomers exist. The para-isomer frequently appears in the urine following administration of acetophenetidin.

phe-net"i-di-nu'ri-a. The presence of phenetidin in the urine.

phe-net-sal, phen'et-sal. $C_6H_4OH.CO.O.C_6H_4(NHCH_3CO)$ Acetyl-*p*-aminophenyl salicylate. White, odorless crystals. The actions of phenetsal resemble those of phenyl salicylate. Used as an antirheumatic, antipyretic, and analgesic. Externally it has been applied in psoriasis and itching skin diseases. Dose, 0.3–1 Gm. (5–15 gr.) Externally in 10% ointment. See *salophen*.

phen"go-pho'bi-a [G. *phengos*, light; *phobos*, fear]. A morbid fear of daylight.

phe-nic ac'id (fee'nick, fen'ick). See *phenol*.

phe-nic al'co-hol. Phenol.

phen'i-cin. An antibiotic substance derived from *Penicillium phoeniceum* and *P. rubrum*, active against several bacteria; also written *phoenicin*.

phe-nin'da-mine (fi-nin'dah-meen, -min). $C_{19}H_{19}N$. 2-Methyl-9-phenyl-2,3,4,9-tetrahydro-1-pyridindene, an antihistaminic substance. See *thephorin*.

phen"in-di'one. Generic name for 2-phenylindane-1,3-dione, an anticoagulant effective when administered orally.

phen-ir'a-mine. A shorter generic name for prophenpyridamine.

phen-meth'y-lol. Benzyl alcohol.

phe-no-bar'bi-tal (fee"no-bahr'bi-tawl, -tal, -tol, fen"o-) (*phenobarbitalum*). $C_{12}H_{12}O_3N_2$. Phenylethylbarbituric acid; white, glistening, small crystals; slightly soluble in water, soluble in alcohol. Used as a hypnotic in nervous insomnia and conditions of excitement of the nervous system. Due to the slowness and persistence of its action it is used as sedative and antispasmodic in epilepsy. Dose, 0.015–0.12 Gm. (¼–2 gr.) Syn., *phenylethylmalonylurea*, *phenobarbitone*. See *luminal*.

elixir p. (*elixir phenobarbitali*). Contains 4 Gm. of phenobarbital per liter. Dose, 4 cc. (1 fluidrachm).

p. sodium (*phenobarbitalum sodicum*). The sodium derivative of phenobarbital; very soluble in water and soluble in alcohol. The effects of phenobarbital sodium are similar to phenobarbital except that it is more rapidly absorbed. Dose, 0.015–0.12 Gm. (¼–2 gr.) Also called *soluble phenobarbitone*, *soluble phenobarbital*. See *luminal sodium*.

phe"no-bar'bi-tone. See *phenobarbital*.

phe'no-coll. $C_2H_5O.C_6H_4.NHCOCH_2NH_2$ aminoacetophenetidin, crystalline base, salts of which have been used as antipyretics and analgesics.

phe"no-cop'y, phe"no-cop"y. An experimentally produced effect on the body which copies the appearance of genetic effects, e.g., tanning produced by ultraviolet light which duplicates hereditary pigmentation.

phe'no-din. Hematin.

phe'nol (fee'nole, -nol, -nawl, fi-nole') 1. (*phenol*). C_6H_5OH. Hydroxybenzene, obtained from coal tar or prepared synthetically; colorless to light pink, needle-shaped crystals; 1 Gm. dissolves in 15 cc. of water; soluble in alcohol and glycerin. Undiluted it whitens and cauterizes the skin and mucous membranes; used as an antiseptic, germicide, disinfectant, escharotic, and local anesthetic. Phenol has also been used for the treatment of tetanus by hypodermic injection. Also called *carbolic acid*, *phenyl alcohol*, *phenyl hydrate*. 2. Any hydroxy derivative of aromatic hydrocarbons which has the OH group directly attached to the ring.

camphorated p. (*phenol camphoratum*) (*camphor-phenol*). Contains 30% of phenol and 60% of camphor in liquid petrolatum.

liquefied p. (*phenol liquefactum*) (*liquefied carbolic acid*). Phenol maintained in the liquid condition by the presence of 10% of water.

p. coefficient. A figure representing the relative strength of an antiseptic, as compared with phenol acting on the same organism and for the same length of time.

p. glycerite (*glyceritum phenolis*) (*glycerite of carbolic acid*). Contains 20% of liquefied phenol in an aqueous-glycerin vehicle.

p. ointment (*unguentum phenolis*) (*ointment of carbolic acid*). Contains 2% of phenol in yellow ointment.

p. red. See *phenolsulfonphthalein*.

phe'no-lase. An enzyme which catalyzes oxidation of phenolic substances.

phe'no-late. A compound of a phenol in which the hydrogen of the hydroxyl group is replaced by univalent metal.

phe"nol-phthal'ein (fee"nole-thal'een, -thal'ee-in, -fthal'ee-in, fee"nol-, fee"nawl-) (*phenolphthaleinum*). $(C_6H_4OH)_2CO.C_6H_4CO$ a white or faintly yellowish powder; almost insoluble in water, soluble in alcohol. Used as laxative in the treatment of simple constipation, increasing both peristalsis and secretion throughout the whole intestinal tract. A frequent allergen. Dose, 0.03–0.2 Gm. (½–3 gr.)

yellow p. An impure form of phenolphthalein having canary yellow color; is two or three times as active as the white form.

phe"nol-phthal'in. 4,4'-Dihydroxytriphenylmethane-2-carboxylic acid, prepared from phenolphthalein with zinc and sodium hydroxide. Used as a reagent for detecting the presence of blood.

phe"nol-sul'fo-nate. A salt or ester of phenolsulfonic acid.

phe"nol-sul"fo-ne-phthal'in. Phenolsulfonphthalein.

phe"nol-sul-fon'ic ac'id. $C_6H_4OH.SO_3H$. Of the three isomers, ortho-, meta-, and para-, the last is used, in the form of salts, as an intestinal antiseptic. Syn., *sulfocarbolic acid*.

phe"nol-sul"fon-phthal'ein (*phenolsulfonphthaleinum*). $C_{19}H_{14}O_5S$ bright-red to dark-red, crystalline powder; 1 Gm. dissolves in about 1300 cc. of water and about 350 cc. of alcohol. Used for determining the functional activity of the kidneys: 1 cc. of a sterile solution containing 6 mg. (¹⁄₁₀ gr.) as the monosodium salt is injected intramuscularly or intravenously. The degree of renal defect is estimated by adding solution of sodium hydroxide to the voided urine, and comparing with standard. Phenolsulfonphthalein is also used as an indicator: yellow pH 6.8, red, pH 8.4. Also spelled *phenolsulfonephthalein*. Syn., *phenol red*.

p. injection (*injectio phenolsulfonphthaleini*). Phenolsulfonphthalein ampuls; sterile solution of phenolsulfonphthalein in isotonic solution of sodium chloride made with water for injection and rendered soluble with sodium bicarbonate or sodium hydroxide.

phe"nol-tet"ra-chlo-ro-phthal'ein. A dye used intravenously in the form of the sodium salt for the determination of the functional activity of the liver.

phe n l tet ra i o do phth l' in so di um (fee nole-tet rah-eye do-thal'een) See *phenoltetraiodophthalein sodium.*

phe ne ls ri [G. *phainein*, to bring to light *ouron*, urine] The presence of phenols in the urine.

phe-nom e-non (pl. *phenomena*) [G *phainomenon*, neut. pres. part. from *phainesthai*, to appear]. An event or manifestation, generally of an unusual character

adhesion p. Thrombocytobaria reaction; phenomenon in which clumping of platelets or bacteria and spirochetes occurs in the presence of their specific immune serums. It has been used to distinguish between closely allied species or between varieties of the same species.

Argyll Robertson p. See under *pupil.*

Arthus p. See Nicolas Maurice *Arthus.*

autokinetic p. A nocturnal visual illusion manifested through the oculovestibular apparatus and characterized by apparent movement of fixed point of light following staring at the light.

bulldog p. Closure of the j ws in response to tap on the lower jaw seen in experimental animals following ablation of both suppressor bands (3 and 24s) in the cerebral cortex.

clasp-knife p. See clasp-knif *rigidity.*

conglutination p. Normal bovine serum increases the agglutination of erythrocytes in the presence of antibodies and complement, suggested as method for detecting antibodies too weak to cause agglutination.

diaphragm p. See diaphragmatic *sign.*

Donath-Landsteiner p. See Donath-Landsteiner *test.*

double pain p. The phenomenon of feeling two successive sensations of pain following single pain stimulus, g., pinprick. A brief sensationless interval, whose duration is directly proportional to the distance between the site of stimulus and site of interpretation (cerebral cortex), separates the two sensations, which are thus considered to be due to the presence of two sets of nerv fibers (delta and C fibers) with different conduction rates.

D pays-Dutemps' p. A paradoxical lid retraction present in peripheral facial paralysis.

entoptic p. One f the visual sensations generated within the eye.

face p. See Chvostek' *sign.*

Fuchs' p. A paradoxical lid retraction associated with eye movements during the healing stage of oculomotor paresis, haracterized by spasmodic raising of the lid which had suffered from ptosis.

Gowers' p. Pain produced along the entire course of the sciatic nerve by passive dorsal flexion of the foot in sciatica.

great toe p. See Babinski *reflex.*

Hoffmann' p. Increased galvanic irritability of the sensory nerves in tetany

Houssay p. The rare occurrence of pituitary hypofunction in true diabetis, causing amelioration of the diabetes. See also Bernardo Alberto *Houssay.*

immune-adherence p. An immunologically specific in vitro reaction involving normal human erythrocytes, microorganisms sensitized with ant body, phagocytic cells, and complement resulting in enhanced phagocytosis. It forms the basis of the *Treponema pallidum* immobilization test.

interference p. *I microbiology,* condition in which an infectious agent may so alter the host that for time the host is less susceptible to second infectious agent.

jaw-winking p. Winking of the eye sometimes seen with movements of the jaw as in individuals who have recovered from herpes zoster

knee p. See patellar *reflex.*

Koch p. See Robert *Koch.*

Koebner's p. See isomorphous provocative reaction.

Lalsteneterna's p. The violent jerk of patient with cries of pain when any part of the skeleton is tapped seen in meningitis.

Liesegang' p. A precipitation of colloids in the form of concentric rings, which occurs in stone formation.

Lucio p. See Lucio *leprosy.*

Marcus G n p. A congenital syndrome of unknown cause in which opening the mouth causes the apparently paretic upper lid to rise suddenly usually unilateral. Syn., *jaw-winking p.*

Mari Amat p. Closure of the eye when the mouth is open or in the process of mastication, found during the recovery period of peripheral facial palsy Syn., *inverse Marcus Gunn p.*

Meirowsky p. The increase in epidermal pigment in excised skin, from living or post-mortem donors, after incubation t 37° C. or higher or on exposure to ultraviolet light.

multiplication p. of Lawrentiev The concept that each vagus fiber to the gastrointestinal tract branches terminally to innervate large numbe of enteric ganglion cells.

p. of local skin reactivity See Shwartzman *p.*

Piltz Westphal p. Contraction of the pupils on firm closure of the lids or their ttempted closure against resistance, demonstrable in 35 per cent of normal individuals.

platysma p. In hemiplegia, when the patient opens the mouth widely there occurs an exaggerated contraction of the platysma on the opposite or unaffected side.

pronation p. Immediate return to pronation position of the hand on the affected side of the hemiplegic patient when both hands are passively supinated and suddenly released.

psi phenomena. *In parapsychology* personal experiences or events defying physical ex planation, e.g., clairvoyance, precognition, and telepathy

puppet-head p. Sudden dropping forward of the head which causes the eyeballs to look upward; the reverse occurs when the head is elevated; sequela of encephalitis.

quellung p. See Neufeld quellung *test.*

Quinquaud' p. A sideward oscillating movement in all the fingers, probably due to intermittent contraction of the interosseous muscles; in almost any disease with tremors.

Raynaud' p. The color changes of digits seen in Raynaud' syndrome, particularly when occurring secondarily to known arteriolar disease.

rebound p. Sudden withdrawal of strong resistance to movement causes marked rebound; ipsilateral to cerebellar lesion.

release p. Hyperreflexia induced by lesion of the brain stem and release of the effect of the cerebral cortex.

Rust's p. Use of the hands to support the head during change of position in tuberculous caries of the upper cervical vertebrae.

satellite p. The characteristic arrangement of the colonies of *Hemophilus influenzae* i association with *Micrococcus aureus.* The bacilli form satellites at distance from the coccal colonies.

Schiff Sherrington p. Hyperreflexia of the forelimbs after the spinal cord is severed below the cervical enlargement.

setting-sun p. A sign associated with hydrocephaly where, because of tightness of the scalp, the upper eyelids are pulled up and expose the sclera above the iris.

Shwartzman p. A phenomenon of local tissue reactivity in the skin and various organs to bacterial filtrates. Active principles responsible for the phenomenon were identified as antigenic soluble ex toxins. The phenomenon is produced by preparatory (intradermal, intraparenchymal, or intravenous) injection of the active substance, followed by an intra enous injection of the active substance 24 hours later. The lesion produced t the site of preparation is severe hemorrhagic ecrosis. The phenomenon was first observed, but incorrectly interpreted by Giuseppe Sanarelli.

similia p. The basis of homeopathy: like is cured by like.

staircase p. The increases in height of muscle contractions early in series of responses to stimuli of constant intensity. Contractions are increased by residual effects of previous contractions, probably metabolic products.

Staub-Traugott p. See under Hans *Staub*.

stress p. See general adaptation *syndrome*.

tibialis p. A marked dorsiflexion t the ankle occurring in attempts to draw the leg toward the body in pyramidal tract injury.

toe p. A movement of flexion and bduction of the toe caused by sudden blow on the toe-ends; seen in upper motor neuron damage.

Tyndall p. See *Tyndallization*.

von Stockert p. Quick induction of sleep, caused by certain visual stimuli; after acute stages of encephalitis lethargica.

Vulpian-Heidenhain-Sherrington p. Stimulation of intact sensory nerve fibers in trophic muscles may produce enough antidromic impulses generating sufficient acetylcholine to cause slow small, maintained contraction.

Wenckebach p. A recurring pulse pause in partial heart block.

phen"o-pro pa zine hy"dro-chl ride. Profenamine hydrochloride.

phe no-sul'fa zole. Generic name for N-(2-thiazolyl) 1 phen l-4-sulf namid OH C H SO_2NH C H_2NS, employed experimentally in treating poliomyelitis but found ineffective. See *darvisul*.

phe no thi a zine (fee no-thigh uh-zeen, -zin) $C_{12}H_9NS$. Thiodiphenylamine occurs as weak yellow-green to weak olive-green powder insoluble in water soluble in alcohol. It is used at present chiefly by veterinarians for its vermifuge action. Dose varies, depending on animal' size.

phe no-type [G *phainein*, to show *typos*, impression]. 1. The sum total of visible traits which characterize the members of group. 2. A group of individuals who look alike, but differ in their genetic make-up. —**phenotyp'ic**, *adj.*

phe nox'y Th univalent radical C_6H_5O.

phe-nox'y ce ti ac'id. C_6H_5O CH_2COOH; phenoxyethanoic acid or O-phenylglycolic acid, occurring in needlelike crystals, sparingly soluble in water, freely soluble in alcohol. fungicide.

ph n y b nz' min hy"d o hl ride. Generic name for N-phenoxyisopropyl-N-benzyl-β-chloroethylamine, an adrenergic blocking agent. See *dibenzyline*.

phe-nox'y gous [*phainein*; G *zygon*, yoke]. Pertaining to an anomaly of development in which the cranium is considerably narrower than the broadest part of the face.

phen tet"l-o-thal'e-in so di um (fen-tet rye o-thal'ee in, thal een, -thay'lee in) NaO O C C I C C_6H OC_6H_4ONa. The diso um salt of dye, phenoltetraiodophthalein. Bronze-purple, odorless granules soluble in water and alcohol. Used for the roentgenologic examination of the gallbladder and simultaneous test of hepatic function. Dose, 0.04 Gm. per kg. of body weight, total dose need not exceed 2.5 Gm. Syn., *phenoltetraiodophthalein sodium*.

phen tol'a mine Generic name for 2-[(m-hydroxy-N-p-tolylamino)-methyl]-2-imidazoline, supplied under the trade-marked name *regitine* intended for use in diagnosis between essential hypertension and that resulting from pheochromocytoma.

phenurone. Trade-mark for *phenacemide*.

phen yl, phe nyl. The univalent radical, C_6H_5—. —**phenyl'ic**, *adj.*

phen"yl ac"et al'de-hyde. C_6H_5 CH_2CHO colorless liquid with strong hyacinthlike odor, polymerizing and becoming viscous on standing, slightly soluble in water used as attractant in insect control and in perfumery.

phen"yl ac"et am'ide. See *acetamid*.

phen"yl -ce tic ac'id. C_6H_5 CH COOH crystals, soluble in water; product of apparently faulty metabolism of phenylalanine, also of normal metabolism of phenyl derivatives of fatty acids having an even number of carbon toms.

phen yl a-ce"tyl glu'ta mine. H_2N $CO(CH_2)_2$ $(CHNHOCCH_2C_6H_5)COOH$. A conjugated form of phenylacetic cid excreted in man and the chimpanzee.

phen yl a ce"tyl-sal"l-cyl'ate. $C_6H_4(OCH_2CO)$-$COOC_6H$. A white tasteless powder insoluble in water hydrolyzed in the intestines. An analgesic, antipyretic and mild intestinal antiseptic. Dose, 0.5–1 Gm. (7½–15 gr.) See *spiroform*.

phen yl ac"e-tyl u re a. C_6H CH CONH CO-NH_2, white, crystalline substance, very slightly soluble in water prepared by synthesis; an anticonvulsant with minor sedative action, useful in treating epilepsies. Syn., *phenacemide*. See *phenurone*.

α-phen yl ...cryl'ic ac'id. Atropic acid.

phen"yl al' nine (fen il-al'uh neen, -nin, fen-nil-) $C_6H_5CH_2CH(NH_2)COOH$. α-Amino-β-phenylpropionic acid, an amino acid essential in human nutrition.

phen yl al co hol. See *phenol*.

phen"yl-am'ine. See *aniline*.

phen"yl benz am ide (ben zam'id, ben zah-myde, -mid) Benzanilide.

phen"yl bu'ta one. Generic name for 3,5-dioxo-1 2-diphenyl-4-n-butylpyrazolidine, supplied under the trade-marked name *butazolidin* for use in treatment of arthritis and allied disorders.

phen yl car'bi nol. Benzyl alcohol.

phen yl-car byl'a mine chlo ride. $C_6H_5NCCl_2$ lacrimatory agent having potential utility in chemical warfare.

phen"yl cin"cho-nin'ic ac'id. Cinchophen.

phen yl cy' nide. Benzonitrile.

phen"yl di bro mo-ar'sine. $C_6H_5AsBr_2$, lung irritant having potential utility in chemical warfare.

phen"yl-di chlo ro-ar sine. $C_6H_5AsCl_2$, lung irritant having potential utility in chemical warfare.

phen'yl-ene (fen -leen, fee nl leen) The bivalent radical, C_6H

phen yl-ene-di' mines. Any of three isomeric crystalline substances of the formula $C_6H_4(NH_2)_2$ distinguished by the prefixes *ortho-*, *meta-*, and *para-*. All are used in manufacturing dyes, and the para-compound has been used as hair dye, causing toxic reactions.

phen yl ph'rine hy"dro chl ride. Generic name for the sympathomimetic substance available under the trade-marked name *neo-synephrine hydrochloride*.

phen"yl-eth"yl-a mine. $C_6H_5CH_2CH_2NH_2$; 1-amino-2-phenylethane; liquid, slightly soluble

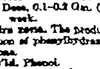
in water produced by enzymatic decarboxylation of phenylalanine also called β-phenylethylamine. Syn., phenethylamine.

phen yl-eth"yl bar"bi tu'ric ac'id. See phenobarbital.

phen"yl-eth yl-mal"o-ny-lu're-a. See phenobarbital.

phen"yl glu-co'sa zone. $C_{18}H_{22}N_4O_4$ A yellow crystalline compound produced in the phenylhydrazine test for glucose.

phen yl hy'dra-te. See phenol.



phen"yl hy'dra-zine (fen il high'drah-zeen, -zin, fee nil-) $C_6H_5.NH.NH_2$ A colorless to pale-yellow to red-brown liquid, sparingly soluble in water and miscible with alcohol. It is used as reagent for sugars, aldehydes, and ketones, and in other chemical reactions. Phenylhydrazine base must not be used medicinally.

p. hydrochloride. $C_6H_5.NH.NH_2.HCl$, occurs as white, silky leaflets soluble in water and alcohol; discolors in light and air. It is used in the treatment of polycythemia. It must be used with caution as excessive doses cause fatty degeneration of the liver. Dose, 0.1–0.2 Gm. (1½–3 gr.) two or three times week.

phen"yl hy'dra zone. The product resulting from the interaction of phenylhydrazine with an aldehyde or ketone.

phe-nyl'ic ac'id. Phenol.

2-phen"yl-in"dane-1,3-di'one.

A white powder insoluble in water soluble in alcohol. It is an orally effective anticoagulant. Syn. phenindione.

phen"yl ke"to-nu'ri a. The presence of phenylketone in the urine.

phen"yl mer-cu'ric ac' tate (ass'i tayt) $C_2H_3HgC_2H_3O_2$; occurs as small, white, lustrous prisms soluble in about 600 parts of water but more soluble in alcohol. Used as an antiseptic, germicide, and fungicide.

phen"yl mer-cu ric bor' te. See merphenyl borate.

phen yl mer-cu'ri chlo ride. C_6H_5HgCl; occurs as white leafy crystals, practically insoluble in water. Used as an antiseptic, germicide, and fungicide.

phen yl mer cu'ric ni'trate. $C_6H_5Hg.OH.C_6H_5HgNO_3$ basic phenylmercuric nitrate; occurs as white or grayish white powder; sol ble in about 1250 parts of water; slightly soluble in alcohol. Used as an antiseptic, germicide, and fungicide.

phen yl mer cu'ric pic'rate. See merphenyl picrate.

phen yl meth'yl al co hol. Benzyl alcohol.

phen y lon. Antipyrine.

o-phen"yl phe nol. $C_6H_5.C_6H_4.OH$ 2-hydroxydiphenyl, occurring as white, flaky crystals, insoluble in water soluble in alkali solutions and most organic solvents used in various formulations as germicide and fungicide.

phen yl pro pa nol' -mine hy"dro-chlo ride. $C_6H_5.CHOH.CH(CH_3).NH_2.HCl$ dl-norephedrine hydrochloride white, crystalline powder freely soluble in water chemically and pharmacologically analogous to ephedrine, its action being more prolonged used as bronchial dilator and nasal vasoconstrictor. See propadrine hydrochloride.

phen yl p pyl meth yl amin $C_6H_5.CH_2.CH(CH_3).CH_2.NH.CH_3$; dl-N,β-dimethylphenethylamine; volatile liquid, slightly soluble in water employed as nasal vasoconstrictor by inhalation. The hydrochloride is applied topically for the same purpose. See vonedrine.

phen"yl py-ru'vic ac'id (fen"il pye-roo vick, -pi-roo'vick, fee nil-) $C_6H_5CH_2.CO.COOH$. A metabolic product of phenylalanine the state of mental deficiency known as phenylpyruvic oligophrenia is characterized by excretion of the acid.

phen yl-py ru vic -nem"ti (-roon shee-uh, -shah) See phenylpyruvic oligophrenia.

phen yl-quin"o-line-car"box yl'ic ac'id (fen"il-kwin o-leen- -lin fee nil-) Cinchophen.

phen yl sal"i-cyl"ate (phenylis salicylas) $OH.C_6H_4.COO.C_6H_5$ A white, crystalline powder very slightly sol ble in water freely soluble in alcohol. Phenyl salicylate is hydrolyzed in the small intestine by the pancreatic juice yielding phenol and salicylic acid. For this reason it is used as an internal antiseptic in the treatment of enteritis and intestinal fermentation. Dose, 0.3–1.0 Gm. (5–15 gr.) Syn., salol.

phen"yl-sul'fate. A salt of phenylsulfuric acid.

phen"yl-sul fur"ic ac'id. $C_6H_5OSO_3H$. A phenol ester of sulfuric acid.

phen"yl thi"o-u re a. $C_6H_5.NH.CS.NH_2$ needle-like crystals, slightly soluble in water of interest as substance which tastes bitter to most persons, but is tasteless to others also called phenylthiocarbamide.

phen'y-toin so di um. Diphenylhydantoin sodium.

phe -chrome (fee o-krome) Chromaffin. Obs.

phe o-chro mo-blas to ma [G phaios, gray; chrōma, color; blastos, germ -ōma, tumor]. A tumor of the same order as pheochromocytoma, but made up of less well differentiated cells, the pheochromoblasts, and considered more malignant as evidenced by invasion of the capsule, direct extension, and metastases. Syn., chromaffinoblastoma, malignant chromaffinoma, malignant pheochromocytoma.

phe" -chro mo cyte [phaios; chrōma; G kytos, cell]. Obsolete term for chromaffin cell.

phe"o-chro"mo-cy to ma (fee o-kro mo-sigh-to muh) [phaios; chrōma; kytos; G. -ōma, tumor]. A tumor of the sympathetic nervous system, found most often in the adrenal medulla but occasionally in other sites such as Zuckerkandl' bodies and in the thorax. It is made up largely of pheochromocytes, or chromaffin cells, derivatives of the primitive neurocytes, with strong affinity for taking up chrome salts. May be accompanied by the adrenal-sympathetic syndrome of spasmodic or persistent hypertension. Also called chromaffinoma, chromaffin or chromophile tumor.

malignant p. See pheochromoblastoma.

phe"o phor'bide. The product resulting when magnesium and the alcohol phytol are removed from chlorophyll by treatment with strong acid.

phe o-phy'tin. The product formed by replacement of magnesium in chlorophyll by hydrogen. The corresponding copper and iron derivatives of chlorophyll, which may be considered magnesium-free pheophytin, are called copper pheophytin and iron pheophytin. They are sometimes referred to simply as chlorophylls.

phe then'y late. The generic name for 5-phenyl-5-(2-thienyl)hydantoin, $C_{13}H_{10}N_2O_2S$, synthetic anticonvulsant. See thiantoin.

Ph. G. Graduate in Pharmacy German Pharmacopoeia.

phi'al. See vial.

Phi"a loph o-ra [G. phialē bowl phoros, bearing]. A genus of fungi.

P verrucosa. A species which is one of the causative agents of chromoblastomycosis.

-phil'i a [G *philein*, to love]. A combining form meaning *love of*; used to denote *tendency toward* or *craving for*. Also see *phobia*.

phi li'a ter, phil'i a ter [*philein*, G *iatēr*, physician]. 1. A student of medicine. *Obs.* 2. A dabbler in medicine. *Obs.*

Philippson's reflex. See under *reflex*.

phil'ly rin. $C_{27}H_{34}O$. A crystalline glucoside found in the bark and leaves of various species of *Phillyrea*; has been used as an antipyretic.

phil"o cy'tase [*philein*, G *kytos*, cell]. Metchnikoff's name for the intermediate body of Ehrlich; an amboceptor. *Obs.*

phil"o-ne'ism [*philein*, G *neos*, new]. Abnormal love of novelty; the reverse of misoneism.

phil"o pa trid"o ma ni a [*philein*, G *patris*, fatherland; *mania*, madness]. Uncontrollable desire to return home; excessive nostalgia, or homesickness. *Obs.*

phil'ter, phil'tre [G *philtron*, love charm]. A love potion; a preparation supposed to be efficacious in exciting sexual passion.

phil'trum [*philtron*]. The depression on the surface of the upper lip immediately below the septum of the nose.

phi mo'sis (figh-mo'sis, fi-mo'sis) [G *phimōsis*, a stopping up]. Elongation of the prepuce and constriction of the orifice, so that the foreskin cannot be retracted to uncover the glans penis. —**phimot'ic**, *adj.*

phleb-. See *phlebo-*.

phleb-an"gi o'ma [G *phleps*, vein; *angeion*, vessel; *-ōma*, tumor]. A venous aneurysm.

phleb ar te"ri-ec ta'si a [*phleps*; G *artēria*, artery; *ektasis*, extension]. Varicose aneurysm.

phleb"ar te ri"o di al'y sis (fleb ahr-teer"ee-o-dye-al'i-sis) [*phleps*; *artēria*; G *dialysis*, separation]. Arteriovenous aneurysm.

phleb"ec ta'si-a, phle bec'ta-si [*phleps*; G *ektasis*, extension]. Dilatation of a vein; varicosity.

phle-bec'to my [*phleps*; G *ektomē*, excision]. Excision of a vein or a portion of a vein.

phleb ec to'pi a [*phleps*; G *ektopos*, away from a place]. The displacement, or abnormal position, of a vein.

phleb em phrax'is [*phleps*; G *emphraxis*, stoppage]. Plugging of a vein.

phleb"ep a ti'tis [*phleps*; G *hēpar*, liver; *-itis*, inflammation]. Inflammation of veins within the liver.

phleb eu rys'ma (fleb yoo-ris'muh). See *varix*.

phleb"ex ai re'sis (fleb"eks-eye-ree'sis) [*phleps*; G *exairesis*, a taking out]. Excision of a vein.

phle bis'mus (fli-bis'mus) [*phleps*]. Undue prominence or swelling of a vein.

phle-bi'tis [*phleps*, G *-itis*, inflammation]. Inflammation of a vein; is generally suppurative (**suppurative phlebitis**) and is the result of the extension of suppuration from adjacent tissues. It leads to the formation of a thrombus within the vein (**thrombophlebitis**), which may break down and cause the distribution of septic emboli to various parts of the body. When not due to a suppurative process (**plastic, adhesive,** or **proliferative phlebitis**), it may give rise to obliteration of the vein. Symptoms are pain and edema of the affected part, redness along the course of the vein, the latter appearing as a hard, tender cord. —**phlebit'ic**, *adj.*

blue p. See *phlegmasia cerulea dolens*.

infectious p. That due to infection.

pelvic p. Inflammation of the veins in the pelvis.

sclerosing p. A type in which the veins become permanently occluded by scar formation.

sinus p. Phlebitis of the sinuses of the dura mater.

phleb o-, phleb- [*phleps*]. A combining form meaning *vein*.

phleb o-car"ci no'ma [*phleps*; G. *karkinōma*, cancer]. Extension of carcinoma to the walls of a vein.

phle boc ly'sis (fli bock'li-sis, fleb o kly'sis) [*phleps*; G *klysis*, a drenching]. The injection of saline solution into a vein.

phleb o-gram [*phleps*; G. *gramma*, letter]. 1. A roentgenogram of a vein after injection of the artery whose capillary bed it drains, with roentgen-opaque material, such as diodrast. 2. A tracing of the venous pulse by the sphygmograph.

phleb o-graph [*phleps*; G *graphein*, to write]. An instrument for recording the venous pulse.

phle-bog'ra phy [*phleps*; *graphein*]. The anatomy and physiology of the veins.

phleb'oid [*phleps*; G *eidos*, form]. 1. Pertaining to a vein; venous. 2. Resembling a vein.

phl b'o-lith [*phleps*; G *lithos*, stone]. A hard concretion sometimes found in veins, produced by calcareous infiltration of a thrombus. —**phlebolith'ic**, *adj.*

phleb o li thi'a-sis [*phleps*; *lithos*; NL. *-iasis*, condition]. The formation of phleboliths.

phleb" o ma nom'e ter [*phleps*; G. *manos*, thin; *metron*, a measure]. An apparatus for the direct measurement of venous pressure.

phleb o-phle-bos'to-my [*phleps*; *phleps*; G. *stoma*, mouth]. An operation in which an anastomosis is made between veins.

phleb o phle-bi'tis. See *phlebitis*.

phleb o plas"ty [*phleps*; G *plassein*, to form]. Plastic operation for the repair of veins.

phleb o ple-ro'sis [*phleps*, G *plērōsis*, a filling up]. Distention of the veins.

phl b"or rha gi a [*phleps*; G *rhēgnynai*, to burst forth]. Venous hemorrhage.

phle bor'rha phy [*phleps*; G. *rhaphē*, suture]. Suture of a vein.

phleb or rhex'is [*phleps*; G *rhēxis*, a breaking]. Rupture of a vein.

phleb o-scl ro'sis [*phleps*; G *sklērōsis*, hardening]. 1. Sclerosis of a vein. 2. Chronic phlebitis.

phle-bos'ta si [*phleps*; G *stasis*, standing]. The temporary removal of some of the blood from the general circulation by means of compression of the veins in the extremities. Syn. *bloodless phlebotomy*.

phleb o-ste no'si [*phleps*; G. *stenōsis*, a being straitened]. Constriction of a vein.

phleb"o-strep'sis [*phleps*; G *strepsis*, a turning round]. Torsion, or twisting, of a vein.

phleb o throm bo'sis [*phleps*; G *thrombōsis*, a becoming curdled]. Formation of a thrombus in a vein.

phleb o tome [*phleps*; G *tomos*, cutting]. A cutting instrument used in phlebotomy.

Phle bot'o mus [*phleps*; *tomos*]. A genus of small blood-sucking sandflies of the family Psychodidae. The species **P. argentipes** transmits the flagellates of kala-azar in India, **P. chinensis** in China. **P. papatasii** is the vector of pappataci fever, sandfly fever of the Balkans. **P. verrucarum** is the vector for *Bartonella bacilliformis*, the causative agent of bartonellosis or Carrión's disease (Oroya fever and verruga peruviana).

phle bot'o-my [*phleps*; G. *tomē*, a cutting]. The opening of a vein for the purpose of bloodletting. —**phlebot'omist**, *n.*

bloodless p. See *phlebostasis*.

phlegm (flem) [G *phlegma*, phlegm]. 1. A viscid, stringy mucus, secreted by the mucosa of the air passages. 2. One of the four humors of the old writers.

phleg ma'si-a [G. *phlegmasia*, a turgescence]. Inflammation.

p. adenosa. See *adenitis*.
p. alba dolens. Milk leg. Painful swelling of the leg beginning either at the ankle and ascending, or at the groin and extending down the thigh, its usual cause being infection after labor.
p. cellularis. Cellulitis.
p. cerulea dolens. Acute, fulminating, deep venous thrombosis, characterized by pain, edema, and cyanosis of the extremities; also called *blue phlebitis*.
p. dolens. See p. alba dolens.
p. lactea. See p. alba dolens.
p. malabarica. See *elephantiasis arabum*.
p. membranae mucosae gastropulmonalis. See *aphthae tropicae* under *aphtha*.
p. myodes. Myositis.
phleg·mat'ic [G. *phlegmatikos*, abounding in phlegm]. 1. Of the nature of phlegm. 2. Characterized by an apathetic sluggish temperament.
phleg'mon [G. *phlegmonē*, inflammation]. Suppurative inflammation of a part, especially the connective tissue. —**phlegmonous**, *adj.*
phlo'em [G. *phloios*, bark]. In botany, that portion of a fibrovascular bundle lying beneath the epidermis which consists of sieve tubes, companion cells, and associated fibers or parenchyma; leptome. Also see *xylem*.
phlo·gis'ton. The name, introduced by Stahl in the 17th century, of the hypothetical component of combustible substances. Such substances were thought to be compounds of phlogiston with another component; on combustion the phlogiston escaped, leaving the other component. The theory was abandoned following the discovery of oxygen and of its role in combustion.
phlog"o·gen'ic, phlo·gog'e·nous [G. *phlox*, flame; *genesthai*, from *gignesthai*, to be produced]. Producing inflammation.
phlo·go'sin. A crystalline substance found in cultures of pyogenic cocci, which can produce inflammation.
phlo·go'sis. Old term for inflammation.
phlog" o·zel'o·tism [phlox; G. *zēlōtēs*, zealot]. An old term for ascribing to every disease an inflammatory origin.
phlor'·e·tin, phlo·re'tin. $C_{15}H_{14}O_5$. A product of the hydrolysis of phlorhizin. Its administration in suitable doses, like that of phlorhizin, is followed by glycosuria.
phlo·rhi'zin (flo-rye'zin, flor'i-zin). $C_{21}H_{24}O_{10}.2H_2O$. A glycoside derived from the bark and root of apple, cherry, pear, and other trees; occurs as light, white, silky needles slightly soluble in water and soluble in alcohol. Phlorhizin causes the appearance of a considerable amount of glucose in the urine. The drug has been suggested as a test for kidney function. It has also been used as an antiperiodic. Also called *phlorizin*, *phloridzin*, *phlorrhizin*.
phlor"o·glu'cine (flor"o-gloo'seen, -sin). See *phloroglucinol*.
phlor"o·glu'ci·nol. $C_6H_6O_3.2H_2O$. Used as a reagent for hydrochloric acid in gastric juice, for lignin, pentosans, pentoses, etc.
phlox'ine (flock'seen, -sin) (C.C.). A red acid dye of the eosin series used as a counterstain with blue nuclear dyes.
phlyc·te'na [G. *phlyktaina*, blister]. A vesicle. —**phlyctenar**, **phlyctenous**, *adj.*
phlyc·ten'u·le (flick-ten'yool, flick'ten-yool"), **phlyc·ten'u·la** [dim. from *phlyktaina*]. A minute phlyctena; a little vesicle or blister. —**phlycten'ular**, *adj.*
phlyc·ten"u·lo'sis [*phlyktaina*; G. *-ōsis*, condition]. The presence of phlyctenules.
-phobe [G. *phobos*, fear]. A combining form denoting one having a phobia.
pho'bi·a [*phobos*]. A specific neurotic fear symbolic of a neurotic conflict and its resulting anxiety. See Table of Phobias in the Appendix. Also see *phobic reaction*. —**pho'bic**, *adj.*
-pho'bi·a [*phobos*]. A combining form denoting *fear* or *dread*. Also see *-phobe*.
pho"bo·dip'si·a [*phobos*; G. *dipsa*, thirst]. Hydrophobia. *Obs.*
pho"bo·pho'bi·a [*phobos*; *phobos*]. A morbid dread of being afraid.
Phocas, B. Gerasime [French physician, 1861–1937]. Described a form of chronic mastitis, characterized by the presence of multiple fibrous nodules; called *Phocas' disease*.
pho"co·me'li·a, pho·com'e·ly [G. *phōkē*, seal; *melos*, limb]. Absence or markedly imperfect development of arms and forearms, thighs and legs, but with hands and feet present.
pho·com'e·lus [*phōkē*; *melos*]. An individual with phocomelia.
phoen'i·cin. Phenicin.
Pho'ma [G. *phōis*, blister]. A genus of fungi whose species may act as common allergens and as laboratory contaminants.
pho'nal, phon'ic (fon'ick, fo'nick) [G. *phōnē*, voice]. Pertaining to the voice or to sound.
pho"nas·the'ni·a [*phōnē*; G. *asthenia*, want of strength]. Weakness of voice, especially that resulting from bodily exhaustion.
pho·na'tion [*phōnē*]. The production of vocal sound or articulate speech.
subenergetic p. Hypophonia.
superenergetic p. Hyperphonia.
pho'na·to"ry [*phōnē*]. Pertaining to phonation, as the phonatory cord, the vocal fold.
phon·au'to·gram (fone-aw'to-gram) [*phōnē*; G. *autos*, self; *gramma*, letter]. The diagram of a phonautograph.
phon·au'to·graph (fone-aw'to-graf) [*phōnē*; *autos*; G. *graphein*, to write]. An apparatus for recording automatically the vibrations of the air produced by the voice.
phone [*phōnē*]. A vocal sound.
pho'neme [G. *phōnēma*, sound]. An auditory hallucination of hearing words.
pho·nen'do·scope [G. *phōnē*, voice; *endon*, within; *skopein*, to examine]. A variety of stethoscope which intensifies the auscultatory sounds by the use of two diaphragms. *Obs.*
pho·net'ic [G. *phōnētikos*, vocal]. 1. Pertaining to sounds. 2. Pertaining to the voice.
pho·net'ics [*phōnētikos*]. The science dealing with the mode of production of sounds.
pho"ni·at'rics, pho·ni'a·try (fo"nigh-ah-tree, fo-nee'ah-tree) [G. *phōnē*, voice; *iatros*, physician]. The study and treatment of the voice.
phon'ic. See *phonal*.
pho'ni·ca [*phōnē*]. Diseases affecting the vocal organs. *Obs.*
phon'ics. The science of teaching pronunciation and oral reading by the sounds for which the letters stand; distinguished from *phonetics*.
pho'nism [*phōnē*]. A sensation, of sound or hearing, due to the effect of sight, touch, taste, or smell, or even to the thought of some object, person, or general conception.
pho·no-, phon- [*phōnē*]. A combining form meaning *sound* or *voice*.
pho"no·car'di·o·gram" [*phōnē*; G. *kardia*, heart; *gramma*, letter]. A graphic record of heart sounds.
pho"no·car'di·o·graph" [*phōnē*; *kardia*; G. *graphein*, to write]. An instrument for registering the sounds of the heart. —**phonocardiograph'ic**, *adj.*

pho no car"di og'ra phy [*phōnē*; *kardia*; *graphein*]. The graphic recording of heart sounds and murmurs by electric reproduction, using microphone, amplifier and galvanometer or by transmission of the vibrations to a delicate membrane, the oscillations of which are optically recorded, as in the Wiggers and Dean method. Syn. *stethography*.

pho no chor'da (fo no-kor duh) [*phōnē*; G. *chordē*, string]. A vocal fold. *Obs.*

pho no gram [*phōnē*, G *gramma*, letter]. A written record of a sound.

pho no graph [*phōnē*; G *graphein*, to write]. An instrument for recording and reproducing vocal and other sounds.

pho nol o gy [*phōnē*; G *logos*, word]. The science and study of vocal sound. Phonetics.

pho"no ma'ni [G *phonos*, slaughter; *mania*, madness]. Homicidal mania.

pho no mas sag [G *phōnē*, sound; F *massage*, massage]. Stimulation and exercise of tympanic membrane and ossicular chain, by alternating pressure and suction in the external auditory meatus.

pho nom e ter [*phōnē*, G *metron*, measure] An instrument for measuring the pitch and intensity of vocal sounds. —**phonometry** n.

pho no my oc'lo nus (fo no-migh-ock'lo-nus, -migh o-kl nus) [*phōnē*; G *mys*, muscl ; *klonos*, turmoil]. A condition in which a sound is heard on auscultation over a muscle, denoting fibrillary contractions, which may be so fine as to be invisible

pho no my og ra phy (-migh-og'ruh fee) [*phōnē*; *mys*; G *graphein*, to write]. Recording of sounds mad by the contraction of a muscle.

pho nop a thy [*phōnē*; G *pathos*, disease]. Any disorder or disease of the voice. *Rare.*

pho no pho'bi a [*phōnē*; G *phobos*, fear]. 1 A fear of speaking fear of one's own voice. 2. Morbid dread of any sound or noise.

pho no pho tog'ra phy [*phōnē*; G *phōs*, light; *graphein*, to write]. Photography of sound waves produced in phonation.

pho nop si a [*phōnē*; G *opsis* vision]. The perception of color sensations by auditory sensations.

phor'bin. The metal-free ring system characteristic of chlorophylls, composed of four pyrrole rings on one of which is fused a cyclopentane ring. It closely resembles the porphyrin ring system of heme.

-pho ri a [G *pherein*, to bear]. In *ophthalmology*, a combining form meaning *bearing*; used to denote *turning of the visual axis*, as in exophoria.

Phor'mi a. A genus of blowflies.

P regina. This species normally deposits its eggs or larvae in the decaying flesh of dead animals, but may be a secondary invader of neglected wounds and sores. The maggots may attack living tissue when dead tissue is not available.

phor'o-blast [G *phoros* bearing *blastos*, germ]. Fibroblast. *Obs.*

phor o-cyte [*phoros*; G *kytos*, cell]. A connective-tissue cell. *Obs.*

pho-rol o gy [*phoros*; G *logos*, word]. The science pertaining to disease carriers. *Obs.*

pho-rom e ter [*phoros*, G. *metron*, measure]. An instrument for measuring the relative strength of the ocular muscles.

phor"o-op tom e-ter An apparatus for optical testing of muscular defects.

phor op ter [*phoros*; G *optēr* one who looks]. A sight-testing device containing 20 lenses; by manipulating the dials, over 61 billion combinations are possible. It adds automatically and rapidly the magnifications of its combinations, thus obviating the tedious shifting of refracting lenses into trial frames by hand.

phor' o-scope [*phoros*; G *skopein*, to examine] An apparatus for testing vision, consisting of a trial frame for lenses, fixed to a bench or table.

phor o-tone [*phoros*; G. *tonos*, tension]. An apparatus for exercising the eye muscles.

phose (fohz) [G *phōs*, light]. The subjective sensation of light or color as scotoma scintillans of migraine. Also see *aphose*, *centraphose*, *centrophose*, *chromophose*, *cyanophose*, *erythrophose*, *peripherophose*, *periphérophose*.

phos'gene. $COCl_2$. Carbonyl chloride; a colorless gas used in chemical warfare and in chemical syntheses.

phos gen'ic. See *photogenic*.

phos'pha gen. Phosphocreatine.

phosphaljel. Trade-mark for an aluminum phosphate gel containing 4% of aluminum phosphate The product has antacid and astringent properties analogous to those of aluminum hydroxide gel, but does not interfere with phosphate absorption Used in the treatment of peptic ulcer.

phos'pha-tase (fos fuh-tase, -taze) A type of enzyme that catalyzes the hydrolysis of esters of phosphoric acid. Numerous phosphatases are known to exist, and they play an important role in carbohydrate metabolism, in nucleotide metabolism, in phospholipid metabolism, and in bone formation. See Table of Normal Values of Blood Constituents in the Appendix.

phos phate. A salt of phosphori acid.

acid p. One in which only one or two of the hydrogen atoms of phosphoric acid have been replaced by metals.

normal p. One in which the three hydrogen atoms of phosphoric acid are substituted by metals.

p. cycle A cycle of continuous phosphorylation and dephosphorylation reactions which provides for conversion of energy derived from certain metabolic processes to useful cellular work.

phos"pha-te'mi a [G *phosphoros*, light-bringer; *haima*, blood]. The presence of phosphates in the circulating blood especially hyperphosphatemia.

phos'pha tide. See *phospholipid*.

phos pha tid'ic ac'id. Any ester of glycerin in which two of its alcohol groups are esterified with long-chain fatty acids, and the other alcohol group is esterified with phosphoric acid, with two acidic groups of the phosphoric acid being unsubstituted. Salts of phosphatidic acids have been isolated from plant tissues and beef heart

phos"pha tu'ri-a [*phosphoros*; G *ouron*, urine]. A condition in which an excess of phosphates passed in the urine more properly called *hyperphosphaturia*.

phos'phene [G. *phōs*, light, *phainein*, to show]. A subjective, luminous sensation caused by pressure upon the eyeball. Also called *pressure p*.

p. of accommodation. A phosphene produced by the effort of accommodation.

phos phide. A compound containing phosphorus in its lowest valence state (−3)

phos phine (fos feen, fin) 1 Hydrogen phosphide, PH_3, a poisonous gas of alliaceous odor 2. A substitution compound of PH_3, bearing the same relation to it that an amine does to ammonia.

phos phite A salt of phosphorous acid.

phos'pho-, phosph- [G *phosphoros*, light bringer] A combining form denoting *phosphorus* or *phosphoric*.

phos"pho-a mi"no lip'id (fos fo-a mee no lip'id, -lye pid, fos fo-am -no-) A compound lipid that contains phosphorus and an amino group.

phos"pho-ar gi nine (fos"fo-ahr'ji neen, -nin). Ar-

ginine phosphate. A phosphoric acid derivative of arginine which contains an energy-rich phosphate bond. Phosphoarginine is believed to play role in invertebrate muscle metabolism similar to that of phosphocreatine in the muscle of vertebrates.

phos"pho-cre'a-tine (fos *f* kree uh teen, -tin) $C_4H_{10}O_5N_3P$ Phosphagen. Creatine phosphate. Creatinephosphoric acid. A phosphoric acid derivative of creatine which contains an energy rich phosphate bond. Phosphocreatine is present in muscle and other tissues, and during the anaerobic phase of muscular contraction it breaks down to yield creatine and phosphate and makes energy available for the contractile process.

phos"pho-di-es"ter ase. An enzyme catalyzing hydrolysis of one ester linkage in phosphoric acid esters containing two ester linkages.

phos"pho-e-nol"py ru'vic ac'id. 2 Phosphoenolpyruvic acid $CH_2:CO \sim P(O)(OH)_2 \cdot COOH$; high-energy phosphate formed by dehydration of 2-phosphoglyceric acid; it reacts with adenosinediphosphate to form adenosinetriphosphate and enolpyruvic acid.

phos pho-fruc to-ki-nase. The enzyme which catalyzes the conversion of fructose-1-phosphate to fructose-6-phosphate.

phos"pho-ga lac"to-i-so'mer-ase. An enzyme which catalyzes conversion of galactose-1-phosphate to glucose-1-phosphate.

phos"pho-glu"co-mu'tase The enzyme which catalyzes the conversion of glucose-1-phosphate to glucose-6-phosphate.

phos"pho glu-con'ic ac'id. $COOH(CHOH)_4CH_2$-OPO_3H_2; 6-phospho-*n*-gluconic acid, product of the oxidation of glucose-6-phosphate by triphosphopyridine nucleotide in the presence of glucose-6-phosphate dehydrogenase.

phos"pho glyc"er-al'de-hyde. $CHO.CHOH.CH_2$-OPO_3H An intermediate product in carbohydrate metabolism. It may give rise to glycerin utilized in fat synthesis.

2-phos"pho gly-cer'ic ac'id. $COOH.HCOPO_3H$ CH_2OH; an intermediate compound in carbohydrate metabolism, specifically between 3-phosphoglyceric acid and phosphoenolpyruvic acid.

3-phos pho-gly-cer'ic ac'id. $COOH.HCOH.CH_2$-OPO_3H_2, an intermediate product in carbohydrate metabolism, specifically between 1,3-diphosphoglyceric acid and 2-phosphoglyceric acid.

phos"pho-glyc"er-o-mu'tase. An enzyme which catalyzes conversion of 3-phosphoglyceric acid to 2-phosphoglyceric acid.

phos pho-gly"co pro'te in. See *nucleoprotein*, *nucleohistone*.

phos"pho-hex"o-i-som'er-ase (-eye-som ur-ace) The enzyme which catalyzes the conversion of glucose-6-phosphate to fructose-6-phosphate.

phos"pho hex"o-ki'nase. The enzyme which catalyzes the formation of fructose-1,6-diphosphate through transfer of phosphate from adenosinetriphosphate to fructose-6-phosphate.

phos"pho-lip'id (fos fo-lip id, -lye pid) A type of lipid compound which is an ester of phosphoric acid and contains, in addition, one or two molecules of fatty acid, an alcohol, and nitrogenous base. They are widely distributed in nature and include such substances as lecithin, cephalin, and sphingomyelin. See Table of Normal Values of Blood Constituents in the Appendix. Syn., *phosphatide*, *phospholipin*.

phos"pho-lip'in. See *phospholipid*.

phos"pho-mo-lyb dic ac'id. $H_3PO_4.12MoO_3$-1^+H_2O A yellow solid used as reagent.

phos pho-mon o-es'ter ase (fos fo-mon o-es ter-ace, -ase fos fo-mo no-) An enzyme catalyzing hydrolysis of phosphoric acid esters containing one ester linkage.

phos pho-ne-cro sis, phos"phor ne-cro sis. See phosphorus necrosis.

phos pho ni um. The hypothetical univalent radical PH_4 It is analogous to ammonium, NH_4

phos"pho-nu"cle-ase (fos *f* new'klee-ace, -ase) An enzyme which splits nucleotides into nucleosides and phosphoric acid. Also called *nucleotidase*.

phos pho-pro te in. A conjugated protein consisting of compound of protein with phosphorus-containing substance other than nucleic acid or lecithin. See American Classification of Proteins in the Appendix.

phos"pho-pyr"i-dine nu"cle-o-tides (fos fo-pirr i-deen, -din) Complex compounds containing nicotinic acid amide, pentose, adenine, and phosphoric acid.

diphosphopyridine nucleotide. Coenzyme I; cozymase.

triphosphopyridine nucleotide. Coenzyme II.

phos"ph py ru vi ac'id $CH_2.CO(PO_3H_2)$ COOH. An intermediate substance obtained in the breakdown of glycogen to lactic acid and the resynthesis of glycogen from lactic acid.

phos'phor A substance which phosphoresces.

phos'pho-ra"ted [G. *phōsphoros*, light bringer]. Containing phosphorus, as phosphorated oil, 1% solution of phosphorus in expressed almond oil.

phos"pho-res'cence [*phōsphoros*]. 1. The continuous emission of light from substance without any apparent rise in temperature, produced after exposure to heat, light, or electric discharges. 2. The faint green glow of white phosphorus exposed to air due to its slow oxidation. 3. *In radiology*, the emission of radiation by substance as result of previous absorption of radiation of shorter wavelength. —**phosphores'cent**, *adj.*; **phosphoresce**, *v.*

phos"phor hi-dro sis (fos"for hi-dro sis, -high-dro sis) **phos"phor-i dro'sis** [*phōsphoros*; G. *hidrōsis*, sweating]. The secretion of phosphorescent sweat; very rare condition.

phos"pho-ri"bo mu'tase. An enzyme which catalyzes interconversion of ribose-5-phosphate and ribose-1-phosphate.

phos phor'ic ac'id (*acidum phosphoricum*) H_3PO_4 Orthophosphoric acid; occurs as colorless, odorless liquid of syrupy consistence and contains 85% of H_3PO_4; miscible with water and alcohol. **diluted p. a.** (*acidum phosphoricum dilutum*) An aqueous solution containing 10 Gm. of H_3PO_4 per 100 cc.

phos'pho-rism [*phōsphoros*]. Chronic phosphorus poisoning.

phos"phor ne-cro sis. See phosphorus necrosis.

phos"phor yl'y-sis. A chemical reaction by which the elements of phosphoric acid are incorporated into the molecule of compound.

phos pho rous ac'id (fos for us, fos for-us) H_3PO_3. A yellow crystalline acid used as reducing agent and as reagent.

phos'pho-rus [*phōsphoros*] (*phosphorus*) P = 30.975. A nonmetallic element occurring in two allotropic forms, white or yellow phosphorus and amorphous or red phosphorus. The red form occurs as reddish-brown powder having specific gravity of 2.19 It is nonpoisonous and is not inflammable in air; insoluble in the solvents in which the yellow form is soluble. The yellow form when recently made is an almost colorless or yellowish, semitransparent mass having specific gravity of 1.82; with age it becomes darker and waxy in appearance; has disagreeable odor and when exposed to air emits poisonous fumes which have an

odor resembling garlic; on longer exposure it may ignite spontaneously. 1 Gm. is soluble in about 400 cc. of dehydrated alcohol, in about 40 cc. of chloroform, in about 102 cc. of dehydrated ether, in about 31.5 cc. of benzene, or in about 0.9 cc. of carbon disulfide; practically insoluble in water. The yellow form should be kept under water and should not be handled with bare hands as it may cause burns when in contact with the skin. Little is known of the effects of elemental phosphorus when administered in therapeutic dose. See Table of Normal Values of Blood Constituents in the Appendix.

p. pentachloride. PCl_5; white to pale-yellow fuming, deliquescent, crystalline masses, soluble in water with decomposition and release of considerable heat; used as a catalyst.

p. pentoxide. P_2O_5; white, amorphous, bulky powder rapidly absorbing moisture from air; slowly soluble in water with evolution of heat; used as a dehydrating agent.

p. trioxide. P_2O_3; colorless crystals, soluble in water, ether, or carbon disulfide.

phos′pho·ryl. The trivalent radical PO.

phos·phor′yl·ase. An enzyme widely distributed in animals, plants, and microorganisms. It is specific for the formation of glucose-1-phosphate (Cori ester) from glycogen and inorganic phosphate.

phos·pho·ryl·a′tion. The term used for the esterification of compounds with phosphoric acid.

phos·pho·ryl·cho′line (fos·fo·ril·ko′leen, -lin, kol′een, -in). An ester of choline and phosphoric acid which constitutes a portion of the lecithin molecule.

phos·pho·ser′ine $(HO)_2OPO·CH_2CH(NH_2)COOH$; phosphoric acid ester of serine; the chief, possibly the only, phosphate containing component of phosphoproteins.

phos·pho·trans·acet′y·lase. The enzyme which catalyzes the reversible transfer of an acetyl group from acetyl coenzyme A to phosphate, with formation of acetyl phosphate.

phos·pho·tri′ose i·som′er·ase. Triose isomerase, an enzyme in the Embden-Meyerhof scheme, catalyzing the interconversion of 3-phosphoglyceraldehyde and phosphodihydroxyacetone.

phos″pho·tung′stic acid. Approximately $P_2O_5·24WO_3·25H_2O$. A white or yellowish-green crystalline acid used as a reagent.

phos·sy jaw. Phosphorous necrosis of the jaw.

phos·vi′tin. A phosphoprotein isolated from the vitellin fraction of egg yolk.

pho·tal′gi·a [G. *phōs*, light; *algos*, pain]. Pain arising from too great intensity of light.

pho·tau″gi·a·pho′bi·a (fo·taw″jee·o·fo′bee·uh) [*phōs*; G. *augeia*, to glitter; *phobos*, fear]. A shrinking from the glare of light.

phot [*phōs*]. A unit of intensity of illumination.

pho′tech·y (fo′teek·ee) [*phōs*; G. *echein*, to have]. Radioactive power exhibited by a substance which has been exposed to radiation.

Photelometer. A trade-marked device combining a point source of light, a photoelectric cell, and spectral filters for the rapid and fairly accurate quantitation of unknown substances.

pho″tes·the′si·a, pho″taes·the′si·a (fo″tess·thee′zhuh, -zee·uh) [*phōs*; G. *aisthēsis*, sensation]. 1. Sensitiveness to light. 2. Photophobia.

pho′tic [*phōs*]. Relating to light.

pho′tism [G. *phōtismos*, illumination]. A visual sensation, as of color or light, produced by hearing, taste, smell, touch, or temperature, or even by the thought of some object, person, or general conception. Also see *phonism*.

pho′to- [G. *phōs*, light]. A combining form meaning *light*.

pho·to·ac·tin′ic [*phōs*; G. *aktis*, ray]. Emitting both luminous and actinic rays.

pho·to·bac·te′ri·um [*phōs*; G. *baktērion*, small staff]. A bacterial organism which is light-producing or phosphorescent.

pho·to·bi·ot′ic (fo·to·buy·ot′ick) [*phōs*; G. *biōtikos*, of life]. Living in the light exclusively.

pho″to·ca·tal′y·sis. Catalysis of a chemical reaction effected by exposure to light, either in the visible or ultraviolet region.

pho″to·chem′i·cal [*phōs*; G. *chymos*, juice]. Pertaining to chemical action produced directly or indirectly by means of radiation.

pho″to·chem′is·try [*phōs*; *chymos*]. The study of chemical reactions produced directly or indirectly by means of radiation.

pho′to·chrome [*phōs*; G. *chrōma*, color]. Pertaining to colored light.

pho″to·col″or·im′e·ter [*phōs*; L. *color*, color; G. *metron*, a measure]. A colorimeter consisting of one or more photoelectric cells as indicators and various colored filters for examining certain parts of the spectrum.

pho″to·con·duc·tiv′i·ty. The increase in electrical conductivity of a substance when illuminated.

pho″to·con·junc·ti·vi′tis. See actinic *conjunctivitis*.

pho″to·der″ma·ti′tis. A dermatitis of exposed skin caused by the sun's rays or artificial rays; most often caused by ultraviolet rays.

pho″to·dis·in″te·gra′tion. Nuclear disintegration initiated by an incoming high-energy photon.

pho·tod′ro·my (fo·tod′ro·mee) [*phōs*; G. *dromos*, course]. The movement of particles suspended in fluid toward the light (positive) or away from it (negative).

pho″to·dy·nam′ic (fo″to·dye·nam′ick, -di·nam′ick) [*phōs*; G. *dynamis*, power]. Pertaining to the energy of light.

pho″to·dyn′i·a [*phōs*; G. *odynē*, pain]. Pain arising from too great intensity of light; extreme photophobia.

pho″to·dys·pho′ri·a [*phōs*; G. *dysphoria*, discomfort]. Intolerance of light; photophobia.

pho″to·e·lec′tric col″or·im′e·ter. A colorimeter for determining the concentration of the colored component of a solution, consisting of one or more combinations of calibrated filters and photoelectric cells for measurement of the color.

pho″to·e·lec″tric′i·ty [*phōs*; *ēlektron*]. Electricity produced under the influence of light or other radiations, such as ultraviolet and x-rays. When irradiated by such radiations, certain metals give off photoelectrons. —**photoelec′tric,** *adj.*

pho·to·e·lec′tron [*phōs*; *ēlektron*]. An electron set into swift motion by the impact of a photon, and to which the primary photon transmits all of its energy.

pho″to·flu·or·os′co·py [*phōs*; L. *fluere*, to flow; G. *skopein*, to examine]. Fluoroscopy permitting recording of fluoroscopic images on photographic film. Also called *fluororoentgenography*, *photofluorography*.

pho′to·gene [*phōs*; G. *gignesthai*, from *gignesthai*, to be produced]. 1. A retinal impression; an afterimage. 2. A liquid derived from bituminous shale.

pho″to·gen′e·sis [*phōs*; G. *genesis*, production]. The production of light or of phosphorescence.

pho·to·gen′ic, pho·tog′e·nous [*phōs*; G. *gennan*, from *gignesthai*, to be produced]. Producing light.

pho′to·gram [*phōs*; G. *gramma*, letter]. A photographic record, as an enlargement obtained by the microscope. Preferably called *photomicrograph*.

pho″to·ki·net′ic (fo″to·ki·net′ick, -kigh·net′ick)

[*phōs*; G. *kinētikos*, of motion]. Causing movement by means of the energy of light.

pho"to-ky'mo-graph [*phōs*; G. *kyma*, wave; *graphein*, to write]. An instrument for the optical recording of physiologic cycles or actions, photographic camera having cylindrical lens, moving photographic paper and device for the recording of time intervals simultaneously with the physiologic phenomena.

pho-tol'y-sis [*phōs*; G. *lysis*, loosing]. Decomposition by the action of light.

pho'to-lyte [*phōs*; *lysis*]. A substance that is decomposed by the action of light.

pho"to-mag'net-ism [*phōs*; G. *Magnētis lithos*, magnet]. Magnetism produced in certain substances by the action of light.

pho"to-ma'ni-a [*phōs*; G. *mania*, madness]. 1. The increase of maniacal symptoms under the influence of light. 2. A morbid desire for light.

pho"to-mes'on. A meson ejected from nucleus by an impinging photon.

pho-tom'e-ter [*phōs*; G. *metron*, measure]. 1. An instrument for measuring the intensity of light. 2. An instrument for testing the sensitiveness of the eye to light, by determining the minimum illumination in which the object is visible.

flame p. One used especially for the quantitative determination of sodium and potassium in biological fluids. A sample when sprayed into flame emits light which is resolved into its spectrum; photoelectric cell measures the intensity of light of the wavelength corresponding to the particular element under analysis.

pho-tom'e-try [*phōs*; *metron*]. The measurement of the intensity of light.

flame p. The measurement of the intensity of the emission spectra of any element which is introduced into gas flame as an atomized solution.

internal standard flame p. Flame photometry in which the intensity of the unknown element is simultaneously compared with fixed or known concentration of another element, usually lithium.

pho"to-mi'cro-graph [*phōs*; G. *mikros*, small; *graphein*, to write]. A photograph of minute or microscopic object, usually made with the aid of microscope and of sufficient size for observation with the naked eye. —**photomicrog'raphy**, *n.*

pho"to-mo'tor [*phōs*; L. *motor* from *movere*, to move]. Pertaining to muscular response to light stimuli, as the constriction of the pupil.

pho'ton [*phōs*]. A quantum of energy of visible light or any other electromagnetic radiation.

pho"to-neu'tron. A neutron released from nucleus in photonuclear reaction.

pho-ton'o-sus [*phōs*; G. *nosos*, disease]. A diseased condition arising from continued exposure to intense or glaring light, as snowblindness.

pho"to-nu'cle-ar re-ac'tion. See under *reaction*.

pho"to-pa-thi'a (-pa-see-thee'h h, -see-ah) [*phōs*; G. *para*, beyond; *aisthēsis*, perception]. Defective, or perverted, retinal sensibility.

pho"to-path"o-log'ic [*phōs*; G. *pathos*, disease; *logos*, word]. Pertaining to an abnormality related to light.

pho-top'a-thy. See *photonosus*.

pho"to-per-cep'tive [*phōs*; L. *perceptio* from *percipere*, to perceive]. Capable of receiving and perceiving rays of light.

pho"to-phil'ic [*phōs*; G. *philein*, to love]. Seeking or loving light.

pho"to-pho'bi-a [*phōs*; G. *phobos*, fear]. Intolerance or morbid fear of light. See *phengophobia*. —**photophobic**, *adj.*

pho"to-phone [*phōs*; G. *phōnē*, sound]. An apparatus for the graphic recording of sound by means of light waves.

pho'to-phore [*phōs*; G. *phoros*, bearing]. An electric light for endoscopes.

pho"toph-thal'mi-a [*phōs*; G. *ophthalmia*, ophthalmia]. Inflammation of the eyes due to excessively strong light, as welder arc light or sunlight on snow.

industrial p. That resulting from occupations using insufficiently screened sources of light rich in the shorter wavelengths: also called *flash-eye*.

solar p. See *snowblindness*.

pho"to-po-lym"er-i-za'tion. The polymerization of substance when exposed to light.

pho"to-pro'ton. A proton released from nucleus in photonuclear reaction.

pho-top'si-a [*phōs*; G. *opsis*, vision]. Subjective sensations of sparks or flashes of light occurring in certain pathologic conditions of the optic nerve, the retina, or the brain. —**photoptic**, *adj.*

pho-top'sin. The protein moiety of iodopsin.

pho"top-tom'e-ter [*phōs*; G. *optikos*, of sight; *metron*, measure]. An instrument for determining visual acuity.

pho"top-tom'e-try [*phōs*; *optikos*; *metron*]. The measurement of the perception of light.

pho"to-ra"di-om'e-ter [*phōs*; L. *radius*, ray; *metron*]. An instrument for the measurement of the quantity of x-rays passing through given surface. *Obs.*

pho"to-re-cep'tive [*phōs*; L. *receptus*, from *recipere*, to receive]. Capable of receiving and perceiving rays of light.

pho"to-ret"i-ni'tis. See *sun blindness*.

pho"to-roent"gen-og'ra-phy (fo-to-rent-ghin-og'ruh-fee). See *fluorography*.

pho-tos'co-py. See *skiascopy*.

pho"to-sen"si-tiv'i-ty [*phōs*; L. *sentire*, to feel]. 1. The capacity of an organ or organism to be stimulated to activity by light. 2. The absorption of certain portion of the spectrum by chemical system. —**photosen'sitive**, *adj.*

pho"to-sen"si-ti-za'tion [*phōs*; *sentire*]. Abnormal condition of the skin, making it hyperreactive to exposure to ultraviolet radiation or natural sunlight. It may be produced by the ingestion of fluorescent dyes, endocrine products, or heavy metals.

pho"to-shock'. A type of shock treatment in psychotherapy in which an intermittently flashing light is used after administration of sensitizing drug.

pho"to-syn'the-sis [*phōs*; G. *synthesis*, putting together]. The process by which simple carbohydrates are synthesized from carbon dioxide and water by the chloroplasts of living plant cells in the presence of light.

pho"to-tax'is [*phōs*; G. *taxis*, arrangement]. Response to stimulus of light.

pho"to-ther'a-py [*phōs*; G. *therapeia*, treatment]. Treatment with light rays, including the invisible infrared and ultraviolet radiations.

pho'to-ti"mer [*phōs*; AS. *tīma*]. A clocklike device used to provide proper interval of time for photographic plate or film exposures.

pho-tot'o-nus [*phōs*; G. *tonos*, tension]. State of sensitiveness to light. —**phototon'ic**, *adj.*

pho"to-to'pi-a [*phōs*; G. *ōps*, eye]. A subjective sensation of light.

pho"to-troph'. An autotrophic bacterium able to utilize light energy for metabolism: also called *photosynthetic autotroph*. —**phototroph'ic**, *adj.*

pho-tot'ro-pism [*phōs*; G. *tropein*, to turn]. The tendency shown by most plants to turn or bend toward the greater light.

pho'to-tube [*phōs*; L. *tubus*, tube]. A radio tube which furnishes current of about 2×10^{-6} amp. which, through resistance of 1 megohm, provides

an input to the amplifier of 2×10^{-4} volts in the operation of photoelectric plethysmograph.

pho·tu·ri·a [*phōs*; G. *ouron*, urine]. The passage of phosphorescent urine.

phrag′mo·plast [G. *phragmos*, an enclosure; *plassein*, to form]. The spindle during cytokinesis in plant cells possessing rigid cell membranes.

phre·nal′gi·a [G. *phrēn*, midriff, heart, mind; *algos*, pain]. Melancholia. *Obs.*

phren″as·the′ni·a [*phrēn*; G. *asthenia*, weakness]. Mental defect; feeblemindedness. —**phrenas·then′ic**, *adj.*, *n.*

phren·a·tro′phi·a [*phrēn*; G. *atrophia*, want of food]. Atrophy of the brain; idiocy. *Obs.*

phren″em·phrax′is [*phrēn*; G. *emphraxis*, stoppage]. Crushing of the phrenic nerve with a hemostat to produce temporary paralysis of the diaphragm; a form of collapse therapy used in the treatment of pulmonary tuberculosis.

phre·ne′si·a (fri·nee′zhuh, ·zee·uh) [*phrēn*]. Encephalitis. *Obs.* —**phrenesiac** (fri·nee′zee·ack), *n.*

phre·ne′sis [*phrēn*]. Frenzy; delirium; insanity. *Obs.* —**phrenet′ic**, *adj.*

-phre′ni·a [*phrēn*]. A combining form denoting *mental disorder.*

phren′ic [*phrēn*]. 1. Pertaining to the diaphragm. 2. Pertaining to the mind. See also Table of Arteries and Table of Nerves in the Appendix.

phren″i·cec′to·my (fren″i·seck′to·mee) [*phrēn*; G. *ektomē*, excision]. Resection of a section of a phrenic nerve or removal of an entire phrenic nerve.

phren″i·co·col′ic. See *phrenocolic.*

phren″i·co·ex·er′e·sis [*phrēn*; G. *exairesis*, removal]. Avulsion of a phrenic nerve.

phren″i·co·gas′tric. See *phrenogastric.*

phren″i·co·splen′ic (fren″i·ko·splen′ick, ·splee′nick). See *phrenosplenic.*

phren″i·cot′o·my [*phrēn*; G. *tomē*, a cutting]. Surgical division of a phrenic nerve in the neck for the purpose of causing a one-sided paralysis of the diaphragm, with consequent immobilization and compression of a diseased lung.

phren″i·co·trip′sy [*phrēn*; G. *tripsis*, rubbing]. Crushing of a phrenic nerve.

phre·ni′tis [*phrēn*; G. *-itis*, inflammation]. 1. Inflammation of the brain. 2. Inflammation of the diaphragm. 3. Acute delirium. —**phren′ic, phre·nit′ic**, *adj.*

phren·o-, **phren-** [*phrēn*]. A combining form denoting *relation to the diaphragm.*

phren″o·bla′bi·a [*phrēn*; G. *blabē*, harm]. Any disorder of the mind. *Obs.*

phren″o·car′di·a [*phrēn*; G. *kardia*, heart]. A neurasthenic condition associated with dyspnea and pain in the region of the heart. A symptom-complex in anxiety neurosis.

phren″o·col′ic [*phrēn*; G. *kolon*, colon]. Pertaining to the diaphragm and the colon.

phren″o·gas′tric [*phrēn*; G. *gastēr*, belly]. Pertaining conjointly to the stomach and the diaphragm.

phren″o·glot′tic [*phrēn*; G. *glōttis*, glottis]. Pertaining to the diaphragm and the glottis.

phren″o·glot·tis′mus [*phrēn*; *glōttis*]. Spasm of the glottis ascribed to disease of the diaphragm.

phren″o·he·pat′ic [*phrēn*; G. *hēpar*, liver]. Pertaining to the diaphragm and liver.

phren″o·lep′si·a [*phrēn*; G. *lēpsis*, a seizing]. Insanity. *Obs.*

phre·nol′o·gy [*phrēn*; G. *logos*, word]. An old science based on the theory that the various faculties of the mind occupy distinct and separate areas in the brain cortex, and that the predominance of certain faculties can be ascertained from modifications of the parts of the skull overlying the areas where these faculties are located. *Obs.*

phren″o·pa·ral′y·sis. See *phrenoplegia.*

phren′o·path [*phrēn*; G. *pathos*, disease]. An alienist. *Obs.* —**phrenop′athy**, *n.*

phren″o·ple′gi·a [*phrēn*; G. *plēgē*, stroke]. Paralysis of the diaphragm.

phren′o·sin. A complex lipid obtained chiefly from white matter and containing sphingosine, cerebronic acid, and a sugar, usually galactose; also called *cerebron.*

phren″o·sin′ic ac′id. $C_{24}H_{48}O_3$. Cerebronic acid. A hydroxy fatty acid which is a component of the glycolipid (cerebroside) phrenosin.

phren′o·sperm. See *cardiosperm.*

phren″o·splen′ic (fren″o·splen′ick, ·splee′nick) [*phrēn*; G. *splēn*, spleen]. Pertaining to the diaphragm and the spleen.

phric″to·path′ic [G. *phrittein*, to be shuddered at; *pathos*, disease]. Pertaining to, or accompanied by, a shuddering sensation.

phron″e·mo·pho′bi·a [G. *phronēma*, thought; *phobos*, fear]. A morbid dread of thinking.

phro·ne′si [G., practical wisdom]. Soundness of mind, or of judgment.

phryn″o·der′ma (frin″o·dur′muh, fry″no·) [G. *phrynos*, toad; *derma*, skin]. Dryness of the skin with follicular hyperkeratosis; due to vitamin-A deficiency.

phry·nol′y·sin (fri·nol′i·sin, fry″no·lye′sin, frin·o·) [*phrynos*; G. *lysis*, a loosing]. The lysin or toxin of the fire toad, *Bombinator igneus*; it is hemolytic for the blood of various animals.

phthal-. See *phthalo-.*

phthal′ate (thal′ate). Any salt of phthalic acid.

phthal′ic ac′id (thal′ick). $C_6H_4(COOH)_2$. A colorless crystalline acid used in organic syntheses.

phthal′ic an·hy′dride. $C_6H_4(CO)_2O$. The anhydride of phthalic acid. Can act as an allergen.

phthal′i·dyl (thal′i·dil, ·deel). 3-(α-Aminopropyl)-phthalide hydrochloride, a substance having analgesic properties.

phthal′o- (thal′o-), **phthal-** [*naphthalene*]. In *chemistry*, a combining form for *phthalic.*

phthal″yl·sul″fa·thi′a·zole. $C_{17}H_{13}N_3O_5S_2$. 2-(N⁴-phthalylsulfanilamido)thiazole; a white or faintly yellowish-white crystalline powder practically insoluble in water. It is poorly absorbed from the gastrointestinal tract, by virtue of which a sufficiently high concentration develops in the lumen of the large bowel to suppress growth of bacteria and make the drug useful in treatment of disease and in surgery of the colon. See *sulfathalidine.*

phthei·ri′a·sis (thigh·rye′uh·sis). See *pediculosis.*

phthi′o·col (thigh′o·kole, ·kol, ·kawl). $C_{11}H_8O_3$; an antibiotic substance, 2-hydroxy-3-methyl-1,4-naphthoquinone; isomeric with plumbagin, derived from *Mycobacterium tuberculosis*, active, in vitro, against a number of bacteria, and having some vitamin-K activity.

phthi·o′ic ac′id (thigh·o′ick). A cyclic fatty acid produced by *Mycobacterium tuberculosis*. When applied to the body it produces a local reaction characterized by the appearance of a cheesy nodule similar to that observed in tuberculosis.

phthi·ri′a·sis (thigh·rye′uh·sis, thi·rye′) [G. *phtheiriasis*, morbus pedicularis]. Pediculosis pubis, infestation by the pubic louse *Phthirius pubis.*

phthir″i·o·pho′bi·a (thirr″ee·o·fo′bee·uh, thigh″ree·o·) [G. *phtheir*, louse; *phobos*, fear]. Morbid dread of lice.

Phthir′i·us [*phtheir*]. A genus of true lice. *P. pubis*, species which infests the pubic region of man, and has been implicated in the transmission of louse-borne typhus fever, louse-borne relapsing fever, etc.; the crab louse.

phthis″i·ol′o·gy (tiz″ee·ol′o·jee, thiz″ee·, ·)

[G. *phthisis*, wasting away; *logos*, word]. The study or science of tuberculosis. *Obs.*

phthis"i-o-pho'bi-a (tiz"ee-o-fo'bee-uh, this"ee-o-) [*phthisis*; G. *phobos*, fear]. Morbid fear of tuberculosis.

phthis"i-o-ther'a-py [*phthisis*; G. *therapeia*, treatment]. The treatment of tuberculosis. *Obs.*

phthi'sis (thigh'sis, tye'sis) [G.]. 1. Old term for tuberculosis, especially pulmonary tuberculosis. 2. Old term for any disease characterized by emaciation and loss of strength, especially diseases of the lungs. —**phthis'ic, phthis'ical,** *adj.*

abdominal p. Old term for tuberculous infection of the intestines, peritoneum, or both. In children, usually involves the mesenteric and retroperitoneal lymph nodes.

fibroid p. Chronic, slowly progressive, pulmonary tuberculosis with extensive fibrosis and mild symptoms.

flax-dresser's p. A fibroid pneumonia resulting from the inhalation of particles of flax.

florid p. Acute pneumonic pulmonary tuberculosis, with rapid progression and fatal termination, usually within one to four months.

miner's p. Fibrosis of the lungs occurring in miners. Also called *miners' asthma*. Also see *silicosis*.

p. bulbi. Shrinking of the eyeball.

p. corneae. Cicatricial shrinking of the cornea.

renal p. Tuberculosis of the kidney.

phy"co-bi'lin. A metal-free pigment, found in algae, in which an open-chain tetrapyrrole group, related to bile pigments, is linked to a globulinlike protein.

phy'co-chrome [G. *phykos*, seaweed; *chrōma*, color]. The complex blue-green pigment that masks the green of the chlorophyll in certain algae.

phy"co-col'loid. A class name for polysaccharides, derived from brown or red seaweeds, which form colloidal dispersions with water.

phy"co-cy'a-nin [*phykos*; G. *kyanos*, blue]. *In biology*, a blue pigment, characteristic of the Cyanophyceae (blue-green algae). Active in photosynthesis.

phy"co-e-ryth'rin. A red, protein-containing pigment found in the chloroplasts of most red algae.

Phy"co-my-ce'tes (figh"ko-migh-see'teez) [*phykos*; G. *mykēs*, fungus]. A class of fungi, with generally nonseptate mycelium. This group includes the common black bread mold and water mold.

phyg"o-ga-lac'tic [G. *phygein*, to avoid; *gala*, milk]. Stopping the secretion of milk.

phyg"o-ga-lac'tic. An agent that checks the secretion of milk.

phy-lax'is (figh-lack'sis) [G., a watching]. The activity of the body in defending itself against infection.

phy-let'ic (figh-let'ick) [G. *phyletikos*, of a tribe]. Pertaining to a stock or a race.

phyllicin. Trade-mark for a brand of theophylline calcium salicylate.

phyl"lo-e-ryth'rin. A porphyrin pigment resulting from degradation of chlorophyll, found in the bile of ruminants, in bovine gallstones, and in dog feces; claimed to be identical with cholehematin.

phyl"lo-por'phy-rin. See *porphyrin*.

phyl"lo-qui-none'. Phytonadione.

phy-log'e-ny, phy"lo-gen'e-sis (figh-lodj'i-nee) [G. *phylon*, tribe; *genesis*, production]. The evolution of a group or species of animals or plants from the simplest form; the evolution of the species, as distinguished from ontogenesis, the evolution of the individual. —**phylogenet'ic,** *adj.*

phy'lum (pl. *phyla*) [*phylon*]. A primary division of the animal or vegetable kingdom.

phy'ma [G., growth]. 1. A tumor or new growth of varying size, composed of any of the structures of the skin or subcutaneous tissue. 2. A localized plastic exudate larger than a tubercle; a circumscribed swelling of the skin. —**phymatoid,** *adj.*

phy"ma-tor-rhy'sin (figh"muh-to-rye'sin, -rise'in, figh-mah'tor-) [*phyma*; G. *rhysis*, issue]. A pigment found in hair and melanotic new growths.

phy"ma-to'sis [*phyma*; G. *-ōsis*, condition]. Any disease characterized by the formation of phymas or nodules.

Phys"a-lop'te-ra [G. *physallis*, bubble; *pteron*, wing]. A genus of nematode worms of the family Strongylidae.

P. caucasica. The only species infesting man, commonly found in natives of tropical Africa.

phys-co'ni-a [G. *physkōn*, potbelly]. Any abdominal enlargement, especially from tympanites. *Obs.*

physeptone. Trade-mark for *methadone hydrochloride*.

phys"i-an'thro-py [G. *physis*, nature; *anthrōpos*, man]. The study of the constitution of man, his diseases, and their remedies.

phys"i-at'rics [*physis*; G. *iatrikos*, skilled in the medical art]. Physical medicine.

phys"i-at'rist. A physician specializing in physical medicine.

phys'ic [G. *physikos*, of nature]. 1. The science of medicine. 2. A medicine, especially a cathartic.

phys'ic. To administer medicines; to purge.

phys'i-cal [*physikos*]. 1. Pertaining to nature; pertaining to the body or material things. 2. Pertaining to physics.

phys'i-cal in-spec'tion. *In military medicine*, a physical check made by direct observation and, when indicated, a partial examination to ascertain the presence of any acute or chronic communicable disease, vermin infestation, or gross deterioration of physical status.

phys'i-cal med'i-cine. See under *medicine*.

phys'i-cal pro'file se'ri-al. *In military medicine*, an estimate of over-all ability of an individual to perform military duties by consideration of his physical and mental condition. Six factors, designated PULHES, are expressed numerically: *Physical* capacity or stamina, *Upper* extremities, *Lower* extremities, *Hearing* (including ear defects), *Eyes*, and neuropsychiatric evaluation.

phys'i-cal re-con-di'tion-ing. 1. A treatment phase aimed at restoring and/or maintaining physical and psychological fitness of hospital patients through progressively graded activities during their hospitalization. 2. *In military medicine*, a section of physical medicine service.

phy-si'cian [G. *physis*, nature]. One who is authorized to practice medicine.

house p. A physician who lives in a hospital and is constantly available, as an intern.

resident p. A physician living in the hospital for further training after an internship. Also called *resident*.

phys'i-cist [G. *physikos*, of nature]. One skilled in physical science.

Physick, Philip Syng [*American surgeon*, 1768–1837]. Introduced the stomach tube in America (1803). Devised an operation for artificial anus (1826). Devised a method of iridectomy in which he removed a circular piece by means of a cutting forceps: called *Physick operation*. Invented a tonsillotome (1828).

phys"i-co-chem'i-cal (fiz"i-ko-kem'i-kul) [G. *physikos*, of nature; *chymos*, juice]. Pertaining to the borderland area where physics and chemistry overlap.

phys"i-co-gen'ic [*physikos*; G. *genesthai*, from *gignesthai*, to be produced]. Produced by physical causes.

phys″i co py rex′i a (fiz″i ko pye·reck see uh) [*physikos*; G *pyressein*, to be feverish]. Artificial fever produced by physical means for its therapeutic effect.

phys′ics [*physikos*]. The science of the phenomena and laws of nature, especially that treating of the properties of matter and of the forces governing it.

health p. The study of various methods of protecting personnel from ionizing radiation.

nuclear p. The branch of physics dealing with the structure and behavior of atomic nuclei.

phys″i no sis (fiz i·no sis) [G *physis*, nature; *nosos*, disease]. Any disease due to physical agents. *Obs*

phys″i og′no·my (fiz ee·og no mee) [G *physiognomonia*, physiognomy] 1 The countenance. 2. The science of determining character by study of the face.

phys″i·og no sis (fiz ee·og·no sis) [G *physis*, nature *gnosis*, knowledge]. Determination of disease through facial characteristics and expression. *Obs.*

phys″i o·log′ic (fiz ee·o·lodj′ick) **phys″i o·log′i cal** [G *physiologikos*, of inquiry into nature]. 1 Pertaining to physiology 2 Pertaining to natural or normal processes, as opposed to those that are pathologic.

phys″i·o·log″i·co·an tom′ic (fiz ee·o lodj″i·ko·an uh·tom ick) [*physiologikos*; G *anatomikos*, relating to anatomy]. Pertaining to physiology and anatomy

phys″i ol o·gist [G *physiologos*, one who inquires into natural phenomena] One versed in physiology

phys″i·ol′o·gy (fiz ee·ol′o·jee) [*physiologia*] The science that treats of the functions of living organisms or their parts, as distinguished from morphology etc

animal p. The physiology of animals.

antenatal p. That which concerns the fetus in utero.

applied p. Physiologic knowledge used in interpretation of problems arising in medical practice, public health, or industry

aviation p. The study of physiologic problems in flying.

cellular p. The physiology of cells.

comparative p. The comparative study of the physiology of different animals and plants.

experimental p. Experiments carried on in physiologic laboratory with experimental animals or man.

pathologic p. The study of disordered functions or of functions modified by disease.

plant p. The physiology of plants.

special p. The physiology of special organs.

phys″i·o·med″i cal ism [G *physis* nature; L. *medicus*, medical]. The professed use of natural remedies only poisons and minerals being rejected. *Obs.*

phys″i·o·pa thol′o·gy See physiologic *pathology*

phys″i o·ther′a py See physical *medicine*.

phy sique [F]. Physical structure or organization body build.

phy″so hem″a t me tra (figh so·h m uh·to-mee truh, hee muh to mee truh) [G *physa*, breath; *haima*, blood *metra*, uterus]. An accumulation of gas, or air and blood in the uterus, as in decomposition of retained menses, or placental tissue.

phy so hy″dro me tra [*physa*, G *hydōr* water *mētra*] An accumulation of gas and fluid in the uterus.

phy″so·me′tra [*physa*, *mētra*]. A distention of the uterus with gas.

phy so py″o·sal′pinx [*physa*, G *pyon*, pus, *salpinx*, trumpet] Pyosalpinx with formation of gas in the uterine tube.

phy so stig′ma [*physa*, G *stigma*, mark] The dried ripe seed of *Physostigma venenosum*, the calabar bean. Of several alkaloids reported present, physostigmine (eserine) is the most important.

phy″so tig′min (figh so·stig meen, min) $C_{15}H_{21}O_2N$ An alkaloid obtained from the seeds of *Physostigma venenosum*, slightly soluble in water sol ble in the organ sol ents occurs as white crystals, becoming red on exposure to air and light. Extremely poisonous. Syn *eserine*

p. salicylate (*physostigminae salicylas*) $C_{15}H_{21}O_2N\ HC_7H_5O_3$. The salicylate of an alkaloid usually obtained from the dried ripe seed of *Physostigma venenosum*, white or slightly yellow, odorless crystals, becoming red on long exposure to light and air 1 Gm. dissolves in 75 cc. of water and 16 cc. of alcohol. Used as parasympathetic stimulant. It inactivates the cholinesterase and provides for longer and more intense skeletal muscle tone. Through its parasympathetic activity it is usef l in postoperative intestinal atony and as miotic i glaucoma and other diseases of the eye. As depressant to the spinal cord it has been used in tetanus and strychnine poisoning Also used in th treatment of myasthenia gravis Extremely poisonous. Dose, 0 001–0 0025 Gm. ($\frac{1}{60}$–$\frac{1}{24}$ gr); for instillation in the eye, 0.25–1% sol tions. Also called *eserine salicylate*.

p. sulfate $(C_{15}H_{21}O_2N_3)_2.H_2SO_4$ White or slightly yellowish, deliquescent powder Reddens on exposure to light or air very soluble in water and alcohol. Extremely poisonous. It is the preferred form in veterinary medicine. Also called *eserine sulfate*.

phy″so·ven′ine. $C_{14}H_{18}N_2O_3$ an alkaloid from the seed of *Physostigma venenosum*.

phy′tase. An enzyme occurring in plants, especially cereals, which catalyzes hydrolysis of phytic acid to inositol and phosphoric acid.

phy′tic ac′id. $C_6H_6O\ (H_2PO_3)$ Inositol-hexaphosphoric acid, constituent of cereal grains By forming an insol bl salt, it is said to prevent utilization of calcium in the cereal.

phy′tin. The calcium or magnesium salt of inositol-hexaphosphoric acid constituent of cereal grains. Also trade-mark for same.

phy′to- phyt [G *phyton*, plant] A combining form meaning *plant*, used to denote *vegetation* or *vegetable parasite*.

phy″to-be zoar (figh to-bee zor bee or) [*phyton*, Per *bad-zahr* antidote]. A bezoar or ball of vegetable fiber sometimes found in the stomach

phy″to-chem′is try [*phyton*, G *chymos*, juice] Vegetable or plant chemistry

phy″to flu′ene. $C_{40}H_{64}\pm 2H$; polyene hydrocarbon, occurring in the vegetable kingdom in chlorophyll-free tissues which contain considerable amounts of carotenoid pigments, as palable amounts of carotenoid pigments, as orange, viscous oil, insoluble in water and alcohol, soluble in ether and benzene

phy″to-gen -sis, phy tog e-ny (figh todj′i nee) [*phyton*, G *genesis*, prod ction] The science of the origin and development of plants. —**phytogenet′ic,** *adj*

phy tog′e-nous (figh·todj′ nus) [*phyton*, G *gennaein*, from *gignesthai*, to be produced]. Produced by plants.

phy″t hor′mone. Any plant hormone.

phy toid [*phyton*, G *eidos*, form]. Plantlike referring to certain animals and organs.

phy′tol. $C_{20}H_{39}OH$; an unsaturated aliphatic alcohol present in chlorophyll as an ester; colorless

liquid, insoluble in water but soluble in most organic solvents used in synthesis of γ-tocopherol and vitamin K

phy"to lac ca [*phyton*; NL. *lacca*, lac] (*phytolacca*). The dried root of *Phytolacca americana*. It yields water-soluble material, containing saponin, and an alcoholic extract containing resinlike material which depresses the central nervous system. The saponin component is local irritant and produces emesis. The therapeutic usefulness of phytolacca is obscure, but it has been used internally in chronic rheumatism and locally in the form of an ointment.

phy"to-lac'cin (figh to lack'sin) [*phyton*, *lacca*]. A resinoid, or the precipitate from tincture of the root of *Phytolacca decandra*.

phy tom e-lin (figh tom lin) *See rutin.*

phy"to mon'ic ac'id. $C_{20}H_{40}O_2$. A liquid saturated fatty acid isolated from the lipid fraction extracted from *Phytomonas tumefaciens*.

phy"to-na di'one. $C_{31}H_{46}O_2$; the U.S.P name for 2-methyl-3-phytyl-1 4-naphthoquinone, occurring in green plants but usually prepared by synthesis; clear yellow very viscous, odorless or nearly odorless liquid, insoluble in water soluble in alcohol used therapeutically to promote prothrombin formation. Syn., *phylloquinone*, *3-phytyl menadione*, *vitamin K*

phy'ton-cide. An antibacterial and protozoacidal substance produced by various plants; certain of which, notably those produced by plants of the genus *Allium*, are volatile.

phy"to par' -site [*phyton*, G *parasitos*, parasite]. A vegetable parasite.

phy"to path" gen'ic [*phyton*, G *pathos*, disease; *gennethai*, from *gignesthai*, to be produced]. Causing disease in plants.

phy"to pa-thol' gy [*phyton*, *pathos*; G. *logos*, word]. 1 The science of diseases of plants. 2. The science of diseases due to vegetable organisms.

phy toph gous (figh tof'uh-gus) [*phyton*, G. *phagein*, to eat] 1 Plant-eating. 2. Vegetarian.

phy"to phar ma-col'o-gy [*phyton*; G *pharmakon*, drug; *logos*, word] That branch of pharmacology concerned with the effects of drugs on plant growth. —**phytopharmacolog'ical**, *adj*

phy"to-pho"to-der"ma to sis. A dermatitis associated with contact with, or ingestion of, plant and followed by exposure to the sun, as dermatitis bullosa striata pratensis.

phy"to-pneu"mo no-co ni-o'sis [*phyton*, G *pneumōn*, lung, *konis*, dust -*osis*, condition]. A condition marked by inflammatory nodules in the lungs, caused by the inhalation of vegetable particles

phy"to-pre-cip'i tin [*phyton*; L *praecipitare* t precipitate]. A precipitin produced by immunization with protein of vegetable origin.

phy to sis (figh to sis) [*phyton*, G -*osis*, condition]. 1 Any disease due to the presence of vegetable parasites. 2. The production of disease by vegetable parasites. 3. The presence of vegetable parasites

phy"to ste rin [*phyton*, G. *stear* fat]. Old term for phytosterol.

phy tos'ter-in (figh tos'tur in). Old term for phytosterol

phy tos'ter ol (figh tos'tur-ole, -ol, -awl, figh"to-steer) Any sterol occurring in plant oil or fat.

phy tos'ter-ol in. A glycoside of phytosterol.

phy"to-throm"bo-kin ase (-kigh nace, -naze, kigh nace naze) A thrombokinase prepared from yeast or plant sources.

phy"to t ic. 1 Pertaining to phytotoxin. 2 Pertaining to or describing substance poisonous to plants.

phy"to tox'in [*phyton*, G *toxikon*, poison]. A toxin derived from plant, such as abrin, ricin, and crotin.

phy"to-vi tel'lin (figh to-vi-tell'in. -vye tell'in) [*phyton*; L. *vitellus*, yolk]. A vegetable protein resembling vitellin.

3-phy"tyl men -di'one. Phytonadione.

P I International Protocol (*Protocol Internationale*) the designation affixed in the U.S.P to drugs on which international agreement as to composition has been reached.

pi'a, pi'a ma'ter The vascular membrane enveloping the surface of the brain and spinal cord, and consisting of plexus of blood vessels held in fine areolar tissue. —**pial**, *adj*

pi-an (pee-an pye an, pee-ahn pyahn) Y ws.

pi a -bois" See *leishmaniasis americana*.

pi"a-rach noid (pee uh-rack'noyd) [L. *pia*, tender; G. *arachnoeidēs*, like cobweb]. The pia and arachnoid considered as one structure also called *leptomeninx*, *leptomeninges*; also spelled *pia-arachnoid*.

pi"as-tre-ne mi a. See megakaryocytic *leukemia*.

pi-blok'to. A state of hysterical excitement exhibited by Eskimos, particularly women, in which the individual becomes irrational, often destructive.

Pic, Adrien [*French physician*, 1863-1943]. Described, with Louis Bard, typical symptoms of carcinoma of the head of the pancreas, including progressive icterus, cachexia, distended gallbladder and loss of weight; called *Bard-Pic syndrome*.

pi'ca (pye'kuh) [L., magpie]. 1. A desire for strange foods; may occur in chlorosis and during pregnancy 2. A craving to eat strange articles, as hair dirt, or sand the recurrence in later life of the infantile tendency of bringing everything to the mouth.

pi-ca cic ac'id. An antibiotic produced by the fungus *Coprinus picaceus*; pale-yellow oil, sparingly soluble in water soluble in organic liquids It forms soluble sodium and potassium salts.

Piccolomini, Archangelo [*Italian anatomist*, 1526-1605]. Striae acusticae are also known as *striae of Piccolomini*.

Pi'ce-a (pis ee-uh, pye see uh) [L., pitch pine]. A genus of coniferous trees.

P abies. The Norway spruce.

P glauca. The white spruce.

P mariana. The black spruce.

pi e in (pis ee in, pi) see-in) $C_{14}H_{18}O_7$. A glycoside from the leaves of the Norway spruce, *Picea abies*, or from *Salix nigra*, willow

pi'cene. $C_{22}H_{14}$ pentacyclic hydrocarbon, 1,2 7,8-dibenzphenanthrene, found in tar oils from soft coal and in petroleum residues from the cracking process. It occurs as crystals, difficultly soluble in most solvents.

pic'e-ous (pis ee us, pye see us) [*pices*]. Resembling pitch.

pi'chi (pee chee) [Araucan, small thing]. The stems and leaves of *Fabiana imbricata*, growing in South America. It has been used as terebinthinate diuretic in the treatment of cystitis.

Pick, Arnold [*Czechoslovakian physician*, 1851 1924]. Known for his study and description of circumscribed cerebral atrophy accompanied by aphasia and progressive dementia (1892); also called *Pick disease*. See also lobar *sclerosis*.

Pick, Friedel [*German physician*, 1867 1926]. Described pseudocirrhosis of the liver with pericarditis (1896) called *polyserositis*, *mediastinopericarditis*, *Pick disease*, *Friedel Pick disease* Described syndrome of liver enlargement with recurring ascites but without cardiac symptoms or icterus called *Pick' syndrome*.

Pick, Ludwig [*German pediatrician, 1868–1935*]. Described form of xanthomatosis. See Niemann Pick *disease*.

Pickworth method. See benzidine and nitroprusside oxidase *method* for hemoglobin.

pic'o-line. C_6H_7N either of two isomeric substances, α-*picoline*, 2-methyl-pyridine, or β-*picoline*, 3-methylpyridine, found in coal tar and bone oil. Both are colorless liquids, miscible with water and alcohol used as solvents, intermediates, in dye and resins industries, and in insecticides.

pic"o lin'ic ac'id. C_5H_4N COOH α- or 2-pyridinecarboxylic acid an isomer of nicotinic acid, occurring as white crystalline powder sparingly soluble in cold water and, as metabolite analog of nicotinic acid, displacing it in certain bacteria.

pic"ra-con'i tine. See *picraconitine*.

pic"ra-den'i din. A gl coside obtained from adonis. It has digitalislike action.

Pic ras na (pick-raz'nuh) See *Picrasma*.

picragol. Trade-mark for *silver picrate*.

pic ram'ic ac'id. C_6H $OH.(NO_2)_2.NH$ 4,6-dinitro-2-aminophenol redu tion product f picric acid, occurring as red crystals, slightly soluble in water and appearing in urin following ingestion of picric acid used as reagent for albumin and in synthesis of dyes.

Pic ras'ma (pick raz'muh) [G *pikrasmos*, bitterness] A genus of the Simarubaceae. The wood of P excelsa is the source of Jamaica quassia, containing α-picrasmin and β-picrasmin. It sometimes is employed in the form of an infusion as bitter tonic and as rectal injection for threadworms in children.

pic-ras min. $C_{22}H_{32}O$ bitter principle of quassia, identical with isoquassin isolated from quassia by later investigators.

pic'rate. A salt of picric acid.

pic'ric ac'id. Trinitrophenol.

pic"ro a-con'i tine (pick ro-a kon'i teen, -tin)

pic"ra-con'i tine. $C_{32}H_{45}O$ $_{10}N$ Benzaconine; bitter powder derived from aconite Its action is similar to that of aconitin but less potent.

pic"ro-car'mine (pick ro kahr'min, meen, myne) One of variety of mixtures of carmine, ammonia, and picric acid, used as stain for tissues.

pic"ro-form'ol. A fixing agent consisting of mixture of saturated solution of picri acid 75 parts and formol 25 parts, to which 5 parts of aceti acid are added immediately before using. Also called *Bouin fixing fluid*.

pic"ro lon'ic ac'id. $C_{10}H_8N_4O_5$, 3-methyl-4-nitro-1-(p-nitrophenyl)-5-pyrazolone, occurring as yellow leaflets, sparingly soluble in water used as reagent for alkaloids and basic amin acids, also for calcium.

pic ro-pod"o-phyl'lin (-pod o-fill'in, -po do-fill in, po-dof' lin) $C_{22}H_{22}O$ nontoxic, crystalline substance isomeric with podophyllotoxin and formed by alkaline hydrolysis of t in alcoholic solution It ppears to be physiologically inert.

pic"ro-tox'in (*picrotoxinum*) $C_{30}H_{34}O_{13}$ A glycoside obtained from the seed of *Anamirta cocculus*; occurs as shining, prismatic crystals or microcrystalline powder stable in air but is affected by light. On gram dissolves in about 350 cc. of water and in bout 5 cc of boiling alcohol. Picrotoxin is stimulant to apparently all the efferent centers of the cerebrospinal axis, affecting the cerebrum, the medulla, and the spinal cord. Used as one of the most reliable agents in poisoning by the barbiturates. Dose, 1.0–3.0 mg. (1/64–1/20 gr) by intravenous injection, repeated t half-hour intervals as required. Also called *cocculin*.

p. injection (*injectio picrotoxini*) A steril solution of picrotoxin in isotonic sodium chloride solution. Picrotoxin injection usually available contains 3.0 mg. (1/20 gr) per 1 cc.

pie dra (pee-ay drah) [Sp stone]. A nodular growth on the hair of the scalp, beard, or mustache. The type known as **black piedra** is found in tropical regions and is caused by the fungus *Piedraia hortai*, which infects only the hair shafts of the scalp. **White piedra**, rare form, occurs in temperate regions and is caused by the fungus *Trichosporon beigelii* which infects the hair of the beard and mustache. Also called *tinea nodosa*, *Beigel' disease*, *piedra nostras*

pi"es-es the'si-a (pye ees-ess-theezh uh, -thee ee uh, pye ez ess-) [G. *piesis*, compression; *aisthēsis*, perception]. Perception of the sense of pressure.

pi" sim' ter pi" ses'o-ter See *piesometer*

pi e" o-e-lec'tric ef fect' (pye-ee zo-l leck'trick). The development of electri charges by certain crystals when subjected to strain. Conversely if such crystals are located in an oscillating electric field, they will produce resonant vibrations. The latter effect is the principle of the recording part of som pen-writing (or stylus) recording electrocardiographs.

pi"e zom'e ter [G *piesis*, to compress' metron, measure]. 1. An apparatus for measuring the degree of compression of gases or fluids. 2. An pparatus for testing the sensitiveness of the skin to pressure. 3. A simple liquid manometer

Piffard, Henry Granger [*American dermatologist*, 1842–1910] Introduced paste for testing urine for sugar It contains sodium tartrate, sodium hydroxide, and copper sulfate. Called *Piffard's paste*.

pi'geon-toed. Walking with the feet turned in.

pig'ment [L. *pigmentum*, pigment]. 1. A dyestuff coloring matter 2. Any organic coloring matter of the body See Plate 28. 3. Any stain used in microscopical work. 4. Any medicinal agent pplied externally to the skin, like paint. —**pigmented** *adj.*

bile pigments. Pigments found in bile or derived from it. They include bilirubin, urobilinogen, urobilin, and biliverdin.

blood pigments. Pigments normally found in blood. See *hemoglobin*, *bilirubin*.

carboxyhemoglobin p. One used in hemoglobinometry A sol tion of it is almost permanent when sealed in an tmosphere of carbon monoxide

cholera-blue p. A color base btained by dissolving cholera-red in concentrated sulfuric acid and then neutralizing with caustic soda.

cholera-red p. A color base found in cultures of cholera bacilli which, upon addition of mineral acids, gives violet color On rendering the solution alkaline and shaking it with benzol, the cholera-red is obtained in brownish red lamellae. Distillation of cholera-red with zinc dust gives indole.

hematogenous p. Any pigment derived from hemoglobin, including heme, hemosiderin, methemoglobin, and bile pigments.

hepatogenous p. See bile *pigments*.

iris p. The chemically pure pigment of the bovine eye triturated with water It is used for tattooing corneal opacities.

metabolic p. A pigment formed by the metabolic action of cells. Melanin is the type of metabolic pigments.

wear-and-tear pigments. Pigments, as lipofuscin, hemosiderin, and lipochrome, observed in increased amounts in tissues of older individuals.

pig'men tar"y (pig'men-terr ee) [L. *pigmentarius*,

of paints]. Pertaining to or containing pigment; characterized by the formation of pigment.

pig"men ta'tion [L. *pigmentatus*, pa ted]. Deposition of or discoloration by pigment.

endogenous p. That, pathologic in character due to increased amounts or abnormal distribution of natural body pigments or due to new pigment elaborated in the body as in Addison disease or xanthomatosis.

exogenous p. That due to pigments introduced from without, as in pneumoconiosis or tattooing.

pathologic p. An bnormal amount, distribution, or composition of pigment in tissue.

pig men"to-gen' sis [L. *pigmentum*, pigment G *genesis*, production]. The origin of pigment.

pig men'to-phage [*pigmentum*; G *phagein*, to eat]. A phagocyte which destroys pigment, especially that of hairs.

pig men'tum ni'grum [L.]. The dark coloring matter which lines the choroid coat of the eye.

pig'my See *pygmy*.

Pignet, Maurice-Charles-Joseph [French military surgeon, 1871–]. Introduced formula for the determination of standards of physical condition of recruits for the army which he proposed as F = H − (C + W) F is the empirical factor H the height in centimeters, C the chest measurement in centimeters on deep inspiration, and W the weight in kilograms. If F is less than 10, the applicant is classed as exceptionally strong if between 10 and 15, he is strong if between 15 and 20, he is good; if between 20 and 25, he is fair; if bove 30 he is very weak. A similar formula was published by J A. Black using English weights and measures. Called *Black' formula; Pignet' factor or formula*.

pig'weed [ME. *pigge*; AS. *weod*]. A plant of the genus *Chenopodium*, frequently causes allergy

pi i'tis (pye eye'tis) Old term for leptomeningitis.

pil. *Pilula*, pill.

pi'lar pi'la ry (pye'luh-ree, pil'uh-ree) [L. *pilus*, hair]. Pertaining to the hair

pi las'tered [L. *pila* pillar] Flanged so as to have fluted appearance arranged in pilasters or columns, as pilastered femur

Pilcz's reflex. See under *reflex*.

pile [L. *pila*, ball]. A hemorrhoid.

blind p. One which does not bleed.

external p. A hemorrhoid which is located outside the anal sphincter.

internal p. A hemorrhoid which is located inside the anal sphincter

sentinel p. The thickened wall of the anal pocket at the lower end of an anal fissure.

pile [L. *pila*, pillar]. 1. A battery 2. A nuclear reactor The term *pile* arose from the construction of early reactors by piling graphite blocks and pieces of uranium and uranium oxide.

thermoelectric p. A number of bars or plates in which two kinds of metal are conjoined (thermocouples). When the junctions are heated, an electric current is generated by which temperature can be measured.

pile [L. *pilus*, hair]. The hair or hairs collectively of any part of the integument.

pi'le-ous [*pilus*]. Pertaining to hair; hairy

piles. See *hemorrhoids*

pi'li (pye'lye) Plural of pilus.

pi"li-a'tion, pil"i-a'tion [*pilus*]. The formation and production of hair

Pi-lif'er-a. Animals with hair; term suggested for mammals. Syn., *Trichozoa*.

pil'i-form, pi'li form [*pilus*; L. *forma*, form]. Having the appearance of hair; filiform.

pil'li gan (pee'li gahn) [G *pilos*, felt; *gennathai*, from *gignesthai*, to be produced]. The plant *Lycopodium saururus*, found in South America and Africa. It contains the alkaloids saururine, C H N saururine, C H ON and pilliganine, $C_{15}H_{24}ON$ It is also stated to contain resin. It is used as an emetocathartic. Other species of *Lycopodium*, as *L. selago* and *L. polytrichoides*, have been used as cathartics.

pil"li ga-nine (pil"li-gah-neen, -nin, pye lig uh) An alkaloid btained from *Lycopodium saururus*. See *pilligan*.

pi"li mic'tion [*pilus*; L. *mictio*, from *mingere*, to make water]. The passing of urine containing hairlike filaments.

pill [L. *pila*, ball]. A small, solid body of globular ovoid, or lenticular shape, containing one or more medicinal substances and used for internal administration.

pil'lar [L. *pila*, pillar]. A columnar structure acting as support.

anterior p. of the fornix. A band of whit matter on each side passing from the anterior extremity of the fornix to the base of th brain.

p. of the fauces. One of the folds of mucous membrane on each side of the fauces.

posterior p. of the fornix. One of two bands passing from the posterior extremities of the fornix into the descending horn of the lateral ventricle

pil'let [L. *pila*, ball] A little pill, or pellet.

pil'le us, pil'le um [L., felt cap]. The caul or membrane which sometimes covers child' head during birth.

pi'lo-, pil- [L. *pilus*, hair]. A combining form meaning *hair*

pi"lo car'pi dine. $C_{10}H$ N_2O ; liquid alkaloid from *Pilocarpus jaborandi*.

pi"lo-car'pine (pye"lo-kahr peen, -pin, pill o-) $C_{11}H_{16}N_2O_2$. An alkaloid btained from various species of *Pilocarpus* (*jaborandi*) occurs as colorless to yellow viscid liquid or crystals; freely sol ble in water and alcohol.

p. hydrochloride (*pilocarpinae hydrochloridum*) $C_{11}H_{16}N_2O_2.HCl$, the hydrochloride of an alkaloid obtained from the dried leaflets of *Pilocarpus jaborandi* or of *Pilocarpus microphyllus*; colorless, translucent, faintly bitter hygroscopic crystals; 1 Gm. is soluble in about 0.3 cc. of water and about 3 cc. of alcohol. For uses and dose, see *pilocarpine nitrate*. Also called *pilocarpine muriate*.

p. nitrate (*pilocarpinae nitras*) $C_{11}H_{16}N_2O_2.HNO_3$ the nitrate of an alkaloid btained from the dried leaflets of *Pilocarpus jaborandi* or of *Pilocarpus microphyllus*; shining, white crystals; 1 Gm. is soluble in 4 cc. of water and 75 cc. of alcohol. Pilocarpine is the physiologic antagonist of atropine, exciting those nerve endings which are paralyzed by that alkaloid. It is used chiefly as sudorific, in conjunction with some form of external heat, and in the treatment of postoperative urinary retention. It is widely employed by ophthalmologists as miotic. Dose, 0 003–0 006 Gm. ($\frac{1}{20}$–$\frac{1}{10}$ gr) as miotic, 0 5–1% solution.

pi"lo-car'pus (pye"lo-kahr pus, pill"o-) [G *pilos*, felt; *karpos*, fruit] The dried leaflets of *Pilocarpus jaborandi*, or of *Pilocarpus microphyllus* and other species of *Pilocarpus*. A number of alkaloids have been obtained from various species of pilocarpus, the principal one being pilocarpine Syn., *jaborandi*.

pi"lo-cys'tic [L. *pilus*, hair; G. *kystis*, bladder]. Pertaining to encysted tumors containing hair and fat.

pi"lo-e-rec'tion. Erection of the hair

pi"lo mo'tor [*pilus*; L. *motor* from *movere* to move]. Causing movement of the hair as the pilomotor muscles.

pi"lo ni'dal [*pilus*; L. *nidus*, nest]. Pertaining to or containing an accumulation of hairs in a cyst.

pi'lose pi'lous [L. *pilosus*, hairy]. Hairy
pi"lo-se ba ceous [L. *pilus*, hair *sebaceus*, tallow-candle]. Pertaining to the hair follicles and sebaceous glands, as the pilosebaceous apparatus, the hair follicle and its attached oil gland.
pi lo sis (pye-lo sis) [*pilus*; G *-osis*, increase] The abnormal or excessive development of hair
pi los'i ty (pye los -tee pi los -tee) [L. *pilosus*, hairy]. The state of being pilose or hairy
pil'u la (pl. *pilulae*) [L. *pilula*, little ball]. A pill. Abbreviated, pil. —**pilular** *adj*
pil'ule [*pilula*]. A small pill.
pi'lus (pl. *pili*) [L.]. 1. A hair **2.** *I biology* fine, slender hairlike body
pili annu lati. See *ringed hair*
pili tactiles. Tactile hairs.
pili torti. A rare, congenital deformity of the hair characterized by short, broken, twisted hairs presenting the appearance of st bble.
pi mel'l ac'id. $COOH(CH_2)_5COOH$ heptanedioic acid, occurring as crystals, soluble in water Biotin may derive part of its molecule from pimelic acid which is interchangeable with biotin for some microorganisms.
pim li'tis (pim l lye tis, pye mi-lye tis) [G *pimelē*, fat *-itis*, inflammation] Inflammation of any adipose tissue also, inflammation of connective tissue in general.
pim" lo pte-ryg'i um (pim l-lo-t h-rid) ee-um, pye mi lo) [*pimelē*; G *pterygion*, small wing]. A fatty outgrowth on the conjunctiva.
pim lor he [*pimelē*; G *rhoia*, flow]. 1 An excessive f tty discharge. **2.** Diarrhea with excessive fat in the stools.
pim lor thop ne a (pim"l lor-thop nee uh, -lor thop-nee uh, pye mi) [*pimelē*, G *orthopnoia*, breathing only in an upright position] Orthopnea due to obesity
pim e-lu'ri a [*pimelē*; G *ouron*, urine]. The excretion of fat in the urine lipuria.
pi men ta [Sp. *pimienta*]. The nearly ripe fruit of *Pimenta officinalis*, an evergreen tree The fruit yields from 1 to 4% of volatile oil It sometimes is used as an aromatic carminative in flatulence and as an adjuvant to tonics and purgatives. Syn., *allspice*. Sometimes spelled *pimento*.
pim pi nel'la [NL., from L. *piper* pepper]. The dried rhizome and roots of *Pimpinella saxifraga* or other species. It contains pimpinellin, isopimpinellin, isobergaptene, volatile oil, and an acrid resin. It sometimes is used as carminative, in certain types of diarrhea, and as local stimulant in toothache. From the dried ripe fruit of *Pimpinella anisum* is btained volatile oil. See anise *oil*.
pim'ple [L. *papula*, pimple]. Lay term for small pustule or papula.
pin. See *nail*, 2.
Austi Moore' pins. See Austin Talley *Moore*.
Stei mann p. See Fritz *Steinmann*
pin oeid [G *pinax* tablet *eidos*, form] Denoting polyhedral forms having only two parallel faces, as in some condensed systems f large molecules.
pin -col. 1. $(CH_3)_2C OH C OH(CH_3)$ 2,3-dimethyl-2,3,-butanediol or tetramethylethylene glycol crystalline substance, slightly sol ble in cold water **2.** Any of group of glycols of th type of $R_2C OH.C.OH.R$ where R is hydrocarbon radical.
pin cy'a-nol. A basic xanthine dye of the cyanine group, used as supravital stain for mitochondria, and for the staining of frozen sections.
Pinard, Adolphe [*French obstetrician*, 1844–1934]. Described sign of breech presentation after the sixth month of pregnancy in which sharp pain is elicited upon pressure over the fundus teri (1878) called *Pinard' sign*. H advocated special technic in breech deliveries in which the knee of the fetus is pushed to one side and leg brought down for traction purposes, called *Pinard' maneuver*
pince ment' (pans-mahng *See* Notes § 30 [F] In massage pinching or nipping of the tissue.
pin cers [F *pincer*]. 1 Forceps. 2. The two median upper or lower incisor teeth of horse
Pinck'ney (pink nee-uh) [after Charles Cotesworth *Pinckney* American statesman, 1746–1825] A genus of the R biaceae. P pubens is small tree of the southern United States. The bark is astringent and tonic and has been used in intermittent fevers.
pine [L. *pinus*, pine]. A general name for coniferous trees. Various varieties of this genus yield many substances used in medicine and in commerce, as turpentine, resin, tar pitch, and many volatile oils.
compound white p. syrup (*syrupus pini albae compositus*) Used as mild expectorant in subacute bronchitis. Dose, 4–8 cc. (1 2 fluidrachms).
p. camphor Pinol, terpene found in pine needles.
p. cone oil. A volatile oil from the cones of *Abies picea*.
p. leaf oil. A volatile oil distilled from pine needles.
p. needle oil. Oil of dwarf pine needles.
p. oil. A crude turpentine btained by distillation of pine wood.
white p. (*pinus alba*) Th dried inner bark of *Pinus strobus*. It contains glycoside, coniferin, together with bout 10% of tannin and some mucilage and oleoresin. White pine bark is used as an ingredient in cough yrups. Also called *white pine bark*.
pin e l [L. *pinea*, pine cone]. Referring to the pineal gland, or epiphysis cerebri.
pin e-al blas t ma. See *pinealoma*.
pin"e- l-cy to ma. See *pinealoma*.
pin e- lec t my [*pinea*, G *ektomē*, excision]. Surgical removal of the pineal gland.
pin' -al-ism pi ne al ism [*pinea*]. Disturbance due to abnormality in the secretion of the pineal gland.
pin"e-a lo ma [*pinea*, G *-ōma*, tumor]. An uncommon, usually small, frequently invasive tumor of th pineal gland composed of varying proportions of the large, round, parenchymal cells or the small, dense, stromal cells. Symptoms usually are due to hydrocephaly caused by obstruction of the cerebral aqueduct. Also called *pinealblastoma*, *pinealcytoma*, *pineal germinoma*, *pineal seminoma*, *pineal tumor* *pineoblastoma*
Pinel Philippe [*French alienist*, 1745–1826] Remembered for his advocacy of reforms in the treatment of the insane (1792) His *Mental Alienation* advocated bolition of forcible restraints (1801).
pi nene. $C_{10}H_{16}$ 2,7,7 Trimethyl-Δ^2-bicyclo (1,1,3) heptene. A terpene or hydrocarbon found in many essential oils. It is the chief constituent in turpentine oil. Occurs as colorless, aromatic liquid slightly soluble in water sol ble in alcohol and ether
pin e-o-blas-to'ma. See *pinealoma*.
pine tar (*pix pini*) A product obtained by the destructive distillation of the wood of *Pinus palustris*, or other species of *Pinus* very viscid, blackish brown, noncrystalline liquid, with an empyreumatic, terebi thinate odor; it is slightly soluble in water and is miscible with alcohol. The composition is largely phenolic. The constituents include benzol, tol ol, xylol, styrol, naphthalene, phenol, cresol, phlorol, etc. It sometimes employed externally as stimulating and anti-

septic application in skin diseases. Internally it is used as a stimulating expectorant in subacute or chronic bronchitis. Dose, 0.3–0.6 Gm. (5–10 gr.) Also called *pix liquida*. See rectified *tar oil*.

p. t. ointment (*unguentum picis pini*) (*unguentum picis liquidae*). Contains 50% of pine tar in yellow ointment.

pin·gue'cu·la [L. *pinguiculus*, somewhat fat]. A small, yellowish white patch situated on the conjunctiva, between the cornea and the canthus of the eye; it is composed of connective tissue.

pin'guid [L. *pinguis*, fat]. Fat; unctuous.

pi'ni·form, pin'i·form [L. *pinus*, pine; *forma*, form]. Shaped like a pine cone.

pink'eye" 1. A contagious, mucopurulent conjunctivitis occurring especially in horses. 2. Acute contagious conjunctivitis in man. Also called *Koch-Weeks conjunctivitis*.

pink'root" See *Spigelia*.

Pinkus, Felix (1868–1947). German dermatologist who described lichen nitidus (1901), called *Pinkus' disease*.

pin'na [L., feather]. The projecting part of the external ear; the auricle. See Plate 20. —**pinnal**, *adj.*

pi'no·cyte (py'no-sight, pin'o-) [G. *pinein*, to drink; *kytos*, cell]. A phagocytic cell exhibiting pinocytosis.

pi"no·cy·to'sis (py"no-sigh-to'sis, pin"o-) [*pinein*; *kytos*; G. -*osis*, condition]. Drinking by cells, as opposed to phagocytosis, eating by cells.

pi"no·syl'vine $(OH)_2C_6H_3CH{:}CHC_6H_5$. 3,5-dihydroxystilbene; a crystalline compound occurring in the heartwood of *Pinus sylvestris*, said to have many times the bactericidal activity of phenol.

Pins, Emil [Austrian physician, 1845–1913]. Described a sign in pericarditis in which the symptoms which simulate pleurisy disappear when the patient assumes the knee-chest position; called *Pins' sign*.

pint [OF. *pinte*]. The eighth part of a gallon; 16 fluidounces. Symbol, O (*octarius*). Abbreviated, pt. An imperial pint contains 20 fluidounces.

pin'ta (pin'tah, peen'tah) [Sp., spot]. A disease of the skin seen most frequently in tropical America, characterized by dyschromic changes and hyperkeratosis in patches of the skin, caused by the spirochet *Treponema carateum* which is morphologically identical with the spirochetes of syphilis and of yaws. Also called *carate* and *spotted sickness*, *mal del pinto*, *pinnie*, *Purú-purú*, *Quetiqua*, *Tinna*.

pin'worm" See *Enterobius vermicularis*.

pi"o·ne'mi·a [G. *piōn*, fat; *haima*, blood]. The presence of an emulsion of fine oil globules in the blood, sometimes found in diabetes; a form of lipemia.

Pi·oph'i·la (pye-off'i-luh) [*piōn*; G. *philein*, to love]. A genus of small, black, dipterous insects containing the species *P. casei*, the cheese fly, which deposits its eggs preferably on cheese but also on ham, bacon, and other fatty foods. The larvae, commonly called cheese skippers, are a cause of intestinal myiasis.

Piorry, Pierre Adolphe [French physician and clinician, 1794–1879]. Reintroduced percussion using an intermediary element. Invented pleximeter for this purpose (1866).

pi"or·thop'ne·a [G. *piōn*, fat; *orthopnoia*, breathing easily in an upright position]. Orthopnea due to obesity.

pi'o·scope [*piōn*; G. *skopein*, to examine]. A variety of lactoscope, an instrument for measuring the butter-fat content of milk.

pip [L. *pituita*, slime]. A contagious disease of fowls characterized by a secretion of thick mucus in the throat and mouth.

Pi'per [L., pepper]. A genus of Piperaceae. See *pepper*.

pi·per'a·zine (pi-perr'uh-zeen, -zin, pip'ur-uh-zeen, -zin, pip'ur-ay'zin) $(CH_2)_4(NH)_2·6H_2O$. Diethylenediamine. The anhydrous base occurs as colorless, volatile crystals; freely soluble in water or glycerin, less soluble in alcohol. Has been used in the treatment of uric acid gravel and calculi and in gout. Dose, 0.3–0.6 Gm. (5–10 gr.)

pi·per'i·dine (pi-perr'i-deen, -din, pye-perr'i-, pip'ur-i-deen, -din, pye'pur-i-) $C_5H_{11}N$; hexahydropyridine; a volatile liquid base found in small amounts in black pepper and also obtained by alkaline hydrolysis of piperine, soluble in water and alcohol; used as a reagent.

pip'er·ine (pip'ur-een, -in, pye'pur-) $C_{17}H_{19}NO_3$. 1-piperoylpiperidine, an alkaloid from several varieties of pepper occurring in crystals, almost insoluble in water, soluble in alcohol; used as an insecticide, antipyretic, and carminative.

pi·per'i·tone $C_{10}H_{16}O$. 4-isopropyl-1-methyl-1-cyclohexen-3-one, occurring in dextrorotatory, levorotatory, or racemic forms in various volatile oils; used in perfumes, in dentifrices, etc., for its mintlike taste and odor.

pip"er·o·caine hy"dro·chlo'ride $C_6H_5COOCH_2CH_2CH_2NC_5H_9CH_3·HCl$. 3-benzoxy-1-(2-methylpiperidino)propane hydrochloride, occurring as white crystals or crystalline powder, freely soluble in water; used for topical, infiltrative, regional, spinal, and caudal anesthesia. See *metycaine hydrochloride*.

pip'er·o·nal (pip'ur-o-nal, pye-perr'o-nal). Dioxymethylene-protocatechuic aldehyde, $CH_2O_2C_6H_3CHO$. Used in perfumes. A pediculicide in 5% solution with castor oil and alcohol. Also called *heliotropin*, *piperonyl aldehyde*.

pip"er·o·va'tine (pip"ur-o-vuh-teen, -tin, pye-per-) $C_{16}H_{21}O_2N$. An alkaloid from the fruits of *Piper ovatum*, occurs as colorless crystals, soluble in alcohol, insoluble in water. It is said to act as a depressant of both motor and sensory nerves, and as a stimulant to the spinal cord.

pip"er·ox'an hy"dro·chlo'ride. Generic name for 2-(1-piperidylmethyl) 1,4-benzodioxan hydrochloride $C_{14}H_{19}NO_2·HCl$; an adrenolytic agent used in differential diagnosis of hypertension. See *benodaine hydrochloride*.

pi·pet', pi·pette' (pi-pet', pee-pet') [F., dim. from *pipe*, tube]. A graduated open glass tube used for measuring or transferring definite quantities of liquids.

braking p. A micropipet in which a brake is inserted between the mouthpiece and the tip. The brake is a constriction which limits the flow of air and permits finer control of fluid movement.

Ostwald-Folin p. One which has less surface per unit volume than the ordinary pipet and no sharp shoulders to impede drainage. Favored in microanalyses.

syringe p. One having a small hypodermic syringe.

pip·sis'se·wa (pip-sis'-uh-wah, -wah) [Algonquian language]. Common name for the genus Chimaphila. See *chimaphila*.

pip'syl chlo'ride. $IC_6H_4SO_2Cl$. *p*-iodophenylsulfonyl chloride; a reagent which reacts nearly quantitatively with free amino groups of the amino acids in protein hydrolysates to give corresponding pipsylamino acids of the type of $IC_6H_4SO_2NHR$.

pip"to·nych'i·a (pip-to-nick'ee-uh) [G. *piptein*, to fall; *onyx*, nail]. Shedding of the nails.

pi·quite Pinta.

pi qûre' (pi-cure *See* Notes § 35) [F]. Puncture.

Piria, Raffaele [*Italian chemist*, 1815–65]. Known for his test for tyrosine in which he used sulfuric acid, barium carbonate, and ferric chloride, violet color being considered positive reaction. Isolated salicin (1839)

pir'i form, pyr'i form (pirr'i form, pye ri-form) [L. *pirum*, pear *forma*, form]. The piriformis.

pir'i form, pyr'i form. Pear-shaped.

pir"i for'mis [L. *pirum*, pear; *forma*, form]. A muscle arising from the front of the sacrum and inserted into th greater trochanter of the femur

Pirogoff Nickolai Iva ovich [*Russian surgeon*, 1810–81]. Author of topographi anatomy (1852–59) One of the first to use ether in Europe. Introduced an osteoplastic operation for amputation of the foot resembling Syme s, in which part of the calcaneus was retained; see Pirogoff's *amputation*.

piromen, pyromen. Trade-mark for a complex polysaccharide derived from *Pseudomonas aeruginosa*; when intravenously injected in the form of a colloidal queous dispersion the product acts as nonanaphylactogenic pyrogen and is useful for producing therapeutic fever and also for eliciting a euphoric effect in subpyrexial doses.

Pir"e·nel'la. A genus of operculated snails.
P conica. That species which serves as the first intermediate host of the fluke *Heterophyes heterophyes* in Egypt.

Pi"ro plas'ma (pye ro-plaz'mah) Synonym for *Babesia*.

pi"ro plas mo sis (pye ro-plaz-mo sis) [L. *pirum*, pear G *plasma*, anything formed *-ōsis*, condition]. Infection of mammals other than man with sporozoa of the genera *Babesia* and *Theileria*. —**piroplasmot'ic,** *adj*

bovine p. See Texas *fever*

canine p. A type occurring in dogs characterized by hemoglobinuria, jaundice, weakness, and high temperature.

equine p. See equine biliary *fever*

ovine p. A disease of sheep caused by the *Babesia ovis*; characterized by anemia, hemoglobinuria, f ver icterus, and weakness.

Pirquet von Cesenatico, Clemens Peter [*Austrian physician and pediatrician*, 1874–1929]. Introduced type of tuberculin test in which the material is pplied to superficial abrasion of the skin (1907); called von *Pirquet test, reaction*. Described serum sickness, with Bela Schick (1905) Made important investigations in the etiology of cancer (1929) Introduced the term allergy (1907)

pi -sid'i a [L. *piscis*, fish, *caedere*, to kill] The dried bark of *Piscidia piscipula* (*P erythrina*) Contains piscidic acid, $C_{11}H_{12}O_7$ dibasic acid, and neutral principle, piscidin, $C_{29}H_{24}O_8$. Piscidia possesses some anodyne power and has been used for the relief of neuralgia and in whooping cough. Syn., *Jamaica dogwood*.

pis ci·din, pis ci'din. See under *piscidia*.

pi"si n mi la'ris. A variant of the abductor digiti quinti muscle inserted into the transverse carpal ligament.

pis'iform (pis'iform) [L. *pisum*, pea *forma*, form]. A small bone on the inner and anterior aspect of the carpus. See Table of Bones in the Appendix.

pi'si form. Pea-shaped.

pi"si met" car'pus. A variant of the abductor digiti quinti muscle inserted into the fifth metacarpal.

pi"si un ci na'tus. A variant of the abductor digiti quinti muscle inserted into the hamulus of the hamate.

Piso. See Guillaume le *Pois*.

pit [AS. *pytt* from L. *puteus*, well]. A depression, as th pit of the stomach the armpit.

anal p. The proctodeum.

auditory p. The embryonic invagination of the auditory placode that later becomes the otocyst or auditory vesicle: also called *otic p.*

basilar p. The depression upon the palatal surface of an upper incisor tooth, t the base of the cingulum.

ear p. See *fistula* auris congenita.

gastric p. One of the depressions in the gastric m cosa into which open the gastric glands.

olfactory p. One formed about the olfactory placode in the embryo by the growth of the median and lateral nasal processes the anlage of part of the nasal cavity: also called *nasal p.*

otic p. See uditory *p.*

p. of the stomach. A name popularly given to that part of the bdomen just below the sternum and between the cartilages of the false ribs. Also called *scrobiculus cordis*.

primitive p. A minute pit at the anterior end of the primitive groove in th embryo just caudal to the primitive node it may form the opening into the neurenteric canal.

pitch [L. *pix*, pitch]. A heavy liquid or dark residue obtained by the distillation of tar as, pine pitch, Burgundy pitch, coal tar pitch. It forms lustrous brittle mass when cold, and semisolid to syrupy mass according to the degree of heat to which it is subjected. It contains many organic compounds which differ according to its origin.

black p. The black residue obtained by distilling pine tar It consists of rosin and empyreumatic products of rosin.

Burgundy p. The resinous exudation obtained from the stem of *Picea abies*; occurs as reddish-brown or yellowish-brown solid, soluble in glacial acetic acid and boiling alcohol but partly soluble in cold alcohol. It is very fusible and softens and becomes adhesive at body temperature. It contains pimaric acid, which is mixture of the dextro and levo forms, an morphous resin acid, pinic acid, and volatile oil. Has been used in chronic rheumatic pains and in chronic affections of the chest or abdomen.

Canada p. The resinous exudation from *Tsuga canadensis* (*Abies canadensis*) It is hard, brittle, opaque, dark reddish brown substance. It softens and becomes adhesive t moderate temperature The constituents are resin and small quantity of volatile oil. Has been used as mild rubefacient, analogous to Burgundy pitch in its properties.

pitch [ME. *picchen*]. That quality of sound which depends upon the rapidity of the vibrations that produce the sound.

pitch'blende [G *pechblende*]. A massive form, having pitchlike luster of the mineral uraninite; native uranium oxide, also containing radium.

Pitfield Robert L. [*American physician*, 1870–1942]. Devised method for staining flagella, known as *Smith-Pitfield method*.

pi the coid pith e-coid [G. *pithēkos*, ape *eidos*, form]. Pertaining to the anthropoid apes.

pith'i tism, pi thi'a tism [G *peithein*, to persuade; *iatos*, curable]. 1. A condition caused by suggestion. See *hysteria* 2. Treatment of disease by suggestion. —**pithiat'ic,** *adj*

pith"i·at'ric [*peithein*, G *iatrikos*, skilled in the medical art]. Capable of being relieved by suggestion or persuasion, as certain hysterical conditions

Pitkin George P [*American surgeon*, 1885–1942] Introduced solution of procaine used in spinal anesthesia. See *spinocain*.

pitocin. Trade-mark for an aqueous solution containing the oxytocic principle of the neurohy-

pophysis (oxytocin) with less than one-half unit of pressor activity per cc.

pi·tom'e·ter [after *Henri Pitot*, French physicist, 1695–1771; G. *metron*, measure]. An instrument which records the rate of flow of fluids.

Pitres, Jean Albert [*French physician*, 1848–1928]. Known for his study of the cortical motor centers describing a series of sections through the brain used in post-mortem examinations, called *Pitres sections*.

pitressin. Trade-mark for an aqueous solution containing the pressor and diuretic-antidiuretic principle of the neurohypophyses (vasopressin) with less than one unit of oxytocic activity per cc.
p. tannate in oil. A suspension in vegetable oil of water-insoluble tannate of the pressor and diuretic-antidiuretic principle of the neurohypophyses used where the prolonged action of pitressin is desired.

pit'ted [AS. *pytt*, from L. *puteus*, well]. Marked by indentations or pits, as from smallpox.

pit'ting [*puteus*]. 1. The formation of pits. 2. The quality of preserving for short time, indentations made by pressing with the finger.

pi·tu'i·cyte [L. *pituita*, phlegm; G. *kytos*, cell]. The characteristic cell of the neurohypophysis.

pi·tu'i·tar"y (pi-tew'i-terr"ee) [*pituita*]. 1. Secreting mucus or phlegm. 2. Pertaining to, or designating, the pituitary body.

pi·tu'i·tar·y. The pituitary body or gland; the hypophysis cerebri. The human pituitary is small, rounded organ averaging about 0.5 Gm. in weight. It lies in the sella turcica of the sphenoid bone, and is attached by stalk to the floor of the brain. A classification of the mammalian pituitary based on embryogenesis, morphology and functions, divides this gland into two: the *adenohypophysis*, derived from Rathke pouch of buccal ectoderm, with subdivisions into the pars distalis, pars intermedia, and pars tuberalis; and the *neurohypophysis*, derived from the neural ectoderm from the floor of the diencephalon. Other classifications divide the hypophysis into anterior, intermediate, and posterior lobes, or only into anterior and posterior lobes. The name *pituitary* was given this organ because it was erroneously thought to secrete the mucus of the nose. It is now recognized as the master gland of internal secretion. The recognized adenohypophyseal hormones are adrenocorticotropin, thyrotropin, growth hormone, follicle-stimulating hormone, luteinizing hormone, and prolactin; those extracted from the neurohypophysis are antidiuretic hormone and oxytocin. See Plates 17, 18, 45, and Table of Hormones, II, in the Appendix.
desiccated anterior p. (*pituitarium anterius*). The dried, partially defatted, and powdered adenohypophysis of cattle, sheep, and swine, occurring as gray or yellowish-gray amorphous powder only partially soluble in water. Present evidence has not yet demonstrated that any of the six generally accepted hormones are absorbable from the alimentary canal; its use as remedial agent is therefore in question. Also called *pituitary anterior lobe, desiccated pituitary anterior lobe, pituitary body anterior lobe*.
desiccated posterior p. (*pituitarium posterius*). The cleaned, dried, and powdered lobe obtained from the pituitary body of domesticated animals which are used for food by man; occurs as yellowish or grayish, amorphous powder and has a characteristic odor; only partially soluble in water. Also called *pituitary hypophysis sicca*.
desiccated whole p. (*pituitarium totum*). The dried, partially defatted, and powdered pituitary gland of cattle, sheep, or swine; occurs as gray or yellowish gray amorphous powder. Any effects obtained by the oral administration of this drug probably are due to the stimulating action of the posterior lobe fractions. Also called *pituitary gland, desiccated pituitary substance, pituitary body*.

pituitrin. Trade-mark for a brand of posterior pituitary injection.

pituitrin-S. Trade-mark for solution of posterior pituitary double the strength of the official solution.

pit'u·rine. An alkaloid from species of Duboisia, related to nicotine.

pit·y·ri'a·sis [G. branlike eruption on the skin]. A fine, branny desquamation of the skin.
p. capitis. Dermatitis seborrheica.
p. lichenoides et varioliformis acuta. A noncommunicable, acute or subacute skin eruption characterized by vesicles and pustules that form crusts and later scars; usually runs a course of one to three months; also called *Habermann disease*.
p. linguae. Transitory benign plaques of the tongue.
p. nigra. See *tinea nigra*.
p. pilaris. See *keratosis pilaris*.
p. rosea. A self-limited skin disease of the trunk, usually acute, characterized by pale red patches with fawn-colored centers. The etiologic agent is unknown. Also called *p. circinata, herpes tonsurans maculosus*.
p. rubra. A chronic, inflammatory skin disease usually involving the whole body. The skin is deep red and covered by whitish scales. The disease varies in duration from months to years and is generally fatal. It was described by F. von Hebra (1857). Also called *Hebra p.*
p. rubra pilaris. A chronic, mildly inflammatory skin disease in which firm, acuminate papules form at the mouths of the hair follicles with horny plugs in these follicles. By coalescence scaly patches are formed. Also called *lichen ruber acuminatus*.
p. simplex. Dermatitis seborrheica.
p. steatoides. Dermatitis seborrheica when large waxy scales are formed, usually associated with pruritus and alopecia.
p. versicolor. A chronic skin disease characterized by yellowish-brown desquamating macules, involving principally the trunk and caused by the fungus *Malassezia furfur*.

pit'y·roid [G. *pityron*, bran; *eidos*, form]. Branny.

Pit"y·ro·spor'um (pit"i-ro-spor'um, -ro-spor'um) [*pityron*; G. *spora*, seed]. A genus of fungi which is yeastlike in character.
P. ovale. A species found in the hair follicles and on the skin in seborrheic dermatitis; of unknown pathogenicity.

piv'ot. In dentistry, old term for dowel.

piv'ot crown. An old method for attaching a crown to decayed tooth root.

piv'ot·ing [F. *pivot*]. The fixation of an artificial crown to a tooth by dowel.

PK Psychokinesis.

pK The negative logarithm of the dissociation constant of an acid or base. It is equivalent to the hydrogen-ion concentration (expressed in pH units) at which there is an equimolecular concentration of the acidic and basic components of any given buffer system.

Place, Edwin Hemphill [*American physician*, 1880–]. The first to report Haverhill fever with Lee Sutton and Otto Willner (1926).

pla·ce'bo [L., I shall please]. A medicine having no pharmacologic effect, but given for the purpose of pleasing or humoring the patient.

pla·cen'ta [L., cake]. The organ on the wall of the

uterus to which the embryo is attached by means of the umbilical cord and through which it receives its nourishment. It is developed, about the third month of gestation, from the chorion of the embryo and the decidua basalis of the uterus. The villi of the chorion enlarge and are received into depressions of the decidua, and around them form blood sinuses into which, by diffusion, the waste materials brought from the fetus by the umbilical arteries pass, and from which the blood receives oxygen and food material being returned to the fetus by the umbilical vein. It also serves an endocrine function by producing hormones. At term the placenta weighs one pound, is one inch thick at its center and seven inches in diameter. The lay term is *afterbirth*. See Plate 41. **—placental, placentoid,** *adj.*

abruption of p. Premature detachment of the placenta.

accessory p. See *p. succenturiata.*

adherent p. One that fails to separate from the uterine wall after childbirth.

annular p. One extending around the interior of the uterus in the form of a belt.

battledore p. One in which the insertion of the cord is at the margin of the placenta.

bilobed p. See duplex p.

bipartite p. A placenta with two divisions.

circumvallate p. A placenta with an irregular elevation on the fetal surface close to the circumference. Syn., *p. extrachorialis, p. nappiformis.*

discoid p. One shaped like a disk.

duplex p. A placenta with two or more parts separated by membranes, whose vessels do not communicate but unite just before entering the umbilical cord. Syn., *bilobed* p.

endotheliochorial p. A type in which syncytial chorionic epithelium is in direct contact with the endothelium of uterine blood vessels; found in carnivores.

epitheliochorial p. A type in which the endothelial, connective tissue, and epithelial layers are present in both the uterus and the chorion. The fetal circulation must pass through all of them. This type is found in the sow.

fundal p. One attached at the fundus.

hemochorial p. A type in which the chorionic ectoderm is in direct contact with maternal blood; found in rabbits, insectivores, bats, and anthropoids.

hemoendothelial p. A type in which the endothelium of vessels of chorionic villi is in direct contact with maternal blood; found in the rat and guinea pig.

horseshoe p. In twin pregnancy, a condition in which two placentas are joined.

incarcerated p. One retained by irregular contraction of the uterus.

maternal p. The external layer developed from the decidua basalis.

multipartite p. One with more than three lobes and vessels which may emerge to form the umbilical cord directly or may first communicate with one or more of the other lobes. Syn., *multilobed p., septuplex p.*

p. accreta. A placenta which has partially grown into the uterine myometrium (cleavage zone in basal decidua incompletely developed).

p. cirsoides. One in which the umbilical vessels have a varicose arrangement.

p. diffusa. See *p.* membranacea.

p. extrachorialis. See circumvallate *p.*

p. fenestrata. An irregular four-sided variety of placenta with an opening near the center.

p. increta. One which has grown into the uterine myometrium at all contact areas (no cleavage zone).

p. membranacea. One in which the entire ovum is covered by functioning chorionic villi. Syn., *p. diffusa.*

p. nappiformis. See circumvallate p.

p. percreta. One which has grown into and through the entire uterine myometrium.

p. previa. A placenta superimposed upon and about the internal os, a condition producing serious hemorrhage during labor.

p. previa centralis. A condition in which the center of the placenta is directly above the internal os.

p. previa marginalis. A condition in which the edge of the placenta meets, but does not overlap, the internal os.

p. previa partialis. A condition in which the edge of the placenta overlies, but does not completely obstruct, the internal os.

p. reflexa. A condition in which a thickening occurs in the peripheral portion of the placenta, giving it a rolled-back appearance.

p. reniformis. A kidney-shaped placenta.

p. spuria. An adjacent, though separate, portion of placental tissue, apparently serving no role in fetal nourishment.

p. succenturiata. An anomalous formation in which one or more accessory lobules are developed in the membrane at a greater or lesser distance from the margin of the placenta, but connected with the latter by vascular channels. Syn., *accessory p.*

retained p. One not expelled by the uterus after labor.

Schultze's p. A mechanism in which the retroplacental hematoma forms in the center, sending this portion to present before the periphery.

septuplex p. See multipartite p.

syndesmochorial p. A type in which the chorionic ectoderm is in contact with uterine connective tissue; occurs in ruminants.

tripartite p. A three-lobed one connected by vessels, membranes, and a thinned portion of placenta.

velamentous p. A placenta with the umbilical cord springing from the outer border.

plac″en·ta′tion (plass″en-tay′shun) [*placenta*]. Formation and mode of attachment of the placenta.

pla·cen′tin [*placenta*]. Placental extract formerly used in the cutireaction for pregnancy.

plac″en·ti′tis (plass″en-ty′tis) [*placenta*; G. *-itis*, inflammation]. Inflammation of the placenta.

plac″en·tog′ra·phy [*placenta*; G. *graphein*, to write]. Roentgenography of the placenta after delivery using a contrast medium.

plac″en·tol′y·sin (plass″en-tol′i-sin, pla-sen″to-lye′sin) [*placenta*; G. *lysis*, loosing]. A cytolysin formed in the blood of an animal which has received injections of placental tissue emulsions from some other animal.

plac″en·to′ma [*placenta*; G. *-ōma*, tumor]. A neoplasm springing from a retained portion of the placenta.

plac″en·to·sis. See intervillous *thrombosis*.

pla·cen″to·ther′a·py [*placenta*; G. *therapeia*, treatment]. The remedial use of preparations of the placenta of animals.

Plácido da Costa, Antonio (1848–1916). Portuguese ophthalmologist who introduced the keratoscope in examinations of the eye (1880), called *Plácido's disk*.

plac′ode [G. *plax*, anything flat and broad; *-ōdēs*, like]. A platelike epithelial thickening, frequently marking, in the embryo, the anlage of an organ or part.

auditory p. The dorsolateral ectodermal anlage of the internal ear; also called *otic p.*

dorsolateral p. One of series of ectodermal placodes from which nerves and sense organs of the acoustic and lateral-line systems develop.
epibranchial p. One of series at the dorsal end of the visceral grooves that, i some vertebrates, contributes to the adjacent cranial ganglion.
lens p. The ectodermal anlage of the lens of the eye; its formation is induced by the presence of the underlying optic vesicle.
olfactory p. The ectodermal anlage of the olfactory region of the nasal cavity
otic p. See uditory p.
plad"-⌐ro'ma [G., abundance of fluids]. A soft wart or tumor of the eyelid.
pla gi-o-ce phal'ic, pla gi o-ceph a lous [G. *plagios*, oblique *kephalē*, head]. Designating type of pronounced oblique deformation of the skull.
pla gi-o-ceph lism. See *plagiocephaly*.
pla gi o-ceph' -ly [*plagios*; *kephalē*]. A type of strongly asymmetri cranial deformation, in which the anterior portion of one side and the posterior portion of the opposite side of the skull are developed more than their counterparts, so that the maximum length of the skull is not in the midline but on diagonal. Due to number of causes, such as prenatal, developmental (disordered sequence of suture closure) mechanical (intentional or unintentional) *Syn.*, *wry-head*.
plague [L. *plaga*, plague]. 1. Any contagious, malignant, epidemic disease. 2. A contagious disease endemic i eastern Asia, and in former times occurring epidemically in Europe and Asia Minor. It is an acute febrile disease characterized by inflammation of the lymphatics, ith the production of buboes, primary or secondary pneumonia, petechiae and diffuse hemorrhages, and high mortality Caused by *Pasteurella pestis*. Primarily disease of rodents, transmitted to man by fleas.
black p. The plague which decimated the European nations in the 14th century so called because of the high incidence of hemorrhages.
bubonic p. The usual form of plague, characterized by bubo formation, formerly prevalent in various parts of the world.
cattle p. See *rinderpest*.
fowl p. A acute septicemic disease of domesticated birds caused by *Pasteurella avicida*, characterized by fever and manifested by eakness, prostration, and profuse diarrhea.
hunger p. Relapsing fever
levantine p. The plague of the eastern part of Europe.
lung p. Pleuropneumonia of cattle
rat line p. *Pasteurella pestis* infection of the rat, transmitted from rat to rat and from rat to man primarily by the flea.
p. sore. A sore resulting from the plague.
p. spot. The petechia characteristic of the plague.
p. vaccine. One used for the active immunization against plague; may be of either killed or attenuated living cultures of the organism.
pneumonic p. An extremely virulent type with lung volvement and high mortality rate.
Siberia cattle p. See *anthrax*.
swine p. See *swine plague*.
sylvatic p. The type transmitted by rodents other than the rat, especially prevalent in wooded or rural reas.
plak-al'bu min. A protein derived from egg albumin by the action of proteinase elaborated by *Bacillus subtilis*.
pla'na. Plural of planum.
Planck, Max [*German physicist*, 1858-1947]. Known for his contributions which form the basis of the quantum theory Nobel laureate (1918)
Planck's con stant. See quantum *constant*.
plane [L. *planus*, level ground]. Any flat, smooth surface, especially any assumed or conventional surface, whether tangent to the body or dividing it. For subentries not found here, see under *planum*.
alveolocondylean p. The plane of Broca, tangent to the anteroinferior border of the maxillary alveolus and the inferior surfaces of the occipital condyles.
axiobuccolingual p. One parallel with the long axis of tooth, passing through both the buccal and lingual surfaces.
axiolabiolingual p. One parallel with the long axis of an incisor tooth and passing through its labial and lingual surfaces.
base p. A theoretic horizontal plane upon which an artificial denture is set up.
bite p. An imaginary plane extending from the edge of the upper lip, at rest and relaxed, backward at right angles to the sagittal plane, and parallel with line drawn from the anterior nasal spine to the lower border of the external auditory meatus. This is the plane to which the bite is constructed. Also called *occlusion plane* (Wilson)
Bolton nasion p A line joining the Bolton point and nasion on the lateral roentgenogram. It marks the junction of the face and cranium.
cleavage p. 1. The area in cell or developing ovum where cell division take place. Also see *cleavage*. 2. Any plane in the body along which organs or structures may be separated with minimal damage.
coronal p. A frontal plane, especially one in the head
datum p. Any one of number of horizontal planes, determined by certain craniometric points, used by craniometrists in the comparative study of skulls and the making of standardized comparable craniometri records.
fascial p. Any plane in the body which is oriented along layer of fascia. It usually represents cleavage plane, and is used for exposure in surgery; it may limit or direct the spread of infection.
focal p. The area perpendicular to the axis of lens or lens system where an object forms its image.
Frankfort horizontal p. An anthropometric plane for orienting heads of the living as well as skulls in definite position, so that measurements and contours of series will be comparable. The F H was proposed at the Craniometric Congress held Munich in 1877 and was formally adopted by the International Congress of Anthropologists in Frankfurt-am-Main in 1884, whence its name. The plane was defined as being determined by *four* points, viz. the two *poria* and the two *orbitalia*. In anthropometric practice, only the two poria and left orbitale are the *three* points used to determine the plane, since only in perfectly symmetrical heads or skulls would *four* points fall in the plane. The plane was adopted because it can be determined easily on the living, making comparison between head and skull possible, and it approximates quite closely the position in which the head is carried during life.
frontal p. Any plane parallel with the long axis of the body and perpendicular to the median plane.
horizontal p. (a) Any transverse plane at right angles to the long axis of the body (b) *I dentistry* plane at right angles with the long axis of tooth.
inclined p. Any one of the inclined cuspal surfaces of tooth.
infracostal p. See subcostal *p*.
intertubercular p. A horizontal

through the tubercles on the crests of the ilia. This plane usually lies at the level of the fifth lumbar vertebra.

lower horizontal p. See intertubercular *p.*

median p. One drawn vertically in the longitudinal axis of the body.

midepigastric p. See transpyloric *p.*

midsagittal p. The median plane.

nuchal p. See *planum nuchale*.

occipital p. See *planum occipitale*.

orbitale p. See *planum orbitale*.

parasagittal p. Any vertical plane parallel to the median plane.

p. of incidence. The plane containing a light ray incident to a surface.

p. of inlet of pelvis. A plane passing through the sacral promontory and the upper border of the symphysis pubis.

p. of outlet of pelvis. A plane passing through the lower border of the symphysis pubis and the tip of the coccyx.

popliteal p. The flat surface on the posterior aspect of the distal end of the femur between condyles.

principal p. A plane normal to the principal axis of a lens, passing through a principal point.

rotate p. *In biology,* wheel-shaped and flat.

sagittal p. A plane which bisects a bilaterally symmetrical body; the median plane.

standard horizontal p. See horizontal *p.*

sternal p. See *planum sternale*.

subcostal p. A horizontal plane passing through the lowest points of the costal arch or the lowest points of the tenth costal cartilages. This plane usually lies at the level of the third lumbar vertebra.

temporal p. See *planum temporale*.

transpyloric p. A horizontal plane through the body at the level of the second lumbar vertebra; the pylorus usually lies in this plane.

transverse p. One at right angles to the long axis of the body; horizontal plane.

umbilical p. A horizontal plane passing through the umbilicus; this plane usually lies at the level of the intervertebral disk between the third and fourth lumbar vertebrae.

upper horizontal p. See subcostal *p.*

visual p. One which passes through the axis of vision of both eyes.

pla·ni·ceps (play′ni-seps, plan′i-) [L. *planus,* flat; *caput,* head]. Flatheaded.

pla·nig′ra·phy. See *sectional radiography*.

pla·nim′e·ter [*planus;* G. *metron,* measure]. An instrument which measures the area of a plane surface by tracing the periphery.

plan′ing. A method of plastic surgery whereby skin, hardened by freezing, is abraded by means of a burr, sandpaper, or rotating steel-wire brush, to remove permanently scars, pock marks, and superficial skin blemishes.

plank′ton [G. *plagkton,* from *plazesthai,* to wander]. General term for free-floating plants and animals in sea water.

plan·o-, plan- [G. *planos,* wandering]. A combining form signifying *wandering*.

pla·no- [L. *planus,* flat]. A combining form signifying *flat* or *level*.

pla·no-cel′lu·lar [*planus;* L. *cellula,* small storeroom]. Flat-celled.

pla·no-con′cave [*planus;* L. *concavus,* hollow]. Concave on one surface and flat on the opposite side.

pla″no-con′i·cal [*planus;* G. *kōnos,* cone]. Having one side flat and the other conical.

pla″no-con′vex [*planus;* L. *convexus,* rounded]. Plane on one side and convex on the other.

plan′o-cyte [G. *planos,* wandering; *kytos,* cell]. A wandering cell. *Obs.*

pla·no·gram. See *vectorcardiogram, monocardiogram*.

plan″o·ma′ni·a [*planos;* G. *mania,* madness]. A morbid desire for wandering; an impulse to throw off social restraints and live in the wilds.

Pla·nor′bis [L. *planus,* flat; *orbis,* circle]. A genus of fresh-water snails species of which act as intermediate hosts of the flukes causing schistosomiasis in man.

plan′ta [L.]. The sole of the foot.

Plan·ta′go [L.]. Plantain. A genus of weeds, some of which are used medicinally.

P. psyllium. A species, the seeds of which are used in chronic constipation.

plan·ta′go seed (*plantaginis semen*). The cleaned, dried, ripe seed of *Plantago psyllium* or of *P. indica,* known in commerce as Spanish or French psyllium seed, or of *P. ovata,* known in commerce as blond psyllium or Indian plantago seed. It contains a mucilaginous principle called xylin together with protein, fixed oil, pentosans, and galactans. It is used almost exclusively in medicine in chronic constipation. The gum of the epidermis, being largely indigestible, retains water and thereby gives bulk and softness to the fecal masses. Dose, 4–15 Gm. (1–4 drams). The seeds should be soaked in water before taking. Also called *psyllium seed, plantain seed*.

plan·tain (plan′tin). See *Plantago*.

plan′tar [L. *planta,* the sole of the foot]. Pertaining to the sole of the foot, as plantar fascia, the dense triangular aponeurosis occupying the sole of the foot beneath the integument.

plan·tar′is (plan-tar′is) [*planta*]. A small muscle of the calf of the leg. See Table of Muscles in the Appendix.

plan′tar wart. A type of verruca, usually multiple, occurring on the sole of the foot, may become quite painful, as the wart cannot grow out from the surface because of pressure. Also called *verruca plantaris*.

plan·ta′tion. A general term including *implantation, replantation,* and *transplantation*.

plan′ti·grade [*planta,* L. *gradi,* to walk]. Walking on the entire sole of the foot, as man and the bear.

plan′u·la [dim. from L. *planus,* flat]. *In embryology,* the embryo at the stage of the two primary germ layers of ectoderm and endoderm in coelenterates.

pla′num (pl. *plana*) [L.]. A plane, or level surface. For subentries not found here, see under *plane*.

p. nuchale. The rough, external surface of the squama occipitalis lying below the superior nuchal lines.

p. occipitale. The relatively smooth, triangular, external surface of the occipital squama lying above the superior nuchal lines.

p. orbitale. The smooth, triangular, superior surface of the maxilla which forms the floor of the orbit.

p. popliteum. A relatively smooth, triangular area on the posterior surface of the distal end of the femur between the diverging lips of the linea aspera.

p. sternale. The ventral surface of the body of the sternum.

p. temporale. A relatively flat area lying below the linea temporalis inferior and composed of portions of the frontal and parietal bones, great wing of the sphenoid, and squama temporalis.

plaque (plack, plahk) [F.]. A patch.

agar p. See under *agar*.

bacterial plaques. See dental *plaques*.

blood plaques. See *blood platelets*.

dental plaques. Thin, transparent films on the surfaces of teeth made up of mucoid and colloidal

material secreted by the salivary glands. Depending on the predominant component, mucinous and bacterial plaques are recognized.

milk plaques. Pale-gray plaques in the epicardium without disruption of the continuity of the mesothelium, usually well-defined, roughly circular areas. Cause is unknown. Also called *soldiers' spots*.

mucinous plaques. See dental *plaques*.

plasm (plaz'um) [G. *plasma*, anything formed]. 1. Plasma. 2. Old term for part of the substance of cell.

germ p. The material basis of inheritance; it is located in the chromosomes.

plas'ma (plaz'muh) [G.]. The fluid portion of blood or lymph, composed of mixture of many proteins in crystalloid solution and corresponding closely to the interstitial fluid of the body.

normal human p. The sterile plasma obtained by pooling approximately equal amounts of the liquid portion of citrated whole blood from eight or more healthy humans. The cell-free plasma is separated, sterility tests made, preservative added, and the plasma distributed into final containers. The plasma so obtained may be stored in three ways: as liquid plasma at temperature between 2° and 8° C.; by rapid freezing; or by desiccating the frozen plasma in high vacuum at temperatures below freezing. Plasma is capable of serving all the purposes for which whole blood is employed, except restoration of the hemoglobin, and has the advantages that human plasmas are rarely incompatible with each other and that it can be stored for long periods of time. Also called *citrated normal human p.*

p. accelerator globulin. Proaccelerin.

p. cell. See *plasmacyte*.

p. hydrolysate. An artificial digest of protein derived from bovine blood plasma prepared by method of hydrolysis sufficient to provide more than half of the total nitrogen present in the form of alpha amino nitrogen. It provides the approximate nutritive equivalent of the source protein in the form of its constituent amino acids. See *travamin*.

p. proteolytic enzyme. Collectively the proteolytic enzyme (or enzymes) active at or near neutrality: plasmin or fibrinolysin.

p. thromboplastin antecedent (PTA). A clotting factor in normal blood, necessary for the normal elaboration of plasma thromboplastin activity and distinct from plasma thromboplastinogen and plasma thromboplastin component (PTC). The deficiency of this is called *PTA deficiency*.

p. thromboplastin component (PTC). A clotting factor present in normal blood, necessary for the normal elaboration of plasma thromboplastin activity and distinct from plasma thromboplastinogen and plasma thromboplastin antecedent. The deficiency of this is called *PTC deficiency*, *hemophilia B*, or *Christmas disease*.

p. thromboplastinogen. See *thromboplastinogen*.

p. tryptase. A proteolytic enzyme, present in plasma in an inactive form, which may be identical with plasmin and fibrinolysin.

p. volume expander. Any synthetic or other blood substitute. See *dextran*, *periston*.

plas'ma·blast [*plasma*; G. *blastos*, germ]. The stem cell of the plasmacytes. The nucleus has the fine granular structure typical of other blasts, and nucleoli are present. Cytoplasm is characteristically gray-blue-green in color. Also called *lymphoblastic plasma cell*.

plas·ma·cule. See *hemoconia*.

plas'ma·cyte. A fairly large, deeply basophilic mononuclear cell with lightly staining zone about the centrosome. The nucleus is eccentric with its chromatin arranged in irregular clumps or in wheel-spoke pattern. They may be multinucleated, and are normally present in bone marrow and other body tissues. They are increased in chronically inflamed regions and multiple myeloma. They are considered by some to be an abnormal form of lymphocyte and by others to be an independent cell series. Also called *plasma cell*, *Unna plasma cell*, *Marschalko plasma cell*, *plasmacytoid lymphocyte*, *myeloma cell*. —**plasmacyt'ic**, *adj.*

plas"ma·cyt'ic se'ries. The cells concerned in the development of plasmacytes. See *plasmablast*, *proplasmacyte*.

plas"ma·cy'toid lym'pho·cyte. See *plasmacyte*.

plas"ma·cy·to'ma. See *myeloma*.

plas·ma·cy·to'sis. 1. An increase in number of plasmacytes in the spleen, lymph nodes, bone marrow, kidney or liver. 2. An increase in number of plasmacytes in peripheral blood, occurring in certain infections, usually of virus origin, and occasionally in serum sickness and multiple myeloma.

plas'ma·gel (plaz'muh-jell) [*plasma*; L. *gelare*, to freeze]. That portion of the cytoplasm of cell whose physical property is that of gel.

plas'ma·gene [*plasma*, G. *gennethel*, from *gignesthai*, to be produced]. Any independently self-reproducing hereditary particle of the cytoplasm, which is part of the intimate cytoplasmic organization.

plas"ma·lem'ma. Plasma membrane; the cell membrane.

plas·mal'o·gen. One of group of lipids in which fatty acid aldehyde in acetal linkage replaces the two fatty acid groups of either α- or β-cephalin. Syn., *acetal-phosphatide*.

plas"ma·pher'e·sis (plaz muh-ferr'i sis, -fer'i-sis) [*plasma*; G. *aphairesis*, taking away]. The operation of venesection into sodium citrate solution, centrifugalization, washing the blood cells in physiological salt solution and returning them (without the plasma) into the donor circulation.

plas'ma skim'ming. The phenomenon of plasma without erythrocytes flowing into side branch of blood vessel, the erythrocytes continuing along the main channel.

plas'ma·some [*plasma*; G. *sōma*, body]. A granule in cytoplasm.

plas"ma ther'a·py [*plasma*; G. *therapeia*, treatment]. Treatment, as for shock, by the intravenous injection of blood plasma.

plas·mat'ic (plaz mat'ick) [*plasma*]. Pertaining to plasma.

plas"ma·tog'a·my [*plasma*; G. *gamos*, marriage]. Cell union in which the nucleus of each remains.

plas·ma·tor·rhex'is. See *plasmorrhexis*.

plas·ma·to'sis [*plasma*, G. *-ōsis*, condition]. The liquefaction of cell substance.

plas'mic (plaz'mick) [*plasma*]. Of, or pertaining to, protoplasm or cytoplasm.

plas'min. A proteolytic enzyme, present in inactive form as plasminogen, occurring in plasma, and responsible for slow digestion and lysis of fibrin clots; sometimes called plasma *tryptase* and *fibrinolysin*, though it is not certain that all these substances are identical.

p. inhibitor. See *antiplasmin*.

plas·min'o·gen. The inactive form of plasmin; when blood is shed over injured tissues, it is converted to plasmin.

plas·mo- (plaz'mo-), **plasm-** [*plasma*]. A combining form meaning *plasma*.

plasmochin. Trade-mark for brand of pamaquine naphthoate.

plas·mo·crin [*plasma*, G. *krinein*, to separate]. A term applied to crystalloid-filled vacuoles in the cytoplasm of secretory cells, representing a stage in the development of secretory granules.

plas·mo·cyte. See *plasmacyte*.

plas·mo·cy·to·ma (plaz·mo·sigh·to·muh) [*plasma*, *kytos*; G. *-oma*, tumor]. Myeloma made up largely of plasma cells.

p. with leukemia. See plasmacytic *leukemia*.

plas·mo·des·ma. See *intercellular bridges* under *bridge*.

plas·mo·di·blast. See *syncytiotrophoblast*.

Plas·mo·di·i·dae (plaz·mo·dee·i·dee) [*plasma*; G. *eidos*, form]. A family of the Haemosporidia containing the genus *Plasmodium* which includes the malaria plasmodia of man, birds, and lower animals.

plas·mo·di·tro·pho·blast (plaz·mo·di·tro·fo·blast, trof'o·blast) See *syncytiotrophoblast*.

Plas·mo·di·um [*plasma*, *eidos*]. A genus of protozoa that causes malaria in birds, lower animals, and man. —**plasmodial**, *adj.*

P. falciparum. That species which is the cause of estivo-autumnal or malignant tertian malaria. See Plates 27, 28.

P. malariae. That species which is the etiologic agent of quartan malaria. See Plates 27, 28.

P. ovale. The species of protozoa which causes tertian or ovale malaria.

P. vivax. That species which causes vivax or benign tertian malaria. See Plates 27, 28, 29.

Plas·mo·dro·ma. A subphylum of protozoa in which the organisms move by means of flagella or pseudopodia. Includes the medically important classes Rhizopoda, Mastigophora, Cnidosporidia, and Sporozoa.

plas·mog'a·my [*plasma*, G. *gamos*, marriage]. Cell fusion.

plas·mo·gen [*plasma*, G. *gennaein*, from *gignesthai*, to be produced]. Formative protoplasm; germ plasm; bioplasm.

plas·mol'y·sis [*plasma*; G. *lysis*, loosing]. Shrinkage of a cell or its contents, due to withdrawal of water by osmosis. —**plasmolyt'ic**, *adj.*

plas'mo·lyze [*plasma*, G. *lyein*, to loose]. Bring about dissolution or shrinkage of cell protoplasm.

plas·mo·ma. See *myeloma*.

plas'mon [*plasma*]. The hereditary properties of the egg cytoplasm. It stands in contrast to the genome.

plas"mo·nu·cle'ic ac'id. Ribonucleic acid.

plas·mop·ty·sis [*plasma*; G. *ptysis*, spitting]. The escape of protoplasm from a cell, due to rupture of the cell wall.

plas'mo·quin. See *plasmochin*.

plas"mor·rhex'is [*plasma*, G. *rhēxis*, breaking]. The rupture of a cell and the escape or loss of the protoplasm.

plasmosan. Trade-mark for *polyvinylpyrrolidone*.

plas·mos·chi·sis (plaz·mos'ki·sis) [*plasma*; G. *schisis*, cleavage]. Protoplasmic fragmentation or cleavage.

plas'mo·sin [*plasma*]. A nucleoprotein found in the cytoplasm of cells; one of the structure proteins.

plas·mo·some [*plasma*, G. *sōma*, body]. 1. The true nucleolus, distinguished from the karyosomes in the nucleus. 2. Old term for any cytoplasmic granule.

plas"mo·trop'ic [*plasma*; G. *tropein*, to turn]. Producing excessive hemolysis in the liver, spleen, and bone marrow.

plas·mot'ro·pism [*plasma*; *tropein*]. Destruction of red cells in the organs producing them, as the spleen and bone marrow. Obs.

plas·mo·zyme [*plasma*, G. *zymē*, leaven]. Prothrombin; thrombogen.

plas'te·in. A product of interaction between protein digest and either pepsin or papain.

plas·ter [G. *emplastron*, plaster]. 1. Substance intended for external application, made of such materials and of such consistency as to adhere to the skin. 2. Calcined gypsum or calcium sulfate.

adhesive p. (*emplastrum adhaesivum*). A mixture having pressure-sensitive adhesive properties, spread evenly upon fabric, the back of which may be coated with a water-repellent film. The adhesive mixture usually consists of rubber mass, waxes with one or more fillers of absorbent powder such as zinc oxide, orris root, or starch. Types of adhesive plaster differing in the kind of fabric used, intended for special uses, are extensively employed. Also called *adhesive tape*.

court p. A solution of isinglass made with alcohol, glycerin, and hot water spread on silk and allowed to dry. Used to hide blemishes or close small wounds.

mustard p. That made by mixing mustard and flour with water.

p. of Paris. See *calcium* sulfate.

plas'tic [G. *plastikos*, fit for molding]. 1. Formative; concerned with building up tissues, restoring lost parts, repairing or rectifying malformations or defects, etc., as plastic surgery, plastic operation, plastic repair. 2. Capable of being molded.

plas'tic. Material, such as celluloid, proteins, resins, etc., which can be molded during processing by heat or pressure.

plas·tic force. The generative force of the body.

plas·tic'i·ty (plas·tis'i·tee) [*plastikos*]. The quality of being plastic.

plas"ti·ciz·er. A substance incorporated in an organic formulation or substance to maintain it in a plastic condition, preventing or retarding cracking or development of brittleness.

plas·tic lymph. The inflammatory exudate that covers wounds or inflamed serous surfaces, and becomes organized by the development in it of blood vessels and connective tissues.

plas'tics [*plastikos*]. In *dentistry*, those filling materials, such as amalgam, gutta-percha, and various cements, which are soft at the time of insertion, and may then be shaped and molded.

plas'tid [G. *plassein*, to form]. 1. A hypothetical elementary organism; cytode. 2. Any of certain small cytoplasmic bodies in plant cells, regarded as seats of the chemical activities of the cells.

plas·ti·dule [*plassein*]. See *bioplast*.

plas·tin [*plassein*]. The substance forming the more solid portion of protoplasm, such as the linin or the cytospongioplasm.

plas·to·dy·nam·i·a (plas·to·dye·nay'mee·uh, ·nam'ee·uh) [G. *plastos*, formed; *dynamis*, power]. Growth potential.

plas·tog'a·my [*plastos*; G. *gamos*, marriage]. Cytoplasmic fusion as contrasted with nuclear fusion.

plas'to·gene [*plastos*; G. *gennaein*, from *gignesthai*, to be produced]. The basic self-reproducing unit of the plastids of plants.

plas·to·some. See *mitochondria*.

-plas·ty [G. *plassein*, to form, mold]. Combining form denoting *plastic surgery*. See *plastic* (*adj.*), 1.

plate [OF.]. 1. A flattened part, especially a flattened process of bone. 2. A thin piece of metal or some other substance to which artificial teeth are attached. 3. In *microbiology*, a shallow cylindrical, covered culture dish; also such a dish containing solid cultural medium suitable for the growth of microorganisms; a petri dish. 4. In *orthopedics*, a metallic device used with screws or bolts for internal fixation of bone.

agar-streak p. See under *agar*.

alar p. The lateral wall of the neural tube dorsal

to the sulcus limitans, associated with sensory nerves. Syn., *alar lamina*.
anal p. The anal membrane.
auditory p. The bony plate forming the roof of the external auditory meatus.
axial p. The primitive streak of the embryo.
basal p. of cranium. A cartilaginous plate of the embryonic cranium representing the fused parachordal plates of lower forms. It is the predecessor of the occipital bone.
basal p. of gravid uterus. That part of the decidua basalis incorporated into the placenta, including its covering of basal ectoderm from the trophoblast.
basal p. of neural tube. The lateral wall of the neural tube ventral to the sulcus limitans; motor in function. Syn., *basal lamina*.
base p. *In dentistry*, a rigid or semirigid substance adapted to a cast. It is part of a bite plate, and is sometimes incorporated in a completed denture.
bite p. *In dentistry*, a base plate and the plastic material attached to it, used to establish the proper relationship of the jaws to each other and to adjacent oral structures.
cardiogenic p. An area of splanchnic mesoderm at the cephalic margin of the embryonic area below the coelom that gives rise to the endothelial tubes of the embryonic heart.
cell p. The equatorial thickening of the spindle fibers from which the intercellular septum arises in the division of plant cells. It is vestigial in some animals. Syn., *midbody*.
chorionic p. The chorionic membrane of the placental region, formed externally by the trophoblast layer and internally by a fibrous lining layer of mesoderm.
cloacal p. The cloacal membrane.
closing p. Any epithelial membrane, usually bilaminar, closing a potential orifice; especially one separating a visceral groove and pouch.
cough plates. Those coated with boiled potato, glycerin, agar, and blood mixture, on which pertussis patients cough.
cribriform p. 1. The horizontal plate of the ethmoid bone, part of the floor of the anterior cranial fossa, perforated for the passage of the olfactory nerves. 2. The bone lining a dental alveolus; also called *alveolar bone proper, lamina dura*.
culture p. A culture of bacteria within a Petri dish.
cuticular p. An oar-shaped plate associated with the supporting cells of the organ of Corti.
cutis p. The dermatome.
dorsal p. One of the two longitudinal ridges on the dorsal surface of the embryo which subsequently join to form the neural canal.
end-p. See motor end-p.
epiphyseal p. (a) The broad, articular surface with slightly elevated rim on each end of the centrum of a vertebra. Syn., *epiphyseal disk*. (b) The thin cartilage mass between an epiphysis and the shaft of a bone; the site of growth in length. It is obliterated by epiphyseal union.
equatorial p. The compressed mass of chromosomes aggregated at the equator of the nuclear spindle during karyokinesis.
floor p. The ventral wall of the embryonic neural tube, ependymal in structure.
foot p. The flat part of the stapes.
frontal p. In the fetus, a cartilaginous plate interposed between the lateral parts of the ethmoid cartilage and the lesser wings and anterior portion of the sphenoid bone.
Kowarsky's p. A small plate composed of two layers of copper used in preparation of heat-fixed blood smears.
Lane p. See William Arbuthnot *Lane*.
lateral p. The thickened side walls of the neural tube.
lateral pterygoid p. A broad, thin plate whose lateral surface forms part of the medial wall of the infratemporal fossa and gives attachment to the external pterygoid muscle, and whose medial surface forms part of the pterygoid fossa and gives attachment to the internal pterygoid muscle.
meatal p. A solid mass of cells seen in a two-month embryo, formed by the ingrowth of ectoderm from the bottom of the branchial groove toward the tympanic cavity.
medial pterygoid p. A long, narrow plate whose lateral surface forms part of the pterygoid fossa and whose medial surface constitutes the lateral boundary of the choana. Its lower extremity forms a hook, the pterygoid hamulus, for the tendon of the tensor veli palatini.
medullary p. Neural plate; dorsal plate.
Moore blade p. See Austin Talley *Moore*.
motor end-p. A small mass of sarcoplasm formed beneath the sarcolemma at the junction of nerve and muscle fibers. It receives the terminal ramifications of the naked axis cylinder of a somatic motor nerve.
muscle p. A myotome.
nail p. The nail.
neural p. The thickened ectodermal plate overlying the head process that differentiates into the neural tube.
notochordal p. A plate of cells representing the root of the head process of the embryo after the latter becomes vesiculated. The plate becomes intercalated in the dorsal wall of the vesicle and later consolidates into the notochord.
nuclear p. (a) The metaphase chromosomes arranged along the equatorial plate. (b) The septum which sometimes divides the nucleus in amitotic division.
oral p. See stomodeal p.
orbital p. One of two thin, triangular plates of the frontal bone which form the vaults of the orbits.
paper-disk p. A filter-paper disk soaked with an antibiotic test solution and placed on the surface of seeded agar plates, to determine the zone of inhibition resulting from the diffusion of the antibiotic into the surrounding medium in the course of incubation.
parachordal p. See basal p. *of cranium*.
perpendicular p. A thin, flat, polygonal lamina of the ethmoid bone which assists in forming the septum of the nose.
petri, Petri p. See plate, 3; also called *petri dish*.
pour p. A bacterial culture in which the culture is incorporated into a medium, poured into a sterile petri dish, and allowed to solidify.
primitive joint p. The primary rudiment of a joint which is formed by a separate thickening of mesenchyme between the thickenings which are the forerunners of the bones to be joined.
primitive p. The floor of the primitive groove.
prechordal p. A region of thickened endoderm immediately anterior to the notochord and in direct contact with the ectoderm. It forms a part of the buccopharyngeal membrane.
pterygoid plates. Two plates into which the pterygoid process of the sphenoid bone divides.
roof p. The dorsal wall of the embryonic neural tube, ependymal in structure.
screening p. One using solid media for distinguishing the effect of some particular agent on bacteria, e.g., incorporation of antibiotics and notation of zones of inhibition, and susceptibility of *Salmonella typhi* to different bacteriophage types.

Sherman p. See Harry Mitchell *Sherman*.

sinus p. A median plate of epithelium within the glans penis of the embryo which later takes part in the formation of the external urethral orifice.

slotted p. *In orthopedics*, a steel plate with slots at either end in which screws are placed, allowing for compression of fractured bone fragments while being maintained in contact.

spiral p. Spiral lamina.

stomodeal p. A sheet of ectoderm and endoderm which separates the stomodeum from the originally blind end of the foregut. Also called *oral p*, *buccopharyngeal membrane*.

streak p. A bacterial culture within a Petri dish formed by streaking across the culture medium with a loopful of bacterial suspension.

sucking p. *In dentistry*, a plate constructed so as to be held in place largely by atmospheric pressure.

tarsal p. A thin, elongated plate of dense connective tissue which contributes to the form and support of an eyelid.

terminal p. The thin plate of bone of an epiphysis laid down on the metaphyseal surface preceding epiphyseal union.

Townsend and Gilfillan p. A plate used for treating, by open reduction, tibial shatter fractures; the plate is screwed to the tibial shaft, and extends upward to receive a bolt transfixing the condylar fragments.

tympanic p. The bony sides and floor of the external auditory meatus.

urethral p. A solid plate of endodermal cells, derived from the endoderm of the urogenital membrane, that temporarily obliterates the cavity of the phallic part of the urogenital sinus and later forms a large part of the penile urethra.

vacuum p. *In dentistry*, a plate on which artificial teeth are mounted, having an air chamber to assist in its retention in the mouth.

pla·teau' [F.]. In operating Geiger counter tubes, the voltage range over which the number of impulses recorded is nearly constant.

plate cul'ture. A method of obtaining pure cultures of bacteria by the inoculation of a solid cultural medium in a petri dish with microorganisms. The inoculum may be distributed over the surface of the medium (streak plate) or incorporated within it (pour plate).

plate'let [dim. from OF *plate*, plate]. See *blood platelets*, *thrombocyte*. See Plate 26.

pla'ting [*plate*]. *In microbiology*, the inoculation of solid cultural medium in a dish with microorganisms. The inoculum may be distributed over the surface of the medium or incorporated within it.

pla·tin'ic [Sp. *plata*, silver]. Referring to a compound containing platinum as a tetravalent element.

plat'i·nous [*plata*]. Referring to a compound containing platinum as a divalent element.

plat'i·num [*plata*]. Pt = 195.23. A silver-white metal occurring natively or alloyed with other metals. It is fusible only at very high temperatures, and is insoluble in all acids except nitrohydrochloric. On account of these properties, it is extensively used for chemical apparatus, crucibles, foils, wire; it is also employed as a reagent. Platinum occurs, aside from its ordinary metallic form, as a spongy mass (spongy platinum) and as a fine metallic powder (platinum black) which is capable of absorbing many times its volume of oxygen, and hence acts as a powerful oxidizing agent. Platinum forms two types of compounds: platinous, in which it is divalent, and platinic, in which it is tetravalent. It is no longer used medicinally.

Platner, Johann Zacharias [German physician, 1694–1747]. Remembered for his part in drawing attention to the tuberculous origin of kyphosis of the spine (1744). Described crystals of sodium glycocholate and taurocholate from urine containing an excess of bile; called *Platner's crystals*.

plat'ode, plat'oid [G. *platys*, broad; *eidos*, form]. *In biology*, broad or flat, as a worm.

plat·o·nych'i·a (plat·o·nick'ee·uh) [*platys*; G. *onyx*, nail]. Rare dystrophy of the nail, consisting of a modification of its greatest curvature, which, instead of being transverse, as normally, is lengthwise.

p. acuta aberata. Psoriasiform eruption and lesions of fingernails, consisting of round, whitish, soft, thickened spots in the center of each nail except that of the middle finger.

platradon. Trade name for platinum radon seeds.

plat'y-, plat- [G. *platys*, broad]. A combining form meaning *broad*, *flat*.

plat"y·ba'si·a (plat"i·bay'see·uh) [*platys*; G. *basis*, base]. A developmental deformity of the occipital bone and upper cervical spine, in which the foramen magnum is small and misshapen, the atlas is occipitalized, and the odontoid process of the axis impinges on the brain stem. It is accompanied by neurologic symptoms and signs referable to changes in the medulla, cervical spinal cord, and lower cranial nerves.

plat·y·coe'li·an (plat"i·see'lee·un, ·sell'ee·un), **plat"y·coe'lous** (plat"i·see'lus, ·sell'us) [*platys*; G. *koilos*, hollow]. Concave in front and convex behind.

plat"y·ce·phal'ic [*platys*; G. *kephalē*, head]. Characterizing a person having a skull with a flat vertex. —**platyceph'aly**, *n.*

plat"y·cne·mi'a (plat"ick·nee'mee·uh) [*platys*; G. *knēmē*, leg]. *In osteometry*, a pronounced mediolateral flattening of the diaphysis of the tibia, determined by a cnemic index of 64.9 or less; also called *platycnemism*.

plat"yc·ne'mic [*platys*; *knēmē*]. Designating a tibia with a marked mediolateral flattening.

plat"y·co'ri·a, plat"y·co·ri'a·sis [*platys*; G. *korē*, pupil]. Expansion of the pupil; mydriasis.

Plat"y·hel·min'thes (plat"i·hel·minth'eez) [*platys*; G. *helmins*, worm]. A phylum of flatworms characterized by bilaterally symmetrical, many-celled, leaf-shaped bodies lacking a body cavity and usually containing both sexual elements. Includes the medically important classes Trematoda and Cestoda.

plat"y·hi·er'ic (plat"i·high·err'ick) [*platys*; G. *hieron osteon*, os sacrum]. *In osteometry*, designating a sacrum that is greater in width than in length, with a hieric index of 106 or more.

plat"y·mer'ic (plat"i·merr'ick, ·meer'ick) [*platys*; G. *mēros*, thigh]. *In osteometry*, designating a femur with a moderate anteroposterior compression and an increased mediolateral diameter in the proximal portion of the diaphysis; having a platymeric index of 75.0 to 84.9.

plat"y·mor'phi·a [*platys*; G. *morphē*, form]. A flatness in the formation of the eye and shortening of the anteroposterior diameter resulting in hyperopia.

plat"y·o'pi·a [*platys*; G. *ōps*, eye]. Relative flatness of the root of the nose with relation to the biorbital width, designated by craniometric methods by an orbitonasal index of 107.5 or less.

plat"y·o'pic [*platys*; *ōps*]. 1. *In craniometry*, designating a facial skeleton that is flat, having an orbitonasal index of 107.5 or less. 2. *In somatometry*, designating a face that is flat; having an orbitonasal index of 109.9 or less.

plat"y·pel'lic [*platys*; G. *pella*, basin]. *In osteometry*,

designating a pelvis with transverse diameter considerably greater than the conjugata vera, having pelvic-inlet index of 89.9 or less.

plat″y·pel′loid. See *platypellic*.

plat′yr·rhine (plat′i·ryne, ·rin) [*platys*; G. *rhis*, nose]. 1. *In somatometry* having broad and flat nose with height-breadth index of 85.0 or more. 2. *In craniometry*, having very wide apertura piriformis with a nasal index of 51.0 or more. 3. *In taxonomy* pertaining to the Platyrrhina or New World monkeys, so named because of their broad nasal septum and wide space between the nostrils. The term is practically replaced in its application to the human nose by *chamaerrhine*.

pla·tys′ma (pla·tiz′mah) [G., flat object]. A subcutaneous muscle in the neck, extending from the face to the clavicle. Formerly called *platysma myoides*. See Table of Muscles in the Appendix.

plat″ys·ten″ce·pha′li·a, plat″ys·ten·ceph′·ly [G. *platys*, broad; *enkephalos*, brain]. The condition of skull very wide at the occiput and with prominent jaws.

Plaut, Hugo Karl [German physician, 1858–1928]. Described type of ulcerative membranous infection, chiefly of the tonsils; called *Plaut′ angina*, *Vincent′ angina*, *Plaut-Vincent′ disease*.

plavolex. A trade-mark for dextran.

Playfair William Smoult [English physician, 1836–1903]. Remembered as the advocate in England of the rest cure for neurasthenia, first proposed and used by Silas Weir Mitchell, called *Weir Mitchell treatment*, *Playfair′ treatment*.

pledg′et [uncertain in origin]. A small, flattened compress of cotton, gauze, etc.

plei′o- (ply′o-) **pleo-** [G. *pleiōn*, more]. A combining form meaning more.

plei·ot′ro·pism (ply·ot′ro·piz·um) [*pleio-*, G. *trepein*, to turn]. The occurrence of multiple effects produced by given gene. —**pleiotrop′ic**, *adj*.

ple″o·chro′ic [*pleo-*; G. *chroia*, color]. The capacity of substance to show more than one color.

ple·och′ro·ism (plee·ock′ro·iz·um) [*pleo-*; *chroia*]. The property possessed by some bodies, especially crystals, of presenting different colors when viewed in the direction of different axes. —**pleochro′ic**, **pleochromat′ic**, *adj*.
